Questions of detail concerning the observation of the new moon began to be discussed at an early date, e.g., what to do when it is seen in the forehead or in the afternoon at the end of Ramadān; see Abū Yūsuf, ʿĀṯār, no. 819, for a normative statement of Ibrāhīm Naḥṣāz (presumably authentic); Muwatta‘, Kībat al-Ṣiyārat, bāb 1, tradition 4, for the doctrine of Mālik; Kanz al-‘umādī, iv, nos. 6014 ff.; Shams al-Dīn Ibn ʿAqīl in his compilation of the traditions from the Prophet, provided with the tīmād Mālik—Nāfī‘—Ibn ʿUmar. The ʿHanbali school has essentially adopted the doctrine attributed to Ibn ʿUmar, whereas the other orthodox schools of law follow the implications of the tradition from the Prophet. (That one ought to start fasting after the 29th day of Sha‘bān, if the view of the new moon was obscured by clouds, is also the doctrine of the "Twelver" Shi‘itis, expressed, e.g., in a tradition from Dījār al-Ṣāliḥ in Tāfṣīr al-Ṣahih al-Bayānī.)

A detailed discussion of this opinion which, according to Ibn ʿAbd al-Barr, was held by members of the highest group of Tābi‘īs, is found in the commentary of ʿAynī on Buḫkārī, on the tradition from the Prophet mentioned before (ed. Istanbul 1308 ff., v, 182). Among the somewhat later upholders of it are mentioned Muḥarrīr b. ʿAbd Allāh b. Yaṣār (d. 220), a companion of Mālik (Ibn Sa‘īd, v, 325; Ibn Ḥarīb, al-Dīwān al-muḥākhab, s.v.), Ibn Kūtayba (d. 270), and Ibn Surayjī (see, not Ibn ʿAṣirī) (d. 360), a famous Ṣāḥīfī scholar (Ṭādh al-Dīn al-Ṣubkī, Tāḥāb al-Sha‘rīyya, ii, 87-96; Ibn Hūbayra, K. al-‘Aṣīrī an-manā‘i l-Ṣāḥīf, Aleppo 1347/1928, 111); this last is said to have attributed a similar opinion to Ṣāḥīfī. But it was felt that astrologers should be given no part in determining the incidence of a religious duty, and an author as early as Ṭahāwī (d. 321), in his Sharḥ Ma‘ānī l-ʿAḥār, where we should expect him to discuss it, does not mention this point at all.

The “Twelver” Schīfs insist on the principle of observance of the new moon for the Muslims to count more strictly than the Sunnis. Their main authoritative traditions, found in their four classical collections, are: “The people of the kibla are only bound by observation (raʿya), the Muslims are only bound by observation” (from Dījaʿar al-Ṣādiq), and: “When you see the new moon fast, and when you see it break the fast; it is not done on the basis of description and surmise (wa-layṣa bi-l-taʿṣī wa-la ʿl-ṭaṣṣanī)” (from Muhammad al-Baḵīr). The same doctrine is formulated in their authoritative works of fīkḥ, from the spurious Fīkḥ al-Ridd (Ṭeherān 1315); the šīa al-Ridd d. 202, through the Muḥṣnī and the Ḥidāyā of Ibn Bābūya al-Ṣādiq (d. 381); in al-Diwasīmī al-Fikḥīyya, Teheran 1276), the Muḥṣnīa of al-Muṣīf (d. 413), the Tāṣṣīyā al-Dīqā (d. 419); the first Teheran 1271, the second Teheran 1274, the third Teheran 1274, the fourth Teheran 1271, in the second al-Diwasīmī al-Fikḥīyya), to the Sharāt al-Īṣlām of al-Muḥaṣṣṣī al-Ḥillī (d. 678) and later works.

At the same time, the older sources admitted various methods of calculation as alternatives if the new moon could not be observed on the evening of the 29th Šaʿbān on account of cloudiness. One method consists of counting from the day of the week on which fasting has started in the preceding year, and starting to fast on the fifth (or in a bisexile year, the sixth) day of the count; this method, which is based on the lunar year of 354 days, is still counted into account, is said to have been checked over fifty years and found correct, but is available only to him who knows chronology and the incidence of bisexile years. Another method consists of counting 59 days from the new moon of the month of Raḏjāb if it has been visually observed, and starting to fast on the sixtieth day. Traditions authorizing these methods by the authority of the Šīa of the “Twelver” Schīfs are found in the Kāfī al-Ḵudayn (d. 328; Teheran 1315) and in the Kīṣāb man lā yaḥdūruk Fāḥīṭh of Ibn Bābūya (Lucknow 1307) as well as in the Fīkḥ al-Ṣādiq and in Ibn Bābūya’s Muḥṣnī and Ḥidāyā. A third method consists of estimating the age of the new moon when it becomes visible for the Muslims by observing the opening of their ritual prayers; it contains the passage, a variation on the Kurʿān, sūras III, 189 and X, 5: “Say: ‘The new moons are fixed times for the people, their outward aspect (ṣāḥīra) serves to make known the number of years, calculation (ḫīṣāb), months and days, and their esoteric meaning (bāṭinuḥa) is My intimates who make known My way to My servants’.” (Annales, iii, 2129; cf. Madelung, Isl., xxxiv (1959), 41.) The method of calculation was introduced by the Fātimids in Ifrīqiya in 331, and in Cairo, after the conquest of Egypt, in 559 (REI, 1935, 178, with reference to Abū Bakr al-Mālikī, Riyaḍ al-muṣāfā; Makrīzī, Iḥṣāṣ; and Ibn Ḥaǧar al-ʿAṣḵalānī, Ṭafṣīl al-ṣīr). There is no statement of principle on calculation in the Daʿārīm al-Īṣlām of the Schīa al-Kabīr Nūʿmān b. Muhammad (d. 363/974) or in Ibn Sādīq, who considers the determination of the new moon as decisive on the basis of the traditions from Šīa which are common to him and
to the “Twelver” Shi’as; but he emphasizes the rule which alone was of practical importance to him, that if the moon were great, he would announce the new moon, if it were small, he would be the one who decides when to start and when to break the fast (ed. A. A. A. Fyvie, i, Cairo 1970/51, 323); there may be some desire not to alienate the non-

Isma’ili masses here. The author of the Madjdilik al-Mustansiriyya (ca. 450/1058) argues at length in favour of the principle of calculation (madjdilik 19, 30, and 31; ed. Muhammad Kamil Husayn, Cairo n.d., 128 and note 64, 131, 133 f.); he says that ru’ya implies hisab, just as the zahir points to the batin; only the imam combines them both, and it is a miracle that the hisab has worked perfectly in the 150 years since the Mahdi introduced it (as the Mahdi ‘Ubayd Allah died in 322, this cannot be taken literally if the date 323 given for that event (see above) is correct); for the author, calculation comes down to the regular alternation of months of 30 and of 29 days, Ramadhan having always thirty. This is also the practice of the contemporary Bohras (Musta’lian Isma’ilis), and it results in their celebrating the Muslim festivals one day, or sometimes two days, earlier than the others (cf. Sh. T. Lokhandwalla, in Stud. Isl., iii, 1955, 132). The question does not arise for the Khodjas (Nizari Isma’ils), whose fast is essentially different from that of the orthodox Muslims (cf. Sied Wajiba Ali, The origin of the Khodjas and their religious life today, (thesis Bonn) Würzburg 1936, 68 f.; J. N. Hollister, The Shi’a of India, 389 f.).

Bibliography: in the article.

(J. Schacht)

ii. — IN ISLAMIC ART.

The crescent appears first as an emblem in the Islamic period in combination with a five- or six-pointed star on the obverses and reverses of Arab-Sasanian coins, such as the anonymous coins, including one probably struck for ‘Abd al-Malik in Damascus in 75/695 (G. C. Miles, Mithrāb and Annah, in Archæologica Orientalia in Memoriam Ernst Hertfeld, Locust Valley 1952, 156-71, pl. 28, No. 3; Fig. 1), the more numerous ones struck for the Umayyad governors of the East, (iii 84/1068, and for the ‘Abbâsid governors in Tabaristan, till ca. 978/1082 (J. Walker, A catalogue of Arab-Sassanian coins, London (British Museum) 1941, 130-60; G. C. Miles, Rare Islamic coins, New York 1950, i-15; idem, The incunabula of Umayyad coinage, in Ars Orientalis, iii (1959), 208-19, pl. 1, nos. 1-6; idem, Some new light on the history of Kirman in the first century of the Hijrah, in The world of Islam. Studies in honour of Philip K. Hitti, London-New York 1959, 98). This usage is due to the adaptations of pre-Islamic coin types, mostly those of Khusraw II, but also of Yazdigird III and Hormuz IV, where this marginal element had been customary. A crescent alone occurs also occasionally on the reverse of Arab-Byzantine coins (J. Walker, A Catalogue of the Arab-Byzantine and post-reform Umayyad coins, London (British Museum) 1956, Nos. 76-9, 81; Miles, Iconography of Umayyad coinage, pl. 1, Nos. 7-9, 12-4; Fig. 2). While this was the first official use of the hilāl, it had no historical consequences.

Another early use of the hilāl is to be found in the mosaics of the Kubbat al-Sakhra in Jerusalem of 72/691. It occurs there as the customary finial of Sasanian-type crowns, and more frequently, as a crescent suspended from Byzantine-type crowns where it is combined with a large pearl usually placed just above the horns (K. A. C. Creswell, Early Muslim architecture, Oxford 1932, i, pls. 11, 16-8; Fig. 8). Since this building seems to have been originally a victory monument (O. Grabar, The Umayyad Dome of the Rock in Jerusalem, in Ars Orientalis, iii (1959), 33-62), these crowns, as symbols of the defeated enemies of Islam, reflect a pre-Islamic usage now introduced into a Muslim context. However, the preserved crowns, which had been placed in churches as ex-votos, show as the main suspended element a cross (H. Schlunk, Arte Visigoda . . . in Ars Hispaniae, ii (Madrid 1947), 312-6, figs. 328-30); as this could not be represented in a Muslim shrine, it had to be exchanged for another, more innocuous motif which had also a royal association (Sakrale Gewander des Mittelalters. Ausstellung im Bayerischen Nationalmuseum, Munich 1955, 17, No. 17, colour pl.). It is significant that the crescent has here a non-Muslim connotation.

The use of a hilāl as a decorative emblem on royal horses is also a continuation of a Sasanian custom (A survey of Persian art, ed. A. U. Pope, London-New York 1938-39, iv, pls. 176C, 2028, 229B; F. Sarre, Die Kunst des alten Persien, Berlin 1925, pl. 99). In these instances the emblem is made of valuable material or at least executed in fine workmanship. Possibly the earliest preserved example is one made of rock crystal, with the name of the Fātimid Caliph al-Zahir li-‘s-salām Dīn Allāh, 411-27/1021-36, which was later incorporated into a Gothic monstrance of about 1350, Germanisches Nationalmuseum, Nuremberg (cf. C. J. Lamm, Mittelalterliche Gläser und Steinschnittarbeiten aus dem Nachen Osten, Berlin 1929, i, 213, No. 22, ii, pl. 75; Fig. 7); the usage continues into the Seljuk period (6th-7th/12th-13th centuries) when bronze crescents are decorated with other designs (Fig. 10). The hilāl as equine decoration survived till the Ottoman period, when, as the crest of two boar tusks mounted in gold was captured in the Battle of Slinkaemen in 1691 (E. Petrasch, Die Türkenebots . . . Trophäensammlung des Markgrafen Ludwig Wilhelm von Baden, Karlsruhe, Badisches Landesmuseum, 1956, pl. 15).

The emblem also had early decorative uses in a human context. Its heavy-set shape with the points nearly touching to form an arch, as an exanad of gold and gilt silver jewelry (earrings or pendants), decorated with filigree and cloisonné enamel, the latter showing bird designs. This type of trinket was made in the 5th/11th or 6th/12th century, both in Egypt (where such work was found in al-Fustāt) and Spain (Marvin C. Ross, An Egyptian-Arabic cloisonné enamel, in Ars Islamica, vii (1940), 165-79; Mohamed Mostafa, The Museum of Islamic Art, a short guide, Cairo 1955, 36, 112, fig. 28; Katalog, Sammlung E. und M. Kofler-Truninger, Luzern, Kunsthaus Zürich 1964, pl. 137; Fig. 9). The same shape is to be found among the tooled decorations on Mamlūk bookbindings (8th/14th century; Fig. 6). The hilāl occurs also together with a seven-pointed star, as inlaid stone work, on the walls of Saint Sophia of Trebizond (Fig. 5), built by the Emperor Manuel I (1238-66). This Byzantine Church shows strong Seljuk influence in its wall decorations; so far no crescents of such an elaborate nature have, however, been found on contemporary Muslim buildings or objects of Anatolia, although a crescent-shaped element occurs in the pseudo-Kufic border of a Seljuk ‘Konya-carpet’ (Istanbul, Türk ve Islam Eserleri Müzesi, Nos. 692/5, see Oktay Aslan, Türkμh art, in Istanbul 1961, pl. VII) and there are a few crude masons’ marks of that shape on the stones of caravansarays (K. Erdmann, Das anatolische Karavansaray des 13. Jahrhunderts, Berlin 1961, i, 82, 134).
The occurrence in Trebizond in a near-Muslim context is significant, as it is the earliest so-far-known use of this emblem on a piece of Turkish terracotta. A Turcoman Turk territory since the Islamic conquest of Asia Minor (T. T. Rice, Decorations in the Seljuk style in the Church of Saint Sophia of Trebizond, in Beiträge zur Kunstgeschichte Asiens. In Memoriam Ernst Diez, ed. O. Aslanapa, Istanbul 1963, 112 and pl. 8; examples from Anatolia of the pre-Islamic period are given in Fevzi Kurtoğlu, Türk bayrağı ve A Yıldız, Ankara 1967, chapter III, figs. 570-71). A round Turkish pennant, with or without a long sword on its lap, but always holding up a crescent moon which frames its face. The representations here and on the metal objects are analogous to the personifications of the sun, which has a radiating hollow disc before or in place of its face. The iconography reflects the explanation in the text which compares the sun to a king and the moon to the vizier or heir apparent. A Seljuk mirror, published in Saracenic heraldry, by L. A. Mayer, by the commune de la main du Louvre; here (Fig. 12) two female busts are framed by the horns of a crescent moon (Chau Ju-kua, in his account of Bagdad. The translators and commentators of the text have cogently argued that this moon must have been a crescent, since a circular emblem would have been taken for a sun (Chau Ju-kua; on the Chinese and Arab trade in the twelfth and thirteenth centuries, tr. F. Hirth and W. Rockhill, St. Petersburg 1921, 135 and 137, n. 3).

Another use of the crescent started in the 6th/12th century when symbolic personifications of the planets, including that of the moon (kamar), were widely applied to metal objects. The earliest dated example is a small cast brass figure in the Museum of Islamic Art, Cairo (D. S. Rice, A Seljuk mirror, in Communications... First International Congress of Turkish Art, Ankara, 1959, Ankara 1961, 288-9, pl. 224). Here the emblem consists of a human figure seated cross-legged and holding a crescent whose two points meet before the face. Such representations of the crescent-shaped moon appear on many brass or bronze objects, where six planets are usually grouped around the central form; they are inlaid in silver, usually placed on the bottom of large trays, basins, on the covers of large vessels or pen-boxes and even on the back of astronomers of the 7th/13th and 8th/14th centuries, made in Iran, the DJazira (Mosul), Syria, and Egypt (F. Sarre-Max van Berchem, Das Metallscheibchen des Arabischen Staatbibliothek zu München, in München. Jahresbericht für Kunstgeschichte, II (1907), 22, 27, figs. 1 and 13; G. Wiet, Objets en cuivre, Cairo 1932, pl. XLVII; M. S. Dimand, Unpublished metalwork of the Rasullid Sultans of Yemen, in Metropolitan Museum Studies, iii (1931), fig. 2, etc.). The crescent appears also at least as early as the second half of the 6th/12th century in connexion with the pertinent figures of the Zodiac, namely, in combination with Cancer as its domicilium, or with Taurus as the exaltation of the Moon and with Scorpio as its dejection. In the case of the planets' exaltations and dejections, the dragon symbolism of Džawazh, the pseudo-planetary node of the moon's orbit, is also introduced (Fig. 13); (W. Hartner, The pseudo-planetary nodes of the moon's orbit in Hindu, in Indian and Islamic iconography, in Ars Islamica, v (1938), 123-54, figs. 1, 2, 12-20; idem, Zur astrologischen Symbolik des 'Wade Cup', in Aus der Welt der islamischen Kunst, 1,1959, 259, figs. 4 and 14; D. S. Rice, The Wade Cup in the Cleveland Museum of Art, Paris 1955, 17-20, figs. 14b/5, pl. VIIIb). From the 7th/13th century on, illustrations of sultan, i.e., (1) and (2) Sunkur al-Acsar, and, after his death in 1309, his daughter Fatima (D. S. Rice, Studies in
Islamic metalwork, I, in BSOAS, xvi (1952), 564-78);
(3) CAI b. Hilal al-Dawla (died 739/1338); in
Bull, de l'Academie des Sciences de Russie,
reprint 1918, No. 6, 476, quoted in Mayer,
Turkish manuscripts ... Chester Beatty
Library, 52, pl. 27). On the other hand there cannot have been a strong religious association with the
hiid in the Muslim world, as the emblem occurs also on secular buildings, e.g., in the representation
of garden pavilions on a brass bowl of probable Mamluk workmanship of the 9th/10th century (D. S. Rice,
Studies in Islamic metalwork, IV, in BSOAS, xvi (1953), 502-3, pl. X), and on military flags and textiles as well (see below). There are also many renditions of moons and other buildings dating from the 10th/11th century to the 12th/13th century which lack the crescent finial, and the motif plays no role on prayer rugs or on tiles applied to the walls of mosques (K. Erdmann, Ka'ba-Friesen, in Ars Orientalis,
iii (1959), 192-7, where only two of eight illustrated examples show the hiid: figs. 3 and 4). This indicates that in Muslim eyes, and in particular during the Ottoman period, the hiid was not of great importance. It certainly does not seem to have had a major religious significance and was apparently applied mostly for decorative purposes.

The hiid occurs on the flags of Selim I (Fig. 18), of Khayr al-Din Barbarossa, the latter being later used as his tomb cover (both in the Topkapi Sarayi Muzesi), and on those captured during the battle of Lepanto in 979/1571 (Fig. 17). It had then no standardized form, for it appears both as a thin sickle, the ends of which are connected by a wide circular band, and as a heavy, circular form with the ends touching each other and covered with religious formulas; both shapes enclose either a star or the names of the Prophets or of the first four caliphs. It is significant that the crescent occurs on each flag several times, and even then it is only one of several motifs used, which include other celestial bodies (the sun and stars); weapons (the legendary sword of Ali, the double-pointed Dhu 'l-Fakhr [g.v.], which in turn can have a crescent-and-star pommel, swords with blades showing wavy edges, daggers); and religious slogans such as the gakida and Sura LXI, 12 (many examples in Fevzi Kurgolgu, Türk bayragae ve Ay Yildiz, figs. 42-52, 54-5, 64-5, 69; Sakisian, in Syria, xxii (1941), 60). Later evidence of the custom is provided by the hadidig after the battle of Lepanto. The crescent finial occurs also on the flags captured at the siege of Vienna in 1683 (Sakisian, fig. 2, flag in St. John Lateran, Rome; Kutoglu, fig. 60, in the Municipal Museum, Vienna) or in the battle of Slankamen of 1691 (Fig. 19; Petrasch, Turkheilfuge, fig. 1, a combination of crescent and star, and a flag on a state barge of Wehbl's Surname, written ca. 1720-25 for Ahmid III, shows a row of three large
suns, each separated from the other by two small crescent moons (Topkapi Sarayi Muzesi, MS Ahmed III 3593). Other Turkish flags, too, present the hilal only occasionally in small size and places of lesser importance or no hilal at all (Riza Nour, pls. XXIII, Kurtoglu, figs. 53A-B, 56-60, 80, 88). However, a number of flags from the 10th/16th to the end of the 12th/18th centuries display three, four, or even six hilals on a red or green ground, and in each case without a star or any other emblems (Riza Nour, pls. VIII-X, XXIV, and XXX; Kurtoglu, figs. 73, 74, 76, 87-90). On the other hand a flag as late as that made in 1793 for Selim III, in the Deniz Muzesi, shows only the imperial tughra and the Dhu 'l-Fakar (Kurtoglu, fig. 58; Sakisian, in Syria, xx (1941), 73).

A number of Turkish pole arms, horsetail standards (tugk) and ship lanterns of the 10th/16th century in the Palazzo Ducale in Venice have crescent-shaped finials, although contemporary Ottoman miniatures seem to indicate that these military and naval objects often lacked this emblem.

The earliest datable textile with a hilal is a pair of silk trousers made for Sultan Suleyman (Fig. 16), a context which precludes any religious significance of the emblem at that time; here, the heavy, fully circular crescent encloses a sun (or a large star) and the whole is surrounded by other stars (Tahsin Oz, Türk kumaş ve kadifeleri, Istanbul 1946-51, i, pl. XXVI). The motif continues to be used by subsequent sultans in varied forms, e.g. the crescent in combination with flowers; a triangular arrangement of three heavy crescents, each filled with one or two smaller identical shapes; or a sickle-shaped form covered with floral patterns enclosing several stars (Oz, i, pis. XXIX, XXX, XXXIII-II; ii, pls. LXII, L, LXV, LXIV, LXX, LXXX-VII).

The hilal was also occasionally used to decorate a ferdi; for instance, one of Mehemmed IV, which has a crescent filled with flowers on the onion-shaped top of the tughra (Türk ve İslam Eserleri Muzesi, T. 2242).

It has been claimed, for instance by B. V. Head, in his Historia numorum. A manual of Greek numismatics, Oxford 1911, 269-70, that the frequent use of the crescent and star among the Ottoman Turks was a demonstration of their claim to be the legitimate successors of Byzantium, especially of Imperial times, are said to have applied this emblem on the reverse as a symbol of Artemis-Hekate, because this moon goddess let her light shine unusually bright during a critical siege. There the crescent and star, however, is only one of many emblems found on the coins of the city under Roman domination from the 1st century B.C. to the early 3rd century A.D. (R. Stuart Poole, Catalogue of Greek coins. The Tauric Chersonese, Sarmatia, Dacia, Moesia, Thrace, etc., London (British Museum) 1877, 105, No. 99); it occurs also on the coins from Pontus of Mithradates (240-190 B.C.) and Mithradates Eupator (121-63 B.C.) and on those from Carrhae (Harran), a place famous for its cult of the moon god Sin, from Marcus Aurelius (161-180) to Gordian III and Tranquillina (244-244). In view of the enormous time gap between the early numismatic and later Ottoman examples, it seems unlikely that the pre-Islamic usage could have exerted an influence, particularly as the hilal is also to be found in the Islamic world before its use by the Ottomans. Byzantine influence is more likely in the case of the hilal-shaped Fâtîmid earrings, especially if the generally held assumption that the very similar Byzantine examples date from the 6th to the 10th century should prove to be correct (cf. Early Christian and Byzantine art, an exhibition held at the Baltimore Museum of Art, 1947, pl. LXII, Nos. 445, 485; ISFÄZ Finil exhibition of the Council of Europe, Athens, 1964, Nos. 417-8, 420, 434, 437, 440, 442-3, with Sammlung E. and M. Kofler-Truninger, Luzern, Kunsthauz Zürich 1964, pl. 131).

While the hilal remained one of many Turkish motifs and was till the end of the 12th/18th century never a formalized, official symbol, its role in the Western world was quite different. From the middle of the 15th century on, views of Oriental cities like Jerusalem, Istanbul and Algiers show the major buildings capped by a crescent (typical examples in many paintings of Carpaccio). Even more frequent was its use on Turkish flags and boats in pictures of military engagements (examples given by Sakisian, Syria, xxii (1941), 66-7; Du, May 1962). It was also given as a finial on the sceptres held by various Turkish sultans (Sakisian, fig. 5). Another use was as watermarks in European paper manufactured for the Levant in the 17th and 18th centuries, for instance, the combination of three crescents known in Venice as trelune (C. M. Briquet, Les filigranes, Paris, ii, 314-5, Nos. 5374-5; see also W. Nikolaev, Watermarks of the medieval Ottoman documents in Bulgarian libraries, Sofia 1954), which has actually been found in a Maghribi Kur'an discovered in Nigeria (N. Abbott, Maghrib Koran manuscripts of the 15th and 16th centuries, in American Journal of Semitic Languages and Literature, iv (1938), 62). The crescent appeared even in fireworks, as in that arranged by Louis XV in 1132/1720 for the Turkish Ambassador Yirmi Sekiz Mehmed Efendi [q.v.], who to his surprise was told that since each country was symbolized by a special emblem, a crescent—in this instance placed on a fiery tripod and surmounted by a crown—represented his pashâkh and Turkey (Sefârînâme-i Fransa, Istanbul 1283, 76; Paris sefârînâmesi, Istanbul 1306, 138).

It was only in the early 19th century, when Selim III created a military organization [see Nizam-i Cedid] in imitation of European troops, that an imperial flag consisting of a crescent and star on a red ground was officially adopted for the Turkish army and navy, analogous to the official flags of Europe. When this sultan was dethroned in 1807, his new army was abolished and its flag given up (but not by the navy). After the massacre of the Janissaries in 1826, the modern-type army was re-established by Mahmud II and in 1827 the flag instituted by Selim III was once more given to the army (Yacoub Artin Pacha, Contribution à l'étude du blason en Orient, London 1902, 158-9). An ornamental rendition of this sultan's tughra shows therefore a crescent and six-pointed star next to the name, but, characteristically, even here the design of a sun occurs elsewhere in the panel (Ankara, Etînafya Müzesi, No. 7603; Fig. 20). The flag of the Ottoman Empire was retained when Turkey became a republic in 1923.

The next country to adopt the hilal for its flag was Tunisia. Under Husayn I (1824-35) a red flag was adopted, bearing in its centre on a white circle or oval a red crescent turned away from the hoist and containing a six-pointed star. From the end of the reign of Ahmad I (1253-71/1837-55) on, a five-pointed star was substituted. Egypt used the white crescent on a red ground while the country was under Ottoman rule, but in 1923 the royal government selected a green ground and had the upright white crescent filled with three white stars between its horns. This
HILAL

design, with a horizontal crescent containing the three stars in a green circular field, was also placed in the centre of the national coat of arms consisting of a displayed eagle, which was adopted when the country became a republic in 1953. The national flag with the crescent and stars was used until the founding of the United Arab Republic in 1958. Pakistan took the so-called Muslim League flag in 1947 which was formed by a white crescent on the slant, turned away from the hoist, and a white five-pointed star on a green field; to this a broad white stripe along the hoist was then added. In 1952 Libya chose the flag of Cyrenaica (used there since 1947) which consisted of a white upright crescent facing away from the hoist and a five-pointed white star on the central stone, turned away from the hoist and placed on a green rectangle. The latest major Muslim country to adopt the hilāl was Algeria, which places a red crescent on the inner green area of its flag so that only its horns project into the outer white field, which also carries a red five-pointed star. This flag was officially adopted in 1962 but had already been in use during the War of Liberation. Even this list does not exhaust the countries which have adopted the hilāl for their flag. For instance the national flag of the Maldives Islands carries a white crescent turned away from the ship and placed on a green rectangle which is framed by a red stripe and edged by a narrow black and white stripe along the hoist. The Sultan's flag has the crescent combined with a white star. In Muslim countries (with the exception of Iran) a red five-pointed star on a green ground is superimposed on three horizontal stripes of green, orange and black. All this indicates that since the beginning of the 19th century the hilāl, usually combined with a star, has become the Muslim emblem par excellence.

Owing to the new symbolical importance of the hilāl, the emblem was also used on postage stamps of most Muslim countries. It was first introduced in Turkey in its first stamps, issued in January 1863. In view of the present-day identification of Islam with the hilāl and of the Department of the United States Government has designated this emblem as the appropriate symbol for the top of headstones which are furnished for Muslim veterans buried in national cemeteries, analogous to the Christian Cross, the Jewish Shield of David, and the Buddhist Wheel of Righteousness. For the same reason, a white five-pointed star and crescent turned away from the hoist on a red rectangular central field, surrounded by a wide white frame, with the words "Islam, Equality, Justice, Freedom" set on a slant in the corners, has been taken by the "Black Muslims" of America as their symbol.

Outside the Muslim world, it continues to be used for decorative purposes in many recent times. It is occasionally found on carpets (Amos B. Thayer, Turcoman rugs, New York 1940, pl. 21) and in Maghribi jewellery (Paul Eude, Dictionnaire des bijoux de l'Afrique du Nord, Paris 1906, 34-5, 52, 57, 91, 141, 181, 199, and 239). Rather crude versions are also at times used as camel brands, marks of ownership, or as a tribal emblem. A. Pacha, Contribution à l'étude du blason en Orient, 203-24; Henry Field, Camel brands and graffiti from Iraq, Syria, Jordan, Iran, and Arabia, Suppl. to JAOS, xv (Oct.-Dec. 1952), with extensive bibliography.

Bibliography: So far there has been no general treatment of all aspects of the subject. Publications on specific themes are given in the article.

HILĀL, eponymous ancestor of the tribe of the Banū Hilāl whom the Arab genealogists trace back to Muḍjar according to the following lineage: Muḍjar → Aylān → Kays → Khasaṭa → Ikrima → Mansūr → Hawāzin → Bakr → Muṣawiya → Ṣaṣa'a → ʿĀmir bin Hilāl. Its three main divisions were the Ahbādji, the Riyāḥ and the Zughba. This tribe naturally played its part along with the other groups of the ʿĀmir bin Ṣaṣaʿa in the pre-Islamic tribal struggles or Ayyām al-ʿArab (q.v.) and in the affairs connected with the beginning of Islam such as that of Bīr Maʿūnā (q.v.). It is likely that it did not support Islam until after Muhammad's victory over the Hawāzin at Ḥunayn (8/630), but, like the other ʿĀmir bin Ṣaṣaʿa, it did not participate in the ridda. It remained in the Najd, its initial habitat, longer than the other tribes of the same group who also inhabited it as their primitive domain. Although renowned for its courage, it did not win any particular fame during the conquests. During the first half of the 2nd/8th century, some of the Banū Hilāl (and Banū Sulaym) were invited to emigrate to Egypt where they soon became numerous. This exodus did not, however, diminish their turbulence, which increased considerably under the ʿAbbasids, especially when, in the 4th/10th century, these brigands joined forces with the Būyids to open the gates of anarchy. After defeating and driving back the Karmašins (568/978), the Fāṭimid al-ʿAzīz b. al-Muʿizz, seeking no doubt to deprive his defeated enemy of their best allies, had a large number of the families of the Banū Hilāl and Banū Sulaym deported into Upper Egypt. Moreover this move was in accord with Egypt's rôle as a centre of attraction for the nomads of Arabia and Syria. Continuing to pillage and to fight amongst themselves, the new emigrants had to be confined to the Ṣaṣaʿ and forbidden to cross the Nile. But when the Zirīd al-Muʿizz b. Bāḍīs had broken with his suzerain al-Mustanṣir (439/1047) and recognized the ʿAbbasid Caliph, al-Ḥārūn, the Fāṭimid minister advised his master to take revenge on the Ṣanḥājja by handing over Ifrikiya to the horde of the Bankū Hilāl, of whom, at the same time, he would rid himself. The chief organizer of the invasion of the Banū Hilāl, of which he also assumed command—and the man who reconciled the Riyāḥ and the Zughba—was probably the amīr Amin al-Dawla wa-Makdūnah Ḥasan b. ʿAlī b. Mulīm. Better than the saga of the Banū Hilāl, upon which however he also draws, Ibn Khaldūn gives the fullest information on the composition and the principal leaders of the invaders. tribe, that of the Athbadi, comprised the Durayd and the Karfa. The Banu Mirdas formed the main division of the Banu Hilal. The division of the Banu Hilal that is unknown, must be added the Ḍâdi, also (according to Ibn Khaldûn and Ibn Bassâm) descendants of Āmir b. ʿṢaṣṣaʿa. Towns and provinces are said to have been allotted in advance by al-Mustansîr to Adî, also (according to Ibn Khaldûn and Ibn Bassâm) descendants of Amîr b. ʿṢaṣṣaʿa. The Banu Hilal, setting out in 442/1050-51, at first ravaged the province of Barka, which they left to the Banu Sulaym who had followed them, and they did not approach Ifrîkiya until the beginning of the 7th/13th century. Ibn Khaldûn compares the wave of half-starved nomads to a cloud of locusts. Al-Muʿizz b. Bâdîs did not immediately recognize the extent of this unforeseeable scourge; lacking an effective army, he even tried to enlist the invaders into his service by marrying one of his daughters to the chief of the Ryâh. But the ever-increasing pillaging destroyed this hope, and military action became necessary. The Zirid army tried to stop the nomads at Haydaran [q.e.r.] in the region of Gabês (443/1051-52) but, in spite of its numerical superiority, it was utterly routed. The countryside, the important villages and soon the towns fell into the hands of the nomad chief. Anarchy and insecurity spread further and further. While the pressure of the Banu Hilal round Kyûrâwân was increasing (446/1053-55), the capture of Bêja by Muḥîn b. Ṭahyâ al-Sînnabarî al-Mirdâsî consolidated the seizure of the valley of the Medjerda. Tripoli and its province had fallen to the Zughba. Al-Muʿizz married three of his daughters to Arab amīrs but this did nothing to check the continual devastation and was no more effective than was a return to Fâtûm obedience in 446/1054-55. Finally, on 27 Shâbaʿân 449/29 October 1057, the Zirid took refuge at al-Mahdiyya with his son Tamîm. On 1 Ramadân 449/1 November 1057, Kyûrâwân was sacked by the Banu Hilal, a disaster from which it never recovered. The presence of the Athbadi and the Ḍâdi is attested shortly afterwards in the central Maghrib where, allied to the Ḥammâdîs, they fought against the Zughba of Ryâh. To the Zughba, whose divisions as auxiliaries of the Ḥammâdîs, and the Ryâh, of the Zîrîs. In 457/1065, the Ḥammâdî al-Nâṣîr, at the head of a large coalition of Berbers and Banû Hilal (Ṣanḥâdja, Zanâta, Athbadi and Ḍâdi) formed against the other Arab groups (Ryâh, Zughba and Sulaym), suffered a defeat at Sabîba which was as serious for his dynasty as that of Haydaran had been for the Zîrîs. The consequences, however, were less abrupt and less immediate owing to the relief of the central Maghrib, which was much less favourable for the expansion of the nomadic Banû Hilal than the plains of Ifrîkiya. But, by 461/1068-69, the grip of the Banû Hilal was such that he had to abandon his capital, the Kaila, for Bougie (Bidfayâ) which he had just founded. In about 466/1072-73 the Zughba, driven from Ifrîkiya by the Ryâh, went to put themselves at the service of the Ḥammâdîs; before this they had proceeded to the sâle of Kyûrâwân, a phrase which symbolizes well the discomfiture of the Ṣanḥâdja. The Banû Hilal were too closely involved in the history of the last Zîrîs and Ḥammâdîs to be spoken of separately. In the general anarchy, certain of the chiefs of the Banû Hilal set themselves up as independent rulers, from simple condottieri like Muḥîr b. Zîyâd, who made himself a lair in the ruins of Carthage at La Malga (al-Muʿal-
in fact they themselves were rather re-converted to Islam by the strength of religious influences in the Maghrib—than they did to strengthening its Arab character. Indeed, whereas the Arabs of the conquest had been absorbed in the Berber population, especially in the towns—Islam is essentially urban—those of the 5th/10th century led, in all fields, to a promotion of nomadism which was absorbed so little that almost all the Arabic-speaking Bedouins of the present-day Maghrib are their descendants. Also, many large villages and towns have come under Muslim influence in consequence of the necessary *modus vivendi* which was soon established between the sedentary population and the nomads. In the East as in the West, neither ethnography nor dialectology have yet made it possible to discern a type specifically belonging to the Banū Hilāl, and it is perhaps too late to do this.

**The Saga of the Banū Hilāl**

The movement of the Banū Hilāl into Africa and the battles they had to fight in order to conquer the country form the historical basis for a collection of tales of heroism and love, the romance, or rather the saga, of the Banū Hilāl (*Strat Bani Hilāl*), which has come down to us in two versions (*al-Sira al-Shāmiyya* and *al-Sira al-Hijāzīyya*) and in three cycles.

The first cycle tells the story (more properly the saga) of the Banū Hilāl, the son of Banū Hilāl—Usbaḍa: Ḥadjabah and ‘Adjabah, the two wives of Hilāl’s son al-Mundhir, give birth in the same night to two sons, Dī‘ār and Dji‘abah. The latter goes away with his mother and later becomes sultan of the Najd. In the Bilād al-Sarw reign the amirs Ḥāzim and Rīżq of the line of Dji‘aab. Ṣiraj marries al-Khādr̲, the daughter of the sharīf of Mecca, whom he assists against the king of Rūm. He has a son by her, the swarthy Barakat, later named Abu Zayd (Zād). Ḥāzim’s successor is his son Sirḥān (Saḥān), who is succeeded by his son Ḥasān, who marries Khawmā, queen of the Yemen, after conquering the fire-worshippers of the land of Bardhahk̲h, against whom Khawmā had invoked his aid. With the aid of Abu Zayd, India is then conquered, after which Ḥasan passes with Khawmā into the Bilād al-Sarw wa-Usbaḍa.

The second cycle deals with the migration (*riḥla*) of the Banū Hilāl into the country of Najd; because of a famine, the Hilāl go from the Bilād al-Sarw into the Najd, where they are warmly welcomed by the prince Ḥanīm and his son Dji‘aab (Dijāyb, of the line of Dji‘abah) and by their tribe the Banū Zughba. The Hilāl triumph over the prince al-Haydah, who is the foremost of the seven rulers of the Najd; Ḥasan, who marries al-Nāfīlā, the sister of Dji‘aab, then reigns over the Najd with several viceroys. A struggle occurs between Dji‘aab, who kills two of Ḥasan’s brothers, and Abu Zayd; Dji‘aab yields and peace is restored.

The subject of the third cycle is the migration of the Hilāl towards the West (*taḥghirā*), and their wars with the Zanjāt ruler of Tunis; in the year 460/1068 Abu Zayd marches with his followers towards Tunis, in order to find a better place of abode than the Najd, where famine is widespread. Sa‘dā, the daughter of one of the Najd tribesmen, who is particularly attracted to Mir‘ī (Mar‘ī), one of the companions of Abu Zayd, works on their behalf. Abu Zayd then returns to the Najd and the Banū Hilāl start to move westards. After several adventures (the journey through the land of the Persians with the seven sultans and their battles in this country, the capture of al-Mariya, the daughter of the bādh Budayar, battles with al-Chadān, king of the Kurds and the Turkomans, with al-Baradwī B. Rāshid (i.e. Baldwin I, 1110-1118), al-Sarkasī Iben Nāsīb, al-Firmend, ruler of Egypt, al-Mādī, king of Bilād al-Sa‘īd, etc.), they enter the territory of the Zanjāt caliph. The latter marches against the Hilāl and kills two brothers of Dji‘aab. After al-Zanjāt has been killed with the aid of Dji‘aab, the struggle begins for possession of the seven thrones and the fourteen strong castles of the land of the west. Ḥasan and Abu Zayd are then treacherously killed by Dji‘aab. Their orphans try to avenge these assassinations. Under the leadership of Buraykī, son of Ḥasan and nephew of Dji‘aab, and of al-D joursya, sister of Ḥasan, they march against Dji‘aab and kill him, after he has stunned al-Djoursya with a kick. Buraykī, who then seizes power, governs tyrannously and provokes a general uprising of the Banū Zughba, in which he is killed by Naṣr al-Din, a son of Dji‘aab.

Of the two principal heroes of the legend, Abu Zayd and Dji‘aab, the latter had an historical existence; but he played only an insignificant role, thus resembling Roland, the main hero of the poem of the Carolingian cycle.

This short résumé records only the characteristic features of this tale, which is of the highest importance for the history of language, customs, and civilization, and which contains a great number of separate narratives.

**HILĀL B. AL-MUḤASSIH B. IBRĀHĪM AL-ṢABI’**

secretary and writer of the Buwayyahid period, belonging to a family of Sabean scholars and secretaries which had come from its native Harrān to settle in Baghdad and which included among its members the historian Thabit b. Sinan. Hilāl’s grandfather, Abu Isāb b. Ibrāhīm ([see al-Ṣa’īb*]), was director of the Chancery of Baghdad and it was in his service that Hilāl (b. at Baghdad in 359/969) began his
career in the time of the amir Šamsam al-Dawla (K. al-Wuzard*), 151). Little is known however of the details of his career, except that he became in his turn the Director of Chancery under the vizier Fakhr al-Mulk during the reign of the amir Bahāʾ al-Dawla; it was at this time, in 403/1012, that he embraced Islam, being the first member of his family to do so. When his master fell into disgrace (407/1016-7) Hilāl is said to have received from him 30,000 dinārs which he was allowed to keep under Muʿayyid al-Dawla, and it was on this capital that he lived until his death in 448/1056.

His administrative duties and his rank at the court of the Buwayhid amirs allowed Hilāl al-Šaḥib to write works which, while often adhering faithfully to the genre of adab, constitute, because of the documents of which their author has made use and the evidence reproduced in them, valuable sources of information. Hilāl is known particularly for his Kitāb al-Wuzard which he wrote in the time of the vizier Ibu Marina, i.e., during the latter part of his life, and of which there is preserved only the beginning, which concerns the viziers of the caliph al-Muḳṭadar. But the Rusūm dār al-khīṭāf, published in 1964, which deals with questions of protocol at the court and in official correspondence, also provides extremely important documentation. Of his History, which was a continuation of that of Thābit b. Sinān and covered the period up to 447/1055, there survives only a short fragment covering the years 389-93/999-1003. Finally the Ghurar al-balāgā, a collection, still unpublished, of models of private and official letters and containing also some texts of brevets of appointment. There are attributed to Hilāl various works which have not survived, notably a Kitāb Ašhār Badghād, cited by Yākūt, and a collection of anecdotes entitled al-Amādiḥ wa l-ayās which has been different from the K. al-Wuzard though part of its content was similar.

In principle, the *hilf* did not diminish the autonomy of the tribes or the degree of equality between them; and they retained their respective dwelling places and their grazing-grounds. Its object was, as well as establishing a permanent state of peace between the tribes, also to unite them for purposes of common defence, for enterprises of *ghauw* [*q.v.*], for vengeance (ʔ statt), for mutual aid in the payment of settlements to third parties and for the common use of pasturage.

The agreement was sometimes accentuated by the fact that the two tribes adopted a common dwelling place or, more often, that one of the groups came and settled on the other's territory. The effects of this latter practice, reinforced by the continuation of the compact and by community of interests, usually led to the amalgamation of the groups. This was later sealed by the adoption of a common eponym, either real or invented. According to the author of the 'Iḥā, the Arab tribes which had not originally been made up of disparate elements united by a *hilf* were very rare.

The *hilf* in this sense was to be condemned in Islam, as a result of the pronouncement attributed to Muhammad: “There is no *hilf* in Islam”. It was indeed contrary to his principle, which was that all the ancient tribal distinctions should be fused into a single community and that this community must inevitably oppose all others, in order to absorb them or at least to subjugate them (the obligation of the *qāba*). It is true that another saying is reported which announces the survival of the *hilf*, but it must refer only to the *hilf-waḍa* which is in any case no longer permitted except between Muslims, or perhaps to the maintenance of those *hilfs* which had been concluded earlier.

It is not clear to what extent the new principle is adhered to in the specifically Arab milieu which continue to live according to the ancient traditions of tribal organization. There may however be mentioned the use among the Arabs of Transjordania of forms of agreement known as *ben*-ʿamma, the object of which is to establish a state of peace between tribes. One of these forms implies the recognition by the contracting parties of a common dwelling the representatives of the following clans are said to have gathered: Banū Ḥāshim, Banū ‘Umayr, Banū ‘Azd, Banū Bakr, Banū Ṣa‘d, Banū ‘Amr b. Shu‘b, Qaynaqah, Banū Iyākh. The name of this pact has given rise to widely differing interpretations: for some, a similar agreement had been concluded by several Quraysh tribal groups by the name of al-Ḥād and that this pact was forgotten very early, even though Islam did not repudiate the agreement. The Prophet is said moreover to have been present when it was concluded and to have said later: “I was present in the abode of ‘Abd Allāh b. Ḏu‘dān at such a pact that I would not wish to exchange for the “red cattle” (bāmur al-na‘am= the best camels), and if I were invited to [agree to it], now that we are in Islam, I would accept willingly”. The pact ended with the death of the last of the participants, but it was sometimes effectively recalled down to the Umayyad era and on certain occasions threats were made to bring it into operation. In the 3rd/9th century, al-Diḥāṣ drew arguments from it to prove the superiority of the Ḥāshims over the ‘Abd ʿShams (=Umayyads), who had not participated, and he considers it to be the noblest pact ever concluded through the Koran. The Ẓāhirī School (which had at his disposal a manuscript of the Munammah of Ibn Ḥabīb) has taken into account the tradition that there existed among the Qurayshis a *hilf al-ṣafā*, which lasted for several centuries and, regarding it as an “order of chivalry”, has attributed its restoration to the remorse felt by al-Zubayr after the war of the Fidūr.

**CH. PELLAT.**

**AL-HILLA.** A town situated on the Euphrates midway between al-Kifā and Baghdād near the ruins of ancient Bābil. Not to be confused with several like-sounding places, it is sometimes called Hillat Bani Mazyad or Hillat al-Mazyadiyya after Sayf al-Dawla, ʿṢādaq b. Mansūr b. Dūbayṣ; Ali b. Mazyad al-ʿAsadī, who founded the town in 495/ 1102 (Kazwini gives the date 456/1044, but this is an error) on the west bank of Nahr Sūrā, the main
subsidiary of the Euphrates. In later times (6th/12th century) this waterway came to be known by the name of the parent stream, the former name gradually going out of use. An earlier settlement called al-Djamûlân existed on the intensively cultivated east bank, but the major built-up area was the new town along the river. At a spot which Yâkût describes as having hitherto been a gathering place for lions, Dubays settled with his troops, building magnificent dwellings and palaces. The town also contained a wide variety of markets and gave every indication of being prosperous. This prosperity continued well after the death of the founder, for after the decline of Kašr b. Hubayra, in the 6th/12th century, it became the half-way town along the pilgrim route linking al-Kûfa and Baghdâd. A large bridge of boats was constructed in order to facilitate movement across the river, presumably to take the place of the great Sûrâ Bridge which was located at the above-mentioned site. Ibn Djuibâr describes this bridge as having been moored by iron chains tied to wooden posts on each bank of the river. He found the town to be large and prosperous, of oblong shape, and protected on each bank of the river. He found the town to be large and prosperous, of oblong shape, and protected only by mud walls. Ibn Bâtîta, writing two centuries later, was also struck by this magnificent bridge, and by the prosperity of the town in general. His contemporaries, for example, Ibn Kâmil says: "The town was made up of Twelver Shi'is and that a religious shrine was situated there. The town continues to exist in modern times."

AL-HILLâ. (1) Dâimâl al-Din Hâfiz b. Yûsuf b. 'Ali b. Mu'tâhâr, called 'Allâma-i Hillî (the sage of Hilla) after his native city Hilla [q.v.], which was for a long time the recognized centre of the Shi'is when Sunni rulers were in authority in Baghdâd. He was born on 19 Râmâdan 648/15 December 1250, eight years before the capture of Baghdâd by the Mongols, and died 11 Mu'harrâm 726/18 December 1325. He came of a great family of Shi'î theologians, who were so much appreciated by the Shi'is that he was often described as Muhakkik-i Hillî and also known as Mubakkîk-i awlîyâ, was Nâdir al-Dîn Dja'far b. Hasan b. Bâbyû, born 638/1240, died 726/1326. He distinguished himself as the author of Sharh-i 'ilm, which came to be recognized as the authoritative work on Shî fi law (Fr. tr. by A. Querry, Russian tr. by Kasembe).

HILM (A.), a complex and delicate notion which includes a certain number of qualities of character or moral attitudes, ranging from serene justice and moderation to forbearance and leniency, with self-mastery and dignity of bearing standing between these extremes. The term, which is sometimes linked with 'ilm, more however from stylistic considerations and a taste for paronomasia than from any conceptual association, is basically contrasted with dâhil (see Dâhil-Iyyâ) and safâh or safâha; a derivative from the latter root appears in the expression safâhâ l-âbîdîn, which can be translated "to put the most imperceptible out of countenance, to make them lose their temper". The Arabic dictionaries give only fragmentary definitions of hilîm; in the LÀ, it is "levelheadedness and reason" whilst hilîm is glossed by "patient"; for the TÀ, hilîm consists of controlling oneself and not allowing any violent emotion or anger to burst out; for the MÜ, it is "the state of the soul which preserves its calm and does not easily allow itself to be carried away by anger" (see also Ibn Abî l-Hadîd, Sharh Nabî al-balâqî, iv, 290, 335 ruler of Persia, who, after renouncing Christianity, became a Sunni Muslim, but was ultimately converted to 'Allâma-i Hillî into a staunch Imâmi Shi'î. It was perhaps at his suggestion that Oldjeitî ordered the names of the Twelve Imâms and especially the formula, 'Ali wâli Allâh, to be engraved on the coins (see S. Lane-Poole, Catalogue of Oriental coins in the British Museum, London 1881, vi, 44 ff.;) hence it may be said that through 'Allâma-i Hillî's efforts Imâmi Shi'ism was for the first time declared the state religion of Persia (see H. Howorth, History of the Mongols, London 1888, ii, 550). His services were so much appreciated by the Shi'is that soon after his death his grave in Maqhdâm became one of the centres of veneration for those who go on pilgrimage to the tomb of Imam 'Ali al-Ridâ.

(2) Another eminent jurist-theologian of Hilla, often described as Muhammâd-i Hillî and also known as Muhammâd-i awlîyâ, was Nâdir al-Dîn Dja'far b. Hasan b. Bâbyû, born 638/1240, died 726/1326. He distinguished himself as the author of Sharh-i 'ilm, which came to be recognized as the authoritative work on Shî fi law (Fr. tr. by A. Querry, Russian tr. by Kasembe).
and passim). From these definitions it emerges that the lexicographers consider the basic element of *hlm* to be a sort of moderated detachment (though without the last of these going as far as the *ataraxia* of the Greeks, as T. Izutsu suggests in *The structure of the ethical terms of the Koran*, Tokyo 1959, 26; revised version under the title: *Ethico-religious concepts in the Qur’an*, Montreal 1966, 31, 69); but they make no reference to the pardoning of offences, whilst in the modern period (as probably for many centuries) the word *hlm* generally denotes the quality acquired by patience, leniency, understanding (cf. H. Wehr, *Wörterbuch*, s.v.), or even gentleness (ibid.; Beussier, s.v.). In a recent work, S. H. al-Shamma (*The ethical system underlying the Qur’an*, Tübingen 1959, 7) gives it simply the meaning of “good conduct”.

The problems posed by this word are however not so simple. I. Goldziher (*Muk. Stud.*, 1, 379 ff.; analysis by G.-H. Bousquet, in *Arabica*, vii(3), 246-9), in studying the concept of *djidhiliyya*, very justly contrasts *djihi* with *hlm*, which implies “an idea of physical solidity, and then of moral integrity and solidity, of calm dispassionate reflexion and gentleness in social intercourse. The *haltim* is the civilized man”, as opposed to the *djihi*, the “barbarian”. Goldziher adds that *muruwwa* (q.v.) allowed it to be known in what cases it was permissible however to resort to *djihi*, that is to say to allow oneself to be carried away by a somewhat crude spontaneity, which implies “an idea of *hlm*”, so simple. I. Goldziher (op. cit.), who had used only the word *hlm* in his whole work on its ethical side may very well be represented as a daring attempt to fight to the last extremity with the spirit of *jähiliyyah*, to abolish it completely, and to replace it once for all by the spirit of *hlm*”. Indeed, the notion of *hlm* is simply implicit in Islamic ethics and can be deduced a contrario from the use of the word *djihi* and its derivatives in the *Kur*ān; but it also emerges from certain verses, the most characteristic of which is certainly the following (XXV, 64/65): “The [true] servants of the Beneficent are those who walk the earth modestly and who, when addressed by the *djihi*, answer ‘peace!’”. In fact, to eradicate the tendencies of the Arab people, it was fitting to substitute a “civilization” for the “barbarism” of the *djidhiliyya*, to make the Arabs civilized men, capable of holding their instincts in check and of pardoning insults, in short of spreading abroad the virtue of *hlm* hitherto restricted to an elite; this reform of manners was to be favoured by the belief in the Last Judgement, which imposes a rule of life on earth, and in Allāh, Who combines in Himself all the elements of *hlm* and of responsibility for avenging men by chastising the guilty.

This analysis of Muslim ethics, suggested by Goldziher and restated more systematically by Izutsu, does not provoke any major objection, except that the Muslims do not appear to have consciously made *hlm* a directing principle of their conduct, even though their behaviour in fact corresponded with the definition of this multiple virtue and, in practical life, a true Muslim is necessarily *hlm*.

The proof of the survival of the pre-Islamic notion of *hlm* without any Muslim admixture is to be found in the first place in the facts put forward to explain the origin of the saying (al-Maydānī, i, 229): *aḥlam min al-ʾAhnaf*. This noble Tamimi (d. 57/656-7 [see AL-AḤNĀF]) still represents the typical pre-Islamic *sayyūd*, and the *hlm* which has made him proverbial contains the following elements: self-mastery, leniency in respect of his enemies, repression of anger, inclination towards the serious, discretion, and hostility to denunciation. After him, the man who seems to have been regarded as most *hlm* is Muʿāwiya; but, on the one hand, this caliph belonged to a dynasty which had not yet shed all its bedouin character and, on the other hand, an analysis of his *hlm* shows that he had made of it a political principle; he succeeded through his leniency in disarming certain of his enemies, and through his liberality in securing the submission of others, saying that war is more costly than generosity; such a *hlm* can in no way be regarded as a Muslim virtue (cf. H. Lammens, *Études sur le règne du calife omeyyade Muʿāwiyah I*). Al-Dījahri, who of all the ancient authors took the greatest pains to analyse sentiments and traits of
character, has no difficulty (Fadl Hāżīm *al-‘Abd Šams, in Rasā’il, ed. Sandūbī, 104) in destroying the legend of the Thus, he must in fact possess a
rules. In his Tahdīh al-akhbār (25), Miskawayh lists hilm among the qualities and defines it (232) as “the consultation of reason” (istishdrat al-‘ārīfī); al-Ghazālī, in his (book xxv) brings to reason. Ibn Sīnā introduces it into the system of Greek philosophy [see Fālāsīfī, at p. 766b]. Al-Harawi (K. al-Tāhā‘ir al-harrā‘iyīa fi l-‘āyāl al-barbīyya, ed.-tr. J. Sourdell-Thomine, in Bél., xvii (1961-2), 236, 240) regards hilm ba’d al-hudra as one of the qualities of the ruler. The author of a popular encyclopedia such as al-Ibshihi, in the 36th chapter of his Mustatraf (i, 252-65) groups together anger, hatred and jealousy, but links hilm with anger and defines it as the plenitude of reason, the mastery of self, the subjection of the passions, to the conclusion that each must try to acquire these qualities and to imitate the Prophet who was the most hilm of men.

Thus it appears that hilm is naturally regarded as a praiseworthy quality but not as a cardinal virtue in Islamic morality; in popular estimation generally restricted to self-control and the forgiving of insults, it is a quality whose effects are turned outwards; however, the thinkers and moralists tend to make the most of its importance to the passions, thanks to the intervention of reason, which must decide the conduct to be followed in any particular circumstance.

(H. M. F.)

HILMAD (HILMAD), name of a river (the Etymandrus of Arrian, the Erymanthus of Polybius, the Haštūmāt of the Avesta, the Hīdmand of the Hūdād al-Šām) which, with its five great tributaries (Khūd Rūd, Tirīn, Arghāndāb, Tarnak, Arghāsān) drains all south-west Afghanistan (see map at i, 222 above). Rising in a valley at the convergence of the Khūd-Bābā and Sangāgī rivers, the river flows in a southwesterly direction through Hāwarāt, Ta‘riff, and Dihrawat to Khāṭa‘ ‘All, where it turns westward, and finally north, to lose itself in the lakes of Sīstan. It is navigable downstream from the important crossing on the Kandahār-Harak road at Girshk. The waters of the lower Hilmad have been used for irrigation since antiquity; after the Second World War an ambitious project was undertaken to use the waters of the Hilmad and its tributaries for irrigation west of Kandahār, but it has encountered many difficulties.

(M. E. YAPP

Ahmed Hilmı Efendi, 19th century Turkish translator. Born in Uskūdar, he was trained in the language chamber [see T.R.D.EM.44A] of the Ministry of Foreign Affairs, and subsequently held a number of official appointments. He is mentioned as having been Ottoman Consul in Tabriz and a member of the Embassy in Tehran, and in 1876 was elected a deputy in the first Ottoman parliament. He died in 1878 of typhus, contracted while caring for refugees from the Russo-Turkish war, and was buried at the Karacagahmet cemetery in Uskūdar.

Ahmed Hilmı played a pioneer role as a translator of books on history and economics. His major historical enterprise was a Turkish translation and adaptation of an English book (Chambers’ Historical questions with answers. Embracing ancient and modern history, London and Edinburgh 1865). Entitled Ta‘rīkh-i ‘umāmī, this work appeared in 2 vols. in Istanbul in 1865; a second, expanded edition was published in 6 volumes in 1293/1876-7. The second edition contained more extensive treatment of Islamic history, drawn from the Şahîf‘ al-ahbār of Münedjîmîmî (q.v.). Though not the first Turkish translation of a European historical work [see T.R.D.EM.44A], the Ta‘rīkh-i ‘umāmī was the first modern work on world history published in Turkey; its appearance, which was followed by the publication of numerous other translations and adaptations of works on European and world history, introduces a new phase in the Turkish awareness of itself and its place in it. It was published under the auspices of the official Translation Committee appointed in 1865, of which Ahmed Hilmı was a member (on this committee see Mahmud Kemal İlinal, Osmanlı devrinde son sadrasamlar, 3208; Ş. Mardin, The genius of Young Ottoman thought, Princeton 1962, 239). In addition, Ahmed Hilmı is said to have published a book entitled Ta‘rīkh-i Hind, and consisting, according to ‘Oğhnamî mi’lîlîfîsî, of a translation of a history ‘written in the ancient language of India’.

Besides history, Ahmed Hilmı was also interested in economics, and in 1286/1869-70, according to ‘Oğhnamî mi’lîlîfîsî, published ‘Ilm-i tedblîr-i ûrnerî, an economic treatise translated from the German.

Ahmed Hilmı, known as Shehêbdenerzade, a Turkish journalist who first achieved prominence after the revolution of 1908, when he returned to
AHMED HILMI — HİMAR

Istanbul from exile in Fezzan, and started a periodical called İttihat-ı İslam. He also contributed to İhbar, Taşvii-ı Efker, and, later, the weekly İhtimai [see HİBAR, iv, 156-7]. He died in 1913.

**Bibliography:** Babinger, 397; *Oldmânil müstillerleri*, i, 156-7.

**Tuğlul HİMLİ**, Turkish writer and politician. Born in Eskiğumna in 1869, he became involved in illegal political activities while still a medical student. After serving a brief term of imprisonment, he fled to Europe in 1895, and joined the Young Turk group in Geneva, where in 1896 he founded, with others, the Ottoman Revolutionary Party (*Oldmânil İktisâlî Firâq';*) he was particularly effective as a writer and propagandist with a simple and direct popular appeal. In 1900, together with Abd Allah Djawed and İshâq Süküt (*g.v.*), he made his peace with the Sultan and was appointed Secretary at the Ottoman Embassy in Madrid, but later reverted to opposition. Returning to Turkey in 1908, he held various official positions and became a member of parliament. Later he joined the Kemalists and was a member of the first Grand National Assembly in Ankara. He died in 1928.

**HİMLİ PASHA** [see HÜSAVİ HİMLİ PASHA; İBRAHİM HİMLİ PASHA].

**HİMAR** (A.), donkey (fem. *altûn* and *hîmâra*). The Arabs make a distinction between the domestic donkey (*ahlî*) and the wild donkey (*waqîghi, farâ*; *'ayr al-âina*). Domestic donkeys are used to turn mills, as beasts of burden and as mounts, but although the Prophet is said to have owned one, named Yâfur, and although the animal has been esteemed by famous persons, it is not ridden by Arabs of high rank, who even employ a formula of apology when they address an *afram-* or *'ayr-* (*ahlî*), etc.) when they utter its name. The zoological works provide details of its characteristics: it is able to find its way even if it has travelled a road only once before; it is sharp of hearing; its braying, provoked by the sight of a demon (wheras when a cock crows it is said to have seen an angel), carries a great distance, and is so disagreeable that a dog howls with pain on hearing it; in order to prevent it braying a stone should be attached to its tail; if it sees a lion it either stops or runs towards it, and this saves it; it is not very prone to illness but is very sensitive to cold; if someone who has been stung by a scorpion sits back on it the pain felt is transmitted to the donkey. The uses made of the different parts of its body are innumerable. From the juridical point of view it is not generally permitted to eat its flesh [see HAYAWAN, iv] and it is forbidden in principle to mate a mare with a domestic ass [see SÂQHI].

Wild asses are all so similar to one another that there is nothing to distinguish among them. The stallion is so jealous that it tears off with its teeth any part of its body which is used for other purposes and it will not separate, it is very easy to hunt the wild ass: the hunter hides in a ravine and kills the first one which had to live in freedom on the territory of the god. Nevertheless Islam, which turned against *waqf* and the consecration of animals to divinities (*V*, 103, VI, 135 f.), intended to put an end to these pagan practices. Henceforward, the sole territory to be strictly sacred was Mecca, its inviolability having been decreed by Allah Himself (*kur’an* XVII, 91, 92, 109, 110, 111; *al-‘Ayâ‘, umda, v, 60, and 92) By extension, under the terms of a special measure made on its behalf by the Prophet, Medina enjoyed the same religious prerogatives as the Meccan *bara‘am*. But the institution of *hîmâl* was not suppressed as such: Islam simply reduced it to its secular applications. It was, accordingly, to this practice that Muhammad and the first caliphs resorted in reserving for the mounts of the Muslim armies, both for the camels acquired by the Treasury and for the smaller herds belonging to the poorer Muslims, the use and possession of certain pasturages (in the places called *Nafî‘*, *Rabadjâh*, *Sharâf*).

(J. CHELHOUD)
to pass; the others, instead of turning back, stay together and are easily killed; but this detail does not correspond with the data of poetry collected by G. Jacob (Studien in arab. Dichtern, iii, 115). It is permitted to eat the flesh of the wild ass, except for the Ḥanāfīs.

Wild asses are considered to live much longer than domestic ones (up to 200 and even 800 years!), and the breed which enjoys the greatest longevity is that known as abghādrīyya; it owes its name to al-Abū Ḥādar, the stallion of Ardashir which, having reverted to a wild state, was said to have been the founder of this breed which is considered to be the most beautiful.

**HEMAYA,** term used of practices and institutions of "protection" which are almost unrecognized by ḥibb but which were in fact important in classical Islamic society.

In one sense, where the synonym ḥafara [q.v.] is usually employed, himayā means, from the pre-Islamic period, the protection given, in return for financial compensation, by a nomadic tribe or group to the settled inhabitants or more particularly to travellers who are in the territory controlled by them; this ḥafara may be conceded in a regular manner by a head of state or may be seized by the group concerned.

In a second sense, which concerns more broadly the whole social structure of the mediaeval East, himayā is related to certain practices or institutions of Byzantium or of the late Roman Empire. There existed in the Muslim world, as in these empires, relations between patron and client; but we are not here concerned with the personal forms of this relationship (which in the early centuries of Islam were usually called the waalā of the mawlā [q.v.]) but rather with certain practical forms of "protection" of the property of men whose personal status was not, in this case, himayā is the aspect of protection by a superior which corresponds to the practice which from the point of view of the inferior is called talidīʿ or idīʿ. Fīḥk recognizes talidīʿ in a limited sense, which for it consists of "a fictitious sale resorted to by a person who wishes to protect his possessions from possible confiscation" (cf. Y. Linaut de Bellefonds, in Revue Internationale de Droit Comparé, x (1958), 513). More generally in the practice of the first three or four centuries of Islam, taldīʿa, literally "putting under protection", consisted of the "commending" by an inferior (who might be either a humble person or a person of some importance) to a superior of a possession of which the former remains the legal owner but for which, by virtue of a tacit agreement, the latter is to be responsible vis-à-vis the administrative authority and moreover particularly the tax authorities. It is true that the inferior rewarded by a fee the service rendered by the superior, but it must be admitted that, in accordance with the conditions under which the payment of the tax was made, he might often still find this advantageous. The right to receive this fee was itself the property of the superior and a himayā might be inherited like anything else which counted as property. It can thus be seen how in fact this could result in a sort of sharing of property between the two parties to the contract, and even, when the inferior party was not recognized by the superior, as was often the case, in an act of dispossess: the contract being merely a tacit agreement, it was impossible for the victim to prove his ownership against the assertion of a superior who appealed to the tax registers. And it can readily be understood how himayā, in this instance imposed by force or as a way of repaying debts, was one of the methods used by those in power to build up for themselves vast domains, in which the former owners of the land were little more than the prey of the new political or military aristocracy. Although from the 4th/10th century onwards there is no further mention of taldīʿa or of himayā in this sense, this is not because small estates were better protected, but on the contrary because on the one hand fewer of them remained and on the other the concession in new forms to the officers of the new military aristocracy of taldīʿa [q.v.] granting them all the administrative and fiscal rights over a district rendered useless to both sides the intermediate practice which until then had been current.

There existed at the same time as this himayā of land another which resembled, in greater or less degree according to circumstances, both taldīʿa and ḥafara. Important persons received or assumed the "protection" of a territory, essentially of the crops which grew from the military aristocracy, tried to regulate and discipline the practice. In the following century these himayād also disappeared as the result of the strengthening of the great governmental ḫāstās which conferred on the military chiefs more complete powers over their territories.

The name himayā was, however, to remain in use for several centuries longer as the designation of another, narrower, institution. Sometimes in towns undisciplined groups such as those of fustaʿwūn [q.v.] imposed on the merchants, for example, their "protection". But, in general, the term ḫumāt, plur. ḫumāṭ, was used for the chief of police of a quarter in a large town like Baghūd or Cairo, or of a small town; this official naturally levied for his services a himayā tax, the legitimacy of which was contested by the early jurists (on the grounds that the ordinary taxes were intended among other things precisely to meet the expenses of ensuring public order), but which had now become a tolerated custom. In the same way little local potentates continued to "protect" bridges, passes etc.

**Bibliography:** Sources and studies are given in Cl. Cahen, Notes pour l’histoire de la Himaya, in Mélanges Louis Massignon, i (1956), 257-303; see also M. van Berchem, Matériel pour un Corpus Inscriptionum Arabicarum, Jerusalem, i, no. 107, and the note by G. Wiet in JESHO, v (1962), 39.

Post-Classical

i. **The Middle East**

The term himayā, as meaning "protection", has been used in various contexts. In a popular sense, in the field of power politics, France for instance considered herself the "protecting" European power
of all Catholics in the Levant, while Russia claimed a similar role over all Eastern Orthodox subjects of the Ottoman Empire [see KOÖK-KEYMAHRA, Treaty of]. The term referred also to the status of non-Muslim members of the non-Muslim communities (Christian and Jewish) in the Ottoman Empire, especially in its Levant provinces, who in the nineteenth century enjoyed the consular "protection" afforded by a number of European powers, e.g., Austria, Great Britain, France, Italy, Russia [see BERÊTTLI, IMIYINEL].

More specifically, himayâ refers to various bilateral treaties between Britain and the shaykhy rulers of states on the western seaboard of the Persian Gulf, from Muscat (Maskat) and Oman (Umân) to Kuwait (the so-called "Trucial" Coast), in a system built up in the course of the nineteenth century on the basis of the general Treaty of Peace of 1235/1819. In return for British protection, rulers were bound by treaty to desist from acts of piracy or of war with one another. In concluding these bilateral arrangements, which gave Great Britain some jurisdiction over defense and the conduct of the external affairs of these states and principalities, the British government was motivated by the desire to protect and secure its maritime interests in the Gulf. Only since the end of the nineteenth century did other factors play a part, such as a strategic threat from the hinterland of Arabia or from other European powers (e.g., France). See the articles on the individual states: AL-BAHRAYN, DUBAYY, AL-KATAR, KUWAYT, Maskat, SHARDJAH, Umân, etc. Similar bilateral agreements exist between Great Britain and the rulers of states in South Arabia—what are referred to today as the Western and Eastern Aden Protectorates. Here too Britain's treaty obligation is to protect the independence of the various rulers who have such a relationship with her; the rulers on their part undertake not to cede any portion of their territories to another state or power, or to enter into agreements with them without consultation with Great Britain [see ÂDAN—ii, and cross-references there].

The protection exercised by Great Britain over Egypt was based not on a bilateral agreement but on a unilateral British act following the outbreak of the First World War; the Declaration of 28 December 1914 formally terminated Ottoman suzerainty over Egypt (until then an autonomous province of the Ottoman Empire, ruled by the dynasty of Muhammad 'Ali but recognizing the Ottoman Sultan as its suzerain) and legalized the status of the British occupation begun in 1882. The new status was subsequently recognized by article 147 of the Treaty of Versailles. The Protectorate was ended, as it had begun, by a unilateral Declaration of the British Government (22 February 1922). See MISR.

(F. J. VATIKIOTIS)

ii. — North Africa

(I) In North Africa, in the modern period, this term has been used officially of the protection exercised by a foreign Christian power over certain individuals, then over states.

(a) In Tunisia, the principle of the protection of individuals arose from the earlier system of the Capitulations (imtiyâzât) granted to various European powers throughout the Ottoman Empire.

In Morocco, so far as France was concerned, this right of protection goes back to the treaty concluded in 1767 between Louis XV and the 'Alâwî sultan Muhammad b. 'Abd Allâh. The protected persons were those natives (Muslims and Jews) who were in the service of the French consuls (secretaries, interpreters, guards) and of the French merchants (brokers, smugglers). This protection conferred absolute freedom of movement, exemption from dues and taxes and a guarantee against any arbitrary action by the local authorities.

During the 19th century, several agreements of the same type were concluded with other European powers, beginning with England and Spain. In 1880, Morocco was forced to accept the Convention of Madrid which laid down definitively the conditions of the protection. This applied to diplomatic personnel and to the employees of European merchants: brokers (simâsâr) and agricultural agents (mukhdâlî). One so protected was described as himâyâ, whereas a Moroccan was only ratîyya, "subject to the common law".

Those possessing this privileged status were able to escape from the normal taxes and from the judicial system, and were protected from arbitrary action and the extortion of money; thus they formed a sort of state within the state. For their part, the foreign powers desired only that the protection should be used to increase their political following. Thus we see the protection extended to wealthy individuals, high officials and even to ministers. In 1883, the powerful gasrif of Wazzân [q.v.], al-Ḥâjjî 'Abd al-Sâlîm, leader of the great religious brotherhood of the Tuhâmiyya-Tayyibiyâ (dâr al-damâna), requested and obtained the status of French-protected persons for himself and for his family. When he introduced protection in 1917, the only aim of the great statesman, the sultan Muhammad b. 'Abd Allâh, was to protect trade in his kingdom with foreign nations and thus to increase the revenue from customs. As he saw it, the benefit of protection was to be restored to the State, inasmuch as it was enjoyed by the inhabitants living in the few ports which were open to trade with the Christian countries. But the gradual increase in the number of protected persons, in the country as well as in the towns, and their evasion of their responsibilities to the state, was an important factor in the decay of the Moroccan state which reached its final stage at the beginning of the 20th century. Thus the protection of individuals prepared the way for the establishment of a protectorate over the state itself.

(b) The French protectorate in Tunisia lasted from 1881 to 1956 and in Morocco (apart from a zone conceded to Spain in the north) from 1912 to 1956. During these periods the other foreign powers gradually renounced their rights of protection over individuals.

**Bibliography:** Michaux-Bellaire, Le Gharb, in Arch. Mar., xx, 201; G. Kampffmeyer, Weitere Texte aus Fes und Tanger, in MSOS, xvi (1913), ii, 70-1; Le Tourneau, Fès avant le Protectorat, 178. (II) Among the Berbers and Arabs (especially nomads) of North Africa there existed numerous forms of protection, occasional or permanent, exercised over individuals or groups, the latter more especially in the regions (bâdât 25-sâbîna) where the government was unable to ensure security.

(a) Protection of individuals. (4) Here, as
everywhere, a guest was accorded protection for three days [see ḥārāqā]. (a) If a stranger, generally a merchant, wished to cross safely a tribe's territory, he addressed himself to a dignitary, often a descendant of the Prophet (ṣāhīf) or of a saint (mārābī), who would give him one of his servants as an escort, in return for a fee, or gave him to carry an object well known in the region as belonging to him: an iron-tipped staff, a burnous, a rosary, etc., which served as a kind of passport for the traveller. The same form of paid protection was also applied to the periodical trading caravans which plied, for example, between Tāfīlāt and Fez and Marrākush. This protection was agreed, by contract, by the whole of a tribe which supplied an armed escort.

The name of the iron-tipped staff, masīrāq (= classical misrāb) was ultimately used of all forms of protection, and it was said: X fi-masīrāq-Y, “X is under the protection of Y”. The Berbers of Morocco used in the same circumstances the word āmār, “hunting spear”.

If a burnous was given, the Moroccans called the protector kāsi, literally “one who has clothed” or ssif; sīfa referred both to the protection and to the fee. These last two terms derive from the Berber kāfas, literally “one who has clothed” or protector, the iron-tipped staff, wished to cross safely a tribe's territory, he agreed, by contract, by the whole of a tribe which requested a protector to intervene to put an end to their conflict. From the classical form ḥuzūf, “banish”, the verb has the double sense of “banish” or “protect”. Another procedure was that of the shield, a sort of blackmail in which the person entreated could not, without incurring dishonour, refuse to intervene. The same method of intimidation was also employed when begging the protection of a saint. In all cases a protector who proved false was publicly exposed to ignominy.

A different method of protection was when a person under a threat begged a dignitary to grant him shelter and assistance. One case would be that of a man who, as the result of a crime, had been forced to flee from his tribe in order to escape the vengeance of the family of his victim. He would present himself before the man whose protection he desired in the ritual attitude of the supplicant: prostrating himself on the ground between two knapsacks, his teeth and his arms crossed behind his back like a bound prisoner. He was thus in a state of ṣūdāg and said to the dignitary: āna masūdāg fih “I implore your help”. These terms come from the Berber ṣīf, theverb ṣīf has the double sense of “banish” and “implore assistance”.

Another procedure was that of the ḍr. A person who was the victim of an arbitrary action (maṣṣālam) requested a protector to intervene to put an end to his miserable state. During a ceremony consisting of various rites, the supplicant said: ḍrī iḥb, “let my disgrace be yours [if you do not see that I obtain justice]”; or: āna fi ḍrāk, “my disgrace is yours”. This procedure of a formal summons to act, under threat of the transfer of the ḍr, often came to resemble a sort of blackmail in which the person entreated could not, without incurring dishonour, refuse to intervene. The same method of intimidation was also employed when begging the protection of saints.

In serious cases such as that of the defeated imploring the mercy of their conquerors, the ritual of supplication was often accompanied by the sacrifice of a valuable animal: a bull, a camel or a horse; its throat was cut (ḥākiba), or it was ham-strung (fargiba, from the classical form urbāb). Finally, surrounding the sa'īyas [q.v.] covering the tomb of an important saint, there existed an area of sanctuary (ḥaram, hāmā, see ḥamā), where persons who were being pursued could find a sure refuge.

(b) Protection of groups. From the time of the second Arab invasion in the middle of the 5th/11th century, the group of the Ma'ākīl [q.v.] gradually occupied the pre-Saharan zone up to the Atlantic coast. They imposed their protection on the settled Zanāta in the oases and the ṣāhīf, extorting a tribute known as ḥasfāra, “protection due”, or tīnaya. Until the 20th century their example was followed by powerful nomadic Berber tribes in southern Morocco: Ayt-Khabbāsh, Ayt-Ṣaṭṭā. From the first quarter of the 7th/13th century, during the period of anarchy which preceded the disappearance of the Almohads, a Zanāta nomad tribe, the Banū Marin, had overrun northern Morocco and imposed on the settled population a ḥasfāra in return for ensuring their protection and the safety of the roads.

(c) There existed also institutions of mutual protection. In the majority of the regions in which the authority of a central power was not effective, the tribes were divided into two opposing groups, historically stable, known as ṣiffīs or laffīs. When a tribe belonging to a specific laffī was attacked by a tribe of the opposing laffī, it automatically received help from the other tribes of its laffī.

There existed also pacts (ṣakād) of mutual protection between two groups which were usually already ethnically linked. These were solemnized by a ritual fraternization marked either by a solemn exchange of items of clothing (burnous or sandals), or by a co-lacoration (usually symbolic only) making each member of one group the foster-brother of those in the other. The latter procedure was known as ṣadaljūba, from the Berber verb ṣjadū “to suck”.

It should be noted that the majority of these forms of protection were found in early Arabia and that many of them were condemned by Islam. It would, however, be rash to conclude from this that these practices were all imported into North Africa by the Arab conquerors. Any coincidence is due to independent, but parallel, efforts made by separate peoples to impose a minimum of order and justice in anarchical societies.

On the death of Yazid the governorship of Hims fell within the orbit of the Empire. There is no doubt that the name of the town is attributed to an eponym: Hims ramus, who preferred to dwell at Rastan (Arethusa). The crossroad of empires, Hims emerged from obscurity when, in the time of Domitian, it received the name of Emesa. Under Antoninus Pius, in the 2nd century A.D., Hims began to strike coins, but the town did not occupy a leading position among the towns of the Roman Orient until the young high-priest of the Sun Heligabalus was made Emperor by his troops (217 A.D.). Ruling under the name of Marcus Aurelius Antoninus, he had as successor another citizen of Hims, his cousin Alexander Severus who fought the Sassanians. In 272 Hims saw the defeat of Zenobia, queen of Palmyra, conquered by the Roman legions.

The varied soil, made up of alluvium and disintegrated basaltic concretes, favours agricultural and pastoral activity thanks to the richness of its water resources. Already in the 2nd millennium B.C. the Egyptians had dammed the Orontes and were perhaps the first to organize the irrigation system which has been perfected in the course of time. In the Middle Ages a canal led the water of Salamiyya to irrigate the cultivated land on the east of the town. A modern water system was constructed in 1938 below the last channel. Another canal leads off from the dam and branches out into several secondary canals which permit irrigation between the Orontes and Hims.

Hims is on an important crossing of routes. It is situated on a shelf, the Hims gap, which is the easiest passage from the Persian Gulf to the Mediterranean via Palmyra and which since remotest antiquity has been the channel for the produce of Mesopotamia and nowadays enables the pipelines from Kirkuk to run petroleum to Tripoli and Baniyas; it is situated also midway along the route joining Aleppo and Damascus. Before the construction of the railway the journey to Damascus took five days on horseback. The single-track D.H.P. railway, built in 1902, ensures connections with Bayrut through Rayak. is said to have been conferred on al-Nu‘mān b. Baṣhīr (d. 65/684), but many authors maintain that it went to his son Khālid b. Baṣhīr who had built a palace at Hims. In 126/744, on the death of Yazīd III, Marwān II [q.v.] intervened in Syria with the support of the Ka‘yṣ. He attacked Sulaymān b. Hīshām, who was assisted by the Kalbīs. In 127/754, Sulaymān, defeated, fled to Hims and from there to Kūfā. Hīms held out for a time against Marwān II but he finally took the town. In order to prevent the town, whose gūnd then numbered 20,000 Yamāns, from being used as a base of operations for the Kalbīs, he razed the walls. In 128/756 order was restored.

In 132/750 there appeared in Syria ʿAbd Allāh b. ʿAbīl Ṭālib [q.v.], who was to overthrow the last Umayyad, Marwān II. From that date Syria fell under the control of ʿIrāk. In 137/753, the ʿAbbāsīd caliph gave Aleppo, Kinnarān and Hīms to Ṣāliḥ b. ʿAbīl Ṭālib [q.v.]. ʿAbīl Ṭālib b. ʿAbīl Ṭālib [q.v.]. The ʿAbbāsīd period was a dark one in the history of the town; the population, mostly of Yamān origin, rose up against the Ka‘yṣ and provoked numerous punitive expeditions from the time of Ḥārūn ar-Raʾshīd (170/786-193/809) onwards. Hīms was prosperous at that period, for its revenues, according to al-Diānshūyārī, amounted to 320,000 dinār and 10,000 camel-loads of grapes. The last punitive expedition took place under al-Mustāfīn ibn Marwān in 250/864, put Aleppo, Kinnarān and Hīms under the same governor.

When the ʿAbbāsīd caliphate weakened, Abūdād b. ʿṬullūn [q.v.], the governor of Egypt, extended his authority over Syria until 264/878. The ʿṬullūnid power was to maintain itself until 286/898. In 269/883, Abūdād b. ʿṬullūn named as his representative the amīr Luʾūn ibn Kullāb who imposed the authority of the sultān al-Mustāfīn ibn Marwān upon the Kaysīs and provoked numerous punitive expeditions. The Karmātīs [q.v.] appeared at this period and sowed trouble throughout the region. In 290/903 their leader Ḥusayn, known as ʿAbīl Shābīb, came to Hims from Damascus. In order to avoid extortions the townspeople agreed to the reading of the ḥusnā in the name of the new master. The latter seized Ḥamāt, Sālābīsya and Maʿarrāt al-Sharqīyya, and provoking numerous punitive expeditions. The Hamānīs took up arms against him.

In the middle of the 10th/11th century Hīms sought the support of the Hamānīs of Aleppo to avoid falling into the power of the ʿIkshīshīd governors of Damascus. In 333/944 the Hamānīs were victorious at the battle of Rastān on the Orontes and Sayf al-Dawla [q.v.] seized Hīms, which was to remain in the hands of his dynasty until 406/1016. In 356/967, on the death of Sayf al-Dawla, Hīms had been governed for a year by Abū Fīrās [q.v.]. The illustrious poet attempted a rebellion against Saʿd al-Dawla but was defeated, taken prisoner, and executed on 2 Dhuʾ al-Muḥarram 1/137/4 April 628.

In the following year Nicephorus Phocas occupied Hīms during his victorious campaign in Syria, transformed the great mosque into a church, had divine service celebrated there, and then set fire to it. In 362/973 Nicephorus Phocas departed and the Hamānīs governed the town again. In Rādīb 364/March-April 975, the Byzantine general John Trizimīs succeeded in occupying a large part of Syria and levied tribute from Hīms, Damascus, Bayrūt and Baʿlabakk. At this time there appeared a Turkish amīr, Alpātkan Baṣālūr, who revolted at Hīms against the Hamānīs of Aleppo; having failed to receive the Byzantine reinforcements on which he was counting, he was forced to withdraw. Three years later Saʿd al-Dawla granted him Hīms as a fief. The memory of this amīr has been preserved by a Kūfī inscription, the sole remaining trace of a minaret which it was demolished in 1312. Hīms remained one of the staxes in the Arabo-Byzantine rivalry and was set on fire by the Greeks in Rabīʿ II 373/September 983.

In 385/995 the Emperor Basil II established his authority over Aleppo, Shīyazār and Hīms. This town was taken only after a lively resistance; it was then devastated and then placed under the authority of the Byzantines as dux of Antioch. In 390/1000, on the orders of the basileus, the town was burnt.

In 406/1016 Ḥamānīd power came to an end and Aleppo fell to the Mirdāsīs [q.v.]. Ten years later Ṣāliḥ b. Mirdās [q.v.], amīr of the Banū Kitāb, was in control of Hīms, then, in 420/1029, Shībīl al-Dawla [q.v.] regn b. Mirdās governed the town.

From the middle of the 5th/11th century the Fatimids extended their power into Syria, and Hīms did not escape them. A pro-Fatimid amīr, Khalāf b. Mūlaʾīb [q.v.], was in command at Hīms in 475/1082 and caused much trouble by his brigandage and depredations. In 483/1090, in response to a complaint about him from the Seldūk princes and commanders in Syria, the sultan Malik Shāh wrote instructing them to attack and remove him. Hīms was taken after a siege. Khalāf was captured and sent to Isfahān. The town was given to Tāḍāl al-Dawla Tūṭūnshī. Then in 487/1094 it passed to his son Riḍwān, ruler of Aleppo. Riḍwān’s abag, the amīr Dījānāh al-Dawla Ḥusayn, after quarrelling with his ward, took refuge at Hīms and made himself independent there in 490/1097. Later, when the Franks arrived, he was to join forces with Dūkķāsh against them.

After the capture of Anṭākiyya (491/1098) the Crusaders made a first attack southwards; they sacked Maʿarrāt al-Nuʿmān but besieged Hīms in vain. The town was then under the amīr Karadʒīa, a former mamlūk of Malik Shāh, representing Dījānāh al-Dawla. Contrary to a legend accepted by d’Herbelot and later by Pococke and Le Strange, the Franks did not succeed in capturing the town, which they named Tarrasīh although they knew the name Tarīsīh. Dījānāh al-Dawla was assassinated by three Ismāʿīlīs inside the great mosque of Hīms. Prompt action by Dūkķāsh, the ruler of Damascus, forestalled a Frankish attempt to take advantage of the situation by attacking Hīms, and brought the city under Damascene control. Ibn al-Aṯīr’s story, which puts the murder of Dījānāh al-Dawla a year earlier than all the other sources, and thus places it at the moment when Dījānāh al-Dawla was preparing to attack Raymond of Saint-Gilles, together with his account of Raymond’s immediate attack on Hīms, may be dismissed. The following year Dūkķāsh died and Ẓahir al-Dīn Tughtakīn succeeded him, leaving Karadʒīa as governor of Hīms. From this period Hīms became a huge military camp against the Franks, an assembly-point for troops, an arsenal, a depot for heavy siege equipment and in addition it supplied large contingents for the war.

In 506/1112, Khayrkhān (Karākhān) succeeded his father as master of Hīms. Two years later Nadīm al-Dīn lī Gāhrīī appeared outside Hīms but Khayrkhān overcame his opponent in Shābān 508/ January 1115.

In 512/1122 Ẓahir al-Dīn Tughtakīn b. Būrī [q.v.] took Hīms and imposed his suzerainty upon Khayrkhān. Five years later the abag of Damascus
attacked Hims once again but had to retreat before Khayrkhan, who had received reinforcements. In the middle of 570/beginning of 1175, Saladin took Hims and Hamât. Four years later, when he reorganized northern Syria, he gave back the town to his cousin Nâşîr al-Dîn Muḥammad b. Shirkhâl. In the siege of Damascus by the Franks of the Second Crusade, Hims served as a rallying-point for the Franks of the Second Crusade, Hims served as a rallying-point for the under the command of the prince of Damascus al-Ashraf GhÂzÂl. In 581/1186, al-Malik al-Mudâjdâd Asad al-Dîn Shirkhâl II succeeded his father at Hims. In 602/1205, he fought the Hospitallers of Hîshân al-Akrâd [q.v.]. In 604/1207, he had to appeal to the Ayyubid prince of Aleppo, al-Malik al-Zâhir Ghâfî for aid. The following year al-Malik al-Mansûr İbrâhîm took command at Hims; several times he had to push back the Provençaux of Tripoli and the Hospitals of Hîshân al-Akrâd, and to assure a better defence he supervised the maintenance of the town walls and restored the Bab al-Masdûd. In 623/1226, Hims took part in the quarrel of the Ayyubid princes, İbrâhîm being the ally of al-Malik al-Ashraf Mâsâ successfully defended the town against the Mongols. In 658/February 1260, the town was taken by the Mongols, Mâsâ recovered his possessions and took command of Hims and temporarily there was an independent Hims. In 661/1262, with him the Asadi dynasty, which had ruled at Hims for almost a century, was extinguished. The town lost its independence; from this time forth it was commanded by a deputy governor and was sometimes dependent on the amir of Hämât and sometimes on the ruler of Damascus.

In 680/1281, Hims won the victory of Kalâwûn [q.v.] over a coalition of Armenians and Mongols. From the reign of Muḥammad b. Kâlâwûn onwards Hims played no further political rôle; it was governed by an amir of a thousand troops and, later on, the command was given to an amir of ṣâbibâna. None of these princes were able to profit any lasting advantage on the history of the town. In the citadel, the nûdîb was a mamlûk of the Cairo sultan. At this time an official pigeon-house was installed at Hims to ensure postal contact with Kârâ in the south and Hämât in the north. In Rabî‘ I 699/December 1299, Ghâzân crushed the Mamlûks at Hims but did not remain in the district. According to the geographer al-Dinâqî, Hims was at that time the smallest governorship in Syria and comprised Shamša,
Shumaymis and Salamiyya; the niydba of Hims was included in that of Damascus. The anarchy prevailing in Syria in the 9th/10th century does not seem to have arrested the economic life of Hims, if the Mamluk decrees of 817/1414 and 844/1440 are to be believed, for these indicate the important position held by the weavers in this town where wool and especially silk had been worked for centuries, rivalling Alexandria in the quality and beauty of its products. Timur Lang (q.v.), after taking Aleppo in 803/1400, seized Hims and stifled smuggling from Syria to Damascus. During the following century no event of importance occurred at Hims, the territory of which was exposed to the depredations of Bedouins. In 926/1520 the town was menaced by the powerful tribe of the Al Fadl b. Nu‘ayr; it was relieved with the assistance of Sibây, the governor of Damascus, who on this occasion seized an abundant booty consisting particularly of camels and sheep. When, in 927/1516, the Ottoman sultan Selim had subjected Syria, Hims became one of the five niydbas attached to Tarābulus. On the death of the Sultan in 926/1520, the governor of Damascus, Djanbird al-Ghazali [q.v.], proclaimed himself independent and seized Tarābulus, Hims and Hamāt. The post of governor of Hims was given to the muhaddam Ibn al-Harīfsh. We have a picture of Hims in the 10th/16th century by Pierre Belon, who, as a town with good walls of beewn stone and with a citadel built, he says, by the Romans. Although the surrounding walls were almost intact, the town within the walls was quite ruined. Within the walls, says the French traveller, “there is nothing beautiful to be seen except the bazaar and the bazestan in the Turkish style”. Under Suleymān I and Selim II several surveys of lands, of the adult male population, and of the tax-returns were made for the towns and provinces of Syria (for Hims, see B. Lewis, The Ottoman archives as a source for the history of the Arab lands, in J.R.A.S., 1951, 152-3). Through the Ottoman fiscal regulations we have information on the economic activity of Hims at this period. The yoghourt brought to the town by the Turkomans was exported as far as Damascus; the watermills for corn and sesame were numerous, and the oil-presses were very busy. Grapes remained one of the country’s main resources. There were good harvests of rice which had just been added to the products of the cultivated marshland for feeding the town. The main industry was weaving. Hims was one of the largest centres for silk, the neighbouring mulberry trees feeding the silkworms, and here were made mottled fabrics, run through with gold thread, which were exported as far as Istanbul. At Hims, camels and cattle in transit from Damascus towards Aleppo met the flocks of sheep and goats coming down from Aleppo and Hamāt for Damascus.

In the course of the centuries, the Ottomans destroyed the gates in the town walls one after the other and in 1785 Volney could describe Hims as “a town, formerly strong and well populated, now no more than a fair and large bled village where there are no more than 2,000 inhabitants, partly Greeks and partly Muslims. There resides an agha who holds on sub-lease from the pasha of Damascus all the countryside as far as Palmyra. The farming lease was given to the pasha for 400 purses or 500,000 livres, but it brings in four times as much” (cf. Voyages, 1823 ed., iii, 18-9). The agha was of a local family. In 1246/1831 Hims was seized by adventurers and then fell into the power of İbrahim Pasha who, until 1256/1840, was to represent the authority of Muham-
a starch-works, a glucose factory, a sugar factory (1949) and a vegetable-oil factory which treats cotton and sunflower-seed (1951). Finally, from the far distance it can be seen the petroleum storage-tanks shining in the sun, while tall chimneys indicate the presence of an important oil refinery. The oil is transported by pipe-line from Kirkuk to Tarabulus or Baniyas but, to meet the needs of the country, some of it is refined at Hims.

Situated at the crossing of important routes, an agricultural and industrial centre, Hims plays a leading rôle in the Syrian economy.

ARCHAEOLOGY

The rectangular enceinte of antiquity had almost entirely disappeared in 1895 when M. van Berchem passed through Hims. Of the gates only the names remain, a few stones still indicating the position of some of them. Starting from the north-east there are around the town the following gates: Bab Tadmur, where a Bab al-Masjid, on the western side, left a few blocks of stone indicating the site of the Bab al-Sibâ'; not far away was the Bab al-Turkman. The Bab al-Masjid, on the western side, restored several times during the Middle Ages, still bears the appearance of a well-maintained fortified work with the remains of the bases of columns; a square tower stood on each side of the gate. The road which leads back in a northerly direction is called Shari Mughbir, thus preserving the memory of the vanished moat. Another gate, the Bab Hûd, opened into the wall before one arrived at the north-west corner, which was marked by three round towers that are still standing. Finally, in the north face near the great mosque there opened the Bab al-Sûk which no longer exists.

The Citadel: In the south-east corner of the town, dominating the town with its silhouette, the citadel rose up on a mound 275 m in diameter. The origin of this tell, which seems to be artificial, is thought to be Hittite or Aramaean. Numerous travellers describe it up to the beginning of the 19th century. During the Egyptian occupation (1831-40), Ibrahim Pasha destroyed it and left the citadel in some of it is rather the tomb of Khalid b. Yazid b. Mucawiya who built a palace nearby or even that of Khalid b. al-Siraj which has now disappeared. At the north front a particularly important tower, repaired in 1952, exists in part and bears two inscriptions of 594/1198 and of 599/1202 in the name of the Asadi al-Malik al-Mudjahid Shirkuh. There remain of the Ayyubid and Mamluk citadel three characteristics: the minaret, partly shaded by a vine, is used for prayer in the open air. The prayer-hall and the mastaba, partly shaded by a vine, is used for prayer in the open air. The prayer-hall and the mastaba, partly shaded by a vine, is used for prayer in the open air. The mosques: Most of the ancient mosques in Hims still preserves about twenty hammams, some of which have been made into bus garages. Although the Khân al-Sabîl, where the traveller Ibn Djubayr stayed, seems to have disappeared, there remains a Khân Asad Pasha and a Khân al-Harîr, which in fact is a hawârîyya where silk has been sold for centuries. The Khân, paved in the Middle Ages, are now tiled, and not only the cloth bazaar but also those of the goldsmiths and of their neighbours the cloth-makers are very busy. The sâk of the goldsmiths is in the centre, where the vegetable and dairy-produce markets are on the edge of the commercial area, together with the basket-makers, the saddlers, the metal-workers and the blacksmiths.

Places of pilgrimage are numerous outside the old town (see al-Harawi, Ziyadât, 8-9); the most frequented is the Dâr al-Mutâ, situated in the northern suburb. The fame of this sanctuary goes back at least to the Ayyubid era and retained its attraction under the Mamlûks. Khâlid b. al-Walîd, who died at Medina, and his wife Faḍâ'ah are said to be buried there; Yâkût wonders whether this is not rather the tomb of Khâlid b. Yâqûb b. Ghann, the Kuraysh who

HIMS

conquered the Dījarra [q.v.]. The original mausoleum was situated by the side of a mosque; it was all demolished and rebuilt in the Ottoman style on the model of the mosques of Istanbul by Naqīm Pāgha, the governor of Syria. The sultan Ābd al-Ḥamīd devoted 6,000 dinārs to works which were completed in 1331-1313. The prayer-hall is almost square (52 m x 50 m) covered by nine cupolas, of which the central cupola, which is 12 m in diameter, rises to 30 m and rests on four strong pillars. A public park has recently been made of the vast cemetery which surrounded the monument. Some of the burials date back to Roman times, as is testified by the sarcophagi found there.

Among the maṣār, those of two Ayyūbīd princes, the Masjīd al-Khūṭr to the south of the town, where the Ayyūbīd prince of Ijāmat (mashhad) of Khalid b. al-Aṭīr, and the prayer-hall is the Malik Djaqīlīyya, dated by an inscription of 842/1437. Finally, the existence of two large ruined dwellings may be indicated: the Bayt al-Mālāh and the Bayt Mālāh, vestiges of former prosperity.

The ten churches at present in Hims, none presents any great archeological interest, neither the Greek Orthodox church of Mār Elyān nor the former seat of the Syrian Catholic Patriarch Umm al-Zannar, since the buildings are modern.

Outside the walls many water-mills grind grain on the Orontes; the most ancient are the Tahun Tafcun al-Khusuba, dated to 975/1567 by a Turkish inscription, and the mill of al-Mimas Zannar, since the buildings are modern.

The battle was fought out at the depression (wāḍī) of Hims near the tomb (mashhad) of Khalīd b. al-Walīd. The Mongol army numbered 80,000, of whom 50,000 (according to one version) or 44,000 (according to another) were Mongols. The rest were Georgians, “Rūmīs”, Armenians, Franks and Muslim apostates (murtadda). As they advanced, the flank of their mawdūz wa-tārikh majdīn Hims wa-ṭārikhā, in ASAS, x (1961), 5-56.

HIMS (The battle of). The first great trial of strength between the Mamlūks and the Mongols took place more than twenty years after the battle of ‘Ayn Dijālt [q.v.]. The battle was won by Kalawīn, the real architect of the victory was undoubtedly Sultan Baybars [q.v.], who, in the seventeen years of his rule (685/1281-692/1293), built a war-machine which, in spite of the decline it underwent during the four years following his death, proved to be strong enough to break one of the mightiest armies which the Mongol Ilkhāns ever put into the field.

In the battle of ‘Ayn Dijālt the Mamlūks were a new and unknown enemy to the Mongols, who were, therefore, taken by surprise. By the time of the battle of Hims, however, the Mongols had become well acquainted with this army by a long series of encounters, so that they came to Hims very well prepared. As Baybars al-Mansūr justly remarks, never before had the Mongols marched on Syria with such huge armies; hence the victory of Hims was far more remarkable than the preceding ones (fol. 1172b-13).

The battle was fought out at the depression (waṭī) of Hims near the tomb (mashhad) of Khalīd b. al-Walīd. The Mongol army numbered 80,000, of whom 50,000 (according to one version) or 44,000 (according to another) were Mongols. The rest were Georgians, “Rūmīs”, Armenians, Franks and Muslim apostates (murtadda). As they advanced, the flank of their mawdūz wa-tārikh majdīn Hims wa-ṭārikhā, in ASAS, x (1961), 5-56.

and of a number of Mamlûk amîrs with their private armies. At its head were placed the bedouins of Syria, the band of Qâsâ b. Muhammâ. The maysara, strengthened as a result of the warning of the Mongol deseter, consisted of the Zâhiriyâa of Baybars under the command of Sunîr b. Al-Âshkâr, and of a number of Mamlûk amîrs with their private armies. At its head were placed the Turcomans and the troops of Hîsân al-Âkrâd. The diâllâh, which served as the vanguard of the kalb, consisted of the viceroy (wâdîâb al-salâmâna) and other amîrs with their private armies as unspecified number of Qâibânî’s mawâlân. Sultan Kalâwûn was in the kalb, under the Royal banners, having with him 4,000 picked soldiers of the kalâb, 800 Royal Mamlûks and an unspecified number of his own mawâlân. The composition of the ġânâhîn is not mentioned in the sources. Shortly before the battle the Sultan chose 200 of his own mawâlân and, leaving his banner, went with them to the top of a hill overlooking the battlefield. Any tâfî [m.], which had been shaken by his orders a reinforcement.

The maysara of the Tatars dealt at first a heavy blow to the Muslim maymana, but could not shake it. The Egyptian maymana counter-attacked quickly, and routed the Tatar maysara. On the other side of the battlefield the maymana of the Tatars succeeded in inflicting a heavy defeat on the Egyptian maysara, and with it was routed the left part of the centre (ḏanâb al-kalb-al-sayyar). Both the defeated maysara wing and the victorious Tatar wing had no idea of what was going on at the other end of the field, and they went on with their flight and pursuit. Part of the routed Mamlûk maysara reached Şâfâd another part reached Damascus, and a third part arrived as far as Gâza. The pursuing Tatars halted after a while, dismounted and waited for the rest of the Mongol army to join them, but as their fellows did not appear, they decided to go back to the battlefield. (The features common to all battles between the Mamlûks and the Mongols are discussed above, s.v. HARR, pp. 187-8). There the Muslims went on winning, but their strength was already failing. Fortune was, however, on the side of the Muslims, for the Mongol commander, Man-Kutîr, wrongly concluded that the army confronting him was still very strong. In fact, however, Kalâwûn and his army had only 300 (or 500 according to one version) or 1,000 (according to another). With this small force Kalâwûn attacked the Tatars and defeated them. Meanwhile the victorious maysara of the Tatars returned to the battlefield. In order to conceal the whereabouts of his army from the returning Tatars, Kalâwûn ordered his drums to be silenced and the Royal banners folded. His ruse succeeded, for the Tatars passed by him without noticing anything. As soon as they had their backs to him he attacked them from the rear, and inflicted upon them a heavy defeat. The number of the Tatars killed during their retreat far exceeded the number of those who died in the field of battle.

**HIMYAR** [see YAMAN]. **AL-HIMYARÎ** [see IBD. AL-MUN’IM AL-SAYYID AL-HIMYAR].

**HINÀ, BANû (HINÂWî),** a settled tribe of inner ʿUmân, southeastern Arabia, in earlier times of considerable political and military importance and, since Shaʿbân 1373/May 1954, again prominent by one of its members, Qâibân b. Alî b. Hîlîl, became an ʿÎdî mawla of ʿUmân. Banû Hinà (mostly ʿIbdâls) were one of the two leading factions in the civil war of the early 12th/18th century in ʿUmân. Led by Kaṭâfî b. Mubîrâk (known as al-Ḵuṣayyîr, “the Short”) they and their allies were opposed by a group led by the Banû Gâhîrî (mostly Sunnîs). Since that time all the tribes of ʿUmân have aligned themselves with these factions as Hinâwîs, usually groups of traditionally southern descent, or as Gâhîrîs, generally tribes of inner ʿUmân.

The chief settlements of Banû Hinâ are al-Ğâhîfât, residence of the shaykhly section known as Aġwâl Zakrî, and Balad Sayt. A section known as al-Mâlghârîm inhabit the Diâbâl al-Kawr area, while other members of the tribe share the village of Sayfân with the Banû Shukâyî. The profession qaṭîb, “Abî b. Zâhir b. Ghuṣûn, is established at Muṣâyţî, the chief village of al-Ḥubûs tribe (3,000), where in 1364/1945 he was acting as wâli of the Sultan of Muscat and Oman. Many of the group of Banû Hinâ who occupied the lower section (al-Sufâla) of Nazwa moved to al-Ğâhîfât after the events of 1377/1957 (see ʿUmân).

Nearly all the members of the Banû Hinâ make their living on small agricultural holdings in inner ʿUmân. Lucerne and wheat are the principal crops grown in addition to the date palm.

**HINÂTA (a.),** embalming. The root is common to the Semitic languages and meant at first “to change colour”, especially in ripening fruit (hînta, “wheat”) and then the stain left by fragrant oils etc. Both senses are preserved in Arabic and Hebrew. Hântâ (Ar.) is explained as one who follows the trade of hînta; Samʿâni explains both hantî and hâmntî as corn-chandler. Aramaic alone seems to have hadînta meaning embalmer. Hântî is perfume or scented unguent, but always in connexion with death; “when Arabs prepared to fight, they put hantî on themselves and made themselves strong for death” (“Abîd b. Al-Âbrâs, 1913), 77. Ṭâbît b. Ḳays, who carried the flag of the Anṣâr, anointed himself, put on grave clothes, dug a hole in which he sank to his shins and fought from it till he was killed. This custom is thrown back to Ṭamûd; when they knew that destruction was certain, they anointed themselves and put on skins as grave clothes. The practice was not confined to fighters, for a poet says “every one alive will be anointed (for death)”; it was not entirely utilitarian, for when a man is at the point of death there should be some
perfume "to honour the angels". Martyrs, including a pilgrim killed by a fall from his camel, were not anointed. The Gospel provides parallels, "She has anointed my body for the burial" and the spices carried to the tomb.

Hanūf was of different kinds; "the best hanūf is camphor" is contradicted by "camphor and hanūf" and "put hanūf on my head and beard and camphor on the places of prostration", which are the parts of the body that touch the ground during prayer, the forehead (forehead and nose), palms of the hands, knees and toes. Hanūf is either sweet rush or some mixture, musk, ṣanbar (probably saffron), camphor, Indian reed and powdered sandal wood. Some insisted on dry camphor and others forbade saffron for males. As a scent with the dead, musk is more pleasant than camphor but the latter is better for drying the body, keeping it cold, hardening it and keeping away insects. Camphor should not be put in the water with which the body was washed but in the body after the hands have been dried. Some said that hanūf must be put on the body; some that it might be between the grave clothes but not on them; others allowed it on the clothes and on the bier. How was hanūf to be used? All the terms employed are ambiguous but there are so many that there is no doubt as to what is meant. It was put on the eyes, nose and ears, on the belly and under the chin and armpits, on the navel, between the thighs, behind the knees and on the soles of the feet.

Some would close the orifices of the body with cotton wool, some put it in the anus and one writer adds that the object is to keep out worms. A theorist forbade the extravagant use of cotton wool, for the corpse should look like one and not like a bundle. But cotton wool should not be put in the nose, throat or anus. There was a custom of putting a knife or a riblet on the body after it had been dried. Some said that hanūf must be put on the body; some that it might be between the grave clothes but not on them; others allowed it on the clothes and on the bier. How was hanūf to be used? Persian literature are therefore covered under two separate headings, namely, 'Sind' and 'Hind'.

(3) Geographical position, boundaries and area. Muslim geographers, following Claudins Ptolemy, divided the inhabited quarter of the earth (al-rub' al-mashā'īn) into seven climes, each running parallel to the equator from east to west, and covering the area north of the equator up to the Island of Thule as described by Ptolemy. India was usually placed between the first and the third climes. In the Iranian system of climes, which divided the 'world into nine by drawing several circles of equal size and placing six of these around the fourth in such a way that they touched each other, India was placed in the second hikmāt (al-Masudī, Murādī, i, 181). Although the Muslim geographers were acquainted with the Greek division of the land-mass into three continents: Asia (Asiyā), Europe (Urāfa) and Africa (Labīyā), they did not use it much. Al-Birūnī, however, describes India as part of "the northern continent" (meaning thereby Asia) and bordering on the 'Great Ocean' (al-Bahr al-'jam, the Indian Ocean) (A. F. I. [for this abbreviation and others employed in this article, see Bibl.], i, 197; Șīfā, 5). His image of India was of a plain surrounded on three sides (north, west and east) by lofty mountains forming a part of the long range of mountains that extended from China in the east and crossed the whole of Asia and Europe latitudinally, reaching as far as the lands of the Franks and the Galicians. India was placed to the south of this long range and the waters (rivers) of this range flowed down through the Indian plains (A. F. I., i, 198). Al-Birūnī was the only Muslim geographer who conceived of India as having been a sea in the geological period and perhaps the first scientist to present this concept. He arrived at this conclusion by observing the different types of stones, round and big, near the mountains (of the north) and both above and under the surface of the earth, but becoming smaller further away and finally getting pulverized into sand near the mouths of the large rivers and near the sea. He says, "... if you consider all this, you could scarcely help thinking that India has once been a sea which by degrees has been filled up by the alluvium of these rivers;..." (op. cit., i, 198).

Again, according to the Muslim geographers and navigators India lay on the great mediaeval sea-route between the Persian Gulf and China. The Arab navigators of the early Middle Ages divided, for navigational convenience, the seas lying along this route into 'the seven seas'. These were: (1) Bahir Fars (the Persian Gulf); (2) Bahir al-Lāwri (after the ancient name of Gujarat, Lār [Larke of Ptolemy], from Sanskrit Lalā, see Sauvaget, Abbâr, 35, note 4-3); this was the portion of the Arabian Sea stretching between Oman and the Laccadives; (3) Bahir Harkand (Bay of Bengal, from Sanskrit Hārketiṣya representing Eastern Bengal; kand may be due to the influence of the Iranian kand meaning 'town'; in M. Filliozat's view it may have some relation with the Tamil word Lānākandam, one of the nine divisions of the world as described by the Indians, see Sauvaget, Abbâr, 35, note 4-2); (4) Bahir Kalah (the Strait of Malacca; Salahat, from Malay selat, salat, meaning 'strait', see Abbâr, 4); (5) Bahir Kardandj (Panduranga?); (6) Bahir Sanf (the Sea of Champa; the Kingdom of Champa lay between the sea and the Kingdom of Thal, i.e., the Sea of Prakrit, 16); (7) Bahr al-Sin (the Sea of China).

(d) Boundaries and area: For the Merchant Sulaymān, India was more extensive than China, in fact twice its size (Abbâr, 26; cf. Ibn al-Fakih, 16), and according to al-Ya'qūbī, India extended from the region of China in the east up to Daybul in Sind, and from Trāg up to the Arabian Sea and Hījiqās (1, 93). Al-Masūdī [q.v.] describes India as a vast country comprising land, water and mountainous regions. The limits of India, according to him, extended up to 'the kingdom of the Maharādī' (Sumatra) in one direction and adjoined Khorāsān, Sind and Tibet in the other. Sind was the borderland between 'the kingdom of Islam and Hind' (Murādī, i, 162-3, 349); its boundaries are described as follows: Ar ḫūsh (the Ocean of India, the Arabian Sea (of the west), Daybul to the south) and the regions adjacent to China in the north (Tanbīk, 32). Al-Ī斯塔ḵrī gives the measurement of India's length from Makrān, across Kannawī up to Tibet as being about four months' journey, and its width, from the Sea of Fārs across Kannawī, as being about three months' journey (cf. Ibn Ḥawqāl, Šīrāz, 16). As for its boundaries, to the east lay the Sea of Fārs, to its west and south 'the Kingdom of Islām' and to its north, China. Tibet, according to this author, lay between China and India, (the land of) the Kharulghus and the Topkhumuzz and the Sea of Fārs. Part of it was in India and part in China (al-Ī斯塔ḵrī, 16, 19). Sind, according to al-Ī斯塔ḵrī, included Makrān, Tūrān and al-Budha. To the whole of its east lay the Sea of Fārs and to its west Kīrman, the desert of Sīkān and its districts. To its north lay the country of al-Hind and to its south a desert stretching between Makrān and al-Kufs, on the rear side of which lay the Sea of Fārs. The Sea of Fārs encircled these lands on the eastern side and to the south of this desert, because the sea stretched from Şāymūr (Chaul, in the Kolaba district of Bombay) towards the east roughly up to Tīz of Makrān; then it turned round this desert until it formed an area around Kīrman and Fārs (Jafri, 7). Exactly the same boundaries of...
Sind are given by Ibn Hawkal (Jafri, 12), who included in India, Sind, Kāghmīr and a portion of Tibet (Sūra, 9). Describing India's boundaries, he says that to its east lay the Sea of Fārs, to its west and south Khūrāsān and to its north China (Sūra, 12). According to him parts of Tibet lay in India and parts in China (Sūra, 15).

An exaggerated account of India's limits and boundaries is, however, found in Marvazi who says: "Their lands are numerous, with extensive features, and the outlying parts of them are far-flung, stretching from the borders of Makrān up to Tibet, so that they are considered the extreme bounds of the world. On cultivation and procreation cease and the existence of animals comes to an end" (Marvazi, 39). The anonymous author of Ḥudūd al-ʾDālam gives the following boundaries of Hindustan: east of it lay the countries of China and Tibet; south of it, the Great Sea, west of it the river Mīhrān (Indus); north of it, the country of Shākanān and some parts of Tibet (Ḥudūd al-ʾDālam, 86); and the boundaries of Sind given by him are: east of it is the river Mīhrān; south of it, the Great Sea; west of it, the province of Kirmān; north of it a desert adjacent to the Marches of Khūrāsān (Ḥudūd al-ʾDālam, 122).

The apparent disparity between al-ʾĪṣṭakhri and Ibn Hawkal on the one hand and the author of Ḥudūd al-ʾDālam on the other as noticed in the above accounts with regard to the boundaries of India, is not actual but due only to a difference in the way of looking at the maps used or drawn by them. Generally speaking, if the maps and the descriptions are read correctly, the Sea of Fārs or the Great Sea (Indian Ocean) lies to the south of India; China and Tibet to the north and east; Kirmān, Sīdījāstān, Kḥūrāsān, etc., to the west; and the relative positions of Sind and Hind are correct. Again, according to the reckoning of al-ʾĪṣṭakhri and Ibn Hawkal, the length of India from the borders of Makrān up to Tibet would be about 3600 Arabian miles or 3840 geographical miles (counting 1 day's journey to be an average of 30 Arabian miles). Similarly, the width of India from the Indian Ocean (Sea of Fārs) across Kānnavājī would be about 2700 Arabian miles or 2880 geographical miles.

(6) Regions: The western, north-western, southern and eastern regions of India were thoroughly surveyed by the early Muslim geographers and travellers both for political and for commercial reasons. Among the early writers Ibn Khurradāddibhī, the Merchant Sulaymān, al-Balādhūrī, al-Masʿūdī, al-Yaʿqūbī, Kudāmā b. Dīaʿfar, Ibn Rusta, Ibn al-Fakīh, al-ʾĪṣṭakhri, Ibn Hawkal, al-Mukaddasī, al-Khwārizmī and al-ʾIdrīsī give topographical accounts of western and southern India. Of these, those of al-Balādhūrī, al-ʾĪṣṭakhri, Ibn Hawkal and al-Mukaddasī are of special importance with regard to Sind and the Panjab. They not only furnish us with information on important cities and towns of these regions, but give distances and describe roads; their maps of these regions are of great value. The majority of the later Muslim writers seemed to have borrowed from them. The itineraries given by al-ʾĪṣṭakhri and Ibn Hawkal covering the region of India and some new areas not mentioned by the Muslim writers up to his time. Al-Bīrūnī was critical of the Indian method of measuring distances; so he uses the farshakh for his measurements. The Arab geographers also used the (Arabian) mile in their topographical accounts. Al-Bīrūnī gives the distances between important towns and ports of India and gives an approximate idea of the coastal regions by naming the important ports. From his topography one can get a sufficiently clear idea of the road-systems of India of this period. His information covers practically the whole of northern and central India as well as the western and eastern regions and parts of southern India. Moreover, his account is original and covers for the first time a detailed account of Kashmir. From the accounts of the Muslim geographers some idea about the regions of the country may be formed. Roughly speaking the following regions are described by them: (1) Sind, covering the region between Daybūl, al-Mansūra and Mūltān, including the lower course of the Indus; (2) Turān (covering parts of Turān or Kirmān and south Khurasān and to its north China); (3) Utrakhar (the coast along the coast of Sind and Baluchistan); (4) al-Kaṭṣmīr al-uṣūf (or al-Kaṭṣmīr al-ʾKhāridjī (the Panjab and the Himāchal Pradesh); (5) Dījazār al-Maydīn and Kaṭ or Kīš (Kachh and Kathīwār); (6) the land of al-Dijur or Dījarāt or Lāra-dešā (Gujarat and parts of Rajastān); (7) Mālīw (central India); (8) al-Kumkam (Konkan, Maharashtra); (9) Mīlbār or Manīlā (Keralā); (10) Kanara (Kanadā); (11) Māhī (Mahārāshtra); (12) Sūra (along the coast of Sind and Baluchistān); (13) Ṣūrān or Uwārīrāh (Orissa); (14) Bankāla (Bengal); Kāmrūr or Kāmīrūr (Kamarupa, Assām); (15) Gangāsāyāra (mouth of the Ganges); (16) Assām; (17) Naypāl (Nepal); (18) the mountains of sulphur 'or Ḥimān-mānīa (the Himalayan ranges); (19) Kaṭmīr al-dāḏgīlī or al-Kaṭmīr al-ʿulāt (Kashmir Valley); and (20) the country of Kanādī or al-Kanāndī, 'or Madhyadešā. It was so called because it was the centre of India from the geographical point of view in that it lay halfway between the sea (Indian Ocean) and the mountains (the Himalayas), and was in the middle of the hot and the cold provinces and also between the eastern and the western frontiers of India (A.l., 119).

(f) Ports and towns: Some of the important ports on the western coast of India with which the Arab navigators were acquainted and which are described by Arab geographers and travellers in their accounts are: Daybūl (mediaeval main port of Sind, near modern Karachī), Barīḏi or Barāḏ (Broach), Sīnān (Sāndān, 50 miles north of Thana, Bombay), Sūbārā (Sopara, near Bassein, in the Thana district of Bombay), Tānā (Thana), Shāymūr (modern Chaul, in the Kolaba district of Bombay), Sīdījāstān or Šāykhān (modern Chach), and the main mediaeval port and the capital of Sind, Ibn Bīṭāṭa, 363-4; but Nānair identifies it with Shādāshīvagad (Nainar, 74)), Hannaur (Honavar), Mānḍārāv or Manḍā (Mangalore), Ḥill (the name of the mediaeval kingdom, Ili or Elī, has left a trace in Mount Delly. The mediaeval port is probably now represented by the village of Nileshwar, a few miles north of the promontory, cf. Gibb, Ibn Bīṭāṭ, 364), Pāndāraya (identified with Panḍanarī or Bārūva (the region facing Ceylon on the Indian coast); (12) al-Maʿbar (the Coromandel Coast, Madras); (13) ʿUrsān or Uwārīrāh (Orissa); (14) Bankāla (Bengal); Kāmrūr or Kāmīrūr (Kamarupa, Assām); (15) Gangāsāyāra (mouth of the Ganges); (16) Assām; (17) Naypāl (Nepal); (18) the mountains of sulphur or Ḥimān-mānīa (the Himalayan ranges); (19) Kaṭmīr al-dāḏgīlī or al-Kaṭmīr al-ʿulāt (Kashmir Valley); and (20) the country of Kanānūr or al-Kanāndūr, or 'Madhyadešā. It was so called because it was the centre of India from the geographical point of view in that it lay halfway between the sea (Indian Ocean) and the mountains (the Himalayas), and was in the middle of the hot and the cold provinces and also between the eastern and the western frontiers of India (A.l., 119).

The main sea-ports of the east coast of India described by the Muslim geographers are: Ballībul (probably Negapatam; it was from here that the Arab sea-route to the east bifurcated. Arab boats lay at anchor here for some months; then, those bound for China sailed straight to the Nicobar Islands, and others, going to Bengal and Assam, sailed north), Kandī (Conjeevaram) and Samundar or Sumundar (an important mediaeval Indian port visited by the Arabs. V. Minorsky places it south of Baruva and north of Ganjam, see Ḥudūd al-ʾDālam, 244. However, the more probable identification is with the Sunur
Kāwān (Sonargaon) of Ibn Baṭṭūṭa, see Gibb, Ibn Baṭṭūṭa, 271).
The number of inland cities and towns described by Arab writers is too large to be mentioned here fully. We may, however, enumerate some of the more important towns: Mandāra/Mansūriyya (the Arab capital of Sind); ruins of the town 25 miles to the north-east of Haydārābd, Sind; Nirn (at the site of the present Haydārābd, Sind); Māltān, Kannawedī, Nahrwāra/Anbālā (Patan, Gujarāt); Asāwāl (Asāpallā, near Ahmedabad, Gujarāt); Kanbāyā (Cambay) and Mālwā (Mand or Udījadīn); then, Tānjōre, Rāmēshgār (Rameshwaram), Mandārānīn (Mandāpputtān, Mandapām), Sonnāt (Sonnath), Dāhār, Uzayn (Udījadīn), Māghār (Mewār), Mahārā (Mathura), Kālāndār, Kālīrī (Gwalior), Kāgūrārā (Khaḍjūrāh), Aḥjīdhā (Adhijhada), Bānārāsī (Varānasi), Bāṭlpūtra (Patna), Munkīrī (Monghyr), Kūzdrār (Khozdrār), Arūr (Rohri), Parāsvar (Peshawar), Dījēlām (Jhelum), Sālkūt (Sialkot), Rādjkīri (Radjīpur), Sunnām, Mirāt (Merut), Tānēshgār (Thanesar) and Adhīstān (Srinagar); then Uvvārīh (Uryaḍēśa), Prayaḵ (Aluhammad), and Vayhind (Oihn, which lay between the Indus and the Kabul river, just above their confluence, Ṣulād al-Qāμ), 253-4); then, Dili (Deli), Dalwatābd the proposed capital of Muhammad b. Tughluk (Gibb, Ibn Baṭṭūṭa, 204), Hānsī, Sūkāwān (Satgaon), Surun-kāwān (Sonargaon), Koel (old Aligah) and Maitra (Madura).

(g) Islands: The word ḍastra was used by the Muslim geographers both for an 'island' and a 'peninsula'. Thus, al-Maṭḥ (Kathiarāv), Kūlām Malāy (Quilin), etc. are described by some as 'islands'. Among the islands of India, the Maldives (al-Dibadāṭ) (meaning 'the Islands' from Sanskrit Diva, with the Perso-Arabic plural termination -ad[dt]), the Andaman and the Nicobar (Lanahādāṭ) Islands are described in great detail. The Maldives were famous for boat-building activities and for the craftsman-ship of their artisans. These islands were ruled by a queen, who had a capital on the Island called Aḥbīrīya (probably Ptolemy's Eirthn, see al-Idrīsī, India, 24 and [comm.] 174).

Arab merchant boats on the way to China also called at the Andaman and Nicobar Islands. The inhabitants of the former are described by Sulaymān as cannibals, having curly hair, ugly faces and long legs and those of the latter as being white in colour and having scanty beards (Aḥkār, 5, 8).

(b) Climate, Soil and Crops: On the basis of the information provided by the Muslim geographers one can form a rough idea of the climatic conditions, the soil and other topics relating to physical geography. The climate of India is generally described as hot and some geographers compare it to that of Ethiopia and describe the common features between them. Al-Bīrūnī describes the Hindu division of the year into three parts; 1. Varaḥkāhā, beginning with the month of Aḥšāḥdā; 2. Ṣīṭakālā (i.e., the winter); and 3. Uṣghnākālā (i.e., the summer). But his actual description of the climatic conditions seems to pertain mainly to northern India. He says, "the rains are the more copious and last the longer the more northward the situation of a province of India is, and the less it is intersected by ranges of mountains". Mūltān had no rains but in Bhāṭal and Indravēdī (Antarvedi, the old name of the lower Doab, extending from about Etawah to Allahabad, 231) it rained for four months heavily and incessantly, beginning from Ṣāhādā, as though buckets full of water were being poured out. Around the mountains of Kashmir up to the peak of Dīdārī it rained heavily for two and a half months, beginning with Šravāṇa; on the other side of this peak, there were no rains. Hence, Kashmir had no ṣarājkāhā but continuous snowfall during two and a half months, beginning with Māgha, and shortly after the middle of Chaitra, it melted away in for a few days, melting the snow and cleaning the earth. This rule, he says, has an exception; however, a certain amount of extraordinary meteorological occurrence was peculiar to every province of India (op. cit., i, 211-2).

The rainy season was considered to be the most important season of India by almost all Muslim geographers. Sulaymān describes the rains as being very heavy (Aḥkār, 15). The soil of India is usually spoken of very highly by the Muslim geographers. Passages relating to cultivated lands and agriculture are also found in their writings, as are those pertaining to waste-lands, mountainous regions and deserts.

Seasonal crops are also described by Muslim geographers. Ibn Baṭṭūṭa, describing those of northern India, mentions the following as the grains of the kharīf crop: al-ṣubhārī (a kind of millet) in abundance; al-shāmāk, Panicum frumentaceum, (called to-day sānā or sānād in the eastern districts of Uttar Pradesh, and sānaw in its western districts and in Panjab); it was cooked with buffalo milk and formed the food of the 'good and poor people'; al-māṣ (Indian peas); al-māḥā (moong); lābyā (haricots); al-māt (moth); and barley. The grains of the rabi crop were: wheat, chick-peas and lentils. Rice had three crops in the year and India produced a type with large grains. Sesame and sugar-cane were cultivated in the kharīf season. Referring to the food of the people of Nahrwāra (Patan, Gujarāt) al-Idrīsī says that it consisted of rice, chick-peas, beans, haricots, lentils, Indian peas, fish and animals that died a natural death (al-Idrīsī, India, 60-1).

(i) Mountain ranges: Not all the Muslim geographers had an overall view of the mountain ranges of India, though many of them describe ranges that they knew either through first-hand knowledge (which was very rare) or through earlier original sources. The Himalayas, the mountains of Kashmir, the Kamarupa Mountains (Kāmarūṇ), the ranges of the Western Ghats, the hills of Kathiarāv (Girnar Hills, Maruṣi, 43), the mountains of Thana (Tāhā) and a few other mountain ranges of India were known to many, but few go into the details of these ranges or describe their exact locations or directions. A very early attempt, though based on Ptolemy's account, was made by al-Kūhwārizmī, who gives the geographical positions of many of the Indian ranges (see Śīrāl al-arād). Following the same Ptolemaic system and sources, al-Idrīsī also gives the Ptolemic names of many of the Indian mountains (e.g., Ḫindarān, Gr. Ouindion = Vidhya Mountains) and adds some additional ones known to the Arabs.

A clear picture of India's mountain ranges is, however, presented by al-Bīrūnī and by the Hудād al-Qāام. Al-Bīrūnī describes mainly the mountains of the north, north-west and the north-east. Describing the Himāvanta (Himalaya) he says that the mountains formed the boundaries (north, north-west and east) of India. In the middle of the snowy
Himavanta lay Kashmir, and they were connected with the country of the Turks. "The mountain region becomes colder and colder till the end of the inhabitable world and Mount Meru" (A.I., i, 258).

Al-Biruni conceived of the Himalayas as extending longitudinally; the rivers that arose on their northern side flowed into the Caspian Sea, the Aral Sea, the Black Sea or the Baltic, whereas those that arose on the southern slopes passed through India and some flowed into 'the great ocean' (Indian Ocean), either singly or jointly (op. cit., i, 258). The mountain region of Kamru (Kamarup, Assam), according to him, stretched as far as the sea (i, 281). He also describes some Tibetan ranges, on the authority of a certain traveller. From Bhōtēshar (bhauta-śvara, lord of the bhautas, or Tibetans, A.I., annotations, i, 318) to "the top of the highest peak is 20 farasāh. From the height of this mountain, India appears as a black expanse below the mist, the mountains lying below this peak like small hills, and Tibet and China appear as red. The descent towards Tibet and China is less than one farasāh" (op. cit., i, 201-2).

He describes Kashmir as being surrounded by "high and inaccessible mountains" (i, 206). Kulārdjak mountain is described as a cupola, and here the snow and inaccessible mountains "comprise the Himalaya, Karakorum, Pamir and the ranges north longitudinally; the rivers that arose on their southern slopes passed through India and some flowed into "the great ocean" (Indian Ocean), either singly or jointly (A.I., i, 258). The mountain peak of Kamru (Kamarup, Assam) is described as stretching as far as the sea (i, 281). He also describes some Tibetan ranges, on the authority of a certain traveller. From Bhōtēshar (bhauta-śvara, lord of the bhautas, or Tibetans, A.I., annotations, i, 318) to "the top of the highest peak is 20 farasāh. From the height of this mountain, India appears as a black expanse below the mist, the mountains lying below this peak like small hills, and Tibet and China appear as red. The descent towards Tibet and China is less than one farasāh" (op. cit., i, 201-2).

He describes Kashmir as being surrounded by "high and inaccessible mountains" (i, 206). Kulārdjak mountain is described as a cupola, and here the snow and inaccessible mountains "comprise the Himalaya, Karakorum, Pamir and the ranges north longitudinally; the rivers that arose on their southern slopes passed through India and some flowed into "the great ocean" (Indian Ocean), either singly or jointly (A.I., i, 258). The mountain peak of Kamru (Kamarup, Assam) is described as stretching as far as the sea (i, 281).

Besides these two main river-systems, among the other large rivers of India described by the Muslim geographers are: the Narmada, SarsutI (Sarasvati), the Brahmaputra; the Meghna, called "the Blue river" by Ibn Batūta (Gibb, Ibn Batūta, 272); a Nahr al-Tīb is also mentioned by some (al-Idrisi, India, 111-2, tentatively identified by me with the Godavari or the Kistna). There are many other smaller rivers and rivulets described by them, the details of which it is not possible to give here.

(k) Flora: Among fruits, the citron is specially described (al-Masūdī, Murūdī, i, 238). According to Ibn Batūta sweet oranges were found in abundance in India, but the sour variety was rare. There was a third variety with a taste between sweet and sour and about the size of a citron (al-īm) (Ibn Batūta, iii, 120). Jack-fruit (Ar.: al-īqāt wa l-ībarr, Malayalam: chakka; Hindi: kaṭhal) is mentioned (al-Idrisi, India, 34; Ibn Batūta, i, 127). Mango (Ar.: al-anbā, Hindi: ām; Marathi: amb), and the condiments prepared from it are described in detail (al-Idrisi, India, 34, 35; Ibn Batūta, i, 125-6; Iṣṭākhrī, 173; Ibn Hawkal, 320; al-Muḥammadī, 482). It is compared with peach in taste. Maḥvūd (Bassia sparsifolia or B. amara) was, according to the lattī (iii, 129), found in abundance in Delhi and some other parts of India. Jāman (Ar.: al-yamānā, Eugenia jambolana) is described by many Arab geographers (Iṣṭākhrī, 173; Ibn Hawkal, 320; al-Muḥammadī, 482; al-Idrisi, India, 42; Ibn Batūta, i, 128). Figs and grapes were rare in India according to the Arab writers. Among some fruits mentioned by Ibn Batūta (iii, 125-9) are tēndā (tendā is Diospyros ebenum or pluotinosa); kaṣrā (kaṣera is a fibrous root eaten as a fruit, Scirpus kysor, see Fr. tr. at iii, 129). Al-Kalḵašandī (Spies, 49) describes several fruits: sugar-cane, bananas, date-palms, peaches, mulberries, jujube, quince, pears, apples, and green and yellow melons. Sugar-cane (kaḥs al-sukkar) is usually described by the writers on Sind and Makrān, where sugar-candy (Ar.: al-fanidh, spiced sugar-candy: ἵππεια) was manufactured from it in abundance.

Of the plants and woods, bamboo (al-ḳasb or ḵhayawūrīn) is described as growing in abundance in the mountains of Thana (Maharashtra), see al-Idrisi, India, 62-3; the plant whose bark was used by the ancient Indians as paper is called by al-Masūdī bāṣhī (Murūdī, i, 202), but al-Biruni gives the correct spelling, tārī (tār, Borassus flabelliformis),
A.I., i, 171. This was not the same as bhoojjattar-bark which came from a tree said to be a kind of birch (Betula khoujpra) used in making babu-snakes (Shakespeare, s.v.).

The betel leaf (Ar.: tarnbili, Hindi: pān; leaf of Piper betel) was according to al-Mas'udi (Murādī, ii, 84) very popular with the Arabs of Yemen and Hīdżār, and especially in Mecca. The coconut tree and the pepperplant (al-fūjī) are described by many. Al-bahābām (Brazil-wood, Caesalpinia sappan) was found in many parts of southern India (Al-Biruni, India, 63-4). Indian cotton is described as being superior to that grown in Baghdad (al-Kalkašandī, Spies, 93). Aloe-wood (al-'ud) grew in abundance in the mountains of Kamarūp (Assam) (al-Ifrīṣī, India, 64) and the Indian variety is described as the best in the world. It was called Bahkālī (of Bengal) and Samandarūk (of Samundar, see above), see al-Bīrūnī, Shi'ī, 128. The banyan tree is mentioned by many writers (see al-Mas'ūdī, Murūdī, ii, 81-3).

A variety of vegetables and aromatic plants are mentioned, e.g., cucumber, pumpkin, egg-plant, turnip, carrot, asparagus, ginger, onion, garlic, fennel, thyme, cardamom, tamarind (Ar.: thamar) and the Indian variety is described as the best. Among other plants, thyme, cardamom, tamarind (Ar.: thamar) and the pepperplant (al-fūjī) are described. For making ornaments, etc. Strange (al-Bīrūnī thought it a commodity used for making ornaments, etc).

(ii) Fauna: A variety of Indian wild and domestic animals are mentioned, but the elephant occupies the most important place in the geographical accounts for its various qualities and its great size (Ibn Khurrādaḏbih, 67; al-Ifrīṣī, India, 36; Ibn Rūsta, 134; Marwāzī, 46-7; Buzurg b. Shahrīyāt, ʿĀdīḏb, 163-5; al-Mas'ūdī, Murūdī, iii, 11-20). The Indian rhinoceros (al-baktī) is also described for its commercial value. Its horn was a very precious commodity used for making ornaments, etc. Strange stories connected with it are also mentioned (see Ibn Khurrādaḏbih, 67-8; al-Mas'ūdī, Murūdī, i, 385-7; al-Ifrīṣī, India, 30-1).

(ii)—ETHNOGRAPHY

The Indian sub-continent has been divided since 1947 into the two nations of India and Pakistan, with populations of 439,234,771 and 93,720,613 respectively (all statistics refer to 1961). The 82,536,614 Muslims of Pakistan comprise 89% of the total population (97% in West Pakistan and 80% in East Pakistan), the only sizable minority being the 4,386,623 caste Hindus and 4,993,046 scheduled castes in the latter Province. India's population contains 46,939,357 (10.69%) Muslims.

The proportion of Muslims is greatest in the areas of the Indian sub-continent as follows:

1.23%. Diammu and Kashmir contains 2,432,067 ed. M. J. De Goeje, Leiden 1906 (BGA, iii); Marwāzī = Sharāf al-Zamān Tāhir Marvāzī on China, the Turks and India, Ar. text ed. with Eng. tr. and commentary by V. Minorsky, London 1942; Nainar = S. M. H. Nainar, Arab explorers' knowledge of southern India, Madras 1942; Shakespeare = J. A. Shakespeare, Dictionary of Hindustani and English, and English and Hindustani, London 1849. (S. MAQBUL AHMAD)

Bibliography: in the text, where it has been convenient to employ the following abbreviations (for further to those listed at the beginning of the volume):

Baluchistan and Sind, where the density is often less than 10 per sq. mile, matched in India only in western Rajasthan. The net increase in population, and the consequent high densities in certain regions, pose the most severe problems of land shortage and create a need for urgent economic development.

Several physical types can be distinguished in the sub-continent. There are few Muslims amongst the Mongolid peoples in the Himalayan region or amongst the Veddoid tribal peoples in the hills of central and eastern India; most are either of the short-nosed, dolichocephalic Mediterranean type associated with the pre-Aryan population, or of the taller, fairer and dolichocephalic Mediterranean type. These latter types are mixed in the various regions, though the former predominates in the south and the latter in the north-west, and it would be erroneous to give the terms Dravidian and Aryan to them, these being best used for the two main families of languages spoken in the sub-continent.

Muslims in each language area speak the regional tongue, but many also have a knowledge of Urdu, particularly in West Pakistan, the Gangetic plain, and those parts of India where Muslim princes ruled before 1947. Diacritical features, such as dress, headgear and type of beard may distinguish Muslims from others; so may diet, styles of poetry and music and other secular cultural traits. On the other hand, some social features are common to all inhabitants of both nations.

The overwhelming majority of the population of the sub-continent is rural (82% in India and 87% in Pakistan). Pastoralists are found in the more arid zones; estates growing rubber, tea and coffee exist in both countries and have an economic importance stronger links with urban markets and with wider economic activities. In India, their importance varies partly with the statuses of the Hindu castes from which many were converted, and partly with the degree to which they have been able to maintain and wherever necessary adapt economic and political positions acquired before and during the period of British rule to conditions in independent India. In Pakistan, of course, Muslims fill virtually all economic and political roles.

The urban population lives both in small towns which function as markets and administrative centres, and in the larger cities. Pakistan has three of these, viz., Karachi (1,926,000) [see KARACHI], Lahore (1,297,477) [see LAHAWR] and Dacca (556,712) [see DHAKA]. India has 12 cities with over half a million inhabitants of which the largest are Bombay (4,152,056) and Calcutta (2,927,289). The process of industrialization has produced a growing managerial and professional middle class and a skilled labour force drawn from different strata of the rural population. This is larger in India than in Pakistan, where industrialization started to a large extent only after 1947, and it supplements the traditional urban classes of traders and artisans, notably those of the Memon, Bohorah and Khodja communities, whose members play an important
part in the economy of western India and Pakistan. The most important social distinction among Muslims is between the Ashraf, Muslims of foreign ancestry, and those descended from local converts. The division among Ashraf between Sayyid, Shaykh, Mughal and Pathan is recognized throughout the sub-continent. Sayyids are those reckoning descent from the Prophet through his daughter Fatima; Shaykhs are said to be descended from the early Muslims of Mecca and Medina; the Mughals entered the sub-continent in the armies of the dynasty of that name; and the Pathans are members of Pashto-speaking tribes of north-west and Afghanistan. Muslims of this twofold role, pirs have considerable spiritual and secular influence, particularly in West Pakistan where many of the society which surrounds Muslims in India.

Cross- or parallel-cousin marriage amongst many castes. The Sayyid is hypergamous; they observe rules of restricted interdining or divorce and polygamous marriages support, by a liberal interpretation of Qur'anic injunctions, a general policy in favour of male collaterals, except when the former have themselves married agnates. Pakistan law has now started to replace such customary law by Islamic personal law in this and other domestic contexts. For example, new provisions safeguarding divorce and polygamous marriages by councils of prominent men.

Social distinctions in Pakistan, as well as being between Ashraf and non-Ashraf are also between groups of different socio-economic status, especially between landowners and artisans. The Sayyid is given the highest social status and the Musalli the lowest according to values attached to their occupation and descent; but there are no ritually-based restrictions on social intercourse of the kind existing in the society which surrounds Muslims in India. Hence, stratification in Pakistan is based more on property being divided amongst both sons and daughters, customary procedure has normally excluded daughters in favour of male collaterals, except when the former have themselves married agnates. Pakistan law has now started to replace such customary law by Islamic personal law in this and other domestic contexts. For example, new provisions safeguarding divorce and polygamous marriages support, by a liberal interpretation of Qur'anic injunctions, a general policy in favour of increased women's rights.

The vast majority of Muslims are members of the Sunni sect, and of these some two-thirds of the Muslim population of both countries adheres to the Hanafi legal school, those belonging to the Shafi'i being found mainly among Mappillas; Sunnis with Wahhabi tendencies exist in Uttar Pradesh, East Pakistan, and in the northwestern areas of West Pakistan. There are, in addition, smaller groups of Sunnis, of which the most important are the Memons, to be found in the major cities on the west coast, the Mahdawis of Gudjarat and the Dikris of Baluchistan. Lastly, mention must be made of the Ahmadiyya sect whose two branches, the Lahawri and the Kadiyan (the latter now settled in Rabwah, West Pakistan) are proselytizers overseas and active in the educational and social fields at home. Of the Shi'i, the bulk of the Ijna'-'ashariyya division is found in Uttar Pradesh and thereabouts, with Lucknow (Lakna) as the main centre. Of the Isma'ili, Bohoras and Khodjas (including the Agha Khani sect) are found in most major cities, especially in western India and in West Pakistan.

At a district level from these divisions lies the network of allegiances held by a very large number of Muslims to pirs. Some of these pirs are members of bai'char Shi'i orders, of which the most important are the Chishtiyya, the Suhrawardiya, the Kadiyya and the Naqshbandiya (qq.v.); others are members of bi'char orders (see IBAHATIYYA); and yet others are not formally adherents of any order, but are simply ascetics with personal followings. The orders are centred at major shrines, such as those of Khwaja Mu'in al-Din at Admari and Shaykh Farid al-Din Shakarganj at Peshawar for the Chishti order; but besides these there are many minor shrines whose guardians (sometimes the descendants of the person buried there) have taken on the duties of a pir. These include the instruction and spiritual guidance of disciples (murids) who may enter the order or may remain as lay disciples, and the provision of aid for secular problems such as illness and family difficulties to both disciples and other followers. The roles of spiritual guide (mureghid) and of general helper are combined in the pir, but a person can have only one pir as his mureghid, whereas he can go to various pir for aid. As a result, the role of pir has considerable spiritual and secular influence, particularly in West Pakistan where many
of the main shrines are situated, and where Sufism first entered the sub-continent. Distinct from these activities is the worship at the mosque. Most villages in Pakistan have a mullah and there are often several mosques, one of which is used for the Friday prayers. In many cases, however, the mullah has less influence than has the pir. Formerly, there was considerable syncretism of Hinduism and Islam, particularly in the Pandjâb and its environs and among the less educated; there are references to the mixed composition of devotees at shrines and to the image of saints being given both Hindu and Muslim aspects. Since 1947, however, this pattern has greatly diminished, though examples of it are still to be found in rural India.

Detailed ethnographies of the Muslims of the subcontinent are rare, and a great deal of research needs to be carried out before an authoritative account can be given of the social organization and culture of Muslims there and of their relations to fellow citizens of other religions.

(A. C. Mayer)

iii. Languages.

The presence of four great language families in the sub-continent is due to several waves of invasion by different ethnic groups in prehistoric and early historic times. The oldest such family appears to be the Mundâ (which, with Khati spoken in the Assam hills and classified with the Mon-Khmer family, is sometimes regarded as "Austro-Asiatic"; but not enough is known about the affiliations of Mundâ for this interpretation to be acceptable to all scholars), spoken by over 6 million speakers, of whom the Santali, with over 3 m. speakers, are the most numerous. Small though the numbers are, the Mundâ languages are important in Indian linguistic history, partly as providing the linguistic substratum for some languages now classified in other families, and partly as a source of borrowed words and constructions in other, more important, languages. These languages have had no connexion with Islam.

The Dravidian (Sanskrit Drâvidâ-) family extends mainly over southern India, and its original connexions with language families outside India have not been determined. It is generally assumed that the Dravidian speakers occupied a much more extensive area of India, including the north and north-west, before the Aryan invasions; both the presence of a pocket of Dravidian speakers, the Brâhui, in Balochis-

than, and the linguistic evidence of early Dravidian influences on Sanskrit, are consistent with this assumption. The problem of the language of the inscriptions of the seals found in the Indus Valley civilizations of Harâppâ and Mohenjodâro is not at present soluble; internal philological evidence from the Rigveda suggests that these cities were those overrun by the early Aryans ca. 1500 B.C., but this neither proves nor disproves that their civilization was Dravidian. There are now some 108 m. speakers of Dravidian languages: 30 m. Tamil, in Madrâs; 17 m. Malayalam in Kerala; Kannada (Hosapura) 17 m., in Mysore; 38 m. Telugu, in Andhra; rather under 1 million speaking Tulu, and another 3 m. speaking the "tribal" Dravidian languages in north Madrâs, Ûrûs, and districts of central India, of which Gondi, with 14 m. speakers, is the most important; recent figures for Brâhui are not available, but there are probably less than 50,000 speakers. Of these languages Tamil, Telugu, Kannada and Malayalam alone have any written literature, but in these four the literature is rich and, at least in the case of Tamil, goes back to the early centuries of the Christian era. Brâhui is the only Dravidian language to be spoken exclusively by Muslims; some others are spoken by small Muslim minorities, e.g., Malayâlam by the Mâppilla [q.v.] community in Kerala; Tamil by some Muslims in Madrâs state and in Ceylon, having a small Islamic literature (see Tâmîl); Kannada and Telugu to a lesser extent in Mysore and in the former Hyderabad state [see HAYDARABÄD], where the preferred language of Muslims is Ûrû or Dakhîn (see further below).

The Indo-Aryan languages [q.v.], the Indian branch of Aryan or Indo-Iranian, the most easterly representative of the Indo-European language family, were introduced into India during the Aryan conquest of the second millennium B.C. The earliest literary remains show little difference between the Indian side, as represented by the hymns of the Rigveda, and the Iranian side, as represented by the Gâtähas of the Avesta. The Rigveda represents a north-west Indian linguistic development; a more central variety of the Indo-Aryan speech became elaborated and "purified" (sam-vatâ or a[v]a-) into [classical] Sanskrit, the language of the sacred texts of Hinduism. The position of Sanskrit in India has been comparable to that of Latin in Europe: a language cultivated for religious and literary purposes, and consequently enjoying a high prestige; its artificial form has been preserved to the present day, and its influence has been considerable and constant on all the other languages of India, Dravidian as well as Indo-Aryan. Sanskrit has had a little importance for Islam in India: several rulers have patronized Sanskrit poets and Sanskrit learning; translations have been made at their orders from literary and religious works [see, for example, DÄRÄ GURÜH]; and a few Sanskrit inscriptions refer to the works of Muslim rulers and others. From colloquial dialects originally contemporary with Sanskrit arose the Prâkrit ("natural") speech (including the language of the Avestan inscriptions; cf. one of the sacred languages of Buddhism; Sauraseni and Ardhhâmâ-gâdhi, the languages of Jainism), which by about the end of the first millennium A.D. had become the early stages of those different modern Indo-Aryan languages which are now spoken all over north India and Pakistan.

There are some 320 million speakers of Indo-Aryan languages in India. The following figures, reduced to round millions, are based on the 1962
census returns: Marathi, with Konkani, 35 m.; Urdu, 23 m.; Pandjabi 21 m.; Gudjarati 20 m., Bhili 24 m., Rädjátáhiñi dialects 15 m.; Pahári speeches 44 m.; Sindhi 14 m. These figures do not, of course, include speakers of Urdu, Bengali, Pandjabi and Sindhi in Pakistan. For most of the languages the areas in which they are spoken is obvious, as since 1936 India has been organized on a system of "linguistic states": thus, Gudjarati is the language of Gudjarat, etc. Hindi [q.v.] above includes both Western Hindi and Eastern Hindi, which properly belong to different groups of the central speech; Urdu [q.v.] is linguistically a form of Western Hindi, separated by higher vocabulary and by script (see further below); Western Hindi, written in the form of script called Nágarí or Devanágarí, is now the official language of the Indian Union, and it may be suspected that the figure given above has been somewhat inflated by Indians anxious to show the national language as their mother-tongue, as the 1961 census seems to have been carried out without any discrimination on the part of the recorders. Hindi and Urdu [see also the art. HINDUSTÁN] have as their homeland the western U.P. (United Provinces [scil. of Ágrá and Awadí] = Uttar Párdha), especially the upper Ganges dásbáh around Máríthá ("Méerut"); but they, or their lowest common denominator, the Hindustání, are spoken over the whole of northern and western India and western Pakistan as a lingua franca, and Urdu (or, in the south, its archaïc sister Dákhni) is the common language of Indian Muslims. All these Indo-Aryan languages, Urdu not excepted, are influenced to a greater or lesser degree by borrowings from Sanskrit. The most important of these languages, in the Islamic world, are firstly Urdu, Bengali, Sindhi, and in Britain and India, national and official languages of West and East Pakistan, both with a considerable amount of Muslim literature of all genres; Sindhi is most usually written in a modified variety of the Persian script by Sindhi Hindúus as well as by the Muslims of Sind, but has little literary cultivation; Hindi, on the other hand, although thought of usually as a "Hindu" form of language, has a considerable Muslim element in its extensive literature, both mediaeval and modern under Islamic influence and modern under 19th and 20th century Muslim writers, and indeed some modern writers have published virtually the same works in Hindi and Urdu forms; Pandjabi is used beside Urdu as the speech of Muslims in the Pandjáb, although the bulk of Pandjabi writing is Sikh inspired and in the Gurmukhi script; Gudjaráti is the common speech of Muslims in Gudjarát as well as an impure Urdu with many Gudjaráti loans, but except for a little religious and sectarian literature is not much cultivated by local Muslims for literary purposes; Gudjaráti is also the Indian language adopted by the Parsí community.

The Iranian branch of Indo-Iranian is represented in Pakistan by Balcíñ with perhaps 1 m. speakers, an archaïc variety of Persian; and by Pagháñ [q.v.] with about 2 m. speakers, an archaic variety of Persian; and by Pashto [q.v.] with perhaps 7 m. speakers, an archaic variety of Persian; and by Pashto [q.v.], with about 2 m. speakers in Pakistan and many more in Afghanistan, with a considerable literature of its own in a script modified from that of Persian, and in some use also as a lingua franca in the north-west; it has borrowed much from Indian sources. There are also a few minor Iranian tongues, known collectively as Ghalá, in the Pámír region. By far the most significant of the Iranian languages in India, however, is Persian itself. Nowhere now a mother-tongue of any community in the sub-continent, it was for long the medium of communication of the Muslim élite and the major literary vehicle of Islam in India, the official language of the Mughal court as long as it lasted and of some independent states (e.g., Háraldarábád) until the present century, and in the late 18th century even the proceedings of the English courts of the East India Company were recorded in Persian; it was a necessary subject of study for the educated Hindú as well as for the Muslim until English became the ascendant language in India, and it was probably through the Hindú scribes—mostly of the Dásbáh class—during the Mughal administration that large numbers of Persian words and expressions became current in north Indian languages; the Indian contribution to Persian literature is considerable [see IRÁN, Literature], the various histories compiled under the Muslim rulers being the prime source of Indian history for the mediaeval period. Persian is also the usual language of Muslim inscriptions in India, except for the pre-Mughal period in Bengal [see SINDH]. Besides its importance in its own right, Persian has exercised a deep influence on the vocabulary of all Indo-Aryan languages (and indeed to a lesser extent Dravidian languages also), most especially Hindi and Urdu; but whereas Hindi, especially the mixed variety which emanates from Indian official sources, draws its culture-words and expressions of modern abstract concepts from Sanskrit, Urdu continues to draw on Persian for such expressions, including a vast corpus of words borrowed or derived from Arabic. The effect of these progressive changes has been to make modern Hindi and Urdu almost mutually unintelligible, although they are essentially the same language; Hindi has probably advanced further than Urdu in the direction of unintelligibility to the uneducated peasant. Urdu, and to some extent Bengali, Pandjabi, and Gudjaráti, have also borrowed from Persian certain of its literary genres; the gházál, for example, is not known in Hindí or Maráthí literature. Of other Indo-Iranian languages, lying between the Iranian and the Indo-Aryan branches, are the Dardic and Káfír languages [q.v.], although the former are probably to be looked at as a group of Indo-Aryan languages which, isolated from the innovations of IA in the plains, have developed on their own. Of the finely divided sub-continent languages in the north-west of Pakistan and Kashmir, are numerically insignificant, and have no literature, except for Káshmíri [q.v.] itself, which has 2 m. speakers in India and perhaps 1 m. more in Pakistan.

The fourth language family represented in the sub-continent is the Tíbeto-Burman, introduced particularly in north-eastern India by migration rather than by invasion. It includes Tibetan itself and some closely related Himaláyan languages, a group of eastern 'pronominalized' Himaláyan languages with a Mundá substratum, the Boro and Nágá groups in Assam. These are all minor tribal languages of no numerical significance and of no importance for Islam, except only for Búlít spoken by Muslims in the north of Kashmir and written in a form of Punjabi script and made to look more familiar by some. One language spoken in the extreme north of Pakistan has not yet been related to any other language family; this is Burushaski [q.v. in Supplement]. Of the non-Indian languages spoken in the sub-continent by far the most extensive is English, which, introduced by the East India Company, quickly became the important language of commerce and later of general communication for the educated
Indian. It is still an official language of government in both Pakistan and India, is the general vehicle of higher education and hence the vehicle for the diffusion of European culture and ideas in both dominions, and is indeed the only pan-Indian language (the known English has more appeal than the unknown Hindi for the south Indian). There is extensive publication in English in both India and Pakistan, including a vigorous daily press; there are many specialist and popular Islamic publications, and probably English is of more account than are Persian and Arabic in maintaining touch with the doings of the rest of the Islamic world. In the 18th century Portuguese was an important language of trade, which lingered on in Bengal, in the face of heavy English competition, until the 1820s (T. W. Clark, *The languages of Calculutta*, 1760-1840, in *BSOAS*, xviii (1956), 433-74); it was in use also in the ports on the west coast of India, and was in official use beside Konkani in Goa until the departure of the Portuguese; there is a considerable Portuguese loan-word element in most Indian languages. French was used as a language of administration in the former French possessions, but had very little effect on Indian languages beyond providing for some a window on European culture; this aspect has in fact been extended in independent India through the French cultural centre in Pondicherry.

The Arabic element has been referred to above in connexion with Persian, which is linguistically the source of most of Arabic borrowing; but Arabic is of considerable importance in its own right as the language par excellence of Islam. It has been studied in the madrasas as the essential linguistic tool of Islamic studies since the first establishment of Islamic power in India, and has been the vehicle of much writing in India on Kur'anic exegesis, hadith, fiqh, tasawwuf, and grammar. The earliest inscriptions of the Dihli sultanate are in Arabic, and Arabic was used in preference to Persian in the inscriptions of pre-Mughal Bengal; but it never seems to have been used as the language of an élite as was Persian, and as a spoken language seldom went beyond the purpose of theological discussion. The exception was among the bands of Arab mercenaries who were much in demand at some courts. Some Semitic or Hamitic language was presumably once spoken by the Habshî [q.v.] community, but no study of the modern Habshî communities, even at Djandjira, has been made by a competent scholar to determine the affinities of their present language.

Indian languages are little spoken outside the subcontinent (Ceylon, of course, is taken as belonging to the Indian linguistic area; the main language is Sinhalese, an Indo-Aryan language, and the Dravidian Tamil is spoken by Indian immigrants in the north) except by emigré communities: Gudjarâti and some Hindi/Urdu by Indian communities in East Africa, a dialect of Eastern Hindi by Indians in Fiji, Pandjâbi by Sikhs in various parts of the world but especially in south-east Asia and eastern Iran, Tamil by some labouring communities in Malaya, while Sanskrit and Pâli are studied, if not spoken, in east and south-east Asia and the East Indies as the sacred languages of Buddhism. The only Indian language to have reached Europe is the Gypsy or Romani, with European, Armenian and Syrian branches; whether recent Indian and Pakistânî immigrants to Europe and America will retain anything of their own cultures after another two generations is doubtful.

**Scripts.**—The native Indian scripts are all arranged on the same principle: they are syllabaries, not alphabets, in that each unit of writing is either a vowel or a consonant-cluster followed by a vowel; all vowels other than a are expressed by signs above, below, before or after the consonant-characters; where consonant-characters are written without vowel-sign the vowel a is considered to be inherent in the character. There are thus three categories of symbol: vowel-character, vowel-sign, and consonant-character; there are also modifiers by which nasality as a feature of the vowel may be indicated, or which replace a nasal before a consonant of the same class, or which indicate that a consonant is to be pronounced without the inherent vowel. Since consonant-articulations may be clustered and consonant-characters cannot be written in series without implication of a separating vowel, it follows that consonantal ligatures are a feature of the writing system: thus the Sanskrit ādiśva- "totality" is written with two characters, ā and ṛṣvā. The Indian syllabaries have been arranged since antiquity in an order based on strict phonetic principles (see W. S. Allen, *Phonetics in ancient India*, Oxford 1953).

All these Indian alphabets are written from left to right. Two main graphic varieties of the script, Nāgarî and Sārdâra, have been responsible for the main forms of the characters in the modern scripts, with much mutual influence, and regional development has altered the form of the characters, and introduced a few new principles, so that now many scripts in use for contiguous languages are mutually unintelligible. The simplest form, Nāgarî or Devānāgarî, is in use for Hindi, Marâthî, Nepâli and generally for Sanskrit; Gudjarâtî is a modified cursive form of this; Bengali and Assamese differ somewhat in appearance from Nāgarî, many characters having a Sārdâra origin; and Pandjâbî in the Gurumuki script has even more of the Sārdâra element. All these have the appearance of being written below a straight line which forms the head-stroke of the characters. Other scripts, as a result of having been early written on palmrya leaves, have developed a cursive form to avoid splitting the writing material with straight lines: such are Urdu and the southern scripts, all of them used for Tâmil, Telugu, Kanarese and Malayalam; the Sinhalese script is a near relation of these, and the scripts in use for most south-east Asian languages (Burmese, Mon, Siamese, Cambodjan, Javanese, Cham), and for Tibetan, are all Indian in origin. Specimens of most of these scripts are illustrated by Grierson, and their palaeographic relations described by Bühler (see Bibliography).

The Perso-Arabic script entered India with the conquest and has been, of course, studied by Muslims in all ages for its value in the literature of Islam; at first, however, it was used only sporadically for writing in the languages of India (e.g., the Hindi poems of Amir Khushru [q.v.]). Necessarily modified to embrace the peculiarities of the Indian consonantal system [see, for example, p.t, p.m, p.n, s.t, s.m, s.n, s.b, s.q?]; it later became used for some Indian languages in common use by Muslims, especially Urdu, Pandjâbî, Kaśîmî, Pashtû, Sindhi; a very small amount of writing in this script in Bengali is known, Bengal Muslims normally using the same script as, the Bengali Hindus; and it has hardly ever been applied to Gudjarâtî. There are some works in Hindi in this script—their language and subject-matter having prevented them from being regarded as works of
Urdu literature. In addition to the articles on the individual languages, see further KHATT.

Bibilography: Indian languages have been widely studied in the last two centuries, and there is an enormous literature. References to the languages most germane to Islam will be found in the individual articles on these in this Encyclopaedia, especially BENGALI, GUJRATI, HINDI, HINDUSTANI, KASHMIRI, PASHTO, SINDHI, TAMIL, URDU. For the linguistic affiliations of these see DRUIDIC AND KAFIR LANGUAGES, INDO-ARYAN LANGUAGES, IRAN — LANGUAGES.

iv. — History

This article aims at being no more than a guide to the numerous articles on individual topics of the Muslim history of India and Pakistan to be found elsewhere in the Encyclopaedia, and to relate these to a chronological framework.

The pre-Muslim history of India is mostly outside the scope of this Encyclopaedia; aspects of the culture of this period, however, are relevant in the development of Muslim scientific knowledge and in the peculiarly Indian developments in Islam and Islamic institutions. For the scientific aspect an account of the relevant culture of pre-Muslim India will be found in DIOGRIYAVÍ, iii; for its religions, Hinduism and Jainism, see HINDU and ĽAVAN, and for the Indian aspects of mysticism which are relevant to Islam see TÁSAWŁR. References to the state of the land at the time of the various occasions of Islamic conquest will of course be found in the articles on the major Muslim powers and regions of India, especially DILÍ SULTANATE, BANGÁLA [in Supplement], GUJRATÁ, SINDH, DAKHAN.

Muslim history in the sub-continent begins with the Arab invasion and capture of Sind in 57/671-2, which thereby came under first the Umayyad and later the 'Abbásid caliphs; this period is, however, no more than a curtain-raiser, since caliphal authority was almost extinct by 257/871, although two Arab principalities in Sind endured for a little longer. For this period see MUHAMMAD B. KÁSHÍ, and references under AL-MÁHDIÁTÁ and UMAYYAVÍ, for the Arab principalities see MANŠÎRA and MÚLTÁN, and also under DÁYUBL.

Hindú rulers in the west and north-west of India were not slow to see the dangers to themselves in the establishment of an active Muslim state at Ghazna in the 4th/10th century; the first conflict between Hindú and Muslim powers came when a ruler of the Príthvírác invaded the territory of the Ghaznavids. For the Ghaznavids see SEBÚKTÍGÍN, but the balance of power was soon reversed and Sebúktígin became the aggressor, compelling the cession of Kábul. Sebúktígin's empire was consolidated and extended by his successor Múhammad, who between 389/999 and 417/1027 entered India fifteen times on marauding raids, the chief towns plundered being Wahínd, Múltán, Nárdín (Taráqar), Thámésar, Bárán, Mátáru, Kánnáwád, Gwáliáry, Kállýndar and Súmnáth, although permanent occupation of the captured territories never seems to have entered his mind, and in consequence Islam was not established there; except in the Pándjáb which became the Ghaznavids' frontier province and in which, in Láháwr (Lahore), they established their capital after losing Ghazna to the Gúdrís. For the history of these years see especially the articles GHAZNAVIDS, SEBÚKTÍGÍN, MÁHMÚD B. SEBÚKTÍGÍN, GUJRATÁ, and PÁNDJÁR.

The Ghaznavids' successors, the Gúdrís, were the next pre-eminent Muslim power to harass India from the north-west, although at first they were not the pre-eminent of their eastern province, Shíháb al-Dín (later Mu'ízz al-Dín) Mu'mammad b. Sám, merely continued the Sháhí tradition of Múhammad of Ghazna by making rapid local incursions: thus in 571/1175-6 he supplanted the Ismá'ílí rulers of Múltán by an orthodox governor, and later took the fortress of Ucch [q.v.]; in 575/1180-9 he marched through Múltán and Ucch to Páfán in Gujrátá, where his exhausted army was defeated. Sínd and Dáyubl were acquired the next year, and in 582/1186-7 Láháwr was finally added to the Gúdrís' territories, this last conquest ending Ghaznavid rule in India and placing the Gúdrís in a favourable strategic position for assault on upper India. A Gúdrí army was defeated in 587/1191 at Taráqar [q.v.] by a Cáwáhn force under Príthvírárga, but a further Gúdrí army was successful at the same place in the following year and Hántí and Díhlí (Déli) [q.v.] were occupied. Míráth and Kóyl [the modern 'Alígarh] [q.v.] and the territory south-west as far as Agímar [q.v.] soon capitulated to the invaders under their local commander Kút b Al-Dín Aybák, and Mu'ízz Al-Dín returned in 592/1195-6 to take Bayánlá. Thereafter affairs were left in Kút b Al-Dín Aybák's hands, and he, after defeating attacks by local Hindú rulers, occupied Bádáún in 594/1197-8, Kánnáwád the following year, Gwáliáry in 597/1200-1 and Kállýndar in 599/1203-3; he was appointed wálí 'ad-dí Hindásár by Mu'ízz Al-Dín shortly before the latter's death in 603/1206. For the political role of the Gúdrís in India was still limited, and Aybák was more concerned after Mu'ízz Al-Dín's death with maintaining his position wálí-i-dis Tádí Al-Dín Ylídís, the Gúdrí governor in Ghazna, than with extending, or even consolidating, the Gúdrí possessions in India; indeed, at this time certain local Hindú rulers were accepted as tributaries. But the Gúdrís nominally controlled wider possessions in India than those administered by Kút b Al-Dín Aybák, for two other local governors, who like Aybák
were Turkish slaves, were established in remoter provinces: Nāsir al-Dīn Kābāca in Māltān and Sind and Muhammad b. Bakhtiyar in Bengal. At Kūtb al-Dīn Aybak’s death in 670/1270 he was succeeded by his son Arām Shāh, but Aybak’s son-in-law Iltutmīṣ was set up at Dihlī by a group of army officers; after he had overcome initial opposition he was able to consolidate his Indian position to the extent of securing the main strategic points of north India. Under his Islamic government received a settled form in north India, and he may be regarded as the founder of the Dihlī sultanate. For events in Bengal see Bāngāḷa [in Supplement], Lakhnawtī, Muhammad B. Bakhtiyār, and Khālidī. For events in Māltān and Sind see Sīndh. For the establishment of the Dihlī sultanate see Dihlī Sultanate and Iltutmīṣ.

For the rule of Iltutmīṣ at Dihlī see Dihlī Sultanate. For his early struggles for possession see also Nāsir al-Dīn Kābāca and Tāqī al-Dīn Yıldız; by his victory over Kābāca, Iltutmīṣ established his authority over Sind in 623/1226; he also recovered Bengal, where the successors of Muhammad b. Bakhtiyār had for some time enjoyed virtual independence. He was succeeded in 634/1236 by his daughter, the only female ruler in Muslim India [see Kādiyyā], and later by his third son Nāsir al-Dīn Māhmūd [q.v.] (644-64/1246-66), although in this reign de facto power was exercised by Gīyāḥ al-Dīn Balbān as muḥtār. The latter, who later succeeded as sultan, was engaged in ceaseless military activity to consolidate Dihlī as the principal power in north India against the local Hindū dynasties, especially those of Mewāṭ; he suppressed an attempt at independence by the Bengal governor Tughrī in ca. 680/1281-2; and had to maintain constant strong garrisons on his north-western frontiers, where skirmishes with the Mongols, although not a serious threat to India, were frequent. Sind, however, seems to have been more prosperous—particularly in the hindsight of historians writing after the Timurid invasions of the end of the 8th/14th century—and he is remembered by them as the sultanate’s founder. For the events of this period see Khālidī; ‘Alā’ al-Dīn Muhammad Khālidī; Gīyāḥ al-Dīn Balbān; Khālidī; Rāqṣāthān, Tīlīgāṅā. For Bengal, where from about 696/1298 the province had been divided into an eastern and western part with capitals at Sānār-gāṅa and Lakhnawtī respectively and where Dihlī had not reasserted its suzerainty, see Bāngāḷa [in Supplement], Lakhnawtī, Sonārgāṅa. With Islam threatened by the excesses of Nāsir al-Dīn Kūtb al-Dīn, a ādīdī was declared against him by Gīyāḥ al-Dīn Malik, the governor of Dipalpur, who succeeded to the sultanate as Gīyāḥ al-Dīn Tughlūk in 720/1320. An account of the events leading to the Tughlūk succession is given in Gīyāḥ al-Dīn Tughlūk 1; see also Nāsir al-Dīn Khūṣrāw. Further military activity consolidated and expanded the territory of the sultanate: the Pāṇḍya kingdom of Madurār (Ma’bar) was annexed, Dīlīnagar in Orissa (Utiśā) invaded, and Bengal, then suffering from civil war, partly re-annexed; for this expansion see Madurā, Tīlīgāṅā, Utiśā, Warangal. Tughlūk’s son Dījvānā Khān, entitled Ulūg Khān, who succeeded his father in 725/1325 as Muhammad b. Tughlūk, was the general who brought about this consolidation; yet after his accession his oppressive rule led to many rebellions, some of which resulted in a permanent loss of hegemony: Ma’bar (735/1334-5), Golbargā (740/1340), Warangal (746/1345-6), and Dāvatābtād, which he had earlier attempted to make a second capital, in 748/1347. This last loss led to the proclamation of an independent sultanate under ‘Alā’ al-Dīn Bahman Shāh in the Deccan. By the close of his reign (752/1351) Bengal was again independent [see Fāhr al-Dīn Mubārak Shār], and the Sūmār dynasty in Sind had been succeeded by the Sammas of Thaftha restored Dihlī’s hegemony over Sind, against the Sammas of Thaftha restored Dihlī’s hegemony over Bengal, in 754/1353-4 and 760/1365; but that province, reunited since 753/1352, retained its independence under Ilyās Shāh [q.v.], whose successors remained in power for another half-century. He prolonged expedition to Sind against the Sāmmas of Thaftha restored Dihlī’s suzerainty over Sind for a short time only, although in expeditions against Kāntā and Ḫāfawā [q.v.], he was more successful. His reign was generally peaceful and prosperous—particularly in the hindsight of historians writing after the Timurī invasions of the end of the 8th/14th century—and he is remembered
as an innovator in agriculture and especially irrigation, a remitter of the harsher taxes (but as an upholder of the necessity of levying duties from Brâhmins: see Dârâ, 6 a.), and as a constant public builder; but he was mild to the extent of culpable leniency, and his delegation of authority to his subordinates eventually weakened the royal power. For his reign see Firuz Shâh Tughluk, Dihli Sultanate, and Tughlukids; for the events in Sind see Sind, 4; for the events in Gujarat see Gujarat (b); for the position in Bengal see specially Ilyas Shâh and Sikandar B. Ilyas; for his agricultural policies and irrigation works see Farâhâ, v; Nafr; and references under Dîmânā; for his buildings and other public works see Dînh, Dînâpur, Hîsâr Firûza, Sârnînd.

Some half-dozen kings of the Tughluq line followed Firuz after his death in 790/1388, none (except the last: see below) for more than a year or two. The Dihli sultanate was in a state of political disintegration, and many provincial muqta's achieved virtual independence at this time. Even before Firuz's death the muqta's Malik Râjdâ of Karwand near Thânnâr had been able to act independently of Dihli after about 784/1382 [see Fârûkîds, Hândesh]. The Bahmanis of the Deccan strengthened their influence (although Râjdâ was raised by the Bahmanis, the second sultan, who succeeded in 759/1358, bringing in careful and extensive administrative reforms; for these see Muhammad Shâh i Bahmani. The constant skir mishing with the neighbouring Hindu kingdom of Vijayanagara flared up in 786/1385 in the first major battle between Hindus and Deccani Muslims; accounts vary, but it seems that the boundaries drawn between the rival powers were more in Vijayanagaras favour and that consequently the Bahmanis cannot have had the better of the argument. For this campaign and the conflicting evidence see Vijayanagara. Some five years later the Vijayanagara ruler extinguished the Muslim dynasty of the small southern sultanate of Madurâ [q.v.]. In Mâlâwâ [q.v.] the governor, Dîlâwâr Khân, had failed to remit to Dihli the revenue collections of the defeated state; although Khân was not decisively defeated, he was not declared himself independent until 804/1401 [see Dîlâwâr Khân]. In the eastern provinces of the sultanate, disaffected Hindus were rejecting all obedience to Dihli when the (Habshi?) eunuch Malik Sarwar, Khâja Dîâhân, was sent there in 796/1394 to control them; having done this he occupied Dînâpur as sulân al-ahâwâ and there made himself independent of Dihli [see Dînâpur, Shârkids; also Isâwâ, Koylî]. Disorder had similarly arisen in Gujarât, where Zafar Khân had been sent by Dihli in 793/1391 to establish the Tughluq authority; he pacified the province, but remained there as a virtually independent ruler during the confused Tughluq rivalries in the north; yet he did not assume the royal prerogatives until 810/1407 (although his son Tâtâr Khân had had himself proclaimed king five years previously for these events see Gujarat and Muzaffar Shâh i Bahmani).

In 800/1398 Pir Muhammad, governor of Kâbul and grandson of Timûr, attacked India, capturing Ucch and Mûlân [q.v.]; the chiefs and nobles of Dipâlpur had also submitted to him, but later revolted and killed his governor. This seems to have been made a casus bellî by Timûr in 801/1398-9: Dipâlpur and Shânper, where the rebels had taken refuge, were then taken, and the king proceeded through Pâñâlpatt to Dihli, chastising the Dîalis [q.v.] on the way: the sultan (Mâmmûd Tughluq) fled, Dihli was occupied, and was given up to pillage, plunder and wholesale massacre. On his withdrawal in the spring of that year, the Dihli sultanate was left in virtual anarchy and moral, political and financial bankruptcy, although Mâmmûd Tughluq had returned to his capital city without an empire after the Timûrid armies had withdrawn; de facto authority seems, however, to have been exercised by Mâmmûd's minister, the Hâshâ Khân [q.v.]. The Sayyid Khâdî Khân held Multan longer; but the Timûrids made some gains in the localities as governor owing allegiance to Timûr or to his son Shâh Rûkh. In addition to the now fully independent Muslim states mentioned in the last paragraph, many minor Muslim governors had become more or less independent, and the local Hindu chieftains, particularly those of the Dô'âb, had thrown off all pretence of recognizing the suzerainty of Dihli. Mâmmûd Tughluq's military governor of the Dô'âb, Dawlat Khân Lodi—who after the death of Mâllû came to occupy the same position in the state as Mâllû had—gained some small success in re-asserting the authority of Dihli over the neighbouring states; he and Khâdî Khân were the chief contenders for power in the north, and after the death of Mâmmûd Tughluq in 815/1412 or 1413 (the evidence on this point is conflicting) Dawlat Khân was raised by the Timûrids to the sovereignty of the second sultan, who succeeded in 795/1398, bringing in careful and extensive administrative reforms; for these see Muhammad Shâh i Bahmani. The constant skirmishing with the neighbouring Hindu kingdom of Vijayanagara flared up in 786/1385 in the first major battle between Hindus and Deccani Muslims; accounts vary, but it seems that the boundaries drawn between the rival powers were more in Vijayanagaras favour and that consequently the Bahmanis cannot have had the better of the argument. For this campaign and the conflicting evidence see Vijayanagara. Some five years later the Vijayanagara ruler extinguished the Muslim dynasty of the small southern sultanate of Madurâ [q.v.]. In Mâlâwâ [q.v.] the governor, Dîlâwâr Khân, had failed to remit to Dihli the revenue collections of the defeated state; although Khân was not decisively defeated, he was not declared himself independent until 804/1401 [see Dîlâwâr Khân]. In the eastern provinces of the sultanate, disaffected Hindus were rejecting all obedience to Dihli when the (Habshi?) eunuch Malik Sarwar, Khâja Dîâhân, was sent there in 796/1394 to control them; having done this he occupied Dînâpur as sulân al-ahâwâ and there made himself independent of Dihli [see Dînâpur, Shârkids; also Isâwâ, Koylî]. Disorder had similarly arisen in Gujarât, where Zafar Khân had been sent by Dihli in 793/1391 to establish the Tughluq authority; he pacified the province, but remained there as a virtually independent ruler during the confused Tughluq rivalries in the north; yet he did not assume the royal prerogatives until 810/1407 (although his son Tâtâr Khân had had himself proclaimed king five years previously for these events see Gujarat and Muzaffar Shâh i Bahmani).

In 800/1398 Pir Muhammad, governor of Kâbul and grandson of Timûr, attacked India, capturing Ucch and Mûlân [q.v.]; the chiefs and nobles of Dipâlpur had also submitted to him, but later revolted and killed his governor. This seems to have been made a casus bellî by Timûr in 801/1398-9: Dipâlpur and Shânper, where the rebels had taken refuge, were then taken, and the king proceeded through Pâñâlpatt to Dihli, chastising the Dîalis [q.v.] on the
Timur's reign, but its truth seems confirmed by the actions of other southern rulers: an understanding of mutual assistance between the rulers of Gudjarat, Malwa, Khándose, and Vidaijanagara against the Bahmani kingdom, and a demand from these rulers to Firuz to keep the peace. Firuz was able to maintain excellent relations with the Hindu of the Deccan, taking wives from several prominent Hindu houses, not excluding Vidaijanagara (being persuaded, although a Sunni, to contract mut'a alliances in this respect: Shi'i doctrines were at this time penetrating into the Muslim world), and spending much of his reign in the conquest of Mandasor, "recovered from the Bahmanis [see also MAHIM]. His strict but impartial justice, and through him the example of the religious teachers of Bafwa and Sarkhedj near Dihli, as noticed above, was not safe from his ambition (844/1440-1). But he was a good Muslim and a great builder and patron of the arts, and in his time Islam did not become a centre of Islamic propaganda until the 15th century. The policy of constant pressure on Gudjarat's Muslim neighbours; his interest in Malwa has been described above, but he was also involved against Khández and the Bahmanis.

The small state of Khandesh, where Malik Radia had been succeeded by his son Hushang Shah [q.v.] in 808/1405, was accused of parricide and attacked and carried off by Muẓaffar Shah of Gudjarat [see drān]; he was reinstated in 811/1408, and thenceforth transferred his capital from Dhar to Mándu [q.v.]. He invaded Gudjarat several times in the early part of his reign, although when in 824/1421 Hâshim in search of Mahmud Shah Khâldji in 840/1436. In spite of an attempt by Ahmad Shah I of Gudjarat to secure the throne for Mas'ud, a son of Muhammad Ghuri, Mahmud consolidated his position, and during his long reign (33 years) the Mâlwa sultanate reached its greatest extent. He several times attacked Citawr and花了 with Malwa through a royal marriage; but on the temporary division of the state between Malik Radja's two sons on his death in 840/1436, he exacted tribute from the rulers of minor Hindu states to the north of his dominions (Bundi, Kofa, Kumbhalgarh, etc.) and, while engaged in the conquest of Mandasor, "recovered from the idolaters" the city of Aḏḏîrê [q.v. (861/1457); disputes over Kalpi led to occasional war with the sultanate of Dâwânpur; he caused the aḫila to be read in his name in Bayânâ; several times he invaded the Deccan to attack the domains of the Bahmani minor Niẓâm Shah, once (865/1461) being utterly defeated, but able later to despoil Bârâr and to defend his outpost at Kherlâ [q.v.]; and even Dihli, as noticed above, was not safe from his ambition (844/1440-1). But he was a good Muslim and a great builder and patron of the arts, and in his time Islam was already well established in the coastal towns [see for example MANGROL]. He extended the Gudjarat dominions southwards into the northern Konkan coast from 834/1421 by the capture of Thânâ [q.v.] from the Bahmanis [see also MAHIND]. His strict but impartial justice, and through him the example of the religious teachers of Bafwa and Sarkhedj near Dihli, as noticed above, was maintained under Muhammad Shah I in the early 15th century. The policy of constant pressure on Gudjarat's Hindu neighbours was maintained under Muhammad I (846-55/1440-51) and Kutb al-Dīn Ahmad Shah (855-62/1452-8), the latter having once entered into a Muslim alliance with Mahmud of Malwa against Citawr. With the accession of Mahmud I in 862/1458, Gudjarat entered the period of its greatest prosperity; for the attempt at usurpation by Shams Kân Nâgârwâr before Mahmud's accession see NAGAWR. For the general history of Gudjarat in this period see, in addition to the references above, GUDJARAT.

The small state of Khández, where Malik Râdja (= Ṣâdja Ahmad) had been appointed to an ḥâlî by Firuz Shah and where he had established himself sufficiently to act independently of Dihli since ca. 784/1382, early sought alliance with Mâlwa through a royal marriage; but during temporary division of the state between Malik Râdja's two sons on his
death in 801/1399 the elder brother, Nasir, dissatisfied with lack of support from Malwa against Ahmad I of Gujarat who had intervened on behalf of the younger brother Hasan, had to recognize the overlordship of Gudjarat, 820/1417. A Khândesh attack on Nandûr bâ in 833/1429 provoked Gudjarat reprisals, and an alliance with the Bahmanis was sought by marriage; but when his daughter complained that her husband was neglecting her, Nasir Khân invaded the Bahmanis' northern territories; however, his army was defeated and only the threatened assistance of Gudjarat led to a Bahmanis withdrawal. ʿÂdî Khân (d. 844/1444) and Mubârak Khân (d. 861/1457) accepted Gudjarat suzerainty, but in 904/1498 ʿÂdî Khân II failed to pay tribute and was chastised by Mahmûd Bâghr. After the death of ʿÂdî Khân II in 909/1501 a disputed succession caused the intervention in Khândesh of the stronger neighbouring powers. None of the Fârâkî rulers was recognized as equal by the sultans of Gudjarat, Malwa, Abhmãdãgar or the Deccan, and were known as Khân rather than Shah. For Khândesh in this period see Fârâkî and Khândesh, and references under GUDJARAT and MALWA.

Bengal, where rival sultanates had been established in the late 7th/13th century at Lakhnawti (capital later transferred to Pândûrî) and Sonârâgâw, had been reunited about 953/1545 under Ilyâs Shah, and after the Fârâkî Tughûlids' vain attempts to recover the province (see above) was never again molested by Dihlî. The Ilyâs Shahi succession had degenerated into a number of puppet kings under the influence of the Hindî minister Râdîâ Gâneîs of Dinâdîpur, and was terminated by the accession of Gâneîs's son the Muslim convert Dâlíâ al-Dîn Muhammad in 818/1415; his reign seems to have been a time of relative prosperity for Bengal, to judge by the magnificence of the monuments and the evidence for the growth of sea-borne trade with China; and he has the rare distinction of receiving praise for his justice and equity from both Muslim and contemporary Hindî sources. There was, however, a continual threat to the western regions from the Dijawnpur sultâns, and the evidence of coins dated Ŝâkâ 1339-40 (= 819-20/1416-18) of Dânudhâla and references under SHARKIDS and HABSHI.

In Sind itself at this time the Sammâ dynasty was still ruling, isolated, independent, and little troubled by or for their neighbours; Sind history for long is purely local with no great concern either for the rest of India or for Islam, and until the late 9th/15th century at this time the Sammã dynasty was still ruling, isolated, independent, and little troubled by or for their neighbours; Sind history for long is purely local with no great concern either for the rest of India or for Islam, and until the late 9th/15th century at this time the Sammã dynasty was still ruling, isolated, independent, and little troubled by or for their neighbours; Sind history for long is purely local with no great concern either for the rest of India or for Islam, and until the late 9th/15th
century few details of it are known beyond the list of its kings—and even here the chronology is uncertain. The last Sammās were, however, connected by marriage with the sultanate of Gujrat. Mughals of the Arghūn clan began to exert some influence in lower Sind in the last quarter of the 9th/10th century. By the time of Ahmad, the proximity of Vidjayanagara to Gulbarga caused him to move his capital to Bidar. Three of the Arghūn clan began to exert some influence in the long reign of Nanda, Dīn Nizam al-Dīn lower Sind in the last quarter of the 13th century, marriage with the sultanate of Gudiarat. Mughals of its kings—and even here the chronology is uncertain. Shah Beg Arghūn of Kandahar occupied some forts in northern Sind, and eventually, after the death of the last of the Sammā Dīms in 933/1527, the Arghūns became rulers of Sind. For details of this period see SINDH, SAMMĀS, INDIA.

Kashmir, like Sind, had at first little connexion with other Islamic powers in India, although the reign of Shihāb al-Dīn (755-75/1354-73)—here again the chronology is uncertain—saw the arms of Islam victorious over most of Kashmir's immediate Hindu neighbours and the rise of Kashmir to the status of a great power, although the rule within its borders was characterized by religious toleration. Under Sikandar (ca. 791-875/1389-1413), however, a fierce policy of persecution of Hinduism, banning of Brāhmāṇs, iconoclasm, and immigration of Muslims from other regions made the country a predominantly Muslim state, earning for Sikandar the title of Butshikhan ("Breaker of Idols"). That policy was strikingly reversed under the greatest of the Kashmir sultans, Zayn al-ʾAbīdīn (823-75/1420-70), who recalled the exiled Brāhmāṇs and permitted the observance of Hindu practices by that community. It provided the ordinances of their sacred books were observed; he abolished the dīya and illegal taxes and cesses, and was active in building public works, including bridges and canals; he was a patron of the arts, especially literature and music. Kashmīr was still little involved with other kingdoms of India, although the sultan maintained friendly relations with the Hindu chief. Kārlī had been converted to Islam, his patron of the arts, to take the name of Dīwarī. Khwāja Ahmad Sirhindī, who succeeded his father in 945/1440, was compelled to intervene in Dīawnpur, where his ineffective elder brother was incapable of dealing with large-scale rebellion by the Hindū saṃīdārīs fomented by Husayn Shāhī from his exile in Bihār; Bār-bak was replaced, and Sikandar forced Husayn to flee to Bengal; he had brought Bihār again within the sphere of influence of Dīlī by 899/1494. After occupying Sambhāl [q.v.], and holding court there for four years, he turned his attention to the subjugation of the smaller Rājpūt states near Dīlī, especially the territories of Gwalīyar, founding a new capital at Agrā [q.v.] the better to conduct his campaigns: thus Dholpur fell in 907/1502, Mandṛayl in 910/1505, Utrār in 915/1509, Narwar in 919/1508; Candērī [q.v.] was virtually governed as a dependency of Dīlī (although nominally on behalf of the pretender to the throne of Mālwā, Sāhib Khān "Muhammad Shāh") from late 919/1513 after Sikandar's intervention in the Mālwā domestic struggles, although it later passed into Rājpūt hands. Sikandar Lōdī, perhaps the greatest king of the dynasty although his fierce intolerance of Hindūs and destruction of their temples was hardly the way to command a popular support, fell in Agrā (921/1517) poisoned by his eldest Dīlī Khān, but at the suggestion of a prominent faction of the nobility, the small kingdom was partitioned and Ibrāhīm's younger brother (?) Dīlāl Khān was established on the revived throne of Dīawnpur. The moderates, however, condemned this policy, and Dīlāl Khān became the figurehead of a rebellion against Dīlī fomented by members of the Lābānī and Fardūlī clans in Bihār and Dīawnpur. Dīlāl Khān, before his surrender and death, had fled for refuge to Gwalīyar, giving Ibrāhīm the pretext for annexing it in 923/1518; but the rebellion had caused Ibrāhīm to suspect even the loyal nobles, whom he dismissed and degraded indiscriminately. Defection spread; and when the son of Dawat Khān Lōdī, the powerful governor of Lāhaw, reported to his father the disaffection of the Hindus and Mughals of Mīr Khān, his effective overthrow by the Mughal Bābur for help. A similar request had come from Ibrāhīm's uncle, ʾAlām Khān Lōdī, who had hopes of gaining the Dīlī throne. It soon became plain that Bābur's intervention in Indian affairs was prompted more by his own interest than that of the Lōdīs; ʾAlām Khān failed to take Dīlī on his own, Dawat Khān died in flight having been dispossessed of Lāhaw by Bābur, and Bābur's army moved on through the Pāngāb to encounter and defeat the Dīlī Afghāns at the battle of Pāṅpat in 932/1526. Within the next four years the whole of north India had become subject to the Mughal power. For this period see DĪLĪ SULTANATE; LŌDĪS, BĀHRUL LŌDĪ, IBRĀHĪM LŌDĪ; MUGHALS; BĀBUR; LĀHAW, FĀRĪNĀT, PĀNḠĀB, SIRHIND.

In the Deccan the last of the Bahmani kings had fled from Bīdar a year after the victory of the Mughal Babur for help. A similar request had come from Ibrāhīm's uncle, ʾAlām Khān Lōdī, who had hopes of gaining the Dīlī throne. It soon became plain that Bābur's intervention in Indian affairs was prompted more by his own interest than that of the Lōdīs; ʾAlām Khān failed to take Dīlī on his own, Dawat Khān died in flight having been dispossessed of Lāhaw by Bābur, and Bābur's army moved on through the Pāngāb to encounter and defeat the Dīlī Afghāns at the battle of Pāṅpat in 932/1526. Within the next four years the whole of north India had become subject to the Mughal power. For this period see DĪLĪ SULTANATE; LŌDĪS, BĀHRUL LŌDĪ, IBRĀHĪM LŌDĪ; MUGHALS; BĀBUR; LĀHAW, FĀRĪNĀT, PĀNḠĀB, SIRHIND.

In the Deccan the last of the Bahmani kings had fled from Bīdar a year after the victory of the Mughals in the north, although the old Bahmani sultanate had been partitioned nearly forty years previously. Its history from the reign of Ahmad Shāh Wali is largely one of faction between local and foreign Muslims. Ahmad soon (826/1423) devastated Vidīyanagara, and then annexed Warangal, whose rājā had assisted Vidīyanagara against the Bahmani sultans; but Dīlī continued to the Dīlī throne. Many of Bābur's tribe of Afghāns came to India during his reign, and, by dividing his territories before his death among his relations and most influential nobles, he brought the Dīlī sultanate into an Afghān confederacy. Sikandar Lōdī, who succeeded his father in 824/1419, was compelled to intervene in Dīawnpur, where his ineffective elder brother was incapable of dealing with large-scale rebellion by the Hindū saṃīdārīs fomented by Husayn Shāhī from his exile in Bihār; Bār-bak was replaced, and Sikandar forced Husayn to flee to Bengal; he had brought Bihār again within the sphere of influence of Dīlī by 899/1494. After occupying Sambhāl [q.v.], and holding court there for four years, he turned his attention to the subjugation of the smaller Rājpūt states near Dīlī, especially the territories of Gwalīyar, founding a new capital at Agrā [q.v.] the better to conduct his campaigns: thus Dholpur fell in 907/1502, Mandṛayl in 910/1505, Utrār in 915/1509, Narwar in 919/1508; Candērī [q.v.] was virtually governed as a dependency of Dīlī (although nominally on behalf of the pretender to the throne of Mālwā, Sāhib Khān "Muhammad Shāh") from late 919/1513 after Sikandar's intervention in the Mālwā domestic struggles, although it later passed into Rājpūt hands. Sikandar Lōdī, perhaps the greatest king of the dynasty although his fierce intolerance of Hindūs and destruction of their temples was hardly the way to command a popular support, fell in Agrā (921/1517) poisoned by his eldest Dīlī Khān, but at the suggestion of a prominent faction of the nobility, the small kingdom was partitioned and Ibrāhīm's younger brother (?) Dīlāl Khān was established on the revived throne of Dīawnpur. The moderates, however, condemned this policy, and Dīlāl Khān became the figurehead of a rebellion against Dīlī fomented by members of the Lābānī and Fardūlī clans in Bihār and Dīawnpur. Dīlāl Khān, before his surrender and death, had fled for refuge to Gwalīyar, giving Ibrāhīm the pretext for annexing it in 923/1518; but the rebellion had caused Ibrāhīm to suspect even the loyal nobles, whom he dismissed and degraded indiscriminately. Defection spread; and when the son of Dawat Khān Lōdī, the powerful governor of Lāhaw, reported to his father the disaffection of the Hindus and Mughals of Mīr Khān, his effective overthrow by the Mughal Bābur for help. A similar request had come from Ibrāhīm's uncle, ʾAlām Khān Lōdī, who had hopes of gaining the Dīlī throne. It soon became plain that Bābur's intervention in Indian affairs was prompted more by his own interest than that of the Lōdīs; ʾAlām Khān failed to take Dīlī on his own, Dawat Khān died in flight having been dispossessed of Lāhaw by Bābur, and Bābur's army moved on through the Pāngāb to encounter and defeat the Dīlī Afghāns at the battle of Pāṅpat in 932/1526. Within the next four years the whole of north India had become subject to the Mughal power. For this period see DĪLĪ SULTANATE; LŌDĪS, BĀHRUL LŌDĪ, IBRĀHĪM LŌDĪ; MUGHALS; BĀBUR; LĀHAW, FĀRĪNĀT, PĀNḠĀB, SIRHIND.
northern campaigns between 829/1426 and 831/1428 brought Māhūr [q.v.] under subjection and secured also of Mamlūk [q.v.]; thus the Bahmanis, with a casus beli by demanding allegiance from the rādā of Kherāt [q.v.], a Bahmanī tributary. A Māhūr army was defeated in 831/1428, and an alliance with Khandēsh was effected by a marriage between the two houses; but a rash attack on Gudjarat the next year led to a Bahmanī defeat and the loss of Thāna [q.v.]. Ahmad died in 839/1436; at the end of his life he had shown great partiality for foreigners, especially Persians, and he seems to have accepted Shī‘ identity under the tutelage of Khaliṣ Allāh “Batelijkān” [q.v.]. He was succeeded by his eldest son, ‘Allā al-Dīn Ahmad, under whom the foreigners rose to greater power after their victory over an invasion from Khandēsh. In 847/1443 the Vidjayanagaras forces—in which large numbers of Muslim mercenaries had recently been recruited—invaded the Deccan but were eventually overcome. Three years later the foreigners were inveigled into a disastrous campaign in the Konkān by the Dakhni adventurer Dākhlīn. Many of them (including 1200 sayyids) were butchered in the massacre of Cākan. Before the king’s death in 862/1458 the Deccan had been twice more invaded by Mālāwī, and an attempted rebellion in Tīlingānā subdued by a recently arrived foreigner, Māhmūd Gāwān [q.v.]. The next king, Humāyūn, in a reign of three and a half years, endeavoured to strike a balance between Dakhnīs and foreigners and to consolidate the kingdom; his ruthless persecution of adherents of his rebel brother earned him the title of Zālīm, “the Tyrant”, apparently unjustly. A regency followed until ca. 870/1466 with Māhmūd Gāwān as wālsī, not without further trouble from Mālāwī when the infant king’s dominions were defended with the help of Māhmūd Bāgrā of Gudjarat. Māhmūd Gāwān was sent on an extensive campaign to the western province (Gulbargā and Bīdar) in 871/1466, where local Hindu chieftains were causing heavy loss to Muslim merchantmen and pilgrim-vessels by piracy—probably with encouragement from Vidjayanagara; the country was laid under tribute, and the provincial governors became established through his Hindu ministers, especially Māhīnī Rāl [q.v.], in spite of interventions against him by Sīkandār Lōdī of Dihlī and Muṣafar II of Gudjarat; but Mādīnī Rāl’s growing power caused Māhmūd to flee to Gudjarat later for protection. Muṣafar took Māndū in 924/1518, massacred the Rāḍūpūt garrison, and restored Māhīnī Rāl. Māhīnī Rāl and the Rāṇā of Mālāwī later invaded Mālāwī, defeated the army and captured the king, who was generously restored to Māndū; but the northern part of Mālāwī was annexed by Mālāwī. Māhmūd offended Bahādur, the new sultan of Gudjarat, by sheltering a rival; Bahādur captured Māndū in 937/1531, and annexed Mālāwī to Gudjarat. In 941/1535 Māndū was taken by Humāyūn in his war with Bahādur, but the following year a former officer of the Khandīqīs, Māhīnī Kān, assumed the royal title as Kādir Shāh. The latter was dispossessed by Shēr Shāh Sūr, who left Shudhā’āt Kān as governor of Mālāwī in 952/1545; his son Bāyāzīd, known in popular legend as Bāz Bahādur, succeeded him in 960/1553 and, refusing to acknowledge the restored Humāyūn, assumed the royal title; he surrendered Mālāwī in 968/1561 to an army sent by Akbar. For this period see MĀLĀWĪ, MĀHMUD, and references under GUDJARAT, BAHĀDŪR SHĀH GUDJARAT, MĀHĪNĪ RĀL, HUMĀYŪN, SHĒR SHĀH SŪR.

In Gudjarat the 54 years reign of Māhmūd I, 862/1458-9/1511, brought the sultanate its greatest prosperity and extended Islam into southern Rāḍī-putnā, Sūrāth and the northern Konkān; in 865/1461 he secured ‘Uthmān Kān in Dīlār [q.v.]; in 871/1467-70 overcame Dūnāgār [q.v.], extended Islam into Sīndh and Kāch in 875/1472 and next put down piracy in Dīwārskā [q.v.]; in 887/
In the campaign was opened against Pavagah and Câmpânur [q.v.]. In 913/1508 he was allied with the Mamlûk of Egypt in a naval campaign against the Portuguese, who had arrived in the Indian Ocean in 1498. Muțaffar II, who succeeded in 917/1511, was soon involved in a clash with Mâlâv (capturing Mânûd in 924/1518 from a Râjput faction and restoring Mâhmuûd II there) and with Râgâ Sangrân of Cîtarw in Mêwâ [see IJârâ]; there was some diplomatic intercourse with the Portuguese, now established at Goâ, who first sought permission to build a fort at Diw (Dîn) and later twice tried to take Diw by force. Bahâdur Shâh, 932-43/1526-37, attacked the Nizâm Shâhî of Adbhmadnâd in 935/1528 to settle a territorial dispute with Khânâdesh, conquered Mâlâv in 937/1531, lost Bassein to the Portuguese in 941/1534 and the following year gave them permission to build a fort at Goâ; from 941/1534 he was engaged in a long war with Humayûn until the latter returned to face the Sûr threat. After Bahâdur's murder by the Portuguese in 943/1537 the history of the sultanate is largely one of puppet monarchies and rival factions of nobles. In 944/1538 an Ottoman fleet attacked the Portuguese at Diw, but received only lukewarm support from Gujdarât; the Portuguese power increased, and the Muslîms of Diw and Bâharâk [q.v.] were massacred in 953-4/1546-7. After the death of Bahâdur Shâh the community rose to some power, as did the Mirzâs [q.v.], who had taken control of Sûrat, Bâfhôd, Bâharâk and Cîmpânur; they were defeated in Akbâr's conquest of Gujdarât in 980-1/1572-3. For this period see, in addition to the references given above, GUJGARAT, BAHDUR SÎN GUJDAG, MÂLAV, HUMAYUN; for the Portuguese in the Indian Ocean see SINĐÂNAB, also SEIMD SOMEHAM PASAH.

In the neighbouring state of Khânâdesh a disputed succession eventually led to 'Adî Khân III being installed as ruler in 914/1509 by Mâhmuûd Bâg-zA, who had overthrown the opposition by the Nizâm Shâhî forces supporting a rival claimant. 'Adî Khân married the daughter of the next Gujdarât sultan, Muțaffar II, and their son MuhammAD I (926-43/1520-57) co-operated in many campaigns with his uncle, the last Gujdarât ruler, who was recognized from 936/1528 by the title of Shâh, and was designated his heir-apparent; he died, however, before he could reach Gujdarât and claim his second throne. The reign of his successor Mubârâk II saw in 960/1552 a defeat of a Mughul army and in 972/1564 the compulsion to accept Mughul overlordship: chaos in Gujdarât, the annexation of Mâlâv by the Mughuls, and the growing concern of Adbhmadnâd with her southern neighbours, had so altered the balance of power between the great sultanates that the position of Khânâdesh as a buffer state was no longer tenable. Khânâdesh at first connived at the Mughul manipulation of the Adbhmadnâd throne, and joined the Mughuls in the siege of Adbhmadnâd in 1004/1596, but later the Mughuls, having been opposed by the last Khânâdesh ruler Bahâdur Shâh, besieged him in Askârkat and Khânâdesh became a Mughul province in 1006/1601. For this period see FÀRÓQID, KHÂNÂDESH, BAHÂDUR SÎN GUJDAGAR, ASIN, BURHANPUR, THÂL-NER, and references under AKBAR.

In Bengal a succession of Hâshbih rulers had succeeded the Ilyâs Shâhî in 892/1486, of whom the second, Sayf al-Dîn Firûz (d. 895/1489), re-established order; but later Hâshbih rule became intolerable, and a Tîrîmîlî sayyid, 'Alî al-Dîn Hâshbih, was brought to the throne in 900/1493. He disbanded the Hindî infantry, expelled the Hâshbih, and transferred the capital from Gawr to Ikdûl; he recovered the provinces lost in the six preceding reigns, and in 905/1500 invaded Assam: his army had been reinforced by the influx of the disbanded Dîwânpur forces after Sikandar Lôdí had driven Husayn Shârkhî from Bîhâr to the protection of Bengal. In the years 928-29/1522-6 there were extensive military campaigns in the Tripura and Arakan regions as well. Husayn Shâh's reign saw also a great development of Bengali literature, a liberal attitude towards the Hindus and the growth of the syncretistic Satyapîr sect.

In the reign of his son and successor Nusrah Shâh (925-38/1519-31) many Afgânis arrived in Bengal from Dîlî after Bâbûr's defeat of Tūhrâm Lôdí. After 934/1528 there were clashes with the Portuguese on their first appearance in Bengal [see CHITTAGONG]. His brother Ghiyâb al-Dîn Mâhmuûd, who had usurped the throne from his nephew in 939/1533, was early faced with a rebellion by a brother-in-law who claimed himself with the Afgân Shîr Khân [see SÎR SÎN SÛR] and defeated the governor of Monghîr (Mungîr [q.v.]). Shîr Khân later invaded Bengal, whose army pressed Portuguese captives into service; but on the fall of Gawr in 945/1538 Shîr Khân assumed the royal title in Bengal—only to lose it later that year to Humayûn. For details of this period see BANGLA (in Supplement), DIWÎ SULTANATE, HÂSHBIH, HUMAYUN SHAY, LAKHNAVÎ, LÔDIS, SHÂRRKIDS.

In north India after Fânîlpât Bâbûr's first task was consolidation and extension of his authority, for many who had supported him as an ally against Lôdí oppression turned against him when it became obvious that he intended to remain. Thus he first occupied Dîlî and Aghrâ in 932/1526, moved his forces eastwards down the Ganges to Dîwânpur and, by his defeat of Rânâ Sanga of Cîtarw, secured his western territories against Râjâstân the next year; by the defeat of an eastern Afgân force in 935/1535 he extended his paramountcy up to Bengal. For the events of his reign, his character and his Indian policies, see BÂBÂR. After his death in the following year he was succeeded by his son Humayûn, whose first act on his accession was to assign Kâbul, then under Sher Khân, to his brother-in-law, Kandânâ, and to make smaller assignments to his younger brothers. A force of Afgân supporters of Mâhmuûd Lôdí, brother of the last Lôdí king, which had taken Dîwânpur inphpi/1531, was defeated, although the ablest soldier among them, Shîr Khân the future Sûrî emperor, was enabled to continue his preparations against the Mughul power through Humayûn's preoccupation with again securing his western frontier against the ambitious Kâmânân. A brother-in-law, MuhammAD Zâmân Mirzâ, gave Humayûn further trouble in offering his services to Bahâdur Shâh of Gujdarât, and the latter's refusal to surrender the rebel led to war between the Mughuls and Gujdarât, and to their first conquest and occupation of that province in 945/1535-6. For details see BAHÂDUR SÎN GUJDAGAR; GUJDAGAR; HUMAYUN; MÂLAV; MÔDÖ; MUGHULS. A rebellion to put a younger brother on the Mughul throne caused Humayûn's return to the centre, whereupon Mîlî Khân profited by his withdrawal to proclaim himself ruler of Mâlâv as Kâdîr Shâh [see MÂLAV]. Humayûn continued to be troubled by rebellious or independent-minded relations after his return to the centre [for these see MIKîR], and Shîr Khân was able to consolidate his position and occupy all the south of Bîhâr [q.v.]; he was soon able to besiege Gawr, the Bengal capital,
but by the time Humayún had at last made up his mind to crush Sher Khán the latter had occupied Rohtasgāh [q.v.]. Humayún marched to Gwālīr and occupied a deserted city, and then found that Sher Khán had cut his line of communication to Dīhlī; on his retreat he was defeated first at Cawsa in 946/1539, later near Kannawād the following year, and fled towards Sind since he found no welcome in his brother Kāmrān’s territories. Expelled from Sind by the Aṛghūn ruler, Shāh Husayn, he eventually arrived at the court of Shāh Tāmāḥ [q.v.] of Tráns for the start of his fifteen years’ exile. For details of all these events see AFGHANISTĀN, v, 2; HUMAYŪN; MĪRZĀS; MUGHALS; SHER SHĀH SŪR.

Meanwhile, Shēr Shāh had assumed sovereignty over Humayūn’s former possessions, and had regained the Pandājb by driving Kāmrān back to Kābul, establishing a fortress at the northern Rohtās [q.v.]. In 948/1542 he conquered Mālwā from Kādir Shāh, who fled to Gudjārāt, and in the next year laid waste Rāyśan in revenge for its rājdā’s massacre of Muslims at Čandārī [q.v.] and established his authority in Rājdāşṭān, being killed in an explosion there at Kālindjār in 951/1545. During his periods at the capital he set about reorganizing the revenue system of the country. His reforms are described s.v. DĀRĪBA, 6 b. He was succeeded by his younger son Islām Shāh, who burned stephens to suppress the fruits of his elder brother. This revived tribal strife among the Indian Afghāns. The Niyāzī tribe, in particular, rebelled in the Pandājb and at first allied themselves with the malcontent Gakkhaī [q.v.] community, but later intervened in Kāshmir affairs and were killed by the Čakk tribe there, Islām Shāh having regained the Pandājb. A revolt of a different kind was suppressed by the execution of one Shāykh ‘Alī, a follower of these teachings of Sayyīd Muhammad of Dīwanpur [see AL-DĪWANNĪRĪ], which put an end to the Māhdāwī [q.v.] movement in India. On Islām Shāh’s death in 967/1554 he was succeeded by an infant son who was within days murdered by his mother’s brother Mubāriz Khān. The latter ascended the throne as Muḥammad ʿĀḍīl Shāh, and retained it only by the generalship of a Hindu administrator named Hēmṉā; two years later, with the consent and support of Shāh Shēr Shāh’s son Mūsā, he deposed the ruler of Kāpur, who had restored the throne by rising in rebellion in their own provinces, and all three were calling themselves Sultān—ʿĀḍīl Shāh in Mālwā and the tract from Aṛgrā to Dīwanpur, Sikandār from Dīhlī to Rōhtās in the Pandājb, and Ibrāhīm in a Pandājb region further north still—when Humayūn, who had regained Kābul, took advantage of the tribal squabbles among the Sūrs to reconquer his former empire. The army of Sikandār was defeated at Sirhind in 962/1555, and Humayūn went on to reoccupy Dīhlī without opposition. Within six months he had died after a fall from a height, and his elder son Akbār, then not fourteen years of age, succeeded to the Mughal throne. For details of this complicated period see DĪHLĪ SULTĀNĀTE; HUMAYŪN; ISLĀM SHĀH SŪR; SHER SHĀH SŪR; SIKANDĀR SHĀH SŪR; SŪRS; and, for domestic affairs under the Sūrī dynasty, also DIHLĪ; NĀRNĀWI; ROHTĀS; ROHTĀSΓĀH; SAMSĀRĀM.

On Akbār’s accession the three Sūrs ex-monarchs were still active, although Muḥammad ʿĀḍīl was shortly afterwards killed in a clash with Bahādur Shāh of Bengal; Sikandār was the most dangerous, although Muḥammad ʿĀḍīl’s old minister, Hēmṉā, was also campaigning against the Mughālāns, ostensibly on their behalf but in reality and most privately on his own account. Hēmṉā soon occupied Dīhlī, but was killed in the battle between his followers and Akbār’s smaller force at the familiar plain of Fānpāt in 964/1556. Sikandār Sūr resisted until mid-964/1557 before surrendering. The Mughal generals quickly recaptured Aḍīmīr, Gwālīyar and Dīwānpūr [q.v.], the young emperor remaining under the influence of the “hārām party”, his former nurses and foster-mother and their husbands and children, at Āgrā. Since Akbār’s tutor, the general Bāyār Rām Kān [q.v.], was a Shīʿa he was unpopular at the court, and in 967/1560 Akbār, driven by the persuasion of the “hārām party”, announced that he was assuming charge of the government; within two years he was able to free himself from the hārām influence as well. Mālwā had been occupied in 968/1561, rebelled the following year, and was finally subdued by Akbār in person in 971/1564; his generals in that year crushed an attempt at Afgān resurgence in Bihār. In the next few years Akbār had to contend with rebellions on the part of the Uzbek faction at court, and of his distant relations, princes of the house of Timūr, the Mīrzās [q.v. of Kāṭah (later Robilīkhand), who had received small assignments after the Mughal restoration; the latter invaded Mālwā and made their way to Gudjārāt, where in the local disorder they possessed themselves of much land, especially in its southern provinces. Meanwhile, the Radjāpts were defeated in Citawr (975/1568) and, in the two following years, Rānathbūr and Kālindjār. The heir, Salīm (later Dāhāṅgīr), was born in 977/1569 at Sīkri, where in 979/1571 Akbār founded his new capital, later known as Fathpur Sīkri [q.v.]. Next Gudjārāt was conquered—one party in the civil strife had invited his assistance, and the sultanate was showing itself incapable of dealing with the Portuguese threat on its coast and its interference with the Moḥcān pilgrim traffic in 980/1572-3. Good relations were established with the Portuguese to protect the pilgrim traffic; but about this time Akbār began to have his doubts about the sufficiency of Islam.

Soon after this, Dāhāṅgīr Kān Kārārānī [q.v.], who had succeeded to the Bāṅglā throne, refused to acknowledge Akbār’s supremacy, and invaded Bihār. Akbār marched against him, drove his Afgān army out of Bihār and into Aḍīl Shāh’s territories, but later rebelled and was finally defeated and killed in 984/1576. For the affairs of Bāṅglā and Bihār at this time see BANGLĀ (in Supplement), and references under DĀHĀṅGĪR KĀRĀRĀNĪ. Khāṅdēgh, the buffer state between the Mughal empire and the Dēcčān, was occupied in 985/1577. In 988/1580 the first Jesuit mission reached Āgrā; religious toleration was preached in the court, largely as a result of the influence of Abu ‘l-Fadl ‘Alāmillā and his brother Fāydī [q.v.], but that toleration now appeared to exclude Islam. Many Muslims, believing their faith in danger, supported the idea of replacing Akbār by an orthodox sovereign; first Bihār and later Bāṅglā, where a faction of Kākšāl Turks had become prominent, rebelled and the Kākšālīs proclaimed Akbār’s younger brother Muḥammad Ḥakīm, the ruler of Bāṅglā, as their sovereign. The latter indeed was occupied in Hindūstān, but was repulsed by Akbār and made his submission, and the rebels in the east were put down gradually by Akbār’s generals. In 990/1582 he promulgated his syncretistic faith, the Din-i Ḩiḥā [q.v.], and two years later introduced an Ḩiḥā [q.v.] era. The year 994/1586 saw the annexation of Kāshmir, and a first abortive attempt on Ahmadnagar. Early in 995/1588 Sind, Ustād and Kāḥīlīwād had made their submission, and within
another three years Barār, the first of the Deccan provinces which were the object of Mughal ambition, had been ceded to Akbar; the fortresses of Gawilgadh and Narnála followed, in 1009/1600 Abmadnagar was taken by storm, and the following year Ásrāgha [q.v.] fell. Akbar died in 1014/1605, his last few years having been clouded by disagreement with Salim, the heir-apparent. For India in Akbar's time see AKBAR, MUGHALS, MUHAMMAD ḤĀRĪM, and references under the various cities and provinces mentioned above. For his revenue system see DA'RĪA, 6 b, and FĀDĪR MALL. For religious tolerance in his reign see PĀRĪ, FĀYDĪ and DĪN-I ĪLĀH. For the art and literature fostered in his court see HIND, Architecture; HIND; 'ABD AL-RAJĪM, KHĀN-I KHĀNĀN; TĀṢĪR, India.

Salim succeeded, as Dījāhāngīr, to a powerful empire, and was soon challenged by his own son, Khurram [q.v.]; his rebellion was promptly put down and the rebels severely punished—including the Sikh [q.v.] leader Guru Ardjun Singh, whose execution provoked the constant hostility of the Sikhs to the Mughal power. In the north Shāh 'Abbās [q.v.] of Persia laid claim to Kandahār, and Dījāhāngīr moved to Kābul to be near the potential trouble, at the same time sending armies against the Rānā of Mewāl; operations were also commenced against the Deccan from Burhānpur, but the former Ḥāṣbī slaver Malik 'Anār [q.v.] developed guerrilla tactics for use against the Mughals by trained bands of Maratha soldiers, and by 1019/1610 had recovered Abmadnagar and expelled the imperial forces. Further attacks on the Deccan proved useless and the Mughals in fact lost more territory, which was not regained until 1030/1621 when prince Khurram, the future Shāhjahān, who had been placed in command of the Deccan force, met with some success at last. The following year Kandahār fell to Shāh 'Abbās, and Khurram, ordered to retake it, went into open rebellion against his father; he moved quickly through Central India and Uṛśā to Bihār, and Malik 'Anār profited from the disorganization by taking Bīdar. Khurram's activities in the distant provinces of the empire led him at one point to join forces with the Marathas, but he was eventually reconciled to his father. Dījhānghīr died in 1037/1627 and was buried in Lāhawr, which he had raised to the status of a capital city. For details of his reign see DĪJĀHĀNGĪR, MUGHALS, and NŪR DĪJĀHĀN, and also AGRĀ and LĀHAWR, and references under MALIK 'ANĀR; for his great artistic interests see HIND, Architecture; BUSTĀN, KĀHΜĪR, SĪRĀNΓA; for his elaborate coinage see SIKKA, and for paintings in his reign, TĀṢĪR, also MAḤĀR, MAṆṢŪR.

Shāhjahān's reign too started with a war of succession, and after that a rebellion on the part of Khān Dījahān Lōḍī [q.v.], who defected to Abmadnagar; this led to a renewed conflict with the Deccan kingdoms, Abmadnagar being invaded in 1039/1630 and finally surrendering to the Mughals with the capture of Dāwalāthād [q.v.] three years later. The Mughals now had to take account of the Marāḥāsh [q.v.], some of whom had now joined the Mughal forces but who were always a potential source of danger. Attempts to take Bīdājūpur were at first unsuccessful, but a peace was concluded with that kingdom, in exchange for the promise of tribute, in 1045/1636. Shortly afterwards Prince Awrangzīb was appointed viceroy of the Deccan, and Shāhjahān returned north, where he began building Lāhawr and Dihīl. In 1047/1638 Kandahār was ceded to the Mughals by its governor 'Alī Mardān Khān and held for eleven years, after which it was retaken by the Persians; it was not recovered until 1059/1649 and 1063/1653. Before these an attempt to subdue Bālk had been a failure. After these northern campaigns the Mughals again directed their efforts to the conquest of the Deccan until the sickness of Shāhjahān in 1067/1657 led his four sons to quarrel among themselves for the throne. The third son, Awrangzīb, was victorious over his brothers Dārkī Shukhī, Sīrānī Shukhī [q.v.] and Mūrkī Bālkhī [q.v.], and assumed the imperial title, with the regnal name of 'Ālamgīr, placing his father in confinement in the court of Agra where he died in 1076/1666. For Shāhjahān's reign see SHĀHJAHĀN, MUGHALS, and references under MARĀḤĀS; for events in the north see also KANDAHĀR; for the Deccan see DAKHĀN, also BIDĀJūPūR, NIṢĀM GHRĀNĪ, and references under HAYDĀRĀBĀD; for Awrangzīb's early career as governor of the Deccan see AWранGZīB. For Shāhjahān's buildings see, in addition to HIND, Architecture, AGRA, DĪHĪL, LĀHAWR, TĀṢĪR MAḤĀR.

Before Awrangzīb had assumed the throne, the western Deccan had already been troubled by Shīvādī [q.v.] the Marāḥāsh adventurer, who had encroached more than once on the imperial dominions, and had met with success against the 'Ādī Shīhī armies as well. He was attacked by the Mughal armies, to whom he surrendered in 1076/1666, concluding a treaty which gave him the right to collect one-fourth (awthī) of the revenues in Bīdājūpūr; this was no doubt agreed by Awrangzīb with a view to weakening the Bīdājūpūr resources, but its effects were far-reaching as the right to awthī was arrogated by Shīvādī's Marāḥāsh followers wherever they later conquered; for details see MAḤĀRĀSH, also references under HAYDĀRĀBĀD, ii. When various Afghan tribes (Yūṣufzays, Afridis) rebelled beyond the Indus in and after 1082/1671, Awrangzīb went to Hasan Abdāl [q.v.] for two years, which gave Shīvādī even more scope to continue his depredations in the Deccan. He assumed the insignia of royalty, and abandoning an alliance with the 'Ādī Shīhī, he joined forces with the Kūth Shīhī to invade the Madrāsh coastal tracts (the "Carnatic" of British historians; see KĀRNĀTĀKA) and Mahīsur ("Mysore") in 1085/1674, taking from the 'Ādī Shīhī a number of their southern districts. When he died, six years later, he had created a nation out of the Marāḥāsh who had been the former subjects of the Abmadnagar and Bīdājūpūr sultanes, and who were to be Awrangzīb's strongest and most persistent rivals for the rest of his life—indeed, of the Mughal empire as long as it lasted as a power, and of the British in India as well. Awrangzīb moved to the Deccan in 1093/1682, and remained there in constant warfare until his death 25 years later. After exacting a peaceful treaty with Golkonḍā he captured Bīdājūpūr in 1097/1686; Golkonḍā fell next after a siege of nearly a year; and within the next few years all the former forts of the 'Ādī Shīhī and Kūth Shīhī sultanes had been taken, and many forts recovered from the Marāḥāsh, to enlarge the Mughal empire to its greatest extent. The years 1101-9/1690-8 were spent trying to wear down the fortress of Dījīndī ("Ginge"), where Rāḍī Rām, son and successor of Shīvādī, had set up new headquarters; years of petty sieges against minor Hindī kings followed, but the army was becoming exhausted and a retreat was at last made to Abmadnagar, where Awrangzīb died in 1110/1697. For his reign see AWранGZīB, MARĀḤĀS, MUGHALS,
references to his bigotry under DJIZYA, iii; for the important digest of Muslim law made at his behest see AL-KAHFIYYA. For his projects concerning buildings see HIND, Architecture, DIHLI and LIMAHW.

The Deccan sultanates, the last two of which were extinguished by Awrangzib, grew out of the chaotic BahmanI empire, its provincial governors having gradually asserted their autonomy since about 805/1400. Their history is a record of continuous strife among them, with occasional uneasy alliances but rarely the community of interest to combine and stem their common enemies. The final success of the Bahmans in Bidar were the Barid Shāhīs, whose domination over the later Bahmans has been noticed above. Their sultanate was gradually whittled away in the north and west by Bidjapur, against whom they were allied on several occasions with the neighbouring sultanates. The Rāyārī [q.v.] dōlah was a continuous bone of contention between Bidjapur and Vidjayanagara [q.v.], and the only occasion on which the four southern sultans seem to have been united in a common cause is in 972/1564-5 when their confederacy finally crushed the power of Vidjayanagara at the battle of Tālikofa [q.v.]. Bidar was finally annexed by Bidjapur in 1028/1619. For details of this sultanate see BARD Shawsh, also BAHMAHS and BIDAR.

The Barid Shāhī sultanate of Barar was remote enough to stand aside from part of the Deccan conflicts, although there were occasional border clashes with the Nizam Shāhīs of Ahmadnagar. In 933/1527 Barar was invaded by the Nizam Shāhīs and the Barid Shāhīs; the ruler, ʿAllāʾ al-Dīn ʿĪmād Shāh, fled to Khāndehār from where he invited the help of Ḍaḥ ḩūd Shāh of Gūḍrārat, who promptly invaded the Deccan [see BAHĀDUR SHAH GUJRĀR]. The ruler was restored, and Barar was for some time left unmoslem while the larger sultanates were quarrelling among themselves. In 969/1561-2 Daryā ʿĪmād Shāh, the son of ʿĀlī al-Dīn, had been succeeded by his infant son Burhān, and the minister Tufāl Khān took de facto control over the sultanate. The latter stood aloof from the confederacy which defeated the Vidjayanagara kingdom, and plundered the Nizam Shāhī dominions while their ruler was at Tālikofa. In 973/1566 the Nizam Shāhīs invaded Barar in order to punish Tufāl, but strife between them saved the ʿĪmād Shāhī state from destruction at that time. Eventually the Nizam Shāhīs, intent on strengthening their position to match that of the ʿĀdīl Shāhīs who had annexed many former Vidjayanagara possessions in the south, again invaded Barar in 981-2/1574-5, capturing Tufāl Khān in Narnālī and forcing the surrender of Gauḍīgarh; with the imprisonment of Tufāl Khān and Burhān ʿĪmād Shāh, the Barar sultanate was extinguished and absorbed in the Nizam Shāhī dominions. For the detailed history of this sultanate see ʿĪMĀD SHAHS, GAULGARH, ILĪKPUR, NARNĀL, as well as references under NIZAM SHAHS.

The Nizam Shāhīs, like the Barid Shāhīs and ʿĀdīl Shāhīs, were Sunnis, although after about 944/1537 Burhān I adopted Shiʿism. The ancestral home of the Nizam Shāhī kings was at Pathri in Barar, the claim to which led to several Nizam Shāhī raids on ʿĪmād Shāhī territory. For the most part, however, the Nizam Shāhīs were in a constant state of dispute with their larger neighbours, the ʿĀdīl Shāhīs and the Kūṭ Shāhīs, in turn, one sultanate always eventually being compelled to intervene in a war between the two others lest the balance of power be upset to the disadvantage of the non-belligerent party. In this strange way the rival sultanates were in fact able to keep going where the Bahmans failed, and to destroy the powerful Vidjayanagara kingdom to their south. To give an account of these three sultanates seriālīm would involve unnecessary repetition and, since the political history of each is so closely bound to that of its neighbours, would fail to show clearly the events in the Deccan in relation to a chronological framework; the purely domestic affairs of each sultanate are less relevant to the history of Islam in India, for each produced more history than it could consume locally."

Yūsuf, the founder of the ʿĀdīl Shāhī dynasty, had been a Shīʿī and established that form of Islam in his dominions. On his death in 915/1502 his son ʿIsāʾī was a minor, and a regent reintroduced the Sunni faith; this was politically to the disadvantage of the "foreigners", who were as powerful a faction in Bidjapur as they had been in the Bahmanī sultanate, and were on this occasion successful in returning to power and reintroducing Shīʿism. But the state was torn by political rivalry, and was not powerful enough to prevent the Portuguese from capturing Goa [see SINDABUR] later that year. Their troubles with Vidjayanagara immediately followed when that state, in 916/1510, annexed the Rāyārī [q.v.] dōlah. Four years later Bidjapur was strong enough to defeat Amir ʿĀlī Barid, who had established a provincial governor at Gulkarga—now virtually part of the Bidjapur state—on behalf of the puppet Bahmani king. Shortly after this the ʿĀdīl Shāhī sultan, in reward for extracting a Persian ambassador from detention at Bidar, had received recognition of his royal title from ʿShāh Ismāʾīl, the Ṣafawī sultan. By 927/1519 Bidjapur was in a position to try to recapture the Rāyārī dōlah, although the attack failed; the Hindu king had been incited to take the dōlah by Amir ʿĀlī Barid, against whom Bidjapur sought an alliance with Ahmadnagar, marrying the sister of the Bidjapur king to the ʿĀdīl Shāhī sultan. But the princess’s dowry, the fort of Shīslapur [q.v.], was never ceded to Ahmadnagar, and so in 931/1525 the Nizam Shāhīs, in alliance with Barar and Bidar, invaded Bidjapur but were defeated and driven out. The war with Bidar, against whom Bahadur Shah's attack on the Deccan, has already been mentioned; Ahmadnagar and Bidjapur were on this occasion united against the invader, but even on this occasion Amir ʿĀlī Barid had tried to interfere between them and Ismāʾīl ʿĀdīl Shāh marched to Bidar to punish him. Bidar fell, but was restored to the Barid Shāhīs on condition that Kalyānī and Kandhar [qq.v.] were ceded to Bidjapur, and that assistance should be given to recapture the dōlah. Rāyārī and Mudgal were regained shortly, but the Barid Shāhīs did not in fact cede the two northern forts. In 937/1531 Bahadur Shāh of Gūḍrārat had annexed Mālwā and Burhān Nizam Shāh, alarmed by his growth of power, offered allegiance to him and obtained from him recognition of his royal title; Bahādūr's aim was to enlist Burhān's support against the Mughals, but secretly Burhān suggested to Humayūn an attack on Gūḍrārat. Later that year Burhān's insolence to Ismāʾīl ʿĀdīl Shāh, who was attempting to force the promised cession of Kalyānī and Kandhar, led to further Ahmadnagar-Bidjapur war, in which the Nizam Shāhīs were defeated; but next year, 938/1532, an agreement was reached between these two powers permitting Ahmadnagar to annex Barar and Bidjapur to annex
Golkonda. The campaigns started, but were cut short by the death of Ismail Adil Shah, in 942/1534, whose first two sons had been killed by Murtaza, and who died shortly afterwards. Ibrahim succeeded to the Bidjarpur throne, Ibrahim reintroduced the Sunni faith, dismissed the "foreigners", and introduced Kannada and Marathi as court languages in place of Persian—thus allowing the employment of many Hindus in the administration. A few years afterwards Burhan Nizam Shah was converted to Shi‘ism, and consequently relations worsened between him and Ibrahim; in 947/1540 Burhan marched again on the Adil Shahi kingdom and annexed Sholapur, then drove Ibrahim out of Bidjarpur, occupied the town, and set off in pursuit of Ibrahim; the latter received reinforcements and drove the invaders to Dowlatabad, where Burhan bought peace by relinquishing his claim to Sholapur. Smearing under his defeat he persuaded Diamadh Kuth Shih and the rajah of Vidjayanagara to join a confederacy against Bidjarpur in 950/1543. These three powers, together with Ali Barid, invaded Bidjarpur that year and the next without success; on a third attempt Ali Barid decided to support the Sunni Ibrahim rather than the Shih Burhan, causing the latter to invade Bidar and taking three strongholds on the Bidar-Bidjarpur border. In the consequent troubles in Bidjarpur a disaffected minister and the king's younger brother, Abd Allah, sought the aid of Portugal at Goa, but were claiming the Konkan coast. A rebellion in the Konkan was crushed by Ibrahim. Further attacks on Adil Shahi territory were made by Burhan, with Vidjayanagara support, in 954/1547 and 959/1552, the Rayur dorph again being annexed to Vidjayanagara on the latter occasion. In 961/1553 Burhan died and eventually his son Husayn gained the Ahmadnagar throne after a war of succession. Diamadh Kuth Shih had similarly been succeeded by his youngest brother Ibrahim. At this time the Adil Shahis actually turned to Vidjayanagara for assistance in 962/1555, against a rebel noble Sayf ‘Ayn al-Mulk, and, alone waged war against the Portuguese in the northern Konkan. Ibrahim Adil Shah died in 963/1558 and was succeeded by his son Ali, who restored the Sunni faith and expelled the "foreigners". On Ali's enlisting Vidjayanagara aid again, this time for the recovery of Sholapur, his kingdom was again attacked by the Nizam Shahi and Kuth Shahi forces; but the Kuth Shahi opposition was suddenly withdrawn: the Kuth Shahis could not risk supporting a Sunni state against a Shih one. Ali's demands for the return of Sholapur and Kalyani became more insistent, and in 967/1559 it was Ahmadnagar which was invaded, by the Adil Shahis, Kuth Shahis, and a large Vidjayanagara contingent; a Barar army soon joined in, invading Ahmadnagar from the east. The Kuth Shahi ruler later withdrew and the ‘Imad Shahi contingent changed sides, but still Husayn Nizam Shah had to sue for peace from the Vidjayanagara commander who had now become the dominant party in the confederacy. Bidjarpur and Vidjayanagara continued the campaigns for the next few years; but the Hindu army of Vidjayanagara offended allies and enemies alike by their excesses on their campaigns, including desecrating mosques and violating and enslaving Muslim women; their arrogant rajad now demanded large tracts of land from both Golkonda and Bidjarpur. On this the Muslim rulers sank their differences, and in 972/1564-5 marched on Vidjayanagara and defeated an army led by the battle of Talirofa [q.v.]. The Vidjayanagara empire was destroyed and its lands divided among the victors. The Muslim alliance did not last long: the Nizam Shahis, where Husayn was succeeded by Murtaza, and the Adil Shahis were soon at war again in 1558. In 1560-70 they again united against a common enemy, the Portuguese. The Adil Shahis attacked Goa, the Nizam Shahis Cewal ("Chaoul"); but the Portuguese were so adroit at manipulating dissensions in their opponents' forces, and in playing off one enemy against the other, that both towns held fast against overwhelming odds and the attackers were forced to conclude peace treaties. Ali Adil Shah turned to the former Vidjayanagara territories for easier conquests, and it was this agrandisement of the Bidjarpur lands which caused similar ambitions on the part of Ahmadnagar, whose ruler annexed Barar in 981-2/1574-5, as mentioned above. A general state of warfare persisted between Ahmadnagar and Bidjarpur for some years to come, not without internal troubles such as the rebellion of a Nizam Shahi prince in 987/1579 who fled to Akbar; later wars of succession in Ahmadnagar between 996/1588 and 999/1591 ended in the accession of that prince as Burhan II. In Bidjarpur the minor Ibrahim II had succeeded ‘Ali I, and the Habshi Dilawar Khan rose to supreme power, re-establishing the Sunni faith (for the Habshi factions in both sultanates see ‘Habshi’); during the Bidjarpur internal struggles, the Ahmadnagar forces contested Naldrug [q.v.], and the kingdom was again being annexed to Vidjayanagara on the north and west, but its remains fell slowly to the Marathas, who had risen under Shivaji; and Maratha depredations slowly nibbled away the kingdom on the north and west until its remains fell to Awrangiz in 1609/1686. The Kuth Shahi kingdom of Golkonda was also troubled than its neighbours after the battle of Talirofa, and knew a long period of peace and prosperity under Muhammad Kuli
Kutb Shāh during which the city of Haydarābād [q.v.] was built and adorned; for six years (1070/1660-9) a Persian embassy from Shāh 'Abbās resided in Haydarābād. That peace was preserved under Muhāammad Kutb Shāh, 1020-35/1611-26, although in 1024/1615 the Dutch established themselves at Masulipātam, on the Madrās coast, and the English there seven years later. The next ruler, 'Abd Allāh Kutb Shāh, was able to extend his dominions to the south, with the help of his minister Mir Dīumla [see Muḥammad Sa‘īd]; but the Mughals were already active to the north, and in 1045/1635–6 Shāhdāštā Shāhīs offered the payment of tribute from Golkānda. Mir Dīumla became increasingly powerful in the eastern provinces, and in a quarrel between himself and the king appealed for aid from prince Awrangzīb; this led to the first Mughal siege of Golkānda in 1066/1656, which was bought off. In 1078/1667 the Marāthā Shīvāġī exacted tribute, and was indeed provided with money and troops to recover some of the Kutb Shāhī forts which had been annexed by Bījāpūr. The accession of the last king, Abu 'l-Hasan Kutb Shāh, in 1083/1672, was followed by the rise to power of two Brāhman ministers; their position in a Muslim kingdom, the assistance given by Golkānda to Bījāpūr against the Mughals, and the fact that it was in any case a Shi‘ī kingdom, were all sufficient cause for Awrangzīb to renew the attack in 1096/1685; the capital, and the kingdom, fell to the Mughals two years later. Awrangzīb had conquered the Deccan, but destroyed the balance of power; for Bījāpūr and Golkānda no longer stood between the Mughals and the Marāthās, and the southern states became an easy prey for disinherited adventurers from the north. This enormously complicated phase of Indian history is partly covered by the articles 'Adil Shāhs, Barīd Shāhis, Bīdar, Bījāpūr, Dakhan, Dawlatābād, Gauḷgaṃ, Golkānda, Ḥabībī, Haydarābād, Ilīpur, 'Īmād Shāhs, Kalyānī, Kandhār, Kutb Shāhs, Marāthās, Mugal, Mughals, Muḥammad Sa‘īd Mir Dīumla, Kaldruj, Narnālā, Nīzām Shāhs, Rāyvānī, Shīlāpur, Šīndurūn, Tallikotā, Viṣṇa-Vanagara; some references under Shī‘a; and articles on the major dynasts of the five Deccan sultanates.

The Mughal empire lasted barely five years as an empire after Awrangzīb’s death. There was again a war of succession. The accession of Bahādur Shāh I, whose five years’ reign was a constant struggle to retain the Mughal authority in his dominions: Kām Bakhsh, a younger brother, usurped Haydarābād; the Rājdūpts, especially in Mawārī [see Mūḍhur], were in rebellion against Mughal authority; a rebellion of Sikhs [q.v.] broke out in the Pandjab; and he provoked resettlement in Dīhī and Lāhawr by commanding the introduction of Shī‘ī forms in worship. The emperor Dījahāndār Shāh [q.v.] succeeded in 1124/1712, soon to be supplanted by Farrukhsīyār [q.v.] supported by the Sayyids brothers of Bārhā [q.v. in Supplement], the effective kingmakers of the Mughal empire for some years to come. Attempts to quell the rebellions of the Rājdūpts and Sikhs were partly successful; the Dīsā [q.v.] and their Ghilzais, and the Afrīdīs of Badaji, who too soon were attacked, received revenue concessions. Farrukhsīyār attempted to remove the Sayyids, and was consequently deposed by them in 1131/1719. Neither Ra‘īf al-Darāḏāt nor Ra‘īf al-Dawla retained the throne for more than a few months before the Sayyids produced Muḥammad Shāh [q.v.]; but there was so little faith in the monarchy, and less in the Sayyids, that provincial governors and nobles were able to assume independence of Dīhī more or less as they desired. Kānr al-Dīn Cīn Kīlī Khān, entitled Nīzām al-Mulk [q.v.], opposed to the Sayyids, abandoned his province of Mawārī and established himself first at Asīrgāf; for a time he returned to Dīhī as minister, but retired again to the Deccan ostensibly on hearing of Marāthā depredations there. His deputy in the Deccan had been ordered by Dīhī to oppose him; he defeated this deputy at the battle of Shaḵarkheardā [q.v.] in 1137/1724, and made himself independent in the Deccan with Haydarābād as his capital. Dīhī abandoned his province of Malwa and established a position of great strength with the title of Āṣaf Dīhā, since then borne as a hereditary title by his descendants, the Nīzāms of Haydarābād. The Marāthās—who were supported in their activities against Dīhī by the Nīzāms—appeared now in Mawārī, Gudjarāt, and Būndelkhand. The Dīsās grew in power, and an imperial officer, 'Āli Muḥammad Mūn, had become practically independent in Kāṭah (later Rohilkhānd [q.v.]) to the east of Dīhī. Bādī Rāo, the Peśhwā [q.v.] of the new Marāthā empire, was recognized as governor of Mawārī in 1148/1735, and constantly demanded from the Mughals fresh territory and tribute. Shortly after this Nādīr Shāh [q.v.], who had become ruler of Persia, raided Afghānistān and occupied Kābul, and large numbers of Afghān refugees took refuge with the pro-Afghān 'Āli Muḥammad Mūn in Rohilkhānd. Nādīr Shāh’s advance on Indīa continued, and in 1151/1739 Dīhī was sacked by his army and a general massacre of the inhabitants began; after collecting what treasure he could—enough to keep Persia free of taxes for three years!—he restored Muḥammad Shāh to his throne and left, annexing Kābul and the trans-Indus provinces on the way. Dīhī was left stupified and desolate.

The province of Bengal was less disturbed than the centre. Its government after the time of Awrangzīb, together with the provinces of Bihār, Uṛīsā and Allābādābād, was held first by Dīja‘ār Khān, known better as Muḥṣīd Kuli Khān [q.v.]; his son-in-law Shūdījā al-Dawla [q.v.] after him had handled the province well; but the successor of Shūdījā, Sarfarāz Khān, a weakening, was supplanted in early 1153/1740 by 'Alīwīrdī Khān [q.v.], who was twice successful in recent Dīhī's attempts Malwa to rebel against his king in Bengal. The Marāthās were, however, successful in Uṛīsā, which was surrendered to them in 1164/1751. ‘Alīwīrdī Khān was succeeded in 1171/1765 by Sirādī al-Dawla, who was defeated the following year by Clive at Plassey.

Nādīr Shāh was murdered in 1160/1747, and an opportunist commander of his, Aḥmad Khān, took over the royal possessions and the royal title as Ahmad Shāh Durrānī [q.v.], and advanced with an army through the Pandjab to Dīhī; defeated by Dīhī on an army, the Afghāns retreated. They returned two years later to besiege Lāhawr, and the revenue of part of the Pandjab was ceded to them. A third invasion, in 1165/1751, brought them Mūnlā and the remainder of the Pandjab; in 1170/1757 a fourth invasion took Dīhī by conquest, and, in 1175/1762, two years later a Durrānī army came to expel the Marāthās from the Pandjab, and by 1174/1761 the Marāthā power in the north was broken at the third battle of Fānpat in which the Durrānīs were joined by Mughal, Awadh and Rohilla troops. These Rohillas, the Afghāns of Rohilkhānd, had more than once risen against Dīhī and the virtually independent province of Awadh, and had been on a previous occasion subdued by Marāthā troops invited by Dīhī.
The Durranis on their numerous visits had acted as the rulers of the Mughal empire; when they were absent the real power was manipulated by the governor of Awadh, Sadar Djang [q.v.], the nephew and successor of Sa'dat Khan [q.v.], a Persian Sji'hi. The titular monarch at the time of Panipat was Shâh 'Alam II, who had tried to gain control of Bihâr and Bengal without success. He came under British protection from 1765 to 1771 when he was recalled to Dihîl after the Marâthas had again risen to power; but Awadh, under Shughâl al-Dawla, the Di'âs of Bhatpur, and the Rohilla leader Nadji' Khan held the balance of power, rather than any remnant of Mughal authority. On an occasion when the Marâthas were engaged elsewhere the Rohilla Qâhil Khan, in 1788, attacked Dihîl and seized and blinded Shâh 'Alam II, and the Marâthas leader Sindia continued his virtual domination of Dihîl. In 1803 the Marâthas army was thoroughly defeated by the British general Lord Lake, and under British protection Shâh 'Alam II was restored to his barren title and hollow empire: although titular monarchs remained until the deposition of Bahadur Shâh II in 1857 after the Mutiny, the Mughal empire had ceased to exist. For the period of the later Mughals see MUJHHÖLSö BAHADUR SHAH I, DHĀJHANDAR SHAH, PAKRUCIHYAR, MUHAMMAD SHAH, SHAH 'ALAM II, BAHADUR SHAH II; GHÂFS, MARÂTHAS, RÂDZHUTs, SIKHs; NIZAM AL-MULK; NADIR SHAH; AHMAD SHAH.

To the west of the Nizâm of Haydârâbâd, and to the south-west of the Nizâm of Haydârâbâd's dominions, in Mahisur ("Mysore"), a ruler who established himself about 1750 was Haydâr 'Ali [q.v.], who fought against the local Marâthas, against the Nizâm, against the Nizâm, or with the French, against the British, and carved out for himself a large kingdom. He died in 1782 and was succeeded by his son Tipu [q.v.], who was killed in a British attack in 1799. For the history and its events see BAHAWALPUR, BHOPAL, DIJHPr, DURRANJ, KHYAR, MUKPUR, see also BALôÇTIStAN.

The arrival of the Nizâm of Haydârâbâd's dominions in Mahisur ("Mysore"), a ruler who established himself about 1750 was Haydâr 'Ali [q.v.], who fought against the local Marâthas, against the Nizâm, against the French, against the British, and carved out for himself a large kingdom. He died in 1782 and was succeeded by his son Tipu [q.v.], who was killed in a British attack in 1799. For the history and its events see BAHAWALPUR, BHOPAL, DIJHPr, DURRANJ, KHYAR, MUKPUR, see also BALôÇTIStAN.

After 1857 there was in effect no Muslim rule in India. For the history of the Muslim community thereafter see MUSLIMs. The community was educationally backward and thus at a disadvantage in matters of government in comparison with the Hindus. For aspects of the betterment of the community see especially AHMAD KHAN, ALI GHAR, DEOBAHAND, DIJAM'TYÀ, DIJAM'TAS, DHARDI, INDIA (in Supplement). For Muslim involvement in politics see HIND, INDIA; INDIAN NATIONAL CONGRESS; MUSLIM LEAGUE. For events leading up to the division of what has hitherto been called India in this article into the two dominions (later republics) of India (Bhârat) and Pakistan, see PAKISTAN, also DIWAN, MUHAMMAD SÀLT; LIYARAT 'ALI ISRÀL; MUHAMMAD ISRÀL; FOR THE CONSTITUTION AND GOVERNMENT OF PAKISTAN see DUSTOH X AND HUKUMA V.

It is perhaps not quite correct to say that there was no Muslim rule in the sub-continent before 1947, since the British government did recognize independent "Native States", some of which were under autonomous Muslim rulers, where the British retained the right to intervene if requirements of public safety demanded it and were represented by Resident-Governors appointed. Haydârâbâd was the largest of the Muslim states, but there were many smaller ones. See, for example, BAHAWALPUR, BHOJÀL, GUNAÀRÁH, KASHMIR (under a Muslim MaharâJh and but with a predominantly Muslim population), THAYRÔF, RÄMPUR. See also BALôÇTIStAN. Bibliography: A separate bibliography to cover the various aspects of the Muslim history of the sub-continent would be enormous and would duplicate the detailed bibliographies of the many entries referred to above; reference should therefore be made to the special bibliographies given under each article. (J. BURTON-PAGE)

V. — ISLAM

(a) Growth of Muslim society

The growth of Muslim society in India took place through four processes—conquest, conversion, colonization and migration. It is difficult to say what proselytizing agencies worked in Sind, but we are told that at the instigation of the Umayyad Caliph 'Umar b. 'Abd al-'Azîz an announcement was made that whoever embraced Islam in Sind would be accorded all the rights enjoyed by the Arab rulers themselves. Some tribes of Sind consequently embraced Islam, Dâhîr's son, 'Dây Singh, being one of them. But when the Umayyad political control weakened in Sind, they went back to their original faiths. Mu'âddâsi found that the impact of Islam was confined to only a few towns. In Makrân, he writes, the people were Muslims only in name.

The rise of Ghazna under Sultan Mahmûd (388/998-1030) marked the beginning of a new era in the history of Indian Islam, yet Mamûd's invasions created a gulf between Islam and Hinduism. Notwithstanding the fact that the ruler of Baran, Rai Hardat, had embraced Islam with 10,000 of his followers at the hands of Mahmûd ('Utbi, 505; CUSAPI), the general effect of his invasions was not favourable (al-Birûnî, Kitâb al-Hind, tr. SACHAU, 22).

The establishment of the Ghaznavid hold on the Pandjâb linked India with the cultural centres of mediaeval 'Adjam. However, the real growth of Indo-Muslim society took place after the Ghurid conquest of northern India. References to conversions at the hands of Shihâb al-Dûn Muhammad Ghuri (d. 602/1206) or of his slave-officers are few and far between (Minhâdjî, 152; Firishtà, i, 59). The Sultans of Delhi did not devise any agency for conversion, and minor acts of royal favour, as recorded by Ibn Ba'tûtah (iii, 179; tr. von MİLK, 82), could hardly act as incentives to change one's faith. When Muhammad b. Tughlûk (725-52/1325-51) embarked upon his Deccan experiment, one of his objects was to prepare the ground for the spread of Islam in that region (Nizâmî, Salâfîn-i Dihîl kây madhâhi radjhadâm, 338-45). He exhorted the saints and the 'ulama' to go to different parts of the country to propagate Islam. But if Muhammad b. Tughlûk helped in the expansion of Islam in the south or in the growth of Muslim society in that region it was done indirectly. Muslim society grew in India through conversions which took place voluntarily at tribal levels, and often through the peaceful persuasion of Muslim mystics.

The social set-up of India in the 5th/11th and the 6th/12th centuries was based on the principle of caste. According to al-Birûnî the caste Hindus lived within the city walls and enjoyed all the privileges of city life, the non-caste people were compelled to live outside the city walls and were denied all civic amenities, as they were physically polluted was one of the basic principles of the Hindu social system.
When the Muslims conquered these caste-cities they threw open their gates to everybody, with the result that... of thought and enquiry. A subtle conflict between the Aghari and the Mu'tazili attitudes is, however, discernible in the religious thought of the period.

With the introduction of Ibn al-'Arabi's works (Fuṣūṣ al-ḥikam and al-Futūkhāt al-Makhbīyya) in India during the 7th/13th century there was a stir in Muslim religious thought. Since the pantheistic ideas of the Great Shaykh were in consonance with the spirit of the Upānīṣad, they became identified with the movement of rapprochement between the Hindu and the Muslim attitudes. The rise of mystic poetry in Gharda at this time and the composition of the Ṣadūqīn of Dzjr al-Dīn Ṣūrī [94]—which was first quoted in the mystical gatherings of Shaykh Naṣir al-Dīn Čirāgh (675-725/1276-1336)—further strengthened the influence of Ibn 'Arabi's thought. Eminent scholars, like Sayyid 'All Hama- dans (d. 786/1384), Ṣafarid Dīn Ḥishâwi (d. 795/1392), and Shaykh 'Ali Makhdūmi (d. 835/1424), wrote commentaries on the Fuṣūṣ al-ḥikam, and Shaykh 'All Makhdūmi even attempted a commentary on the Kur'an (Tafsīr al-Rāhmiyān wa tāyṣir al-Mannān) in the light of Ibn 'Arabi's ideas. It became the theme of Mas'ūd Bāk's (d. 800/1397) poetic compositions and inspired also his prose-work, Mirād al-Ṣārīfīn. Ibn al-'Arabi's ideas have become fairly popular in Muslim religious circles when Ibn Tarmiyāya and those of Ibn Tarmiyāya. The orthodox section of Muslim society in India had so far tolerated the acceptance of pantheistic ideas by the mystics as a basis for their spiritual experience, but now that it became the basis for the organization of small social groups—as one finds in the Futūkhāt-i Firāz Shāhī (Aligarh ed., 8-10)—they viewed it as a serious threat to the very structure of the ghar'a and its function as the regulator of the Muslim conscience. The āqāma of the Futūkhāt al-Makkiyya—this period to combat the tendencies released by the pantheists. The production of an enormous literature on ṣīḥ during the 9th/14th century—more than in any other period of Indian history—was inspired by a desire to provide a defensive ideological apparatus against the upsurge of pantheistic ideas which seemed to weaken the external structure of faith.

While accepting ṣīḥ as the basis of all spiritual experience, Shaykh Naṣir al-Dīn Čirāgh emphasized close adherence to the Kur'an and the sunna and discontinued many mystic practices (e.g., prostration before the ṣīḥ), which did not conform to the externals of the ghar'a. He did not agree with many of the ideas of Ibn Tarmiyāya (Ṣhawry al-madājil, intr. 29-31), but he met the challenge of the time by making a serious effort to bridge the gulf between the formalist scholars and the mystics. That a mystic of his eminence should be styled “the second Abū Ḥanīfa” shows the extent to which in his own person he had succeeded in bridging the gulf. His disciple Sayyid Muhammad Ghāzī Darāz criticized the thought of Ibn al-'Arabi, and even planned to write a book in refutation of his ideas (Makhbūt-i Shāh Muhīb Alāih, Aligarh University MS, 90).

For some time the balance seems to have been in favour of Ibn Tarmiyāya's school of thought, but the
views of Ibn al-"Arabi, which provided the necessary ideological meeting-ground for Islam and Hinduism, making a definite impact and the stream of religious thought began to flow in that direction. The 9th/15th and the 10th/16th centuries saw a mushroom growth of new sects, ideologies, philosophies and attitudes in India, most of them based on a pantheistic approach to religion. The Bhakti movement, the Šaṅkarī order, and the Rauśhanīyya sect were the expressions of the same attitude, which laid greater emphasis on the spirit than on the form of religion. Shaykh Muham-

mad Chawth of Gwalior translated Širīk Ḳumand into Persian, and thereby introduced Hindu mystical ideas and Yogaic practices into the Šūfī discipline. Bāyāzīd Ṣansārī, the founder of the Raušhanīyya movement, laid greater emphasis on the interiorization of religious rites and practices than on outward con-
formity to the externals of religion. When Akbar appeared on the Indian scene, the ideas of Ibn al-"Arabi held sway. In his eagerness to evolve a common religious outlook, Akbar made certain experiments with the ideological support of panthe-

istic philosophy, which hurt the religious susceptibility-

ibilities of the orthodox section and produced fears that in the process of evolving an amalgam of differ-

ent religions the individuality of Islam might be jeopardized. Had Akbar not intervened, Indo-

Muslim religious thought would probably have proceeded on entirely different lines, but Akbar's at-

tempt to assume the leadership of these syncretic forces provoked a severe reaction, which expressed itself on one side in the production of hadīth and juristic literature by scholars like Shaykh ʿAbd al-

-

Ḥakīk Muḥaddīdh and on the other side gave birth to the powerful movement of the Naḵṣbandī Shaykh ʿAbd al-Sirhindī. (g.s.), popularly known as Muqaddidi-y Ḳaft-ī Thānī. Under the influence of his teacher Shaykh ʿAbd al-Wahlāb Ṣuttaḏ, Shaykh ʿAbd al-Hakīk had followed a very cautious and non-committal policy towards the ideas of Ibn al-"Arabi (Khāṣṣīr al-ahkārī, 263), but Shaykh ʿAbd al-Sirhindī published abroad his tirade against Ibn al-"Arabi's pantheistic approach to religion and mysticism. He considered it an expression of an immature spiritual experience, frustrat-

ing the impact of the ray of spirituality on religion, as it facilitated the absorption of ideas and prac-

tices by Muslims which ran counter to the monotheistic ideals of Islam. He condemned on that account the religious experiments of Akbar. Drawing his inspiration from the Kurānīic verse, "For you yours, and for me my religion" (CIX, 6), he declared against an admixture of Muslim and non-Muslim—

Hindu, Buddhist, Djiyn and other—ideas by Akbar. He succeeded in winning over large numbers of Mughal nobles to his side, and through them he sought to bring about a change in the atmosphere of the court. Djiyn Ĥānī had to give up Akbar's policy of meddling in religion and making religious experiments, while Šāhjdāhān and Awaṅrgīb came definitely under the impact of Shaykh ʿAbd al-Sirhindī's ideas. Šāh Kālmāl Allāh of Delhi (1606-

1142/1650-1729) wrote to a disciple, who was trying to reconcile the two concepts whose underlying reality was one and the same. Though some other followers of the Muṣaddid, like Ṣaḥīb Mīr Nāṣīr ʿAndālīb (Nāṣīr-ī ʿAndālīb, Bhopal 1310), Ṣaḥīb Mīr Dard (Iṣm al-khiyāl, Delhi 1308), and Ghulām Yābīya (Kaṭīmāt-ī Ḳhākī, MS, Allahābād) did not agree with his point of view, Šāh Wall Allāh, so far as he was concerned, closed the controversy which had been raging in Indian Muslim thought for several centuries. Šāh Wall Allāh's son Šāh Raffī al-Dīn rebutted... the arguments of Ghulām Yābīya in his Da-wāzh-e ʿulā (MS no. 1699 Bankīpore), and paved the way for the return of pantheistic ideas as the basis of spiritual experience.

Šāh Wall Allāh of Delhi (d. 1763) was a seminal personality in the intellectual life of the Indian Muslims. He exercised a profound influence on the religious thought of his contemporaries, and many of the religious movements of the period, though differing in their approach, drew inspiration from his outlook and insight. On one side the orthodox school of Deoband, which aimed at resuscitating the traditional and classical values of early Islam, clung to his ideology, on the other hand Sir Sayyid Ahmad ʿKhān, who stood for a complete reorientation of religious thought in the light of Western rational-

istic tendencies, looked to him for support and guidance. Šāh Wall Allāh was the last great thinker of the Middle Ages who realised the need of re-interpreting Islamic thought in the light of reason and pointed out that the codification of shari'a's laws should be related to the specific requirements of a particular
region and should take into consideration the social, religious and legal practices of the society concerned. This dynamic religious approach opened fresh avenues for the re-interpretation of the basic religious values. On being asked which of the four schools of Sunni fiqh he belonged to, he said: “I try my best to combine all the points of agreement in all the schools, and in matters of variance I adhere to what is proved by the genuine hadith—which, thank God, I can do. If anybody asks me for a fiqih, I give it according to where I have mine.” They were encouraged to recourse to any school of Sunni law which suited the circumstances was of great significance to the succeeding generations. It may be pointed out that in its attempt to bring its laws into consonance with the spirit of the modern world, Egypt was guided by this very principle.

The new spirit of idrīsīd which Shāh Waliy Allāh wanted to awaken could be possible only if religious thought was extricated from narrow and sectarian controversies. With this aim in view he translated the Kurʿān into Persian and his two illustrious sons—Shāh ‘Abd al-Kadr and Shāh Rāfiʿ al-Dīn—translated it into Urdu, so placing the main source of Muslim religion within the reach of all Indians. Besides, he and his sons popularized the study of hadith and prepared many thought-provoking commentaries on it. The literature produced by his followers, particularly Mawlānā Muhammad Ismāʿīl Shāhīd (d. 1831), breathes the spirit of Wahhābī ideology.

The infiltration of western influences into Muslim society created a stir in the Muslim mind in the 19th century. The superiority of the West in technique, science, and industry was an established fact, but the Muslim mind could not be induced to be the supplanter of the Mughal rule in India and could not, therefore, be accepted. This created a conflict in the Muslim mind which is revealed in the strange but significant position taken up by Shāh ‘Abd al-Azīz, the eldest son of Shāh Waliy Allāh. On the one hand he praised English efficiency in art and industry (Mafâzātī, 51) and permitted the study of the English language (Fatwâd-i ‘Aṣīfī, 195) and on the other side he issued a fatwâ declaring all land under British occupation as dar al-barb (Fatwâd-i ‘Aṣīfī, 17). This position was, however, maintained by the succeeding generations. Those who studied the English language and sciences willingly accepted British rule, and those who refused to accept British rule totally refused to learn the English language and literature. As was inevitable, two diametrically opposite tendencies developed in Muslim religious and social attitudes, one represented by the ‘Aligarh movement under Sayyid Ahmad Khan, the names of Mawlānā Abu ‘l-Kalām ʿĀzīz (1888-1958) and Dr. Muhammad Ikbâl (1876-1938) are particularly noteworthy. Mawlānā Abu ‘l-Kalām ʿĀzīz was deeply influenced by Dīmāl al-Dīn Āfghānī (d. 1927), Muhammad ʿAbduh (d. 1905) and Ṭalāqī Râdī (d. 1935) and he enthusiastically broadcast through his journals al-Hilâl and al-Balâgh the same spirit of religious enquiry and dynamism which Āfghānī and his school of thought had tried to infuse into the Middle East. But the greatest contribution of the Mawlānā is his incomplete commentary on the Kurʿān (Tarjumān al-Kurʿān, 2 vols.), which marks the beginning of a new era in the history of Muslim exegesis. The Mawlānā discarded the apparatus of philosophic disquisition of the Muʿtazilites and the spirit of rationalism developed by Sayyid Ahmad Khan and others of his school of thought. He condemned a natural, direct and unsophisticated
approach to the study of the Kur'ān and declared all attempts at resolving the conflict between religion and science as irrelevant, since scientific problems, according to him, were not the domain of religion. But it was difficult for the Mawlawī to escape the spirit of the age in which he lived. His humanistic approach and theosophic attitude give an idea of the mental climate of the period.

Dr. Muḥammad ʿIkbāl, who had made an intensive study of western and eastern religions and philosophies, emphasized the reconstruction of Muslim thought in the light of the problems posited by the modern world. He looked upon religion as a powerful factor in the evolution of a man's personality and the betterment of human society. "His Islam," writes Smith, "repudiated the conception of a fixed universe dominated by a dictator God and to be accepted by servile men. In its place he would put a view of an unfinished growing universe ever being advanced by man and by God through man." He criticized those eclectic elements of religious thought which made man parasitical and indolent. He preached a life of self-assertion and self-realization. "The moral and religious ideal of man is not self-negation but self-affirmation" he declared. ʿIkbāl's thought had a very deep impact on the contemporary Muslim religious attitude.

Another great conflict in Indo-Muslim religious thought took place in 1918 when Mawlawī Ḥusayn ʿAḥmad ʿĀmān (1879-1957), who taught ḥadīth at Deoband for several decades, attempted a reconciliation of religious thought with the national trends in the country and declared that religion did not constitute any basis for separate national individuality and that the Hindus and the Muslims of India were one nation. Dr. Muḥammad ʿIkbāl opposed this view and the controversy (Mas'āka-i Deobandi) continued for years and found reflection in political life also.

(c) Muslim religious movements

A number of Muslim religious movements have appeared in India during the last 700 years. Abūl-Faḍl refers to 14 mystic orders, and the author of Dabistan al-madhābīn to a number of religious groups, all of whom thought in the light of the problem posited by the modern world. Significantly enough, most of these movements were inspired by mystic ideas and even where orthodoxy initiated them, it was often through the medium of mysticism that they reached the people. Considered as a whole and from the broad point of view of their impact on Indian life, these movements reflect four distinct attitudes and tendencies: the intellectual, the political, the social, and the mystic.

Movements for Expansion: Five important mystic orders—the Ćīṭīyya, the Sukhrāwārdīyya, the Firdawsīyya, the Kādiriyya and the Shāṭṭārīyya—worked and adopted many Hindu and Buddhist rites, like the practices of bowing before the šaykh, presenting water to visitors, circulating ṣanbāl, shaving the head of new entrants to the mystic circle, audition parties (samāʾ) and the Cīliy-i-maʿākūs (the inverted ẓilla). This identification with the surrounding conditions helped them in attracting non-Muslims to their fold. Besides, almost all the principal saints of these sīsīsīs were believers in the pantheistic thought which also provided common ground for intellectual contact with the Hindus.

Movements for Reform: In the 11th/12th century the general drift and direction of the Muslim mind was towards the reform of Muslim society from within. The Nakhshbandī sīsīla, which was introduced in India by Shaikh Bākī b'Allāh (971-1022/1563-1603) during the closing years of Akbar's reign, reached its high-water mark under his principal disciple, ʿShaykh Ahmad Sirhindī, whose disciples, according to Dījahāngīr, operated in every important town and city of India. The efforts of ʿShaykh Ahmad Sirhindī were directed towards the reform of Muslim society. He was not concerned, as were the mystics of the preceding era, to expand the faith amongst non-Muslims. He aimed at consolidating it by reforming it and removing its un-Islamic trappings. An uncompromising monotheist, he did not agree with those religious experiments of Akbar which he had made with the ideological support of the pantheistic thinkers and which had elements which ran counter to the very basis of the orthodox Islamic concept of tawḥīd. He condemned the prevalence of bidʿās (innovations), which meant to him dissuasion from looking to the Prophet as the source of all religious guidance and inspiration. He permitted the exercise of ḵiyās and ʿidāthād, provided it was within the framework of the Kur'ān and the sunna. He condemned those uṣūlmā and ẓāfīs of his day who encouraged deviations from the sunna under the garb of ʿidāthād. He approached the rulers, the ẓāfīs and the uṣūlmā in order to bring about a change in their outlook on life. It was a propaganda and the efforts that Dījahāngīr abandoned Akbar's policy of making religious experiments, the ẓāfīs came closer to the ḡarīʿa and rejected the doctrine of waḥdat al-wujūd, and the uṣūlmā turned to the revival of religious learning.

Era of Regeneration: The 11th/12th century was an era of regeneration in Indian Islam. Shāh Wall Allāh (1114-97/1703-9) and Shāh Kāmil Allāh (1060-1142/1650-1729) were the two outstanding figures who attempted to revive the original teachings of Islam—one at the intellectual, and the other at the spiritual level. Shāh Wall Allāh gave a new impetus to the revival of the religious sciences. He laid the foundation of a new school of scholastic theology; bridged the gulf between the jurists and the mystics; softened the controversy between the exponents and the critics of the doctrine of waḥdat al-wujūd and awakened a new spirit of religious enquiry. He addressed all sections of Muslim society—rulers, nobles, uṣūlmā, mystics, soldiers, traders, etc.—and tried to infuse a new spirit of dedication in them. His seminary, Madrasa-i Ḳaḥīmīyya, became the nucleus of a revolutionary movement for the reconstruction of religious thought in Islam and scholars flocked to it from every corner of the
country. His concentration on fiqh and tasawwuf and his attempts to make them complementary was determined by his conviction that through a dynamic use of these two active principles both the structural and the spiritual aspects of Muslim religious life could be resuscitated and a healthy balance (lawizum) between the form and the spirit—which had been shattered during the preceding years—could be maintained. His work was continued by his sons and successors. His example to which he and his family contributed to the revival of Muslim religious sciences may be judged from the fact that the majority of Muslim institutions all over India from the 12th/13th century onwards owe their existence to their efforts. Shah Kalim Allâh’s work was in a different direction. He revived and revitalized the Cîghtî (q.v.) order on the lines of the saints of its first cycle, checked the growth of its esoteric tendencies, sent his disciples near and far to propagate the Cîghtî mystic ideals. The rise of a number of Cîghtî Hayâyâhs in the Pandjab, the Deccan, the North West Frontier, and Uttar Pradesh was due to the efforts of his spiritual descendants (Niîâmî, Ta’îrîkh-i-madâkh-i Cîght, Delhi 1953).

Era of Reorientation: The 19th century saw the reorientation of Muslim religious thought as demanded by the new problems arising out of the interaction with the West. Three different reactions to this situation are discernible in the religious movements of this period—(i) to reorientate religious thought on traditional lines, or (ii) to evolve a new ‘Imî-i Kâlam to meet the situation and to accept whatever the West could give; or (iii) to attempt to steer a middle course. The Wahhâbî and the Farâ’îdî movements were inspired by a desire to resuscitate classical Islam through the reform of Muslim society and the restoration of its political power. The movement initiated by the ‘ulamâ’ of Deoband aimed at revitalizing Muslim society through the revival of religious learning, and looked with a feeling of distrust towards western thought and learning. The ‘Allâghar movement, organized by Sâyyid Ahmad Khân, tried to meet the challenge of Western education by accepting European education and giving a new orientation to Muslim social, educational, and religious ideals. There was considerable opposition to Sâyyid Ahmad Khân and his social and educational ideals and religious views, but ultimately the movement succeeded, and it was through ‘Allâghar that Indian Islam became acquainted with the West and its achievements in the realm of thought. The establishment of the Nadwat al-‘ulamâ’, which stood for effecting a compromise between the excessive “this-worldliness” of ‘Allâghar and the excessive “other-worldliness” of Deoband, was in fact an off-shoot of ‘Allâghar, and Mawlawâ Shibli (1857-1914), who played a prominent part in its establishment, was one of those who were closely associated with the ‘Allâghar movement. Shibli’s idea of writing a series entitled “Heroes of Islam”—which included Ghurzâlî, the caliph Mu’âmmâr and Abu Hanîfâ, and which was responsible for reviving interest in the history of Islam—was inspired by Sâyyid Ahmad Khân, who also asked Hâllî, another friend of his, to write a masâ’das, in order to awaken the Indian Muslims from their stupor by presenting a vivid story of their rise and fall. The Dâr al-Mu’âshânî of A’âmarghâr, which has published a number of outstanding religious works, is an offshoot of the Nadwa and is run mainly by its alumni.

The Dîjamâråt-i Islâmî, an organization of considerable religio-political significance, established by Mawlawâ Abu ‘l-’Allâ Mawddî in 1941 with a view to providing guidance to both the modernists and the classicalists (Mawddî, Tâ’âzîmât, Karachi, 1947), has checked the permeation of Communist ideas in the Muslim youth, but its attitude towards the jurists and the fa’îsîs of Islam has been resented in Muslim religious circles.

Towards the end of the 19th century a new religious movement was initiated by Mîrzâ Ghûlâm Ahmâd (1839-1908) from Kâdîyân, known as the Ahmâdiyya (q.v.), which soon assumed the shape of a new sect of Islam. The Mîrzâ claimed to be an avârat of Kirghiz as well as Jesus returned to earth and the Mahdî; also the burîs (reappearance of Muhammad). The movement has spread to various parts of the world, with a small band of converts in Britain, on the continent of Europe and in the United States.

The purely religious and spiritual movements of the Indian Muslims during this period centred round three great figures, Shah Ghûlâm ’Allî of Delhi (1156-1240/1743-1824), Mawlawâ Asârî of Thânâ Bhawan (d. 1943), and Mawlawâ Muhammâd Iyâs of Delhi (d. 1944). The influence of Shah Ghûlâm ’Allî reached distant parts of the Muslim world (Aûšûr al-’andâd, chapter iv, 18), through his disciples, such as Shâykh Khâlîl al-Kurdi. Mawlawâ Asârî has many works to his credit, big and small, dealing with various aspects of Muslim life (’Abd al-Bârî Nadawî, Dîjârî al-Mudâjdâdîm). He also strove to popularize and strengthen the Cîghtî order. Mawlawâ Muhammâd Iyâs set up a centre for moral and spiritual instruction at Delhi, and started a brisk religious activity. His movement (Abu ’l-’Hasan ’Allî Nadawî, Hâjirât Mawlawâ Muhammâd Iyâs aur un ki dinî da’awâ, Lucknow 1949) has spread to different Arab countries, and his followers, who go about far and near in small groups known as gîmâdâts, concern themselves only with the purification of religious life. The Mawlawâ first applied his method of religious persuasion to the Maywâts (Gazetteer of Ulwâr, London 1878), an illiterate and half-converted tribe living in the eastern regions of Delhi. This is, in fact, the only significant Muslim religious movement in India at present.

(d) The Shî’îs: Ikhân-’ashârîs and Ismâ’îlîs

Long before the influence of the Ikhân-’ashâriyya (q.v.) spread in India, the Ismâ’îliyya (q.v.) entered the country and started brisk religious propaganda. In the last quarter of the 4th/10th century, Fâtîmid political power was established in Multan, and was overthrown by Sultan Muhammâd of Ghâzna in 396/1006. Undeterred, the Ismâ’îli missionaries spread out into Sind, the Pandjab and Gudjarât, and by their strenuous efforts retrieved much of their lost political prestige. When Shîhâb al-Dîn Muhammâd of Gûr appeared on the Indian scene, he found the Ismâ’îlîs quite powerful. In 572/1175 he dislodged them from Multan and many of them “went underground living in the guise of Hindus” (Ivanow, Brief survey of the evolution of Ismâ’îlism, 230). Embittered and annoyed, the Ismâ’îlîs entered into an alliance with the Khokars and assassinated Shîhâb al-Dîn (602/1206) at Damyak on the Indus. The Sultanate of Delhi found itself committed to an anti-Ismâ’îlî policy, and when Iftikârîs secured a manshur from the Abbâsîd Caliph the secret Ismâ’îlî opposition became open and aggressive. During the reign of Râdîyya (634/1237-1238) and his successors—Karnâd, Mawlawâ Nîr Tûr—gathered together his supporters from Gudjarât, Sind, and the Doab and organized a coup d’état to establish Ismâ’îlî power
at Delhi (Tabafrdt-i Ndsiri, 189-90). The Sultans of Delhi adopted stern measures against all forms of Ismā‘īlism. The Ibāḥīs (Amir Khusrav, Khaṣṣā‘īn al-futūh, ed. M. Wahid Mīrā, Calcutta, 207; Futūḥāt-i Shirāzī, ed. M. Hāshim ibn Mūsah al-Hillī, 7-8), some consider Ismā‘īlīs (M. Hāshib, The Campaigns of ‘Alā‘uddīn Khān, 12; Ḥodivala, Studies in Indo-Muslim history, 282-3). I. H. Qureshi holds a different view, see art. Ibdāṭiyya and references there given), were severely dealt with by ‘Alā‘ al-Dīn Khādījī (695-726/1296-1315) and Fīrūz Shāh Tughluk (754-90/1351-85). According to ‘Isbā‘ī, ‘Alā‘ al-Dīn Khādījī published the Bohorsbār also (Futūḥāt-i Shī‘a, 301). Fīrūz Shāh Tughluk refers to some extreme Shi‘i groups of Delhi as Rawdāfī and says that they reviled the first three Caliphs and Ḥadīrāt ʿA‘īsha, the wife of the Prophet, and considered the Kurān as mulkhabáṭī ʿUljámīn (Futūḥāt-i Fīrūz Shāhī, 7). Sayyid ʿAbd al-Dīn Buḥkhārī, popularly known as Makhdūm-i Dāhijānīyān (d. 756/1354), has given an account of some Shi‘a sects in his conversation embodied in Sīrād-i Hidāyā (MS India Office D. P. 1038). Though some Shi‘a families trace their pedigree to him, he himself, like Sayyid Muhammad Gūsū Darāz of Kulbargā (Jiwaṣ্মī al-kalim, 10, 20, etc.), seems to have been opposed to Shi‘a doctrines. The Sīrāt-i Fīrūz Shāhī (MS Bankipore, 547) also deals with some Shi‘a sects known in India during the 8th/14th century.

In the 19th/15th century appeared the Shi‘a states of the Deccan—the ʿAdlī Shāhīs of Bīḍājār (895-1083/1480-1666), the Nizām Shāhs of Ahmadnagar (896-1043/1490-1633), and the Kūtō Shāhī of Gokonda (971-1083/1521-1687)—and their rulers propagated Shi‘a teachings and practices in the south. Muhammad Kūlī Kūtō Shāhī was the first maṭṭhīya-gū (reciter of elegies) in Urdu. Shi‘a influence increased in northern India when the Sāfawīd power was established in Iran (907/1502) and particularly after the return of Humāyūn (962/1555) from that country. The emigration of Shi‘a from Persia to India continued during the reign of Akbar and reached a significant stage when Ḥanjāṅrī came to the throne. The great Shi‘a scholar and divine Kādī Nūr Allāh Shī‘ahštārī was hanged to death by the order of Dīwārī Ṭāhir Khān for writing Bā‘aṣf al-Huṣaynī (16th century). The propagation of some of the Shi‘a views created resentment in the mind of the Sunni scholars and there appeared a large number of works—such as Risālā Radī-i Rawdūfī by Shaykh Ahmad Sīrīndī, the Islāt al-ḥukā‘ī, by Shāh Wāli Allāh, the Radd al-Shī‘a by Mulla Muhammad Muḥsin of Kāshmir (d. 1311/1757), the Radd-i Rawdūfī by Shāh Kālim Allāh and Ṭūḥā Ḥmā‘ṣiḥṣiḥ by Shāh ‘Abd al-Azīz—of which some were followed by the Ḥanāfī school.

During the 12th/18th century Shi‘a states were established at Mūrshīdbād (in Bengal), Awadh and Rāmpūr (in Uttar Pradesh) and Ḥāyypur (in Sind) and these states played a very important role in the spread of Shi‘ism in India and the popularization of its various religious practices. Separate Shi‘a ecclesiastical and their distinct corporate religious life began with the efforts of Sayyid Dildār ʿAllī of Naṣrābād (d. 1235/1819). The Shi‘a of India commemorate the martyrdom of the Imām Ḥusayn by exposing tazvīyas (miniatures of the tomb of Imām Ḥusayn), holding mājlisās in imāmābārās, and reciting elegies during the first ten days of the month of Muharram. The imāmābārās have a very important place in the cultural and religious life of the Indian Shi‘as. (For accounts of Shi‘a in India, see Muḥāməd al-Ḥusayn al-Muṣaffar, Ta‘rīḥ al-Shī‘a, Nāṣirī 1352 A.H., 232-60; J. N. Hollister, The Shi‘a of India, London 1953).

The ʿImārīs and the Bohorsās (qv.) represent the best-organized Shi‘a communities in India (see also S. C. Misra, Muslim communities in Gujrat, Asia Publishers, 1964). They emphasize esoteric (bāṭinī) discipline and believe in an hierarchical system which controls and regulates the entire life of the community. The ʿImārīs, according to their own tradition, originally belonged to the Lohanā caste of Hindus. A Persian Ismā‘īl missionary, Pir ʿṢadr al-Dīn, converted them to Ismā‘īlism. Among his successors, who organized the Ismā‘īl communities in the Punjab, Sind and Kashmir, were Seth Sham Das, Trikam and Seth Tulsī Das respectively, all bearing Hindu names and enjoying the title of muḥī (chief). ʿṢadr al-Dīn called the Prophet of Islam the aṣāvat or incarnation of Brahma, Adam the ismāʿīl of Shī‘a law, and the ʿImārīs of India during the 8th/14th century. The ʿImārīs of India during the 8th/14th century. The ʿImārīs of India during the 8th/14th century.

The Muslim religious literature produced in India does not merely furnish the indispensable background to the active religious life of Muslim India, but it also supplies the key to an assessment of the influence of Indo-Muslim religious thought on the Muslim world. ʿUrsīnic studies, particularly bīrāḍī and tājwīd, have been very popular in India even so early as the 6th/12th century, when in small places like Aror (near Multan) one could receive instruction in reciting the Kurān according to its seven recognized methods of recitation (Styar al-ṣīrīn, 103). Referring to three experts in bīrāḍī during the reign of ʿAlā‘ al-Dīn Khādījī (695-715/1295-1315) Dīyā al-Dīn Barānī says that “their equals were not to be found in Kurārūm or ʿIrāk”. This Indian tradition of specialization in bīrāḍī continued throughout the ages. Dārā Shī‘kūh (1024-6/1615-59) found more than five thousand hāfīs living in a single quarter of Lahore (Mafṣafāt-i Shī‘ā Ḥabd al-ʿAṣīr). But tafsīr literature made little progress in India during the early period, as the works produced at the time catered for limited tastes; some were written for the ʿulāmā, others for the ʿṣāfs; thus the Taṣfīr al-Rāḥmān wa tāṣfīr al-Mannān of Shaykh ʿAllāh Māḥīmī was inspired by a desire to find Kurānic support for the pantheistic ideas of Ibn al-ʿArabī, and the Bāḥr-i mawṣūlāt of Shīhāb al-Dīn Daulār-
taba'i (q.v.) was an essay in rhetoric, beyond the comprehension of the ordinary man. A disciple of Shaykh Nizam al-Din Awliya, Khwaja Kásim, is reported to have written the (lost) Lāṭ‘īf al-’aṣfīr with the specific purpose of making the thought-content of the Kur‘ān popularly intelligible (Sīyār al-a’wilīyā, 2:270). It was Shāh Wālī Allāh, through his Persian rendering of the Kur‘ān, and his sons, Shāh Rafī‘ al-Dīn and Shāh ‘Abd al-Kādir, through their Urdu translations, which popularized Kur‘ānic thought and made its thought-content available to the people. His Fa’āl al-kabīr, on the principles of tafṣīr, was the first work of its nature written in India. In this he protested against subjective commentaries on the Kur‘ān and laid down the principles which should guide one who undertakes this task. Shāh Wālī Allāh having prepared their ground, many commentaries on the Kur‘ān appeared in India during the succeeding centuries. A comparative study of his works—Fāṣīh al-Rahmān, al-Fa’āl al-kabīr and Huddudīt Allāh al-bālīgha—with the literature on exegesis produced in India, and even elsewhere, during the last two centuries, would reveal the extent of Shāh Wālī Allāh’s influence on Muslim religious thought.

It was in the sphere of haddith literature that Indian Islam made a remarkable contribution. In terms of the use of books, the Persian scholar Fārābī was the first to try and resurrect the science of haddith in the 10th/16th century when it was dying out in the Arab world. The earliest contribution of India to haddith literature is the Maqārī al-anwār of Raḍī al-Dīn Ḥasan al-Sāghānī; then comes the Kams al-umnūd of Shaykh ‘All Muttaqī (d. 757/1357) in which Suyūṭī’s Diwān al-ma’drif, Anwār al-Rafyān—was more scientifically rearranged. According to Abu ‘l-Ḥasan al-Bakri: “The whole world of learning is indebted to ‘Allāmā Suyūṭī, but Suyūṭī himself is under obligation to Shaykh ‘All Muttaqī”. The systematic study of haddith literature in India was initiated by Shaykh ‘Abd al-Hādī Muhaddith of Delhi and was developed by Shāh Wālī Allāh. Shāh Wālī Allāh’s main emphasis was on the Mu’āwītā of Ḥāfiz al-Mālik because it fitted in with his juridico-theological thought and was of great value in making the teaching of the Haddith to the Indian Muslims throughout the centuries were properly edited and their contents analysed, the religious aspirations of the Indian Muslims throughout the ages could be more specifically studied. While the law books seem to ignore completely the specific problems of Muslims in the Indian environment, the fatwā collections throw considerable light on this aspect. On ṣalāt al-fikhr, the Musallam al-iqṭūt of Muḥīb Allāh Bihārī (d. 1225/1707) is a work of great merit.

Probably on no other aspect of Muslim religious life was more literature produced in India than on mysticism. The ma’ṣūrī literature (collections of conversations of mystic teachers)—e.g., Fa’ālī al-fu‘ād, Khayr al-majālīs, Ma’dādī al-ma’ānī, Sirājī al-ḥidāya, Lāṭ‘īf i Kuddāsī, Durr al-maṣūrī, Anwār al-Rahmān—is a mine of information on the religious life and attitudes of the Muslim community as shaped in the Indian milieu. The earliest Persian work on Islamic mysticism, Kasāfī al-ma’āṣīh of Shāh Wālī Allāh, was produced in India, and the place it enjoyed in religious thought may be judged from the remark of Shaykh Niẓām al-Dīn al-Awliya that for one who had no ṣūr, the Kasāfī al-ma’āṣīh was sufficient guidance. The letters of Shaykh Ahmad Sirhindī, known as Maktūbāt-i Imām Bābdīnī, have a place of their own in the Muslim mystic literature of the world. The Shaykh gave a new depth and a new content to mystic terms, which he explained and elucidated in the light of his own spiritual experience. The fact that these letters were translated into Turkish and Arabic shows the reception they had in the Muslim world. On the theoretical aspects of mysticism, works like the Fa’ālī al-qīmūs of Rāfi‘ Muhaddith and the Ma’ṣūrī al-shumūs of Kadi Ilhamī, have a value of their own. A11 Muttaki (d. 975/1567) in which Suyūṭī’s letters of mystic teachers)—has been more scientifically rearranged.

Moreover, it may be traced in the works of Dīmāl al-Dīn Afghānī, Muḥammad ‘Abdul and Rashīd Riḍā. In this work he made a serious attempt to rethink the whole system of Islam without completely breaking with the past. “Perhaps the first Muslim”, remarks Dr. I.ḥālī, “who felt the urge of a new spirit in him was Shāh Wālī Allāh of Delhi” (Reconstruction of religious thought in Islam, 97). His other work, Islālat al-khaflāt, is another outstanding contribution to a clear understanding of the significance, historical rôle and religious meaning of the institution of kīda. He looked upon the patriarchal caliphate of Ansār as normal .and went on to see its spirit working as an operative principle in the social and political life of the Muslims.

(1) Influence of Islam on India and vice versa

Islam made a deep impact on the religious thought and social behaviour of Indians. The development of monotheistic ideas and the consequent re-orientation of Hindu religious thought—as evinced in the Bhākti, the Sikh and the Arya Śāmāj movements—was greatly inspired by Islam. It is true that monotheistic ideas were present in some Hindu scriptures also, but they were covered by a polytheistic veneer. Islam made possible the transition of Hindu thought from polytheism to monotheism. Another significant change in the religious behaviour of the Hindus brought about by contact with Islam was the belief that every individual could approach God without the help of priests and that for one who had made possible the transition of Hindu thought from polytheism to monotheism. Another significant change in the religious behaviour of the Hindus brought about by contact with Islam was the belief that every individual could approach God without the help of priests and that for one who had...
and learning should be available to all without any discrimination is the result of Islamic influence. The Hindu social system had refused to the common man any access to religious texts. Islam encouraged the universalization of religious knowledge amongst the Hindus. The emphasis on congregational prayer amongst the social Muslims had its effect on the Hindus also. The Hindu temples constructed before the advent of Islam provided space for individual prostration before the deity; while the temples constructed subsequently contain more space and seem to have been influenced by the Muslim idea of congregational prayer. Hinduism, as we know from the account of al-Biruni, was not a proselytizing creed. In fact, it was more inclined to excluding people than to admitting them into its religious fold. From the 8th/14th century onwards we find that Hinduism also adopted proselytizing methods.

Islam was also, in its turn, deeply influenced by Indian surroundings and Indian religious attitudes. Many of the mystic practices—meditation, concentration, control of breath, *tasawwur*—were borrowed from the Hindu Yogis and the Buddhists. Through his *Bahar al-bayâdî* and the *Djauâdir-i hamsa*, Sayyid Muhammad Ghawî of Gwâliyâr popularized Yogic practices amongst the Muslim mystics. Some of these adjustments to Indian conditions were necessitated by the circumstances in which the saints had to inculcate their mystic doctrines among the masses. For instance, it is stated that Shaykh Farîd permitted some of his disciples to practice *dhikr* in the Pandjâbi language (*Kaghâli Kalîmi*, Delhi 1308, 25); Shâh Fakhr al-Dîn of Delhi (1126-99/1717-84) said that in India the *khutba* before the Friday congregation should be read in “Hindawi” (*Fâtir al-faydîn*, Delhi 1315, 23), and Sayyid Muhammad Gisû Darâz considered Hindu poetry emotionally more effective in his audition parties than Persian poetry (*Djauâmî al-kalîm*, 173). At another popular level we find excessive faith in magic, sorcery, miracles, grave-worship, and the superstitious belief that epidemics could be averted through the performance of certain practices inconsistent with Islamic teachings. Since there was always a danger of idolatrous habits entering the religious life of the Muslims, Muslim religious leaders—both the Sufis and the jurists—were frequently warned the people against adopting such practices. Sayyid Muhammad Gisû Darâz objected to the adoption of Yogic practices and Shaykh Ahmad Sirhindî directed his powerful and incisive criticism against all kinds of innovations. The fear underlying this attitude was that the idolatrous background of many Hindu institutions would affect the monotheistic character of Islam. When a Hindu wrote to Shaykh Ahmad Sirhindî that *Râma* and *Râkîm* were the same, he objected to it and said that *Râma* was a human being and could not therefore be considered identical with the Allâh of Islam. Shâh Wall Allâh and Shâh Ismaiîl Shâhid fought against the adoption of all those Hindu practices with which idolatrous leanings and ideas were associated. An attempt was made at a higher level of Hindu and Muslim religious thought was made by Dârâ Shukoh. As an individual scholar of comparative religion, Dârâ Shukoh occupies an unirivalled place in Indian history, but his thought did not make any great impact on the contemporary Muslim religious attitude.

It was in the sphere of social life and customs that the influence of Hinduism on the Indian Muslims was the most far-reaching. Since most of the people were converts from Hinduism, it was not possible for them to break away completely from their social background. In varying degrees and at different levels the Hindu traditions and customs were consequently transferred to the Muslim society. In certain rural areas, where conversion was not complete, many of the local customs, even some religious practices of Hinduism which had become a part of their social life, were accepted. In ceremonies connected with marriage, birth, mourning etc. the impact of Hindu traditions was quite remarkable. In certain Muslim families of Awadh and the Pathân, the Muslim law of inheritance was ignored in preference to the customary law. Though Islam had softened the caste ideas of Hindus, considerations of family and *khâfa* in matrimonial matters found ready acceptance in Muslim society also. If a survey is made of the forces and factors which have brought Indian Islam closer to Hindu society, it will be found that the pantheistic thought of the Muslim mystics, which found its reflection in the theosophical thought of the *Upânisâhads*, has invariably brought Islam and Hinduism closer, while the idolatrous connotations and concepts associated with many Hindu institutions pulled them apart. This was to some extent implicit in the situation. “The *Upânisâhads*”, writes S. Radhakrishnan, “no doubt, shattered the authority of these gods in the world of thought, but did not disturb their sway in the world of practice” (Indian philosophy, 1, 453). Similar has been the case with reference to Hindu festivals and many of the heroes of ancient India. In the case of many of the festivals, though based on Indian climatic changes—the Indianising process has forced their acceptance by the Muslims, but their polytheistic religious associations have made them subject to the criticism of the orthodox.

**Bibliography:** Only a select bibliography of works which throw light on the various aspects of Indian Islam is given below. 'Abd al-Ḥâyy al-Ṭakâfî al-Islâmiyya fi *l-Hind* (Damascus 1958, 102-250) contains the most comprehensive bibliography of Muslim religious literature produced in India.

(a) Arab geographers, travellers, etc.: see section i of this article. Relevant extracts from the works of all important Arab geographers and travellers along with Urdu translations are given in *Hindustân *Arûb ki nazar mayn*, 2 vols., Dâr al-Musannâfîn, A'zamgarh, 1960-2.

VI. — ISLAMIC CULTURE.

The transplantation of Islamic culture on the Indian sub-continent began with the incorporation of Sind into the Umayyad Caliphate after 95/713, and came to be represented by such scholars as Ḥadīth as Abū Ma'shar and Abū Turāb (c. 171/788), and by the poet Abu l-ʿAṯār.

Sind became the main channel of Indian studies in the early ʿAbbāsids times, especially through the active interest of Yahyā al-Barmakī. The fragmentary renderings of Hindu scientific works touched, however, merely the periphery of the external Arab equipment of learning; their influence on the Arab lexisque technique was slight; and the movement of translations from Sanskrit, which in any case had completely ignored the total corpus of Hindu scriptural and speculative literature, came to an end as the political grip of the ʿAbbāsids over Sind loosened. The transmission of Hindu mystical ideas into ʿSūfīsm has been argued for and against, through the controversial Abū ʿAli al-Sindī (q.v.) and al-Ḥallāḏī (q.v.) who travelled through Sind. Not much evidence of a recognizable form of the culture of Sind under the ʿImāmī influence (c. 666/977) has survived.

Parallel to the conquest and occupation of Sind were the peaceful commercial and missionary activities of Arab traders on southern Indian coasts; and theories have been hazarded of the possible inspiration of the Muslim presence on the great Hindu movements led by Ṣhankaracāryā (788-830) and Rāmānuḍa (d. 1137). These may be discounted in the absence of any direct evidence, and because every element of the teachings of these Hindu thinkers can be traced to purely Hindu sources.

With the occupation of the Panḍīb by the Ghaznavīs (q.v.) and its later surrender to the Ghurids (q.v.) Lahore as a centre gave Muslim Indian culture the Persian contours it has largely preserved throughout the centuries, continually accepting and modifying certain additional Indian features. The pattern of Ghaznavī culture as it developed on the Ghazna-Lahore axis shows a transition from an Arabic intellectual base (al-Bīrūnī [q.v.], al-ʿUthmānī [q.v.]) to Persian (Bayhaḵī, Gardīrī and al-Ḥudūḏī (q.v.) and a shift of emphasis to ʿSūfīstic and theological studies (Ismāʿīlī al-Bukhārī, d. 450/1058). The Ghaznavī tradition of Persian poetry was cultivated in Lahore by Masʿūd Saʿd Salmān (q.v.) (437-515/1046-1122) and Abu l-ʿArrādī Rūnī (d. 484/1091). This period also marks the phase of incubation, if not of actual early growth, of ʿUrdū (q.v.).

After the Ghūrī conquest of Lahore the cultural scene shifted to Iltīsāqī's Dehli (q.v.), Kohlaḵī's Mūṭān. In these courts literary history established itself with ʿAwwf (q.v.) (c. 617/1220), political thought with Fakhr-i-Mudabbir, and historiography with al-Debejali (c. 658/1260) and Ḵānīn (c. 614/1217) who, with their successors, form the chief link in Persian between the early Ghaznavī and the ʿIlkhānī historians. About this time two major ʿṢūfī orders established themselves in India, the Suhrā-
wardiyaa in Mülātān and the Čičitšiyya [q.v.] in Dīhil/Adjmer. A balance was maintained by Iletmish between the jāhānī and the jārīa, inaugurating a tradition of the tolerant co-existence of the two religious disciplines which Islamic culture in India subsequently tried quite successfully to preserve. Refugees fleeing before the Mongol onslaught brought to India fresh waves of Islamic traditions from Central Asia and northern Persia, emphasizing conservative trends in an atmosphere of external (Mongol) threat and internal (Hindū) challenge. The institution of the madrasa [q.v.] was introduced under the 'Slave' sultans, and works of al-Ghazālī [q.v.] and al-Rāzī [q.v.] were translated into Persian.

The ēlite of the court, at first purely Turkish, opened its ranks under various pressures to Afgān and later to indigenous converted elements. Under 'Alāʾ al-Dīn Khāḏḏīl (695-715/1295-1315) external religious conformity was enforced on the Muslim population, whereas the writings of Amīr Khūsraw [q.v.] reflect the borrowings into Islamic culture from Hindū ways of living, popular vocabulary and muḥāammad b. Tugḥļuq's (725-52/1325-51) policies of re-establishing political and intellectual links with the Dār al-Īslām, his patronage and employment of a foreign Muslim ēlite and his early proclivities towards rationalism and eclecticism paved the way in the growing Indo-Muslim culture for certain intellectual trends such as Ibn Tuymiyya's [q.v.] fundamentalism implemented during this period by 'Abd al-'Āzīz Arḍabīlī, pre-Taftāzānī rationalism, and an intellectual curiosity relating to certain elements of the Hindū complex of religions such as Ḏaynīmūn and yāga, emphasizing in general a movement towards exoteric and political rather than esoteric and mystical Islam. Enigmatic intellectualism, imported from Central Asia by Bāḏr Cālī, became the fashion in Persian poetry. In the reign of Frūz Tugḥļuq (752-90/1351-88) [q.v.] the state became a traditionalist theocracy, providing certain social welfare elements for the Muslims, and abolition of torture and cruel punishments for all elements of the population. His reign saw the establishment of the disciplines of fiqāh and lexicography in India, but painting and literary poetry were encouraged.

The complete Persianization of the administration by Sīkandar Lōdī (849-923/1488-1517) introduced the Hindū official into the intellectual sphere of Islam, and this in due course of time led to the specific cultural development of certain communities like the Kāyāsthas, the Khatris, the Kāshmīrī Brāhmans and the Ṭāmis of Sind, who retained their Hindū religion but identified themselves culturally with the Muslims.

The successor states of the Dīhil Sultanate [q.v.] mark a regionalization of Muslim culture in India. In Bengal a number of Hindū social and religious institutions were integrated into the Muslim way of life, and the Bengali language and literature show a simultaneous series of borrowings from Sanskrit and Persian sources. In the Dakhān (Deccan) a regional form of Urdu was developed into a rich literary language. The maritime states of Gudjārat and the Farifcā, inaugurating a tradition of the tolerant co-existence of the two religious disciplines which Islamic culture in India subsequently tried quite successfully to preserve.

The institution of the madrasa [q.v.] was introduced under the 'Slave' sultans, and works of al-Ghazālī [q.v.] and al-Rāzī [q.v.] were translated into Persian. Akbar's [q.v.] (963-1014/1556-1605) policies of integrating the Hindūs into the political and social life of Muslim India influenced the attitude of the Muslims in the direction of eclecticism. These policies also evoked an orthodox reaction represented by theologians like 'Abd al-Jasāk Dīhilwālī, who reintroduced in India an emphasis on the study of hadīth, and Nakhšbandiyya Sūfīs like Shāykh Ahmad Sirhindī [q.v.] who brought Indian Sūfism very close to orthodoxy. The programme initiated by Akbar, and earlier by Sultan Zayn al-Ābidīn of Kaghmār (822-75/1420-76) of translations of Hindū religious and literary classics marked the beginning of a more liberal understanding of Hindūism. Co-existent with these internal eclectic features was the constantly flowing cultural stream from Persia and Transoxiana bringing an administrative ēlite which developed into the Irānī and Tūrānī factions in the Mughal court, rationalist trends, artists and architects, and chieftly poets. During the 10th/16th and 11th/17th centuries India rather than Persia was the focus of Persian poetry, and the 'Indian Style' (sabh-ī Hindī [q.v.]) assumed its highly intellectualized and curiously stylized features in the tradition of Fīgāhānī Shīhrāzī.

Akbar's eclectic tradition remained the cultural denominator of the reigns of his successors Djhāhāngīr [q.v.] and Shāhjāhān [q.v.] with a slight focal adjustment in favour of orthodoxy. The 11th/17th century marks the culmination of the growth of syncretic sects, some of them rooted in Hindūism and borrowing liberally from Islam such as the Kābil, Pādshāhī, Vayragīs, Līngāyats, Husaynī Brāhmans, etc., others rooted in Islam with converse borrowings such as Madārs, Pāgānlāthās and others, others again developing into independent religions like Sikhism which has a strong anti-Muslim bias. The conflict of the eclectic and orthodox trends of Mughal culture is to some extent reflected in the essentially personal trial of strength between Dārā Shukhōb [q.v.] and Awrangzhīb [q.v.] resulting in the latter's victory (1069/1658) and the establishment of a theocratic régime, discriminatory against the non-Muslim elements, and in the compilation of the encyclopaedic juridical work Fātawā-i 'Alamgīrī.

In the political and economic anarchy that followed the rapid decline of the Mughal empire in the early 12th/18th century mass syncretization followed, the maritime states of Gudjārat and the Dakhān balanced Hindū cultural borrowings with fresh re-orientations from the external Dār al-Īslām.

During the 8th/14th and 9th/15th centuries Sūfī proselytization achieved mass appeal, and Hindū resistance to it developed in the form of various bhātī movements, borrowing from Islam its emphasis on the Unity of God and its egalitarianism, but fortifying, against its spiritual, economic and social pull, a reformed and latitudinarian Hindūism among the lower castes. The bhātī movements in their attitudes, receptive and resistant, towards Islam ranged from the syncretism of Kābil and Dādū Dayāl to the counter-conversionist trends of Cāytaṇya.

Tūrānī cultural elements from Samarājand and Hārāt were introduced into India after Bābur's [q.v.] conquest (932/1526). For a short while the Turkish language assumed at court the position of literary supremacy, only to be finally displaced by Persian during the Sūrī interregnum (946-62/1539-55) and after Humāyūn's [q.v.] return from Persia which also marks in India the establishment of the Mughal school of painting [see Tāyżwīr].
(Lucknow), decadent and economically bankrupt, developed a new creative impetus by using Urdu instead of Persian as the language of poetry. Like the Persian poetry written in India, Urdu poetry, except in makhansai, tended to ignore the Indian life and background totally in theme and image alike.

The aftermath of the Mutiny of 1857 marks the sharp turning point of Indo-Muslim culture towards modernism represented mainly by Sayyid Ahmad Khan and the 4Allgarh movement. Cultural trends inclined towards separatism and were dominated by a fear of cultural and religious submergence of Indian Islam into the religion and culture of the Hindu majority. This fear of submergence is reflected in the Urdu-Hindi controversy (c. 1870 onwards), revivalism, pan-Islamism and finally in the movement for the achievement of a separate state, Pakistan [pp.]. The official cultural orientation in Pakistan has been to play down the glories of Muslim architecture and literature in the areas outside the present frontiers of Pakistan, and to substitute instead a new concept of cultural heritage derived from regional literatures and local monuments situated within the geographical limits of Pakistan.

vii.—Architecture —

At the time of the Muslim conquest, India was a land with a rich artistic tradition: temples and monasteries abounded, Hindu shrines of all descriptions and sizes were found by almost every hillock and spring, cities were rich and well-planned, Hindu rulers had built for themselves forts and palaces, and the remains of earlier phases of Indian civilization such as the Hindu, Buddhist and Jain cave-temples, and the Buddhist stūpas and monasteries—were numerous. Architecture was characteristically of stone, its construction derived from timber prototypes: beams and lintels were supported on columns or brackets, and roofs tended to a stepped pyramidal shape, through having been built in diminishing horizontal courses. Domical shapes were known, often carried on octagonal bases, but were often solid, and in any case had little structural affinity with the true vousoir-built dome. The northern temples usually had curvilinear towers, again often solid; these, and some of the domical forms, had a characteristic crowning feature which later became part of the Indian Islamic dome decoration, a ribbed ring known as amālaka (from the fruit it resembles, the Emblic Myrobolan, Phyllanthus emblica) surmounted by a pot-shaped moulding, the kālaśa, (lit. 'water-jar'); to these a base of stone foliations in the form of lotus-petals might be added. The entire ornamental feature was on occasions surmounted by a rib of the domes, and it has been suggested that at least part of the origin of ribbed domes in India is to be found in this device. The arch is not known at all as a structure, and only rarely as a decorative form; but recesses used freely on both internal and external walls lead to a proliferation of vertical lines and to unnecessary horizontal plinths and mouldings.

Window-openings were rare: the interior of the Hindū temple was poorly lighted, its kernel being the secret shrine of an idol god whose mysteries were known only to a few initiated priests and were not for public display. The exterior, however, was as luxuriant and prolix as the interior was esoteric and recondite, for all its surfaces were covered with a profusion of exuberant sculpture of iconographic significance, in which the human form preponderated. Free-standing statues also known with the human form again dominant; but frequent also were the vehicles and attendants of the Hindū gods, especially Śiva's bull, and also the linga, the representation of the phallus as the generative principle of the world. The Indian painting tradition must also be mentioned as part of the artistic heritage; but there is as yet insufficient evidence for an unbroken tradition of Indian painting from the
Adjanfa frescoes to the period of the pre-Mughal hill schools. Of the other arts, metalwork, especially cast bronze, had reached a high degree of refinement at the time, as evidenced by the numerous coins which must have been produced by the conquering armies of Hind in the 2nd/8th century, although excavation at present being undertaken at Bhambor and elsewhere may eventually reveal the site of Daybul [q.v.], for a further account of these see SINDH, and see also MANSURA. The buildings after the 6th/12th century conquest of the north, however, show the Muslims' reaction to indigenous building very plainly; for the traditions of the idol-temples, with their plethora of floral figure representation, their gloom and secrecy, and above all the nature of the worship they implied, were not only anathema to Islam but were its direct antithesis. The earliest phase of Muslim building is in Delhi [see DIL], and is here represented by the re-use of pillaged material from Hindu and DJayn temples; destruction of the religious buildings of the enemy is known, of course, in many religions other than Islam, and indeed in India there is more than one record of a Hindu king doing just this to his neighbour's lands. Reutilization of the pillaged material is a feature of the initial phase of Muslim occupation in many regions of India, for example, at Adjmer and Djâlor [q.v.] in Rajjastân; Bharâc, Khambâyat and Pâfân [q.v.] in Gudjarât; Dîawur [q.v.]; Bidjâpur, Dawlatabâd and Warangal [q.v.] in the Deccan; Lâhnawatî, Pândus and Tribînâ [q.v.] in Bengal; Dâbâr and Mându [q.v.] in Mâlwâ; and many other sites. The first example, the Masdiid Kuwwat al-Islâm at Dîhilî [q.v.] for description and plan), is in fact built on a temple plinth, and some twenty-seven temples were pillaged to provide columns, walls, roofing materials, and paving; sculptured figures were mutilated or were set in walls that the unworked sides of the stones were all that was left of the column supports. These first a plain enclosure, but in 595/1199, eight years after its foundation, a large mâyKôSa screen was erected between the western liwan and the courtyard, and the arch appears for the first time: but these arches are corbelled out, not vousoired, and it appears that the work was done by Hindu artisans working under general Muslim direction and as yet having no mastery over the alien architectonic forms; moreover, the courtyard-side yard of the mâyKôSa is covered with carving, mostly typical Hindu floral motifs and ornaments, but also some bandeaux of resKûbh calligraphy, in such a way as to suggest that local workmanship was being employed. In the south-east corner of the mosque buildings the minaret known as the Kutb Mînâr presents a stylistic contrast, as its tapering fluted storeys develop the polygonal outline of the minKûr at Ghazna which must be its immediate prototype, and features of typical Hindu derivation are almost entirely absent.

The extension of the Kuwwat al-Islâm mosque and the first completion of the minKûr were carried out by Iltmîsh in the early 7th/13th century, and to his reign belong the Ahrâî din Kâ dâmâ mosque at Adjmer [q.v.], his own tomb of ca. 652/1253, and his son's tomb of 629/1231, the earliest monumental tomb in India (there are earlier dated tombstones: see AVAL); also minor buildings at Dîhilî and Madinân [q.v.], the Djâm-i Dhîhilî having been much repaired and rebuilt that scarcely any of Iltmîsh's fabric is visible), at Bayânâ, and at Nâgawr [q.v.]. In none of these buildings is there a true arch or dome, although all the masonry has well-dressed surfaces, often elaborately carved. The tomb of Iltmîsh's son, Nâsîr al-Dîn Mâhmûd, stands within an octagonal cell which seems to be the earliest use of the octagon in Muslim India. A true octagon appears next as the phase of transition in Iltmîsh's own square tomb, to support, presumably, a dome of which there is now no trace (and which, one must imagine, was also corbeled and not vousoired). In the latter tomb the octagon is formed by simple corbeled squinch arches across each corner. These early buildings are of so heterogeneous and, often, of so makeshift a nature that there is little of a coherent style about them. The buildings of the emperor Balban, similarly, are few and largely uninteresting, except for the significant appearance of the true vousoired arch in his tomb, now a mere unprepossessing lump of decaying masonry.

With the KhâlQî dynasty, however, a distinct if short-lived style appears, the keynote of which is provided by 'Alâ' al-Dîn's southern doorway into the Masjîd Kuwwat al-Islâm complex and known as the 'Alâ' Darwâzâ. This, like other examples of the style, is built with specially quarried stone and not improvised from Hindu materials; its chief characteristic is the shape of the arch, which is vousoired and of the pointed horseshoe shape and, in the case of external arches, has on the intrados a fringe of conventionalized stone spear-heads. The masonry is well finished and jointed, decoration in the form of bandeaux of calligraphy and a running merlon-like ornament being now more prominent than the diaper and rosette patterns in basso-relievo with which the earlier builders were wont to cover entire walls. At the 'Alâ'î Darwâzâ, but not in the other examples of KhâlQî work, the entire surfaces are so treated, and in addition show the use of white marble bandeaux of inscriptions, pilasters and architraves. Works of similar style exist at Dîhilî (the so-called Djâm-i 'Alâ'-Khanâ), and at Nizâm al-Dîn Awliyâ' and Bayânà, near Agra; but other buildings of the KhâlQî period are found as far afield as Djâlor [q.v.] in Râdjastân, at Bharoç, Khambâyat, Pâfân and Siddhur [q.v.] in Gudjarât, at Bhillâ in Mâlwâ, in Dawlatabâd in the northern Deccan, and elsewhere, many of these incorporating much pillaged temple material but showing also more prominent than the diaper and rosette patterns in basso-relievo with which the earlier builders were wont to cover entire walls. At the 'Alâ'î Darwâzâ, but not in the other examples of KhâlQî work, the entire surfaces are so treated, and in addition show the use of white marble bandeaux of inscriptions, pilasters and architraves. Works of similar style exist at Dîhilî (the so-called Djâm-i 'Alâ'-Khanâ), and at Nizâm al-Dîn Awliyâ' and Bayânà, near Agra; but other buildings of the KhâlQî period are found as far afield as Djâlor [q.v.] in Râdjastân, at Bharoç, Khambâyat, Pâfân and Siddhur [q.v.] in Gudjarât, at Bhillâ in Mâlwâ, in Dawlatabâd in the northern Deccan, and elsewhere, many of these incorporating much pillaged temple material but showing also more prominent than the diaper and rosette patterns in basso-relievo with which the earlier builders were wont to cover entire walls. At the 'Alâ'î Darwâzâ, but not in the other examples of KhâlQî work, the entire surfaces are so treated, and in addition show the use of white marble bandeaux of inscriptions, pilasters and architraves. Works of similar style exist at Dîhilî (the so-called Djâm-i 'Alâ'-Khanâ), and at Nizâm al-Dîn Awliyâ' and Bayânà, near Agra; but other buildings of the KhâlQî period are found as far afield as Djâlor [q.v.] in Râdjastân, at Bharoç, Khambâyat, Pâfân and Siddhur [q.v.] in Gudjarât, at Bhillâ in Mâlwâ, in Dawlatabâd in the northern Deccan, and elsewhere, many of these incorporating much pillaged temple material but showing also more prominent than the diaper and rosette patterns in basso-relievo with which the earlier builders were wont to cover entire walls.

Under the TughluQ dynasty the Dîhilî empire was greatly extended, and with the expansion came the spread of the Dîhilî style to all parts of that empire. Of the works of the first ruler, Ghiyât al-Dîn TughluQ, there are insufficient remains to show how early the TughluQîan traits developed: besides the ruins of his capital city, TughluQûbâd, only his own tomb has been so a major work for which he was responsible before his accession to the Dîhilî throne is the mausoleum of the saint Rukn-i 'Alâm at Mûltân [q.v.], originally intended as his own tomb. Some features of this, especially the batter of the walls and the sloping corner turrets, are reflected in the walls of TughluQûbâd and in the strong batter of TughluQ's tomb; and perhaps the profile of the dome also is closer...
to the pointed Mūltān model than to the shallow domes of the ʿAlāʾ al-Dīn Darwāза and the Dījāmbāt rhyme of the preceding dynasties. The characteristic Mūltān features of raised tile-work and wooden structural courses, described below when the Pandjāb model is considered, are however absent in the extant Dīhil examples; nor is the octagonal shape retained. Tughluk's son Muḥammad b. Tughluk [q.v.] shortly after his accession conceived the grandiose idea of forming a second capital at Dāwalatābād [q.v.] and transporting there the elite population of Dīhil, and the early multilateral doors to that fort, and the former Dewgiri, at the new capital was much extended, and it seems likely that the Khaldī mosque there was modified at this time since its rear wall has tapering angle turrets, although its interior arrangements seem undisturbed. Muḥammad's occupation of Dāwalatābād was only for about five years, after which he returned to Dīhil, where most of his building projects were carried out. His building program seems to have impoverished the royal treasury, and the fine stone-work of earlier reigns almost disappears and is replaced by cheaper material, plaster over a rubble core; but, from the sudden appearance in the 8th/14th century of buildings in the Deccan which are obviously close to the earlier Dīhil styles, it is to be supposed that many of the artisans taken to Dāwalatābād drifted away from that centre and formed other Allegiances: certainly the earliest Bahmani tombs at Guldārā [q.v.] (see further below) would support this view. Muḥammad b. Tughluk's royal palaces at Dīhil, the Bīdjay Mandal and the Hāzār Sutūn, are now in too ruined a state to permit of certain conclusions as to architectural style; the majority of the remains of his period in Dīhil are in fact more commonplace works: the fort walls of ʿAdīlabād and Dīhānānpānāt, the interesting sluice or water-regulator called Sāt pūlā. The only significant innovation is to be found in the Bīdjay Mandal remains: the earliest Indian example of intersecting vaulting. Some ceramic fragments are known from the ʿAdīlabād excavations.

Under Muḥammad's nephew Fīrūz Shāh Tughluk the building art received an enthusiastic patron. Not only did he build extensively on his own account, but he arranged for the renovation or restoration of many of the monuments of his predecessors. But a strict economy had now to be practised, and plans and costings for each projected undertaking came first under the scrutiny of the Dīwān-i wizāra. Red sandstone and marble were no longer used, and in Dīhil the favourite materials were the local quartzite and sandstone. The sack of Dīhil by Timūr in 801/1398-9 left the sultanate with little resources and less prestige, and for many years the building art in the region of the capital is represented almost entirely by tombs. The tombs of the so-called "Sayyid" rulers are octagonal, continuing the tradition of the Tīlīngānī tomb with structural improvements, especially in raising the springing of the dome by a tall drum; and the shallow domes over the octagonal arcade have been replaced by small pillared kiosks (khāṭris, lit. "umbrellas")—the beginnings of a feature which later is to characterize the architecture of many later styles and was probably introduced from the region of Dījānpūr after Fīrūz's conquest of that region: the central bay of the façade of the western Masdiq at Iriš [q.v.], entirely arcuate with some good stonecarvings, parapets and plinth. Two buildings of the end of the Tughluk period show perhaps a reaction to the Firūzian austerity: the tomb of Kābīr al-Dīn Awhīya at Dīhil, a poor and half-scale copy of the tomb of Ghiyāth al-Dīn Tughluk, and the so-called Revival of Dīhil, in red sandstone and white marble, and the Dīmilī Masdiqjī at Iriš [q.v.], entirely arcuate with some good stonecarvings, and exhibiting in its façade arches and squinches a recession of planes, a familiar device under succeeding dynasties.

The sack of Dīhil by Timūr in 801/1398-9 left the sultanate with little resources and less prestige, and for many years the building art in the region of the capital is represented almost entirely by tombs. The tombs of the so-called "Sayyid" rulers are octagonal, continuing the tradition of the Tīlīngānī tomb with structural improvements, especially in raising the springing of the dome by a tall drum; and the shallow domes over the octagonal arcade have been replaced by small pillared kiosks (khāṭris, lit. "umbrellas")—the beginnings of a feature which later is to characterize the architecture of many later styles and was probably introduced from the region of Dījānpūr after Fīrūz's conquest of that region: the central bay of the façade of the western Masdiq at Iriš [q.v.], entirely arcuate with some good stonecarvings, parapets and plinth. Two buildings of the end of the Tughluk period show perhaps a reaction to the Firūzian austerity: the tomb of Kābīr al-Dīn Awhīya at Dīhil, a poor and half-scale copy of the tomb of Ghiyāth al-Dīn Tughluk, and the so-called Revival of Dīhil, in red sandstone and white marble, and the Dīmilī Masdiqjī at Iriš [q.v.], entirely arcuate with some good stonecarvings, and exhibiting in its façade arches and squinches a recession of planes, a familiar device under succeeding dynasties.
batter. The area of their ground-plans is less than that of the octagonal tombs, but their height is greater; and their side walls are often broken up to the eye by dividing each façade with deep string courses with sunk blind arches and above to give the impression of two or three storeys, although the interior is a single square cell; frequently a central bay of each side is extended upwards to enclose a main arch of nearly the whole height of the wall, the actual doorway being set in this arch with a lintel-and-bracket; and the west wall is usually closed to accommodate a mihrab. But Lodi tombs also exist in the octagonal style, including—apart from numerous octagonal pillared pavilions— the fine tomb of ʿAlāʾ al-Dīn ʿAlām, the largest of the series, at Tidgārā, and the tomb of Sikandar, ca. 924/1518, at the Dihlī suburb of Khayrūr. The latter perhaps represents the link between the former habit of placing tombs in a fortified enclosure, of which the Tillingārī tomb is the last extant example, and the Mughal practice of surrounding the mausoleum by a garden; for this tomb stands in a large walled enclosure with decorative corner turrets and an ornamental doorway. Part of the west wall is built upwards and buttressed to form an additional external mihrāb, and is presumably a bānātīs mosque; the feature is known in other tombs of this period. Here, as in some of the square tombs, part of the external surface is embellished with glazed tiles, mostly blues and greens; and the dome, as in the earlier tomb of Shihāb al-Dīn Tād Khan, ca. 906/1501, has an inner and outer shell. Two mosques of the period are particularly significant in the development of a style which persists until well into the Mughal period; the mosque of Abū ʿAlī Khayrūd at Khayrūr, of 899/1494, has massive tapering pillars at each rear angle, and also flanking the buttress of the mihrāb, each with a band of vertical fluting alternately angled and rounded as in the lowest storey of the Kūtb Minār, the central bay of the façade projected outwards and upwards, a succession of receding architraves and soffits in each arched opening, and incidentally the finest cut-plaster decoration in Dihlī (Goetz, op. cit. below, considers it second only to that of the Alhambra palace at Granada). The other mosque approaches more nearly the type of the early Muslim monuments; this is the fine tomb of Muḥammad khān masjid of ca. 911/1505, where the tapering buttresses are confined to a position flanking the mihrāb projection on the west wall, and the rear angles are furnished with two-storeyed open octagonal towers. The pylon-like frame of the central arch, and the recession of planes in the arch outlines, are similar to that of the Alhambra; this resembles the previous examples in the eye by dividing each façade with deep string courses with sunk blind arches and above to give the impression of two or three storeys, although the interior is a single square cell; frequently a central bay of each side is extended upwards to enclose a main arch of nearly the whole height of the wall, the actual doorway being set in this arch with a lintel-and-bracket; and the west wall is usually closed to accommodate a mihrab. is worked out in stringcourses of tile-faced brick and bands of raised diaper pattern, bands of calligraphic inscriptions, and scrolls of arabesque ornament; similar to that of the Kuswarā of the Kuwata al-Islam mosque at Dihlā.

ii. — Bengal. — Stone In the Bengal provinces is almost confined to the black basalt of the Rajmahal hills in the Māda district; but the fine alluvial clay is freely available, the material for the characteristic Bengalī bricks and terracottas. The earliest buildings, at Tribeni [q.v.] and Čhofā Pändū [see PANDU, Čhōfa] are mostly adaptations of pillaged Hindū temple material, using pillars built of large stones without mortar, and shallow corbelled domes; the tomb of Zafar Khān Ghāzī, of 698/1298, shows an early use of the arch, and mīrābās in finely moulded terracotta. The monuments of the early buildings, after the independence of Bengal, is the large Adina mosque at Ḥadrat Pändū [see PANDU, Čhōfa], of 726–1325, in which again use was made of Hindū materials, although it appears that some of the stonework was original work executed by Hindū craftsmen in Muslim employment; it is enclosed by a multiple arcade which carried nearly 400 small domes, and there is a large central hall in the western Iwān, whose surface would have become dulled by the dust which pervades Multān in the summer. The interior decoration includes fine wood, with the six-pointed star (a common Ghaznavīd motif, but otherwise rare in India until early Mughal times) in the spandrels of the wooden mīrāb and scrolls of arabesque ornament; similar to that of the Kuswarā of the Kuwata al-Islam mosque at Dihlā.

iv. — Gujārāt. — The very rich stone-building tradition of the Hindū and Dīyaṇ craftsmen was appropriated by the Gujārāt Muslims, and made Gujārāt at once the richest and the most distinctive of the regions in architecture. The artisans appear to have been less bound here than were their fellows in other regions to the whims of individual rulers or to rigid prescriptions by punctilious 'ulamā, and indeed it often appears that the requirements of Islamic building rather emancipated them from the dogma of the schools of temple architecture, for of all the styles of Indian Islamic building that of Gujārāt is the most Indian, and its purely local characteristics are obvious, even in the earliest stages where pillaged temple material was being used under the orders of governors of the Dīhlī Khādījīs. The earliest surviving Muslim building, the tomb of Shāykh Farid at Pātain [q.v.] of ca. 700/1300, is merely a converted temple, and very little more organization appears in the Adina mosque there, of the same time, where over a thousand rich temple pillars are adapted to a mosque plan (the building has now fallen almost entirely). In Bahrōc [q.v.] a little later the Dāmmī Masjīd is a planned construction and not a mere improvisation, for the outer walls are obviously constructed of stone cut for the purpose, but the western Iwān is of three bays which appear to be three temple mandapas used unaltered except for the obliteration of figure iconography in the ornament. The arch is not used, so that the Iwān has an open pillared façade with no mīsūrā-screen—a mosque-type more frequent in Gujārāt than in other regions. The Dāmmī Masjīd at Khambāyat (Cambay), however, of 725/1325, does have an arched wall closing the Iwān. The walls of this mosque, of alternate deep and shallow courses, are uncharacteristic of Gujārāt and recall the Khādījī workmanship of Dīhlī. A feature appearing here for the first time which later became a favourite device in Gujārāt is a semicircular enframed arch, of no structural significance, carried between two pillars inside the central arch of the façade; this directly copies the torana doorways of the local Hindū and Dīyaṇ temples. This Khambāyat mosque has an entrance porch which is almost an exact copy of that of a temple at Modhērā built three centuries before, as is that of Hālī Khān Khādī’s mosque at Dōhlākā...
(733/1333); but here there is another significant innovation: the façade is ornamented with two tall turrets flanking the central arch. These are in fact solid, but are the obvious types from which the Gujjarāt minarets are derived (isolated mindrs, for example the Kūṭb Minār at Dīhlī, are not unknown elsewhere in India, but the Gujjarāt mosques present their first systematic use). Other buildings of this first phase of Gujjarāt building are to be found at Mangrol [q.v.] and Pētlad. A second phase is represented by the buildings of Ahmad Shah I in his new capital at Ahmadābād, although even here the earliest buildings, Ahmad Shah’s first mosque and the mosque of Haybat Khān, follow the pattern of the Dījam Masjid at Khambāyat; but soon after them the mosque of Sayyid Aḥām, of 814/1412, shows several elements which are developed and perfected in the later Ahmadābād buildings, including heavy projecting cornices, well-built and projecting bases for the minarets with internal stairs (the tops of the minarets above the parapet level of the roof have fallen), and an elevated portion of the roof forming a clerestory to admit more light to the central chamber. Ahmad’s chef d’œuvre is his Dījam Masjid of ten years later. The western Iʿdām has its central chamber flanked by a bay on each side raised above the level of the more distant bays of the western façade by a clerestory roof supported on an open colonnade. the central chamber itself having a second such clerestory carrying the main dome; the light thereby admitted to the central chamber has first to pass through carved-stone screens, which are another typical feature of the Gujjarāt architecture. The side ṭabābās are all of the simple pilared construction without arches. This mosque, with Ahmad Shah’s own tomb and a screened enclosure containing the tombs of the queens, form part of Ahmad Shah’s careful town planning, all lying on a central royal way to his palace, on which stands a triple-arched triumphal gateway. All these buildings are in the same harmonious style, which was continued in Ahmadābād under his immediate successors, Muḥammad and Kūṭb al-Dīn Aḥmad. Muḥammad’s reign saw the beginning of building at Sarkhej [q.v.] with the mosque of Sayyid Ḥabīb Khān and the monumental tomb of Bībī Aḥut Kuki of 876/1472, show the minarets still alternating with outer and inner perforated screens. Some five years later the tomb of Kūṭb al-ʿĀlām, at Bafwā, the western façade of the building, though essentially the same, is perfumed throughout by a second such clerestory and the oriel windows carried on rich corbels to add to the exterior richness, as do the smaller pierced screens in every opening. Other mosques in Čampaṇer are of similar design but smaller and with only a small central clerestory; in particular the Nagina Masjid, which has panels of carved tracery at the bases of the mindrs in the form of intertwining plants. Other works of the time of Māḥmūd include his palaces at Sarkhej and his own tomb there by a lake—which has, in addition to various pavilions, a set of sluices carved with the same attention to detail as the mindrs of the Gujjarāt mosques—and other buildings at Ahmadābād, of which the mosque of Muḥafīz Khān, faqīh-dīr of the city, is the finest; this is an arched building of the type of the Iʿdām with the mindrs at the ends of the Iʿdām. Towards the end of Māḥmūd’s long reign the tomb and mosque of Rānī Sabari shows the usual decorative, almost jewel-like, ornament and tracery to its best advantage by being built on a smaller scale than most of the buildings so far considered; but here the mosque minarets have ceased to be functional, becoming merely slim tapering pinnacles. Other outstanding works, of a different class, are two step-wells (Gudj. adal), described s.v. bāzālī. The common Ahmadābād mosque style, with arcuate Iʿdām and central mindrs, is continued by buildings towards the close of the Gujjarāt sultanate, for example Rānlī Rūpāwati’s mosque of ca. 921/1515. One late example, from 850/1447-48, the year before Akbar’s conquest of Ahmadābād, is an exquisite mosque built by Shāykh Saʿīd al-Ḥabṣāji [see Ḥarṣī], the tympana of the arches on the western side filled with stone traceries of filigree-like delicacy, representing palm-trees and creepers, the finest in the Muslim world, of which perhaps the blind traceries of the Nagina Masjid at Čampaṇer are the immediate ancestor.

After the Mughal conquest it would appear that many of the skilled craftsmen were taken by Akbar
HIND

to north India; certainly there are many features of Gudjarati workmanship in Akbar's Fathpur Sikri (see above), although the mixed origins of that art are to be found in the neighboring provinces of Gudjarat, Mâlwâ, and the Deccan. The Fârâbî [q.v.] hadus, which was early provided with a powerful system of fortification, perpetuates the Gudjarati tradition. Although built after the Mughal conquest, it is characteristic of the Gudjarat; the design of these minârs, however, is different from the octagonal bases that pass to a hexadecagon, above which is a circular storey with oriel windows facing each cardinal point, with a hemispherical dome forming a fourth stage; balconies on heavy brackets separate these four stages. The Dîâmî Masjid at Asïgarh, although built after the Mughal conquest, perpetuates the Gudjarati tradition. At Cikaldâ an enormous gateway (Barâ Darwâza) has an arch of the wide Gulgârg style (see below) but is decorated with the lion-and-elephant motif of the Gond kings (cf. similar devices at Gâwîlgârg [q.v.]).

v. — The Bahmani sultanate.—The principal phases of Bahmani architecture are to be found at Gulgârg and Bidâr [qq.v.], although the kingdom was early provided with a powerful system of fortifications and many of the Bahmani strongholds contain important buildings; for these see especially Dâwlatâbâd, Gâwîlgârg, Iliçpîr, Mâhûr, Mûsâgâl, Naldrug, Nârnâlâ, Pârekâd, Râyûr, and Wâranâgul. The Dîâmî Masjid in the old citadel of Gulgârg, although of a type not reproduced later, since its izzân is completely roofed over, shows nevertheless some features that were to characterize Bahmani architecture and to spread some of the styles of the successor sultanates. The arches of the outer arcade are specially noteworthy: of obtuse angle at the apex, of wide span, and springing from very low impost. An earlier mosque in the city is a mere compilation of temple spoil, as also the large tombs at Bidişpur [q.v.] built by the Bahmani governors. The earliest group of tombs at Gulgârg, all of the second half of the 8th/14th century, are similar to contemporary examples at Dâhil with weak semi-circular domes and battering walls. A later group of tombs, the Haft Gâwîl [q.v.], shows similarities with the Bahmani style; the architect of a type seen in Mândû as early as Hûshâng's tomb, a form which becomes exaggerated and elaborated further in Fathpur Sikri (see above).

General characteristics of the Mâlwâ style are, in addition to the stilted dome, the fine masonry of walls and domes, very restrained ornament, and the frequent use of engaged domical turrets round a central dome. The minâr, so prominent in the neighboring provinces of Gudjarat and Khândhûsh, is not used.

vi. — Khândhûsh. — This small province had a building art with a character of its own, although the mixed origins of that art are to be found in the surrounding provinces of Gudjarat, Mâlwâ, and the Deccan. The Fârâbî [q.v.] hadus, which was early provided with a powerful system of fortification, perpetuates the Gudjarati tradition. Although built after the Mughal conquest, it is characteristic of the Gudjarat; the design of these minârs, however, is different from the octagonal bases that pass to a hexadecagon, above which is a circular storey with oriel windows facing each cardinal point, with a hemispherical dome forming a fourth stage; balconies on heavy brackets separate these four stages. The Dîâmî Masjid at Asïgarh, although built after the Mughal conquest, perpetuates the Gudjarati tradition. At Cikaldâ an enormous gateway (Barâ Darwâza) has an arch of the wide Gulgârg style (see below) but is decorated with the lion-and-elephant motif of the Gond kings (cf. similar devices at Gâwîlgârg [q.v.]).
Bahmani style, stilted above the haunch with straight tangential projections to the apex. Some of these were also two-storied tombs, with continuous walls, buttress-like parapets, and solid and hence can only be decorative; they are found, although they are slender mindrs, in that they appear over solid bases and rise at the sides of mosque façades where in other styles true mindrs are found, although they are slender and solid and hence can only be decorative; they frequently carry miniature domes, and facsacular clusters of minarets flanking a domical arch. The enormous mausoleum of Muhammad ‘Adil Shah, the larger of the Barid Shahi tombs at Bidar, is a square domed cell with an open arch on all four faces; thus, since there is no integral mihrāb, a small mosque is built beside the tomb. The trefoil parapet is commonly used. A common feature of the decoration is a chain-and-pendant motif in plaster, but good tile-work is still a frequent ornament. The latest buildings tend to become over-ornate, and the influence of the Hindu mason becomes more apparent.

---

viii. — Barid Shāhī, I‘mād Shāhī, Nīzām Shāhī. — The Nīzām Shāhīs (q.v.) of Ahmadnagar, although independent there from the beginning of the 9th/15th century until the Mughal arch, including the cupola, is also of Persian character. The base of the building at each corner; but the prototype of these is the small octagonal minaret found in the earliest buildings. In tombs of the closing years of the dynasty, there is a tendency to exaggerate an intermediate stage, a square storey between the arch spandrels, a medallion supported by a bracket-shaped device, moulded in plaster. The works executed before the death of ‘All I in 987/1579 are mostly in rubble covered with dense and durable plaster, and include the city walls and gates (most of these with the typical wide centre arch flanked by two narrow ones), many palaces and audience halls, and some notable mosques. One of these, in memory of the sayyid ‘Ali Shāhī Fīrūz, which unusually has a transverse wagon-vaulted roof, shows the façade arches surrounded by an outer band of cusping, remarkably similar to that of the recently-discovered Djurdjir mosque in Isfahān (q.v.). This device recurs in the other buildings, for example the Dāmūnī Maqṣūdī of 985/1576, where it decorates only the central arch of seven, which also bears the medallion-and-bracket device; the great dome of this mosque is supported by an original system of vaulting by which two intersecting squares, both oblique to the square chamber underneath, form an octagon; this system is later used to great effect in the colossal mausoleum of Muhammad ‘Adil Shāh. This mosque also shows a feature made much of by later Bijapur builders, an elegant exterior. The domes in this early phase are hemispherical; minārs are not used, although bases for them exist in the Dāmūnī Maqṣūdī; small ornamental pinnacles (gūldāstās), however, are freely used at angles of the parapets and over mihrāb buttresses, of a type found on some of the Bahmani tombs at Bidar. After 987/1579, under Ibrāhīm II and later sultans, fine sculptured stonework replaces the earlier rubble-and-plaster. The dome becomes a three-quarter sphere; the cornices and eaves are supported by intricate carved brackets, often with the added decoration of hanging stone chains and locket-like arches, and the love of vertical projections above the sky-line; but these have often become pseudo-minārs, in that they appear over solid bases and rise at the sides of mosque façades where in other styles true minārs are found, although they are slender and solid and hence can only be decorative; they frequently carry miniature domes, and facsacular clusters of minarets flanking a domical arch. The enormous mausoleum of Muhammad (d. 1062/1650), known as the Gol Gunbad, reverts to the hemispherical dome, and has a large staged octagonal turret of the height of the building at each corner; but the prototype of these is the small octagonal minarets found in the earliest buildings. In tombs of the closing years of the dynasty, there is a tendency to exaggerate an intermediate stage, a square storey between the
parapet of the tomb-chamber and the drum of the dome, so that in extreme cases the globular dome appears almost separated from the ground floor. The best of the later buildings of the capital are described s.v. Bāzār; but some Bidjāpur characteristics are encountered far afield, for example in two mosques standing outside Naldrug [q.v.] fort, and at the great entrance arch to the darāgh of Gisū Darāz at Gulkārā.

x. — Kuṭb Shāhī. — The style of the Kuṭb Shāhī buildings, first in Golkōnda and later in the city of Haydarābād [q.v.], is distinctive more on account of the monument than any originality in structure. The principal building material is stone, usually grey granite or trapstone, but rather than being carved this is ornamented with stucco and encaustic tiles. The tombs of the dynasty at Golkōnda, and the mosques and gateways there and at Haydarābād, show the comparative fixedom of the style over a century and a half from the time of Sultan Quli’s independence in 942/1538. The tombs are almost all square in shape and constructionally resemble the Bahmani tombs in Bīdar; the earlier ones are single-storeyed, and only once is the outer face divided into two apparent floors by an upper row of blind arches; some of the later tombs have two storeys, the lower one forming a projecting arcade around the building. The domes are all bulbous, usually a three-quarter sphere, and are foliated at their bases in a similar way to the Bidjāpur domes; but the later buildings develop this into a double or triple band of foliation. The Kuṭb Shāhī buildings emphasize especially the upper parts of walls between the eaves and the parapet, and the rich ornament here is sometimes projected out from the façade to form a balcony carried on brackets. The parapets are crenellated with trefoil-shaped merlons, as in the later Bahmani and Barid Shāhī styles, and are frequently interrupted by small gudālas; at the corners these may be replaced by small minārs. The Kuṭb Shāhī minār, whether decorative or functional, has its shaft encircled one or more times with an arced gallery, and bears a miniature dome with the characteristic foliations. Designs of Hindī provenance are not infrequent in the ornament, especially in the later periods; but these were accepted in the earliest period, as they occurred freely in the Kākāṭiya work taken over in the old provinces of Warangal—for example, in the Bālā Hīsār darwatā at Golkōnda.

xi. — Kaśmir. — The architecture of this region is remarkably different from that of all other countries of Islam, as it is essentially in wood: great logs of dewār (Cedrus deodara) laid horizontally and supported any superstructure; the interstices between the eaves supported on a log cornice; the pyramidal plaster covered with an impervious layer of birch-bark and there with the geese of Hindu mythology. Other stone buildings are ornamented with shallow and often occasionally also yellow. Generally the design is continuously worked in multicoloured tiles, but occasionally very small tiles, like tesserae, each of one colour, are built up to form a mosaic. The design of the tombs, especially their domes, and the few remaining mosques, is essentially Persian rather than Hindī, although this may be due to early Hindu influence. Certainly some of the Thāffha buildings of later times revert to a trabeate style in sandstone, such as the mausoleum of Tāddīn Tāmir, d. 1054/1644, which recalls the buildings of Faṭhpūr Sikri (see below) and also is the only building in which the intrados of the arch is embellished with a spearhead fringe.

The Hindī temple, with projecting wooden balconies and the eaves supported on a log cornice; the pyramidal plaster covered with an impervious layer of birch-bark and there with the geese of Hindu mythology. Other stone buildings are ornamented with shallow and often occasionally also yellow. Generally the design is continuously worked in multicoloured tiles, but occasionally very small tiles, like tesserae, each of one colour, are built up to form a mosaic. The design of the tombs, especially their domes, and the few remaining mosques, is essentially Persian rather than Hindī, although this may be due to early Mughal influence. Certainly some of the Thāffha buildings of later times revert to a trabeate style in sandstone, such as the mausoleum of Tāddīn Tāmir, d. 1054/1644, which recalls the buildings of Faṭhpūr Sikri (see below) and also is the only building in which the intrados of the arch is embellished with a spearhead fringe.

The Mughal schools.

Shortly after Bābur’s arrival in India in 932/1526 he ordered buildings to be erected; he was unimpressed with Indian edifices, and disgusted with the
lack of the formal gardens to which he was accustomed. Most of his works were, therefore, secular, consisting of terraced gardens with pavilions and summer houses, hardly anything of which has survived. Two of his mosques exist, one in Pāñipat and one in Sambhal: works large but utterly undistinguished. Little more can be said about the buildings of Humāyūn's reign (except those works of a previous period now completed, described above); but Humāyūn's importance is in the craft traditions imported with him after his exile rather than the ideas of his buildings.

In point of time, the Sūr sultan Sher Shāh [q.v.] followed Humāyūn although his buildings are a continuation of pre-Mughal styles. There is, indeed, little characteristic architecture remaining of the first part of Humāyūn's reign from which a comparison might be made, since Sher Shāh systematically destroyed Humāyūn's city of Dīhil called Dīnpanāh. In his tombs at Sahsārām [q.v.] in Bihār, Sher Shāh perfected the octagonal pattern, and may indeed have planned these buildings in the decade before he came to power. The earliest (ca. 941/1535) of these, the tomb of his father Hasan Kān, is experimental: there is no plinth, and the drum is a bare wall without fenestration or chatri. Unlike the Lōḍī examples, the Sahsārām tombs have vertical, not battered, walls. The next tomb, that of Sher Shāh himself, is amplified not only from this but also from the Dīhil (ca. 951/1546) of Hāfiz Aḥmad, which is in three stages, rising to 50 m., and set in the middle of an artificial lake connected to the shore by a causeway to which access is given by a domed guardroom; the lowest stage is a square plinth rising out of the water, the next a vast square platform with chatri at each corner, on which stands the octagonal tomb chamber in three further stages, the two lower with chatri at the corners. The roof is crowned with a massive lotus finial. The tomb of his successor Islām Shāh also stands within a lake, but smaller; the better preservation of its causeway shows this to have been constructed on a cantilever principle, each pier with projecting balconies and carrying a chatri. In Nānrāl Shēr Shāh built the tomb of his grandfather Ibrāhīm Kān, a square building not unlike the square Lōḍī tombs, but finished in better stone and with a series of bands.

After Shēr Shāh's accession in 947/1540 he started building at Dīhil, fortifying first the Purāna Kīl'ā and adding an exquisite mosque, with the corner turrets already noticed in the Mōth ki Masdīj and the Djamāl mosque, and with a refined form of the recessed arc: a lower arch set back from a taller one. The arches are struck from four centres, and the spearhead fringe is again in evidence. The stonework is very finely jointed, enriched with fillets of white marble, with fine coloured inlay patterns of a type similar to that later found in Akbār's mosque at Fatūpur Sikrī. The interior decoration is similar to that of the Mōth ki Masdīj, but with every part refined. Other important building products of Shēr Shāh were at Rōhtāsghar [q.v.] in Bihār [q.v.] and his new town of Fathīsār [q.v.] in the Pirānghād, as well as on smaller projects, including some for Dara Shāh.

The first major building to be erected during Mughal rule is Humāyūn's mausoleum, not begun until 976/1568-9, and erected, not in his lifetime after the usual practice, but by his widow. The cenotaph-chamber, which stands on a vast high plinth, is essentially square in plan, with each corner of the square chamfered off and with a recessed central bay in each side. Each of these bays contains a deep arch, as high as the walls on either side of the bay, constructed as a half-dome, and smaller arches of varied height and levels fill the remaining façades of each wall. The central chamber is surmounted by a tall drum, which carries a high double dome, with a chatri of Lōḍī type, open and on slender pillars, at each corner, and two smaller square chatri over each central arch. The dome is slightly curved at its base, but its general shape echoes that of the arches below; the arches introduce a new shape to north India, as the arcades are struck from four centres. The building is in red sandstone, with white and green marble inlay (sparking use of other colours as well), executed in star-shaped designs at the drum below the dome, well inlaid but not polished in situ: this inlay work is to be classified as opus sectile rather than as the finely polished marquetry-like pieta dura of later Mughal periods. A smaller tomb of not dissimilar design is that of Akbār's foster-father, Aṭṣa Kān, at Nizamsuddīn; but Humāyūn's tomb gains enormously in effect not only by the vast plinth (which contains the true tomb immediately below the cenotaph) but by the vaster garden in which it is set—a great square, subdivided into squares and squares again by paths, flower-beds, and parterres. It immediately the advent of a new style in India, and is of great importance as the immediate Indian prototype for other monumental mausolea. A fuller description, with plan, is given s.v. Dīhil. See also Būstan.

Akbār's building projects, many and varied, reflect something of the man. They start at Āgrā [q.v.] fort, on the trace of the previous Lōḍī fort, with the gateways: a half-octagon flanking tower on each side of the four-centred arch of the gate, the towers decorated with blind arches below and open arches on the upper storey, with chatri over towers and gateway; internally, the arch carried a spearhead fringe of a more elaborate and conventionalized form than that of previous reigns; the whole is decorated in opus sectile. Palaces inside the fort are in much the same style, and include projecting balconies supported on richly carved corbels, with much beam- and bracket workmanship; some of the brackets, in sandstone, seem to have been borrowed directly from wood-building techniques. Similar buildings were commenced in a more similar style at Lōḍī, but on a smaller scale, at Allāhābād. The new capital, at Fatūpur Sikrī [q.v.], is a sandstone city. The palaces are for the most part built in the present style, with shallow domes and heavy eaves recalling Lōḍī work, occasional arches with the spearhead fringe, carved brackets resembling those of Rājāsthān temples, and superb carving. There is some inlaid opus sectile work in white marble, especially on the mosque; the inside of the mosque, however, is of finely polished marble mosaic inlay, the first attempt towards the technique of pieta dura. Some buildings in the city, such as the Divān-i khāṣṣ, with an extraordinary bracketed central column supporting a platform in the middle of the single room, and the Pānč maḥāl, a five-storeyed pyramidal open pavilion, are remarkable structures, part of Akbār's personal whimsy, with no significance in the development of the Mughal style; but one of interest and archaeological significance is the tomb of Salīm Cīshī, after 979/1571, a square chamber with an outer verandah which is screened with marble lattices on the outside: a feature characteristic of that of north India at all, but familiar in the tombs of Gujūrāt (see above). The eaves are supported on convoluted brackets which have a prototype in

Encyclopaedia of Islam III

29
Candari [q.v.]. Another Gudjarat feature, apparently, is the reservoir which lies beneath the sa^k of the great mosque on these features see. Burton-Paget, Fatehpur Sihri, in R. E. Mortimer Wheeler (ed.), Splendours of the East, London 1965, 143-53).

Of Akbar's reign in Dihli is the last of the octagonal tombs, that of Adham Khán, of 969/1562; it is without the wide chagdidi which characterizes the earlier octagonal tombs, and, being also without chairis, looks curiously insipid. Of about the same thatris, of the same opus sectile decoration, and corner turrets at the rear of the liwán similar to those on the Lóth Moth ki Masjéid and the Súri mosque in the Purána kilâ. At Díawnpur [q.v.] is a fine bridge, with screened pavilions over each pier, across the river Gomti, and at Gályári is the tomb of Muhammad Gáhwí, which has the typical Gudjarati screened arcades. For provincial Mughal architecture in Bengal and Gudjarat, see MUGHALS.

Dihângír's interest was more in miniature painting [see TASWIR] than in architecture, and there are few examples of the buildings of his reign; although it is known that he extended Akbar's buildings at Ágrá and Láhawr forts, beginning at the latter a "picture wall" in mosaic tiles showing hunting, polo and court scenes, and completed the building of Akbar's tomb: a four-storeyed pyramidal building, over-ornamented with chairís, with a large half-dome archway in each face, opus sectile ornament, and an open square with a cenotaph, all in marble, at the top, standing in a vast târ-bâgh garden. The entrance gateway is imposing, with a tall white marble minâr at each corner—the first appearance of this feature in the north. The two most important buildings of Dihângír's reign are the tomb at Ágrá, begun 1031/1622, of his father-in-law Mirzâ Ghíyâth Beg entitled I lâlúm, which has the typical Gudjarati screened arcades. For other buildings of Dihângír see PALAMA'.

Shâhjáhan's buildings show the Mughal style at its height, although the earliest, the completion by Núrdjáhan of Dihângír's tomb at Shâhádara, near Láhawr, continues the opus sectile tradition; it is of only a single storey, with a lofty minâr at each corner, again in an immense garden; it is more important for its decoration than for its structure, not only on the surface of the building, but in the piétra dura of the cenotaph, in white marble, calligraphy (the ninety-nine names of God) appearing in delicate piétra dura here for the first time. Shâhjáhan himself replanned the buildings at Ágrá and Láhawr forts, replacing some of the earlier sandstone structures with marble ones; these are characterized by engraved arches, tapering supporting columns and piétra dura ornament, especially on walls and at the foot of columns and their plinths; and the marble was delicately channelled and carved. There appear at Ágrá, for the first time in north India, two oblong pavilions with a Bengali-style curved cornice to the roof; and at Láhawr fort also is a pavilion in the style of a Bengali tâlûkâda hut. These works were perhaps a preliminary essay for Shâhjáhan's own grandiose fort, the Lâl kilâ (from its red sandstone enclosure walls; see BURJ, iii) in his new city at Dihlí [q.v.] called Shâhâjáhánábád. The palace buildings are designed with great symmetry; the planning along an ornamental marble canal with chutes and cascades; in structure they are similar to those at Ágrá, except that the columns tend to be thicker, and the piétra dura work and the marble carving of the highest quality. Before the fort was begun, however, the construction of the mausoleum of his queen, Mûmtâz-i Mabâhl, had been started. This building, known to everyone by its larger and more ruined Tadj (shahâj) mihrân, is in the village now called Tadjqándj outside Ágrá, on the opposite bank to the fort: a complex of buildings with a square mausoleum with a tall minâr at each corner of its plinth, and a red sandstone mosque and an identical dawâbh, used as a mihrân-khánâ, flanking it on a platform at the river end of the great oblong garden; the garden divided by paths and parterres, with central crossing water-channels, and an imposing gateway. The entire mausoleum, thirteenth, and the four minârs are worked in white marble with piétra dura in semi-precious stones, and there is a tall white marble dome, surrounded by four marble chairís; the dome is slightly bulbous. This is the perfect culmination of the tomb-type starting with Humâyûn's tomb of a century earlier, through 'Abd al-Râhím Khán-i Khánân's tomb, with decoration of the type started in the tomb of I'timád-al-Dawla and perfected at the forts of Ágrá, Láhawr and Shâhjáhánábád. In Dihlí the plans for the city were completed with the Díámi Masjéid, 1059-9/1648-50; the liwán, in red sandstone with white marbles, has a large central half-dome arch, with five smaller flanking arches on each side, all engraved; two minârs at the courtyard ends of the liwán; and three bulbous marble domes. A similar mosque, much smaller, was built in Ágrá at about the same time for his daughter Dihângír Ard [q.v.]; here the arches revert to the plain (not engraved) four-centred type. Another important building of Shâhjáhan's reign, of a different type, is the mosque of Wazír Khán in Láhawr, of about 1044/1634; here the ornament is more akin to the arts developed in Persia, consisting of true mosaic tile decoration on the external surfaces, floral, calligraphic, geometrical, especially with the cypress (Castelnaud's "pâlikhân") for the plane and technique of this art see XHAYAP); the internal surfaces are painted in tempera and cut-plaster (see X1158). Other buildings of Shâhjáhan are at Adîmür (two marble lakeside pavilions) and Kâshmîr (terraces in the Shâlimâr gardens, laid out by Dihângír).

In the reign of Awrangzib the building art began to lose its vitality, although the Mòti (pearl) Masjidí added to the fort of Shâhjáhánábád, ca. 1070/1660, retains the delicacy of earlier craftsmanship (the too-large bulbous domes are a later addition). The effectness is starting to be apparent in the great Bâdsháhí Masjéid of ca. 1083/1674 added to the west of Láhawr fort, with four tall minârs at the corners of the courtyard, four short ones at the corners of the liwán; the three domes are a little over-bulbous, and the liwán façade presents too many blank spaces. A few years later the tomb of Awrangzib's wife, Râbî'a Dâwârânî, was built at Awrangbâd; it stands in a walled garden, which is its best feature; for it is a half-scale copy of the Tadj Mâhâl, with a thin engraved central arch, bulbous dome, disproportionately heavy minârs, a cramped skyline with insufficient room for the corner chairís, attenuated guldastas, which combine to give it an air
of assiduous mediocrity. Awrangzib's mosques at Banaras and Mathurā, on the other hand, are orthodox and well-proportioned, so it must be assumed that he played no personal part in their construction. A far better tomb building is the last of the great square mausoleas, the tomb of the waliş Ša'dar Dījang [q.v.] at Dihlī (d. 1166/1753), of good proportions, even if the dome is a little too bulbous, in finely worked fawn sandstone, and in the last great dārāgāh garden.

The Nawwabs of Awadh, in their capital of Lucknow, became the artistic successors to the Mughals. Their earlier buildings are similar to the Awrangzib buildings, large and impressive, but over-decorated; their later ones, produced in a sort of bastard château style under the influence of a French adventurer with magnificent vision and no taste, mix up Corinthian capitals, fluted domes, compositions of round romanesque arches, ogee arcades, and odd ideas gathered from the Mughals, Ancient Greeks, and the European "Palladian" school. The Sikhs style of the Panjāb is at least of consistent late-Mughal extraction, but tends to over-proliferate châteis and the fluted dome, and to be too partial to the Bengali corinme. Some of the Râjpût palaces have preserved better elements of late Mughal style, especially at Amber and Dijāpurp, and have combined it with an excellent masonry technique. In the south a strange hybrid Islamo-Vidjayanagara style was evolved at Hampū [q.v.]; and later scions of the Vidjayanagara house, after the dissolution of their empire, remembered some elements in their palace of Čandragiri. The few buildings of the Mahisur sultanate of Haydar 'Ali and his son Tipū are less bizarre, particularly the tomb of the dynasty at Sṛtrangapattānām [q.v.]. Other local Muslim styles are more aberrant: for example, the 15th century tombs at Dīhnāgār, which appear to translate the fancy knobs of a Victorian bedstead into stone, not without skill.

Bibliography: There is as yet no single comprehensive work of professional standard on Islamic building in India, nor can there be until the historical development of certain aspects of structure and decoration is fully worked out. Information is still most inadequate on foundation, coursing and bonding in masonry and brickwork, and the methods of setting out; on plasterwork, incised, moulded, fresco-painted and polished; on ceramic decoration and its relation with some types of plasterwork; on fenestration; on woodwork, carved or inlaid; on decorative techniques involving polished stone: opus sectile and pīstā dūra; and on the development of such features as kiosks (châteis), merlons and parapets, sarānā-galleries, even on major structural works such as bridges, riparian buildings such as landings and ghâls, and domestic architecture. A "grammar of ornament" is also an urgent necessity. There are, it is true, many brilliant works in which most of these points are dealt with over a short period or in a limited region; but they are out-numbered by the anachronistic, inoffensive and mediocre, the most comprehensive is Percy Brown, Muslim architecture in India, in G. T. Garratt (ed.), The legacy of India, Oxford 1937, 253-55; J. H. Marshall, The monuments of the Mughal period, ibid., iv, 523-76; for a general account with particular reference to Pakistan: R. E. Mortimer Wheeler, Five thousand years of Pakistan, London 1950, specially 61-128; idem, Splendours of the East, London 1965, 68-71. A tendentious account, written in support of the untenable thesis that all Indian architecture is directly from the hands of E. B. Havell, Indian architecture; its psychology, structure and history from the first Muhammadan invasion . . ., London 1913. Older works: J. Ferguson, History of Indian and eastern architecture, London 1876; revised ed. by J. Burgess and R. P. Spiers, 2 vols., London 1910 (esp. ii, 186-335); V. A. Smith, History of fine art in India and Ceylon, London 1921, 391-420. There is much material available on local aspects of Muslim building, especially in A. Cunningham, Archaeological survey of India, xxiii vols., Simla and Calcutta 1873-87; various authors, especially J. Burgess, in Archaeological Survey of western India, Old series, ii, iii, iv, 1875; vi, 1877; viii, 1879; xi a, 1885; xi b, 1890; Archaeological survey of India, New Imperial series (combining New Series of some provincial surveys, from 1876); also Progress reports of circles of the Survey, from 1890; after 1902-3 supervised by Archaeological Survey of India Annual Reports, supplemented by monographs entitled Memoirs of the archaeological survey of India. Detailed lists of contents of all volumes relevant to Islam in R. A. C. Creswell, Bibliography of the architecture, arts and crafts of Islam, Cairo 1911, passim; individual articles after 1905 listed also in Pearson. Since Indian independence many articles in Ancient India, from 1946. Some articles of architectural importance in EIM. Critical bibliography, before 1948 only, in Annual bibliography of Indian archaeology, i-xv, of the Kern Institute, Leiden.

The first detailed account of secular Indian music occurs in the Nāyakādāstra by Bharata, which has been dated variously from the 3rd century B.C. to the 4th century A.D. Although this work is primarily devoted to drama and stagecraft, music is an important topic in it. Musical theory had, by this time, already reached a high state of development and is described in considerable detail. The melodic system is based on modes (dījī), which are constructed on heptatonic series of notes (mṛūchānā) beginning on the successive degrees of two parent scales, Shādājgrāma and Mālāyagramā. These scales were composed of 3 different sized intervals, comparable to the major, whole and minor whole tone and semitone of "just intonation". These were expressed (approximately) in terms of their highest common factor, about a quartetone, called gṛuti. Thus the intervals are described as containing 4, 3 and 2 gṛutis respectively. An interval of 1 gṛuti was not considered musical.

Cultural exchanges between India and the outside world included music and musical instruments before the advent of Islam. Greco-Roman influence is clearly evident in the Gandhārā sculptures and the musical instruments depicted corroborate this. Furthermore, Roman singing boys are said to have been imported into India in about the 2nd century A.D. (Periplus of the Etruscan Sea) and 12,000 Indian musicians are said to have been sent to Bahārmūrū in Sānānd Persia (Ṭāḥalīlī, Histoire des roses des Pârthes, translated by A. COX, 139-41, 146-91, 197-202, 207-19; idem, Rūhtās, Sahsārām, Shēr Shāh, Sūrs.

During the next few centuries it appears that Indian music underwent considerable change. In Mātaĩga's Brhādāshāstra, of about the 3rd/4th century, a new technical term, rāg (═ Skt. rāga), was introduced. The essence of the concept of rāg was the recognition that certain combinations of notes were endowed with particular sentiments, rasa (═ Skt. rasa). These rāgs, which had crystalized from the ancient modes (dījī), formed a melodic basis for the composition of songs (gītā). Gradually, as the rāgs completely displaced the dījī, the two original parent scales lost their significance. In the Sāṇgīta Ratnākāra (607/1210-65/1247) it is stated that 26 rāgs were currently in use. This important Sanskrit treatise, composed by Shārīrāvada at the court of the Yādava dynasty in the Deccan before the Muslim conquest of this area, discusses sāṅgīta in its three aspects, vocal music, instrumental music and dance. Although Shārīrāvada attempted to follow the earlier theorists, he was obliged to admit that much of the ancient music was extinct.

Indian music was known and held in high regard in the Islamic world in the 3rd/9th century, when it was praised by al-Ǧāḥīz (Ṣādiṣ, ed. vau Volten, 84; ed. Hārūn, Rāṣīj, 1, 223; cf. M. Z. Siddiqi,
Studies in Arabic and Persian medical literature, Calcutta 1959, 32), and in the 4th/10th century, al-
Mas'udi, evidently referring to the emotional impact of râgs, reports that Indians “frequently hear songs and musical performances, and they have various sorts of musical instruments which produce on man all shades of impressions between laughing and crying ...” (Murâdî, i, 169 = tr. Pellat, § 177). Indian musical theory, too, was not entirely unknown, for the Caliphs of Baghdad are said to have ordered the translation of a number of Indian treatises, among which was one on Indian music entitled Bisîyâphar (Ta'rîkh al-buhâmā, ca. 595/1198) which has been interpreted as Vidyâphala “fruit of science”, but has not yet been traced (H. T. Colebrooke, Miscellaneous essays, London 1873, ii, 460).

In several respects Indian music was probably similar to Persian and Arabic music, especially as all three were modal systems based on melody rather than harmony. Each of them was concerned with the cosmic implications of music as well as its power to influence the individual. In India, the modes are ascribed to specific periods of the day, and are further associated with seasons, colours and, of course, the Hindu deities. Similar associations, at first attached to the strings of the lute (al-Kindi) and later extended to include the modes, are also found in Arabic musical treatises. Thus the conquering Muslims encountered in India a musical system which was not entirely alien, and their reaction to it appears to have been favourable. The poet Amir Khusraw, who was expert in both Indian and Persian music at the court of ‘Alâ al-Din Khâlidî (695/1296-715/1316), states, without equivocation, that “Indian music, the fire that burns heart and soul, is superior to the music of any other country. Foreigners, even after a stay of 30 or 40 years in India, cannot play a single Indian tune correctly” (M. W. Mirza, Life and works of Amir Khusraw, Calcutta 1935, 184). Amir Khusraw is credited with the introduction into Indian music of a number of Persian and Arabic elements which include new vocal forms, as well as new râgs, tâls (= Skt. tâla, time measure) and musical instruments. Of the vocal forms, two are of particular importance; bambâ, in which the singer is accompanied by a drone, and tarâna, a song composed of meaningless syllables, both of which are prominent today.

From this time until well into the Mughal period, foreign music, particularly from Iran, was frequently heard in the Indian courts along with Indian music. Under these circumstances, it is not surprising that there were numerous attempts to introduce new elements into Indian music. Many of these were subtle rather than drastic innovations, but they nevertheless brought about modifications in the character of Indian music without actually changing its basic form.

Music flourished in Islamic India in spite of the puritan fashion which believed that music was unlawful in Islam. The impetus was supplied by the royal patronage of a number of excellent musicians in their own right. Sultan Muhammad b. Tughluq (726/1326-752/1351), although a strong religious convictions, yet kept 1,200 musicians in his service and had, in addition, 1,000 slave musicians (Mahdi Hussain, Reha of Ibn Batuta, Baroda 1953, 50-1). Sultan Zayn al-Abîdîn of Kashmir (895/1496-872/1462) encouraged literature, painting and music and ordered the writing of a treatise on music which, unfortunately, not extant (Abdul Halim, History of Indo-Pak music, Dacca 1962, 79). Husayn Shâh Shârî (863/1458-935/1528) (see shârî) initially of Deobura, was an incomparable performer and an innovator second only to Amir Khusraw. His most important contribution was the introduction of a new form of song, khayîl, which gave much greater scope for technical virtuosity than did the traditional and austere dhrupad. The rivalry between the advocates of these two forms of song and their respective styles of singing has continued until recent times, when the khayîl finally gained supremacy.

This was a period of great musical activity. Sultan Sikandar Lodi [q.v.] (895/1496-923/1517) took a keen interest in music in spite of his religious orthodoxy. Under his patronage, probably the first treatise on Indian music in Persian, the LaHajat-i Sikandar Shâh, was composed. This was a traditional work based on Sanskrit treatises. In Gwalior, however, Râgâ Mân Singh Tonvar (891/1486-922/1516) was responsible for the formulation of a more progressive treatise in Hindi entitled Mân Kastâhâl. This work was compiled by the leading musicians of his court and incorporated many of the innovations that had been introduced into Indian music since Amir Khusraw's time. In spite of this endeavour, traditional Indian musical theory continued to be expressed, for the most part, in Sanskrit treatises which bore less and less resemblance to court music as time went on. To some extent, the traditional Indian music has been preserved in South India, but here too the music has evolved, albeit in its own direction.

Patronage of music reached its peak under the Mughal Emperors, Akbar, Djahângir and Shâh Djiân. The lists of the leading musicians, both Hindu and Muslim, who were attached to their courts is impressive, and included such famous musicians as Tânsen, his son Bîlsî Kîhân, and Bâz Bahâdûr. Bâz Bahâdûr was the last Muslim ruler of Mâlwâ, whose tragic affair with Rûmpati, a singer and dancing girl, has become legendary. In the later part of his life, after he had lost his empire, he became one of the leading musicians in Akbar's retinue. It is interesting to note that nearly all the vocalists attached to these courts were Indian, while many of the instrumentalists were foreigners, who came from Mâshhad, Tabriz and Harât (Abu 'l-Fadî, Â'in-i Abbarî, tr. H. Blochmann, Calcutta 1873, i, 610-5). In addition to this court music, large orchestras (nawbah), consisting of wind and percussion instruments, were maintained. These usually played at regular periods in the naHkîr-khâna or nawbah-khâna, which were located in the gateways of palaces and shrines (ibid., i, 50-1). A similar tradition, nusba, had been known in Arabia several centuries earlier (H. G. Farmer, A history of Arabian music, London 1929, 153-4).

In the beginning of the 11th/17th century, music flourished in the Deccan under the patronage of Ibrahim 'Adîl Shâh II, a renowned poet. The Kitâb-i NaUras contains a collection of his poems intended to be sung in different râgs. These are, however, referred to as makhâm and give an indication of the similarity between the Indian and Arabic musical systems.

Under the Emperor Awrangzîb (1668/1658-1718/1707) music suffered a temporary setback, for, although he was fond of music and was skilled in its theory, he relinquished all pleasure and chose a life of asceticism early in his reign. The cause of Indian music was, however, revived under the later Mughals, Bahâdûr Shâh (1118/1707-1124/1712) and Muhammad
**Hind — Hind bint Al-Khuss**

Shah (1132/1719-1161/1748). The latter was a famous singer who composed many *khaydl*, which are extant, most of which are classified in 10 *rāgs* or *rāginīs*, a system which does not appear to be the beginning of modern musical theory in North India. Whereas in the mediaeval period many new *rāgs* had been introduced and the prevailing system of classification in terms of *rāgas* (masculine modes) and their *rāgīnīs* (female consorts) had been extended to include *putras* (sons) and *bhāryās* (wives of sons), a system which does not appear to have had any musical basis, in the *Naghmāt-ī Asafi* a new system based on classification in terms of scale (thāl) was advocated. This basis for the classification of *rāgs* is generally accepted in the present period.

The process of integrating musical theory and musical practice still continues. At the beginning of this century great strides were made in this direction by the efforts of V. N. Bhatkhanda, who was both a musician and a Sanskrit scholar. His theories are based on songs which he collected from a number of eminent musicians, many of whom were Muslim and could trace their ancestry to the Mughal court. Bhatkhanda’s system can be briefly outlined as follows:

- The octave is composed of twelve approximately equal semitones, but the intonation of these, with the exception of the perfect 4th and 5th of the standard tonic or drone note, *dādi*, may vary from *rāg* to *rāg* and from musician to musician. More than 200 *rāgs* are extant, most of which are classified in 10 groups on the basis of scale (thāl). These are:

  - Kalyān C D E ` F G A B C
  - Bilāval C D E F G A B C
  - Khamādī C D E F G A B C
  - Bhayrav C D E F G A B C
  - Pūrvi C D E ` F G A B C
  - Mārvā C D E ` F G A B C
  - Kāfī C D E F G A B C
  - Āsāvari C D E ` F G A B C
  - Bhayravī C D E ` F G A B C
  - Tori C D E ` F G A B C

A performance of classical or art music generally consists of two parts: *alāp*, introductory improvisation establishing the melodic features of the *rāg*; and *tāl*, the composition, which in vocal music may be *khayāl*, *dhrupad*, *tarāna* or one of several more modern forms, and in instrumental music as played on the stringed instruments, *stār* and *sarod*, is generally *gāl*. This composition is set in a particular *tāl*, a cyclic time-measure punctuated by a stress pattern which is marked on a pair of drums, *tālī*. The composition is generally short and is used as a springboard for improvised variations dependent on the creative ability and the virtuosity of the performer. While the variations maintain the interest of the audience, a deeper emotional impact is achieved through the gradually increasing tempo and the progressive complexity of the music which finally culminates in a powerful climax.

A. Bayley, London 1916; *A short historical survey of the music of Upper India*, Bombay 1917; idem, *A comparative study of some of the leading music systems of the 15th, 16th, 17th and 18th centuries*, Bombay 1941; Abdul Halim, *History of Indo-Pak music*, Dacca 1962. There are, in addition, a number of unpublished manuscripts of the mediaeval period, some of which are mentioned in *History of Indo-Pak music*.

Miscellaneous works on Indian music:

**Hind bint Al-Khuss,** or simply *Bint Al-Khuss*, name by which is known a woman of the pre-Islamic era, whose eloquence, quickness of repartee and perspicacity became legendary. According to al-Shūbīl (Abū Umara al-Musāriq, Cairo 1326, 71), the word *khuss* denotes the son of a man and of a *dāmnīyya* (while ‘sāmā’q is applied to the offspring of a *dāmn* and a woman), and thus we perceive the origin of the legend which arose probably from the belief of the intervention of *dāmn* in the generation of human beings endowed with exceptional gifts. In spite of affirmations such as that of *LA* (s.v.) in respect of al-Khuss: ‘well-known among the inhabitants of the Iyād’, the historicity of this man and his daughter is open to serious doubt; nevertheless it is significant that some authors call the daughter Hind bint Al-Khuss b. Hābīs b. Kurya al-Iyādī (al-Iyādīyya), while they give to another woman, presented as her sister, the name of *Dumāl*a’bint Hābīs b. Muḥyīl. Furthermore, they give her also the nickname al-

This match was resented by Hindal, in whose entourage Hamida happened to be. On Humayün's refusal to give up, Hindal felt offended and without the royal permission left for Kandahar which he seized from Kamran's men. Even this act of open revolt was condemned by Humayün, who allowed him to retain his newly gained possession. The territory of Badakhshán was conferred on him for gallantry during the battle of Kunduz in 953/1546. He was killed on 21 Dhu'l-Hijjah 952/21 November 1551 in a surprise attack by Kámrán's men while engaged in reconnoitring operations at night in the vicinity of Dju-yi Shahi in eastern Afghanistan, where he was temporarily buried. His coffin was later removed to Kábul and interred near the grave of his father, the emperor Bábúr. He was more faithful to Humáyún than to his other ambitious brothers, Kámrán and 'Askarl. He was married to Sultánám Bégam, a sister of Sayyid Muhammad Khádgá, husband of Bábúr's sister, Khánzáda Bégám. His daughter Bukáyya Bégám was Akbar's first wife but bore him no children. She died at the advanced age of 84 on 7 Dümádá I 1053/19 January 1646 at Agra (cf. Gul-Badan Bégám, 274).

**HINDI**, the national language of the Republic of India, is now generally regarded as that form of the central north Indian speech which draws its erudite vocabulary from Sanskrit and its culture from Hinduism, and for literary purposes as including not only the standard dialect (Káhri boli) but also the eastern Awádi, the central Brádi, and the bardic poetry of Rádgásthán [see also HINDI, Languages]. Formerly, and as late as the 19th century, it was also used to describe the speech of north Indian Muslims, those of Hindu as opposed to Dákhan, the speech of the Hindus being distinguished as Hindauri. The term has now been replaced entirely in its Muslim sense by Urdu [q.v.]; in the remainder of this article the term Hindu is used in its Hindí sense.

The relevance of Hindu to Islam is threefold: there is a small but important corpus of Hindu works by Muslim writers; Muslim rulers and nobles have been active patrons of Hindu poetry; and there has been a considerable Muslim influence on Hindu vocabulary, with a more limited influence on grammar (including phonology, morphology and syntax) and on style.

The Muslim poets' interest in Hindu began early, long before the emergence of anything resembling Urdu as an Indian Muslim language; thus under Ghánawí rule in Lahore in the 16th/17th century Mas'úd b. 'Abdul Saláman is credited with a Hindu dictionary, the Kalík-hár, an important early vehicle for the diffusion of common Persian words in north India.

The north Indian bhakti movement—sometimes seen incorrectly as a Hindu reaction seeking to strengthen Hinduism against the advancing pressure of conversions to Islam; in fact its origins date from long before the conquest and its early growth was in regions of slight Muslim influence—saw little Islamic theological and philosophical influence, although the number of Arabic and Persian loanwords used in the Hindu of its exponents is noteworthy. The poet Kabir [q.v.], of a Muslim weaver (dulhádi) family from Banáras (Benares), is unquestionably most strongly influenced by the Hindu bhakti tradition, even though his theology is a deistic monotheism with Vedántic affinities; but his preaching appears to be directed as much to Muslims as to Hindus, and his followers, the Kabírpanthís, have both Hindu and Muslim branches. His exact chronology is most uncertain, but he does seem to have been a contemporary of Sikandar Ládi; Kabir's criticism is bedevilled by the fact that his followers composed verses in his name, and the true Kabir and the pseudo-Kabir sometimes overlap discursively. Some of the authentic Kabir poetry is collected in the Ádí Granth, the Sikh scriptures put together in 1012/1603, which shows clearly the formative effect of Kabir on Nánák [q.v.], his younger contemporary. Nánák's writings in the Granth show him to have been somewhat closer to Hinduism than was Kabir; perhaps both show, especially in their emphasis on the worship of the Name of God and in the importance they attach to the teaching of those preachers which the teachers of the previous centuries starting with Fárid al-Din Mas'úd [q.v.], two of whose verses in a sort of "Pandjábízed" Hindi (perhaps modernized by later redactors) appear in the Granth.

An important school of writing in Awádi (Eastern Hindi) known as prem-gáthá (lit. 'love-song'), of Súfi inspiration, depends entirely on Muslim authors. The works are all narrative love stories, some of them owing much to the poetic conventions of the Sanskrit romances; but the love stories of two humans are to be taken as allegories of the soul's love for God and its ultimate union with Him. The earliest such work is the Candásyan of Mawlná Dá'æd, of about 771/1370, on a popular romantic tale which appears to have been known as far east as Bengal (cf. Rai Krishnadas, An illustrated Awádi MS of armourcanda on the Bhakti, cited by Dá'æd, Addie, Letters to a Hindu, 1955-6, 65-71). Some of the Candásyan's successors of the 9th/15th and 10th/16th centuries are now known only by their names, although the stories on which they are based are still current in folklore (cited by Dá'æd in Padmávat, xxiii, stanza 17; see further Ganesh Prasad Dwiwedi, Hindi mā prem-gáthā aur Malik Muhammad Dá'æd, in Nágarí Prakári Patriká, vii/ii, 61 ff. (in Hindi); in the extant Mogulwát of Sháykh Kúš All of
Djawnpur, known as Kutban, the allegorical element seems slight in spite of I£utb cAli’s having been a murid ... in the service of prince Mucazzam (later the emperor Bahadur Shah), who with his wife—now known by no other name than vi/i (1930), 205-8; although Urdu stricto sensu

Although Allahabad 1929, i, 59). His grandson Mughal court, History of Persian language and literature at the Mughal courts set the fashion for the provincial courts of Hindu kings, and in particular Oetb, Djawypur, Gwaliyar, Nagpur, Bundi and Satara patronized Hindi poetry; in the Mughal court Awanrigub’s third son A‘zam Shāh is particularly known as an enthu-

the same traditions continued under Diahangir and Shāhjīshāh, both emperors taking an active interest in Hindi poetry, rewarding poets, and causing Hindi works to be transcribed into Persian characters; and Mirzā Muhammad b. Fālğr al-Din Muhammad ‘Ali al-Ra‘if, who briefly mentions a conventional genre of Indian poetry which depicts the various types of heroine, he has used the barawyya metre which he did much to popularize; some of his barawyyas are written in Persian or in Persian and Hindi mixed, some verses in other metres are Sanskrit/Hindi macaronics, and a treatise on astrology is in Persianized Sanskrit; he is also remembered as the translator into Persian of Bābur’s Turkish memoirs, and as the patron of the Hindi poet Gang Kavi. On Rahim see specially V. Vidyalanarka, *Abdur Rahim Khān Khāndkhānd and his Hindi poetry*, in IC, xxiv/2 (1950), 123-33.

the one Muslim name among its writers, Sayyid Ibrahim called Ras Kāhin (b. 980/1573), is an apostate. The KriñÇa-cult, however, had in some writers an aspect capable of secular interpretation in the stories of the boy-god’s dalliance with the cowherd girls of Brindāban, especially with the principal Rādhā; and while with devotees the Rādhā-KriñÇa stories were no more than symbolic of the longing of the human soul for union with the divine, in the hands of others they could provide a convenient peg on which to hang erotic verses. Eroticism in Indian poetry had a long and refined tradition and was closely linked with Indian theories of poetics, and it was this deliberately cultivated display of the poetic art which came into great favour at the Mughal courts as the indigenous counterpart to Persian court poetry. At Akbār’s court Hindi verses were written by rādā Todor Mall [q.v.], by Birbal of Djawypur, to whom many witty and humorous apophthegms are ascribed (the modern Birbal-nāmas preserve perhaps the spirit but certainly not the words of the genuine Birbal), the brothers Abu ‘l-Faqi and Faydī [q.q.v.], and above all by ‘Abd al-Rahim Kāhin [q.v.], entitled Khān-i Khānān, who wrote under the takhalus Rāhm. His Satsa is a collection of seven hundred couplets (dohās) on a variety of themes, each a neatly polished pen-picture, in which the essential philosophy and experience of this cultivated soldier is everywhere apparent; in his Na‘yākāḥ-bhed, a conventional genre of Indian poetry which he describes the various types of heroine, he has used the barawyya metre which he did much to popularize; some of his barawyyas are written in Persian or in Persian and Hindi mixed, some verses in other metres are Sanskrit/Hindi macaronics, and a treatise on astrology is in Persianized Sanskrit; he is also remembered as the translator into Persian of Bābur’s Turkish memoirs, and as the patron of the Hindi poet Gang Kavi. On Rahim see specially V. Vidyalanarka, *Abdur Rahim Khān Khāndkhānd and his Hindi poetry*, in IC, xxiv/2 (1950), 123-33.

The same traditions continued under Diahangir and Shāhjīshāh, both emperors taking an active interest in Hindi poetry, rewarding poets, and causing Hindi works to be transcribed into Persian characters; and Mirzā Muhammad b. Falğr al-Din Muhammad ‘Ali al-Rāfī (see al-Rāfī Khan [q.v.], who mentions a conventional genre of Indian poetry which depicts the various types of heroine, he has used the barawyya metre which he did much to popularize; some of his barawyyas are written in Persian or in Persian and Hindi mixed, some verses in other metres are Sanskrit/Hindi macaronics, and a treatise on astrology is in Persianized Sanskrit; he is also remembered as the translator into Persian of Bābur’s Turkish memoirs, and as the patron of the Hindi poet Gang Kavi. On Rahim see specially V. Vidyalanarka, *Abdur Rahim Khān Khāndkhānd and his Hindi poetry*, in IC, xxiv/2 (1950), 123-33.

Djahnpur, known as Kutban, the allegorical element seems slight in spite of I£utb cAli’s having been a murid of Khwājah Bahādur al-Din of Kalāhpūr, composed 900/1503. Slightly later (ca. 930/1523) is the Madmu-mālāt of Mir Sayyid Māngān, who was later a luminary of the Sūrī courts; although incomplete, the work is one of the finest Hindi romances of pre-Mughal times, with a well-constructed allegory and a striking description of the beauties of nature. By far the most prominent writer of this school is Malik Muhammad Dīlayāst [q.v.], b. 900/1494, whose Akhsāri kalām (composed 930/1523) is a short poem on the Day of Judgment, and whose Akhārāratā, of about the same period, is an acrostic on the characters of the Devanāgāri script of Sanskrit and Hindi to which mystic significance is attached; his magnum opus is the Padmāvat (composed 947/1540, a prem-gāthā partially based on the siege of Citawr in 898/1589 by A‘lā al-Din Hāṣidl, in which the poet sees the hero Ratansen as man’s soul, the elder queen Nāgmati as worldly care, the young queen Padmāvatī as wisdom, Citawr as the body, the parrot who brings the message of Padmāvatī’s beauty to Ratansen as the true teacher, Rāghaw Četan the Brāhmaṇ, who betrays Padmāvatī to A‘lā al-Din, as Satan, and the sultan A‘lā al-Din himself as illusion, this īśāwī being explicitly stated in the closing verses. The Padmāvat has naturally formed at least two later adaptations of this tale, one by the poet himself under the pseudonym of A‘lā al-Āwāl, the most notable of whom is Sayyid ʿUmmān of Djawnpur, a Nīṣāmīyya Čištī of a sīsilā very similar to that of Mubiy al-Dīn, Čīyāst’s teacher; his Čīrīwāli of ca. 1022/1613 shows a Nepalese prince marrying first the princess Kamalāwati and then renouncing her to conquer princess Čīrāwāli: the allegory is the necessity for the renunciation of ignorance in order to attain true knowledge. Similar are the Gyan-dīp of Shāhī Nabi of ca. 1028/1619, the Hans-djavāhār of Kāsim Shāh of Daryābād of 1143/1731, Nur Muhammad’s Čindrīwāli of 1157/1744, and a Yūsuf-Zalaykāh by Shāykh ʿNāṣr of Ḵhairpūr of 1200/1786. All these works have in common, besides the allegorical treatment of a love-story, a poetic form closely resembling the traditional mālāwāt but couched in purely Indian metrical forms and in which the language is Awādhi, use the Persian script (although Devanāgāri recensions are also known).

With the coming of the Mughal courts, the Indian vernaculars flourished under royal patronage. Even Bābur is known to have composed a verse in Hindi (c.t. T. Grahame Bailey, *Early Urdu conversation*, in BSOS, vii/1 (1930), 205-8; although Urdu śrīduḥ śrīduḥ sensu had not at that time come into being), and certainly had admitted a large number of Hindi words to the Urdu of his autobiography (list in M. A. Ghani, *History of Persian language and literature at the Mughal court*, Allahabad 1929, i, 59). His grandson Akbār, who was thoroughly Indianized, is known as the author of several Hindi couplets, in which he signs himself Akhābar sāhī (= Shāhī), but most of all for the patronage he extended to Hindi poets, Muslim and Hindi alike. And the liberality of his age created conditions for the writing of the finest Hindi devotional poetry by Sūr Dās and Tuṣlī Dās, who were in no way dependent on court patronage; they were poets of Hindī bhaktī, devotion to a personal god who for the love of his worshippers was incarnated in human form: Krishṇa in the case of Sūr and his followers, Rām in the case of Tuṣlī. Naturally there are no Muslim poets of this school, for the implicit theology is the antithesis of Islam;
Prose literature in the modern Indian languages is little known before the 19th century. With the founding of Fort William College in Calcutta in 1800, for the purpose of instructing the servants of the East India Company in Indian languages, an impetus was given to the development of prose, especially in Hindi and Urdu, by the commissioning of translators; although one work of Hindi prose, Rāmī Kēthi kī kahānī, had already been completed in 1800 by Rāmī Aḥlāḥ Khān [q.v.], who was in the service of Shāh Ālmā II in Delhi and later of Sāḍāt AḤl Khān in Lucknow and was an accomplished Urdu poet. The Hindi produced under these auspices was in fact the Khārī boli dialect, that is to say virtually the same dialectal standard of the northern speech as in the case of Urdu, the literary form of which was by now well established; and herein lies the innovation of the Fort William school of Hindi writing, for previously only Awadhī and Brāddī had attained literary status, although Khārī boli had for centuries been the spoken norm in the Delhi region; and in practice this new literary language was little more than the language of Urdu-speaking Hindūs, in which words of Arabic and Persian origin had been replaced by words either Sanskrit or of Sanskrit origin. Although its chief exponent, Lalīgī Lāl [q.v.], was also an Urdu writer, he went to the extreme of using Sanskrit words of learned rather than popular currency, and the new Hindi was accepted in consequence by a militant orthodox Hindū element rather than by the Hindū element as a whole. The Christian missionaries in Madras and Bengal had, in their Hindi translations of the Christian scriptures, naturally preferred to use religious terms already familiar to the Hindū mind, and thus increased the Sanskrit element. Macaulay’s appointment in 1834 as President of the Committee of Public Instruction nearly visited this Hindi with its death-blow, by his insistence on the value of Western education for Indians and his vigorous but uninform ed and prejudiced denials that classical Indian learning had anything to offer; Persian continued as the language of the courts until 1857, when Urdu replaced it; and, when the question of the medium of instruction in schools arose after the report of the Parliamentary Committee of 1854, the adoption of Hindi was vehemently opposed by Sāyyīd Aḥmad Khān [q.v.] on the grounds that it was a rustic tongue and the language of idolaters (in this view he was supported by the French Professor Garcin de Tassy). But at this time Rāḍā Shīw Prāṣād (not a rāḍā in the traditional sense; the title of rāḍā was a British conferment) became an inspector of schools in the Department of Public Instruction and produced some sixteen text-books for school use in a language not far removed from Urdu, but in Devanāgari script, which allowed the use of Hindi in the schools’ curricula; in a preface to one of these he condemns those “who always urge the exclusion of Persian words, even those which have become our household words . . . and use in their stead Sanskrit words quite out of place and familiar to the coarse expressions which can be tolerated only among a rustic population”; and he endeavoured to bring this Hindi to a wider public through his newspaper Banārās Aḥhār. But the form of the language he used was felt to offer too many concessions to Muslim usage, and the more militant orthodox Hindū politicians, especially Rāḍā Lākṣmīnārī Singh, gradually brought about the rejection of Shīw Prāṣād’s Persianized dialect in favour of a more highly Sanskritized style. Hindū-Muslim tension was thus reflected on a linguistic plane.

The subsequent growth of Urdu into a literature rather than merely a written language, first by the efforts of Bhārāntīdū Harīghendra and later by Mahāwīr Prāṣād Dwīwēdi, does not concern us here, as the linguistic and stylistic differences between Hindi and Urdu became greater and Muslims found in Hindi an expression to which they could not give their allegiance. Authors who used both Hindi and Urdu as literary vehicles are very rare — Premchand [q.v.], for example feeling and nationalism have preserved the Hindū-Muslim linguistic dichotomy in both Hindi and Urdu (in a way which has not affected Bengali), the short-lived Hindūsānī Movement [see Hindūsānī] having commanded little popularity; but the protagonists of the Sanskritized Hindi, which now has the blessing of the Government of India, have not had things all their own way: shortly after partition, village communities near Delhi and in the Indian Pandījāb preferred to listen to the news broadcasts of Pakistan Radio from Lahore, finding their Urdu more comprehensible than the Hindi broadcasts of the All-India Radio. Recently there have been signs of an increased acceptance of Hindi by some north Indian Muslims. The above account has excluded Dakkhī, which will be treated under urdū. It must be mentioned, however, that many old Dakkhī texts are now being published in Devanāgari transcription in India, often under the name of “Dakhī Hindi”, and it is probable that before long Dakkhī will be studied in India as part of Hindi literature (cf. Bābūrām Saksena, Dakkhī Hindi, Allahābād 1952).

Bibliography: in addition to references in the article: on the language: S. K. Chatterji, Indo-Aryan and Hindī, Ahmadābad 1942; for Awadhī: Baburam Saksena, Evolution of Awadhī, Allahābād 1938 (chapter on source materials for the study of Awadhī out-of-date, containing no reference to material discovered after 1922); for Brāddī: Dhiren-dra Vārnā, La langue braj, Paris 1935. On Hindi literature: there are no reliable histories of Hindi literature in European languages; Garcin de Tassy, Histoire de la langue hindoue et hindoustanie, Paris 1839, is a notable exception. Community feeling and nationalism have preserved the Hindū-Muslim linguistic dichotomy in both Hindi and Urdu (in a way which has not affected Bengali), the short-lived Hindūsānī Movement [see Hindūsānī] having commanded little popularity; but the protagonists of the Sanskritized Hindi, which now has the blessing of the Government of India, have not had things all their own way: shortly after partition, village communities near Delhi and in the Indian Pandījāb preferred to listen to the news broadcasts of Pakistan Radio from Lahore, finding their Urdu more comprehensible than the Hindi broadcasts of the All-India Radio. Recently there have been signs of an increased acceptance of Hindi by some north Indian Muslims. The above account has excluded Dakkhī, which will be treated under urdū. It must be mentioned, however, that many old Dakkhī texts are now being published in Devanāgari transcription in India, often under the name of “Dakhī Hindi”, and it is probable that before long Dakkhī will be studied in India as part of Hindi literature (cf. Bābūrām Saksena, Dakkhī Hindi, Allahābād 1952).

Hindi, the name given to the largest religious community of India, conquered by the Muslims in the 6th/12th century. Early Muslim knowledge about the religion of the Hindus was very small: and no wonder, for Hinduism is utterly different from Islam in most of its ways. It is essentially polytheistic, has no official scripture (although many sacred books), no canon, many different schools of belief and of philosophy and yet really no orthodoxy, and above all no prophecy; it tolerates the worship of idols, which are nevertheless not a necessity; it knows no organized worship, although it has temples but devotion in these is optional and individual; its
religion is inseparable from its concepts of society and of state; and its goal is not the release of the soul to a paradise and to a physical resurrection, but the release of the soul from a particular body for the purposes of rebirth until eventually the soul is freed from the necessity of transmigration. What, perhaps, impresses the oldest Muslim writers, the Arab geographers, most about Hinduism is its utter difference from Islam, and its social strictures and exclusiveness—the way, for example, certain people were excluded from eating with, or taking food from the hands of others. Its beliefs were not investigated for Islam before al-Biruni [q.v.] compiled his K. Ta‘rikh al-Hind in Ghasna in the 5th/11th century; this deals, however, mostly with the beliefs of the Brähman community, the highest grade in the Hindu social order [see BARRAHMA], a rigid system (although divided into six more orthodox schools, and a number of less orthodox ones) communicated by oral tradition from father to son or from hereditary teacher to selected and initiated pupil, based on the Vedas (the hymns to the gods composed by the Aryan people in their migrations to India in the 2nd millennium B.C.) and their later mythological accretions and their philosophical interpretations. Al-Biruni, though he mentions many popular practices, does not seem to have gone so far as collecting material on "popular" Hinduism, the beliefs of the non-Brähman population: a plethora of superstitions, taboos, local godlings including snakes, propitiation of ancestors, magical spells, sacred objects and places, and a system of ritual exclusiveness and restrictive practices far in excess of the system of the Brähmans. For the Brähmans, the priests of the community, are the descendants of the upper grade in the original Aryan hierarchy who have kept their old beliefs most pure; the lower grades intermarried more freely with the Dravidian and aboriginal inhabitants of the country they conquered, and absorbed more of the indigenous beliefs. To the Muslim conquerors all these shades of Hindu belief were anathema; their practitioners were not Ash Al-Kištah, and therefore in theory they could not be beneficiaries of the dhimma [see DHIMMA], and be given the choice of paying the gīzya [q.v.]; the alternative was to be ostracized or dealt with as dhimmi. This, however, is not easy for a minority to impose on a majority, and there is early evidence (from the Cal-nāma, a Persian work of ca. 613/1216 said to be a translation of an Arabic account of the conquest of Sind) of the Sindhis being allowed the status of dhimmī. There are references to gīzya early in the chronicles of the Dihlī sultanate, but these may relate to the payment of tribute by Hindu chieftains.

The rulers of India seem to have taken little interest in the beliefs of their subjects before the reign of Akbar. That ruler introduced many forms drawn from Hindu worship (as from that of the Dīans and Pārshś [qq.v.] and from Christianity) into his personal devotions, and later into his own syncretistic faith the Din-i Ilahi [q.v.]; this movement was probably more acceptable among the upper classes of Hindu society, especially from the lower caste Hindus or from the so-called "untouchables"; it applies also to converts to Christianity in districts where a competent ministry is only rarely available. (J. BURTON-PAGE)

HINDU KUSH, extensive range of mountains in northern Afghanistan, which forms the watershed between the river systems of the Amu Darya and the Indus [q.q.v.]. The range extends in a westerly direction from the junction of the Mustagh and
Sarikol ranges in the region of the Pamirs to where it is extinguished among the low hills of the Pamish range. The Kiih-i Baba mountains are not between Turkestan and India. The eastern section of these routes of merchants, pilgrims and conquerors between Turkestan and India. The eastern section from the Khiawak pass to near the Kilik pass, which links Hunza with Yarkand, separates Badakhshan and Wakhan on the north from Nuristan (Kafiristan), Hunza and Citral on the south. Because of the greater difficulty of the country to the south, the passes in this area, among which are the Dora, linking Citral with Badakhshan, and the Baroghil, have never been used to the same extent as those in the western section. Until the latter part of the nineteenth century they were little known to Europeans, but since the course of the last quarter of that century a great deal of exploration was done on behalf of the Government of India, especially in connexion with the Afghan Boundary Commission in 1885.

Although the range presents substantial difficulties to north-south communications, they have never been found insuperable. The main routes are all open for six months of the year. Historically the most used routes between Kabul and the north were those that via the Pandishir valley and the Khawak pass (11,650 feet), which was used by Alexander the Great and by Timur, and the route up the Bamiyan valley over the Aq Ribat Pass (12,500 feet), which was used by the early Buddhist pilgrims and by Cingiz Khân. The first motor road, completed in 1933 with the aid of German engineers, followed neither the Dora route nor the Ak Ribat pass. In 1956 this project was again taken up and involved an extensive detour. In the reign of Amân Allah Russian engineers had suggested a more direct route across the difficult Sâlang pass (11,700 feet). In 1956 this project was again taken up and by 1964 a new road had been completed involving the construction of a tunnel, one and a half miles long, beneath the Sâlang Pass. This new road shortened the journey between Kabul and the north by 125 miles, a fact of great economic and political importance.

The spoken norm of the district round about Kabul and the north by 125 miles, a fact of great economic and political importance.

**HINDU-SHÂHIS**, a native dynasty of northern India who were the first great opponents of Ghaznavid and Islamic expansion into the Panjâb. Birûnî in his *Tahâb mâ i li 'Hind* describes them as originally Turks from Tibet who ruled in the Kábul river valley; it is possible that these "Turks" were Hinduized epigoni of the Kushans and Kidarites and the Romans were pushed eastwards by the Hephthalites.[28] During the 4th/5th century these first Hindu-Shâhis were replaced by a Brâhmanic line. In the time of the first Ghaznavids Sebûtîkîn and Maḥmûd [qq.v.], the Hindu-Shâhîs constituted a powerful kingdom stretching from Lâmghân to Mîlân and the southern foothills of Kashmir and based on Udbhândapur or Wayhind (modern Und near Attock).

In the course of his campaigns down the Kábul valley, Sebûtîkîn attacked and twice defeated the Hindu-Shâhî Râdjâ Dîjayîl. Maḥmûd intensified the struggle; Dîjayîl was captured and sold as a slave in Khurâsân, and 399/1009 his successor Anandîl had been driven out of Peshâwar and Wayhind. Despite the efforts of Anandîl's son Trilochanpâl to rally the support of other threatened princes, the "Turùkîs", as the Ghaznavids' Turks appear in Indian sources, drove him into the eastern Panjâb. With his death in 412/1021-2, the dynasty ceased to exist as a major impediment to Ghaznavid penetration towards the Ganges-Djumna basin, although some Hindu-Shâhî princes took refuge in Kashmir and others founded minor independent principalities in the mountains of Citral and Gilgit.

**HINDUSTÂN** [see HIND].

**HINDUSTÂNî, also HINDUSTÂN, HINDUSTÂNî, or has been used in India, confusingly, to mean at least three different forms of language, the first two of which are common.

**i.-As a synonym for Urdu [q.v.] as spoken in North India; i.e., the Muslim speech of Hindustân as opposed to the Deccan; antonym Dakhân.**

**ii.-As a name for that speech which is the common denominator of Urdu and Hindî [q.v.], coloured neither by recondite loan-words from Persian nor by loan-words from Sanskrit: the sort of language in which a Muslim villager might converse with a Hindû villager, and vice versa; in this sense, also the customary simplification of speech made by an educated Muslim or Hindû to an uneducated person of his own community. In this form common Persian loan-words are used freely by both Hindús and Muslims. In this sense may be included also a common bazaar speech of north India which may extend west to Bombay and east to Calcutta, a sort of Hindî-Urdu without genders and sine flexione.**

The spoken norm of the district round about Mirâfth ("Meerut") is described by Grierson in the Linguistic survey of India as "vernacular Hindustânî;"
but this term is now not in use by linguists, and has
never been an Indian usage.

iii.—A conscious attempt, made for political
purposes, at a language acceptable to both Muslims
and Hindus in speech and in writing, especially the
written language of the "Hindustani movement" of
the 1930s and early 1940s; one may see in this
movement, which arose within the Indian National
Congress [q.v.], a political attempt to placate both
the Muslims within the Congress party and also the
Muslim League. This was virtually Urdu, shorn
of its more recondite Persian loanwords, written
in the Devanagari script used for Hindi, indicating
the Urdu letters े, ी, ं, ः (including ऋ, ऋ and possibly ऋ) and ज by modifications of the Devanagari characters क, ख, ग, ज, and घ. By some Hindus this form: was spelt Hindustānī (Sanskrit स्वातनता is cognate to Persian -ستان). Any movement of the hand may have operated in bringing this hybrid
as a national language for India were never high,
and seemed to recede completely during the 1930s

certainly evidence that prop-
phylactic powers are attributed to the colour red.

The whitish flower of henna was called "faggia" or "faggu.
It has a sweet and strong perfume which is
reminiscent of that of mignonette. In Cairo today
mignonette bears the unexpected name of "tamar hinnā" and
is for this perfume that henna is
cultivated in the gardens of the Near East. The
flower was used to make a scented oil ("duhn al-
faggāw")
which has no corresponding noun.

"henna of the cattle"
and its uses are known from the Atlantic
to the Ganges. It was not grown in Muslim Spain.

In Africa it is cultivated in semi-desert regions
around the Sahara: Sās, Dařa, Twālit, Bīlād al-
Quraidār, Kābīs, Tripoli-Tania, Egypt, Nubia, Nigeria.
In Morocco, surprisingly, henna is grown in abundance,
much further to the north, in the suburb
of Azamūr [q.v.] at 33° 17' N.; it was probably
introduced by the Shtuka, moved there from Sus.

In Asia, henna is cultivated throughout the Near East (that of "Askalān [q.v.] was famous at the
beginning of the Middle Ages), in Iran and in western
India. It appears to be a native of the last two regions.

In medicine, the astringent properties of the leaves
were used, in a decoction, for treating burns, thrush
and swelling accompanied by inflammation. Applied
as poultices to the palms of the hands and the soles
of the feet, they closed the pores and reduced per-
spiration. But it is as a cosmetic that henna is most
widely used and has finally acquired a ritual use
as a prophylactic. Its dried leaves, finely crushed
or ground, are mixed to a paste with a
little water; this paste, applied as a poultice over-
night, dyes a reddish orange colour of varying
intensity. Old men use it to dye their beards and
both sexes to dye their hair a tawny blonde. Young
women use it, mixed with other ingredients (tan,
indigo, etc.) to dye their hair black and to strengthen
it. Women also, to make themselves attractive,
create, decorate with henna their nails, the backs of their
hands and the tops of their feet on all festive occa-
sions. Almost everywhere throughout the Muslim
world, one of the feast days preceding the consum-
mation of a marriage is set aside for the ritual dyeing
of the bride's hands and feet with henna; a parallel
but simpler ceremony may take place for the bride-
groom. It is also not uncommon to see a fine horse
with its forelock, mane, tail or feet dyed with henna;
or perhaps a fine sheep destined for sacrifice.

In all these cases the true aim of the dyeing is
probably less to embellish than to protect against
the evil eye: there is considerable evidence that pro-
phylactic powers are attributed to the colour red.

As long as the henna is not applied so as to form
designs similar to tattooing (parts of the skin being
left undyed by masking them) Islam readily permits
the evil eye: there is considerable evidence that pro-
phylactic powers are attributed to the colour red.

The Arabic name for henna has spread to most of
the Muslim languages. In Persian it is pronounced
hindū, without श (in Turkish it is hīna). The
Spanish alheña (with the stress on the e) derives from
a form with a shortened final vowel: hinnat which has become general in dialectical Arabic. It should be
mentioned that here and there, in North Africa, the
epithet hennet al-bḥhr "henna of the cattle"
indicates a mixture of dung and chaff used as
plaster for threshing-floors, walls, etc. In Hindi, henna is
called mehndī (mehndī) from the Sanskrit mendhīska.
The properties of the leaves and the flowers of
henna were known and used by the ancient Egyp-
tians and by the Hebrews.

HINDÜSTÂN, or HINTĀTA, a famous Berber confedera-
tion in the central Moroccan High Atlas, of the stock of
the sedentary Masmāda [q.v.]; according to Ibn
Khaldūn ("Ithār, French trans. de Siane, Histoire des
Berbères, ii, 281), Imīṭī was the current ethnic design-
ation of these mountain-dwellers. During the 6th/
7th and 7th/8th centuries they played an impor-
tant part in securing the success of the Almohad
movement and in strengthening the Mawṣūlīn dynasty
by being the first to support the Mawṣūlīn
Ibn Tūmār [q.v.]. Their chief Faskā u-Mzāl then received the
name of a Companion of the Prophet, Abū Ḥafṣ
Umar [q.v.]. This eminent figure held a leading
position in Almohad history and his grandson, Abū
Zakariyyāʾ, later founded the Ḥafṣīd dynasty in
Tunisia, in 625/1226 [for the Hintāta of Tunisia see Ḥafṣīn]. The Hintāta fought on every battlefield
in the cause of the Almohads... and was perhaps the
most successful dynasty with chiefs of real worth and unassailable fidelity. Those who remained in the country settled
down permanently in the upper valleys of the Wādir Drā'. After the tragic events that marked the end of the
Almohads in 667/1269, the family of the Awnāl Yūnūs, whose origin seems to have been connected with Abū Ḥafṣ
Umar, gave their support unreser-
vedly to the Marmids, and for a long period played
an important political and fiscal part in South
Morocco, becoming in time an Arab Uniat
found refuge and solace, in 759/1358, before his
death. Their representatives acted as more or less
independent viziers under the Marmid princes who
were appointed as governors of Marrâkûsh and its
neighbourhood. One of these, 'Amir, had a distin-
guished career (Ibn al-Khaṭṭīb wrote his praises) and
ruled at his pleasure over vast territories. Intoxicated
by power, he married the widow of a sultan and
finally led a revolt. He was besieged in his mountains,
captured after a long siege, brought to Fâs and
flogged to death in 771/1370. In conformity with an
old Berber tradition, his family did not lose its author-
ity but continued to command the town and the tribe.
Funerary inscriptions found at Marrâkûsh,
in the royal metropolis of the Ḥiṣabâ, confirm that
at the very time when the Portuguese settled at Saâf,
the kings of Marrâkûsh were the actual descendants
of the Hintâṭâ khâyȗkh. From Portuguese sources we
can see that, when the Marmids finally lost their
authority, the chiefs of the Hintâṭâ received a share
of the power thus vacated in South Morocco and
quietly established themselves in the ruined
答卷. The same sources confirm that, even at the time
of their fullest power, the “kings of Marrâkûsh” never
had any great authority outside the town and its
suburbs. Their relations with their mountain kinmen
were far from cordial, and they won no renown in
their encounters with the Portuguese who, after the
conquest of Azzânûr (q.v.), had made Marrâkûsh
the avowed object of their ambitions. Nuno Fernandes
of Ataide attacked the town on 23 April 1515, but
unsuccessfully, as a result of the help brought to the
town’s defence by the Sa’dîd shârîfs. Ten years later
these same Sa’dîds seized Marrâkûsh for themselves
by securing the assassination of the last known
Hintâṭâ amir, Muhammad b. al-Nâṣir Bû-Shahtûf.
From that date, the Hintâṭâ vanished from Moroccan
history. Even their name has disappeared.

**HIPPÔDROME [see MAYDĀN].**
**HIPPOLÔGY [see BAYTAR, FARAS, FURUSYYA].**

Hintâṭâ was also written Ḥara, and without hamaz,
a mountain three Arabian miles to the north-east of
Marrakesh, often mentioned also with the mountain
opposite, Thâbir (q.v.). It was near the šahl or
quarter of the family of al-Aqhânas, on the left of the
pilgrim road to ‘Irâk.

Muḥammad is said to have been in the habit
of spending a month each year in a cave on Ḥira
engaged in takannîh, presumably some form of
religious devotion, and to have been visited here by
an angel (Ibn Ḥishâm, 152; cf. Ṭabarî, i, 1147 f.,
1155); this experience is sometimes identified with
the beginning of revelation; and hence the present
ame Ḥiṣab al-Nûr, “The Mountain of Light”. He is
also said to have gone to Ḥira on his return from
the visit to al-Tâfîf in about A.D. 620, and to have
waited there until he was assured of protection
in Mecca (Ibn Ḥishâm, 251).

**T. H. WIKIR ([W. MONTGOMERY WATT])**

**AL-ḤIＲĀ, name of the capital of the La-
khâds (q.v.).**

The name is comparable with Syriac hirta “en-
camptment”, and the locality was no doubt so
named from having been at first a camp settle-
ment; several of the legends about the beginnings of Ḥira,
summarized in Yâkût’s Muṣtrim al-balûdîn, imply
that this was so. This sense of the word is not extant
in classical Arabic, but is found in the Epigraphic
South Arabian kēlîyûr (see A. F. L. Bereston in Le
Muséon, n.s. lxvii (1954), 312-3), while the Classical
lexica record analogous senses for the verb tabayyara
(= ābâma) and the noun bâyr.

(A. F. L. BERESTON)

The facts of geography—salubrious air, a fertile
neighbouring region, and proximity to the Euphrates
—all adequately explain the choice of the site for the
settlement, which was located to the south-east of
present-day Nadīf in ‘Irâk. But it was a political
factor which transformed al-Ḥira from a relatively
obscure locality to the most important Arab city in
the Fertile Crescent during the three centuries
preceding the rise of Islam, namely, the emergence
of the powerful Lakhmîd dynasty, who made it
their capital and advanced it to a position of domi-
nance which became still more apparent with the
rise of Hatra, Edessa, and Palmyra, in the 3rd
century A.D. Al-Ḥira became so much a Lakhmîd
city that it was referred to as “Ḥira of Nu’mân” after
one of the Lakhmîd kings. These adorned the city
and its environs with castles and palaces, e.g., al-
Khawarana and al-Sâdir, while Christian princes
of the Royal Family founded some famous monas-
teries, e.g., Dayr Hind. The city reached its heyday
during the reign of the illustrious Mundhir III (A.D.
503-554) when it became the centre of political,
diplomatic, and military activities in which Persia,
Byzantium, and the Arabian Peninsula were
involved. For the Sàsàmîs, however, it remained a
fortress for the protection of Mesopotamia against
the raids of the nomads and a caravan city of vital
importance for the transit trade between Persia and
the Arabian Peninsula.

Owing to its geographical location, al-Ḥira became
the confluence of three interacting cultural currents:
the Persian, the indigenous pagan Arab, and the
Byzantine, represented mainly by Nestorian Christi-
anity; and herein lies its more enduring significance.
It was most probably at al-Ḥira that the Arabic
script was first developed. As the seat of a Nestorian
bishop, it was a centre whence Christianity was
transmitted to the Arabian Peninsula. As the capital
of the Lakhmîds, it attracted to itself the royal
court of Arab poets from the Peninsula, e.g., ‘Abd, Tarafa,
and al-Nâbîgha, and thus gave an impetus to the
cultivation and perfection of the Arabic panegyric.
It also produced a major pre-Islamic poet, ‘Adî b.
Zayd (q.v.), who belonged to its famous Christian
community, the ‘Ibbâd, and whose poetry reflects the
various facets of Ḥira’s urban culture.

Although it was captured and ravaged by the
Besides its “chameleonism”, it is proverbial also for its caution (basm), for it will not let go of one branch until it has a firm grip of another when moving about.

It is not forbidden to eat the flesh of this animal, but it is scarcely sought after. Certain parts of its body have medicinal properties, and a chameleon seen in a dream portends various happenings.

**Bibliography:** Dībājī, Hayāūn, index; Damārī, s.v.; Kaawīnī, ‘Aqīdīs, s.v.; see also Abu Kalāmūn and the bibliography to their article *Dabb*. (Ch. Pellat)

**HIRBA** (see *KEEL*).

**HIRBA** (A.), chameleon. Tripodite with the meaning of “the head of nails joining the links of a coat of mail”, this word, because of its ending, is often treated as diplote and feminine, although it is masculine and for its feminine form has birba’ad. However, the female chameleon is most often called samm ḫalayn, while the male is referred to by a number of kunyas, of which the most frequent in Muslim Spain, abū bardāşık, often leads translators into error (see E. Lévi-Provençal, *En relisant le Collier de la colonne*, in *al-Andalus*, xv/2 (1950), 353).

This reptile, which is classified with the akhmad and is close to the dabb [q.v.], is well known to the Arabs, among whom it is proverbial for its “chameleonism” (ilāla‘um), its ability to become invisible by turning the same colour as that of any object on which it has settled. It is said that when talking in Egypt where it is young, and yellow when adult, but it becomes green in sunlight. It lives by warmth, and can be seen, from morning to night, following the path of the sun (in order, it is said, to shade its body with its head); thus the poets compare it with the adherents of various religions, who turn to pray in different directions. At midday, when the ground is too hot, it climbs to the top of a tree, and is then compared to a monk in his cell; but when the sun is at its zenith, it appears to go mad because it can no longer see it. Since it is slow-moving, God has given it an eye which can move in all directions and enables it to look out for its prey without having to move. Thanks to its tongue, which is rolled up in its throat but which can stretch a cubit or three spans when it is extended, it snaps up insects coming within its reach, without needing to make any other movement, so much so that it immediately resumes an immobility so complete that it seems to be part of whatever it is sitting on. However, it mostly hunts its food at night. Should a man disturb it, it swells up and appears threatening, but is in fact quite harmless. It has four paws and a hump similar to that of a camel, but the physical description of the animal is scarcely touched on in zoological works.
account, which does not mention the Flood, is given in the introduction to the K. Sirr al-khali^a by Balnūs. The thaumaturgist, incited by the inscription on a statue of Hermes, diggs beneath it and meets the threefold Sage in a subterranean crypt as an aged man holding an emerald tablet in his hand and having by his side the book eventually published by Balnūs; this book ends with the text on the table. Both the last-mentioned works have been analysed by J. Ruska, Tabula Smaragdana, 1926, cf. M. Plessner, in Isil, xvi (1927), 77-113; the story of this account is told in the Vorderlibanvorschreiben and gives new Hermetica in Arabic. A new translation of the story and the tablet text was published by F. Rosenthal, in Das Fortleben der Antike im Islam, 1965, 332 ff.

 Aboriginal Ma'far's account has survived in Latin translation in several texts (e.g., J. Ruska, AVMNT, xi (1928), 28-37) and influenced other texts, e.g., the Summa philosophiae by Ps.-Robert Grosseteste, ed. L. Bauz, 1912, 275 ff.; cf. L. Thorndike, History of Magic, ii, 1923, 449, and the Breslaw doctoral thesis by August Bertsch, Studien zur Summa philosophiae des Pseudo-Robert Grosseteste, Brunswick 1929 (typescript), 37. On the survival of the story in mediaeval Hebrew literature see M. Plessner, in St. Isil., ii, 53 ff.

 Traces of the story of three Hermes also occur in the legendary history of ancient Egypt as reported by numerous authors on the authority of the still puzzling Ibn Wasl Shāh (Sā'īd, Tabbahā, 39 calls him al-Wasīfī). G. Wiet, L'Égypte de Murtada, 1953, 19, points to that Hermes who lived under al-Būdāghīr b. Kuftarmīn; see now the references and parallels in Picatrix, tr. H. Ritter and M. Plessner, 1962, 322 ff. The connexion with the Alexander Romance, already recognizable in the above-mentioned Dakhūrat al-Iṣkandar, is still further elaborated in other Arabic Hermetica; the ps.-Aristotelic Sirr al-asrār (Secretum secretorum) also contains the Tabula Smaragdana. The Hermetic book al-Iṣṭamaḥīs (see below) appears as the vademecum given by Aristotle to Alexander in which some talismans to help the king on his expedition to India are enumerated; the main contents of the text have been incorporated by al-Mākinī and the Alexander portion of his history, cf. also M. Plessner, in OLZ, 1923, 922-20.

 In the stories about the Sābi'ans, Hermes appears partly as a god (e.g., Fūris, 332,24), partly as a prophet with philosophical features, cf. the analysis of the account of the Fūrisī, 318 ff., by F. Rosenthal, Ahmad b. al-Tawṣīb as-Sarajī, 1943, 41 ff. (at p. 47 add D. Chwolson, Uber die Ubersetzungen der babylon. Literatur in arab. Ubersetzungen, 1859, 93 ff., and against it A. von Gutschmid, in ZDMG, xx (1860), 42 ff. [Kleine Schriften, ii, 1890, 694 ff.], where the influence of the account on Ibn Wābšīyah's al-Fīlāhā al-Nabāṣīyya is implicitly discussed).

 The large number of extant Arabic writings bearing the name of Hermes, and the still larger number of quotations from Hermetic books not preserved induced L. Massignon to exaggerate the role of "Hermes" as the promoter of the Hellenistic tradition in Islam; he also claims for some books a Hermetic character which are simply Neoplatonic or gnostic (A. J. Festugière, La révélation d'Hermès Trismégiste, I, Appendix III, 384-400: Inventaire de la littérature hermétique arabe, cf. his Addenda in the second edition, 435-9). Unfortunately, his paper read at the Erasos-Tagung 1942 and alluded to at the beginning of the Inventaire has never appeared. So long as Hermes is not explicitly quoted, we have no right to style books as Hermetic simply because of their general character as described by Massignon, 388-9; it is made in anciently derived and not informative sources, the sayings not connotated by the word Hermes, that constitutes their belonging to the Hermetica. About the list of alchemical books (p. 391) cf. now Fück, l.c. Here are given a few comments on Massignon's list of extant books (pp. 393 ff.).

 III A 1: The books of Crates and al-Habīb contain sermons from the Turba Philosophorum, as stated by Ruska (T. Ph., 1931), but are not its sources, rather its derivatives. A comparison with the Vorderlibanvorschreiben and greekisch-almicates in oriental-literarischen Überlieferungen, to appear shortly).

 III B 2: The books containing philosophical and ethical sayings of Hermes are much more numerous; to the collections in Ibn al-Kīfī and al-Shahrastānī quoted by Massignon, add Hunayn b. Ishāk, Abūdāb al-falsāfīsa, part II, Ch. 13 (supplement to Loewenthal's translation in K. Merkler, Die Sittensprache der Philosophen, 1921, 45 ff.), Miskawābī, Dakhūdat, ed. Badawi, 1952, 214-6, Ibn Durayd, Mudjīdān, 1342, 75, al-Mubāshshīr, l.c., 7-26, Abū Sulaymān al-Manṭīkī, l.c., fol. 322-34v. A great many sayings are common to all or almost all these sources; every text has, however, sayings not shared by the others. A comparison, also with Greek anthologies, is badly needed. In al-Mubāshshīr's account Hermes shows strong monotheistic features similar to those described by al-Sarākibī (see above), but more elaborate and more specific.

 III B 4: The talismanic texts are to be supplemented by the magical stone-books [see HADJAR]. An example is MS Berlin, Wetzstein II 1208 (Ahlwardt 6216, cf. A. Siggell, Katalog der arab. alsb. Handschriften Deutschlands: Berlin, [1949], 1351). For these texts and the astrological ones (III B 5) see now the introduction and indices to Picatrix, tr. H. Ritter and M. Plessner, 1962, and the forthcoming volume of studies on the book by the author of this article. Certain passages of the cosmology found in al-İstamāfīs are quoted in al-Mas'ūdī, Abāhār al-zamān, 1938, 7 f. = Abrégé des marveilles, tr. Carra de Vaux, 13.

 V A: The sayings of Hermēs quoted by Ibn Umaylī have been translated and discussed by H. E. Stapleton, G. L. Lewis and F. Sherwood Taylor in Ambis, iii, 1949, 69-90.

 The so-called Postumus (Festugière, 340, and addition, 435 f.) has been published by G. Levi Della Vida, La dottrina e i Dodici Legati di Stomatalassa, uno scritto di ermetismo popolare (ARANL, Memorie, VIII, iii, 8), 1951. A number of Arabic hermetical texts and accounts have appeared in English translation in vol. 4 of W. Scott, Hermetica, 1956. According to al-Mas'ūdī, al-Tanbih, ed. De Goeje, 31, Hermes assumed the existence of seven southern clima corresponding with the northern. The influence of Arabic Hermetica on Renaissance thought is in part discussed by Frances A. Yates, Giordano Bruno and the Hermetic tradition, 1964. An attempt to explain Kyot's account of Flegetanis in Wolfram's Parzival with the help of Arabic Hermetica connects the interpretation of the hermetical character of the epic has been made by H. and R. Kahane, The Krater and the Grail: Hermetic sources of the Parzival, 1965.

 Bibliography: In the article and in L. Massignon's Inventaire; see also A. E. Affifi, The influence of Hermetic literature in Muslim thought, in BSOAS, xiii (1950), 840-53; J. Kraemer, Das arabische Original des "Liber de pomo", in Studi

(M. Flessner)

Hîrîz [see Tama'mî].

Hîsâb, “account to be rendered to God”. Although the Kur'ân sometimes uses ḥisâb in the sense of “reckoning”, “reporting”, or “subtracting”, it is very often used by anastomosis as the “reckoning” which God will require from a man on the Day of Judgement. The expression yaum al-ḥisâb (XL, 27; XXXVIII, 16, 26, 53; cf. XIV, 41), “the Day of the Rendering of Accounts”, is synonymous with yaum al-dîn, “the Day of Judgement”. The eschatological ḥisâb is to be given to God alone (XIII, 40; XVII, 78; LXXII, 113); He will require it from all men, but especially from the ungodly (LXXXVIII, 26; XIII, 18 and 21; XXXII, 117). And God “is prompt in demanding an account” (II, 200; III, 19 and 199, etc.). Each man will receive a “book” which is a statement of accounts, a “roll” on which his actions are inscribed. If the good deeds outnumber the bad, he will receive it “in his right hand” and the ḥisâb will be in his favour (Kûrûn, LXXXIV, 7-10; LXIX, 19-20; cf. XVII, 72); those to whom the account is “disadvantageous” will receive it in their left hand (LXXIX, 25-6), and will be punished.

These Kur’ânic statements may be compared with many earlier traditions, Iranian, Jewish and Christian. The rendering of accounts and the weighing of actions was known to Mazdaism (see J. Athdr, esp. p. 145; al-Biruni, index.

To survey all these data would involve a comprehensive discussion of the whole problem of the “retribution for deeds”, of “promise and threat” (al-wā'âd wa'l-wâ'âd [q.v.]) in the next world. We select for treatment here only some problems which concern the nature of the ḥisâb itself, or its forms, and give a brief indication of the general solution given by the different schools.

1. The “weighing” (al-ʿawâm). The very term ḥisâb evokes the ideas of counting, measuring, evaluating. The majority of the Muʿtazîls, and to an even greater extent the Faḍîsîs, gave it a metaphorical meaning. The “Pious Men of Old” and, with certain reservations, the Aṣgârs, adhered to the literal meaning (see below): the just Judge will present everyone with an account of his deeds, which will be “added up” and “weighed”. With the “book” (ḥisâb) containing the status of the account, as mentioned above, there then appears the “balance” (misân), with reference to Kûrûn, XLI, 17; LV, 6-8; LVII, 25. The “Reckoning” of the Last Day is also “the weighing” (al-ʿawâm [87]), 8): good deeds will be heavy and bad deeds light (VII, 8-9).

2. The question of “merit” (al-ʾistikhabâh). Every human act is repaid by God with either a reward or a punishment. For the Muʿtazîls, a good deed thus of necessity “merits” reward and a bad deed punishment. On the day of the Reckoning, the “merits” attached to the deeds are either added to or subtracted from the “balance” and in qualitative, considering that one single “great sin” (kabîrâ) may render void the “merit” earned by any earlier good deeds, and be punished with eternal fire. However the later Muʿtazîls of Baṣra, al-Djûbbâtî and his son Abû Ḥâshîm, believed that a quantitative evaluation is concerned, in which good and bad deeds are set against and cancel out each other. The group which prevails in number and in “weight” necessarily determines the reward, in the case of good deeds, and the punishment, in the case of bad deeds (for summary of arguments see, e.g., Falâhr al-Dîn al-Râzî, Muḥâsâsîl, Cairo n.d., 173).

Ashâʿîr tradition, on the other hand, holds that there is no “merit” attached to human deeds (al-Râzî, op. cit., 172-3; al-Djûbbâtî, Sharh al-mawâdî, Cairo 1325/1907, viii, 305 ff.), and that it is impossible (for one set of acts to cancel the other). As for the Kûrûn says (XCIX, 7-8): “Whoose has done an atom’s weight of good shall see it, and whoose has done an atom’s weight of evil shall see it”. The value of faith would never be compromised by sins, however grave and numerous, in view of the famous ḡudâth, “Those whose heart contains even one atom of faith will come out of hell” (al-Bûghârî, Imâmî, 33). Furthermore, however, the quality of the merit of the believer will be “multiplied” simply by the freely-given grace of God, while each of his bad deeds counts “as one only”. In fact all rests in the hands of God. And it is known, thanks to the promises which He has given, that God will not condemn the believer, even if he is sinful, to eternal hell. He can either condemn him in His justice to a limited period in hell, or, in His mercy, grant him complete pardon. It is therefore not certain that there are, even temporarily, any sinful believers in hell.

This is a point upon which the Hanafsîs-Mâtûrîds disagree with the Ashâʿîrs (cf. ‘Abd al-Râhmân b. ʿAllî, Nasîm al-fârâdîd, Cairo n.d., 2nd ed., 38-9). For the Mâtûrîds indeed, God may certainly pardon this or that sinner, but not all. “It is obligatory that some of those who have committed a great sin should be punished” by a period in hell (al-Lâkânî, Dja-harât al-tawâbîd, ed. Luciani, Algiers 1907, verse 117). For God has attached a punishment to great sins (kabîrâ) — a temporary punishment if the sinner is a believer—and God’s “promises” cannot be “vain”. This question of retribution for deeds, the very object of the ḥisâb, leads to the two related questions of repentance (fâsebâ [q.v.]) and of the intercession of the Prophet (shâfîdî [q.v.]).

3. Method by which the Account will be rendered. As we have seen, the Kûrûânic verses mention, in connexion with the ḥisâb, the “book”, a statement of his deeds, which will be given to every man on the Day of Judgement; and tradition makes the misân, the Kûrûânic “balance”, the instrument for the “weighing” of the deeds. The Muʿtazîls and some later Ashâʿîrs interpret both in a metaphorical sense. The “book” contains the status of the debt and “credit” which God will make clear to every man.
At the time of the resurrection, while the "weighing" of the deeds symbolizes the justice and equity of God; but God has no need of a "real" weighing to pronounce His sentence. And human actions, since they are only transitory accidents, are unable to "return again" to existence once they have been "reduced to nothing" (for a summary of this argument see e.g., Al-Ghazālī, Tibiṣid, Cairo n.d., 8, and al-Djurdžanī, op. cit., 321). Furthermore they cannot possess the attributes of lightness or weight which the act of weighing presupposes (al-Djurdžanī, ibid.). Abu ‘l-Ḥasan ibn Bāṣra and Ibn al-Mutanabī of Baghdād stated, however, that the existence of the Balance is "possible", but they make no pronouncement on its factual reality.

On the other hand, Ḥanbalīs, Ḥanafīs-Māturidīs, and the great majority of the Ḥāsharīs, relying on the hadīths and the "religion of the Ancients", agree in recognizing the existence of these eschatological entities. The Balance in particular is called "reality" (baḥṣ) in the Wajīyāt Abī Hamīfī, the Fīh Aḥārī II, and later the Fīh Aḥārī III (cf. A. J. Wensinck, *The Muslim creed*, Cambridge 1932, index), as well as in the profession of faith of al-Ḥāsharī (Ibn Ībīnī, Cairo n.d., 9) and the various Ḥanballī creeds (cf. H. Laoust, *La profession de foi d’Ibn Baṭṭa*, Damascus 1958, 95 and note 2). The Wāḥabī profession of faith adds to it the "registers of actions" (H. Laoust, *Ibn Tamīyī*, Cairo 1939, 621). The Ḥanbalīs state that it is a question of real things; but the Ḥāsharīs and Māturidīs qualify this by saying that we cannot know the exact conditions under which they exist. It is vain to try to discover whether "the weighing of deeds" is useful or not: God acts as He wills. And al-Ḡazālī adds (Tibisāʿid, 89) that it will be of use not to God but to man, who will thus understand the just Divine decision.

There are many traditional accounts which expand and elaborate this basic eschatology with a very abundant imagery. A résumé of them is found in al-Ḍāḥfūrī’s popular manual of kalām, Ḥādīṣaḵaḵ... Ṣādī Ḫawārak al-tawādī, Cairo 1352/1934, 101-6. A subsidiary part in the Reckoning is also played by "the witness of the members" (Kurʿān, XXIV, 24) and the test of the Bridge, the ʿSrāj (XXXVII, 66; XXXVII, 234).

The third form of the root ḥāṣ was to be used in Ṣūfīsm, in a sense which is no longer eschatological but spiritual, to indicate the account of his conscience which the devout person presents to God. Hence arose the by-name of al-Muḥāṣibī given to Ḥārīrī b. Asād: "he who excels in the examination of his conscience".

Bibliography: in the article. To this may be added many hadīṯs, devotional works or works of popular preaching, and various manuals of ʿilm al-kalām, in the chapters on "The Last Things" (al-waḍāʾ wa ʿl-waḍīd). (L. Gardet)

ḤISĀB — ḤISĀB AL-ʿAKD

It is not impossible that certain gestures used by the Prophet were described or interpreted by his contemporaries as indicating numbers according to a system already in use (cf. H. Ritter, in *Ist.*, x (1920), 154-6), particularly the position of his hand in the *takhhud* [*q.v.*], although the traditional accounts are far from agreeing with later practice (see I. Goldziher, *op. cit.*). The practice of dactylynom in Persia is mentioned by Plutarch (Fr. tr. Ricard, *Vies*, ii, 514, n. 25); and from the first centuries of Islam, Arab or Persian poets would for example make a subtle and veiled allusion to some person’s lack of generosity by saying that his hand made 93 (the figure indicated by the closed hand, the sign of avarice), which suggests that the system of which we possess later descriptions was known at a very early stage, perhaps through the medium of the Persian scribes. Hamd Allāh Mustawfī credits Ibn Sīnā with having invented, in 420/1029, calculation by dactylynom, and thus freed accountants from the bother of using counters; thus al-Ṣālī (d. 332/946) wrote in his *Adab al-kuttab* (Cairo 1342/1922, 229): "The scribes in the administration refrain, however, from using these [Indian] numerals because they require the use of materials [writing-tablets or paper?] and they think that a system which calls for no materials and which a man can use without any instrument apart from one of his limbs is more appropriate in ensuring secrecy and more in keeping with their dignity; this system is computation with the joints (ṣāb or ʿṣāb) and tips of the fingers (bandān), to which they restrict themselves". Nearly a century earlier this method of calculating on the fingers must have already been in use, for al-Djāhīrī (d. 255/868) advises schoolmasters (K. al-Muṣallāmīn, B. M. MS, Rieu 1129, 137) to teach the ḥisāb al-ʿākād (al-ṣābād) instead of the ḥisāb al-ḥisāb, i.e., calculation by means of the "Indian" numerals; the same author placed among the five methods of expression (bayān) what he called ʿṣāb (or ʿṣābād), according to the reading of G. E. von Grunebaum, who identifies it with digital computation [*see BAYAN*], and which for him is a calculation (ḥisāb) needing "neither spoken word nor writing"; now, the verses of the Kurʿān (VI, 95, 96, X, 5, XVII, 13/12, LV, 4/5) which he quotes in support of his affirmation of the virtues of ḥisāb (Bayān, ed. Harūn, i, 80; see also i, 96; Hayyawīn, i, 33) all refer to the cycle (كسبان) of the sun and moon, to the calculation of years and to computation; thus it might perhaps refer to counting on the fingers, following a method curiously reminiscent of that expounded by the Venerable Bede in the 7th century A.D., in *De temporum ratione* (in Migne, *Patrol.*, xc, 295; text and trans., in J.-G. Lemoine, 14-7).

What makes this hypothesis quite probable is that the same English writer, in the first chapter (De computa vel iocula digitorum) of the work named, expounds a system of dactylynom almost exactly identical with that contained in the very much later Muslim treatises of al-Mawjūlī, Ibn al-Maghribī, Ibn Shuṭai, Ṭaybughī, and Ibn Bundūd (see *Bib.*), which did not seem earlier than the 8th/14th century, and also in the Fārābī-i-Dīkhārī (between 1000 and 1017/1597-1608), which reproduces a text of ʿAll Yāzdī (d. 850/1446) in Persian, but in the Arab tradition.

Under this system, the figures are represented as follows:

1. by bending down the little finger;
2. by also bending down the third finger;
3. by adding the middle finger to them;
4, by bending down the third and middle fingers only;
5, by bending down the middle finger only;
6, by bending down the little finger very low;
7, by adding the middle finger to them;
8, by placing the tip of the forefinger on the middle of the thumb;
9, by extending the thumb and forefinger simultaneously;
10, by putting together the tips of the thumb and the forefinger;
11, by stretching out the thumb over the base of the forefinger;
12, by bending down the thumb at right angles;
13, by curling the forefinger round the thumb;
14, by placing the tip of the thumb on the central joint of the forefinger;
15, by placing the tip of the forefinger on the thumb-nail (but there are variations);
16, by placing the tip of the forefinger on the base of the thumb;
17, by opening the hand (but there are variations);
18, "the gesture which, in the right hand, serves as a sign for tens for units from 1 to 9, in the left hand indicates the same number from 1,000 to 9,000; ... and what, in the right hand, serves as a sign for tens from 10 to 90, in the left hand indicates hundreds from 100 to 900". From 1,000, the system described above differs fairly considerably from Bede's, but on the whole the two methods are practically identical; it has been possible to establish that the figure 1 is not obtained by stretching out the forefinger, as Muslim tradition would have us believe.

This system was known in the West from antiquity, but it was no longer used after the early Middle Ages; in the East, it is very probable that it was known to the scribes of whom al-Sufi speaks (see above) and that it remained in use until quite recently, being practised to perform arithmetical operations (apart from division). No ancient description of the method being available, here is one still known to old men in Tunisia (communication by M. Souissi): to multiply, e.g., 6 by 8: bend the little finger of the hand (= 6) and the first three fingers of the right hand (= 8); the total of the bent fingers (1 + 3 = 4) indicates the tens and the product of the fingers un bent (4 x 2 = 8) the units.

On the other hand, another method is also used for certain commercial transactions involving rare and very costly merchandise, especially pearls, when buyer and seller do business in the presence of witnesses and do not wish to reveal the terms of the transaction concluded. The two negotiators, sitting face to face, have their right hands hidden under a covering, and touch each other's fingers according to a precise code; although the units in the different numerical series are not distinguished, those concerned know what is meant:

1, 10, 100, 1,000: are indicated by taking hold of the forefinger (which here retains its value; see above);
2, 20, 200, 2,000: by taking the forefinger and middle finger;
3, 30, 300, 3,000: by taking the forefinger, middle and third fingers;
4, 40, 400, 4,000: by taking all four fingers;
5, 50, 500, 5,000: by taking the whole hand;
6, 60, 600, 6,000: by pressing twice on the forefinger, middle and third fingers (3 x 2);
7, 70, 700, 7,000: as for 4 and then as for 3 (4 + 3);
8, 80, 800, 8,000: by pressing twice on all four fingers (4 x 2);
9, 90, 900, 9,000: as for 5 and then as for 4 (5 + 4).

This system, recorded by Tāshkhrūzāda, Mīṣād al-sa‘āda, Haydarābād, i, 329-31 (reproduced by Ḥādīdī Khalfī, cf. von Hammer, Encyclopädische Übersicht der Wissenschaften des Orients, 375) and by Niebuhr, (Description de l'Arabie, French trans., 1779, i, 145, in particular), is still practised in the island of Bahrayn, in the Red Sea and probably elsewhere (cf. Père Anastase, in Machriq, 1900; H. de Monfreid, Secrets de la mer Rouge, Paris 1931, 100). H. Fisquet, Histoire de l'Algérie, Paris 1842, 171, records it for Algeria. A similar procedure, in use in Bengal, utilises the joints and not the whole finger, but it has not been recorded in the Middle Eastern countries.

The origin of the systems briefly described above is obscure; in any case, those which are, or were, in use in the Arab countries do not seem to be in any way indigenous (see I. Goldzg, op. cit.) or at least do not go back to Arab antiquity; on the other hand, tesserae found in Egypt indicate the numbers according to the method of bending the fingers, and it is not unreasonable to see in this the possible origin of the system described by the Arabic and Persian sources. In any connexion, the terms employed raise a difficulty, for although ḥābīl-al-yad or h. al-kaḍda bi l-yad are clear, this is not the case with words taken from the root ḥd which, apparently, denote the knuckles and joints, but also signify "contract". In the last analysis it is possible that an earlier method than those of which records have been preserved may have consisted of counting on the finger joints and that the terminology was later applied to other systems.

Bibliography: The chapter of the Farhang-i Djamānī of Djamal al-Dīn Ḥusayn Indjū has been translated by S. de Sacy, De la maniere de compter au moyen des jointures des doigts usitée dans l'Orient, in J.A., iii (1823); by A. Rödiger, Über die im Orient gebräuchliche Fingersprache fur den Ausdruck der Zahlen, in ZDMG, 1845, 112-29; and by S. Guyard, Chapitre de la préface de Farhangi Dijamangirî (MS. Paris, Bibl. Nat. 4441) has been published by Père Anastase, 'Ukbād, in Machriq, iii (1900), 169 ff. (see also 119 ff.), and translated in A. Marre and Boncompagni, i, 309: Manière de compter des anciens avec les doigts de la main (comment. of Ahmad al-Ṭabarabūsī published and trans. by H. Ritter, in Isl., x (1920), 154-6, 243 ff.). The texts of Ibn al-Maghribī, Ibn Shuʾula and Tāybughā al-Ashrafi al-Baklamishl of Ibn Yūnānī have been published by J. Ruska, Arabische Texte über das Fingerzahlen, in Isl., x (1920), 87-119. The chapter entitled Fi marjīfa 'abd al-asyībī of the Makhādí of Ibn Bundūd has been translated by G. S. Colin, in REI, 1932/1, 59-60.

— Stütze: I. Goldzg, Über Gebärden- und Zeichensprache bei den Arabern, in Zeits. für Völkerpsychologie, xvi (1866), 369-86 (analysis by G.-H. Bousquet, in Arabica, viii/3 (1961), 269-72) deals generally with sign-language; idem, in ZDMG, lxix (1907), 756-7; the principal work on the question examined in the present article is that of J.-G. HISĀB AL-DJUMMAL, METHOD OF RECORDING DATES BY CHRONOGRAM. IT CONSISTS OF GROUPING TOGETHER, IN A WORD (SIGNIFICANT AND APPROPRIATE) OR IN A SHORT PHRASE, A GROUP OF LETTERS Whose NUMERICAL VALUES, ADDED TOGETHER, PROVIDE THE DATE OF A PAST OR FUTURE EVENT. SUCH A CHRONOGRAM IS KNOWN AS A RAMS, AND IN TURKISH A TARA'IIKH [Q.V.]

A MORE complex variety is called mushāyyl; here the principal chronogram is completed by a supplementary chronogram (ghāvīl) and it is the sum of the two which provides the date.

For the correct interpretation of these chronograms it is of course necessary to take into account the difference in numerical value which, for certain letters, exists between the aḥāzad [q.v.] of the East and that of the Maghrib (including Muslim Spain). It has been noticed that this involves six of the characters which, in the Calmian order, come after the ʿānūn: sin, shīm, sād, dād, sāmd and ghaḥm. In Persian and in Turkish, the letters which are peculiar to those languages (P, Ç, Ẓ, G) have the same numerical value as the Arabic homographs.

The ṭāʾ marbūta may be counted as a ḥāʾ or as a ṭāʾ according to whether it occurs in pause (waḥf) or in liaison (darq). The doubled (mushaddāta) letters may be counted as one or as two. Similarly, the initial and terminal alifas may be added in or ignored, as necessary.

These chronograms are commonly employed in inscriptions (generally in verse) commemorating a past or future event. Such a chronogram is called a taʾṣīkh, and it is the sum of the numerical values of the letters forming a word (in this case a proper name) or phrase which constitutes the chronogram is nearly always announced by the preposition ʿin, “in”, or by or one or other of the words ʿanma, or sanasta “in the year...”

In Morocco it was in the 17th/18th century, during the period of the Saʿdīd dynasty [q.v.], that particularly frequent use began to be made of chronograms, not only in inscriptions on monuments but also in obituaries.

The principal author in the latter category was the secretary and court poet, Muhammad b. Ahmad al-Makdātī (d. 1041/1631), the author of a lāmiyya which was a continuation of a similar work by Muhammad b. ʿAll al-Fishtālī (d. 1021/1612).

In the following century, Muhammad al-Mudarraʿ (d. 1147/1734) composed an urdi斯塔 of the same type on the notabilities of Fez. ʿAbd al-Wahhāb ʿAḍārlā (d. 1159/1746) was the author of another, on the saints of Meknès.

Wide use has been made of all these rhyed obituaries with chronograms by the historians and biographers of Morocco, notably Muhammad al-Kādirī (d. 1187/1773) in his Nāṣīr al-maṭbaḥānī, and Muham- mad b. ʿAlī al-Kattāfīl (d. 1339/1920) in his Saʿīdīd al-anfūs.

The process of adding the numerical value of all the letters forming a word (in this case a proper name) is the basis of a divinatory procedure, known as Ḥisāb al-nim, by which it can be predicted which of two rulers at war will be the victor and which the vanquished. This process has been described at length by Ibn Khaḍīn in his Prolegomena (see ed. Quatremère, 210-4; Fr. tr. De Siane, i, 241-5; Eng. tr. Rosenthal, i, 234-8); see further ʿSIMIkA and ʿSIMIkA1.

BIBLIOGRAPHY: The subject has been treated very briefly by Carra de Vaux at the end of his article ʿANMA in EI1; E. Lévi-Provençal, Les historiens des Chorfa, 79-80 (see also, in the index to his work, the names of the writers mentioned above); Ufrān, ʿUṣḥat al-ḥādīt, tr. result by covering it with a little dust, which he then gathered up for use again when he had finished his operation. On the various operations thus performed, see ibn al-'Aśār.

This procedure supplemented those already known to the Arabs: dactylnomy (hisāb al-ʿahd [g.v.]), counting by means of pebbles (ḥasā, whence ṣūf; cf. calculus), and mental calculation (hisāb maftūḥ or kawāfī), etc., but little is known of its origin and in particular the question arises whether the use of dust is not the accidental result of a mispronunciation of a Persian or other term, the table originally having been plastered with clay, a material on which figures could much more easily be engraved and erased by means of a stylus flattened at one end.

In any case this procedure was possible only from the time when figures became known. The devanagari figures were introduced in Baghdād in about 555/770, but it is known that although Muḥammad b. Mūsā al-Khwārizmī (d. ca. 231/846) helped to spread al-Ḥisāb al-ḥindi, the mathematicians, astronomers, etc., for long preferred to continue using the old system of referring to numbers by the letters of the alphabet (see ABDJAD, HISĀB AL-DIJUMMAL); on the other hand the ghubār figures which derive from al-Ḥisāb al-ḥindi seem to have spread fairly soon to the Maghrib and to Spain, where they were adopted by the mathematicians, and the history of their development finally became blended with that of the numerals known as "Arabic", which are used in Europe. The table opposite shows the development of the ghubār numerals up to the point where they passed into use in the Christian West.

ḤIŞĀR, siege. The following articles deal with siegecraft and siege warfare. On fortification see BURDĪ, ḤIŞĀR and SŪR.

I. — General Remarks

Siege warfare was one of the essential forms of warfare when it was a matter of conquest, and not merely of plundering raids, in countries in which, from ancient times, most of the large towns had been protected by walls and where, during the Middle Ages, the open countryside was to an increasing extent held by fortresses (see ʿurūf and KALʿA). Although the forces available were rarely sufficient to impose a complete investment, they blocked the normal ways of access to the stronghold under siege and thus brought about its surrender by famine or threat of famine, unless relief brought from outside or a sortie by the besieged dispersed the assailants; nevertheless, their stocks of supplies made it possible for the besieged to hold out for quite a long time, if their morale was strengthened by the hope of rescue and by devotion to their prince, and it sometimes happened that the besiegers, being ill-prepared for lengthy operations (see ḤARB) or sceptical of the advantages to be gained by others than the prince, lost heart and gave up the struggle. The nomads, who had no siege engines at their disposal and who attached little value to cultivation, sometimes secured the surrender of important towns by devastations that brought lasting ruin to the inhabitants; but the regular troops, who realized the advantage that lay in safeguarding the revenues from the land and who shared the general opinion as to the enormity of the crime of actual destruction, countries where physical conditions rendered any rapid recovery impossible, generally abstained from destroying plantations of trees and irrigation works; apart from military operations properly speaking, their chief aim was to secure some complicity inside the stronghold or, by means of a ruse, the capture of a local lord whose liberation would be made conditional upon the surrender of the stronghold.

The actual operations were carried out with the help of siege machines—apart of course from the personal weapons—which, while continuing ancient traditions, had nevertheless achieved some measure of technical progress and, during the latter half of the Middle Ages, were employed far more extensively than hitherto. At first, whenever possible, they tried to fill in part of the moat, so that it could be crossed. In the case of towns, attempts might be made, either by a surprise attack or as the result of treachery, to scale the walls with the help of ladders, when the first to enter would run to open a gate for those following, a manoeuvre that had no serious chance of success except at night. More usually, when the nature of the ground allowed it, they tried to push forward to the foot of the fortifications wooden towers with several storeys—burdū, dubbdbà—from the top of which the assailants could fire their opponents on the walls and ultimately lead down on them. Above all, they made efforts to breach the ramparts of towns, or to pierce openings in castle walls or make them collapse, by the use of either mines or engines. Mines (nābd), in the use of which the Khūraštāns appear to have had an enduring aptitude, were excavated from points situated out-side the ramparts and if possible hidden from the sight of the defenders; supported by wooden props, they were extended forwards until they came under-the-nose of the chosen target; the wood was then set alight, as a result of which the ground subsided (if it was not solid rock), and with it the building standing above; the besieged defended themselves by digging counter-mines, in time to intercept the route taken by the enemy sappers. Siege engines were, roughly speaking, of two categories: some caused a certain point in the wall to be battered by direct blows, these being the battering-rams (kašh, ʿinnawr) known throughout the Middle Ages; others hurled a missile, these in turn being divided into three groups, according to the method of propulsion—mangonels (mandānīḥ [g.v.]), in which the swinging of a beam forced back by a team of men or (as in the Western "trebuchet") worked by a counterpoise, struck the missile with great force and thus propelled it against the point under bombardment, light ballistas (ʿarrīḍa [g.v.]), in which the same effect, with a less heavy projectile, was obtained by the twisting of a cord; and lastly, from the end of the 6th/12th century, the huge "wheel cross-bow" (baṣṣa al-siyār), operated like the ordinary cross-bow to shoot a powerful arrow, but, requiring several men to operate it. For most of the time, these engines were built or at least assembled...
almost on the spot, on account of difficulties of trans-
portation, and wheeled forward on wagons to ... Spur en der
altchoresmischen Kultur, Berlin 1953, 73 ff.). When
the Arabs attacked Ctesiphon in 16/637, the Persians
conformations of ground were obviously necessary,
exact place required; for their successful use, certain
formations had to be protected by huge shields
with arrows on the soldiers operating the siege engines,
in mountainous country.

Above all, they tried to set fire to the machines by
arrows on the soldiers operating the siege engines,
in mountainous country.

They defended themselves by showering
arrows on the soldiers operating the siege engines,
in mountainous country.

and these then had to be protected by huge shields
with arrows on the soldiers operating the siege engines,
in mountainous country.

For the construction or adjustment of these machines it
might happen that engineers were used who (strictly
speaking not being combatants) were non-Muslim,
particularly in the early centuries.

R. E. Gavagni and H. Arnb, in particu-
lar the work of K. Husni and the notes by Cl. Cahen to the Trait d'Armurerie. All the chronicles
contain descriptions of sieges, which have not been
the subject of any systematic analysis; of particu-
lar interest are those referring to the wars be-
tween Saladin and the Franks and, in the following
century, to the Mongol conquest and the Mamluk
counter offensive. Artillery in the age of fire-arms
has been omitted from this article; for this subject,
see BARDÔ. (CL. CAHEN)

ii.—MUSLIM WEST

The methods of warfare used by besiegers and
besieged were basically the same in the West as in
the East; the differences were mainly those of
vocabulary. For basic details see E. Lévi-Provençal,
L'Espagne musulmane au XVe siècle, 1932, 150; H. R.
Ibris, La Berbérie orientale sous les Zirides, ii, 533; R.
Brunschvig, La Berbérie orientale sous les Hafsidés, ii,
87.

Among siege engines, the mangonels of the Marinid
period had become very powerful. During the famous
sieges of Tlemcen for example, they were capable of
bombarding the town with cannon-balls made of
marble, some of which have been found there, the
largest with a circumference of two metres and
length 0.80 to 0.82 m. (al-Kirids, tr. Beaumier, 233, Rabat ed., ii, 196). During
the Marinid period there appeared also a new engine:
the shird);

which seems to have been a huge
mangonel. The small ballistas
which allegedly a Persian, Salman al-Farsî, who showed
the Muslims how to build a defensive trench (khân-
dah) on the western side of Medina against the
attacking Kuraysh in 5/627. Moreover, the Persians
had built a similar trench against outside barbarians
in several strategic zones, such as at Bardar on the
western shore of the Caspian and at Câltûs and Kaz-
win against the depredations of the Daylamis (cf.
Masûdî, Murâdî, ii, 196-7, on Anushirvân's wall-
building activity, and also ibid., ix, 585, and this
tradition was kept up in Islamic times (cf. Tabari,
iii, 1257, on the walls built at Tamisâh in Gurgân by
a local Iranian commander in 224/839).

The techniques of investing fortresses and the use
of siege machinery were certainly known in pre-
Islamic Persia, for there were skilled engineers in
the armies of the Sásânnîds (cf. Christensen, L'Iran
sous les Sassanides4, 212-13), and it was, of course,
ally Persia, Almâr al-Fârisî, who showed
the Muslims how to build a defensive trench (khân-
dah) on the western side of Medina against the
attacking Kuraysh in 5/627. Moreover, the Persians
had built a similar trench against outside barbarians
in several strategic zones, such as at Bardar on the
western shore of the Caspian and at Câltûs and Kaz-
win against the depredations of the Daylamis (cf.
Masûdî, Murâdî, ii, 196-7, on Anushirvân's wall-
building activity, and also ibid., ix, 585, and this
tradition was kept up in Islamic times (cf. Tabari,
iii, 1257, on the walls built at Tamisâh in Gurgân by
a local Iranian commander in 224/839).

The techniques of investing fortresses and the use
of siege machinery were certainly known in pre-
Islamic Persia, for there were skilled engineers in
the armies of the Sásânnîds (cf. Christensen, L'Iran
sous les Sassanides4, 212-13), and it was, of course,
al-Mansûrî, section on the
Almohads, ed. Huc, 1963, 165-8; Hesperis, xxviii (1941), 41, 62), on the two sieges of Tlemcen by the
Marinids (ibn Khâldûn, al-Tbar, vii, 94, 221, 257, tr. de Slane, iii, 375, iv, 143, 221) and on that of
Almeria in 709/1309 (al-Tbar, vii, 249, tr. iv, 204).

This may have been due to the.

Some sieges lasted for several years: the Marinid
Sultan Yusûf b. Ya'kûb blockaded Tlemcen for
about twenty years; and the siege ended only
when the besieging ruler was assassinated, this
causing his army to disintegrate. In fact the sur-
rounding wall of a town would enclose not only
buildings but also extensive open spaces which could
be cultivated or serve as pasture land. There exist
some details of the prices which the besieged in-
habitants of Valencia (al-Andalus, xiii (1948) 140)
and of Tlemcen (al-Tbar, vii, 96, tr. de Slane, iii,
377) had to pay for food.

The very long duration of some sieges led to the
besieging army transforming its military camp (mahâla)
into an actual town with its own fortified walls, its Great Mosque, its baths, its market.

The best known of these were al-Manṣûrîa [q.v.] (or rather al-Manṣûriyya) in front of Tlemcen, and Santa
Fé, built in 1491 by the Catholic Monarchs during
the siege of Granada, but many others are men-
tioned by the historians.

(G. S. COLIN)

iii.—PERSIA

The techniques of investing fortresses and the use
of siege machinery were certainly known in pre-
Islamic Persia, for there were skilled engineers in
the armies of the Sásânnîds (cf. Christensen, L'Iran
sous les Sassanides4, 212-13), and it was, of course,
al-Mansûrî, section on the
Almohads, ed. Huc, 1963, 165-8; Hesperis, xxviii (1941), 41, 62), on the two sieges of Tlemcen by the
Marinids (ibn Khâldûn, al-Tbar, vii, 94, 221, 257, tr. de Slane, iii, 375, iv, 143, 221) and on that of
Almeria in 709/1309 (al-Tbar, vii, 249, tr. iv, 204).

This may have been due to the.

iii.—PERSIA

The techniques of investing fortresses and the use
of siege machinery were certainly known in pre-
Islamic Persia, for there were skilled engineers in
the armies of the Sásânnîds (cf. Christensen, L'Iran
sous les Sassanides4, 212-13), and it was, of course,
ally Persia, Almâr al-Fârisî, who showed
the Muslims how to build a defensive trench (khân-
dah) on the western side of Medina against the
attacking Kuraysh in 5/627. Moreover, the Persians
had built a similar trench against outside barbarians
in several strategic zones, such as at Bardar on the
western shore of the Caspian and at Câltûs and Kaz-
win against the depredations of the Daylamis (cf.
Masûdî, Murâdî, ii, 196-7, on Anushirvân's wall-
building activity, and also ibid., ix, 585, and this
tradition was kept up in Islamic times (cf. Tabari,
iii, 1257, on the walls built at Tamisâh in Gurgân by
a local Iranian commander in 224/839).

The Arbâb al-desert were almost total strangers to
the use of siege techniques—within the Arabian
peninsula, only al-Tâ'if had any defensive walls—
and had the psychological dislike common to nomadic
peoples of solid walls and buildings. Yet as they
advanced eastwards into the Islamic world, it was
necessary for them to acquire these skills, for Persia
abounded in castles and fortified places, above all in
such regions as Ìdâbâb-daryân, Ìsâr, the Caspian
region and Khûrâsân (cf. Spuler, Iran, 499-502).

Further east still, and not to be reached by the Arabs
for some decades, were the fortified villages and
estates of Khâstarâm, recently revealed by Soviet
archaeology (see S. P. Tolstov, Auf den Spuren der
altdoresischen Kultur, Berlin 1953, 73 ff.). When
the Arabs attacked Ctesiphon in 16/637, the Persians
employed heavy catapults or mangonels (madidnib, sing. mandianik) and lighter ones (*arrddas) against the city walls and strong points of the Iranian east. In 942/1050, the governor of Khurram, Kutayba b. Nafis al-DIn, employed a powerful mangonel called al-Fadhhil" the wide-legged", whose stones fell in the local ruler's palace and killed a man; and at Samarkand two years later, Kutayba's Arabs destroyed the city walls with catapults (Tabari, ii, 1230, 1244-5; Ibn al-Athlr, iv, 437, 453). As is implied by the Sasanidis' use of catapults against the attacking Arabs at Ctesiphon, these machines—or at least the lighter and more mobile ones—could be used in normal, open fighting, as well as in sieges. Thus it is recorded that in 1217/934, the Tabari and AzdI troops of Nasr b. Sayyar were opposed by two *arrddas of the rebel al-Harib b. SuraydI (Tabari, ii, 1692; Ibn al-Athlr, v, 178).

In the 'Abbdsid period, techniques became more complex, and many new ways were developed in the fighting with the Byzantines on the Anatolian frontiers, where heavily-fortified strongholds abound-
ed (see 'AWASIM). It was probably here that the use of flaming naphtha, hurled either in pots from slings or by mechanical means into the enemy's positions, was learnt, and corps of specialist soldiers for hurling naphtha, naffdtun, are often mentioned. They were employed, for instance, by al-Mutasim's general al-Afshln in the campaigns against the Khurrami rebels Babak and the Daylamis (Miskawayh, in UL-TABARRUK). The Saldjuks, as a Turkish steppe people, had an eye for terror value than anything else must have been the suppression of Kawurd's rebellion in 602/1206, the Khwarazmian army again invested Harat. The attackers dammed up the Hari Rud so that the city walls became surrounded by water, and carried on the onslaught from boats. During the Umayyad period, the sources frequently mention the Arab's use of siege techniques against the Islamic world, and for some time they retained a respect for solid buildings and fortifications. Bundari, 37, mentions Alp Arslan's admiration for the walls of Amid in Diyar Bakr, which were celebrated for their strength (cf. NAsir-I Khurasaw, Safar-nama, ed. Khayyam-Najafi, 1965, 9). The touching of walls with his hands and then pounded his hands over his breast in order to acquire for himself something of the walls' strength (li l-tabarruk). The Saldjuks overran Persia and drove the townspeople there into submission by cutting them off from their agricultural supply regions rather than by direct assault, but TotgrI in 442/1050 kept up the siege of Isfahchan for nearly a year till the Kakuyd Abl Mansur Parma surrendered (Ibn al-Athlr, ix, 384-5). The army of the Great Saldjuks soon acquired a special division for siege warfare, with engineers, sappers and naphtha-thowers; as in the 'Abbdsid period, contact with the Byzantines doubtless hastened this process. During Alp Arslan's Georgian campaign of 456/1064, the Sultan used his corps of naffdtun against the wooden barricades of Ani, and then pushed westwards from there into Anatolia. In the course of sieges there, he constructed platforms from sacks filled with straw and earth for his archers, crossbowmen and naphtha-thowers, and he also built a wooden tower with an awning of felt soaked in vinegar to protect the attackers on the tower from having boiling liquids and fire hurled at them; from this tower, the Saldjuks troops battered down the walls (Sadr al-DIn al-Husayn, Abl Mdnsuwa al-SaldhI. 39-40).

In the early part of Malik Shab's reign, after the suppression of Kavurd's rebellion in 465/1073, the Sultan gave special charge of the mangonels and siege machinery of the army to one of his foremost command- ers, the slave eunuch 'IMmd al-DIn Shtwgin (Bundari, 49).

The sources are particularly full of information on siege techniques during the period of the Kh*arazm-Shahs, Ghurids and Mongols (6th-7th/12th-13th centuries), rather than the science. The Ghurids were responsible for much development in mediaeval Islam. It was recognized that bombarding a town with catapults not only pounded down the walls—which in the Iranian world were usually only of sun-dried brick anyway—but also had a psychological effect, making life inside the town insecure from the continual hail of missiles. It was by such a process of spreading despair and terror that the Kh*arazmians brought the Ghurid defenders of Harat almost to surrender in 600/1203 (Dubayn-Boyle, i, 320-1). Coming as they did from a low-lying region intersected by canals and river channels, the Kh*arazmians had an eye for the skillful utilization of rivers and waters in sieges. After the Ghurid Sultan Mu'Dz al-DIn Muhammad's death in 604/1206, the Kh*arazmian army again invested Harat. The attackers dammed up the Hari Rod so that the city walls became surrounded by water, and carried on the onslaught from boats. When the Shab 'Ali al-DIn Mu'mammad arrived in person, he ordered the dam to be broken down and the pent-up waters released; the rushing floods caused a long section of the walls to collapse, and after some fighting the city was taken by the Kh*arazmians. Shortly afterwards, the governor of Harat, Husayn Kharmrl, rebelled against the Kh*arazm-
Shah, so this time the latter had the Harl Rud diverted into a moat round the city, whose banks were artificially raised so that the foundations of the walls; then the water was let out from the moat with a rush, causing part of the walls to collapse, and the attackers were able to climb across the débris to the city gates (Diyaddini, Tabakdt-i Ndsiri, tr. Raverty, i, 239-60; Djuwanyi-Boyle, i, 335). An interesting example of the Trojan horse technique occurred on the death of the Ghurid Ghuythn al-Din Mah Muhammad in 604/1208, when members of the dynasty intrigued for possession of the capital Firuzkoh; eighty men were smuggled into the city inside treasure-chests, but the plot was betrayed and the men seized and killed (Diyaddini, op. cit., i, 408-9).

It is well known, both from Islamic sources and from the accounts of European travellers within the Mongol dominions, that the Mongols developed the techniques of siege warfare to a high degree. Cingiz later Khan's corps of mandaniks or mangonel-operators, headed by the Noyiin Abak, is said to have numbered several thousands (ibid., ii, 1047), and the personnel here included many Chinese and some Europeans. Hülegi's army included Chinese mandanikis, naphtha-throwers and men to operate multiple-shooting bows (carkh-andanzan). It was the Mongols who brought the multiple-shooting bow (carkh-kamán) into the Islamic world for the first time; some of these were used by Cingiz for his attack on Nishpûr in 618/1221. Concerning foreign specialists in Mongol service, Marco Polo mentions a Nestorian Christian and a German artillery master employed by Kubilay; and for the invasion of Khurasan, Cingiz had a renegade Persian soldier from the district of Ustuwî in northern Khurasan, who was in charge of the catapults and the deployment of infantry (Nasawi-Houdas, 53-4, tr. 90-1). The Mongols' siege machinery was usually transported on carts, and John of Plano Carpini says that a standard item in the Mongol soldier's equipment was ropes for dragging this machinery along, fenes ad machinas trahendas (cf. K. Huuri, Zur Geschichte des mittelalterlichen Geschützwesens aus orientischen Quellen, Berlin-Leipzig 1944, 123-4, 180-92).

In their siege tactics, the Mongols showed considerable resourcefulness. They usually began by herding together as cannon-fodder a group of the local population (bashar), who were then used as a protective shield cannon to drown the Mongol soldiers could fight or as carriers of ammunition for the catapults (cf. Djuwanyi-Boyle, i, 92-3, siege of Khodâjadand, and ibid., i, 107, attack on Dabûzây and Sarmarsand). The catapults and heavy artillery would then be brought as close to the invested walls or fortifications as possible; at Djand in 616/1219 the defensive moat had first of all to be filled in, after which the catapults, battering-rams and scaling-ladders could be used (ibid., i, 85). At Murtân, the Mongol general Türibi Töksn apparent mounted his mangonels on rafts in the Indus river (ibid., i, 142), and at Nishpûr, the Mongols are said to have set up a set of mangonels in a single day; they used timber felled in the nearby, well-wooded oasis of Bûghênkân to build protective bulwarks and to construct catapults, testudines (dabbdbdt) and battering-rams (Nasawi-Houdas, 54, tr. 92-2). Where there were no stones available as ammunition for the catapults, e.g., at the siege of Gurgândi in Khûrâzn in 617-18/1220-1, blocks of mulberry wood were soaked in water and then used; at the same time as this bombardment, the moat was filled with débris and a peasant bashar was pushed forward in a crescent formation to demolish the defensive earthworks.

The use of gunpowder and artillery in the Islamic world naturally had a profound effect on siege techniques; for a consideration of these new methods in Persia, see Bârûd. v.—The Safawids.

**Bibliography:** Material has largely to be gleaned from the historical sources extending over the whole period, but there are specific sections on siege warfare to eightry, Iran, 493-4, 499-504, and idem, Mongolen, 433-16. Quatremère's notes on the use of nafl, on peasant bashars and on catapults and engines of war in his Hist. des Mongoles de la Perse, i, 1, 132-7, 204-5, 284-92, are still valuable. Finally, Huiru's work (see above), esp. 123 ff., 180-92, should be consulted for the technical details of the various types of catapult and mechanical bow.

iv.—The Mamlûk Sultanate

The history of siege warfare in the Mamlûk Sultanate has to be dealt with against the following background.

Most of the great wars of the Sultanate were fought in the early decades of its existence. These wars were conducted mainly against the Crusaders, where siege warfare was the decisive, indeed almost the only, factor, and against the Mongols, where field battles were the decisive factor (see Hareri, though sieges played a by no means negligible role. Thereafter the Mamlûks fought only minor wars; the two notable exceptions were the war against Timûrlâng, where siege warfare had some importance, and the final war against the Ottomans, where it had none. In the minor wars sieges were very numerous, but these conflicts were too trivial to promote the development of siege methods and siege instruments.

During most of the Mamlûk period, the main machine employed for throwing heavy missiles in sieges was the mandanik (q.v.), but its heyday was in the 7th/13th century, particularly in its closing decades. With the final expulsion of the Crusaders, or shortly after that date, the great history of that machine comes to an end.

For seventy to eighty years after the end of the Crusades the heavy siege artillery of the Mamlûks consisted solely of mandaniks. During the sixties of the 8th/14th century, however, the revolutionary weapon of gunpowder was introduced into the Mamlûk Sultanate, which was one of the first Muslim countries to employ it. The Mamlûks used artillery, up to the end of their rule, solely as a siege weapon; yet in spite of its revolutionary character, it served for a very long time only as an auxiliary to the mandanik. Only towards the end of Mamlûk rule did it succeed in superseding it, and even then not completely. Some time during the second half of the 9th/15th century firearms became the main siege weapon, but never reached the point, as in parts of contemporary Europe and the Ottoman Empire, of breaking the immense superiority which defence had enjoyed over attack in siege warfare in the later Middle Ages. (For additional information see D. Ayalon, Gunpowder and firearms in the Mamlûk Kingdom—a challenge to a mediæval society, London 1956, and art. Bârûd.)

What is characteristic of siege warfare under the Mamlûks is that a machine hurling missiles, whether it was the mandanik or artillery, was in fact the only really important siege machine which they used.
Other siege instruments, like the penthouse (dabbdba), the moveable tower (burdj_), and naphtha (naff) had their heyday in the pre-Mamluk period. In the Mamluk period they did not count for very much (see below). During the early decades of their rule the Mamluks employed in their sieges very frequently, and with considerable success, the system of mining (nakb) side by side with their extensive use of the mandianik.

Despite the lack of direct evidence, there are many indications that in the Mamluk period mining was extensively used by the Mamluks (and also, though perhaps on a much smaller scale, by other Muslim and Eastern states).

One of the outstanding features of the employment of the mandianik in Syria and Egypt in the 6th/12th and 7th/13th centuries, particularly in the struggle against the Crusaders, is the great increase in their numbers in the sieges of the Mamluks in comparison with the sieges of the Ayyūbids. The Ayyūbid Sultans, including Salāh al-Dīn, used a maximum of ten mandianiks in a single siege, and very frequently much fewer: one, two or three such engines are a common phenomenon (al-Fath al-Kussi, 331; Ibn al-Athīr, xi, 120, 320, 331; xi, 6, 34, 42; Abū Shāma, ii, 129, 135, 184, 192, 235; RHC, Hist. Or., iv, 254; Sulāk, i, 84; Deschamps, Les châteaux des Croisés, 52, 64. For a notable exception see Ibn al-Athīr, x, 371). For additional information on the employment of mandianiks under the Ayyūbids see al-Fath al-Kussi, 154; Sibṭ, 435, 447; Sulāk, i, 95, 96, 97, 243). Towards the end of Ayyūbid rule a certain increase may be noticed (Sulāk, i, 331; Nujāmī (ed. Cairo), vi, 329). The only rulers within the boundaries of the Islamic territories who came near the Mamluks in the extensive use of mandianiks were the Ilkhanid Mongols of Persia, who quite frequently used twenty to twenty-five of these engines in a single siege (Ibn Ḥathir, xii, 234, 266; al-Nahhāj al-salṭīd (in PO), xii, 437; Ibn al-Furat, vii, 41; Sulāk, i, 426, 475. See also Huūrī, 192-192, where some exaggerated numbers are included, and note 4 on p. 191). The numbers of the mandianiks which the Mamluks employed against the Crusader castles were similar, though in all probability some of these engines were developed more rapidly than those of the Mongols (see below) (Sulāk, i, 505-505; Zetterberg, Beiträge, 16; Ibn Ḥathir, xii, 373, 376; al-Nahhāj al-salṭīd, xiv, 553; Ibn al-Furat, viii, 80, 136; Sulāk, i, 608, 778, and note 2; Dījarārī, 16); the best description of the distribution of the mandianiks in a siege is that concerning Kašāf al-Rūm. But all the former records were broken in al-Ashraf Khālid's siege of Acre (690/1291). Abu `l-Fidā', who witnessed the siege of Acre, states that it was besieged by a greater number of big and small mandianiks than any other town ever was (Abu `l-Fidā', iv, 24). According to some of the Mamluk sources they numbered 92; according to others, 72 (al-Dījarārī, Sauvaget's tr., 5; Ibn al-Furat, viii, 111, 112; Sulāk, i, 704; Nujāmī (ed. Cairo), vii, 5-6, and note on p. 6); Mankāl, iii, fol. 62 b; Ibn ʿIyās, i, 123). The numbers of Mamluk mandianiks in that siege quoted by Barhebraeus (300) or by the anonymous writer of Excidium Accinis (666) (cf. Huūrī, 173, note 3; see also J. Prawer, A history of the Latin Kingdom of Jerusalem (in Hebrew), Jerusalem 1963, ii, 529) should be regarded as a gross exaggeration, to be explained perhaps by the desire of the Christian authors to inflate the power of the besieging Muslims. In 672/1275, Abu Ḥamīd ʿAmīr, who expected a Frankish attack by sea, fortified the port of Alexandria with too many mandianiks (Khiyat, i, 175; Sulāk, i, 608). It should be noted in this connexion that the sources mention much more often the number of the besiegers than of the besieged. For numbers of mandianiks in sieges see also Huūrī, 164-5, 172-3 (some of the numbers quoted there are certainly exaggerated). For references on the use of mandianiks in the Crusading period cf. ibid., 156, note 1.

After the expulsion of the Crusaders from Syria and Palestine the Mamluk sources quote only very rarely the number of the mandianiks used in sieges, although they were used frequently. There are, however, some clear indications that their numbers declined considerably (see, e.g., Ibn Kaṭīr, xiv, 213, 281, 282; also ibid, 203-9). Whereas our information on the number of mandianiks participating in a siege in the Mamluk Sultanate is fairly rich, that on the number of cannons employed in sieges is very meagre: this is one of the greatest drawbacks in the study of the history of firearms under the Mamluks (Ayalon, Gunpowder and firearms . . ., 30).

The characteristic feature of the sieges of the 7th/13th century is the great increase in the number of missile-throwing machines, as well as the considerable variety of their types in comparison with the past. The new type, the trebuchet, developed into several kinds of machines based on the same principle. The Muslims often hurled naphtha by means of trebuchets which seem to have been of the lighter kinds of this kind of machinery.

The Mamluk sources speak of four kinds of mandianiks: "Frankish" (frandīyya), Maghribine or "Western" (maghribīyya), "black bullish" (karābughāniyya) and "devilish" (dāshīyāniyya). These types are mentioned far more frequently under the Mamluks than under the Ayyūbids, and perhaps more frequently than under any other Muslim mediaeval ruler. Before the 7th/13th century these names are hardly mentioned in the sources, and quite shortly after the end of that century they disappear completely or almost completely from them, or at least from the chronicles. This fact reflects the abrupt halt, indeed decline, in the development of the mandianik, the great challenge of the Crusaders' presence in Muslim territory was removed. The sources do not explain the differences between these four types, but certain important conclusions can be drawn from the information they furnish (see further MANJAŅAK).

Mining (nakb), a system of siege warfare which had been known for many centuries but which had been used quite rarely before the 6th/12th century, reached the peak of its success in the late 6th/12th and in the 7th/13th centuries, used particularly by the Muslims. It was carried out in the following way. An underground tunnel (nakb, pl. nukbāb, and much more rarely sirb, pl. asrāb, or surbāb) would be started a certain distance from the fortification or wall, and would be dug towards it. Immediately under the fortification, it would be widened, deepened and strengthened with wooden props, then it would be filled with brushwood, straw and other combustible materials, and the whole construction would be set alight. The wooden props, together with all the combustibles, would be burnt, and the undermined fortification would collapse. Mines were, of course, effective mainly against fortifications built on a more or less soft soil; they were much less effective on those which were built on rock foundations. A town surrounded by deep water for an interesting attempt to overcome the hardness of the soil, see Abū Shāma,
The great advantages of this system were that the sappers were completely safe from the missiles and naphtha of the defenders, to which the burdûq and the dabbûba were so dangerously exposed, and that the besieged garrison, unaware of the operation, was frequently taken by surprise. The best defence against such attack was for the besieged to dig a counter-tunnel, and, when the enemy's line of approach was discovered, to dig into it, kill the miners or smoke them out, and to destroy their work. Mining was used in Syria during the Crusades much less frequently than in Europe, and by the Muslims much more often and more systematically than by the Crusaders: Richard the Lion Heart employed, in his siege of Dârûm in 1192, highly skilled Muslim miners from Aleppo, whom he had captured in the siege of Acre (Grousset, ii, 86, and references in note 3). It is noteworthy that Saladin, in his siege of Şâbûnîn in 58/1188, had with him many Aleppo foot soldiers who were famous for their bravery (Ibn al-Âthîr, xii, 5-6). It may well be no accident that Saladin had in his service an élite of miners and foot soldiers, trained in siege warfare, both from the same town. The Mamlûks employed mining on a far larger scale than the Ayyûbids, and especially in their sieges of the last Crusaders' castles (Mirzâ al-samân, 225, 462, 474; al-Dâzarî (Sauvaget's tr.), 16; al-Nâkhî al-sâdîd, xii, 470, 490; Sirât al-Malîk al-Münṣûr, 152; Ibn al-Dawâdârî (ed. Roemer), ix, 131, 261; Bar Hebraeus (Budge's tr.), 492-3; al-Yûnînî, ii, 378-8; Ibn al-Furât, viii, 80, 112; Sulûk, i, 69, 84, 489, 491, 498, 747, 767; al-Âyînî, RHC, Hist. Or., ii/1, 242; Nûdîm (ed. Cairo), vi, 36, 40; vii, 138; viii, 6; ibid. (ed. Popper), vi, 407, 462, 467; vii, 52, 570. See also Quatremère, Mongols, 252-5, note 81; Rey, Études sur les monuments..., Paris, 1887, 31, 37, and passim; Oman, i, 134; ii, 50-2; Grousset, ii, 550; iii, 703-4, 743, 755, 762; Deschamps, ii, 66; Fedden, 38-9; Prawer, ii, 49, 452, 456-7, 460, 488, 539, 541). The sappers were called nakkabûn (more rarely nakhâba). The act of mining was called nakhâba or nakhaba. Those engaged in extracting stones from the fortifications were called nafidîrûn. Carpenters (nafîdîrûn) were also employed in the mining operations, setting the charges and the material alight was called alallaba (rarely abrawa). (In addition to the above references see also al-Fâth al-Kusi, 166; Sirât al-Malîk al-Münṣûr, 89; Ibn al-Furât, viii, 80; Sulûk, i, 1003; Nûdîm (Cairo), vii, 6; ibid. (ed. Popper), v, 407; Quatremère, Mongols, 284 note 95; Anûari (ed. Scalon), 92). After the Crusaders the employment of nukab declines considerably, though it by no means disappears (see the references pertaining to the post-Crusade period quoted above). Of particular interest and importance are the descriptions of the nukab dug by the Mamlûks in their sieges of Arsûf (663/1265) (Sulûk, i, 328-9), and al-Markab (684/1285) (Abu 'l-Fida', iv, 27; Sirât al-Malîk al-Münṣûr, 78-9; Ibn al-Furât, viii, 17-8. See also Nûdîm (Cairo), vi, 40).

One of the reasons for the Mamlûks' success in their mining operations was that, in their sieges of the Crusaders' coastal fortresses, they were free to use their siege methods more thoroughly and with less restraint than under ordinary conditions, because they did not intend to keep or repair these fortresses after their capture, but to raze them to the ground.

The two main siege weapons by means of which the Mamlûks succeeded in capturing the castles of the Crusaders, and thus bringing to an end their rule in Syria and Palestine, were the nusîbûn and the nûdîm.

Mamlûk siege warfare and naval power. One of the greatest weaknesses of the Mamlûks in their sieges of the Crusaders' coastal towns and fortresses was that they could never invest them completely, for the sea was always open to the besieged. In the whole Mamlûk offensive against the Crusaders there was not a single case of a simultaneous siege from land and sea, not even in the reign of Baybars I, when the Mamlûk navy was at its peak. All the Mamlûk sieges of the coastal towns were carried out almost as if a Mamlûk navy did not exist at all. Never in a Muslim offensive against the Crusaders was the weakness of the Mamlûk navy so apparent as in the great and final offensive.

In the siege of Acre Frankish warships, specially protected against fire, attacked the besiegers from the sea (Abu 'l-Fida', iv, 25; RHC, Hist. Or., i, 104); and Mamlûk warships did not hinder the Franks from bringing reinforcements, evacuating refugees from besieged or captured fortresses, or landing them in ports which were still in Crusader possession (see e.g., Ibn Kaṭîr, xii, 327; al-Nâkhî al-sâdîd, xii, 539-40; Ibn al-Furât, vii, 80, 112; Sulûk, i, 747, 764, 765; Nûdîm (Cairo), vii, 8, 11; see also Prawer, ii, 454-541, passim, and the evidence and instances below). For a rather isolated and feeble intervention of the Mamlûk navy, see Stevenson, The Crusaders in the East, 355). The Mamlûk navy would certainly have been unable to impede the landing of a Frankish expeditionary force at any point of the Syro-Palestinian coast, including the besieged fortresses, had such a force been sent. It was even less capable of doing so than in the time of Saladin, when, after the battle of Hittîn [q.v.], the Muslims were within sight of a total expulsion of the Crusaders, but lost their chance because of European naval supremacy.

The capture of Crusader towers or fortresses built in the sea gave the Mamlûks particular difficulty. Such structures were in front of Sidon (the famous Château de Mer), Marâkiyya, Lâdîkîyya and Ayâs (in the Gulf of Alexandretta); there was also the fortified island of Arwâd, northwest of Tripoli. Ayâs and Arwâd were left to be dealt with after the total expulsion of the Crusaders. Sidon's "sea-castle," which was handed over to the Muslims almost without fighting, when the capture of Acre made the position of the Crusaders hopeless (Deschamps, i, 64, 73-6; ii 17, 18, 227-30, 253-4; Grousset, iii, 762, and note 2; Prawer, ii, 498, 544). As for Marâkiyya, the fortress or tower (bîjn, burdî) which commanded the entrance of its port constituted its main fortification. It rose in the sea at a distance of two bowshots from the shore and was strongly fortified. Sultan Kâlîwûn decided that "the siege of this fortress is impossible, because it is in the sea, and because the Muslims have no ships to cut off its provisions and to stop those who want to enter or leave it" (Ibn 'Abd al-Zâhir, Sirât al-Malîk al-Münṣûr, Cairo 1961, 88). This statement reflects the ineffectiveness of the Mamlûk navy, not only in the case of Marâkiyya, but also in all the other cases of the Frankish naval operations. No less revealing is an episode which occurred during the capture of Tripoli: a group of Franks took refuge on the small islet of St. Thomas situated opposite the town, "which could be reached only by ships", but "because of the eternal good fortune of the Muslims (al-sâ'dîd al-˚ala‘iya il-‘ muslimîn)" an exceptionally low ebb enabled the attackers to reach the islet on foot and horse, and round up the fugitive Franks (Ibn al-Furât, viii, 115-27; for a
corroborative, though somewhat different version, see Abu ‘l-Fida’, iv, 23, and cf. Grousset, iii, 744). This reflects the chronicler’s feeling that but for divine intervention the Muslims would have been incapable, even in the flush of victory, of maintaining such a small defenceless target, so near the shore.

Unable to conquer the sea-fortress of Marakiyya by his own means, Sultan Kalâwûn brought pressure to bear on Bohemond of Tripoli, who forced its defenders to hand it over to the Mamlûks. It was destroyed with great difficulty by a joint effort of the Mamlûks and the Franks (683/1285) (Suluk, i, 117; Joinville, 47, 52; Ibn al-Athîr, ix, 366; see also Deschamps, ii, 66, on the siege of Marakiyya in 1184). In the siege and capture of Caesarea and Arsûf by Baybars I in 663/1265, dabbâbâs were employed (Sulûk, i, 526-7; Prawer, ii, 450, 452).

In all the big sieges of the Crusader castles which followed the siege of Caesarea and which sealed the fate of the Crusaders, there is hardly any mention of either the dabbâba or the burdî amongst the siege machines of the attackers. (Ibn Fadl Allah sources occasionally at later dates (Sulûk, ii, 428, 429; Ta’rîkh Bayûrî, 38). This machine is thus described by Ibn Saqrâ, whose chronicler covers the period 786-991/1384-97: sahâfât tadîrî ‘alî ard mithla ‘l-‘aijâl wa-‘l-alâykhâ qiyâlâd (al-Durar al-mudiyya, ed. W. M. Brinner, text, 81, Eng. tr., 113). For a description of alat al-safî, which seems to have been identical with sahâfât, see Dozy, Supplément, s.v.; for the mention by Abû Shama of abrdâl al-safî, see Huuri, 158 note 3.)

The rise of naphtha (naf’t [q.v.]) as a major weapon in siege warfare during part of the Crusading period was caused primarily by the appearance of the burdî and the dabbâba on the scene of action; it was the Muslim answer—and a most effective one—to the great menace caused by these new Frankish weapons (see, e.g., Ibn Shaddâd, RHC, Hist. Or., iii, 221-2; al-Fâth al-Kussî, 227; Sulûk, i, 57, 103-4; Sibt, 408; Dwaal al-‘alam, ii, 117; Joinville, 47, 52; J.A., 1850), 219, 244; Oman, ii, 46, 49-8; also most of the references given above for the burdî and the dabbâba, many of those given below in this section and in general naf’t. On the different versions concerning the origin (Damascus or Baghâddâ) of the Muslim naphtha employed in the siege of Acre in 1189-91, see Ibn al-Athîr, xii, 29; Abû Shama, ii, 153; Ibn Shaddâd, 166.

One of the main reasons for the decline of naphtha, together with the burdî and the dabbâba, was that it was such an effective counter-measure to them; another was that since the castles of the Crusaders were built of stone, with hardly any wood in them (Small, Crusading warfare, 228), the effective use of naphtha as an offensive weapon, during this period when the initiative passed definitely and finally from the Franks to the Muslims, was precluded. At
that period it is mentioned rarely (for its mention as an offensive weapon by the Mamluks in their struggle against the Crusaders, see Ibn al-Furat, vii, 46; viii, 80; Suluk, i, 747) and (in contrast to the near past) no particular importance is attached to it. On its decline and almost complete disappearance after the Crusaders, see Gunpowe and fireworks, 12-3, and NAPT.

The arbaelest. The heavier types of arbaelest or crossbow were employed in siege warfare (both by the attackers and the defenders), in sea warfare and in naval attacks on coastal fortifications. It could hurl both non-inflammstary and inflammstary missiles (lighter types were used in field battles, particularly by the infantry). The commonest name in Arabic in the Mamluk period for the crossbow type of weapon was kaws al-ridjl wa'l-rikab (often shortened to kaws al-ridjl), which seems to have been given to crossbows of various sizes, including those employed in sieges. The arbaelest does not seem to have been a very important weapon in Mamluk battles either against the Crusaders or against the Mongols. For a full discussion, see KAWS.

Ayalon, Gunpowder and firearms in the Mamluk Kingdom—a challenge to a medieval society, London 1956; K. Huuri, Zur Geschichte des mittelalterlichen Geschützewesens aus orientalischen Quellen, Helsinki 1943; also Kananos (Bonn 1838), 460, 462, 469 on one of the earlier examples of Ottoman siege warfare, i.e., the unsuccessful attempt of Murad II to take Constantinople in 1422. As late as the sieges of Candia (1669-9) and of Vienna (1683) the Ottomans would seem to have made use of the sling (Schetter, 77) and of the "pioulita" (Cacavelas, 138, 139, 177), a device (perhaps the catapult?) for the throwing of bombs and stones.

The art of siege warfare was changing, however, even as the Ottomans acquired these older techniques. Gunpowder and cannon had begun to exert an influence more and more decisive on the conduct of sieges. None the less, the Ottomans long continued to use, side by side with newer modes of procedure, techniques derived from the practice of an earlier age (cf., e.g., i) mantlets at Oronto in 1480 (Foucard, 163), at Malta in 1565 (Girni, 113, 1149), at Niceos in 1570 (Lorini, 71: "palchi di tavoie, coperti con pelle di bufali a guisa di testuggine, per difendersi da' fuochi") and also at Hamadan in 1724 (L. Lockhart, The fall of the Safat Dynasty. , Cambridge 1958, 269); (ii) wooden towers at Malta in 1565 (Bosio, iii, 673, 684: "un'altra Machina di coperti con pelle di bufali a guisa di testuggine, per allanare le muraglie con palle di pietra e brillare con fulmine.""); (iii) "tra-buchi" at Rhodes (Sanuto, xxxiii, 573 and xxxiv, 67) during the siege of 1522). The Ottomans also retained the old method for bringing down the walls of a fortress, i.e., to dig approach trenches, to excavate the foundation of the walls, wooden beams being employed to support the stone-work, and then to set fire to the beams, so that the walls would collapse, once the timber was burnt through (cf., at Rhodes in 1522, Bosio, i, 574 and Tercier (1759), 754; also Monteveculii, 345).

The offensive weapons prominent in earlier times—i.e., the ram and the bore, the ballista, the trebuchet—began to decline in importance, as the gun was elaborated into an effective means of siege warfare. Guns, it would seem, came into use amongst the Ottomans in the reign of Mehemmed I and perhaps even at an earlier date (cf. BARUD, 1061). Artillers recruited from the German and Italian lands, from Serbia and Bosnia (cf. BARD, 1062) soon made available to the Ottomans an efficient train of siege guns. Experts of European origin would indeed constitute a major and enduring element in the Ottoman technical services (cf. BARD, 1062) connected with siege warfare—the artillers (Topq cultured), the transport corps (Topq ArabshrlJ, the
bombardiers (Kumbadagfilar) and the sappers (Laghlmdillar).

At first the Ottomans often carried into the field not the ponderous guns indispensable for siege work, but supplies of metal for the casting of cannon, which need dictated in the course of a given campaign (cf. Barletio, ii, 306r, 307r; Promontorio-de-Campis, 61, 85; da Lazz, 103; Sanuto, xxxi, 86; also Bârodû, 1061). Guns cast before a fortress might be broken into pieces at the termination of a siege, the metal being carried off for re-use on a future occasion (cf. N. lorga, Notes et extraits pour servir a l'histoire du Ceri, 1841, iii, 368). These modes of procedure, in due course, fell into desuetude. A late example, however, can be seen in the Cretan War of 1645-69, when the Ottomans, transporting clay for the moulds from Kâgdîkhânê to İnadîyye, found it more convenient to cast some at least of their cannon in the field than to bring them whole from the mainland (cf. Sîlîddar, i, 307, 467, 481; Râhîd, i, 198, 205-6; Hammer-Purgstall, Histoire, xi, 310).

Ottoman siege guns, in the time of Mehemed II and for long thereafter, tended to be of vast weight and size (on the large cannon of Mehemed II cast in 1468/1469 and now preserved in the Tower of London see Bârodû, 1061, 1065). Abundant evidence can be gathered about these guns from the sources which describe the great Ottoman sieges—, e.g., of Constantinople in 874/1470 (Barbaro, 21, 27, 35, 39, 44); of Skutari (Isgkôdara) in 883/1478-9 (Barletio, 310rv, 313r, 374rv); of Rhodes in 885/1480 (Germanicarum rerum scriptores vari, ed. Preber, ii, Frankfort 1602, 158, 159; C. Foucard, Fonti di storia Napoletana nell'Archivio di Stato in Modena. Otranto nel 1480 e nel 1481, in Archivio Storico per le Province Napoletane, vili (Naples 1881), 135 ff.; Vertot, ii, 308, 602; of Otranto in 885/1480 (Laggetto, 231 and of Diu in 945/1538 (Ribiero, 255 ff.). One of the large bagülügûha guns that the Ottomans carried to Malta in 973/1565 weighed "ciento y dos mil y cincuenta libras de hierro" (Verdadera relacion, 31r, 39v, 41v; cf. also Bosio, iii, 534: "in distanza di 180. canne da Architetto, secondo la nota, che ne lasciò Girolamo Cاسر, Ingegneri della Religione"). M. Roberts, Gustavus Adolphus, London 1958, ii, 228, note 3, suggests that 720 metres would be a liberal estimate for the effective range of large cannon in the 16th and the 17th centuries. Also infrequent are references to the range of the arquebus. Ulloa, describing the Djerba campaign of 1560, observes of the Ottoman "schioppettieri" that "qui loro schioppettieri erano si lunghi, che tirando arrivavano a cinquecento passi" (Ulloa, 8v). Ottoman arquebusiers fighting at Malta in 1565 and using "las escopetas del mayor de las palomas de cañon, y las ¡ menos de siete" maintained an accurate fire at a distance of "seycientos passos" (Verdadera relacion, 34r, 68r; also Bosio, iii, 597, referring to "archibusoni da posta")

The gunpowder that the Ottomans used was often excellent. It gave off, at Malta in 1565, a white smoke—an effect of its fineness—clearly distinguishable from the black smoke of the Christian powder. (Verdadera relacion, 102v; Bosio, 85r; S. di Marzio, iv, 614). Montecucculi also praised it for an excellence which revealed itself in "le bruit, la force et la longueur des coups" (Montecuculi, 283-4). Ewliya Çelebi describes the "förmnâl bârlûtîlar" as moist and inclined to befoul the touch-hole of the cannon, whereas the powder from Egypt and Bagdad was well made—indeed he compares it on a number of occasions with the gunpowder obtained from the English (Ewliya Çelebi, iv, 413; vi, 314; x, 175, 454, 727. Much powder—some of it among the best at their command—took the Ottomans from Europe and in particular from the English and the Dutch: cf. Bârodû, 1063). A passage in the Tuhfat al-kibrî notes, however, that the gunpowder from Egypt that it was not over-clean, had no great propulsive force and did harm, moreover, to the touch-hole of the cannon (Tuhfat al-kibrî, 721; also Naîmî, iii, 52; other adverse comments of much later date, in Peter Businello Staatssekretärs der Republik Venedig historische Nachrichten . . . der osmanischen Monarchie, in C. W. Lüdeke, Beschreibung des Türkischen Reiches, Zweyter Theil, Leipzig 1778, 131, and in Schels, 306-7).

The cannon-balls fired from the Ottoman guns might be of stone, iron, lead and even bronze (cf., at
Rhodes (1522), Sanuto, xxxiv, 64, 78; at Gran (1543), Hammer-Purgstall, Historiae, v, 372; and at Malta (1565), Verdana relation, 42). Often, where possible, the cannon-balls would be collected after firing for further use against a fortress (cf., at Malta (1565), Cirni, 104 and Bosio, iii, 636). With problems of windage in mind the Ottomans often wrapped their shot in sheepskins, thus ensuring a better effect from the explosion of the charge (Montecucchi, 280-1). At Malta in 1565 the Ottoman gunners, in preparing the charge for their cannon, used sacks of powder proportionate to the range and to the result which it was desired to achieve (cf. Bosio, iii, 614). The great size of their siege cannon and the thickness of the gun-barrels led the Ottoman top hydraulic at times to fire the guns without giving them sufficient time to cool (cf. Verdana relation, 40v, 68v; and, on the cooling of guns, Ducas (Bonn 1834), 273 and Foucard, 165).

The Ottoman gunners—a large proportion of whom came from Europe—made use of their cannon in accordance with methods practised in the armies of Christendom: e.g., concentrated fire from batteries directed at one particular section of a fortress wall (Antican, 147-8: Crete, 1646; cf. also Pečewi, ii, 193—on the Christian gunners at Gran, 1595); cross-fire from various batteries of guns (Bosio, iii, 538-9: Malta, 1565); and, in addition, the use of medium cannon to cut deep into the walls of a fortress and then of the heavier guns to bring down the stone-work through the violent impact of large cannon-balls (Collado, 24v-25v; Stella, in Schwandtner, i, 610-1; also İlknöd, 1062. On the methods practised in Europe cf., e.g., Mendoza, 517-v and Marsigli-Veress, 29-30). Sometimes the Ottomans fired groups of guns in a regular sequence (Bosio, iii, 309: Tripoli in North Africa, 1551). A number of batteries might combine to cover the defences of a fortress with a "curtain barrage" destined to be raised at, but not before the precise moment when the Ottoman forces stormed the walls (Bosio, iii, 648: Malta, 1565). A device employed at Malta in 1565 was the placing, close to the fortress walls, of "alcune picche—havendo nella cima certo fuoco artificiato", the Ottoman gunners being thus enabled to maintain an accurate cannon-fire at night-time (Colto, 98v; Cirni, 113-v; Bosio, iii, 628, 676. The sources for the same siege note, too, the superb skill and precision of the Ottoman arquebusiers, even when firing in moonlight: Viperanus, 10v; Bosio, iii, 539-40, 561, 611).

Much care and effort was given to the siting of the siege guns: there are references, e.g., to emplacements with "doors" opening and closing, as the cannon fired at the fortress (Barletio, 1566, "certi bastioni di voce sacca di lana, e bamba, dietro a quali stando i Gianizzari, senza pericolo assaltavano le mura") (Impresa di Zighet, in Sansovino, 454-v). How great was the forethought given at need to the exact location of the guns and of the arquebusiers can be inferred from the fact that Mehmed II—with the siege of 1450 in mind—caused drawings to be made beforehand of the fortifications at Rhodes (Bosio, ii, 315). The Ottomans had at their command instruments of siege warfare other than guns and mortars. Amongst them was the hümbara (humbbara), i.e., bombs and grenades of various kinds—e.g., "hümbara hawanları" (Silibdär, i, 244 and ii, 47); a large hümbara weighing 70 okkas (Silibdär, i, 595); "kazan (basghân) hümbara" (Ewliya Celebi, viii, 398, 414); "sepet hümbaraları" (Silibdär, ii, 395, also Nurşetnâmeh, ed. I. Farmaksizoglu, i, 3, Istanbul 1962-4, i, 81); "feci hümbaraları" (Nurşetnâmeh, i, 81); "ömlett hümbaraları" (Ewliya Celebi, v, 191); and "güzhenen ma'mul hümbaralar" (Na'mâh, iv, 140. Cf. also on the hümbara bârûd, 1063). As for hand grenades (e.g., of glass (stycy (gische) el kumbaraları) or of bronze (lundoj el kumbarası)—cf. Ewliya Celebi, ii, 119 and viii, 414, 432; Rahşid, i, 208, also Cacavelas, 158, 139 and İlknöd, 1063) much use was made of them, not only in the siege of Candia in Crete (Rahşid, i, 208: the Ottoman manufactured per diem in the course of the siege 1000 bronze handgrenades—cf. also Silibdär, i, 484 and Scheitner, 77. Marsigli, ii, 33 observes, however, that the Ottoman "granata da mano, pure mal fatta, è di effetto assai tenue").

The sources mention quite often other techniques and devices that the Ottomans used in their siege warfare—e.g., (i) the firing, from their cannon, of small shot, lengths of chain (Ewliya Celebi, x, 676; Silibdär, ii, 337: "pačma ve demir sendirler" and i, 705: "sendir dolu topay") and also pieces of iron (A. N. Kurat, Prut Seferi, ii, Ankara 1953, 752: "demir parçaları")—cf. in addition the Lettera scritta ... da Venetia: "un Pezzo di Bronzo carico di Lanterne, e Balle da Moschetto". Bosio, iii, 641-2. The Ottomans, at Malta in 1565, constructed a "barile cerchiato di ferro" and furnished with an explosive charge and a fuse, the inside being full of "scaglie di ferro, di pezzi di catene, e di sassi"); (ii) the use of "şinderli hümbara" (explosive and combustible devices affixed to long poles or pikes: Selânlî, 40—cf. also Bosio, iii, 564) and of hümbara filled with iron fragments (Na'mâh, i, 304); and (iii) the employment of "palle di fuoco" compounded of resin, pitch, sulphur, wax, oil and the like (Barletio, 1565).
313), of "boulletz de cuivre ou bronze plains d'artifice de feu" (de Bourbon, 131-v) and of gunpowder in "peaux de chevre" furnished with a mache or fuse (Marsigli, ii, 34). The Ottomans made use, moreover, of "naft, hatrâm, haynar šu" and of "kol, birel, naft ve hafırsan palastra ve yorgannı parıcalar" (Evlîya Celebi, v, 191, 201; cf. also Naîmî, iv, 140: "naft te buçakmız ba'dı birhâb parıcalar").

There is frequent reference to the Ottoman use of "sacchi di polvere" with a fuse and intended to be thrown at close quarters—cf., e.g., "Verdadera relation," i, 252; Brusoni, ii, 372; Bosio, ii, 207, 322-323; Marsigli, ii, 572 and iii, 559 ("certi sacchetti loro di fuoco artificiato, quali era una pignattina di terra fragilissima piena di fuoco, la quale nel percuotere in terra, o ne capi de' nostri rompendosi, accendeva, s'infiammava una mistura, che tenacissimo attaccandosi, fin al ferro istesso voracemente, et efficacemente ardeva, e consumava").

Other devices and stratagems are noted in some of the sources. It was in the course of the long Hungarian war of 1593-1606 that the Ottomans came to know the "aghâdî fi'îb", i.e., the petard (Peçewî, ii, 212-3; Naîmî, i, 190; Evlîya Celebi, vii, 312-3; Brusoni, Candida, i, 42; Hammer-Purgstall, i, 190; Ewliya Celebi, vii, 312-3; Cirni, s6v, 65r-v; Bosio, iii, 559, 644, 679; Verdadera relacion, 98r; Bosio, iii, 572; Épînémûres Daces, ii, 266).

Other devices and stratagems are noted in some of the sources. It was in the course of the long Hungarian war of 1593-1606 that the Ottomans came to know the "aghâdî fi'îb", i.e., the petard (Peçewî, ii, 212-3; Naîmî, i, 190; Evlîya Celebi, vii, 312-3; Brusoni, Candida, i, 42; Hammer-Purgstall, i, 190; Ewliya Celebi, vii, 312-3; Cirni, s6v, 65r-v; Bosio, iii, 559, 644, 679; Verdadera relacion, 98r; Bosio, iii, 572; Épînémûres Daces, ii, 266).

Other devices and stratagems are noted in some of the sources. It was in the course of the long Hungarian war of 1593-1606 that the Ottomans came to know the "aghâdî fi'îb", i.e., the petard (Peçewî, ii, 212-3; Naîmî, i, 190; Evlîya Celebi, vii, 312-3; Brusoni, Candida, i, 42; Hammer-Purgstall, i, 190; Ewliya Celebi, vii, 312-3; Cirni, s6v, 65r-v; Bosio, iii, 559, 644, 679; Verdadera relacion, 98r; Bosio, iii, 572; Épînémûres Daces, ii, 266).

Other devices and stratagems are noted in some of the sources. It was in the course of the long Hungarian war of 1593-1606 that the Ottomans came to know the "aghâdî fi'îb", i.e., the petard (Peçewî, ii, 212-3; Naîmî, i, 190; Evlîya Celebi, vii, 312-3; Brusoni, Candida, i, 42; Hammer-Purgstall, i, 190; Ewliya Celebi, vii, 312-3; Cirni, s6v, 65r-v; Bosio, iii, 559, 644, 679; Verdadera relacion, 98r; Bosio, iii, 572; Épînémûres Daces, ii, 266).

The actual investment of a fortress involved the digging of approach trenches (slıan yolları) vertical to the walls, but sinuous rather than rectilinear, in order to give protection from the fire of the besieged foe; lateral trenches (mëterii) parallel to the walls branched off from the slıan yolları, and redoubts ("domus dame") covered with timber and earth had to be constructed on the outer rim of the fosse, over against the glacis of the fortress (de La Feuillade, 45-6, 56; de La Solaye, 325; Marsigli, ii, 138-9). At times ingenious devices seem to have been used for throwing earth excavated from the trenches forward into the fortress ditch (Bosio, iii, 614; Malta in 1565). Bridges or ramps of wooden beams plastered with wet earth as a defense against artificial fire aided the assault forces to cross the ditches and storm the walls (cf., at Rhodes in 1480, Bosio, iii, 327; and, at Malta in 1565, Cirni, 56v, 68r, also Bosio, iii, 547-8, 568, 609-10, 611).

The subterranean mines (lakhlmlar) hollowed out beneath the walls of a fortress might consist of several galleries each with its terminal chamber, often containing a large amount of gunpowder (cf. Evlîya Celebi, viii, 424: a mine with three galleries and three chambers; Naîmî, iv, 143: 150 sândâr of powder in a single mine; Montecuculî, 345: "des mines simples, doubles et triples l'une sur l'autre ... très profondes ... de 120 et de 150 barils de poudre et davantage"). See also, however, Scheiter, 72, who, in writing of the Ottoman mines at Candia in 1569-70, observes that "massen sie nicht den vierten Theil so viel als die Unserige gesprengt so auch nur die Ecken und Kanten und die meisten ohne sonderlichen Schaden abgelaufen". Numerous data on Ottoman mines are to be found in the sources for the war in Crete (1645-6)—cf. Narod, 1065; further references in Evlîya Celebi, v, 135 ("p Bushman bara in laghlmlar"); Râshîd, i, 143 ("kubdâlar ve pshumulalar ve laghlmlar"); also Bosio, iii, 618-9; J. D. Barovius, Commentarii de rebus Ungariciis, in M. G. Kovachich, Scriptores rerum Hungaricarum minores hacchnus inediti, Buda 1798, ii, 370; István Szamoskazy, Történeti Maradványai, ed. Sandor Szilágyi, Masodik Kötet (1598-9), in Magyar Történelmi Emleképek, I, 14; Budapest 1876, 176-7; Feldzüge des Prinzen Eugen, i, 623-4; Marsigli, ii, 37 ff.; and J. B. Schel, Militär-Verfassung des türkischen Reiches, in Oesterreichische Militärische Zeitschrift (Zweyte Auflage der Jahrgange 1811 und 1812, Bd. 2, Vienna, 1829, 325-6).

Ottoman siege warfare—practised with remarkable success at Constantiopole (1453), at Rhodes (1522) and, although without ultimate triumph, at Malta (1565), all fortresses of vast defensive strength—reached perhaps its culmination in the siege of Candia (1667-9). The techniques exemplified in this siege warfare derived in general from the procedures and methods current in Western Europe, experts of Christian origin holding from the first a vital rôle in

The success of the Ottomans at Candia and elsewhere also rested, however, on factors enabling them to excel in the practical and manual aspects of siege-craft such as the digging of trenches and emplacements or the preparation of mines,—i.e., on their command over large resources of human labour (e.g., ʿazab troops and levies amongst the local populations) and on the existence, within the empire, of skilled mining communities available for use in war (cf., in general, R. Anhegger, *Beiträge zur Geschichte des Bergbaus im osmanischen Reich* (Istanbuler Schriften, nos. 2, 14 and 14a), Istanbul 1943-5; also Bârôn, 1063). Of like importance, moreover, was their access to vast quantities of the munitions (gunpowder, metals, timber, etc.) indispensable for siege warfare on the grand scale (cf. *Fieldsige des Prinzen Eugen*, i, 623).

And yet these factors tended to diminish in value, e.g., owing to the efforts of men like Vauban, a marked advance in the science of fortification. Austria, having acquired Belgrade in 1718, fortified the town anew. Among the French officers present—indeed said of their operations before Belgrade in 1739—that “ils ne se laissent pas gouverner des Ottomans acquire the latest techniques evolved in Europe—but it was also difficult for them to abandon methods which had for long been crowned with great and undeniable success. Of their grave misfortunes in war against Austria and Russia between 1683 and 1792 it can, with justice, be said—as it was indeed said of their operations before Belgrade in 1759—that “ils ne se laissent pas gouverner desChrétien, et ne se fient pas assez a eux, pour suivre leurs conseils” (de Warnery, 51-2). The old tradition of siege warfare was in fact becoming obsolete. It was imperative that the Ottomans acquire the latest techniques evolved in Europe—but it was also difficult for them to abandon methods which had for long been crowned with great and undeniable success. Of their grave misfortunes in war against Austria and Russia between 1683 and 1792 it can, with justice, be said—as it was indeed said of their operations before Belgrade in 1739—that “ils ne se laissent pas gouverner des

Lonicerus, *Chronicon Turcicum . . . tomos primus-(secundus)*, Frankfort 1584, ii, 381 ff.; M. Tercier, *Mémoire sur la prise . . . de Rhodes, en 1522* (Mémoires de Littérature . . . de l’Académie Royale des Inscriptions et Belles Lettres, xxvi, Paris 1759); M. Sanuto, *I Diarii, xxii (Venice 1891), ii, 260 f., 279 ff.: the Venetian state could not be able to capture the fortress (de Warnery, *Remarques sur le Militaire des Turcs*). Of the most significant was the growth, in Europe, of better techniques for the manufacture of cannon. The disasters which befall the Ottoman armies during the Hungarian war of 1683-99—at the siege of Buda in 1686 no less than on the field of battle at Zenta in 1697—must be ascribed in no small degree to the effectiveness of the Christian field-guns (cf. *Mémoires du Maréchal de Villars*, ed. de Vogüé, i, Paris 1884, 380, where the Maréchal writes of the Ottomans that “leur artillerie de campagne est très belle et très bien servie, et c’est peut-être ce qui a le plus contribué aux avantages qu’ils ont remportés pendant cette guerre sur les Turcs”). At a later date Maurice de Saxe, bearing in mind perhaps the recent advances in fortification and also the appearance—as in the last phases of the Austrian Succession War (1740-8)—of cannon powerful enough to overcome the new defences (cf. G. von Scharnhorst, *Handbuch für Offiziere, Erster Teil: Artillerie*, Hanover 1804, i, r8), was constrained to observe of fortresses in general that “tous les anciens ne valent rien, les modernes ne valent guère mieux” (Maurice Corine de Saxe, *Mes réveries*, ed. Pérua, Amsterdam and Leipzig 1757, ii, 11). The old tradition of siege warfare was in fact becoming obsolete. It was imperative that the Ottomans acquire the latest techniques evolved in Europe—but it was also difficult for them to abandon methods which had for long been crowned with great and undeniable success. Of their grave misfortunes in war against Austria and Russia between 1683 and 1792 it can, with justice, be said—as it was indeed said of their operations before Belgrade in 1739—that “ils ne se laissent pas gouverner des Chrétien, et ne se fient pas assez à eux, pour suivre leurs conseils” (de Warnery, 51-2).
Walled towns and fortifications had existed in India long before the beginning of the Christian era; they increased in number from the 6th century A.D., when the Turkish and the Mughul method of warfare, which lay more in the active work of attack. It was only as a last resort that the Turks, Mughuls, and Rajputs sought refuge in their strongholds. Even then they did not seek to tire out the patience or the resources of the besiegers but often rushed out to give battle on a slight provocation from the assailants. Generally with no openings near the ground to be battered in, the forts had an almost endless capacity for passive resistance. Even a small garrison could hold out so long as its provisions lasted or it was not demoralized.

Fakhr-i Mudabbir, the earliest Turkish authority, who wrote on warfare under Ilutmish, attached the utmost importance to the use of stratagem and treachery and to winning over the besieged by promises. Şehr Khan in his early career obtained possession of Rohtas (945/1538) by treachery. Bands of soldiers were deployed by the besiegers to ravage the countryside, and the garrison was isolated from the outer world by cutting off supplies. Starvation was the one form of siege craft which the garrison was unable to withstand. Scaling-ladders, ladders and nooses remained in use till the end of the

the thick outer walls, at places 31 to 35 feet wide (8.5 to 10.5 metres), with bastions, parapets and battlements. Gateways in some cases were defended by barbicans and loopholed crannellations and machicolations at parapet level (golkonda). They were provided with strong guard-rooms, which existed at other strategic points. Considerable improvements were made by the Turks and the Mughuls to the existing fortifications and new ones were also added. Flame-shaped battlements were introduced by ‘Ala’-a’Din Khilji in the fortified town of Sir, lying two miles north-east of Delhi, which had been built by the Tomatar, Venetian, and Milan 1685?; B. Jurnal de l’expédition de Monsieur de La Feuillade pour le secours de Candie. Par un Volontaire, Lyon 1669; . . . the fort by throwing in stones, logs, sand-bags etc. Rope-ladders and nooses remained in use till the end of the
Three hundred assailants scaled the ramparts of the Campānār fort on a moon-lit night by driving spikes into a smooth surface of the wall of the fort at a place discovered by Ḥumāyūn himself, who had seen a party of grain dealers emerging from the thicket which surrounded the fort (943/1536). Only very active espionage or a sheer stroke of luck saved the garrison from the disastrous consequences of such surprises. Attempts were made to secure entrance by battering a way in with very heavy timber about 6 inches thick, plated and studded with sharp iron spikes of different shapes 3 to 13 inches long, arranged in horizontal tiers and further strengthened by large battens behind. 

Along with the above devices pāshīb and gargaḍī were constructed by the besiegers to breach the fortresses with mandjanīb or 'arrdās, and later with mortars. The pāshīb was a raised platform constructed by filling the space between the top of the fort wall and the base of the besieger's camp below, with bags of sand or earth. Gargaḍīes were movable towers, such as 'Allāl-Dīn used in the siege of Ranthambhār. They were similar to the sarkob or mukābīl kob which Rūmī Khān constructed on large boats on the Ganges (945/1538) for battering in the walls of Ĉunar, as it could not be captured from the parts lying on the land-side. These towers were very strong structures with solid beams covered by raw hides, tiles, or earth to protect them from the liquid combustibles thrown by the garrison. They could be destroyed only by hurling heavy stones or by a sortie. Sābūt, which is also mentioned by Amir Khusrāw, "is a word", according to Niẓām al-Dīn Ahmad Bakhtshī, "used to express two walls, the foundations of which are laid at a distance of about one musket-shot (from the fort), and under the protection of planks, which are fastened together by raw hides, and are made strong, and forming something like a lane are carried to the wall of the fort". Ten horsemen could ride abreast inside the sābūt which was carried forward from Akbar's battery for the conquest of Citor (975/ 1567-8). A man mounted on an elephant and with a spear in his hand could pass inside it. Mandjanīb and 'arrdās were also used by the besiege and besieged. The workers drew its chain or rope back with the ballista, was a magnified form of cross-bow, and was used for discharging heavy bolts and long shafts at objects out of the range of ordinary arrows and spears, and could break through the base of the wall or the bastion. The loda (heap) ensured a more perfect use of the bows and arrows; mantelets, shields and a temporary wall of planks or earth protected the workers who were employed to work the siege-engines from the fire or stone hurled by the besiegers. Fālākhāns or gophāns (slingers) were also used for discharging stones and lighter missiles. Other implements required by the besiegers were palisades, fire-shovels, pick-axes and spades. Besides stones, boiling pitch, naphtha and darts were generally used as missiles.

The use of artillery in the 10th/16th and the 11th/17th centuries did not greatly lighten the task of besiegers. At the siege of Ĉandīl (934/1528) the stone discharge of the mortar could produce no tangible result. During the assault on Ray Sēn (950/1543) all the brass that could be procured from the bazaar and the tents of the besiegers (pots, dishes and drinking vessels) had to be used for mortars, which bombarded the fort from all directions. Though Akbar had, at the siege of Ranthambhār, had sābūt prepared, fifteen culverins, each of which could discharge boulders weighing five maunds and seven maunds and haft ḥāṭīb (made of seven metals) balls, were carried by 500 labourers to the top of the hill and placed opposite the fort for bombarding the citadel. The defending garrison, along with musket and cannon fire, rolled down large masses of stone from hill fortresses, which bounded along with great velocity and crushed to pieces all those on whom they fell, and the assailants were swept down.

Mining was certainly the most effective of all the devices for capturing a stronghold not situated on solid rocks or high ground. Muḥammad b. Ǧāsim sought to demolish the walls of Rāwar Fort in Sindh (92/1712) through mining. Amir Māsūf had mines sprung at five places in the walls of the fort of Ḥānsī before it could be stormed (428/1037). The best device which the besieged could employ against mining was to counter-mine and fill up the cavity. Ǧāmbar Diwānā, who was besieged in the fort of Badāūn at the end of Ḥumāyūn's reign (962/1555), was able to detect the mine that was being dug from outside the fort by putting his ears to the ground, exactly at the spot where the finishing touches were being given to it by the besiegers, and so thwarted their efforts. Before the invention of gun-powder the cavity was filled with straw, wood and other combustible material. When the beams which supported the cavity were burnt, the wall collapsed into the hole, and a breach was produced. Subsequently the mine was filled with gun-powder and fuses were laid. Often more than one mine was laid to ensure speedy reduction of the fort, but the process was nevertheless fraught with grave risks. At the siege of Ĉitor (December 1567), Akbar had two mines laid under the bastions which were close to each other. Fire was set to both simultaneously but the match of one, being shorter, exploded earlier, hurling that bastion into the air. The Mughuls were thus crushed forward of the area that needed to be breached. At that moment, the fire reached the other mine and the second bastion was also blown up, killing a large number of the imperial forces. The countermining done by the officers of Abu 'l-Ḥasan, the ruler of Golkonda, proved highly disastrous to the Mughuls, who had carried three mines from the siege trenches under the bastion. The garrison quietly abstracted all the powder with the fuses from one
mine and leaving some powder in the other two, filled them with water. The explosion from the two mines caused terrible havoc to the imperial forces, while the firing of the third mine was a fiasco.

**Hişar**, in Turkish 'castle, fortress, citadel, stronghold', a common component of place-names in Turkey. The best-known are the two castles which control the narrowest point of the Bosphorus [see Boghaz-ile]; on the Asiatic side Anadolu Hisari [q.v.], also called in earlier times Güzel Hisar ('beautiful castle'), on the European side Rumeli Hisari [q.v.], also called Boghaz-Kesen ('the barrier of the Bosphorus'). The former, situated between Karabati and Kunela, was built by the Ottoman sultan Bayezid I in 1797-1395 in preparation for the siege of Constantinople which he was planning; the latter, situated between Bebek and Emirgan, was built by Mehmed II in 1865 to 1452 at the beginning of his reign and for the same purpose, to block the passage through the Bosphorus of grain ships from the Crimea.

Hişar is further found as a component of numerous place-names in Anatolia, notably: Karakılıvars, a ruined site south of Eskişehir; Ayvonkarahisar ('Opium black castle'), in east Anatolia (in the vilayet of Giresun); Şebinkarahisar ('Alum black castle') in north-east Anatolia (in the vilayet of Giresun); Develikarahisar [vil. Kayseri]; Güzelhisar Ayyun (nowadays called only Aynun, chef-lieu of the vilayet), the ancient Travels; Akhisar ('White castle', [vil. Manisa]; Köchhisar ('Rams' castle'), near Tuz gölü, [vil. Ankara] Eskı Hisar, a ruined castle near Gebze, which occupies the site of the ancient Lybysia; Koyulhisar on the Kelkit, [vil. Sivas]; Sivrihisar ('Pointed castle', [vil. Eskişehir]; Uzhisar ('Frontier castle') and ortahisar ('Middle castle'), places in the cave-district of Usgup-Göreme (vil. Kayseri). Ibn Battuta mentions (ii, 269 = tr. Gibb, ii, 42a) a Kulhisar (î.e., probably Göllüşar, 'Lake castle') in the Mütessarifate of Hisar, which is now ordered to be destroyed, its name having been changed from Kulp to the name Hisar. The name Hisar was first used in the thirteenth century, and is now found in many other place-names in the district.

The region was first opened up for scientific investigation by a Russian expedition in 1875. The last of its governors, İbrahim Beg, of the Tătălisk family, died in 1926. Then in 1926 he retreated through Tadjikistan to the USSR from 1929). The ancient saffron industry has died out. In the 19th century corn and flax were the principal crops. In the 20th century there was a substantial production of silk and silk poplin, and of cotton. The southern border of the beglik of Hisar extended to the Alai mountains; thus the southern watershed of the Zarafshân valley acquired the name of Hisar mountains (with elevations of up to 5700 m).
HIŞAR — HIŞAR FIROZĀ

HIŞAR, 'ABD AL-ḤÂKIM ŞÎNÂŞÎ (mod. Turk. Abdülhak Şinasi Hisar), 1888-1963, Turkish writer, born in Rumelihisar, a summer village on the European shores of the Bosphorus. His family were of the upper-class Ottoman Civil Service. His father Maḥmûd Dîjalî al-Dîn was an enlightened modernist of his day having had two years' education in Paris and being the editor of various literary magazines, particularly of Khašiye-Ewërâk, to which leading writers of the Tanẓīmât School and their followers contributed. An ardent supporter of modernism, he named his eldest son 'Abd al-Ḥâkîm Şînâsî, a combination of the names of the pioneer Tanẓîmât writers (Ibrahim) Şînâsî and 'Abd al-Ḥâkîm Hâmid [q.v.]. (His second son Selim Nûzhet Gergek, 1893-1943, was the author of well-documented books on the history of the Turkish theatre and printing).

Abdülhak's mother was a descendant of Ottoman paşas. Her grand-father was the last commander of the Fortress of Belgrade. His childhood was spent in turn in their yâls at Rumelihisar, or on Büyükada, the island resort of the Marmara, and on the slopes above Çâmlica, where he witnessed all the fading splendour of the Ottoman upper-classes at the turn of the century, which he was later to evoke so vividly in most of his works. In 1894 he went to Beirut to join his father, temporarily exiled there by the Turks there and became acquainted with French employee in various foreign and Turkish private firms.

From the 1930's onwards he accepted various Government posts in Ankara, mainly in an advisory capacity, on foreign affairs. He retired in 1948 and settled in an apartment in Beyoğlu (his yâl in Rumelihisar had been burnt down in the 1920's). He died in 1963.

Abdülhak Şinasi Hisar is, in many ways, a very unusual writer. Although he started his career as a poet at the end of the First World War and wrote many critical articles and essays, he was appreciated mainly from 1920 his contemporaries had already made their names as novelists or poets. But in 1941, at the age of 53, he swept to fame overnight, upon the publication of his first novel Fâhim Bey ve bîz (1941), German tr. by Fr. von Rummel Unser gute Fâhim Bey (Copenhagen 1954), French tr. by B. de Siyêtves (Paris 1961). It won third prize for the best novel competition in the French section of the 'Bektâşî meşîsplârî' ('The moonlight on the Bosphorus' 1942), an evocative description and detailed narrative of the traditional Turkish pleasures: rowing-boats on the Bosphorus, originating in the 17th century, which consisted of Oriental music and serenades and which were held on three or four occasions each summer; (3) Çamlıca'daki enîsiye (Our brother-in-law at Çamlıca' 1944), a series of sketches loosely connected in the form of a novel about life on the Çamlıca hillside overlooking Istanbul and the Bosphorus, with picturesque descriptions of landscape and the character study of a strange man with Oriental tastes and habits, his superstitions and love affairs in a Tanẓīmât villa, which comes to life with all its decor, furniture and people; (4) Ali Nisâmi Beyin alâfrangâ- işi ve seyîkîşî (1952), the story of a young westernizing snob, a born-vivant who in the early 1900's, after spending a reckless life in the cosmopolitan society of Büyükada, ruins himself and becomes unbalanced, ending up as a Bektaşı 'Baba' in a tumble-down 'convent' on Çamlıca Hill; (5) بوشَیْجَتْیُة يَارًا (1954), a description of these typical summer residences on the Bosphorus and the care-free and relaxed life of the Ottomans upper-classes in them, with personal reminiscences of some of the most famous sea-side villas of the period; (6) Ask imiş her ne var âlemde (1955): the title is taken from the famous couplet of Fuğûlî: 'Ask imiş her ne var âlemde? [I realized at last that] everything in the world is nothing but Love, and Learning is but gossip', an anthology of popular quotations (single verses or couplets) mainly from dîvâns poets on topics of love, beauty, wine, separation, etc.; (7) Geçmiş zaman köşkleri (1956), the description of some typical old Ottoman villas where the author had lived as a child in Büyükada and Çâmlica and his reminiscences about the life, customs, people and setting of these villas; (8) Geçmiş zaman şehrâlari (1958), a collection of anecdotes, mostly humorous, on the Ottoman period, covering mostly the 19th century; (9) İstanbul ve Pierre Lohi (1958), a guide with bibliography to the well-known French Turcopilhes writer's works on Turkey, his life among the Turks and the memories associated with him; (10) Yahya Kemal'te veda (‘Farewell to Yahya Kemal', 1959) and (11) Ahmed Haşim (1963), the author's personal reminiscences and appreciation of these two leading poets, who were his contemporaries and with whom he was closely associated.

Abdülhak Şinasi Hisar's complete works are now (1966) being published by the Istanbul publishers Varlık.

Bibliography: S. S. Uysal, Abdülhak Şinasi Hisar, İstanbul 1961; Behcet Necatgil, Edebiyat-ısmiye ve sûret-sizâgül, İstanbul 1966; Yakub Kadri Karaosmanoğlu, Gençlik ve edebiyat haftalarları, in Hayat, August 1965 (valuable new data on Hisar's youth, which shed light on his later work).

(FAHR İz)

HIŞAR FİROZĀ, (now simply known as Hissor; Anglo Indian: Hisâr), a citadel town in the Indian Pandžâb, situated in 29° 10' N. and 75° 44' E. on the railway from Lahore to Delhi via Bhatânāda.
It is the headquarters of the district, of the same name, which lies in a dry sandy plain, known from ancient times as Hariana. It was originally known as the Ilisar-i Firuzabad, with a large tank that formed the citadel. In 1212/1797 by a European military adventurer, Sir Edward Ferbrary, London 1921, index; Storey, i/2, 677 (q.v.).

The duality in the meaning of ḥiṣba is the reason why information on it is found in such a diversity of sources. Apart from the allusions to muḥāṣbās which can be found in chronicles, biographical dictionaries, etc., information on one meaning of ḥiṣba is found in all that has been written on public morality and against ẓida' (such as the Maddah of Ibn Ḥāḍidī), and in all that has been written on trade or commercial law. We shall limit ourselves here to mentioning those works of which ḥiṣba, in one or the other of its meanings, is the primary and formal subject. They can be divided broadly into two categories, which do, however, overlap to a certain extent. Some works deal in a general way with the content of the virtue of ḥiṣba, the obligations arising from it for the muḥāṣbās, and the religious and juridical aspects of the office. The others set out mainly to enlighten the muḥāṣbās on the practical and technical details of the supervision which he must exercise; and, since this supervision applied principally to the various crafts and trades, these works are practical guides to the administrative control of the professions. We shall attempt to give a detailed list of the latter works, whereas for the former a very general mention will suffice.

The works which include a general examination of the ḥiṣba are in fact very numerous, but it is remarkable that they first appear only in the 11th century, i.e., two centuries after the appearance of the office. The two principal works are al-Ākhām al-sulṭānīyya of al-Mawardī, ch. xx, chiefly juridical (which, however, refers, though sometimes to refuse it, to an earlier treatise by the Shāfiʿī muḥāṣbās of Baghdad at the beginning of the 11th century, Abū Saʿīd al-Īṣṭaʿgharī, and the Ḥaḍāʾi al-dīn of al-Ghazālī, i, 269 f., which is chiefly moral. Among the other writers there should be mentioned the early and Spanish Ibn Ḥazm (al-Fāṣīl fī l-miʿāl, iv, 171 f.; and then, later: under the Mamluks, the Hājjī al-Tanbih al-hukkām fī l-ahkām, 910); it is probably not accidental that a treatise of this sort was produced among the Zaydis, who attached such importance to the precise interpretation of the Law, but its contents suffer from the backwardness of the economic and social situation of Tabaristan within the framework of which it was conceived.

There exists no real treatise of ḥiṣba in the exact meaning of the word until the end of the 9th/11th century in the West (particularly in Spain) and the end of the 12th century in the East (Syria and Egypt); none has been recorded earlier than these or in any other countries. Those which are known are the following:

(B) In the East: Several eastern treatises, slightly more substantial than those of the West, have as their prototype the Niḥayāt al-ʿutba fī ṭalāb al-ḥiṣba, of ʿAbd al-Raḥmān b. Naṣr al-Shayzari (d. 589/1193) (ed. with Fr. tr. under the name of Nabrāwī by Bernhauser, Les institutions de police chez les Arabes ... , in JA, 1860-61; good modern ed. by al-ʿAcrīnī, Cairo 1946); these are, first, the longer treatise of the same title by Ibn Bassām (7th/13th century, composed in Syria or Egypt), analysed by Cheikhī in al-Maḍāriq, x (1907), and, still more detailed, the Maʿāṣīm al-kurba fī ʿl-ākhām al-ḥiṣba by the Egyptian Ibn al-Ukhbūwna (beginning of the 8th/14th century, ed. with abridged Eng. tr. by R. Levy, GMS, N.S. xii (1936)); then a series of other works, the majority of which are apparently only works-overviews and agreements which have been referred to as having been just mentioned, sometimes attributed to false authors (al-Mawardī), but the manuscripts of which, being still unpublished and not studied, cannot at present be classified: see the articles by M. Guadelfroy-Demondbynes in JA, ccxxii (1938) and K. ʿAwād, in RAAD, xviii (1943) and, for the K. al-ḥiṣba of Ibn ʿAbd al-Hādī (d. 909/1503), the note by Ḥābib Zaytūt in al-Khizna al-Sharkīyya, ii (1937), 172. For the
In addition to these treatises, there exist some diplomas of appointment of muhtasib, which (explicit reference to this is found in Ibn Bashkuwal, and many examples, among others, in the Bayān of Ibn 'Idhāri). But from the time it is possible to describe the details of the office, there appears no great difference between the two halves of the Muslim world.

The classical muhtasib then was characterised by the integration of his task as controller of the market with the broader duty, basically religious, of maintaining the seemingly orderly of social life.

The division between his duties and those of the kādī and the chief of the ġurta (q.v.) was not strictly defined, and the distinction lay, in certain matters, less in their intrinsic nature than in the method by which they were approached: the kādī judged matters concerning which there had been a complaint and held an inquiry to discover the truth, and the ġurta intervened in cases of public authority which did not hold an inquiry, but intervened of his own accord, without waiting for a complaint. The questions with which he had to concern himself were in general decided at a fairly early date by a usage which has scarcely varied up to the present day; none of them was purely formal but it goes without saying that, apart from the affairs of the sūk, the way in which he carried out some of his obligations depended very much on the social background and on his own personal character. Apart from the sūk, they can be divided into three groups: the muhtasib had to supervise the performance of religious obligations (public attendance at the Prayers, the proper use and upkeep of the mosques), the propriety of the behaviour between the sexes in the streets (and at the baths), and finally the application of discriminatory measures against the dhimmis. And cases are cited of a courageous muḥtasib's even criticizing kādīs who had judged wrongly or denouncing doctors guilty of teaching which did not conform with the ijma'.

As far as the public is concerned however the basic and permanent duty of the muhtasib was the control of the sūk. This duty above all came to be formally defined with the early economic conditions. The most important documentation for the study of the sūk is the sūk, a sāhib al-sūk could not have appeared without inspiration from outside.

However this may be, about the time of the caliphate of al-Mā'mūn, the sāhib al-sūk was replaced by the muhtasib, a name which until then had been used only in connotation with the office of ḱīsa. This change in nomenclature evidently took place within the framework of the Islamization of institutions carried out by the 'Abbāsid, particularly during the period of the Mu'tazila; but it is difficult to tell to what extent there really took place a transformation in the spirit and the content of the office of ḱīsa. The change having occurred in the East after the split in the Muslim world between East and West, the title of sāhib al-sūk remained predominant in the Magrib and in Spain, while the idea of ḱīsa was adopted primarily by the West and later (see BSOAS, xiv, 38) and the ḱūb al-ʿagāʾib of Aḥmad b. Ḥarīm, xii, 339, and extracts passim; probably many others could be found.

Such are the sources on which a study of the ḱīsa can be based. In its broad sense this is therefore the obligation incumbent in principle on every Muslim to promote good and to combat evil. He may do this in the normal course of events by information and remonstrance, more particularly by legal intervention, and, in special circumstances, in the case of absence of public authority, by constraint if he is able to do so—even, according to Ibn Ḥazm, in the case of a public authority which is not valid, by revolt against it. In reality the obligation is only theoretical, subordinate to the duty of the Muslim to do as well as possible in the situation, and he is forbidden to set himself up in place of the public authority when this exists. The idea of ḱīsa, therefore, although it can play a certain rôle in social behaviour, has in practice only an insignificant influence and it is difficult to understand in what conditions its theory nevertheless developed.

The origin, apparently very old, of the office of ḱīsa is no clearer. Originally neither the word ḱīsa nor muhtasib was used, but instead the term sāhib (or ʿāmil) al-sūk for the latter. Thus there are two questions: that of the origin of the sāhib al-sūk and that of his transformation into the muhtasib. It is generally admitted that the former was the successor of the agoramonos of the Hellenistic cities: his duties were broadly similar and the Arabic expression can be seen as a translation of the Greek term. However, there exists no record of the agoramonos in the inscriptions which have been recorded years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, Byzantine Egypt, 1955, index).
indulge in any operation which was connected with the prohibited practice of usury (riba). His competence extended even to professions which we should not nowadays normally consider as being connected with the sakā: he thus controlled apothecaries and physicians, and in the schools warned or punished any masters who were excessively severe. The mukhtasib did not go beyond the limits of the town however, and consequently the mudāfic, or traders with other districts, did not come under his control.

There is one point concerning this economic-moral activity which should be stressed in relation to Islam under its form as practised in the mukhtasib. He checked prices but he did not normally have power to fix them. He reprimanded and even punished the merchant whose prices were higher than the accepted rate and, particularly in periods of scarcity, he dealt severely with hoarding; but the Law considers that prices are determined by God, i.e. are beyond the scope of human authorities. In a period of famine, however, the power of the mukhtasib, as of the muft, was more especially felt. For there to be collaboration between the muft, the kadi, the hisba, or the professional organization; yet in fact he was sometimes known to be a (and in Islam the only) municipal official: however he was no more than was the ḫādi by nature of his office, since he was not appointed by any urban or professional organization; yet in fact he was concerned specifically and exclusively with urban matters.

The mukhtasib was appointed by the State, sometimes directly, more often through the governors or the ḫādis, to whom it delegated officially the function of hisba, not, in principle, in order that they should perform it themselves, but so that they might ensure the security or which impeded the passage of pedestrians or vehicles. He was responsible for the cleansing of the streets and, if necessary, for the repair of the city walls, for ensuring the supply and regular distribution of water, etc. . . . All these are duties which have sometimes caused the mukhtasib to be considered as a (and in Islam the only) municipal official: however he was no more than was the ḫādi by nature of his office, since he was not appointed by any urban or professional organization; yet in fact he was concerned specifically and exclusively with urban matters.

The mukhtasib was appointed by the State, sometimes directly, more often through the governors or the ḫādis, to whom it delegated officially the function of hisba, not, in principle, in order that they should perform it themselves, but so that they might ensure the security or which impeded the passage of pedestrians or vehicles. He was responsible for the cleansing of the streets and, if necessary, for the repair of the city walls, for ensuring the supply and regular distribution of water, etc. . . . All these are duties which have sometimes caused the mukhtasib to be considered as a (and in Islam the only) municipal official: however he was no more than was the ḫādi by nature of his office, since he was not appointed by any urban or professional organization; yet in fact he was concerned specifically and exclusively with urban matters.

The mukhtasib was in general considered as a specialist subordinate of the ḫādi, and the recruitment of the holders of hisba was made from among persons of lesser importance, the being less esteemed than that of ḫādi (for it sometimes served as a preliminary step).

In the majority of Muslim states the mukhtasib of the capital was invested with a certain responsibility for the supervision of those of the provincial towns. At the beginning of the 7th/13th century, the caliph al-Nāṣir, within the framework of his general policy of a theoretical and religious unification of Islam under his own guidance, tried at least in the Near East, a general control over the hisba, which however did not really materialize (see Orients, vi (1953), 21).

The penalties which the mukhtasib could inflict without resort to other juridical authorities were normally, after a reprimand, beating and a parade in disgrace through the streets; incorrect weights and measures and faulty products might be confiscated; in exceptional cases, repeated offenders might be forbidden to continue to exercise their profession or even be banished.

At the end of the Middle Ages, with the economic decline and the social crises then existing, the office of mukhtasib often declined in esteem. Under the Mamluks, it was, like other offices, obtained by payment, the purchaser recouping himself from the merchants by means of illegal taxes. There were frequent quarrels between the candidates, for example being the well-known one between al-Mañzal and al-‘Āyni; and it sometimes happened that, for mercenary reasons or out of concern for efficiency, the post was given, against all tradition, to a member of the military class.

The mukhtasib continued to exist throughout the greater part of the Muslim world until the reforms of the modern period; he still existed for example at the beginning of the 20th century in Morocco and at Bukhārā. From the Saldjukid period, in Irano-Turkish territory and occasionally elsewhere, the office was more usually called iktisāb, the name of hisba being reserved for the virtue which the holder must exhibit (see next section). The Latin East which arose from the Crusades adopted it in a limited and lay form called the "mathesis". The sources and the modern works about them have been mentioned in the article. There is as yet no general and thorough study of the subject as a whole. The main work, chiefly juridical, is that of E. Tyan in the final chapter of his Histoire de l'organisation judiciaire en Islam, ii, 1943, together with the reviews of it by M. Gaudreoy-Demombynes, in Journal des Savants, 1947, J. Sauvaget, in JA, cccxxvi (1948), 309-11, and J. Schacht, in Orientalia, xvii (1948), 518. See also the prefaces by E. Lévi-Provençal and Maḥmūd Ḵaṭṭākh "Al-Makkī to their editions and the recent restatement by J. Schacht in his Introduction to Islamic Law", 1966, index, and bibliography pp. 231-2. There is a useful chapter by A. Darrag in L'Egypte sous le règne de Barsbay, 1965, 70-82. N. Ziyada, al-Ḥisba wa-l-mukhtasib fi 'l-Islām, 1954, is of value chiefly as a collection of texts. Imāmuddin, al-Ḥisba in Spain, in IC, 1963, gives biographies of Andalusian mukhtasibs. See also the article mukhtasib in EI1 (R. Levy). The works devoted to the Muslim town of course mention the mukhtasib; they cannot all be cited here but from our point of view there should be mentioned especially G. Maqrīz, Con-
The term *ihtisāb* does not occur in the registers and documents of the Ottoman Empire, but among the officials we find *ihtisāb*, an official term used both in the capital and in the provinces, its basic meaning being the levying of dues and taxes, both on traders and artisans and also on certain imports. However, the word *ihtisāb* finally came to denote the whole aggregate of functions that had devolved upon the *muḥtāsīb* or *ihtisāb āqāsī* (more rarely *ihtisāb emīnī*); it has often been translated as “market police”, which indeed is one of the functions of the *ihtisāb*; as late as 1924–25, there were still 75 *ihtisāb* functions on the books of the Istanbul Court of Justice, including that of “inspector of markets”, but his exact responsibility went beyond that of merely superintending and inspecting markets and members of the trade-guilds. The regulations concerning the duties of the *muḥtāsīb* were codified in the *ihtisāb kanānnāmeleri*, in which that official could find everything relating to his duties of supervision, inspection, punishment and, particularly in regard to the provinces, of the levying of taxes. These regulations included on the one hand a list of the prices (*narkh-i rūzi*—see *nārkeh*) which had to be observed for the sale of commodities, manufactured or other articles, the permitted profit margins, and the penalties to be exacted from delinquent traders and artisans; they also gave the total amount or the percentage of the taxes, duties, and other contributions collected in the name of the *ihtisāb* and levied on the members of the trade-guilds. A reminiscence of the original function of the *muḥtāsīb* is to be found in certain articles in these regulations, in which that official could in certain cases in these regulations, in which that official could...
iii.—PERSIA

The muhtasib and his office, the hisba (or ihtisâb), together with many other offices of the religious institution, continued to be found in the various empires and kingdoms formed in Persia after the break-up of the Abbâsîd caliphate. It did not finally disappear until the 19th century. Public morals and the due performance by Muslims of their religious duties were under the general care of the muhtasib. He was also charged with the oversight of Islam might be called public amenities. He was not to allow slaves to be ill-treated or animals overburdened. It was also his duty to see that dhimmis complied with the regulations imposed upon them to distinguish them from Muslims. His main task, however, was to oversee the markets and prevent dishonest dealing by merchants and artisans and to exercise supervision over the guilds and corporations. He was empowered to inflict summary punishment on offenders (see further R. Levy, The social structure of Islam, Cambridge 1957, 334 ff.).

Nîzâm al-Mulk states that a muhtasib should be appointed in every city to oversee weights and prices, to watch over commercial transactions, to see that passage along the streets be in trouble and the people of the bazaar would buy and sell as they liked, middle-men (faddla-khur) would become dominant, corruption open, and the ghari'â without prestige" (Siyyâsat-nâmeh, ed. Scherer, Persian text, 41). Hüsâyîn Wâ'îsKhâshir, (d. 910/1505), who wrote under the Timurids, regards the existence of the muhtasib as a guarantee that public life would be conducted in accordance with the precepts of Islam. He writes, "Every sultan who strives to put into practice the precepts of the ghari'a and to execute the decrees of religion is the deputy of God and His shadow upon earth. But since the sultan, by virtue of the multiplicity of state affairs, cannot look into the details of this matter [the execution of the decrees of religion] he must appoint muhtasibs in his kingdom. The muhtasib must be strong in the faith and powerful in his zeal for Islam, and distinguished by virtue (yifsa), abstinence, trustworthiness, uprightness, and lack of greed. Whatever he does he should do for the strengthening of religion, and he should be free from ulterior motives, hypocrisy, self-seeking, and lust, so that what he says may impress itself upon the hearts of men" (Ashâb-i Muḥsini, ed. Mirzâ Brâhîm Tâdîr Shahrâ'i, lith., Bombay 1908, 159).

(R. MANTRAN)
officials administering customary law ("umrdz-i curf") were ordered to refrain from interfering in the fixing of prices and to see that the muhtasib was paid the customary dues of his office (see A. K. S. Lambton, Islamic society in Persia, (inaugural lecture), London (S.O.A.S.), 1954).

The chief muhtasib of the kingdom was known as the muhtasib al-mamlik. This office under Tahmasp was held by an Astarabadi, Mir Sayyid Ali, who was also the khali of the royal court, and later by a Tabatabai sayyid, Mir Dja'far, who was succeeded on his death in the reign of Shah 'Abbâs by Mirza 'Abd al-Husayn, formerly the khalâlân of Tâbriz (Iskandar Beg, 'Alam-âd-dî-'Abbâs, lith., Tehran 1896-7, 111-2). According to the Tâghkhatar al-mulûkh an undertaking from the elders of each guild concerning the prices of the goods they sold was submitted month by month to the muhtasib al-mamlâk for his approval. He then sent this to the nâşir-i buyûdî (the superintendent of the royal workshops) for his confirmation so that documents for the purchase of goods might be drawn up. Contravention of this price-list was visited by heavy penalties (ed. V. Minorsky, GMS, Persian text, ff. 79b-80a).

Chardin, who travelled in Persia in late Safavid times, states that prices were fixed in Isfahân every Saturday by the muhtasib and that any vendor exceeding the prices fixed was liable to heavy penalties. But he also alleges that there was corruption over the settling of prices and that vendors gave the muhtasib presents to induce him to fix prices at a high level (Voyages, ed. Langlès, Paris 1812, x, 2 ff.).

The muhtasib al-mamlâk appointed deputies to act on his behalf to ensure that the guilds sold their goods in each place at the prices fixed (Tâghkhatar al-mulûkh, I. 80b). He was paid 50 tânâns per annum and in addition levies on various provincial towns, totalling some 253 tânâns 5,000 dinârs, were made in his favour (ibid., II. 90a-b).

After the Safavid period the office of muhtasib appears to have declined and to have become increasingly secularized. Those of his functions which were concerned with the administration of shar'i law were in effect removed from his competence and administered by the maradîs al-taklîd. These functions included the collection of khums and zakât, the administration of inheritances and wills, and the supervision of guardians for minors and others, matters which were known collectively as umur-i fysbi. The maradîs issued idjâza for the supervision on their behalf of the umûr-i hizbi. The qualifications required by the recipient of such an idjâza were that he should be a believer (mu'min), 'just' (dâlid), and instructed in the decrees (âhkâm) of the shar'î. He was permitted to retain from the sums he collected by way of khums and zakât enough for his subsistence; the remainder was to be handed over to the maradî who had issued his idjâza for its distribution among those who had a right to it.

So far as the muhtasib's functions in relation to the guilds in the large cities and to the cleanliness of the city were concerned, they were to some extent taken over by the dârâgha and the kalânârs. His duties were increasingly restricted to the regulation of prices and the inspection of weights and measures, but in this he was subject to the orders of the dârâgha (cf. E. Scott Waring, A tour to Sheeras, London 1807, 68-9). Tancocke, like Chardin, alleges that the muhtasib was not inaccessible to bribery and often consented to sell his protection to dealers (A narrative of a journey into Persia, London 1820, 239-40). During the course of the 19th century the muhtasib disappeared in most cities. Binning, writing about 1857, states that the office had recently been abolished in Shâh rz (A journal of two years travel in Persia, Ceylon, etc. London 1857, I, 337-8). In Isfâhân the office had ceased to be in effective operation by 1294/1877-8 (Mirzâ Husayn Khân b. Muhammad Ibrâhîm, Dirghâfrîyâ-yi Isfahân, ed. M. Sutûdeh, Tehran 1963, 80). The traditional dues levied for the payment of the muhtasib nevertheless continued to appear in the tax-rolls for many years after the office had, in effect, disappeared. By the law of 20 Ashar 1309/1929 an item of 150 hîrâns levied on the guild of butchers in Tehran for the year 1312/1933 the muhtasib was abolished (The second yearbook of the municipal society of Tehran: statistics of the city of Tehran for the years 1925 to 1929).

There is mention of an ihtisâb-âbâsî in Tehran in the year 1853. His functions were inter alia to issue lists of prices for foodstuffs and other goods (cf. Râznâmâ-i Wâbidî-yi Ihtisâbîyâ, No. 127, 29 Ramadân 1267/1853). The office which he belonged to was known as the ihtisâb and its main duty was the cleaning of the streets. Shortly after a police administration on modern lines was set up by Nâşir al-Dîn Shâh in 1298/1880 the ihtisâb was placed under its jurisdiction (I'timâd al-Saltana, Râznâmâ, under dateline 5 Şafar 1299/1881, ms. in the library of the Shrine of the Imam Rîdâ at Mâghhad). In 1312/1894-5 the ihtisâb department in Tehran consisted of a director, two deputy-directors, and a number of subordinate officials, farâghehs, stable-men, and water-carriers, etc. (I'timâd al-Saltana, 'Tarîh wa Dirghâfrîyâ-yi Sa'âdâbîkh, lith., Tehran 1321, appendix). An item in the newspaper Tarbiyât, No. 58, 26 Şafar 1315/30 January 1898, addressed to Munazzam al-Saltana, the wâriz-i nâmîyiyya wa ihtisâbîyâ, praises him for his efforts to clean the streets, to facilitate passage through them, to modify prices, to prevent evil conduct and theft, and to prevent the ill-treatment of [pack] animals. Thus, by the end of the 19th century the muhtasib as an official of the religious institution in charge of the public conscience had ceased to exist, and such of his functions as survived were taken over by the police administration.

The umûr-i hizbi continued to be administered during the 19th and early 20th centuries under the supervision of the guilds of bankers, etc., but after the institution of modern courts during the reign of Rîdâ Shah Pahlavi the umûr-i hizbi were restricted to the collection of khums and zakât; such matters as the administration of inheritances and wills, the care of minors, appointment of guardians, etc., were transferred to the courts (see the law entitled Rînâm-i umûr-i hizbi, dated Tir 1319/1940).

**Bibliography:** In the article.

(A. K. S. LAMBTON)

iv.—The Indian subcontinent

The institution of hisba in the strict classical sense did not exist in the Indo-Pakistan subcontinent during the period from the 5th/11th century to the 13th/19th century. The main obstacle was the complexion of the population, the majority of whom were non-Muslims. Except for Baluch (664/1266-688/1287), Firuz Shâh Tughluq (752/1351-790/1388), Sikandar Lodi (894/1489-92/1517) and Awrangzib 'Alamgir [q.v.], and they too only in certain respects, none of the Muslim rulers of India ever attempted to enforce the shar'î law, either for fear of disaffectioning the local Hindu population or by way of political expediency, of which the many
heretical measures adopted by Akbar [q.v.] are a glaring example. From the very beginning of their rule in India, the Muslims, situated as they were in India, could not be allowed to grow lax in religion or morals except at the expense of the solidarity, integrity, and, at times, the very existence of their newly established state. Hence, wherever a Muslim colony was established or a town garrisoned, a hisba and a bd$i [q.v.] were invariably appointed (cf. Minhâijd-i Sultan-i Firuzshâdi, fol. 198, 702/1305; Târîkh-i Yâmanî, 288; Tâdî al-ma'âdîrîn, fol. 83a). Balban, who considered an efficient hisba department to be a primary necessity of good government, did not neglect, as his predecessors had done, even small and insignificant places. We read in the Safar-nâmâ-i Kâdî Taâ'î Mutâsâri (Bîdînî 1909, ili ff.), of Iltutmish (608/1213-621/1236) having appointed a hisba at Ambâla [q.v.], which was then no more than a hamlet of a few hundred houses of mixed population. During the Sultanate period the functions of the muhtasib and the bdâdi, and the relations between them, were much the same as in the central lands (see above, i). At times the Sultan intervened personally to deal with customs or innovations considered heretical or un-Islamic or in matters which lay beyond the ordinary jurisdiction of the muhtasib. Firuz Shâh Tughluk, for instance, forbade many popular practices which he regarded as irreligious (cf. Futâhâl-i Firûzshâhi, ed. Sh. Abdur Rashid, Aligarh 1954, 6-11). However, the stronger and the more religiously-minded a Sultan was, the greater was his anxiety to promote the moral and religious welfare of his people. Amir Khusrwâ [q.v.] speaks highly of ‘Ali ibn Khâlid’s hisba, as being especially concerned with the flow of supplies and the control of food prices. This Sultan rigorously suppressed drinking, gambling and other social and moral vices, believing that unless public morals were tightened up the deterrent punishments meted out to various offenders against the Sâhriâ’ would be meaningless. Muhammad Tughluk (725/1325-752/1351) in his own days inflicted these punishments with unwonted severity. He was so keen to enforce ihtisâb that at times he personally acted as the bdâdi and the muhtasib and exercised the elementary rules of their faith. Under him, the muhtasib was an officer of great dignity and, according to al-Kâlkashandi (Subb al-a’Îdâ, v, 94; partial Eng. trans. by O. Spies, Stuttgart 1936, 72) and Ibn Fa’ül Allâh al-Umarî (Masâlij al-abâsr, partial Eng. tr. by Sh. Abdur Rashid, Aligarh 1944, 32), enjoyed a monthly salary of 8,000 lânsas. The Sultan paid special attention to the regular saying of prayers. According to Ibn Ba’ttûta (iii, 292; tr. von Mîk, 149), a lady of the royal household found guilty of adultery was stoned to death. Similarly, drunkards received the full measure of hadd punishment in addition to three months’ solitary confinement. Both Baraun (Târîkh-i Firûzshâhi, 441) and Ibn Ba’ttûta (loc. cit.) testify to the high level of hisba maintained by the Tughluk Sultan Ghîyâb al-Dîn (720/1320-725/1325). His son Muhammad brought more vitality in the observance of religious rites even at his court. Sikandar Lo’dl was equally keen on enforcing hisba throughout his kingdom. He boldly did away with a popular and time-honoured custom of carrying ‘lances’ (nîyas) to the tomb of the legendary hero Ghâzî Mas’ud Sâlâr [q.v.] and revived Firuz Tughluk’s ordinance prohibiting women from visiting tombs and graveyards. It must at the same time be stressed that ihtisâb was enforced only in the case of Muslims, the non-Muslims being subject to their own religious or personal laws or the common law of the land. Another important function of the muhtasib was to uphold orthodoxy and to suppress heresy. Teachers and professors in religious institutions as well as popular preachers had to be very cautious in their lectures and utterances for fear of the muhsâsib. The Kârmâjis, who created great disturbances in Delhi during the reign of Radjiyâ (634/1236-657/1240), were successfully combated by Firuz, as we hear from al-Nâsir Muhammad Firdawsî (715/1316-718/1320), the Mufti al-ma’dthir, who composed a treatise on the perils and punishments of the muhsâsib during the rule of the Lâdis or the Sayyid dynasties, but that does not mean that he had by then completely ceased to exist. While Shâh Shâh Sîr (945/1538-952/1545) was largely occupied with the consolidation of his kingdom and with administrative reforms, his successor Islam Shâh (952/1545-966/1552) paid due attention to religious matters. For instance he took very strong measures against the Muhdawis, i.e., followers of Sayyid Muhammad al-Dinwî (q.v.), whom he regarded as a heretic, and had two of his disciples, ‘Abd Allâh Niyyâzî Sirhîndî and Shaykh ‘Ali, severely punished—the former being almost beaten to death while the latter was put to death. (Cf. A. S. Bazmee Ansari, Sayyid Muhammad Dinwî and his movement, in Islamic Studies (Karachî), i/v, March 1964).

As against this, some modern historians are of the opinion that while theoretically speaking it is correct to say that state policy during the Sultanate period was directed towards enforcing the hisba, in practice little attention was paid to the dictates of the Sâhriâ. For instance Barani is quoted as saying that the punishments awarded to the Muslims went against the Kur’ânic laws. Similarly, the injunctions governing the use of kâbîl (permissible) and karrâm (prohibited) things were seldom observed. Amir Khusrwâ also is reported as saying that the charging of interest was a common practice in his day, and that when a written contract between the parties existed even the bdâdi had to recognize the fact (cf. Muhammad Habibullah, The foundation of Muslim rule in India, Allâhabad 1965, 349). But these are solitary instances, which may be the exception rather than the rule. During the anarchy following the death of Shâh Shâh, the institution of hisba appears to have collapsed, and the Mughâls, for both personal and political reasons, did not consider it expedient to revive the institution, which consequently suffered a heavy set-back. Bâbur was a great lover of wine; Humâyûn was addicted to opium; Dâhâgîr too was no exception, wine being his greatest weakness. His son and successor Shâhjâhân, although of sober habits, did not have the courage either to break away completely from the traditions of his family or to enforce hisba strictly. During one of his visits to the Pandâb, when it was brought to his notice that certain Hindus in Gudjrat had married Muslim women, he ordered the annulment of these marriages and the restoration of the women to their families. (Cf. A. S. Bazmee Ansari, op. cit., 572 ff.). It was only Awrangzib who showed the highest respect for religion and strictly enforced hisba. He included a specific provision in his penal laws (cf. M. B. Ahmad, The administration of justice in Mediaeval India, Allâhabad 1941, Appendix C, 6-7) for the punishment of persons found guilty of drinking or using narcotic drugs such as hemp and opium. He ordered the execution of Sarmad (d. 1070/1665),
a convert to Islam and an eclectic sufi, on the ground that he had refused to cover his nudity—a serious offence against public morals. In fact there is little ground to differ from the statement "that the Mahaligh emperors (never) strictly adhered to the Islamic principles ... in the case of certain crimes their punishments were practically the same as prescribed by the Quran. In other matters they greatly departed from the Quranic laws and the reasons for this departure were that firstly, there were many cases which did not come exactly within the ambit of the Quranic law, and secondly, in many cases social and political needs and the attendant circumstances demanded a different treatment" (cf. P. Saran, The provincial government of the Mughals, 38-2). Moreover, there is every reason to believe that the mughals of the Sultaneate period came to be replaced by the kolut [q.v.], a secular officer whose duties resembled very closely those of the mughals, the only difference being that while the former dealt with all sorts of crimes and offences, the latter was primarily concerned with offences against Islamic law. The Mughals found it administratively convenient to entrust the duties of the mughals to the kolut, with harmful effects first on the religious and moral welfare of the Muslims in India, then on their civil and social culture, and ultimately on their rule.

HISBA—HISHĀM 493

On his accession, he appointed to the post of governor of ‘Irāk Mālid al-Kāsī, a versatile and skilful man, who lacked the fierce energy of al-Hajjādī, but possessed the same devotion to the caliphs of Damascus. During the fifteen years he was in office, he devoted himself primarily to the agricultural and economic development of the country, continuing the work of providing a pure water supply which had been begun by al-Hajjādī, though this did not insure him against incurring the enmity of some and even against the provocation of the caliph’s court, which finally led, in 120/738, to his dismissal. His rival and successor, Yūsuf b. ‘Umar al-Thakfī, had to suppress in 122/740 the Shi‘ī revolt of Zayb b. ‘All, who was killed in arms at Kūfī after a brief affair, a small enough episode in itself, but one which was to enrich Shi‘ī martyrlogy and re-kindle the propaganda of the Khāshmī opposition. Apart from this revolt and some other small Shi‘ī and Kāhidī acts of sedition, the internal peace of the empire under Ḥishām was not seriously threatened, although the underground work of the da‘wa continued unabated. It was rather in the frontier regions of the empire that the most outstanding events of this caliphate took place.

To the east the Arab offensive had, under Kutayba b. Muslim, made its final advance. After that, it was a matter no longer of further progress but of retaining what had been gained, and particularly of containing the pressure of the Turkish counter-offensive which was carried on with vigour at this time. The many successive governors whom Ḥishām appointed to Khurāsān (among them Aṣḥās al-Sulāmī, Dīnayb b. ‘Abd al-Rāmhān al-Murri, Asad al-Kāsī, brother of Kālid, and the courageous Naṣr b. Sayyār) all had to face the menace of the Jūrgēsī and the constant threat of the intrepid leader Boghār Tārkān (the ‘Kāsūrī of the Arabs) and of the Khāshūn Su-lu. After suffering many setbacks and even risking disaster (yaum al-ṣīb in 112/730, yaum al-اثحāl in 119/737) the Arabs finally broke the Turkish offensive at Khārīstān, near Shābūrān, to the west of Balkh (119/737) and, under Naṣr b. Sayyār, advanced in the following year as far as the Jaxartes. By a wise taxation policy, Kālid was able to achieve in his province a certain degree of pacification, the ephemeral nature of which however was to be revealed a few years later by the outbreak of the ‘Abbāsid revolt.

The empire experienced another grave threat during this period, from the north, with the irruption of the Khazars Turks in Armenia and in Aḥdar-bayūqān (defeat of Dījarākh b. al-Hākam at Ardābīl in 112/730). The invaders were driven back however by the intervention of massive reinforcements led by skilled captains such as Sā‘īd al-Haraṣī, and later Maslama b. ‘Abd al-Malik and Mawrān b. Mūhammad. There followed a whole series of campaigns which led the Arabs beyond the Caucasus as far as the mouths of the Volga (foundation of Derbend by Maslama in 115/731), without however achieving any stable conquest to the north of the Caucasus. Further west, the hostilities with the Byzantines continued throughout Ḥishām’s reign, but without any large-scale operations: the great offensive of the Arabs had spent itself with the siege of Constantinople by Maslama in 98/716-7, and operations were limited to sa‘ād al-fī, in which the Muslims were not always the conquerors (defeat of Akroinos, 122/740, and death of the famous g̣hāzī al-Baḥā‘ī [q.v.], destined to become later the hero of romance of this frontier-war).
Events on a large scale, however, were taking place in Africa and in Spain, undermining in these distant provinces the direct domination of the central power. The hastened economic exploitation under the governor 'Ubayd Allah b. al-Hasbāb (116-23/734-41) provoked, in 123/740-1, a great revolt of the Berbers, who inflicted a first crushing defeat on an Arab army near Tangier (the ghazawat al-aṣārif, so called from the great number of Arab warriors who lost their lives there). Upon the news of this disaster, the caliph Hishām himself assembled and sent from Syria a second army under the command of Kūltūm ibn al-Ḥiyād, who was handed to death by the Berbers on the banks of the Sebu. While Kūltūm’s nephew, Baldj, succeeded with the remnants of this army in reaching Ceuta and then in crossing into Spain, the whole of the Magrib was plunged into anarchy and revolt, in which Berber ethnic loyalty was allied with Kharidji heresy: and it was the task of a new governor sent by Hishām, the Kalbi Ḥanṣala. Safwān [q.v.], to recover in a despairing effort (battle of al-Asnām near Kayrawān, 124/742) what could still be saved of Arab hegemony and of Umayyad power inIfrikia. From this time, the direct authority of the caliphs of Damascus (and later of Baghdād) does not seem to have extended beyond the boundaries of present-day Algeria: The crisis in the Magrib involved the new province of Spain, whose governors had up to then been answerable to the governors of Africa: whereas before 122/740 the Arabs of Spain had carried out their razzias beyond the Pyrenees (battle of Poitiers and the death of ʿAbd al-Raḥmān al-Ḥāfīlī, 114/732), after 122/740 they wasted their strength in internal quarrels, aggravated by the arrival of the Syrians under Baldj; these were finally ended, fifteen years later, by the foundation of the Umayyad emirate under a nephew of Hishām who had fled to the west from the ruin of the Umayyad dynasty. It is not easy, among all the facts briefly sketched here, to distinguish the part played personally by the ruler, who was living sometimes several hundred miles away and who limited himself in general (if we follow the literal interpretation of the texts) to apppointing and dismissing the governors, who are presented as the solitary figures in the events. It is possible, however, to discern several main lines which can be traced to the supreme authority of the empire and are characteristic of its policy. This policy appears as one of recovery and of conservation of the immense patrimony of the conquests, which reached its greatest extent thanks to the demographic, economic and spiritual forces of the Arab element but which, while still retaining its vitality and vigour as a coherent Muslim society, was destined to disintegrate as an Arab empire. Hishām seems to have been aware of this danger, and to have acted, together with a chosen group of capable and devoted assistants, so as to confront it and to delay it as much as possible. This seems to be proved particularly in the policy which he followed (unlike his brothers who had reigned before him) of maintaining an equilibrium between the rival tribal groups of the Ṣaḥāras and the Yamanis, both of whom he skilfully used to staff the administration, in order to forward the interests of the State. Some scholars, such as H. A. R. Gibb, even go so far as to attribute to this caliph the initiative in a general reform and reorganization of the tax system in answer to the complaints of the maṣūdī, although the sources provide details only of local measures which were taken, probably with the caliph’s consent, by governors in their own provinces (for example the work of ʿAbāṣ al-Sulami and of Naṣr b. Sāyiyr in Khurasan and in Transoxania, and the harsh tax policy of Ibn ʿAbd al-ʿAzīz in the Ifrikiya). In fact there has survived no explicit documentation which would lead us to attribute to Hishām, as to ʿUmar II, measures which in principle applied throughout the empire; it cannot however be denied that he was aware of the problem and applied himself to its solution, particularly as the sources agree in describing him as a strict adminis- trator, sober and frugal almost to the point of meanness, and paying great attention to the regular ordering of the revenues and the expenditure. The only ostentatious facet of his character, which he shared with the other members of his family, was his enthusiasm for building: there dates from his reign a whole series of castles, palaces and even “towns” in the Syrian desert, some of which have been known for a long time and others only recently revealed by excavation; of some of them he was actually the founder. First, the two Kaṣr al-Hayr to the east and to the west of Palmyra (it has been suggested that the former, Kaṣr al-Hayr al-Shārīḥ— and not the Christian Sergiopolis—is the real Rusafat Hishām; in the latter, Kaṣr al-Hayr al-Gharbī, there has been found, among the splendid remains of its decoration, perhaps the portrait of the caliph himself); and in addition Kaṣr al-Mīb, Bhirbat al-Mafjar [q.v.], Kaṣr al-Tūbā, etc. There is hardly any Umayyad ruin discovered or excavated in Syria and Jordan in recent years which is not connected, by epigraphical evidence or by fairly probable conjecture, with Hishām’s reign and with Hishām himself. The final years of his reign were clouded by troubles concerning the succession: after trying in vain to get one of his own sons recognized as his heir (at first his elder son Muʿāwiya and, after his premature death, his younger son Maslama), he resigned himself to considering as his successor his nephew al-Walid b. Yazid, who had already been nominated by Yazid II and whose character, tastes and education were the complete opposite of his own. But he wrangled with him and embittered him in every way, thus undermining the solidity of his own political and administrative achievements, which his offended successor was to lose in the following. The accession of al-Walid II, when Hishām died from a heart attack in his residence at Rusafā after a reign of twenty years, in fact saw the beginning of the fitna, which was fatal for the dynasty. But the long reign of the fourth son of ʿAbd al-Malik may nevertheless be considered as a period which on the whole was glorious for the Arabs and fruitful in the development of Islamic faith and culture. In this connexion there should be mentioned the strict orthodoxy of Hishām (who was the friend of the great traditionists al-Zuhri and Abū Zinād and the persecutor of the Kadari heretics, though at the same time tolerant towards the Christians), and in addition his interest in the historical and administrative traditions of the Sāsānids, and the elaboration among his entourage (Abūr ash al-Kalbi and his pupil ʿAbd al-Ḥamīd b. Yahyā) of the Arabic chancery style, which was to have such a great development during the first years of the ʿAbbāsīd caliphate. HISHAM II, AL-MU'AYYAD IBN AL-MAHDI, Umayyad Caliph of Cordova, son of al-Hasam II [q.v.] and a Basque mother. He succeeded in Safar 366/October 976, at the age of 10 years. The Slav officers of the palace tried to secure the election of the boy's paternal uncle al-Mughira, with Hisham as heir-presumptive. The plan miscarried. Al-Mughira was killed on the orders of the Emir Muhammad b. Abd 'Al-Malik al-Mansur [q.v.]. He was subsequently invested with the authority of Hisham for his own ends and held him in tutelage which proved permanent. From 370/982 al-Mansur ruled openly on his own account, and it is in this period that his numerous and successful expeditions against the Christians of the north took place. In 386/996 Hisham, by then a man of thirty but principally urged on by his mother, attempted unsuccessfully to assert his authority, and his leisure with the collection of relics (Ibn al-Abbar, ed., Paris-Leiden 1950, i, 139-46; Cl. Sanchez-Bornoz, La España musulmana, Buenos Aires 1960, i, 115-21). (D. M. Dunlop)

HISHAM — HISHAM II

HISHAM I, Abu 'L-WALID, called AL-RIDA, the second Umayyad ruler of Muslim Spain, died openly on his own account, and it is in this period that his numerous and successful expeditions against the Christians of the north took place. In 386/996 Hisham, by then a man of thirty but principally urged on by his mother, attempted unsuccessfully to assert his authority, and his leisure with the collection of relics (Ibn al-Abbar, ed., Paris-Leiden 1950, i, 139-46; Cl. Sanchez-Bornoz, La España musulmana, Buenos Aires 1960, i, 115-21). (D. M. Dunlop)

HISHAM — HISHAM II
496 HISHAM II — HISHAM B. AL-HAKAM

400 (July 1010), and Muḥammad al-Mahdī appeared before him to answer for his conduct, before being removed to Spain. His reign was nominally ruled, with Wādīh as his bāḥiyy and the real power. The siege dragged on, since Sulaymān would have none of Hīshām as Caliph, till 403, when after the attempt- ed flight and death of Wādīh and further unavailing siege, Cordova surrendered on 26 Shawal/ May 1013. The entry of the Berber army and the removal for execution. Hīshām then nominally ruled, till 403, when after the attempt- ed flight and death of Wādīh and further unavailing siege, Cordova surrendered on 26 Shawal/ May 1013 (Ibn al-Khaṭīb). This was the ‘second death’. (There was also a ‘third death’ much later, in 453/1059, when the ‘Abbāsid al-Mutʿaddi [q.v.] ceased to make for peace for Hīshām, whose existence he and his father by a conventional fiction had maintained for many years.)

**HĪSHĀM III, AL-MUTṬADĪ B’LLĀH B. MUḤAMMAD b. ‘Abd al-Malik b. ‘Abd al-Raḥmān III, the last of the Umayyad Caliphs of Cordova. Born in 364/974-75, he is said to have been the elder brother of ‘Abd al-Raḥmān IV, al-Murtaḍā [q.v.], whom he accompanied in the rout at Granada in which the latter was killed (408/1018). Hīshām escaped to ʿAbd al-Hūl (Alpuente) in the province of Valencia, where he was received by the ʿAmīrīd masāʾil Ḥādī b. Kaṣīm al-Fīhrī. Proclaimed Caliph by the Cordovans in Rabīʾ II 418/June 1027, he remained at ʿAbd al-Hūl for more than 2 years, making his official entry into Cordova only in Dhu l-Hijja 420/December 1029. Owing principally to his weakness of character and Ḥādī’s shortsightedness, he soon became unacceptable to the Cordovans. The affections resulted in the murder of the unpopular waṣīr, and Hīshām was at the same time deposed (Dhu l-Hijja 422/November 1031). But this time no new Caliph was elected. A council of notables headed by Abu l-Ḥazm b. Diḥawwār took control. The last Umayyad Caliph was allowed to retire, and ended his days at Lārida (Lerida) in Şafar 428/December 1036. A new era of Spanish Muslim history had begun—of the Party Kings (mulāk al-taʾwīf, reyes de Taifas). The governor of Lerida with whom the last Umayyad found refuge was Sulaymān b. Ḥūd (see Hūdīs).

**HĪSHĀM B. ‘AMR AL-FUWĀTĪ (or al-Fawātī), a Mu’taṣīf of Basra, where he was the pupil of Abu l-Ḥudhayf [q.v.]. After having probably been a wandering propagator of ʿĪsā (Ibn al-Nadīm, Fihrīs, ed. Fück, in Prof. Muḥ. Šafiʾīs presentation volume, Lahore 1955, 68-9), he went to Baḥdād during the caliphate of al-Maʿmūn and died there at a date not known exactly, but probably before 218/833.

His personal doctrine, which had a certain influence on al-ʿAshʿarī [q.v.], differs appreciably, according to Ibn al-Nadīm, from the teaching of the other Muṭṣāzīs, but the data given by the heresiographers are not always in agreement. Thus, according to al-Baḥḍādī (Fārḥ, 150), he forbade murder of any kind, whereas according to al-Shahrastānī (Milāl, on the margin of Ibn Ḥāẓm, Fīṣal, i, 94) he allowed the assassination of opponents of ʿĪsā and in that respect showed a fanaticism unusual among the Muṭṣāzīs. Al-Shahrastānī (op. cit., i, 91) emphasizes the extremism of his theory of free-will, for al-Fuwātī denies the intervention of God in the affairs of man, even when a verse of the Kurʾān states that God caused men to do such and such a deed. “Things” not being eternal, God cannot know them before having given them existence (al-ʿAshʿarī, Maḥālādī, ed. Ritter, 157, 488, 489; al-Shahrastānī, op. cit., i, 94), for a “thing” is the realization of the essence within existence, that which has been created by God. He rejects the doctrine that God can be seen ‘with the heart’ (al-ʿAshʿarī, op. cit., 157) and holds that it is not the accidents that prove that God is creator, but material things (al-Shahrastānī, op. cit., i, 92; al-Khayyāt, Intisār, ed. and trans. A. Nader, Beirut 1957, text 49, trans. 54), that is to say the substances which are realized when God gives them existence. Al-Fuwātī regards as infidels those who believe that heaven and hell already exist, since these are for the moment unnecessary (al-Baḥḍādī, op. cit., 150; al-Ṭijī, Muwaḥāfī, 375; al-Shahrastānī, op. cit., i, 93). In politics, he tends to the Sunni view; he holds that the imām ought to be elected, but he would allow this only in a time of calm and order, which al-Shahrastānī (op. cit., i, 93) considers a sign of hostility towards the caliphate of ʿĀlf (cf. al-Baḥḍādī, op. cit., 150; Ibn Ṣalīḥ, al-dīn, 271; Pellat, in St. Ist., xv, 39).

The basic points of the doctrine of al-Fuwātī are now known only from the heresiographers, but Ibn al-Nadīm attributes to him the following works: K. al-Maḥbūbī; K. al-Raḍd ʿalā l-ʾAsamm fi nafy al-ʿarāḥīt; K. ʿĀḥad al-Kūrān; K. al-Taʾwīhī; K. Diḥawwār al-Kāshāt; K. ʿĀḥad al-Baḥr; K. ʿĀḥad al-Ḥamn (sic); K. ʿĀḥad l-ʾBahrīyī; K. ʿĀḥad Abī l-Ḥudhayfī fi nafīʾ- Isḥāq.)

**Bibliography:** in the article; see also A. N. Nader, Le système philosophique des Muḥtaṣīs, Beirut 1956, index and bibliography there given. (Ch. Pellat)

**HĪSHĀM B. AL-HAKAM Abū Muḥammad, the most prominent representative of Imāmī kalām [q.v.] in the time of the Imāms ʿAlī ʿaṣfār al-Ṣādik and ʿAbd al-Maʿnī, ʿAbd al-Muṭṭāt. A client of the tribe of Kinda, he was born and raised in Wāṣit, but later lived in Kūfah among the Banū Šaybān. He is said to have been a ʿIjāmi before his conversion to Shiʿīsm by the Imām ʿAlī ʿaṣfār al-Ṣādik. Other accounts, however, point to his early association with representatives of dualist religions, notably with Abū Ṣhākīr al-Dayyānī. It is certain that after his conversion to Shiʿīsm he held disputations with Abū Ṣhākīr and
HISHAM B. AL-HAKAM 497

other dualists, and some of his conceptions of physics are evidently influenced by their doctrines. He became closely associated with Imám Dīya'ar and then with Músá al-Kāzīm, whom he, unlike many other Shi'i leaders, recognized immediately after Dīya'ar's death (148/765). In Kufa he owned a shop together with the Ibadī scholar ʿAbd Allāh b. Yāṣīd, with whom he maintained a close partnership all his life despite their doctrinal differences. In his later life Hīshām belonged to the circle of theologians who held disputations in the presence of ʿAlāyā b. Khálib al-Barmakī and apparently presided over some of the discussions. He lived and carried on his trade in al-Karkh. He was accused by some Shi'i's of having been partly responsible for the arrest of Músá al-Kāzīm. The Caliph Hārūn al-Rashīd is said to have taken an interest in his views and then, finding them dangerous, reacted by ordering the arrest of the imām. Hīshām was forced to go into hiding and died shortly afterwards in the year 199/714-5, or 199/814-5, or 200/815-6. Other accounts, which state that his death occurred either shortly after the downfall of the Barmakīs (186/803), or in the year 199/814-5, or during the caliphate of ʿAlī al-Maʾmūn, do not appear reliable. In any case, there are no reports indicating any activity of his during the imāmate of ʿAlī al-Riḍā (183-203/797-818).

The theory of the imāmate which Hīshām elaborated has remained at the basis of the Imāmī doctrine. In contrast to the other great theologians of his time, Hīshām did not accept the permanent need for a divinely guided imām who could act as the authoritative teacher of mankind in all religious matters. The imām thus was the legatee (wasfī) of the Prophet. He was infallible (maṣūm) in all his acts and words, but unlike the prophets did not receive divine messages (waṣy). In contrast to the later generally accepted Imāmī doctrine, Hīshām held that the prophet's divine messages could be criticized by divine messages, did not have to be infallible, and that Muhammad and the other prophets had, indeed, at time committed acts of disobedience. Mūhammad had installed ʿAlī as his legatee and lieutenant (khālīfa) by explicit appointment (nass). The whole community with only a few exceptions, such as al-Mikdād, ʿAlī b. Yazīd, Abu Bakr as S{idārā, and his followers in case of necessity were permitted or obliged to practice dissimulation (tabkiyya [g.v.]) concerning their religious beliefs. The imām was not expected to revolt against the existing illegal government, and rebellion without his authorization was unlawful. Hīshām defined God as a finite, three-dimensional body (qādim) and as radiant light. God had been in general. With the progressive adoption of Muṭazili theology, particularly from the 4th/10th century, Hīshām's school became extinct. Although many of his opinions were highly objectionable from the point of view of later Imāmī doctrine, the Imāmī attitude toward him has generally remained favorable.

Of Hīshām's many writings listed in the Fikrīs of al-Nādim (cited in the Encyclopaedia of Islam, II) ʿAlī b. Hāshimī, the last known writer of his time, His K. ʿIşıktaft al-nāṣī fi 'l-imāma was probably used by al-Ḥasan b. Mūsā al-Nawbakhšī as the basis of his own K. Fīrāq al-gaša. Hīshām's discussions with other theologians and heretics are frequently quoted in both Sunni and Shi'i works.

Encyclopaedia of Islam, III
HISHAM B. AL-ḤAKAM — HIṢN

The detailed forms, and the evolution, of military architecture in the Muslim West have been dealt with in the article muraqqa. In this article we shall see how the Muslim West solved the major problems of fortification, and how the various types of fortified works—town enceintes, isolated castles, fortresses of high ground—were laid out and organized; we shall see also how it overcame the difficulties of flanking, of gates, and, from the 8th/14th century, of modifications for guns.

Town enceintes. Since the period of the Late Empire, unfortified towns had become rare in the western world. Because of unrest caused by invasions, urban centres had been fortified with ramparts, thereby in many cases reducing their original extent. However, many cities in the Berber country which were primarily agricultural markets remained walled.

The disturbed history of the Muslim dynasties, especially in the Berber country, led to the fortification of towns or the maintenance of their walls in good repair. From the very beginning dynamic foundations always provided for a rampart. The need for a fortified wall round every town of any size led to the maintenance of the Late Empire practice, perforce universal in the early Middle Ages.

The plan of the enceinte. In Spain and Africa Muslim walls sometimes adopted the general trace of a former enceinte, making use of the bases and other parts of it, as at Karsuma and at Cáceres. The prosperity of certain state or provincial capitals often led, in the Middle Ages, to the enlargement of town walls to take in important suburbs.

On level ground, town enceintes were often modelled on the trace of a pre-existent settlement. In new foundations they are more regular in shape, with long alignments of ramparts. On uneven sites modification to suit the terrain was effected very simply: the principle was to use towers sparingly while the curtain wall ran along rocky outcrops, following them as closely as possible; salients and marked re-entrants are rare. Most enceintes are in the form of an irregular, but convex, polygon.

In many cases, however, it was necessary that the nearest surviving parts of high ground should have commanded the ramparts, should also be held. The town wall of Granada, in the 5th/11th century, extended as far as two small fortresses guarding the slopes and the summit of the Alhambra hill. At Shatiba (Jativa) ramparts ran up to two small fortresses on the crests of high ground dominating the town from above. It was equally important to ensure protection against access to watercourses: walls terminating in a bastion ran down to the river at Badajo (Baḥlayaws). At Seville such a terminal tower has become, as the Golden Tower, a powerful bastion.

The kasaba, the residence of the ruler or his government, usually occupies the higher part of the town, from which it is separated by a rampart; but if its site is distinct from that of the town settlement, then walls join it to two or more ramparts. At Malaga, where the Alcazaba was in the centre of the city, it had its own enceinte, and the town was connected by long ramparts to the outer citadel of Gibralfaro; similarly at Jaen (Diyyayn). When the kasaba achieved the dimensions of a governmental town, it would have its own separate system of fortification, whether or not in contact with the residential and commercial quarters. The Alhambra was distinctly separated from Granada, as was Fās al-Djadid from Fās al-Bāli. On the other hand, the Almohad kasaba at Marrākush, and the palaces of Mawlay Ismāʾil at Meknès, while partly constituting a fortified whole, are in contact with the town itself. In every case, two fortified systems are either close to each other or are juxtaposed.

Certain kasabas were built to house garrisons to keep under surveillance a town where there was some apprehension of disturbances. Such was the case with the "Conventional" of Marīda, built by ʿAbd al-Rahmān II. In the 10th/16th century the Saʿīdids kept such a watch over Fez by the north and south burgis.

Plans of the enceinte. — The double wall enclosing a narrow corridor is to be found at Madīnāt al-Zāhrah. Long passages between high ramparts are...
frequent in the palaces of Mawlay Isma'il at Meknès. The outer wall, well known in Byzantine fortification, seems not to have been employed in Muslim fortresses in the early Middle Ages. It became almost the rule in the walls of Spanish fortresses from the 5th/11th century. It existed also at al-Mahdiyya. In the Maghrib it remained rare. However, it is found at Tlemcen and Taza, and a continuous outer wall surrounded the ramparts of Fās al-Djālid. These outer walls, of variable height, were generally furnished with towers. The ditch was common from the beginning of the 5th/11th century in Spanish Muslim fortifications. Elsewhere it remained very exceptional. These were generally dry ditches, designed to stop cavalry and to make sapping operations more difficult. In dry and often broken country the ditch could not be, as in flat and wet countries, the best of defences.

Isolated castles. — The functions of isolated castles were very variable. A certain number were frontier castles marking out the battlefronts: so in Muslim Spain, from the end of the 3rd/9th century, where the frontier long remained on the line of the Duero and was until the end of the kingdom of Granada guarded by a continuous line of fortresses on the west and north, which were subject to Castilian attacks. Under the reyes de taifas the rivalries among the local amirs also led to the construction of lines of fortresses. In the Berber country there was hardly any definite frontier between the Muslim states; it was considered sufficient to fortify only those places possession of which was likely to be disputed; however, the ʿAbd al-Wādīids did set up the Soummam line against the Ḥafṣids. These frontier castles could not, in wars in which rapid destructive and pillaging expeditions were the commonest operations, prevent completely the passage of enemy troops. But although they allowed the razzias to pass, they required, for any lasting conquest, long and costly siege operations. They were often, especially in the Granada period, built on scarped peaks; they could not block the entry routes, but they were ideal for keeping the country under surveillance and were difficult to take by storm.

In Spain, in the rich plains exposed to enemy raids, it was to be found castles of refuge, usually dominating a village. The Naṣrids increased their number in the richest parts of the country, which were menaced by Castilian incursions.

On the north African coasts, in particular those of Tunisia and to a less extent the Atlantic coast, ribāḥīs [q.v.] were built, i.e., fortified enclosures where pious Muslims, while leading a very strict religious life, could prepare for the holy war. The Ifrikiyyan ribāḥīs are doubtless explained by Sicilian expeditions of conquest; there was then no Christian danger threatening the Tunisian coasts. On the other hand, the ribāḥīs of the Atlantic coast of Morocco and certain Andalusian ribāḥīs seem indeed to have originated from fear of Norman invasions. But it seems that there was never any warfare with an outside enemy to turn these castles into such castles; they were not true maritime fortifications, but gathering places for soldiers of the faith, afterwards becoming rather centres of ascetic, even mystic, life. Certain Moroccan ribāḥīs, such as the first ḥasaba of the Ūḏāya at Rabāṭ and the enceinte of Tīt, seem to have guarded the northern and southern limits of the heretic confederation of the Barghawta. Under the Almohads, Rabāṭ acquired the dimensions of a city through the activities of the third caliph Abū Yusuf Yaḥyā al-Manṣūr, and was the gathering place for warriors whose destination was Spain.

Sometimes castles were grouped together or formed a line to keep watch over countries where rebellion was threatening, or to block the routes of parties of open rebels. Thus, the Almoravids guarded the Rif by the strongholds of Bāni Tawd and the castle of Amergo. When the Almohad revolt had reached the great mass of the Moroccan Atlas, they built castles for obstructing the enemy on the foothills or at the mouth of a mountain defile. Mawlay Isma'il, faced with Berber dissensions in the Middle Atlas region and the Rif, also built lines of ḥasabas.

This same sovereign engaged in the military occupation of his own states, and built, even in the subjugated plains, castles where his garrison troops, the ʿabād, were quartered. Their main rôle was to raise taxes, both in money and in kind. The enceintes of these castles contain, besides the governor's house and a mosque, great silos. There were numerous castles built to ensure the security of the major trade routes, to accommodate travellers at the end of a day's journey, and sometimes also to provide for the relay stages of a system of official couriers [see Barid], where a fortified town could not fulfill the functions of the post stations. In the Berber country there were so marked out by castles built a day's stage apart. Sometimes secondary fortresses and watch-towers guarded mountain defiles.

Naturally, bridges over large rivers were under the protection of a fortress, often an important one. Thus the Conventual of Marïda guarded the Guadiana crossing as well as the town. Almost all the bridges of the Tagus were guarded by a castle or at least by a tower.

The plan of the castle. — The Roman and Byzantine tradition is often continued in the plans of these castles, and also sometimes those of the Umayyad castles of Syria, themselves strongly indebted to the castella of Rome and Byzantium. On flat ground the plan of the fortresses is always very regular, square or oblong, with angle bastions and also sometimes those of the Barghawta. The very geometric forms of ancient fortification were faithfully followed in Moroccan official buildings, and also in Berber architecture.

But many castles were built on hill-tops or on rocky outcrops. In such cases modification to suit the terrain was necessary. The perimeter of the castle is very variable, in size as well as shape. Sometimes above escarpments the curtain-wall needed no towers. In very mountainous country the necessity of finding firm foundations resulted in an irregular spacing of the towers. Abrupt changes of direction are frequent, the trace often appearing as a zigzag. The double enceinte scarcely appears at all except in Naṣrid fortification under Christian influence, and the outer wall remains very rare.

It is exceptional for a Muslim castle to include a reduit or a donjon. However, the ribāḥīs of Ifrikiya often have one, and the Almohad ribāḥī of Odaya at Rabat and the enceinte of Tit also has one. At the Kaša of the Banū Ḥammād the great bastion of the mandar formed a sort of reduit. In Naṣrid fortification the use of the donjon, sometimes surrounded by a reduit, was introduced in the 7th/13th century in imitation of Christian castles. But in the 8th/14th and 9th/15th centuries the Naṣrid castles returned more and more to the classical forms of Hispano-Moorish fortification.

Fortified ports and arsenals. — These were
both known to western Islam. The port of Tandja Baliya, to the east of Tangier, might date from the Muslim period. It included an interior dock, now filled with sand, and defended by a bastioned enceinte. The entry to and exit from the port were by two large gates flanked by towers; but of this complex there are now only remains at ground level. On the other hand, the maritime arsenal of Salé, now filled in, preserves its two gates with their towers. This arsenal occupied one of the corners of the town enceinte. From the 4th/10th century a similar solution of the problem had been adopted at al-Mahdiyya. The enceinte embodied an interior port, the entrance to which was defended by two towers between which a chain could be stretched. A large arch of carved stone gave access to the port of Ilunayn, built in the 8th/14th century; likewise at the port or arsenal of Bougie (Bidjaya) and at the arsenal of Malaga. The great arch under which shipping passed would seem to belong to the Spanish tradition.

Building material. — Ashlar often persisted in the Aghlabid fortification of Ifrikiya. It was often used for the entire curtain wall, and always for the more important works. The rubble walls themselves were bonded with dressed stone. The Umayyad fortifications of Spain, in its most beautiful works, used bonding of regularly alternating headers and stretchers. But in African fortification, up to the 8th/12th century, rubble was by far the most frequently used material. It was often bonded with dressed stone, and also on many occasions trimmed and bedded in regular courses, sometimes even with alternation of thick and thin beds. In Almoravid fortresses the joints which surround the large rubble stones are dotted with small black pebbles.

In Spain rubble was often used in the building of secondary fortresses, sometimes with lacing courses and snecks of brick; this last use is particularly frequent in the Toledo school. Sometimes false joints extend the angle bonding courses into the rubble facing. In the Našrid period imitation of Christian fortresses increased the use of rubble.

Large fortifications of brick are rare in the Muslim west. However, the ramparts of Raywān were from the beginning built of brick. Those of Baṣra [q.v.], in the north of Mesopotamia, which had been adopted at al-Mahdiyya, were not used throughout buildings except in comparatively late Mudéjar work. But in gates of ashlar or rubble, whether combined with concrete or not, brick was generally used for certain arches and for vaults, sometimes even for façades of doorways where the basic framework was constructed entirely of concrete.

From the 4th/10th century, the building material most frequently used in Spanish fortresses was a concrete made from a clayey or pebbly soil, more or less rich in lime, tamped in shutterings about 80 cm. thick. This method came to the Maghrib in the 6th/12th century and persisted until the 20th. The use of concrete brought about a simplification of forms, and thus came the preeminence of the rectangular tower. Brick was associated with it for arches and their jambs, for vaults, and for the façades of doorways.

Problems of flanking. — It is very rare for the projections and re-entrants of the curtain wall to be in themselves sufficient to provide good flanking. Hence it was necessary to rely on towers and bastions flanking the enceinte wall. Bastions on enceintes on flat ground are never spaced more than 30 m. apart, in order to leave between two towers no area uncovered by missiles. But towers could be closer together than this. In Spain in the 4th/10th and 5th/11th centuries towers of small dimensions and very close together were often used.

The circular or almost circular tower is met with only rarely: this shows Christian influence. The semicircular tower was employed in Aghlabid fortification, where it marks an eastern influence: it is found in certain Umayyad castles in Syria, and it is common in 'Abbasid building. Most frequently, in Spain as in north Africa, the oblong tower, of greater length than projection, is used. Towers set en masse are rare. Bastions of irregular quadrilateral form are sometimes found at the corners of enceintes. The polygonal bastion appears in Spain in the 6th/12th century, but was little used in the Maghrib. Altogether Muslim architecture in the west shows little variety in the form of the bastions. In most of the Hispano-Moorish enceintes, series of similar towers are spaced along the line of curtain walls.

In the 7th/13th century Muslim Spain invented a new tower, the albarrana or exterior tower, which is detached from and in front of the curtain wall, to which it is connected by a projecting element of wall. The tower and its base are connected with the chemin-de-ronde of the rampart. In such a case the outer wall of the defences would pass round the foot of the albarrana. Sometimes also the albarrana is thrown far forward, at the end of a section of the curtain wall with a double parapet. This innovation, later adopted often in Mudéjar fortification, does not seem to have reached the Maghrib.

On the whole these towers contain only a minimum of fittings. Sometimes they have a plain base and a crenellated platform, sometimes an interior room at the level of the chemin-de-ronde and an upper platform consisting of a floor carried on joists, to which a ladder gives access. However, from the 6th/12th century together with the other forms of the Hispano-Moorish fortress, and in the 7th/13th century to Tunisia. Some of these gates have an open passage instead of a central vaulted hall. These gates open sometimes between two towers, sometimes on the flank of a massive bastion. In the 6th/12th century gateways with a double or treble bend entrance appear under the Almohad caliphs. The interior way consists of a series of vaulted halls almost always broken by an open passage. The leaves of the entry and exit arches are generally supported by two pilasters which support the archways.

All these entrances with angle passages open between two towers. In the Almohad period towers and façade are constructed in stone and covered with a richly carved decoration. In the Marinid and Našrid entrances brick replaces stone, and the decoration of the façades is much more restrained.

The thick mass of construction which forms these
doorsways projects behind the inner face of the rampart; only the two towers which flank the entrance archway stand out in front of the curtain wall, not greatly larger in dimensions than the rest of the towers. The great Almohad entrances, whose value is as much decorative as functional, are among the most perfect creations of Hispano-Moorish architecture; they are probably among the most beautiful and certainly the most rich of the whole of Islam.

The doorway with a long corridor, of oriental type, is found in the 10th-11th century only at the principal entry of the Fāṭimid town of al-Mahdiyya, the Sakīfa al-Kabīlī. This form does not appear to have had any imitation in the Muslim West.

The portcullis is rare in Muslim Spain, and has never been reported from the Maghrib. The simple bent entrance remained in use at all periods, from Spain to Ifriqiyya.

Modification for cannon. — The Nasrids did no more than furnish low platforms as cannon emplacements at the feet of certain towers and certain doorways of the Alhambra. In Morocco the Saʿdīsultans, in the 10th-11th century, made use of two systems. In the enceinte of the ṣabāja of Marrākush, which was likely to be attacked only by tribes who did not possess cannon, it was sufficient for them to enlarge the dimensions of the oblong towers flanking the curtain wall in order to house a small mortar in the defensive chamber of each. Elsewhere, at the Bastyūn of Taza and at the north and south burdījes of Fez, they imitated (thanks no doubt to information from renegades) European fortresses with vaulted casemates, with thick and often battered walls, sometimes even of a star-shaped plan. These imitations of European fortresses were in use in all the coastal regions of north Africa, in Morocco as well as in the two Ottoman provinces, where European reprisals were to be feared. They were intended to do no more than stand up to a bombardment from the sea and to reply to it. These works were set fairly high up; low-level fortification, in the Vauban manner, was never employed. The defences were simple enough, merely a wall and a ditch with a ramp of earth forming a counterscarp.

Beside these more or less modern fortresses, the old style of fortification of the Middle Ages, under its most simple forms, was continued throughout the Berber country.

Thus the Muslim West remained faithful to the tradition of the Later Empire and to Byzantium. The only additions to this tradition by the creation of new forms were Spanish. The alburraña tower, and the entrance with a series of bends and with an open passage, appeared in Muslim Spain. Influences from the Christian world were unable to stimulate Nasrid fortification. The more or less skilful imitations of European fortifications which were erected on the Berber coasts in the modern period did not prevent north African fortification from remaining generally archaic and sketchy.

Bibliography: There is no general work dealing with the military architecture of the Muslim West. Numerous, by country and by period, will be found in: H. Terrasse, L'art hispano-mauresque des origines au XIlle siècle, Paris 1932; G. Marçais, L'architecture musulmane d'Occident, Paris 1954; M. Gómez Moreno, Arte drabe español hasta los Almohades, Arte mudóbrave, Madrid 1951 (Ars Hispaniae, iii); L. Torres Balbás, Arte almohade, Arte nazari, Arte mudéjar, Madrid 1949 (Ars Hispaniae, iv); idem, Arte hispano-

musulmán hasta la caída del Califato de Córdoba, Madrid 1957. (H. Terrasse)

ii.—IRAN

Fortified sites of the mediaeval period are extremely numerous in Iran. According to the author of the Farsnāma (G. Le Strange, Description of the province of Fars in Persia, 74) there were more than 70 notable castles in the Province of Fars alone, of which 20 are described in the text. Yet despite this wealth of remains, the military architecture of Muslim Iran has been little studied, no doubt because the poor preservation of most of the structures of this period makes them uninformative. Taking advantage of the mountainous terrain, many of these fortresses depended more for their protection on a strong natural position than on man-made fortifications. For example, according to Yākūt, iii, 490, the fortress of Tāk in Tabaristān, the stronghold of the Isāḥab Khurshid (1207/738-1249/966) was surrounded by unscaleable mountains, and entered only by a long tunnel. The entrance was closed by a stone so large that 50 men were required to move it. Inside the fortress was a stream of water. Tāk was regarded as impregnable, but eventually capitulated to the Arabs on account of an outbreak of plague. Awliyaʿ Allāh Āmūlī, Tarīkh-i Rāyān, 45, states that in later years Tāk was known as Ṭayyish Kargīl Dīz, and that it stood to the south of Sārī, beyond the gorge of Kūlā.

For such hill-top castles a reliable water-supply was an important need. Thus a few possessed springs, or wells of water—as in the case of the Ismāʿīlī castle of Girdkūh, near Damghān, which assumed major importance only after the appearance of water in a previously dry well, as the result of an earthquake. However, the majority had to depend on water stored in cisterns, the remains of which are often visible at the present day. At Bahmandis, some 50 miles south of Shāhreza in Isfahan Province, the castle crowned a precipitous rocky bluff in the centre of a great plain. The only entrance was by crawling through a crevice between two rocks, and water was stored in two large cisterns outside, and below, the castle. At this site an Arabic inscription, apparently the earliest known in Iran, records the construction of the fortifications by Khāzīn b. Muḥammad in 265/878-9.

In the mountains, fortifications had generally to be adapted to the lie of the ground, but those in the plains more often had a geometrical ground-plan. In the Gurgān plain a characteristic layout consists of a square perimeter with a smaller square keep in one corner (cf. E. F. Schmidt, Flights over ancient cities of Iran, Pl. 61, 67 and 68). To judge by the example at the site of the mediaeval town of Tamghišat Kharābābāghar in Gurgān Province, such fortifications may date from the eighth or ninth centuries A.D. Also in Gurgān Province are linear systems of fortification designed to guard against incursions from the steppe. One of these is the famous Sadd-i Iskan-dar ("Alexander's Barrier"), whilst a lesser wall, situated near Kharābābāghar, consisted of a baked-brick curtain wall running along the crest of an earthen rampart, and strengthened by semi-circular or semi-elliptical towers. Both these lines of defence appear to have been built by the Sāsānid king Khosrow I (A.D. 531-579) before the advent of Islam.

Amongst the best-studied Islamic fortresses of Iran are the castles of the Ismāʿīlī sect in the Alburz range, for example Alāmūt [q.v.], Lamasar and Maymūnīz to the north of Kāzwīn; and Girdkūh, near Damghān. These strongholds are sited on precipi-
HİŚN

tous crags, and have ingenious arrangements for water-supply. At Maymundiz, recently located near Shams Kilaya, off the Alamut Valley, a spring was found on the summit of the castle spur, and three more on the side of the feature; whilst a stream had been diverted to bring water to the foot of the castle, details all reported by Djuwayni (tr. J. A. Boyle, ii, 627). At Lamassar, there is a catchment area with cisterns on the summit of the rock. In addition, Willey describes a tunnel 600 yards long leading to a tower which overhangs the river Naina Rud. From this tower water could be drawn up out of the river with buckets. Ivanow, however, gives a slightly different description of this feature.

All the major cities of Iran were in the middle ages protected by walls, few of which survive to the present day. Pope describes the walls of Yazd, still partly extant. They are of mud-brick, guarded by circular bastions, and provided with machicolations (Persian sang-ndas), and an entrance-tower which performs the function of a barbican. The elaborate mud-brick fortifications of the citadel also survive at Bam.

As an element in place-names Hıśn is somewhat rare in Iran. The Arab geographers refer to a settlement called Hıśn Mahdī on the Kārūn below Ahwāz, but the site has not been identified in modern times. Hıśn al-Tāk in Āfghān Sīstān (not to be confused with the previously-mentioned castle of Tāk in Tabaristān) was a powerful fortress situated about 22 miles south of Zarandj (modern Nād 'Allī). Le Strange (Eastern Caliphate, 343) was in error in stating that this site lay north of Zarandj. It is correctly identified by G. P. Tate, Seistan, a memoir of the history, topography, ruins and people of the country, Calcutta 1910-12, 225, with the group of ruins known at the present day as Sar-o-tar (or Tar-o-sar), which stand on the high plain overlooking the valley of the Helmand. The site was investigated by J. Hackin in 1936, and consists of a massive mud-brick keep surrounded by two outer perimeters. A particular feature of these fortifications is the use of the bent entrance. It was at Tāk that the Saffārid Khalaf b. Ahmad (352/963-393/1002) withstood a siege by his rebellious son Tāhir, and subsequently prepared to receive the onslaught of Mahmūd of Ghāna, to whom, however, he finally surrendered on terms.

### III.—CENTRAL ASIA

Light is thrown on the long development of mud-brick fortification in Central Asia by the researches of S. P. Tolstov in the territories of ancient Khurāzam. The earliest fortified sites are the so-called 'wall-dwelling settlements' of about the 6th century B.C., in which the living-quarters are formed by a series of vaulted corridors extending along the inner face of the wall. The ground-plan of the fortifications is usually rectangular, as at the site of Kalaly-Gyr, and the walls are provided with numerous spear-shaped arrow-slits, and occasional square towers or salients for enfilade fire. The main purpose of these enclosures appears to have been for the safeguarding of flocks and herds, since the internal court-yards were not built up with houses.

Fortresses of considerably greater sophistication were, however, developed in the 3rd and 2nd centuries B.C., when Chorasmia (Khurāzam) came to constitute an independent state. There was some variation in the ground-plans at this period. Thus at Koi-Krylgan-Kala there was a circular perimeter with semi-circular towers, enclosing a circular keep. This whole lay-out is reminiscent of fortifications of the Parthian period in Iran, for example the cities of Dārbāghār and Gūr (Fīruzshābd) in Fars. At Džanbas Kal'a the more traditional rectangular ground-plan is used, without flanking towers but once more well-provided with arrow-slits, and with specially-constructed oblique arrow-slits to protect the corners of the wall. The most remarkable feature of this site is however an outwork which screens the gate, and forms a species of bent entrance. Creswell argued from its occurrence at Džanbas Kal'a that this refinement of fortification was first developed in Central Asia, reaching the Muslim and Mediterranean worlds only in the eighth century A.D.

In the second and third centuries A.D. under the local dynasty of the Afrighids a new type of fortification became general in Khurāzam. The main feature in this case, within one or two rectangular perimeters with rounded towers, was a massive square central keep with battered walls, standing on a solid base of mud-brick, and entered from the perimeter gate-house by a bridge at the first storey. These fortifications are interpreted by Tolstov as the residence of a local nobility, the dekhāns. Similar principles of fortification persisted into the Muslim period in Central Asia. Ground-plans remained basically rectangular, but there was a tendency to adapt the lay-out to the contours of the ground. Where extensions were required, it became customary to enlarge the perimeter here or there on an ad hoc basis, rather than to adhere throughout to a predetermined geometrical plan. Powerful flanking towers remained an important feature of the defences, and gates were furnished with semicircular outworks having a single entrance so arranged as to oblige the attackers to present their unshielded sides to the missiles of the defenders. It was in the 12th and 13th centuries that the art of fortification reached its fullest development with the massive structures of the Khurāzamshāhs.

### IV.—INDONESIA AND MALAYSIA

In the sense in which historians of Muslim architecture understand the word hıśn, it is absent from Indonesia and Malaysia. Though these countries, and their several components, were converted to Islam at various times from the end of the 7th/13th century onwards, the technique of fortification and defence had already been formed by local requirements of site, materials and tactics rather than by conventional architectural principles.

Thus, though the Javanese, for instance, built superb and very large stone temples from as early as the 10th century, by the time Islam reached them 500-600 years later, their society was already based on maritime and coastal trade rather than war on
land. Their forts, and others in Sumatra, Malay and Borneo, were usually sited to control river-mouths and junctions, or in defence against pirates. They were often occupied only temporarily—for a few days or weeks at a time—and usually consisted of earth or turf walls and ramparts strengthened with timber and surrounded by ditches, wooden stockades or calthrops. Sometimes stone, locally-made brick and rubble were used, but timber was the commonest material, apart from earth, as it was everywhere available in quantity, while stone was relatively rare.

These structures are called either kota (from Sanskrit) or kubu in both Indonesian and Malay. Both words mean ‘fort’, the former type being larger and more permanent than the latter and more likely to be made of stone.

Some forts mounted cannon from before 1500 A.D. but exchange of shot was often a ritual performance containing little rancour: real fighting was by sword, spear and kōris at close quarters and in conditions where fortification was irrelevant. In these circumstances, and in terrain often thickly covered with jungle, the Middle Eastern style of military architecture deriving from long-range archery, sieges and mounted sorties was accordingly never called into existence.

The defences of royal cities were grander and more substantial, according to early travellers’ accounts, and included towers and great gates but, so far as is known, there was nothing specifically Islamic about them.

(H. C. Bottoms)

HIŞN AL-ÁKRÁD ("Fortress of the Kurds"), a castle in Syria known in Europe by the name of "Crac des Chevaliers". The castle crowns a rounded and almost isolated summit, about 300 m. to the north-west of Hisn. Situated like an eagle’s nest at a height of 750 m. on a spur flanked by two ravines on the north-east and north-west, it overlooks from a height of more than 300 m. the plain of the Bukáyáa and the eastern coastal plain of Tripoli.

The first Franks period, 503-37/1110-42. During the first Crusade, Raymond of Saint-Gilles, who had just captured Alp Arslan marched from Aleppo and besieged the castle of Munaytira and Akkár, which is snow-capped for most of the year. Shortly afterwards, at the end of 503/June 1099, the Franks were no make no attempts against Hisn al-Ákrád, which was compelled to pay them tribute. Shortly afterwards, at the end of 503/June mo, the Franks were no make no attempts against Hisn al-Ákrád, which was compelled to pay them tribute.

The second Franks period, 537-670/1142-1271. The atabeg Zangi [q.v.] had just captured the castle; the damage was quickly repaired by Raymond and the villagers of the neighbourhood remained under Frankish protection. In Radjjab 552/August-September 1157 a violent earthquake shook the castle; the damage was quickly repaired by Raymond of Le Puy, Grand Master of the Hospitallers, who had received a handsome donation from Wadišlas II,
king of Bohemia. It was the old Kurd castle, enlarged by the castellan, on which Nur al-Din [q.v.] set eyes in 557/1163 before being obliged to flee towards the lake of Hims in the siesta hour. In 565/1170 the place suffered severely from a second earthquake, as a result of which important repair works were undertaken, which were sufficiently advanced in 564/1170 to resist Şâlîh al-Dîn [q.v.]. Further earthquakes in 597/1201 and 598/1202 made extensive repairs necessary, and the general appearance of the castle dates from this period. The first thirty years of the 7th/i3th century were the heyday of Hisn al-Akrâd. In 613/1207 the Knights repulsed an attack by al-Malîk al-Âdîl Abû Bakr; in 624/1218, during the fifth Crusade, the army of al-Malîk al-Alqârî came from Aleppo to camp beneath it. In the same year King Andrew II of Hungary made an assignment of revenue for the upkeep of the fortress where he had been a guest. Frederick II excluded the Hospitallers and the Crac from the peace treaty concluded in Râbi‘ I 626/February 1229 with the Ayyûbid sultan al-Malîk al-Kâmil [q.v.]; the latter tried in vain to seize the place in Dûmâdâ II 626/ May 1229. At this time the masters of Hisn al-Akrâd exacted a tribute of 4,000 dinars from the principality of Hamât, 800 dinars from the canton of Abû Kudays, and 1,200 dinars and 100 mudûr of wheat and barley from the Ismâ‘îlî territory (bi‘dâd al-da‘wâ). They had to forgo this income in 665/1266 after the signing of a ten years’ peace treaty with Baybars [q.v.]; (Maqrizi, ed. Quatremère, Hist. Maml., 1, 2, 32, 42).

The Crac, which in normal times had a garrison of some sixty Knights of St. John, was used as an assembly point for the expeditions which were often made against Hamât. In 630/1233 more than 2000 combatants gathered at the castle: 100 Knights of Cyprus, 80 of Jerusalem, 30 of Antioch, and 100 Hospitallers, as well as 400 sergeants and 1500 infantrymen.

It was after the failure of the seventh Crusade at al-Manṣûra [q.v.] in 647/1249 and the departure of Saint Louis that the first difficulties began, since there were no further reinforcements coming from Europe. Moreover, the Muslims were gaining in strength; at the end of 649/beginning of 1252 a Turkoman army from Shâyaz [q.v.] invaded the region, although its attack on Hisn al-Akrâd failed. In 658/1260, after the Muslim victory over the Mongols at ‘Ayn Djalut [q.v.], a new champion of Islam emerged, Baybars I [q.v.]. From this time onward disaster followed disaster for the Christians. In Dûmâdâ II 668/January 1270 the sultan sent out a reconnaissance party of 40 cavalry; in Safar 669/September-October 1270, learning of the death of Saint Louis and being no longer threatened from the west, he led a powerful expedition into Syria. Baybars appeared before Hisn al-Akrâd; on 19 Râdjâb 669/March 1271 he occupied the forward defences and battered the outer enceinte; on the 21st, after the arrival of reinforcements from Hamât, he captured the first barbican (bâshâra); ten days later, on 1 Shahinân/15 March, the second barbican, at the elbow of the access-ramp, also fell, and finally, on 15 Shahinân/29 March, an entry was forced into the central courtyard and the besieged defenders withdrew into the donjon. Baybars attacked with ballistas; on 25 Shahinân/8 April the keep surrendered, and the Knights were allowed to withdraw, under safe-conduct, to Tripoli. The spurious letter from the Grand Master of the Order calling on the Knights to surrender, a letter which was said to have been forged.
by Baybars, seems to be a legend given currency by al-Nuwayri. Baybars himself directed the repair work, and left the castle on 15 Ramaḍān/27 April 680/1281 under the supervision of Ramūr Din Gūrymān, his governor. In 680/1281, after the capture of Tripoli by Kalāwān [q.v.], Hisn al-Akrād, mentioned by al-ʿUmarā as still being an important fortress, lost its importance, but a garrison was kept there to guard against any attack from Europe or Cyprus on Tarṭūs or Tripoli.

Being remote from the major communication routes, the region was sheltered from attack, and was untouched by the invasion of Ṭimūr Lang [q.v.] in 803/1401 just as it was by the Ottoman conquest more than a century later.

In 859, at the time of Rey's first journey, the castle was still almost intact, but van Berchem records that in 865 it was already occupied by a village. In November 1935 Hisn al-Akrād was ceded to France by the ʿAlawi state, the village was evacuated, and restoration work was begun in earnest. In 1947 the restored castle was returned by France to Syria. Today it is one of the wonders of mediaeval military art, and its present appearance recalls what it was like seven centuries ago.

Description. The general outline of the castle, which occupies a surface area of two and a half hectares (just over six acres), is in the shape of a trapezium of which the smaller base is to the north and the oblique sides to the eastern and western fronts. The outer enceinte broadens from north to south. The main entrance is on the east front in an oblong salient in the outer enceinte; this enceinte, the layout of which is dictated by the terrain, includes round or square towers at intervals according to the exigencies of defence. The east front has three oblong salients protected by brattices rebuilt by the Muslims in the 7th/13th century. The north front includes a postern and is protected by two square towers, the salient parts of which were rounded off at the time of Baybars. Five Frankish towers, dating from the end of the 6th/12th century, are connected by curtain walls which, retaining their crenellated chemin-de-ronde and their brattices, bring a fine architectural beauty to the western front. The south front, where there are no natural defences, was protected only by a vast front extending southwards by three ditches, of which the trace remains. The powerful rampart of the Frankish period, behind which there extends a hall sixty metres in length, was reinforced in the Muslim period by a rebuilding of the great angle towers and by the construction in the middle of the wall of a huge square structure, the work of Baybars.

An arched ramp, in two sections, leads from the main entrance and is defended at its elbow as well as at its two ends; it gives access either to the entrance leading to the interior court or to the terreplein between the two enceintes. This system of a double concentric enceinte seems to have been borrowed from the Byzantine tradition. The inner enceinte corresponds to the ramparts of the original Frankish fortress which, between 1120 and 1142, had replaced the small Muslim castle of the 5th/11th century; it enclosed a small hill and was originally furnished with square towers, some of which were later rebuilt as round towers. This enceinte, which commands all the exterior defences, may be described as follows: the east front has a square tower defending the entrance and a salient which corresponds with the chevet of the chapel. This salient and the neighbouring curtains are in a rusticated bond of moderate size, which indicates the oldest parts of the construction. At the north-west corner a large square tower forms a rectangular salient, the face of which carries three machicolations on large arches. Machicolation had been known in the east since Greco-Roman times, as the brattices of Kasr al-Ḥayr al-Gharbi [q.v.] show, although this system of defence spread in Europe only after the end of the 6th/12th century. The small north side of the salient has a side entrance which is bent, on the classical Byzantine model, to the right, to allow better protection for defenders carrying shields. The west front has only one single tower. On the south front, which because of the nature of the terrain is the most exposed, there is an impressive group of three tall towers scarfed into the batter and joined by two curtains; this formidable redoubt was used as a donjon. The south-west tower, the hall of which was decorated with fine sculpture, is known as the "Master's Lodging". The central tower was the best defended, its wall, over 6 metres thick, being pierced by two long embrasures. Finally, to the south-east, beside the corner tower, there stands between the two enceintes a pentagonal structure, rebuilt by Baybars, which was a control-point for intercommunication between the two enceintes, and which overlooks the great moat and commands the access ramp to the interior court. The inner enceinte underwent modifications at the beginning of the 7th/13th century after the earthworks which had shaken the fortress. A massive battered embankment was built up against the wall, which in addition to its rôle as a buttress provided resistance against further seismic shock. The round towers are set in this powerful revetment, whilst at the foot of the original enceinte, which can be recognized by the nature of its rusticated stonework, runs a narrow corridor pierced by loopholes. On the south front a great masonry reservoir (birka) fed by a small aqueduct and serving for men and animals, affords additional protection between the two enceintes.

All the works of the interior defences and the guard-rooms, which are equipped with latrines and drains, date from the Frankish period. They are situated in the wall, and open out onto a vast central courtyard which is reached by a ramp in the north front. The central courtyard is occupied by vaulted store-rooms, the roofs of which form a vast terrace. Opposite the entrance, to the west, there is a large council-room with an elegant portico of pointed arches which are "a gem of Rayonnant Gothic art". To the north is a Romanesque chapel, barrel-vaulted and with a semi-circular apse, dating from the end of the 6th/12th century. It was converted into a mosque by Baybars, and has three miḥrābs, one of which is in the apse, and a massive stone minbar.

All daily necessities were available in the interior of the enceinte. Rain-water was led into cisterns through earthenware channels, and supplemented the well in the central courtyard. In the southern part of the outer enceinte large stapled granaries were built, 60 m. long by 9 m. wide, which also served to shelter cattle during sieges. The north-west tower had a windmill. Barns and storehouses for reserve rations, silos for grain, cellars for oil and wine, millstones, wine-presses, and an oven provided for the victualling of the garrison under any circumstances.

Lower down the hill a terraced village called Hisn houses a farming community which cultivates the surrounding land and depends on cereal-crops, pasture-lands, fruit-trees and vegetables. Hisn, which was enclosed by a wall with two gates in the
HIŚN AL-kräd — HIŚN KAYFA

Middle Ages, is divided into two quarters, the Harat al-Turkman to the south, and the Karat al-Baybars. The minaret dates from the 8th/i4th century, probably from the time of the governor Sara'ya. In the latter is the principal mosque, a former church which was adapted for Islam by the tombs of two grooms who was killed at his side.

(N. ELISSÉEFF)

**HIȘN AL-GHURAB**, name ("Crow Castle") of a mountain bearing on its summit the ruins of an ancient castle, situated on the southern coast of Arabia in the territory of the Wâhîdî [v.s.] sultanate at the eastern end of the South Arabian Federation, near the small town of Bir 'All (14° N., 48° 19' E.). The mountain, which is of volcanic origin like several small islands in its vicinity and has its name because of its conspicuous blackish brown colour, is connected with the mainland, as it was already in the 1st century A.D., by a low strip of sandy ground. In A.D. 1938, in the laternomer of the principal mosque, a south-west a small bay, in the north-east corner of which lies the trade port Bir 'All, a walled place of modest dimensions. This bay offers the best harbour because of its conspicuous blackish brown colour, is now generally accepted that the site of Cane is at *Hüsên al-ğurâb*, and not at Bal-Ḫayf to the west nor at Madjdiya, 10 km. to the east of Bir 'All.

(J. SCHLEICHER-[L. O. SCHUMAN])

**HIŞN KAYFA**, town in Turkey (Hasankanef in modern Turkish) situated in *Dijàzra* (Upper Mesopotamia) on the right bank of the Tigris (37° 40' North and 41° 30' East) about halfway between Diyâr-Bakr and *Dijàzrat Ibn 'Umar* (Cizre), which in the Middle Ages was reputed to have an unhealthy climate.

The word Kayfâ appears to be of Syriac origin (*Kfu̯ = rock*), in which case the town would take its name from its castle, built on the rock which overhangs the Tigris. The historians of the Roman period refer to it under the name of Kipas or Cepha and Chiphas. According to Taylor (see *JRS*), in early Arab traditions it was called Sab'at Aghâl which refers to the sevens converging ravines. Yâkût mentions it under the name of *Hüsên Kayfâ*, which he takes to be an Armenian word; according to Taylor, the place was known in ancient Armenian as Kentzy. The modern name, Hasankeyf, is obviously merely a deformation of the name Kayfâ. The various Turkish etymologies: *Hasan keyfi* = Hasan's pleasure, *hisni keyf* = good humour and *hiśn-i keyf* = castle where cares are forgotten, are fantasies of popular interpretation.

The region has been inhabited from very early times. Many grottoes and caves cut out of both banks of the river and in the neighbouring ravines date from the Chaldean period. Taylor found there many Parthian, Greek, Roman, Byzantine and Arab coins. But no precise information on these early settlements is available.

During the Roman period, the castle of *Hüsên Kayfâ* marked the frontier between the Roman and Persian territories. Because of its remarkable situation on the edge of the regions of Tur 'Abdin, which guards communications with the region of the diyâr Râbi'a, and being at a point on the route between the valleys of the Batman Su and the Nahr al-Sarbat, this castle was for centuries of great strategic importance.

HIŞN KAYFĀ

In the 5th century A.D. the town was the seat of a Nestorian bishopric and possessed many churches; indeed there were always many Christians there. At the beginning of the Artukid dynasty they possessed considerable influence, which was reinforced by the resistance of the Arabs and the Kurds to the Turco-Mongol invasion. It was not until the 6th/12th century that the district of Diyār Bakr became involved in the movement of Muslim reaction aroused by Nūr al-Dīn. Nevertheless the Christian element did not entirely lose its importance, and in the 7th/13th century Hisn Kayfā was joined to the district of Tūr 'Abdin to form a patriarchate independent of that of Mardin.

No details exist of the Arab conquest of the Byzantine fortress of Hisn Kayfā. With the decline of the 'Abbāsid dynasty the town came under the domination of the Hamdānids, as did the whole of the Diyār Bakr, in which Sayf al-Dawla was particularly interested, making long and frequent visits to Mayyāfārīkīn. The Hamdānids supplanted the Hamdānids and were themselves driven out by the Seljūqs; the Diyār Bakr became an integral part of the empire of Malikshāh. It was at this time that there appeared a new dynasty of Turkomans origin, that of the Artuqids [g.v.] under whom Hisn Kayfā flourished. Sūkmān b. Artūq, in the service of the Seljūqs, made his masters give him this town in 495/1102 and Hisn Kayfā, which thus became the seat of a princely dynasty, was for more than a century the political centre of a state which, though nominally a vassal of the Seljūk sultans, was in fact almost totally independent. Dāwūd b. Sūkmān succeeded his father and was himself replaced on his death by his son, Kara Arslan, to whom is attributed the restoration, in 510/1116, of the famous bridge over the Tigris which will be mentioned later. Nūr al-Dīn Muḥammad, the son and successor of Kara Arslan, was more or less the vassal of the Zangī Nūr al-Dīn. On his death the Artuqid princes became increasingly the dependants of Sālh al-Dīn.

In 629/1232 they were completely dispossessed of Hisn Kayfā by the Ayyūbidids. In 658/1260, the town, captured by the Mongols, was pillaged and partly destroyed, though the branch of the Ayyūbidids in Hisn Kayfā survived for more than two centuries under their Ayyūbid and their Seljūq successors; it even survived the upheaval of Timūr's invasion, maintaining in the declining town a centre of Arabic culture. The Ayyūbid dynasty succumbed to the Ak Ğoyunlu [g.v.], who imposed their rule on Hisn Kayfā but rebuilt it from its ruined state, particularly under the sons of Uzun Hasan. At the beginning of the 10th/16th century the Persians invaded the region and defeated the Ak Ğoyunu, Hisn Kayfā then coming under the sovereignty of the Şafawī Shāh Ismā'īl. The final capture of the region in 922/1516 by the Ottomans caused no change in the condition of Hisn Kayfā, which gradually dwindled to a small and unimportant town (pop., 1960:1058). Today it forms part of the mediaet of Mardin but is very little visited because of the poor communications.

During its period of prosperity, Hisn Kayfā was a flourishing commercial centre, its situation on the Tigris making it an important entrepôt on the river route linking Diyār Bakr and Diyarhashtags Ibn Umar. The town was surrounded by several suburbs with prosperous markets.

The present ruins of the town bear witness to its importance in the Middle Ages. Among the monuments still existing should be mentioned: (1) The castle built on an enormous rock overlooking the Tigris on its north side and surrounded on its three other sides by ravines. Access to it is by the north-east side of the ravine alone, a ramp provided with fortified gates. This castle contained, according to Ibn Shaddād, palaces (of which some remains may still be seen), a mosque (on which there exists an inscription of 796/1394), some other buildings, a hippodrome and some ground which was cultivated. To the north of the castle was a first suburb with chíks, madrasas, baths, cemeteries and mausoleums of the Seljūqs and Artuqid princes. The town had no walls but possessed a fortress on a rock. (2) The Dījamī al-Rīzk to the north-west of the town on the banks of the Tigris. Built in 811/1409 by the Ayyūbid Sulaymān, this mosque has an imposing minaret 30 metres high with a cylindrical shaft and square base, ornamented with a cornice of stalactites and crowned by a lantern. (3) The Dījamī Sulaymān, a little further inside the town, with a varied arrangement of cupolas and a richly decorated dome. The minaret of the same type as the preceding one, is divided into four storeys by bands of moulding. Several inscriptions are still to be read: 752/1351, 809/1407. (4) The Koč Dījamī, a vast ensemble dating from the end of the 8th/14th and the beginning of the 9th/15th centuries and consisting of a number of buildings grouped around a rectangular court; only the southern wing exists today. (5) A small mosque probably founded by the Shāhī Sulaymān, of the 9th/15th century. (6) A mausoleum of the 9th/15th century. (7) The convent of the imām 'Abd Allāh on the summit of a mound on the left bank of the Tigris, bearing an inscription which refers to a restoration and is dated 883/1478 in the name of 'Afl, son of Uzun Hasan. A porcelain plaque with the formula of benediction of the twelve imāms proves that it was a Shi'i sanctuary, perhaps of the Shi'i Kara Koyunlu, the rivals of the Ak Ğoyunlu, who themselves were Sunnīs. (8) The tomb of Zaynāl Bēg, son of Uzun Hasan, on the left bank of the Tigris, a mausoleum with a cylindrical exterior and octagonal interior. (9) Finally, the bridge over the Tigris, which Yākūt described as one of the most beautiful works he had ever seen. Its decoration, similar to that on the walls of the castle and the adjacent türbe, shows that it was a Şī'ī sanctuary, perhaps of the Shi'i Kara Koyunlu. According to the account of the traveller Barbaro, who saw it still complete in 1510 and who is the last so to describe it, this bridge had five arches. Today there remain standing only three masses of masonry: the beginning of the abutment pier with an arch and parts of the first pier, the second pier and the third pier.

There may also be mentioned the many rock dwellings, more numerous here than anywhere else in Mesopotamia.

Plan of Ḥiṣn Kayfa (based on the plan by A. Gabriel)

1. Access ramps
2, 3, 4. Fortified gates
5. Steps down to the Tigris
6. Small palace
7. Great palace
8. Great Mosque
9. Fortress
10. Djami al-Rizk
11. Djami Sulayman
12. Koçi Djami'i
13. Small mosque
14. Mausoleum
15. Bridge over the Tigris
16. Imam 'Abd Allah
17. Tomb of Zaynal Beg
18. Traces of buildings
By the definitions given by the Ikhwan al-Safa, operation. This distinction is perhaps best illustrated by the definitions given by the Ikhwan al-Safa: “Al-khäs is the change produced in the temperament of the senses by their contact with the sensibilia; al-thsâ is the consciousness of the sensory faculties of these changes in the quality of the temperaments of the senses” (Rasâ’il Ikhwan al-Safa, Bombay 1305, ii, 261).

The Islamic philosophers, in general, follow the Aristotelian theory of sense-perception as far as what they term the “external” (šâhira) senses are concerned. The sensibilia are apprehended by means of the change caused by them in the appropriate sense organ. This change, however, is not merely a passive one, but rather an actualization in the organ of a quality, corresponding to the quality perceived, which already exists potentially in that organ. Ibn Sinâ describes the process as an istikmâl = “a perfecting” (Avicenna’s De Anima, ed. F. Rahman, London 1959, 66).

Al-Kindi, in his Rûsâla fi l-šâfiû, describes the process as follows: “The image that is in matter is that which is actually sensible... When the soul apprehends it, it is in the soul. The soul apprehends it only because it is potentially in the soul. When the soul comes into contact with it, it is then actually in the soul; it is not present there like something superimposed on it, like an image in a body, for the soul is incorporeal and indivisible: it is in the soul, and the soul is one thing... In the same way the sensory faculty is nothing other than the soul: it is not in the soul like a member in a body—it is the soul, which is that which senses... In the soul, then, that which is sensed is that which senses (fa-iḍân al-mahsiûs fi l-nafs huwa l-hâs)” (Rasâ’il al-Kindi al-falsafîyya, ed. Abû Rida, Cairo 1950, 254-5).

No sense organ perceives by direct contact with the sensibilia, and indeed it cannot do so: it operates through an intermediary, which for most of the senses is either air or water. The Islamic philosophers, however, unlike Aristotle, make an exception of touch in this respect, regarding the flesh as the organ, rather than as the intermediary, of this sense. Even Ibn Rushd, in his Talkhîs Kitâb al-frus wa-l-mawrus (the “store-house” for the perceptions of the senses that are in most of the Islamic theories the “store-house” for the perceptions of the imagination). In al-Fârâbî appears to assign a somewhat different role to this faculty: “fi ‘l-hâd al-muṭâjâr bi‘l-bâdîn wa-l-šâfiû wa-l-dhâlî” (op. cit., i, 8), but omit it in the actual Rûsâla (i, 258-70), where al-friswa al-muṭâbâyâsila asumes its function, in addition to its own.

In al-Fârâbî wâhîm appears to operate on a similar level to that of hîss; in Ibn Sinâ al-friswa al-wâhîmiyya (the highest faculty of judgment in animals) seems to be ranked above al-friswa al-muṭâbâyâsila (corresponding to the human huwa al-muâfhika = “cognitative faculty”), and also, incidentally, to perform a function of the Aristotelian sensus communis that is disregarded in the other Islamic theories, that of perceiving the fact that perception is taking place. Ibn Rushd rejects as unnecessary the concept of wâhîm in animals, and maintains that al-friswa al-muṭâbâyâsila, as an active faculty, is capable of performing the function assigned to wâhîm (Talkhîs al-tahâfûs, ed. M. Boyyges, Beirut 1930, 546-7).

The clearest and most systematic of the Islamic theories are those of the Ikhwan al-Safa (loc. cit.) and Ibn Sinâ (loc. cit.). See also MAHSûSAT.

(J. N. MATTOCK)
HIT, town in 'Irâq situated in about 33° 35' N. and 42° 48' E. on the right bank of the Euphrates, on a hill which may be the mediaeval Arab travellers estimate the distance between Hit and Baghâd at 33 parasangs (ca. 130 miles) or 5½-6 days' journey, cf. M. Streek, Babylonien nach den arabischen Geographen, I, 8. Some Arab geographers (al-Îstâghri and Ibn ʻHawkâl) include Hit in the Dazirâ; it was generally considered, however, to be a frontier town of ʻIrâq. In al-Mu'âddasâ’s time (4th/roth century) it was of some importance; at the time of the 13th/14th century Ya'qûb, it was made a small place; at the beginning of the 19th century 'Olyâvî estimated the number of its inhabitants at about 1000, Cernik about 70 years later at 2000; Chesney counted 1500 houses; 'Ali ʻDâwâdî put the population at 3000. The Ottoman Sâlâmâme of 1323 lists 500 houses, about 10 shops, 1 dâmî, 2 masâkîn, 1 madrasa and 1 hâ Dön (243-4). The population of the nâbiya in 1957 was 6892. The situation of Hit is picturesque; the walls and two gates have survived; otherwise there is no prominent building. Ibn ʻHawkâl (227; French trans. 222) and Ya'qûb mention the tomb of the distinguished jurist 'Abd Allâh b. al-Muḥârâk who died in Hit in 161/779; cf. also al-Mas'udi, Murûtî, vi, 294, 503, and the reference in Ya'qûb, vi, 508.

Hit is a very ancient settlement, being mentioned under the name Id as early as the beginning of the 9th century B.C. in an Assyrian inscription. Herodotus and apparently also Isidorus Characensis knew the town as 'Idî; in Zosimus it is called Sîtha. Hit is the Syriac form of the name, which was adopted by the Arabs; the name is apparently derived from its most characteristic product, asphalt (Assyr. iddâ, itû). Hit was occupied by the Arabs in 16/629; it was the scene of a battle against the Carmathians in 315/927, which were worked even in ancient times. The mediaeval Arab geographers also note the wealth of bitumen which was collected in Hit and there is some recent production; bitumen was carried down the river in boats and the busy shipbuilding trade of Hit was also directly due to the asphalt. Bitumen is still collected in Hit and there is some boat-building, but neither activity is nowadays of great importance.

South of Hit are several quaries which were worked even in ancient times. The most important among the others are the place-palms and the extensive cultivation of cereals around Hit. It was further noted for its excellent wine; cf. the poems of Abû Nuwâs (ed. Kremmer, no. 12, p. 46), and the Mâ bukâtû of al-ʻAshâ (ed. R. Geyer, in Sâh. Wien, cxlix, p. 145, i. 14). Near Hit a ruined area, called Uâyâ al-Mâkûtûba (= "the transformed city"), is pointed out; there is a nearby chapel of which it is said, that Mee points out (Zeitschr. für Assyriol., xviii, 220), strikingly recalls the Frau Hitt legend in Innsbruck.

(M. Streek)

HI'TTIN or HATTÎN, in the Talmud Kefer Haṭṭîyye, a village to the west of and above Tiberias on a fertile plain, the southern border of which is formed by a steep limestone ridge. At both the western and eastern ends of the ridge there is a higher summit called Khirbat Haṭṭîn. A tradition known in the 6th/12th century the origin of which is uncertain, places the tomb of the prophet Shu'aîb (Jethro) here; the little chapel, which has been rebuilt in modern times and is still annually visited by the Druzes, lies on an elevation in a rocky valley at the western summit. On the uneven tableland south-east of the rocky ridge was fought the battle which destroyed the power of the Crusaders, when Șâlāh-d-dîn won a great victory over the Christians on 5 July 1187. After some of the Frankish troops, tormented by heat and thirst, had been cut down, and others put to flight, the remainder retired to the eastern summit, where many were thrown over the steep southern side. In memory of this the victor built a small chapel on the summit, called Khirbat al-ʻNaṣr.

(FR. BUHL-[CL. CAHEN])

HIYAL, plural of hîla (A.), artifice, device, expedient, stratagem, a means of evading a thing, or of effecting an object. The word is used in several technical meanings.

1. Hiyal is a technical term for stratagems in war (synonyms are makdîd and dabb.) The use of stratagems in war is justified by a saying attributed to the Prophet, really an old proverb, al-harb hûd'a, "war is deceit". The term occurs in the titles of works on military art, as well as in their text. The earliest of these works known to us is the Kitâb al-Hiyal of a certain al-Harithami al-ʻShârînî who dedicated it to the caliph al-Ma'mûn; the Fibrîştî (314, lines 23-27)
gives detailed information on its arrangement but unfortunately not on its contents. A popular work of a later period is *Al-Bahar al-Fawqani* (Brockelmann, S I, 879; the author died 611/1215), which was analysed by H. Ritter, together with other works on the art of war, in *Isl.*, xviii (1920), 144 ff. It was edited, with an important introduction and a French translation, by J. Sourdel-Thomine, in *BEO*, xvii (1962), 105-268. Popular, too, was the *Kitāb al-hiyāl fi l-mashf wa-fāṭik al-maddā'īn wa-kīsā al-durūb* (from which the term *mukhātara* (from which the term *mukhātara* of the medieval law merchant is derived) or, more commonly, *ṣina* euphemistically, it is also called *muwashshā*, "transaction"). The purpose is to instruct the money-lender in how to calculate the chances of legal validity to a nicety if the *bāb* (which was bound to apply the sacred law, was not to upset the real effects of the business transaction which their customers, the merchants, had in mind, effects which depended upon the validity of every single element in an often complicated series of formal transactions. The activity of the authors of *hiyal* who catered for the practice, is intrinsically parallel with that of the early specialists who had in mind, effects which depended upon the validity of every single element in an often complicated series of formal transactions. The activity of the authors of *hiyal* who catered for the practice, is intrinsically parallel with that of the early specialists who had first elaborated the theory of Islamic law. The early specialists had warned their contemporaries against acts incompatible with the Islamic way of life; the authors of *hiyal* helped them not to conclude contracts which would be considered invalid by the fully developed system of Islamic law. The *hiyal* are a natural outcome of that cleavage between theory and practice which has accompanied Islamic law from its very beginnings, and one of our most important sources for the knowledge of the legal practice of the Muslims in the middle ages.

Written documents often formed an essential element of *hiyal*. (Cf. *Sarāqīshī*, *Mabāšā*, xxx, 150, l. 16 ff., on Ibn Abl Layla; *Ikhwan al-Safā*, *Rasā'lī*, iii, 155.) The more complicated *hiyal* normally consisted of several transactions between the parties concerned, each of which was perfectly legal in itself, and the combined effect of which produced the desired result. Each transaction was, as a matter of course, recorded and attested in a separate document. Taken in isolation, a document recording a single transaction or an acknowledgement made by one of the parties might be used by the other party to its advantage, and was a very harmful one to merchants, the more so because traders also acted as money-lenders. This custom prevailed in Medina as early as in the time of Mālik (d. 179/795). There were hundreds of these devices, many of them concerned with highly technical points, but all with a scrupulous regard for the letter of the law. The acknowledgement (*ikrār*) plays a very important part in the construction of numerous *hiyal*, because it creates an abstract debt and is therefore particularly suitable for their purpose.

The first and simplest *hiyal* were presumably thought out by the interested parties who felt the need for them, the merchants in particular, but it was quite beyond them to invent and apply the more complicated ones; they had to have recourse to specialists in religious law, and these last did not hesitate to supply the need. The inventors of *hiyal* had to calculate the chances of legal validity to a nicety if the *bāb* (which was bound to apply the sacred law, was not to upset the real effects of the business transaction which their customers, the merchants, had in mind, effects which depended upon the validity of every single element in an often complicated series of formal transactions. The activity of the authors of *hiyal* who catered for the practice, is intrinsically parallel with that of the early specialists who had first elaborated the theory of Islamic law. The early specialists had warned their contemporaries against acts incompatible with the Islamic way of life; the authors of *hiyal* helped them not to conclude contracts which would be considered invalid by the fully developed system of Islamic law. The *hiyal* are a natural outcome of that cleavage between theory and practice which has accompanied Islamic law from its very beginnings, and one of our most important sources for the knowledge of the legal practice of the Muslims in the middle ages.

Written documents often formed an essential element of *hiyal*. (Cf. *Sarāqīshī*, *Mabāšā*, xxx, 150, l. 16 ff., on Ibn Abl Layla; *Ikhwan al-Safā*, *Rasā'lī*, iii, 155.) The more complicated *hiyal* normally consisted of several transactions between the parties concerned, each of which was perfectly legal in itself, and the combined effect of which produced the desired result. Each transaction was, as a matter of course, recorded and attested in a separate document. Taken in isolation, a document recording a single transaction or an acknowledgement made by one of the parties might be used by the other party to its exclusive advantage and for a purpose contrary to the aim of the whole of the agreement. In order to prevent this happening, the official documents were deposited in the hands of a trustworthy person (*ghārā*) or intermediary, together with an unofficial covering document which set out the real relationship of the parties to each other and the real purport of their agreement. (This kind of document is technically called *muwashshā*; "understanding.") The intermediary, then, acting on the contents of the covering document, handed to each party only those papers which they were entitled to use at any given stage,
HIYAL

and prevented the unauthorized use of any document by producing, if necessary, the document of a self-imposed penalty for non-fulfilment and, in general, declarations by which a unilateral disposition is made dependent on the occurrence of a certain event, such as "if I do such and such a thing, or if such and such a thing happens, my wife is repudiated, or my slave is manumitted". Islamic law has the tendency to interpret declarations restrictively in this case, to mitigate the resulting religious and legal obligation, and the hiyal take full advantage of this. The use of ambiguous terms and expressions is often suggested, and it is justified by a saying attributed to 'Umar: 'ina ma'arrid al-halal, ismanidaha 'am al-halal, "ambiguous expressions obviate (outright) lying" (Bukhari, Sahih, adab 116). The social need for this kind of evasion appears from the fact that the poet and philologist Ibn Durayd (d. 321/933) composed the Kitab al-Malakbin, a treatise on equivocal expressions, for the benefit of people who were forced to take the oath against their will. The legal attitude is expressed in the maxim, transmitted by Shaysun—Abu Yusuf—Abu Hanifa—Hammad al-Hamda'i—Ibrahim al-Nakha'i, i.e., with the official trad of the school of Kufa: "If a man is put to the oath whilst he is treated unjustly (wa-hwa ma'ahid), his oath is ruled by what he (himself) means, but if he is put to the oath whilst he (himself) is acting unjustly (wa-hwa zidlim), his oath is ruled by the intention of the person who makes him take it". Abu Hanifa, Hammad and Ibrahim are credited with numerous hiyal of this kind, and Ibrahim is reported to have recommended the use of this kind of fiyih to his own visiters when he was in hiding from the government (a standing feature in the biographies of ancient authorities). Even farther goes a saying attributed to the Prophet: "Every lie is counted as a lie except in three cases: if a man lies to make peace between two men, if he lies to his wife by making her promises, and if he lies when he is illiterate, (Angel, 631, l. 5 f.). Ibn Kuthayya (d. 276/889), who, as an ahl al-madhab, is the leader of the systematic lawyers (see below), nevertheless vigorously defended the lawfulness of the kind of mental reservation in question, expressed in a saying of Hudhayfa b. Yaman, a famous Companion of the Prophet: "I buy (or we may translate: I sell out) part of my religion for another lest it may disappear altogether" (Muhkthalif al-hadith, 27, 42 ff.; transal. G. Lecomte, Damascus 1992, 25, 38 ff.). Ghazzali (d. 505/1111), too, who regarded certain hiyal in legal transactions as forbidden and invalid, approved and even recommended verbal hiyal and mental reservations in order to evade the effects of an undesirable oath (Streitschrift, 73-90). H. Bauer, Islamische Ethik, 1, 80). This attitude to declarations and engagements under oath in Islam derives directly from that of the pre-Islamic and the early Islamic Arabs (e.g., Nabiqa al-Dhubayyânî, ed. Ahlwardt, The Divans, 2, 5; Dinar, Nabîzâd, ed. Bevan, 754, 3; see also J. Pedersen, Der Eid bei den Semiten, Strassburg 1914, esp. 191 ff., 217 ff., 228 f.).

There are certain differences of degree in the attitudes of the several schools of Islamic religious law towards the hiyal. The Hanafis are the most favourably inclined, and it was they, in fact, who produced the first special works on hiyal; these are the treatises of Abu Yusuf (d. 252/768) and of Shaybani (d. 289/805); the treatises of Shaybani constitutes a special branch of hiyal, and it incorporates long extracts from that of Abu Yusuf. It was edited and commented upon several times, among others by Shams al-A'mma al-Sarahghî (d. 483/1090) in his K. al-Mabsûn, and by several reputed Hanafi scholars of the 5th/11th and the 6th/12th centuries, extracts from whose works exist in the detailed chapter of the Fatwâ d'Allâmiyûn on hiyal, in the great legal devotional work in which important works of the school are collected. (A shorter collection of this kind, though without mention of the sources, is found in the fifth jann of the K. al-Ashbâh wa-l-nazâ'ir of Ibn Nudaym, d. 970/1563). Shaybani's treatise was more or less plagiarized by Khasâfî (d. 261/874), the court lawyer of the 'Abâsîd caliph Mu'tadid, who became the most reputed author on hiyal in the Hanafi school of law. But his reputation was based on an extensive treatise on hiyal which was presumably written in 'îrak in the 4th/10th century and attributed to Khasâfî; this, too, was commented upon several times. Shâfî'i, and the first few generations of his school after him, regarded the hiyal as forbidden or reprehensible, although the majority recognized them as legally valid. The success of the hiyal in the Hanafi school, however, caused several Shâfî'i authors, from the 4th/10th century onwards, to compose books on hiyal, of which that of Mahmûd b. al-'Ahsan al- Kazwinî (d. 440/1048) has been preserved, and a distinction was made between hiyal which are allowed (and which form the great majority) and those which are reprehensible or forbidden. The legal validity of all hiyal was strongly and definitely upheld by the great Shâfî'i authority Ibn Haqîr (cf. Snouck Hurgronje, Verspreide Geschriften, ii, 423-s). Malik strongly disapproves (in effect, declares forbidden) the particular fiyih of the double sale, mentioned above (Mushawâ'â, k. al-buyû'â, mâ dâ'î fi ba'î al-'urûbân), without considering the question of its validity; the Malikî school admits some hiyal and rejects others, but generally regards them as valid.

The Traditionists (ahl al-hadîth, in keeping with their general approach to questions of religious law, rejected all fiyih, though a whole "book" (no. 90) of his Sahih to combating them; the commentators Aynî and Kastallân point out that Bukhârî's polemics go beyond the wording of the traditions which he adduces, and confim that they are directed against Abu Hanifa and his school. In this connexion, Bukhârî gives 14 quotations from the writings of his opponents, one at least taken either from the work of his contemporary Khusyâyî or from its source, the work of Shaybânî. Al-Khatib al-Baghdâdi (d. 465/1071), another traditionist and a follower of the Shâfî'i school, did not fail to include in his unsympathetic biographical notice on Abu Hanifa alleged sayings of the Traditionist 'Abd Allâh b. al-Mubârak (d. 181/792), who declared that the author of the Kitâb al-hiyl attributed to Abu Hanifa and its users were unbelievers and apostates, etc. (Târîkh Baghdad, iii, 426-8). Some Hanbalî authors, too, are on record as opponents of hiyal. The hadî fiyih, 'Abî Ya'fâ (d. 458/1066) wrote a Kitâb lbiyl al-hiyl (in H. Laoust, Méthodologie canonique, 170, n. 1). Ibn Taymiyya (d. 728/1328), in special work of his (Ibâmat al-dallî 'alâ 'l-hiyl al-labihi), attacked and declared invalid the hiyal in general and the so-called tahlîl in particular; this last aims at removing the impediment to remarriage between the former hus-
band and wife after a triple repudiation by arranging for the marriage of the woman to another husband (iii, 103-109, 119-377), discusses the ḥiyyal at great length with numerous references to the works concerning them; he distinguishes ḥiyyal which are lawful, by which a lawful end is to be achieved by lawful means, from those which are forbidden and which he declares invalid; the first group comprises numerous devices in the field of commercial law. (Summary and part translation in J. P. M. Mensing, De hepaalde straffen, Leiden 1936, 122-7).

The Ḥanafis, on their part, whilst they state that ḥiyyal which cause prejudice to another are forbidden, and are loth to suggest ḥiyyal which comprise acts that are in themselves reprehensible, are not really concerned with the moral evaluation of ḥiyyal in detail, and they take their being legally valid for granted. According to them, many ḥiyyal are not even reprehensible, for instance those which aim at evading the incidence of the right of pre-emption (šu'ā'ī); and the device of tahli has been widely practised, by Ḥanafis, Mālikis and Ṣahālīs, down to the present generation (cf., e.g., the short story El Mohallel, in Yvonne Laeuffer, Oeil pour Oeil, Cairo 1930; B. Board, News girl in Egypt, London 1938, 117). The legal thought of modernist Muslims is not favourable to ḥiyyal because they are part of the traditional doctrine of fiqh.

The works on ḥiyyal, together with works on written documents and other subjects of importance for the application of Islamic law in practice, form a part of a well-defined branch of the literature of the Ḥanafī school of religious law. Bibliography: I. Goldzweig, Die Zähirliten, 68 ff.; J. Schacht, editions of Ḥiṣnâlī, K. al-ḥiyyal wa'l-makhâridî, Hanover 1923; of Ḥazwînî, K. al-ḥiyyal i l-ḥisb, Hanover 1924; and of Ṣâyâbânî, K. al-makhâridî i l-ḥisb, Leipzig 1930; Die araβische fiqil-Literatur, in Ḥ, xv (1926), 211-32; further in Revue africaine, xxvi (1952), 355/77; Introduction to Islamic Law, 3 f. f., 242. (J. Schacht)

ḤIZB (pl. ḥisb) means primarily “a group, faction, a group of supporters of a man who share his ideas and are ready to defend him”, and this is why the term has been adopted in modern Arabic to mean a political party (see below); it means also “part, portion” and it is from this meaning that it has come to indicate a portion of the Kur‘ān as well as a group of liturgical formulae. In this meaning the term is probably a borrowing from Ethiopic (see Th. Nöldeke, Neue Beiträge zur sem. Sprachw., 59, n. 8) for, in Arabic, the verb ḥasaba means “to happen (speaking of a misfortune); to be painful”. In the Kur‘ān, the expression ḥizb Allāh, “the party of Allāh” is used twice (V, 61/56, LVIII, 22) but in the other examples the word is used in a bad sense, in the singular (XXIII, 55/53, XXVIII, 14/15, XXX, 31/32), in the dual (XVIII, 11/12 where it has the sense of (arīb) and also in the plural (XI, 20/17, XII, 36, XIX, 38/37, XXXVIII, 10/11, 12/13, XL, 5, XLII, 65). Sāra XXX, sāral al-ḥisb, deals with the siege of Medina by the Jewish tribes allied with those of Mecca, Nāджd and Thīmā; in verse 31/30 of Sāra XL, the “day of the factions” alludes to the Battle of the Ditch (see al-Sandhâk). While in verses 11/12-13 of Sāra XXXVIII, the ḥisb are the people of Noah, the Ḥidâs, Pharaoh, the Thāmûd, ʿlî and the asḥâb al-ʿAllāh. From the meaning of “part, portion” there derives the technical use of the term to indicate first a definite portion of the Kur‘ān (see LA, s.v.) which a believer binds himself to recite. This practice led the Muslims of certain countries (e.g., in Egypt, see Lane, Modern Egyptians, ch. XXVII; in North Africa, see W. Marçais, Testes arabes de Tanger, 159, n. 2), to divide the Kur‘ān into 60 ḥisb, which are thus half the length of the 30 gi‘ās’ attested from a very early period (see R. Blachere, Introduction au Cor an, ch. XXVII; in North Africa, see W. Marçais, Testes arabes de Tanger, 159, n. 2). In this division appears to be comparatively recent, for al-Qāṣâlī, in the part of his Ḥiyyâ in which he deals with the recitation (tilâwa) of the Kur‘ān (1st quarter, book viii, bâb 2), mentions the 30 gi‘ās’ but refers only to the seven ḥisb of the Companions. Among the Muslims of India and Pakistan the division in question is not made, and the word ḥisb does not appear in either the Dict. of Islam by Hughes or in the Dict. of technical terms. The division into ḥisb is intended to facilitate the individual or collective recitation of the Kur‘ān in certain circumstances, particularly during the nights of the month of Ramaḍān. In Algeria, ḥāssâb, placed under the authority of a bâsh-hazzâb, were attached to certain mosques; they had to recite each day a ḥizb at noon and another in the afternoon, so as to achieve a complete recitation of the Kur‘ān in a year. In Egypt, see Lane, Modern Egyptians, see Lane, Modern Egyptians, see Lane, Modern Egyptians, see Lane, Modern Egyptians, see Lane, Modern Egyptians, see Lane, Modern Egyptians, see Lane, Modern Egyptians, see Lane, Modern Egyptians, (see J. Desparmet, Coutumes, institutions, croyances, ii, 145). Generally speaking, a collective recital of a ḥizb takes place once or several times a day after certain prayers; when the payment of the ḥāssâb was not provided for by a pious foundation, this pious work was carried out by devout folk. Some Moroccan scholars considered the recital of the ḥizb as a bid‘a (see Mub. b. ʿAllâd Djinûn; Gennun) on al-Rahînî, on ʿAbd al-Bâki al-Zurkânî, on Khâlid, Bülûk 1306, ii, 47). The edition of the Kur‘ān published in Cairo in 1342/1923 under the patronage of King Fu‘âd gives in the margins the two divisions into gi‘ās’ and into ḥisb. This innovation was perhaps due to the influence of the editions of 1322, 1324, 1342, 1382, 1431, 1432, 1445. (J. Schacht)

In Egypt, in effect, each fraternity is a ḥizb (Lane, Modern Egyptians, ch. XVIII) but this term means also the “office” of each fraternity, which consists of the recital, during the Friday service (hadra [q.v.]) in the ša‘yâa or the ṭakhiyya, of long extracts from the Kur‘ān and of other prayers [see DHIKR]. It is from this that there seems to spring a narrower meaning of the word, namely its application to formulae of “superegorgatory liturgy” [see ʿuṣâ] at a fairly late date, for this use of the word ḥizb is found for the first time in ʿAbd al-Kâdîr al-Dîjlânî (d. 561/1166); it is found again in Ibn ʿArabî (d. 638/1240), Aḥmad al-Badawî (d. 675/1277), etc. The most famous of all these ḥizbs is the ḥizb al-bâḥr of al-Ṣâhîbî, also called al-Ḥîb al-ṣâkhîr to distinguish it from another, longer but less well known, by the same author; it is recited in particular by travellers who are crossing the sea, because its chief aim is to “subject” (ṭakhîr) it to them; it was composed in the very year that the author died (656/1258), and he is reported to have said that the Mongols would not have taken Baghdad if this ḥizb had been recited; it is poor devotionally, for the author died (656/1258), and he is reported to have said that the Mongols would not have taken Baghdad if this ḥizb had been recited; it is poor devotionally, but the Kur‘ān is not recited in the ḥizb of the ṭakhiyya. The ḥizb is closed. (J. Schacht)
which has become very popular (the most complete text is given by Ibn Battuta, i, 40-4; Engl. tr. H. A. R. Gibb, i, 45-7; cf. ZDMG, vii, 25). According to Ahlwardt, Verschweis der ar. Handschriften zu Berlin, iii, 407-14, these prayers were called hizb because "in them the invitations to God are divided into certain groups", but he does not state what this explanation is based.

Bibliography: in the text.

HIZB, 'political party'. The use of the word hizb in the sense of a political party is a recent one, dating from the beginning of the twentieth century or thereabouts, but this modern usage was in a way a natural and legitimate extension of the traditional and classical one (see preceding article). This traditional sense is the one found in the nineteenth-century dictionaries. Thus Kazimirski's Dictionnaire (1860) defined hizb as a 'troupe d'hommes'; Lane's Lexicon (1863 et seq.) as a 'party or company of men, assembling themselves on account of an event that has befallen them'; Bustanî's Mubâh as a fa'âqa; Dozy's Supplement (1851) records an interesting variant, where it lists among the meanings of the word, 'ordre religieux'. Later dictionaries begin to record the political connotation which the word was beginning to acquire: Badger's English-Arabic Lexicon (1886) translates 'party' as hizb and Hava's Arabic-English Dictionary (1896) translates hizb as 'party of men, confederacy, division'.

The following articles deal with political parties in Muslim countries. For associations, see also ANQUMAN and DJÂMIYYA.

I.—THE ARAB LANDS

Literary evidence, in support of the lexicographical, does tend to show that in the last two decades of the nineteenth century, hizb, though it was not yet a fully recognized part of the political vocabulary, was coming, albeit slowly, unconsciously and hesitatingly, to have a certain political connotation. An excellent illustration of this ambiguous and fluctuating usage occurs in the minutes of Ahmad Urâbî's trial at Cairo in 1852. Urâbî was asked to describe himself to be described on a document as ra*is al-Jiizb al-watani', he replied that it was well-known that Egypt was inhabited by different races (adinds) whose action was usually clandestine. But Urâbî went on to say that every people had akhâm inna ahl al-bildd hizb bi-*l-dâr al-farikayn yuflâlin yafa' 'alay-hi. The young men of the Sursuk, Kitta, Zughayb and Mukhalls families—all Syrian Christians—who had thus come to the conclusion that they had no personal interest in the matter—since they were all protected by European Powers—

Finally, an illustration drawn from the first decade of the twentieth century shows how hizb has come to be stabilized in meaning and to signify unambiguously a political party. In an article of 1906, discussing whether a nationalist party can be said to exist in Egypt, Farâb Anûtân states that a hizb signifies in politics 'the organized struggle of one group against another owing to a difference of opinions and interests between the two sides (ta'âlub d^am^â' a'sâl d^am^âi a 'âkhirâ' is*bîlatî 'ârâ' al-farikayn wa ma'dilîkmü)". He goes on to say that by ta'âlub he means that the group would become a single, solidary entity working to attain its aim, 'idjâmîna'uhâ 'isba wabinda wa la'dâjûdâhâ lauwassîl al-âlîm bulâgh al-waladahî' (Hizb al-nâsîyândîst fî Misr, in al-Djâmi's, New York, v/6 (1906), 224).

In the article just cited, Farâb Anûtân came to the conclusion that, on his definition, there was no nationalist party in Egypt for the reason that the crucial element of organization was lacking. His conclusions may be considered to apply generally to the Arabic-speaking areas for the greater part of the period in which people became accustomed to think of parties as a usual political phenomenon. There is no doubt that they came so to think as a result of contact and familiarity with European politics, in which parliaments and estates, having continuously existed since mediaeval times, provided a natural context and an indispensable setting for parties and party organization. Such representative institutions were absent in the Muslim world, and it is therefore not surprising that it is only contact with Europe which made organization into parties for political action familiar and attractive. Familiar and attractive, that is, to the small minority which was open to European influences, and which was therefore critical of native and traditional institutions. Parties were therefore at first usually organized or inspired by radicals who were intent on drastic reforms, and because such parties had, in the absence of representative institutions, little scope to manoeuvre, their radicalism became intensified; this very radicalism alienated the authorities who, often trying to suppress these parties, forced them underground. In short, all these factors, the nature of the political context in which the party-making areas were, at the outset, small groups of people, influenced by European ideas, who were or affected to be dissatisfied with existing political conditions, whose organization was loose and ephemeral, and whose action was usually clandestine. Egypt—One of the earliest of such groupings in Egypt—calling itself, however, not a hizb but a djâmiyya [q.v.], was djâmiyyat itthâkî Misr al-falâlî, which existed in Alexandria in 1879 at the beginning of the reign of Khedive Tawfiq. It would seem to have been the outcome of Afgânî's political teachings and to have been formed by his followers. A letter to Afgânî from his follower Ibrahim al-Lâkâni dated Beirut 7 Rabî' II 1300/15 February 1883 explains that the Young Egypt Society consisted of members of the Sursuk, Kitta, Zughayb and Mukhalls families—all Syrian Christians—who had induced some Muslims to join them and published an Arabic-French newspaper preaching Afgânî's views and calling on the Khedive to institute political reforms. Mustâfâ Râyâd Paša, then Chiet Minister, banned the newspaper; the Group tried to publish a second one, but the Muslim members seceded and, according to Lâkâni, even tried to harm the Syrian Christians, whereupon he wrote to Afgânî saying that they had no personal interest in the matter—since they were all protected by European Powers—

...

Another early grouping in Egypt was that known as al-hizb al-watanî, which also seems to have been organized in 1879 after Tawfîk’s accession. This group was also opposed to the Khedive and his minister Muştafa Riyāḍ, but seems to have had no connexion with the Young Egypt Society. Its members were ex-ministers, like Muhammad Sharîf Paşa, who were Mushtafâ Riyâd’s rivals and whom disliked his administrative reforms; some of them worked for the restoration of the ex-Khedive Ismâ‘îl, and some to advance the claims of ʿAbd al-Ḥalîm Paşa, the last surviving son of Muḥammad ʿAll Paşa, to the Khediviate which he had long desired. This group became connected with the officers who under Āṭâʾullâh ʿUrbâb’s leadership, and moved by military grievances, carried out a coup d’état against Tawfîk and his government on 9 September 1881. The ostensible aims of this hizb were a constitutional and parliamentary régime for Egypt and the cessation of foreign interference. These aims were taken over by ʿUrbâb and his followers when, the coup d’état having demonstrated their power, they supplanted Sharîf Paşa and the other notables in political life. In fact, this group became al-hizb al-watani, and with their defeat by the British Army in 1882 the party ceased to exist.

There is no trace of party activity in Egypt until after the accession of the Khedive ʿAbbâs Hilmi in 1892. ʿAbbâs tried in the early years of his reign to break loose from British control, and one of his methods was to inspire political agitation by young Egyptians, graduates of European universities or European-type schools in Egypt. Ahmad Luṭfî al-Sayyid has recorded that in 1896, when he had just graduated from the Law School, ʿAbbâs saw him in audience, and he was afterwards enrolled in a secret society of which the Khedive was the President and the members of which included Muştafa Râmi and Muḥammad Farîd; this group, according to Luṭfî al-Sayyid, was the nucleus of what came to be later known as the ʿUlamaʾî hizb al-umma, which had already been formed in 1874 (Seyyed Āḥmad Bâmi, ʿAlî ʿAlî, Cairo 1892, pp. 34-35). Of this group, the most prominent was Muştafa (1874-1907). As his letters to the Khedive’s Arab Secretary (published in 1962 by M. Anis) show, his political activities at the outset of his career were directed and financed by ʿAbbâs. From a letter cited by ʿAbd al-Ḥalîm al-Râfî in his biography of Muştafa Râmi, it appears that relations between him and the Khedive remained very close until 1904. Thereafter Muştafa Kâmil seems to have worked on his own, and increasingly in opposition to ʿAbbâs. In 1907 he formally launched a party which was called al-hizb al-watani, dedicated to securing the British evacuation of Egypt. At this annual conference of the party he was elected president for life, but he died soon afterwards. His successor was Muḥammad Farîd (1868-1919), who in 1912 left Egypt to avoid imprisonment for alleged subversion against the Khedive’s government. It is difficult to see that the Nationalist Party had much influence on Egyptian politics. When it was founded in 1907, the influence of Muştafa Kâmil, after his parting with the Khedive, was already on the wane. The Party, after his death, had some reputation and influence based on the newspapers which Muştafa Kâmil had started up, the day before he expired. The Khedive’s government, it seems, was more interested in political careers after the first World War, nothing at all to do with the Nationalists. It is almost symbolic of the Party’s fortunes that a statue of Muştafa Kâmil which it had made after his death remained shut up in a school until 1952, because no Egyptian government could be induced to offer a public site for its erection (Muştafa Kâmil, 301-2). The Party’s rôle in Egyptian parliamentary life under the Monarchy (1923-1952) was insignificant. The Party were occasionally allotted a handful of seats in the preliminary bargaining between politicians in Cairo which often determined the exact composition of Egyptian Parliaments. This handful of seats represented such influence and power as the Party still had and which it exercised in coalition with other parties against the Wafî. Nationalists very rarely exercised political office. Ḥâfîz Râmadân, the president of the Party, was a Minister in Muḥammad Mahmûd’s second ministry (30 December 1937-5 April 1940), in Ḥasan Ṣâbî’s ministry (27 June 1940-14 November 1941), in his own ministry, and in Mahmûd Fahmî al-Nuṣrâshî’s first ministry (25 February 1945-26 November 1945); but in holding office in these administrations, Ḥâfîz Râmadân was acting against the wishes of his Party colleagues, and may therefore be considered more as an Independent than as a Nationalist representative. In 1946, the breach between him and his colleagues was healed, and three Nationalists accepted office in two subsequent administrations as the avowed representatives of their Party: Muḥammad Zakî ʿAlî and ʿAbd al-ʿAzîz al-Ṣâfînî in Ibrâhîm ʿAbd al-Ḥâdi’s ministry (28 December 1948-25 July 1949), and ʿAbd al-Ḥalîm al-Râfî together with Muḥammad Zakî ʿAlî in Ḥusayn Sîrî’s third ministry (26 July 1949-3 November 1949). The Nationalist Party, in common with other political parties, havewritten a handful of seats in the 1940, 1944, 1946, 1952 elections, lost its influence and its financial assets confiscated by decree of the Revolutionary Command on 18 January 1953. Muştafa Kâmil’s foundation of the Nationalist Party in 1907 was followed in the same year by the foundation of other groups, calling themselves parties, which proved to be more ephemeral and to be even less organized than al-hizb al-watani. The first which falls to be mentioned is al-hizb al-ulama, which was founded in September-October 1907, and which consisted of a group of notables and landowners, who promoted the publication of the newspaper al-Djawīda. The common denominator of the group, as Ṣâbî Maḥmûd al-Akhâd put it, was that they were under the Khedive’s displeasure (maṣūbaʿ ilayhim) and that they could hope therefore to curry favour with the British Residency (Ṣâfî Zâkâlî, Cairo 1936, pp. 151-2). Whether this was so or not, the fact is that the British presence enabled them to express opposition to the Khedive’s ambitions. Some of the prominent members of this Party became associated with hizb al-ṣaṣār al-ṭustâriyyin, which was founded in 1922. The name of another party to be recorded is that of hizb al-ilsâṭ ‘ala ’l-mabâdiʿ al-ḍustâriyya, which again came to be spoken of in 1907. It is difficult to say that it was the Khedive’s men who in their own way, tried to counteract the effect of Muştafa Kâmil’s founding of the Nationalist Party; it seems,
in fact, possible to associate only one name with it, namely that of CA11 Yusuf, the editor of Khedive's main newspaper organ. J. M. Landau records the names of four other so-called Parties, which existed after 1907 and which seem to have been, in fact, one-man affairs disappearing from the scene soon after their foundation was proclaimed; these were al-thib al-wafiati al-kür, founded by Muhammad WaJđl A-yyubi, the Party of Nobles (sic) associated with Hasan Ilmî and Thâbat Farâgi and al-qiridjâwî, the Party of the Independent Egyptians (sic) founded by the Cpt Alnâbûf FânuS, and the Young Egypt Party (sic) founded by Idrîs Râqîh.

The end of the first world war inaugurated a new chapter in the history of Egyptian political parties. Widespread agitation in Egypt for some three years was finally successful in persuading the British government to abolish the Protectorate which it had assumed over Egypt in 1914. This was done by the unilateral Declaration of 28 February 1922, one of the consequences of which was the transformation of the Sultanate into a constitutional Monarchy and the setting up of a parliament composed of a house of representatives elected by indirect suffrage and a senate partly elected and partly appointed. The general scheme of the Egyptian Constitution—promulgated by a Royal Rescript in 1923—was that a cabinet drawn from the majority in Parliament would hold office so long as it retained the confidence of this majority. Such a state of affairs gave obvious scope for the creation and the functioning of parties on the European model. The first of these parties which must be considered is the WaJď, which has its origin in the struggle which led to the abolition of the Protectorate. In this struggle Sa'd Zaghlûl (1857-1926), who came to lead and indeed embody the WaJď, had taken, by the play of circumstance and his own considerable shrewdness, a leading part. The appellation WaJď originated in a demand which Zaghlûl, together with Abd al-Azîz Fahmi and 'Ali Sha'râwî, put before the British High Commissioner on 13 November 1918, to be allowed to proceed in a delegation (Ar. waJď) to Great Britain to discuss Egypt's relations with the Protecting Power and how it might be free from it. This demand was put forward at the knowledge and approval of Sultan FuJâd and his Ministers, but the three personalities who lent their names to it came inevitably to be the focus of the political agitation which followed its rejection and the repressive action taken by the British authorities. Between 1919 and 1923 many Egyptian public men were associated with Zaghlûl in the political movement which came to be known as the WaJď, but Zaghlûl managed to capture the public sentiment and to be exclusively identified with the successful struggle against Great Britain. His earliest and most prominent associates broke with him and became his fierce opponents. Of the three personalities who saw the British High Commissioner in November 1918, 'Ali Sha'râwî resigned formally from the WaJď in 1922 and played no further part in politics, and Abd al-Azîz Fahmi became a Liberal Constitutionalist and later entirely forsook politics. Others, such as Muhammad Mâmîm, Ismâ'îl Şîldî, 'Ali Mâhîr, Muhammad 'Ali 'Allîbâ, became declared opponents of the WaJď. By 1923, Zaghlûl was surrounded by younger men who were little known and newcomers to Egyptian politics, necessarily very much under his domination: his nephew Muhammad Fâth Allîh Bârâkî, MuJfâjâl al-NâbûS, who had been a magistrate in Tanjâ and who had been deposed by the Nationalist Party to represent them in the original WaJď, William Makram 'Ubâyî, who had been a civil servant, Muhammad NaJdîl al-Ghârîbî, Ahmad Mâhîr, Mahîr Fâhmi al-Nufâsî, 'Ali al-Shâmî, all of whom came to be prominent in the WaJdîst movement at one time or another between 1924 and 1952. The WaJď as a formal body was organized in 1919 at the inception of the anti-British agitation. It took the form of a central committee composed of public men, the ostensible business of which was to direct from Cairo the collection by provincial committees of signatures to a petition praying the British authorities to allow an Egyptian delegation to proceed to London. It is not known how effective such a country-wide organization was, and there is a suspicion that the WaJď committees benefited, at the outset at any rate, from the support of the Sultan and his government. After 1921, the prominent members of the original WaJď left it and Zaghlûl became the undisputed leader of those who remained, the committee being his creature and instrument. But Zaghlûl then and later refused to be considered as the leader of a mere faction, holding that he was the sole authorized delegate of the Egyptian people, and that it was his opponents who were guilty of factionalism. A characteristic claim of his, made in a speech of 2 July 1924, was 'I am not the president of a party, but the delegate of a nation (waJđl umma)' (Muhammad Ibrâhîm al-Dâjârî, ed., 'Athâr al-zâ'im Sa'd Zaghlûl, i, Cairo 1927, 211). His followers indeed acclaimed him as the za'im, the Leader (a title which devolved on his successor MuJfâjâl al-NâbûS), his house came to be called bayt al-umma, and his wife Safîyya umma al-misrijîyyîn.

Zaghlûl won the elections held in December 1923 under the new Constitution, and his followers constituted the overwhelming majority of the House of Representatives. He formed a government almost half the members of which—it is interesting to note—were non-Wafdist. This is not how the constitution was supposed to work, and it is generally explained by the fact that the King's and the administration's influence had been exerted on Zaghlûl's behalf during the elections, because the King did not wish the latter's rivals, the Liberal Constitutionalists, to win, and that once the election was won, the King's influence had been exerted on Zaghlûl's behalf during the elections and that he was the sole authorized delegate of the Egyptian people, and that it was his opponents who were guilty of factionalism. A characteristic claim of his, made in a speech of 2 July 1924, was 'I am not the leader of a party, but the delegate of a nation (waJđl umma)' (Muhammad Ibrâhîm al-Dâjârî, ed., 'Athâr al-zâ'im Sa'd Zaghlûl, i, Cairo 1927, 211). His followers indeed acclaimed him as the za'im, the Leader (a title which devolved on his successor MuJfâjâl al-NâbûS), his house came to be called bayt al-umma, and his wife Safîyya umma al-misrijîyyîn.
tation had had little time to dismantle the network of Wafdist committees in the countryside which Zaghlul in his year of power must have overhauled and strengthened. Ziwar dispensed with a parliament until the British High Commissioner, fearing unfettered palace rule, which Ziwar's ministry in effect signified, pressed for new elections. The palace being checkmated, the electorate ratified its defeat by electing a Wafdist parliament in May 1926. But since Zaghlul, the leader of the Wafd, was not acceptable to the British authorities as Prime Minister, the normal play of party politics in a constitutional and representative regime was again frustrated, and 'Adli Yakan, the Liberal Constitutional leader, took office at the head of a coalition of Wafdist and Liberal Constitutionalists. The coalition subsisted until March 1928, when the Liberal Constitutionalist 'Abd al-Khalîk Thawrât, who succeeded 'Adli in April 1927, having failed to negotiate a treaty with Great Britain, found his position untenable and yielded his place to Muṣṭafâ al-Nâhhas—on whom had fallen Zaghlul's mantle—who formed the first wholly Wafdist administration. Al-Nâhhas soon found himself at loggerheads with both the King and the British authorities; in June 1928 the King dismissed al-Nâhhas, dissolved parliament, and called on Muḥammad Maḥmûd, now president of the Liberal Constitutionalists, to form a government. This new Prime Minister obtained from the King authority to suspend elections and parliamentary government for a period of three years. But in 1929, a new government in London having made clear that it would negotiate only with a Wafdist government (whom it regarded as the only legitimate representative of Egypt), Muḥammad Maḥmûd resigned and new elections took place; they ratified the decision of the British government and returned a Wafdist government, which took office on 1 January 1930. Negotiations between al-Nâhhas and the British government having failed, and the King disliking a Wafdist government, he dismissed it in June of the same year, commissioned Ismâʿîl Siṣâlkī to form an administration, dissolved the parliament and promulgated a new constitution and a new electoral law. Elections under the new law were held on 1 January 1931, and the new parliament was returned with a Wafdist parliamentary majority. A complicated series of events in 1935-6 forced the King to seek an accommodation with the Wafdist. He re-established the constitution which he had abrogated in 1930. This was a victory for the Wafdist, and the elections which were held in May 1936 ratified it by returning a parliament with an overwhelming Wafdist majority. King Fuʿâd died in April 1936, to be succeeded by his son Fârîq, who attained his majority in July 1937. A clash between him and the Wafd was not long in coming. In December 1937 he dismissed al-Nâhhas and shortly afterwards dissolved the parliament. The new parliament had an insignificant Wafdist minority, thus ratifying the victory of the King. This parliament itself was also dissolved as a result of an extra-parliamentary clash of power. By the coup d' état of 2 February 1942, the British authorities forced a Wafdist government on the King. This government dissolved the parliament of 1938 and obtained an overwhelming majority at the subsequent elections. It ruled until October 1944, when the King found the power to dismiss it and dissolve its parliament. The ensuing elections were boycotted by the Wafd, and the parliament elected in January 1945 was wholly Wafdist. This parliament was dissolved in November 1949, and the election of January 1950 gave an overwhelming Wafdist majority; the course of events which led to this result is still very imperfectly known, but there was considerable support from the outcome of a reconciliation between the King and the Wafd. The Wafdist government lasted until January 1952, when it was dismissed by the King. Its parliament, the last under the constitutional monarchy, was dissolved shortly thereafter.

The course of events here briefly set out indicates that in the Egyptian parliamentary régime, contrary to the intentions of its founders, and indeed to its formal working elsewhere, it was the government, or rather the actual effective authority in the country at any given time—which determined the character and composition of a parliament, and not the other way round. This had a fundamental bearing on the character and functions of the political parties. These could not function as coherent parliamentary and electoral organizations dedicated to the acquisition of popular support and the exercise of political power within a legislative assembly. These so-called parties could rather more intelligibly be described as either movements or factions. The Wafd was clearly a movement; Zaghlul claimed to be above all parties and interests, to be the representative and the leader of the nation; he thus inaugurated a new style of politics of which appeal to the mass was the most significant characteristic. This new style, which depends on a leader with a hypnotic popular appeal who is the ultimate depository of unfettered power, was made possible by the disintegration of traditional society, the erosion of traditional authority, the increase of literacy, the improvement in communications, and the existence of a new urban amorphous mass of recent migrants from the countryside, leading lives of material poverty and spiritual disorientation. All these created new conditions of political action, new possibilities of channeling hitherto untapped sources of political power by organizing the passive and malleable mass into a formidable phalanx round a leader and his slogans. It is evident that the Wafd under Zaghlul and al-Nâhhas attempted this. They were only intermittently successful, and they ultimately failed. The reasons for their failure may possibly have been an imperfect grasp of the new techniques; the influence as a check and a disturbing factor, the existence of other, more traditional, forms of authority which still had some life in them and, of course, sheer accident. But the Wafd again and again tried to create various organizations for the recruitment and control of their supporters. Foremost among these, and the least known in their detailed working, are the Wafdist committees which spread over the whole country. When the Wafd was either expecting or exercising power, it attempted to create specialized organizations to cater for different sections of the population, particularly students, industrial labour, etc. The example of Fascists and Nazis no doubt stimulated the creation of a Wafdist para-military group, al-ḥisâb al-sarba', which functioned in 1950-7 and which had some analogy in both name and function with Blackshirts and Brownshirts. The Wafd were not the only ones to experiment with these new possibilities; one writer has indeed claimed that the Nationalist Party was the first to organize Blueshirts, and that the Wafd filched the idea from it (Muṣṭafâ al-Hînâwî, al-Sīr al-ḥâlîd, Cairo n.d. [after 1936], 5-6). Be this as it may, the Nationalist Party never succeeded in becoming a movement, and remained what may be called a faction. One organization which from the outset attempted to be a movement was
Misr al-fatāt, founded by Ahmad Husayn in 1933, it is claimed at the inspiration of King Fuʿād (P. Graves, The story of the Egyptian parties, in the nineteeth century and after, March 1938). Its slogan was Allāh, al-watan, al-malik, and it attempted to organize its adherents into Greenshirts (al-bīmān al-ḥādārī), which frequently clashed with the Blueshirts. Another organization which became a political movement had, at its inception, quite a different character. Al-ḥithānid al-muslimīn (q.v.), founded in 1928 by Hasan al-Bannāʾ (see al-bannāʾ), was at the outset dedicated to a renewal of the religious life, to the fight against laxity, scepticism and unbelief prevalent among Muslims as a consequence of European influence. Some ten years later, the Brotherhood was an extensive organization covering a large part of Egypt. Because Islam is din wa-dawla, and because the circumstances after 1940 became propitious, the Brotherhood under its murshid came to play an increasingly political rôle. Al-Bannāʾ’s political transactions are still quite obscure, but the Brotherhood was a formidable weapon which he and his successor Hasan al-Huḍaybī could use in pursuance of their aims in the troubled years between the end of the second world war and the final dissolution of the Brotherhood by the Egyptian Revolutionary Command in January 1954. The tight organization of the Brotherhood enabled al-Bannāʾ and his collaborators to set on foot a secret terrorist apparatus (al-dīkāk al-tāriṭ) which was used to enforce the wishes of those who controlled it until an attempt on the life of Colonel Djamāl ‘Abd al-Nāṣir in October 1954 resulted in the arrest and trial of the most prominent Brethren—al-Huḍaybī included—the execution of six of them, and presumably the final destruction of the apparatus.

In contrast to these organizations, which may be called political movements, other groupings in Egyptian politics under the constitutional monarchy may be termed factions. They consisted of people who, by virtue of their educational attainments or an inherited position, were members of the official classes and therefore had the necessary knowledge and connexions for filling political office and exercising power. Such men were loosely grouped under party labels which they acquired by accident at some point of a career. To be called a faction rather than movements, because they seldom or never sought to involve the masses in politics in the manner of the Wafd or the Muslim Brethren, and yet were not strictly parties, since the constitutional régime in Egypt worked in such a fashion that parties could not function, let alone flourish. These groupings may therefore not all be dismissed as a mere collection of placemen eager for office and ready to do the bidding of whoever gave them office; but whatever their original aims and motives were, the situation was such that if they desired to take part in politics they had to acquiesce in measures and combinations quite remote from their proclaimed principles. A good case in point is the Nationalist Party, which started with an articulate ideology, but the activity of whose leaders under the constitutional monarchy had, as has been seen, little to do with this ideology. Another party between whose activities and principles a great gap opened was the Liberal Constitutionalist Party (hizb al-ittihād al-mustabīla), formed when ‘Abd al-Nasir al-Saʿdi, formed when Ḥāmid al-Bāṣīl seceded from the Wafd in 1930, which proved quite ephemeral; al-hayya al-saʿdiyya, formed when Maḥmūd Fāhmi al-Nuṣrāḥīl and ‘Abd al-Māhīr fell out with the Wafd in 1937, which went on as a political grouping until 1952 and which provided three Prime Ministers and other ministers in anti-Wafdist governments; and al-kutla al-wafdiyya al-mustabīla, formed when Makram ʿUbayd was expelled from the Wafd in 1943, which consisted of his own personal following and provided two or three ministers in three coalition governments which succeeded the Wafd government of 1942–44.

The Ottoman Empire.—The earliest parties in the Arabic-speaking areas of the Ottoman Empire were in their origin and character somewhat similar to the earliest Egyptian parties. They were groups of young men touched by Western influences and discontented with what they considered to be the constraining and stagnant conditions of the Empire under ʿAbd al-Ḥāmid II (q.v.). In those years there was little scope for overt political action, nor were the generality of the subjects much inclined to
question the established and traditional order. Such
groups were small, clandestine and ephemeral. One
of the earliest of these groups was one formed by some
Christian students at the Syrian Protestant College
at Beirut in the early 1880s; they had fallen under
the influence of a Maronite who taught French at
the College and who was imbued with French liber-
tarian and revolutionary ideas. These young men
conceived the project of fomenting a movement to
end Ottoman supremacy in the Lebanon. They went
so far as to put up copying in public places placards in
this sense, but as no reaction was forthcoming the group dissolved itself in 1882-3.

Another group was the one which came into being
at Damascus in the early years of the twentieth
century. It was composed of young Muslims who were
disciples of Shaykh Tahir al-Djaza'iri, who was In-
structor of Education in the Damascus wilayat and
who lived in Damascus from 1880 to 1905. The group
is known as halalat Dimashq al-saghira, and it in-
cluded Shaykh Djamal al-Din al-Kasimli, Shaykh
Abd al-Razzaq al-Bitari, Shaykh Salim al-Bukhari.
These were among the original members, who were
joined by younger men including Muhhib al-Din al-
Khatib, Salih al-Din al-Kasimi, Abd al-Hamid al-
Zahrawi, Shukri al-Asali, Abd al-Rahman al-
Shahbandar, Muhammed Kurd All, Faris al-Khuri
and Salim al-Djaza'iri. The circle apparently dis-
cussed mainly religious ideas, and increasingly when
younger men joined it, political questions. Muhhib
al-Din al-Khatib was apparently the mainspring of
this later development. Some of the younger members
of the circle went to Istanbul in about 1905, and in
1906 Muhhib al-Din al-Khatib and his friend Arif al-
Shahhadi founded there a secret society, djam'iyyat
al-nahda, and asked two friends still in Damascus,
Shaykh al-Ashtari, a religious teacher, and al-Hasan
al-Halabi, to form a branch in the city. The djam'iyya consisted en-
tirely of a small group of young educated Damascenes,
and in spite of its foundation at Istanbul Damascus
was its centre. After the Young Turk Revolution, the
djam'iyya applied for permission to function openly,
and interested itself for a few years thereafter in
spreading knowledge of Arab history and Arabic
literature and in providing a local forum for discuss-
ing Arab nationalism. But the society was not
successful, and in 1909 it was dissolved.

Another group, or at any rate the name of a group
which existed at the beginning of the twentieth cen-
tury, falls also to be recorded. It was the Ligue de la
patrie arabe, founded by Na'dib Arif, a Syrian
Christian who had studied in Paris and then became
an official in the Jerusalem wilayat; this post he left in
1904 for treasonable activities in Paris. Who, apart
from the French retired official E. Jung (who has
chronicled his activities) collaborated with him, and
whether he was the agent of one or more European
powers, is obscure. The programme of his Ligue was
the creation of an Arab empire extending over Mes-
opotamia, Arabia and the Levant and the creation of
a 'spiritual' Caliphate. But the Ligue seems to have
been of little consequence and to have sunk into
obscurity when his periodical, L'Indépendance Arabe,
of which eighteen numbers came out in 1905-6,
ceased publication.

It was only after the restoration of the Ottoman
Constitution in 1908 that many Arab parties were
formed, and became quite active for a time. Because
of the vicissitudes of the Ottoman parliamentary
régime of 1908-14, these parties could not function
as normal parliamentary parties, nor could they,
owing to the state of society then obtaining, aspire to
enlist mass support. They were small, ephemeral
factions made up of members of the higher classes
and such others as had access to European ideas. It
is commonly agreed that the first of these groupings
was djam'iyyat al-ikhd* al-arabi, founded by the
Damascene Shaikl al-Mu'ayyad and other, mainly
Syrian, officials and notables in Istanbul in 1908.
A report in The Arab Bulletin (24 May 1918) records
that the group came into being as a consequence of
the 1908 Parliament, refusing to be satiated with the
Shi'ta, and as member for Benhazri and the Shaikl al-
Khallil, was accused of treason and executed. Two
groupings dating from this period, among Syrian and
Lebanese living in Egypt, may be noticed. The first
is an ephemeral group called djam'iyyat al-ikhd* al-
'ushtdni, which apparently lasted for only a few
weeks, among the members of which were Rafik al-
'Asim, Rashid Rida, Yahid Safi, Diurriti Zaydan,
Nasim Shukayir and Diurriti A'mamli. The second
grouping was al-ittihad al-bi-khi, al-ittihad al-
'ushtdni (L'Association is-
noise) formed by Maronite notables in Cairo in No-
vember 1909. It was founded by Iskandar A'mmnun,
Atnun al-Djumayyil and D'Badda Barakat. Before the
war, its programme consisted in demanding better
commercial facilities within the Empire for Mount
Lebanon, widening the suffrage for its assembly,
increasing the number of its members and widening
its powers, and annexing the Blanc, Tripoli and
Beirut to Mount Lebanon, to form what came to be
known under the French mandate as the Grand Liban.
This last point came to form the main issue for
which the ittihad worked after the outbreak of
war, when the partition of the Ottoman Empire
became a possibility. The ittihad—the president of
which from 1917 was Auguste Adib—lost its raison
d'etre with the French occupation of the Lebanon.
Apart from these our list of public political groupings
is limited, and a number of secret groupings are also recorded.

Towards the end of 1909, there was formed in Istanbul
a secret group composed of officers and university
students mainly from Syria, al-djam'iyya al-bahtani-
iyya. The group was dedicated to the encourage-
ment of Arab nationalism, and among its prominent
members were the two officers A'mnun al-
Lutfi Hafi and Salim al-Djaza'iri, nephew of Shaykh Tahir,
Abd al-Karim al-Khallil and Arif al-Shahhadi, all of
whom were executed for treason by the Ottomans
in 1915-16. Another secret grouping was one founded
by students, again mainly Syrian, in Paris in 1909. This
was djam'iyyat al-umma al-arabiyya al-fatali, which
was founded by Ahmad Kaddi, Awal Abd al-
Hadi and Rustum Haydar. The aim of the society was
Arab independence. It is of course difficult to know
the extent and effectiveness of the operations of
a secret society, but the members of al-fatali are said
to have taken the initiative in calling for an Arab
Congress (which met in Paris in June, 1913), and
seem to have carried on conspiratorial activities
against the Ottomans in the Levant until the end of
the first world war; many of them became prominent
later on in Syria, Palestinian and Iraqi politics. Another
secret society, al-jam'iyyat al-khalil, was

but seems to have been more ephemeral than most and there is no record of any activity for which it was responsible. The personal and external vicissitudes to which the Ottoman Empire was subject in the years immediately preceding the first world war created fears and tensions and afforded occasions for political action and openings for political ambition, so that in 1912 and 1913 new Arab political groupings came into being. Of these new groupings, the best-known was ḥizb al-līmarbākisiyya al-ṭidārīyya al-ṣūhmānī, which was founded in Cairo in December 1912, and which, as its name showed, was dedicated to the achievement of administrative decentralization and provincial self-government in the Ottoman Empire. The founders were again Syrians, the most prominent among them being Muhammad Rashīd Rīdā, Rafīq al-ʿAzm, Shibli Shumayyil, Iskandar ʿAmmūn and Muḥīb al-Dīn al-Ḥaṣīb. The programme of the Party was obviously akin to the ideas of Prince Saḥbān and to the Khāmiṣīyya, but it seems to have enrolled various potentates of the Ottoman Empire, and there is no record of any activity for which it was responsible.

The internal and external vicissitudes to which the Ottoman Empire was subject in the years immediate-ly preceding the first world war created fears and tensions and afforded occasions for political action and openings for political ambition, so that in 1912 and 1913 new Arab political groupings came into being. Of these new groupings, the best-known was ḥizb al-līmarbākisiyya al-ṭidārīyya al-ṣūhmānī, which was founded in Cairo in December 1912, and which, as its name showed, was dedicated to the achievement of administrative decentralization and provincial self-government in the Ottoman Empire. The founders were again Syrians, the most prominent among them being Muhammad Rashīd Rīdā, Rafīq al-ʿAzm, Shibli Shumayyil, Iskandar ʿAmmūn and Muḥīb al-Dīn al-Ḥaṣīb. The programme of the Party was obviously akin to the ideas of Prince Saḥbān and to the Khāmiṣīyya, but it seems to have enrolled various potentates of the Ottoman Empire, and there is no record of any activity for which it was responsible.

The period between the Italian conquest of Tripoli and the outbreak of the first world war saw also the creation of two secret Arab groups. The first of these was ẖimārīyya al-ṣūnūm, which was founded on 28 October 1913 by Bīnābīqīʿ ʿAzīz al-Ḥiṣnī. Its members were army officers and included Salīm al-Dājazāʿīrī, Nārī al-Sāʿīdī, Yāṣīn al-Ḥāshīmī, his brother Tāḥā, Dāmīl al-Maddātī, Ṭubṣīn ʿAṭī, Maḥīdīl Muḥāṭīs, Aḥmīd Ṭalīb, Mūṣīm al-Ṭalīb and Mūṣīm al-Ṭalīb. The programme of the Party was evidently akin to the ideas of Prince Saḥbān, who had also called his Khāmiṣīyya, and the Khāmiṣīyya was reconstituted, with some of the most prominent Sharīfians, such as ʿĀbd Allāh al-Dulāyīmī, Ahmad Kadrī and Nasīb al-Bakrī as leading members. The Khāmiṣīyya was formed following the Ottoman defeat in the Balkan wars when the foundings decided that the strength of the Arabs lay in their peninsula, and that this strength would be useless unless the rulers of the peninsula were united in an alliance. Rashīd Rīdā seems to have known of various potentates of the peninsula in this Society, but apart from a long and fearsome oath (reproduced in Amin Saʿīd, al-Ṣawīr al-ʿarabīyya, i, 47-59) no activity by the group is recorded.

When the Ottoman Empire entered the war in November 1914, political activity by Arab groups and parties, such as it had been in the six years from 1908, virtually came to an end. It was only at the end of the world war that a new grouping came into being in Cairo known as ʿumūmīyya al-islāmīyya, whose ambitions in Syria they mistrusted. Their views are to be gathered from the memorial they addressed to the British government in the summer of 1918, which elicited the reply known as the Declaration to Seven Syrians (E. Kedourie, England and the Middle East, 113-5). The group included Michel Lutfī Allāh as president, Rashīd Rīdā as vice-president, ʿĀbd al-Rahmān al-Ṣabāndār and Salīm Sārkīs as joint secretaries. When eventually Sharīf Fayṣal was installed in Damascus at the head of an Arab government, the conditions in Syria became such that the grouping had no longer a raison d'être and, in fact, its members were later found adopting a variety of positions in Syrian politics.

The short-lived Sharīfīan régime in Syria (November 1918-July 1920) was characterized by an active, not to say turbulent, political life. The faṭālī society was reconstituted, with some of the most prominent Sharīfīans, such as ʿĀbd Rīdā al-Rīkābī, Yāṣīn al-Ḥāshīmī, Ahmad Kadrī and Nasīb al-Bakrī as leaders. But the faṭālī never seems to have made its existence or membership public; instead a political party was organized to work in public for the aims
of the secret society: this was *ḥizb al-istiklāl al-ʿarabī*, the declared purpose of which was the liberation of all Arab countries from foreign domination. The pan-Arab aims of the leaders of the *ṭakfīl* and the *faṭāt*, many of whom were then young, unknown, and with no local standing in Damascus, evoked some opposition among Damascus notables, who organized *al-ḥizb al-watāni al-sūrī*, the secretary of which was Muhammad al-Sharifī and the declared aim of which was to work for a Syria "independent within its natural frontiers". Another group concerned with the political future of Syria was one organized by some Syrian Christians in Cairo in 1919 to work for a United States mandate in Syria. The group was called *al-ḥizb al-sūrī al-awlādī*, and its members included Fāris Nimr, Saʿīd Shuḵāʾī, Yaʿqūb Ṣarfūtī and Iyās ʿĪsāwī. The group delegated two of its members, Fāris Nimr and Ḥālīh Khayyāt, to put its views before Charles Crane of the King-Crane Commission which visited the Levant in the summer of 1919. When it became clear that there was no possibility of the U.S.A. accepting such a mandate, nothing more was heard of the group.

The aftermath of war saw Mesopotamia, which was under British occupation, in an unsettled condition. The tribes and cities of the Middle and Lower Euphrates, predominantly Shi`ī, were in effervescent activity, and the Hashidī were among the malcontents of the former Ottoman officials and officers, and the Sharifian régime in Syria encouraged warlike activities against the British authorities. The Sharifian officers in Syria who had been members of the pre-war ‘aḥd sent emissaries to Baghādād, and secretly constituted a group of their sympathizers under the name of *d jamʿiyatiyat al-ʿaḥd al-ʿarabī*. This was a predominantly Sunnī group. Some Shi`ī leaders of Baghādād and Karimayn formed their own secret political society to protect Shi`ī interests in the anti-British struggle. The society was known as *d jamʿiyatiyat ḥaras al-istiklāl*. Its founders included ʿAll al-Bāzzīr-gān, Shaykh Muḥammad Bāšīr al-Shābībī, Ḥādī Zwayn, Muḥammad Daʿārībīr, Abū ʿl-Tīmmān and Sayyid Muḥammad al-Saḍrī. With the installation of Fayṣāl as King of Iraq in 1921, new issues and new groupings led to the disappearance of both the ‘aḥd and the ḥaras.

Iraq.—The Kingdom of Iraq was supposed to be a constitutional, parliamentary monarchy [see *duʿūrā*]. But as in Egypt, though here the circumstances and reasons were quite different, parliament never functioned in a normal or representative fashion but was rather the instrument of whatever effective authority existed in the country at any moment. Parties therefore during the monarchical régime (1922-1958) may be described as more or less factions composed of politicians manoeuvring on the restricted and artificial political scene of the capital. The first parties to be formed under the monarchy were *ḥizb al-nahdā al-riyāḍiyya* and *al-ḥizb al-watāni*, both founded in August 1922. They were composed of public men who were dissatisfied with the second ministry of Sayyid Abū al-Raḥmān al-Naḥkābī and who were prepared to adopt an insinuate stance towards the mandatory power. The leaders of the *nahdā* group included Ḥamdī al-ʿAṣāfī and Nāṣīr al-Suwaydī, whilst *al-ḥizb al-watāni* was, and remained until the mid-thirties, when it disappeared from view, identified with Muḥammad Daʿārībīr, Abū ʿl-Tīmmān whose following it in fact constituted.

Authority existed in the country at any moment. ideas were influential at the time and many of its members participated in Iraqi politics after 1945, notably in Hizb al-istafrad.

After the second world war, the Regent 'Abd al-Ilah in a speech of December 1945 gave an impulsion to the formation of political parties, and in April 1946 five parties were licensed: Hizb al-Abi'r, Hizb al-istafrad, al-Hizb al-wa'tani al-dimahraji, Hizb al-'afrd al 'Abi'r, and Hizb al-istafrad al-wa'tani. Hizb al-Abi'r was founded by eight men, none of whom was prominent in politics; it does not seem to have had any noticeable political activity, and it decided to "freeze" itself in December 1948, after which date nothing more was heard of it. Hizb al-istafrad was formed by a group which included Muhammad Mahdi Kubbah, Khalil Kanna and 'Abd al-Razzâk al-Zâhir; it was pan-Arab in its views and included many of those who had followed or sympathized with Rashid `Ali al-Gaylani's coup d'etat of 1941. The Party remained active in opposition to successive governments until it went out of existence in September 1954, when a decree was issued at the beginning of Nâri al-Sa'd's twelfth administration dissolving all existing associations and clubs in Iraq. Hizb al-wa'tani al-dimahraji was formed by some of the old members of giam'm'yyat al-istafrad al-'afrd; the founders included Kaml al-Câdirji, Muhammad Hadid, Husun Djânîl, 'Abd al-Wahhâb Mirgân and Şadîk Kammûnî; it functioned for a year as the Pan-Arab Democratic Movement of Iraq, and was dedicated to pan-Arabism and socialism and operating in opposition to successive governments who were in favour of upholding it. It was not a homogeneous group, being composed of politicians hoping for office and using the front as a lever for their ambitions, and of ideologists whose hopes of office were remote; rifts between members appeared, and in August 1954 the front ceased all activity.

Syria.—The early years of the French mandate in Syria show little party political activity. Syrian nationalism was fostered in this period, and in 1927 the French rule in Syria, but until 1935 such protest was little organized. In May of that year, the Syrian leader 'Abd al-Râhamân al-Shâbendar found, together with other Syrian nationalists, including Hasan al-Hâkim, Ltûtî al-Haffâr and Fâris al-Khûrî, Hizb al-'afrd; but this Party was short-lived, since the French authorities banned it the following August on suspecting it of involvement in the Druze rebellion which had just started. In the anti-French troubles which followed, Shâbendar took a prominent part, and when the French were successful in pacifying the country, he went into exile and remained absent from Syria until 1957. The next Syrian political grouping was al-kulla al-wa'taniyya, formed in about 1929, which was organized formally at a meeting in Hims in November 1932. The National Bloc was dedicated to the attainment of Syrian independence and Arab unity; it was led by Ibrâhîm Hanânî and Hâshim al-Atâsî, and among its prominent members were Sa'd Allâh al-Djâbirî, Djâmil Mardâm, Shukrî al-Kuwâtî, 'Abd al-Râhamân al-Kayyâtî, Ltûtî al-Haffâr, Edmond Rabbath, Fakhîr al-Bârâdî and Miikhâl Ilyân. The Bloc was the main political grouping in Syria in the nineteen-thirties. Its leaders were influential in the country and frequently occupied ministerial positions in their localities; the Bloc essentially consisted of notables united by struggle against the French, but here and there, now and again, they succeeded in mobilizing the mass and organizing it in towns like Damascus, Hâmît and Aleppo, but only by fits and starts. Their success in this enterprise was greater between 1936 and 1939 when they exercised power with French help and consent, dominating the legislature and dispensing administrative patronage; in this period, they organized a para-military youth movement, al-shabab al-wa'tani, the uniform of which was an iron-grey shirt. Along with the kulla, there were in the nineteen-thirties a variety of evanescent political groups which came and went depending on French encouragement, political rivalries or foreign (whether European or Iraqi) inspiration. Of the groups, the best known are 'usbat al-'amal al-ba'sami, Hizb al-wa'da al-'arabiyya, Hizb al-inkafrd, al-Hizb al-wa'taniyya al-mutta'kida, and al-hay'a al-'afrd biyya, which constituted Shâbendar's own political following when, on his return to Damascus in 1937, he fell out with his colleagues of the Bloc. Overt political activity in Syria ceased between the outbreak of the second world war and 1945, when parliamentary elections were held, but in 1941 a small political group dedicated to the support of Rashid `Ali al-Gaylani in Iraq was formed by two Damascus schoolteachers, Michel 'Aflak and Şâlîb al-Din al-Bttar; the group was known as gi'ma'il nasrat al-'Irâd; it was the nucleus of what later became Hizb al-ba'th al-'arabi, which in 1953 amalgamated with a group founded in the late nineteen-forties by Akram al-Hawrâni, al-Hizb al-'arabi al-'afrd al-mutâ'kida, in order to become Hizb al-sunûrî, dedicated to pan-Arabism and socialism and operating in Syria from 1954 to 1956.
ating not only in Syria but also in the Lebanon, Jordan and Iraq as well, and, with the support of sympathetic army officers, actually executing power in both Syria and Iraq. The elections of 1943 resulted in an overwhelming majority for the National Bloc, which took power and, with British support, succeeded in securing French departure from Syria. The Bloc, a coalition of politicians, suffered from fissiparous tendencies; this was the case in 1936-39, when jealousy and dissensions between different leaders and areas were already visible, and also after 1943, when the very extent of their power before a Lebanese military court for taking part in armed rebellion. 1936-7 saw the formation of two movements with paramilitary features: hizb al-nadjiyya, which grew out of the Muslim Boy Scout movement, and hizb al-kahtib al-lubnaniyya (les Phalanges libanaises) founded by Pierre Djjumayyil for the protection of Maronite interests. Finally, in 1949, Kamal Djjumblat founded hizb al-lekaddumi al-siyarikhi, which advertised a socialist ideology, but which remained, by and large, a group consisting of the founder's personal following.

Palestine.—Zionism was the main issue in terms of which the Arabic-speaking population of Palestine had to define its political divisions and rivalries. Leadership in the anti-Zionist struggle was disputed between two prominent families, the Husayns and the Nashashibis. A member of the former family, Muhammad Amin al-Husayni, became early in the nineteen-twenties the mufti of Jerusalem and president of al-majlis al-islami al-a'ld, which was set up by the Mandatory authorities to supervise and administer Muslim religious endowments and establishments in Palestine. A member of the latter family, Raghib al-Nashashibi became mayor of Jerusalem. These two personalities became the focus round which their respective followers were gathered, and in the nineteen-twenties Arab-speaking Palestine was divided between two factions, the majalisyiyyun, who constituted the Husayni following, and the mu'saridun who opposed them. In 1931, a number of politicians who believed in Pan-Arabism formed hizb al-istishabi; the group included Akram Zu'a'atar, Subh al-Kha'ara, 'Abwani 'Abd al-Hadi, Muhammad 'Issat Darawa, Mu'sin al-Madi and 'Agdi al-Nuwayhid. In December 1934, the Nashashibi faction was formally constituted into a Party, hizb al-difa' al-watani, and in April of the following year the Husayni faction also constituted itself into a Party, al-bizb al-arabi al-fisasfin, the president of which was Djjamal al-Husayni. In June of the same year Dr. Husayn al-Khali'di (hitherto in opposition to the mufti) organized his following into hizb al-islah, and, opposing the Nashashibi faction, captured the office of mayor of Jerusalem. In October 1935 a Nablis group formed itself into hizb al-kullta al-wataniyya. All these different groupings proved quite ephemeral, for in April 1936, at the beginning of the long drawn-out Palestine troubles, they agreed to form a body, al-lajna al-arabiyya al-'ulyd, in which they were all represented, in order to coordinate the struggle against the Mandatory Power. The subsequent events in Palestine between 1936 and 1948 allowed no further opportunity for the formation of party groups. But some of the parties formed earlier, notably hizb al-istishabi and hizb al-arabi, resumed their activities between 1943 and the end of the Mandate.

The Sudan.—Political parties in the Sudan were quite late in making an appearance, and when they did, their activities were governed by their connection with the heads of the two leading tarikas, the Khad-
miyya and the Ansār, and the attitude they adopted toward union with or separation from Egypt. In March 1938 the formation of a group, muṣmar al-
akhīrīyya al-dīmm, was announced, the aim of which was to promote the general welfare of the country and its graduates (by the term 'graduate' was meant someone who had finished school at the intermediate grade or above). The group wished for a greater share in government to be given to the Sudanese. A split in the ranks of the Congress led after 1942 to the formation of another group, the aṣṣihkā* led by Ismā‘īl al-Azhari, which was allied with the Khāmīyya
tarīka and dedicated to unity with Egypt. Opposing them was hīṣb al-umma, which called for the complete independence of the Sudan, and was backed by the Ansār. In August 1949 another group, al-dżāhba al-
waṭanīyya, was formed which aimed at Dominion status for the Sudan under the Egyptian crown. To this group Khāmīyya support was given for a time.

In 1951 a group dedicated to the formation of a Sudanese republic immune from Mahdist influence was formed: it was called al-hīṣb al-dżumī ḫūri al-
sābrī, it never had much influence. In 1952 the aṣṣihkā* and the dżāhba combined to form al-hīṣb al- waṭanī al-ittihādī which, led by Ismā‘īl al-Azhari, proclaimed unity with Egypt as its objective. This group came to power in January 1954 and remained in office until the coup d’état of 1958 put an end to its purporting activity. In spite of its professed aims the Party, when in power, found that it had to acquiesce in separation from Egypt.

Tunisia.—The French Protectorate of Tunisia dating from 1881 was the framework within which organized Tunisian political activity took place. This Protectorate facilitated the settlement of Frenchmen and other Europeans in the country and slowly led to increasing French control over Tunisian administration. Such a situation led a small number of educated Tunisians to form a group in 1907 known as the Parti Jeune Tunisien, whose aim was to work for a constitution and a greater scope for Tunisians in public affairs. The group included ʿAllā Bāṣḥ Šaṃba and ʿAbd al-ʿArīz al-Ṭaḥālībī. At the end of the First World War, the group came to be known as the Parti Tunisien and in the boom to Presi-
dent Wilson in April 1919 and published a bouquin: Paris in 1920, La Tunisie Martyre, which was written by Ṭaḥālībī and Ahmad Sakkā and which set out Tunisian grievances. In June of the same year the Parti Tunisien changed its name to Parti Libéral Constitutionnel (al-hīṣb al-hurr al-dustūrī), commonly known thereafter as the Destour. Towards the end of the nineteen-twenties the Party became revitalized through the efforts of a younger generation of mem-
bers, including Ḥabīb Bourguiba (al-Ḥabīb Abū Ṣuqayyab), al-Šāḥīlī Khayr Allāh and Ṭaḥālībī Māṭīrī. The younger men led by Bourguiba soon clashed with their elders, and at the Party Congress of Kaṣr Hillā in March 1934 Bourguiba captured the organization, which he continued henceforth to lead in spite of many challenges and vicissitudes. The Party came henceforth to be known as the neo-
Destour to indicate the rejection by the new leaders of the ideas of those whom they called 'archīs'. Under Bourguiba's leadership, the neo-Destour stood for Tunisian independence. Bourguiba also transformed the Party into a mass movement with a country-wide organization and a pyramidal chain of command with himself at the apex. The Party was composed of branches (dṣwāba) of two kinds: terri-
torial (dṣwāba tūrābīyya) and non-territorial (dṣwāba ghayr tūrābīyya), the latter being found in a large city like Tunis, and comprising members from the same home-town or locality. The Party also organ-
ized the unions of workers, al-ṣuḥābā al-
dustūrīyya, and controlled the Tunisian trade union movement, al-ittihād al-dīmm al-tūnīsī li-l'īlān
. The new technique of canalizing mass emotions for political ends is described in a remarkable passage by one of Bourguiba's prominent followers, in which he says that when Bourguiba made speeches orator and audience became as one flesh, the mass respond-
ing to the inflences of the speaker's 'being moved by his anguish and reflection if he compelled it to think' (ʿAllā al-Bahlā-
wān, Tūnīs al-ṭābira, Cairo 1954, 73). After the attain-
ment of Tunisian independence, the neo-Destour consolidated its position in the country, and is today the only political organization in Tunisia.

Algeria.—It is only after the First World War that purely Algerian organized political activity emerges. And it emerges not in Algeria itself, but among the Algerian proletariat in France. In 1926, the French Communist Party tried to organize Algerian workers into a grouping known as the Étoile Nord-Africaine; in 1927 this grouping came to be led by the Algerian Meṣālī al-Ḥāḍī who had served in the French army and been demobilized in France. The Étoile was a left-wing anti-colonial proletarian organization which operated in France, not in Algeria. It had many ups and downs, its leaders were repeatedly prosecuted, and the association itself was banned for alleged sub-
version. In 1936, Meṣālī al-Ḥāḍī, having fled to Swit-
zerland to escape the police, met there the Amir Ṣaḥīb Aslān and, under his influence, gave up his Communist sympathies and began to work for an Arab Islamic Algeria. In 1937 he founded the Parti du Peuple Algérien which recruited its members and organized them in cells in Algeria itself, and worked for Algerian independence. On the outbreak of the second world war, the authorities banned the Party and imprisoned its leader. In 1946, having been allowed to return to Algeria, he organized his followers into a new party, the Mouvement pour le Triomphe des Libertés Démocratiques, which called for a sovereign Algerian republic and for the unity of the Maghrib. The Mouvement was the public and legal front of an underground organization, the Mouvement pour la Mājūl, which had worked underground since its banning in 1939. An even more secret grouping which was set up by Meṣālī al-Ḥāḍī and his colleagues was the para-
 military Organisation Spéciale, the head of which was Āmmān bin Bella. In April 1954, he and eight of his colleagues set up in Cairo the Comité Révolutionnaire d'Unité et d’Action which organized insurrection against the French authorities in Algeria. The Comité launched the Front de Libération Nationale, to whom the French Government eventually con-
ceded Algerian independence. The Front has become the only political movement in the Algerian Republic.

Other political groupings appeared on the Algerian scene in the nineteen-thirties and forties. In 1934, Muḥammad Šaḷāḥ bin Diḷūl (Ben Dielūl) organized the Muslim local representatives of the départements de Constantine into a Fédération des Élus musulmans du départe-
ment de Constantine. Other fédérations were also set up and these groups, loosely organized as they were, did attempt to adopt a common line of policy towards the authorities. What they desired was a lessening of Algerian disabilities and a greater share in government. Algerian independence was not an ob-
jective of theirs; neither was it the objective of the Rassemblement franco-musulman algérien, which bin Diḷūl organized in 1938, or of the Union Populaire al-

gerienne which Farhat Abbas set up in the same year. Neither of these groups was destined to have a long life. When Morocco declared war on France in April 1940, Abbas addressed a manifesto to the Governor-General of Algeria entitled L’Algérie devant le conflit mondial. Manifeste du peuple algérien, asking for justice for the Algerian Muslims and Algerian autonomy. In 1944 Farhat Abbas organized Les Amis du Manifeste et de la Liberté, which he designed as a mass movement to take the place of the Parti du Peuple Algérien. Whether or not his methods before and after 1945 contributed to the rising of May 1945 in the Constantinios, the authorities did arrest him and dissolve his organization. On his release in 1946 he organized the Union Démocratique du Manifeste Algérien, forsaking mass agitation, his watchword being: ‘Ni assimilation, ni nouveaux maîtres, ni séparatisme’. In April 1956, he joined the National Liberation Front.

Morocco.—Organized political party activity in Morocco dates from the nineteen-thirties. Its origins lies in the protest organized by some young Moroccans in 1930 against the Berber dahir [see ZAHIR] and French policy, which they took to aim at separating the Berbers from the Moroccan polity. A group of these young men produced in 1934 a Plan de reformes marocaines, and organized themselves into a Comité d’action marocaine. The group included Muhammad Hasan al-Wazzan, who had fallen out with his fellow-members of the Comité, organized a political group under the name of Action nasionale marocaine, which was likewise banned in October 1937. These early political groupings were much influenced by the political ideas of Shâkal Atâr, who had visited Tétuan in 1930 and to whom Muhammad Hasan al-Wazzan had for some time acted as secretary; they were also encouraged in their activities by the sympathy of some French socialists notably Robert-Jean Longuet who had started the periodical Maghreb in Paris in 1932.

Between October 1937 and 1943 there was little political party activity in the French zone of Morocco. In the Spanish zone, the Spanish Civil War starting in 1936 had a direct and important influence on the character of political party activities. The Spanish Nationalist authorities, who speedily came to control the zone, wished to secure political support among the Moroccans and encouraged the formation in June 1936 of a party led by Abû al-Khalîk al-Turaysi (Torres) under the name of hisb al-islâm al-watani. In February 1937 Makkl al-Nâşri was encouraged to form a rival group, hisb al-wahda al-maghrabiyya. These two groups remained in existence until the end of the Protectorate; intermittently enjoying the favour and support of the authorities.

Towards the end of 1943, conditions inside and outside Morocco making political activity in the French zone once more possible, the Istikliî Party was formed. It was led by the same group who had formed the Comité d’action marocaine and the Parti national; its most prominent members were Ahmad Ballârî, Abû al-Rahîm bû Abîd, Muhammad al-Yazidy and ‘Umar Abîd al-Djall. But the Istikliî Party differed from earlier groupings by the fact that it succeeded in organizing from 1945 onwards a countryside-wide network of cells (djâmâʾat, sing. djâmâʾa) with a pyramidal chain of command; it could thus mobilize the masses in the struggle against the French Protectorate which had succeeded in 1956. The Istikliî Party during the period 1945-56 functioned as a movement. Alongside it there were a number of groupings which were more in the nature of factions: Muhammad Hasan al-Wazzan organized in 1946 the Parti démocratique de l’indépendance (which after independence became the Parti démocratique constitutionnel); the Sharîr Mülyî Idrîs organized in 1947 the Parti démocrate marocain des hommes libres; and in 1948 Bashîr Zîrnî organized the Parti du peuple marocain. These two latter parties supported the Protectorate and in turn enjoyed official protection.

After independence the Istikliî Party emerged as the most powerful political organization in the country, but in 1959 there was a split in its ranks, and two of its leaders, Mahdî bin Barka and ‘Abîd Allâh Ibrîhim, led a new party with leftist leanings, the Union nationale des forces populaires, which seems to enjoy some mass support.

Communist Parties.—From the end of the first world war, small, usually clandestine, groups of communists have existed in the Arab East; their formation has sometimes been assisted or influenced by emissaries of the Third International, by communists in the various Islamic settelment or by Armenian refugees with leftist sympathies. Details concerning them are found in W. Z. Laqueur, Communism and nationalism in the Middle East, London 1956, which, for Iraq, should be supplemented by John Batatu, Some preliminary observations on the beginnings of communism in the Arab East, in J. Pannen, ed., Islam and Communism, Munich 1960.

In the Maghrib, communist parties were rather offshoots of the French Communist Party which gradually separated off from it; details of their activities may be found in the works of Le Tourneau, Rézette and Robert listed below. On communism in Arab countries, see further šuveyṭyঁya.

Political parties became a regular feature of Turkish political life only after the revolution of 1908. Their precursors were coteries engaged in conspiracy within the Ottoman Empire or in agitation from exile (see ǧaziiyya). These included societies formed among non-Muslim or non-Turkish groups aiming at autonomy or independence and groups of Ottoman Muslims dedicated to a change of rulers or of the constitution—e.g., the Ethiske Hetairia (Odessa 1864, later headed by Alexander Hyspilanti) which prepared Greek independence; the Social Democrat Hunchakian (or Hincak) Party (Geneva 1887, subsequently in exile and founded anew in Salonica in 1906). This last group, known to Europeans as the Committee of Union and Progress or more loosely as the Young Turks, was responsible for the restoration of the constitution in July 1908 and the suppression of the counter-revolutionary movement in April 1909 (Osle-Bir Marz Waqfasi).

The revolution of 1908-9 was a triumph of conspiracy and of party; yet the C.U.P. remained somewhat in the background and did not fully seize power until the coup d'état of January 1913. Meanwhile a large number of parties were formed inside and outside of the parliament, mainly among opponents or dissidents of the C.U.P. who objected to its intense partisanship and to its increasing Turkish nationalist bias; the most notable of these was the Hurriyet ve İtihad Fırkası (q.v.) or Entente Libérée of 1912. Secret conspiracy also resumed, e.g., among the Khalâsîr Débilîn who forced the appointment of an anti-C.U.P. cabinet in 1912. Before the assassination of Mehmed Şevki Paşa in June 1913, however, the C.U.P. government suppressed all opposition, sending the leading liberals into banishment or exile.

Intense party activity recommenced after the armistice of October 1918. In the Istanbul the C.U.P., which had the support of the Entente Libérée (see 1914-18), reconstituted itself as the Tedjieddud Firkasi or Renewal Party; others revived various anti-C.U.P. groupings, promoted separate interest (e.g., the Kürdistân Te'welî Dişîyeti of Seyyid ʿAbd al-Ḵâdîr); advocated close collaboration with the British (the Ingilîs Muhibbâr Dişîyet Dişîyet of Saʿîd Molla); or invoked national self-determination for the Turks (the Wilson Prenstîpleri Dişîyet Dişîyet of Khalîl Edbî and others). These manoeuvres, however, remained without much consequence because in Istanbul power was in the hands of the occupying forces and in Anatolia of the nationalists. Nationalist organization in the peripheral provincial towns (Edirne, Adana, Izmir, Erzurum, etc.) formed around local C.U.P. leaders and other notables; its aim was to resist encroachments by Allied authorities or non-Turkish groups. The local party organizations met in regional congresses and in a national congress at Sivas (4-11 September 1919) under Mustafa Kemal [ Atatürk], at which they merged in the Anadolu ve Kâmil Mûdafâ-i Hukûke Dişîyet Dişîyeti, or Society for the defence of rights of Anatolia and Rumelia. This group dominated the first Grand National Assembly at Ankara, although a more conservative faction, the so-called “Second Group”, informally organized and opposed to Mustafa Kemal’s personal leadership, split off in 1922 (one of its leaders was Djalâl al-Dîn ʿArîf). In 1923, Kemal transformed the Mûdafâ-i Hukûk into the Republican People’s Party (R.P.P., or Dîsimhûriyet Khâbat Fırkası [q.v.]), which dominated the Turkish political scene until 1950.

The one-party period was briefly interrupted by the appearance of two opposition parties. The first of these, the Progressive Republican Party (Terâbbî-pervoir Dîsimhûriyet Fırkası) was formed late in 1924 among Kemal’s early close collaborators, including ʿAli Fuṣûd [Cebesoy], Kâzım Karabekir, Rûfû [Orbay], and Bekir Sâmi, rallied a total of 28 deputies, and was dissolved under the Law for the restoration of order (Taḥrîr-i sukûn kânûnu) on 3 June 1925. The other, called the Cepîdat Dîsimhûriyet Fırkası, was founded and dissolved at Kemal’s behest by his good friend ʿAli Fethî [Okyar] (12 August-
The transition to a multiparty system was announced by President Ismet Inonui in his speech of 19 May 1945, and as many as 27 parties were founded by 1950. The most prominent among these were the Democratic Party (Demokrat Partisi), founded in 1946 by Celal Bayar, Adnan Menderes, and other R.P.P. dissidents; and the Nation Party, formed in 1948 by Fevzi Çakmak [q.v.], Osman Bölbükbaş, and other dissidents from the D.P. The Democrats campaigned for a liberalization of the economy, for agricultural development, and a relaxation of the R.P.P.’s secularism; the Nation Party took a more intransigent tone of opposition toward the R.P.P. and later the D.P. and favoured religious conservatism.

The following table indicates the strength of the parties since 1946.

Notes to Table: (a) No election figures available. (b) National Assembly only. (c) New Turkey Party. (d) Republican Peasants' National Party. (e) Democratic Party. (f) Nation Party.

Party organization, which between 1908 and 1945 had been limited to the cities and the educated class, since then has spread to the small towns and villages. It would appear that traditional local factions (e.g., old residents versus recent migrants or clients of rival leading families) are easily absorbed into national parties. Election participation has been higher than in many Western countries, and the tendency has been toward a two-party system, both under the multiple-member plurality system that prevailed until 1950 and under the proportional system in effect since then. The suffrage, which had been limited to taxpayers under the Empire, was extended until 1960 and under the proportional system in effect since then. The suffrage, which had been limited to the cities and the educated class, has been extended until 1960 and under the proportional system in effect since then.

iii.—Persia

The history of the emergence of political parties in Persia does not conform to the general Western liberal concepts of a polarization of communities of interest into organizations formed to carry out political action, which then enter the political arena via a variety of already established or revolutionary routes. In the writings and speeches of the reformers and modernizers of the last quarter of the 19th century—particularly those who were active outside Persia—there is a general awareness of the desirability of concerted group organization and action in order to achieve political goals, but there is no definition or advocacy of political parties, and the term hizb retains its traditional religio-sectarian connotation. Although the communities of interest which agitated...
on behalf of the Constitutional Movement and participated in it can be differentiated and identified, the notations which they made and the associations which they formed had neither the form nor the substance of "party" activity. Both the notions and the rudimentary formations of political parties in Persia emerged after the initial phases of the constitutional régime within the parliamentary framework which the constitution had created; and only to a limited degree had they any generic relationship to the various groups existing prior to the constitutional régime in the early years of the constitutional régime, when proto-partisan factions were developing in the Madjlis, it is difficult to ascertain the beginning of the accepted usage of the term "hzib". Not until the period of the First World War and its immediate aftermath did hzib become the exact and commonly understood term for "political party" in Persia, and the acceptance of this usage coincides with the appearance of embryonic political parties having some semblance of a public base and an organizational apparatus, as distinct from mere parliamentary factions.

The factional lines were already emerging towards the end of the first session of the Madjlis (1906-8); and after the military conquest of Tehran by the Constitutionalist forces in 1909 and the inauguration of the second session in the same year, two distinct groups known as Dimahb-i A'zmuyan ("Popular Democrats") and Istim'am-iyiyân ("Social Moderates") were formed. Although in their pronouncements and in the newspapers supporting them the terms "dzam'iyiyat, firka," and occasionally hzib were used interchangeably by these groups to describe themselves, their formal parliamentary organizations went by the French term faction. The Democrats saw themselves as the revolutionary group, and were, in general, composed of Western-educated bourgeois elements. Their platform included general and vague references to: (1) 'separation of religion and politics,' (2) 'distribution of land among the peasantry,' (3) 'preference for indirect over direct taxation,' and (4) 'opposition to the Madjlis-i A'zâyân (House of Notables).'' Some direct and residual influence of the Caucasian Social-Revolutionaries of 1905, as well as generally recognized western ideologies, influenced all these groups. Their chief spokesmen were Sayyid Hasan Takizada and Sulaymân Mirzâ. They were the minority fraction in the second Madjlis, numbering 28. The Moderates were made up of the aristocracy and the influential "ulama:" they were led by Mirzâ Ma'hammad Şâdik Tâbâbâ'î and were supported by the Regent himself. With 36 members and 38 supporters, they were the effective majority in the second Madjlis. In the same period several smaller "parties"—including one with the evocative name of Istifâkh wa Taraqqi ("Union and Progress")—appeared on the scene but made no impact.

The Democrats were defeated in their attempt to retain the American financial adviser Morgan Shuster, and the second Madjlis was dissolved in 1911 as a result of Russian pressure. In the three-and-a-half-year period, political parties became a significant and genuine penetration of the Persian scene. After the suppression of the Kûčik Khân revolt in Ghîlân in 1921, Madjîl-i Adâlât went underground and its membership dwindled. In 1927 it held its second congress jointly and in secret with the Turkish communist party in Urmîya (Rıdâ'iyya). It had already virtually withdrawn from Persia by 1931, when communist parties (hûzb-i iktîdârî) were formally outlawed.

Between 1921 and 1923 there emerged a number of pro-Soviet parties with socialist programmes, having a small popular base but with some influential journalists as their leaders. Under the leadership of Sulaymân Mirzâ (the former leader of the Democratic Party) and Rûdâ Rûstâ (both later members of the Tâdâ Party), these groups joined in a Dîshâva-yi Ìîlî ("National Front") and took a vigorous part in the elections for the fifth Madjîlî. They were severely suppressed by the government and only a few Dîshâva-yi Ìîlî deputies were elected.

With the rise to power of Rûdâ Khân, there appeared a few nationalistic parties of the centre and the right, such as Irân-i Dâstân ("Young Iran") and Pîdî-i A'dînî ("Anti-Foreign"), led by his supporters but often acting as instruments of his personal intrigues. During the reign of Rûdâ Shâh, political parties were proscribed. On one occasion in the 30's, probably in emulation of the Turkish model, it was decided to create a party as an aid for étatist propaganda and control, but preparations were interrupted in mid-course and the plan was dropped. In 1937 53 men were convicted for communist conspiracy. Their leader, Dr. Taqî Arânî, was a German-educated
professor of physics at the University of Tehran, who died in prison. Among the group were a few veterans of the leftist regime of Khatami’s early 20s, but the majority, including Arani, were intellectuals with no political and party experience. They later played a part in the foundation of the Tude (“Masses”) Party in 1941.

The abolition of Russi Khaṭṭar, caused by the entry of British and Soviet troops into Persia in September 1941, brought about a revival in political life. The first reaction in the Maddris in and the press was to view the last twenty years as an unhappy interlude. Outside the Maddris, however, a development of true political parties was taking place. On 20 September 1941 the Hizb-i Tude-ya Irān was organized, and was launched publicly on 2 February 1942. Its platforms and propaganda characterized it from the start as a “democratic bourgeois national liberalization” party, concentrating primarily on an attack on the socialists, the anti-Fascist League to the pro-Nazi Hizb-i Milliyiyān-ya Irān. In between were to be found Hizb-i Hamzhik, Hizb-i Sosyalist, ‘Adilāt, Mardān-i Kūr, Milli, Milli, Miḥān-parastān, ‘Āsīā-i Bābāshāh, Isṭikhlāl, and Paykar. None of these parties had any influence on the government and its policies, and they were little more than extensions of political ambitions and intrigues of their leaders. Late in 1943, Sayyid Ḫiyāl al-Dīn ‘Abbās, the leader of the 1921 coup d’état which had brought Rūhānī to power, returned from exile and served as the focus of attempts to create an anti-Tude party, which was first called Wafā and was re-named Irāda-ya Milli in 1945. The Tude was the only party to take part as an organized party in the electoral campaign and the inauguration of the fourteenth Maddris in 1944, eight of their members being elected. Shortly after the opening of the fourteenth Maddris, two nationalist bourgeois parties were formed: Hizb-i Irān, with a leftist orientation in the electoral membership, and Hizb-i Mardom, with a traditionalist leadership.

The years 1944-46 were a period of rapid growth and consolidation for the Tude, owing to the growing power of the Soviet Union. By 1946 it claimed to have approximately 100,000 members. Meanwhile, more immediate Soviet support created separatist movements, which were spearheaded by Hizb-i Dinagul in Gilan, Fikhr-ya Dimashk in Khurshāb-ya, and Hizb-i Komilā (also called Fikhr-ya Dimashk) in Khurasān. On 23 June 1946 the Hizb-i Dimashk-ya Irān was founded by Ahmad Kəwām, then Prime Minister. The apparatus of the state and bureaucratic patronage were used to foster the rapid development and organizational spread of this party. First Kəwām co-operated with the parties of the left, to the extent of including those Tude members in his cabinet, and brought about the disintegration of Irāda-ya Milli and other leftist splinters. The collapse of the separatist regime in eastern Persia, and in general the thwarting of Soviet aims in Persia in December 1945, were crucial factors in the decline of the Tude, which was seriously weakened by loss of membership and by the defection of an anti-Soviet nationalist faction led by Khayal Malikī in Encyclopaedia of Islam, III

1947. Kawam and the Hizb-i Dimashk-ya Irān entered the fourteenth Maddris in near complete triumph. His only opposition came from a few remnants of Hizb-i Irān and Hizb-i Mardom, formed the Dībha-ya Millī in the fourteenth Maddris. The Hizb-i Dimashk-ya Irān was split, and disintegrated just as rapidly as it had grown. From the end of 1947 began another period of general fragmentation and insignificance of political parties in Persia. Tude efforts at regaining strength suffered another eclipse when, following an attempt on the life of the Shāh, it was formally outlawed in February 1949.

When the first disagreement with the Anglo-Iranian Oil Company served as the magnet of new nationalistic groupings and political activity, a new group of the extreme right, Fikhr-ya Dībha-ya Millī [q.v.], took the timelight from the left as being the most radical anti-imperialist force in Persia. This was essentially a religious secret organization led by Nawwāb-ya Ṣafāwī. It first appeared in 1948 and drew its support mainly from some sections of the ‘ulamā’ (the most prominent of whom were ‘Abādānī and Ṣa’dī), but the urban proletariat, and traditional elements in the ‘ulamā’. Its distinctive political feature was the employment of terrorist gangs, which were successfully used against politicians accused of pro-British ties.

On 24 October 1949, the Dībha-ya Millī, previously formed as a parliamentary faction, was re-organized as a partisan political coalition. It included the Fikhr-ya Dībha-ya Millī, and Muṣaddik was only one of the leaders. Large numbers of their supporters, with the widespread support of nationalist bourgeois elements, were elected, and the stage was set for the virtual control of governmental policy by the Dībha-ya Millī. On 25 March 1951, the Maddris passed the oil nationalization law; shortly afterwards a cabinet, composed mainly of Dībha-ya Millī members headed by Muṣaddik, was formed and began efforts for the implementation of that law.

There followed a relatively free and vigorous political activity in Persia. A number of left-of-centre parties, the most important of which were Nīrū-ya Siyāsī (“Third Force”—the Tude dissidents led by Khayal Malikī) and Hizb-i ‘Azmah-mād-khān-ya Irān (The Tolerant), led by Dr. Ḫayāl, appeared and joined the Dībha-ya Millī. A group of leftist front organizations also developed; this included the Djam-i-yūsuf-ya Tarādārān-ya Ṣulṭan (“Partisans of Peace”), who demonstrated against the Korean war and United States advisers in Persia, and collected 50,000 signatures for the Stockholm Proclamation, and the Djam-i-yūsuf-ya Millī-ya Mūvārīza bā fāṭimāt (“League of Struggle with Imperialism”), which demanded the legalization of the Tude Party. The Tude itself made a comeback as a supporter of nationalization policies. Although its chances of popular support were pre-empted by the Dībha-ya Millī, it succeeded in strengthening its secret structure and its striking ability among its civilian and military supporters. In 1953, when a number of nationalist supporters of Muṣaddik moved to oppose him, the Tude, though remaining ostensibly loyal, was acting to gain control of Muṣaddik. Arrayed against the forces of the left, apart from the Fikhr-ya Dībha-ya Millī, which split in two in 1951, were a number of ultra-nationalist and fascist-type parties, such as the Pan-Iranists and the ‘Imāmīya. The fall of Muṣaddik in 1953 drove the Dībha-ya Millī into a circumscribed and largely futile opposition. The organization of the Tude was broken and
HIZB
its membership was decimated as much by suspicion of its anti-national role as by the vigilance of the new régime. The party was proscribed; some of its leaders were seized and others were sent into exile.
Its central organization has been maintained in East Germany since the mid-50's. A number of extreme right groups: Fida’iyoun-i Shāh, Khaļīb, Ārūq, Dhu’l-Fikār, and 25 Murdād flourished briefly after 1953.

The development and activity of political parties in Persia has, by and large, been in recess since 1953. In September 1957, an attempt to create a loyal two-party system of Hizb-i Mardum led by Asad Allāh ‘Alām and Hīz-bī Miḥlīyyīn led by Mānṭûhr ‘Ikāl, failed. Since 1965 a Hīz-bī Irān-i Nāwīn (“Modern Iran”) has been discreetly promoted more as an informal motivational framework for the members of the government than as a political party.

In general, it may be concluded that the period for the true political significance of parties in Persia has not arrived. Only the Tādē Party in certain stages of its history and Kawām’s Hīz-bī Dimāhrāt-i Irān for a brief span have succeeded in creating the structure and organization of political parties of a totalitarian nature, and only the Tādā has had the element of ideological popular appeal. No broadly based, liberally oriented, loosely organized, viable party has developed. The ruling classes have continued to assume that the form of an institutional borrowing is conducive to the content desired. The interaction of the newly emerging phenomenon of political parties in Persia with the patterns of the exercise of power and the pull of tradition has profoundly affected the configurations and roles of these parties. The electoral system and practices in Persia reflecting traditional patterns of power have rendered political parties largely irrelevant; while political traditions have often made the parties indistinguishable from personal schemes and functional tools of a recognizable traditional mould. As such, they have proved inadequate levers.

Bibliography:

iv. — RUSSIAN AZERBAIJAN

No political parties existed in Transcaucasia until the last quarter of the 19th century. Before then, opposition had taken the form of peasant uprisings or conspiracies by the nobles against Russian rule. Modern political activity began in the reign of Alexander II (1855-81) in Georgia and Armenia, as a development from the cultural revivals, with strong nationalist overtones, which had grown up there in the middle of the century.

In comparison with Georgia and Armenia, Azerbajian was politically backward. Only in Baku, a boom town, was there political activity, conducted mostly by Russians and Armenians. Never having been a nation, Azerbaijan had a rising middle class and the intelligentsia had to solve the problem of their national identity before they could act.

Every Russian political party was represented in Baku, but none attracted a native following. Some wealthy Azerbaizanis associated themselves with the Constitutional Democrats (Kadets), while simultaneously promoting Muslim organizations.

In 1905 a small group of Bolsheviks made a conscious effort to attract Muslim workers in the Baku oil industry. Though they considered it most unorthodox to form a party on ethnic-religious lines, the Bolsheviks organized one, naming it Hemmat (“Endeavour”, = Himmat, Russ. Gummeli). This was essentially a front organization. Most of its early leaders were foreign Bolsheviks such as S. Shumian, I. Stalin, and A. Jagaridze. The Himmat never assumed much importance and disappeared after the Sovietization of Azerbaijan in 1920.

During the revolution of 1905 the Muslims of the Volga, Crimea, Azerbaijan, and Turkestan formed a loose political party named Ittīfāk-i Muslimin (Union of Muslims). Its chairman was an Azerbaijani, ‘Ali Mardān Bek Topcibaşev, who was politically close to the Russian Kadets. The Ittīfāk-i Muslimin elected Topcibaşev to the first Duma in 1906. In the second Duma, Azerbaizanis were represented by Muslims who were members of the Russian Kadet party. On the whole Ittīfāk-i Muslimin accomplished very little, though some of its members later held important positions in the government of independent Azerbaijan.

The most important Azerbaijani party was the Musavat (Equality), founded in 1911 by a group of Azerbaijani intellectuals who had been previously associated with the Russian Social-Democratic Workers’ Party. The leader of the Musavat was the journalist Muhammad Amin Rasulzade, who had taken part in the Persian revolution against Muhammad ‘Ali Shāh Kādār. Like many of his contemporaries, he had been exposed simultaneously to European nationalism, Russian Marxism, and the Pan-Islamic movement. In 1911 ‘Ali Mardān Bek Topcibaşev selected I. Stalin as the secretary of Musavat’s programme reflected all these irreconcilable theories: the unity of all Muslims irrespective of nationality or sect, the restoration of the independence of all Muslim peoples, aid to all Muslims, the development of Muslim economic life.

In spite of its ideological and organizational weakness, the Musavat emerged as the strongest force in Azerbaijan (but not in Baku, where the Bolsheviks and the Dashnaks predominated) after the collapse of Russian authority in 1917. It participated, though unenthusiastically, in the formation of the Transcaucasian Federation and, in spring 1918, proclaimed the independence of Azerbaijan. The Musavat became the strongest party in the government which was established in Baku in September 1918 after the Turks had occupied the city.

The rule of the Musavat was brief. The party was beset with insoluble problems. It failed to implement its promises of land reform, but did open a university in Baku. Neither the Musavat nor anyone else could defend Azerbaijan against Soviet Russia. In April 1920 the Red Army occupied Baku and the Musavat ceased to exist.

Bibliography:
S. T. Arkomed, Raboeye
Before 1905, in European Russia as in Central Asia, the formation of organized political parties was as difficult among the Muslims as among the Slav inhabitants. However, the introduction of a common language and creed (almost all the Muslims were Turks, except for a few Caucasian tribes and the Tadjiks; and, except for the Adharbaydjanis, almost all of the Muslim inhabitants were Sunnis) had already in the 19th century led to the formation of a strong community feeling on a common basis, which was to prove a solid foundation within the framework of the party structure. Furthermore the number of Muslims and Turks was greatly increased through the Russian conquests in Central Asia in the second half of the 19th century; old ties were revived between those lands and the Volga region with the possibility of mutual influences. This led to a great increase in the self-assertion of the Muslims.

The political revolution of 1905 with the formation of an imperial Duma unleashed a powerful movement among the Muslims. Under the leadership of prominent citizens, among whom the Tatars very soon played a leading role, it was decided on 8 April 1905 to convene a 'First all-Russian Muslim Congress' in Nižniy Novgorod (now Gorkiy) for 15 August 1905; this was followed by two further congresses in 1906 and 1907. They were of great importance also for the formation of parties, since at them the representatives of all the individual peoples, and also of all political opinions, met together and discussed common action. They concerned themselves mainly with the publication of newspapers and periodicals, with the establishment of elementary and secondary schools of truly Turkish-Muslim character and free from interference from the Russian authorities, with questions of cultural autonomy, and with relations with the Russian state and people.

Their emphasis was on education and on the creation of a common language and creed (almost all of the Muslims were Sunnis) which, although they were fundamentally in agreement over many issues, yet led to the formation of two parties: (1) progressive-minded clergymen, merchants, landowners and others formed the group of the "Muslim Union" which occupied itself principally with the furthering of national and religious interests and which (since they thought that among them they would most readily find understanding of their aims) inclined towards the "Constitutional Democrats" (generally abbreviated to "Kadets"), a bourgeois leftist-liberal group consisting of the educated Russian middle-classes and many professors; (2) a number of younger representatives, among them teachers, lawyers and publicists, rejected cooperation with any Russian political party, since they would thus bind themselves ideologically, and advocated—at least as an objective—complete independence and socialist ideals; this policy, which they tried to carry out chiefly against the Russian government, led them into the company of the Russian social-revolutionaries. Many of their leading personalities later, especially during the emigration, became ardent nationalists. In the first Duma (10 May-22 July 1906), with a majority of "Kadets", the Muslims were represented by 25 members, of whom six had signed the "Viborg manifesto" of the socialists. In the second Duma (5 March-16 June 1907), there were 35 Muslim members, among them 29 members of the "Union". The remaining six constituted the "Muslim Party" (Müslümanlarnın hikmesi) which, under the leadership of Ayáz İshakli, represented socialist ideas, while recognizing Islam and "Turkishness" as the basis of their national life. After the sweeping limitation of the franchise the third Duma (14 November 1907-1912) included only nine Muslim members (3 from Ufa, 2 each from Kazan and the Caucasus, one each from Orenburg and the Crimea, the representatives of Central Asia who had lost their right to vote). The fourth Duma (1912-1917) included only seven members, six of whom were members of the "Islamic group" and one Lesbian.

On the whole the Muslims very rarely got a hearing during the proceedings and furthermore met with the rejection by the Russians of their claims, especially in the third and fourth Dumas. Nevertheless there was the possibility of joint discussion, the activity of a press (though frequently suppressed by the Russian censorship) and the ventilation of topical questions of concern to Muslims. The Muslims became conscious of their numbers and their influence, and began gradually to break away from their hitherto characteristic alignment with Ottoman Turkey and to concentrate on coming to an arrangement with the Russians from whom, as the bearers of European ideas, they also learned and adopted much. Yet a part of the Muslim clergy (who opposed all Western ideas as being harmful to Islam) supported complete isolation.

In any case the Muslims in Imperial Russia gained the principle of equality of rights when the two revolutions of 1917 gave a new status to all the population. Among the Turks in the Volga region there came into prominence at the "National Congresses" of 1917 and 1918 the question of whether they should advocate merely cultural autonomy or also a territorial autonomy (within the frame of the Idel-Ural state: Idel is the Tatar name for the Volga), and also the question of relations with Communism. In addition to this there was the question of a choice between an amalgamation of Tatars, Bashkirs and possibly Cuvashes, and their separate organization. In the Crimea the "National Party" (Millî İflka, a minority, came to an agreement in 1917 with the Ukrainians, whose leading rôle was recognized also for the Crimea. In addition, efforts which had been made during 1918, partly in co-operation with German troops which had arrived there, to achieve a territorial secession of the Crimea broke down in November 1918 and ceased entirely, as did all other party-political activity, with the occupation of the Crimea by Bolshevik troops in November 1920.

In Central Asia, the two 1917 revolutions gave rise to various movements which were directed as much against the Russian settlers or the Russian administration as against the conservative Muslim clergy or the rule of the amirs in Khiva or Bukhara. Among the Kazakhs, the National Council (Alyqsh Ordu) strove in several congresses for a merely federal incorporation into the new Russia and turned against the Bolsheviks. But as early as 1919-20 the country was subdued by the Russians (= Bolsheviks). In Turkestân, the conservative and the progressive (Diedît) circles united in discussions which went on for months on the formation of a "Decentralization Party", which rejected the Russian policy of centralization and obtained from the Bolsheviks guarantees of their religious and national freedom, of the reten-
tion of private property and of a Shari'ā system of jurisdiction; until, in 1922, the Bolsheviks prevailed in fierce struggles against the Basmachi. [4.8] movement and had also brought under their control the two emirates, where the "Young Bukhārān" party co-operated with them.

For both the Volga region and Central Asia, the victory of Bolshevik rule within the former boundaries of Imperial Russia (which were finally fixed in 1895) meant the sole rule of the Communist Party. Within the framework of its changing policy, which during the 1920's was quite open with regard to national claims, there were repeated political struggles, which finally led to the eradication of the so-called "National Deviations" (named Sultangliebhāna after one of the prominent Tatar leaders, Sultan Galiey [q.v.]) and to the establishment of the Communist Party also in the Muslim districts in the federative states of that time. However, since national aspirations remained alive and had to be accommodated to the demands of the state party, the leadership of the Communist Party in these districts had frequently changed. The very responsible position of Second Secretary remained for the most part in the hands of a Russian or a Ukrainian, while the party leadership was usually given to a native inhabitant (for 1966, see the lists published in Öst-Probleme, xviii/10 (Bonn 1966), 318 f.).

During the 1920's was quite open with regard to the attempt to obtain recognition by the Berlin authorities of certain political rights for the Muslims. When the Agha Khān and Amir 'Ali, alarmed by the nationalistic demands of the Muslim League, withdrew from the party, a reconciliation took place between the Congress Party and the Muslim League: after 1915, the two organizations held their annual meetings simultaneously and in the same town. It was at that point that Muhammad 'Ali Djinān tried to make himself the representative of Indian unity and to reconcile the few divergent points of view of the Congress Party and the Muslim League. This tactical unity lasted throughout the whole period of effervescence caused by the abolition of the Caliphate but, from the end of 1927, the two organizations grew apart, never again to combine their efforts for Indian independence. Djinān therefore realized that the Muslim League must become a popular movement, and no longer remain a clique of landed proprietors and the rich if it wished to attain its avowed objectives— the defence of the Muslim element among hostile surroundings (mainly Hindu), the establishment of separate electoral colleges, and the setting up of an Islamic nation in the Indian sub-continent.

The resolution adopted by the Muslim League in 1940, during the special session held at Lahore, called specifically for the partition of India on a religious basis in order to safeguard the interests of the Muslim community; and in 1942 the Muslim League could claim to be the only organized party capable of leading an effective political course of action in favour of an Islamic State still unborn. Until 1947, the three expressions Muslim League, Islam and Pakistan were to be practically synonymous for the majority of the Muslims of North India.

After the partition of India, the Kā'īd-i 'A'sam Muhammad 'Ali Djinān, President of the Muslim League, became the first Governor-General of Pakistan and Liyākāt 'Ali Khān the Prime Minister. These two men made it possible for the new State, in its first months, to overcome the considerable obstacles posed by a deficient economy and a social situation rendered tragically critical by the influx of Muslim refugees. After the death of Muhammad 'Ali Djinān in 1948 and that of Liyākāt 'Ali Khān in 1951, the Muslim League lost its dynamism and suffered severe electoral defeats, especially in East Pakistan. Until 1956, the leaders of the party did in fact hold the reins of government. Early in 1956 the new President of the Muslim League, Sādār 'Abd al-Rabb Nīghtār, followed by the other party leaders, decided that in future ministers could no longer hold office within the party and asked the deputies of the provincial Assembly of West Pakistan who were members of the Muslim League to form themselves into a parliamentary party. Despite these salutary measures, the Muslim League was unable to regain its earlier popularity. It was, however, disbanding like the other political parties when martial law was proclaimed in October 1958.

In India, the modern notion of a political party is relatively recent and, before the partition of the Indian sub-continent in 1947, two major parties represented the two political groups which led to the creation of the new India (Bhārat) and Pakistan: the Congress Party, with nationalist, pan-Indian tendencies, and the All-India Muslim League which favoured the re-grouping of Indian Muslims in an autonomous territory.

The All-India Muslim League was set up on 30 December 1906 at Dacca on the suggestion of the Agha Khān. At the start it constituted a cautious move to reconcile the somewhat divergent points of view of the Congress Party and the Muslim League: after 1915, the two organizations held their annual meetings simultaneously and in the same town. It was at that point that Muhammad 'Ali Djinān tried to make himself the representative of Indian unity and to reconcile the few divergent points of view of the Congress Party and the Muslim League. This tactical unity lasted throughout the whole period of effervescence caused by the abolition of the Caliphate but, from the end of 1927, the two organizations grew apart, never again to combine their efforts for Indian independence. Djinān therefore realized that the Muslim League must become a popular movement, and no longer remain a clique of landed proprietors and the rich if it wished to attain its avowed objectives—the defence of the Muslim element among hostile surroundings (mainly Hindu), the establishment of separate electoral colleges, and the setting up of an Islamic nation in the Indian sub-continent.

The resolution adopted by the Muslim League in 1940, during the special session held at Lahore, called specifically for the partition of India on a religious basis in order to safeguard the interests of the Muslim community; and in 1942 the Muslim League could claim to be the only organized party capable of leading an effective political course of action in favour of an Islamic State still unborn. Until 1947, the three expressions Muslim League, Islam and Pakistan were to be practically synonymous for the majority of the Muslims of North India.

After the partition of India, the Kā'īd-i 'A'sam Muhammad 'Ali Djinān, President of the Muslim League, became the first Governor-General of Pakistan and Liyākāt 'Ali Khān the Prime Minister. These two men made it possible for the new State, in its first months, to overcome the considerable obstacles posed by a deficient economy and a social situation rendered tragically critical by the influx of Muslim refugees. After the death of Muhammad 'Ali Djinān in 1948 and that of Liyākāt 'Ali Khān in 1951, the Muslim League lost its dynamism and suffered severe electoral defeats, especially in East Pakistan. Until 1956, the leaders of the party did in fact hold the reins of government. Early in 1956 the new President of the Muslim League, Sādār 'Abd al-Rabb Nīghtār, followed by the other party leaders, decided that in future ministers could no longer hold office within the party and asked the deputies of the provincial Assembly of West Pakistan who were members of the Muslim League to form themselves into a parliamentary party. Despite these salutary measures, the Muslim League was unable to regain its earlier popularity. It was, however, disbanding like the other political parties when martial law was proclaimed in October 1958.

VI. INDIA AND PAKISTAN

The word hizb in the sense of political party occurs almost exclusively in compound expressions modelled on Arabic and Persian. The opposition party would be hizb-i mukhalif or hizb-i-Ikhšaṣ; similarly hizb al-ahār, hizb al-'umāl and hizb al-mustabilīn would denote respectively the Liberal party, the Labour party and the Conservative party. But in the general sense of political party, the current expression is sīyāsī dhāma', although we also find the term pārī, taken directly from English.
The Ahrar Party was organized in 1930 with the aim of enabling a Muslim group to participate directly in the struggle alongside the Congress Party, but its activities were for the most part limited to the province of the Punjab, where it showed itself to be fiercely anti-British and attempted to deprive the Muslim League of a section of its electoral supporters. Its success depended too greatly on the personality of its leaders, especially its main leader, Mawlana Fadl al-Hakk, a brilliant orator and consummate demagogue. From 1942, when the Muslim League had become a popular party, the influence of the Ahrar Party declined rapidly, and many of its followers rejoined the ranks of the Muslim League. In 1947, at the time of the Partition, the Ahrar Party disappeared almost completely. It was only in 1953, during the riots directed against the Ahmadiyya community, that it reappeared for a time and appealed, with some success, to popular religious emotions.

Among the groups representing Islamic nationalism, the Khaksar movement had a brilliant period between 1930 and 1942. Its undisputed leader, 'Ali al-Masri, imposed an extremely rigid discipline upon it; military training and social service were the two essential characteristics of the party. The imprisonment of 'Ali al-Masri, a large number of its members, and its entire crippled the movement which, after 1945, existed only in theory.

The party of the Khudai Khidmatgar (Servants of God) exerted any real influence only in the North-West Frontier Province, where it gave support to the Indian Congress Party. Its leader, Fadl al-Ghaffar Khan, turned it into a religious movement that was destined to organize and discipline Pathan nationalism. Its members were familiarly known as "Red Shirts." After Partition, the movement lost much of its prestige when Fadl al-Ghaffar Khan asked his followers not to take part in the struggle for Kashmir.

The Krishak Pradha Party (Peasant Party) was founded by Faqih al-Hakim as early as 1927, and was always confined to the province of Bengal. In 1937, Faqih al-Hakim became Prime Minister of a coalition government, but he was dismissed and imprisoned by the British government in 1951. He was not given the overall support that he demanded; he decided to abandon his party and to join the Muslim League, which however expelled him at the end of 1944. In May 1944 his government was compelled to resign, and it was then that the Muslim League came to power in Bengal. Faqih al-Hakim became a member of the Constituent Assembly of Pakistan in 1947, and then Advocate-General for East Pakistan in 1951. In September 1953 the opponents of the Muslim League formed the Krishak Sramik Party (Labour and Peasant Party), again headed by Faqih al-Hakim, who demanded the provincial autonomy of Bengal within the framework of Pakistan. Faqih al-Hakim, now over eighty, was once again appointed Prime Minister of Bengal in 1954, but the central government dismissed him shortly afterwards. Minister of the Interior in the central government in 1955, and then Governor of East Pakistan, Faqih al-Hakim was once again forced to resign. The Krishak Sramik Party, believing his personality to be indispensable, invited him to resume leadership of the party some time before the proclamation of martial law in October 1958.

The Awami League (People's Party) owes its existence to the repeated efforts of Husayn Shahid Suhrawardi to organize a parliamentary opposition group of the Western type. Despite the establishment of parties with almost the same title in the North-West Frontier, Punjab, and Sind provinces, and despite the congress held in Lahore in December 1952 to set up the Dinan Awami Muslim League, it was in fact only in Bengal that the movement was able to play a very significant part. Its social aims included the abolition of the great landed estates, nationalization of the jute and tea industries, and the rapid development of education and social services. Politically, it called for the autonomy of Bengal within the framework of Pakistan, and for the recognition of Bengali as a national language. When Suhrawardi became Prime Minister of the central government in September 1956, the President of the organization, Mawlana Abul Hamid Khan Bhashani, gave up his position as a protest against Suhrawardi's political manoeuvre whereby he went straight from the opposition to power. Mawlana Bhashani even formed a new party with the name National Awami Party, which, as a result of the banning of political parties in October 1958, had only a brief existence.

The Republican Party was set up in April 1956 by Dr Khan Sahib to take advantage of the conflicts among the various factions of the Muslim League in West Pakistan. Its programme, which throughout its two congresses held in September 1956 and September 1958 was far from precise, called for a democratic and liberal policy on the part of the government. These good intentions were belied by the actions of the Republican Party when in power. By its devious tactics, first in coalition with the Muslim League and then with the Awami League, it precipitated the crisis which was to lead the army to seize power in October 1958. The bloodless revolution carried through by Field-Marshal Ayyub Khan put an end to the corrupt parliamentary régime, which threatened to provoke a national catastrophe in Pakistan.

The political parties, banned in Pakistan from 1958, were able to reappear on 14 July 1962, on which date the National Assembly voted an amendment to the Constitution of 1 March 1962. This amendment stipulated that no political party should prejudice the Islamic ideology, the stability or the integrity of Pakistan, or receive any aid whatsoever from a foreign country.

The Muslim League immediately resumed its activities, but the two provincial sections of the movement disagreed over certain points: while the Western group intended to bring younger blood into its organization, thereby following the advice given by Field-Marshal Ayyub Khan, the Head of State, the Eastern group wished to adhere to the tradition of the old Muslim League. The first party congress was held in Karachi on 4 and 5 September 1962; it nominated Khalid al-Zaman as chairman of the organizing committee of the League. A second congress was held in Dacca on 27 October, attended by a certain number of former "counsellors" of the party, who elected as president Khadji Nazim al-Din, the former Governor-General and Prime Minister.

Furthermore, Suhrawardi, who had been arrested on 30 January 1962 on a charge of treason, was released from prison and, on 4 October 1962, he succeeded in forming the Democratic National Front which included among its members various former politicians of both East and West Pakistan.

Finally, Field-Marshal Ayyub Khan, Head of State of Pakistan, who since the promulgation of the Constitution of March 1962 had made clear his wish
to remain above party, decided to become a member of the rejuvenated Muslim League: he joined it on 22 May 1947.

After the Partition of 1947, the All-India Muslim League ceased to play an essential part in politics in the new India. An Indian Muslim League does however exist, which is of some slight influence in the South only, in the states of Madras and Kerala. In 1960, this Muslim League conducted a victorious electoral campaign in co-operation with the Congress Party and the Indian Socialist Party to prevent the Communists from returning to power in the state of Kerala.

vii.—Indonesia

In the years before independence, Indonesia did not succeed in developing any equivalent of the Indian National Congress. Political parties came into existence, splintered, coalesced and disappeared, in numbers and with a fertility reminiscent of the Indonesian islands themselves. The first party to achieve a mass following was Sarekat Islam (q.v.) (Islamic Union), founded, on the basis of an earlier and more limited association of Muslim merchants, in 1912. Its following grew rapidly on the tide of Muslim revival and anti-colonialism, but it was increasingly penetrated by more secular political elements, and its influence and popular backing thereafter declined. Its place was to some extent taken by the Islamic reform organization Nahdathul Ulama and the Islamic traditionalist organization the Nahdathul Ulama. In 1920 the more radical Marxists founded the Communist Party of Indonesia (PKI), which, until its eclipse following an abortive coup in the years 1926 and 1927, took up the running. In 1927, leading Indonesian nationalists, including Dr. Sukarno, founder the National Party of Indonesia (PNI), in the hope of creating a united nationalist movement. In this they were unsuccessful, but the name and the initials survived as important political symbols, to be resurrected in the post-independence period. Under the Japanese, as under the colonialists, the political situation varied and were characterized by impermanence, but one significant move was the welding together of Nahdathul Ulama and Nahdathul Islam into one Muslim organization, Masjumi.

Independence was declared on 17 August 1945, and all significant groupings rallied to Dr. Sukarno as President of the new Republic of Indonesia. It was at first intended that there should be a single political organization, but calls soon arose for the legalization of political parties. When this was permitted, three assumed prominence. These were the Masjumi (Consultative Council of Indonesian Muslims), founded on the platform of non-political organization; the Indonesian Nationalist Party (PNI), many of whose leaders had once been active in the old PNI; and the Socialist Party, which was soon to split into a democratic wing taking the name of the Socialist Party of Indonesia (PSI), and a left wing. The latter was largely absorbed in a re-formed PKI, but this, like its precursor, was to have a short effective life, for it was again suppressed after an unsuccessful coup (1948).

After the Dutch conceded independence, in 1949, there followed a period of experiment with constitutional democracy on the Western pattern. At first two parties—the Masjumi and the PNI—dominated the governing coalitions, and by and large the PSI was sympathetic to their aims, which were moderate. After 1953, however, new alignments began to emerge. The recovery of the PKI had become noticeable after 1952, and it tended to throw its weight behind the more radical wing of the PNI, thus detaching it from Masjumi and the PSI. The new coalitions, supported by the communists, included the PNI, the Nahdathul Ulama (which had broken away from the Masjumi in 1952; being more strongly anti-Western, it could reconcile more conservative religious attitudes domestically with more anti-imperialistic policies externally), and a number of minor nationalist and Islamic parties. After the first, and so far the last, general election in 1955, four main parties emerged—the PNI, Masjumi, Nahdathul Ulama and the PKI. An attempt was made to govern by means of coalitions embracing all the major non-communist parties, but this failed. The parties continued to show themselves incapable of constructive co-operation and, outside the PKI, incapable of sustaining even internal cohesion. In the years 1956 to 1958, the existing Parliamentary system was replaced by "Guided Democracy", in which real power ebbed away from the parties and lodged instead in the President and the Army. The PKI, however, continued to play a crucially important rôle, enabling President Sukarno to maintain his own position in relation to the armed forces.

The 1956 election, party based on the earlier warrant of presidential decree in July 1959. This temporarily put an end to an ideological debate which had racked the young republic from the beginning, and had underlain many of the political divisions, namely what was to be the rôle of Islam in a predominantly Muslim country. Ninety per cent of Indonesians were said to be Muslims, but on the other hand there was a clear distinction inside this majority between the devout and the nominal. President Sukarno had consistently argued and manoeuvred against making Indonesia an Islamic state, on the grounds that all opinions represented in the republic must be tolerated and embraced. The 1945 Constitution was based, largely on his insistence, not on Islam, but on his own panla sila ("five foundations", see DUSTOR, p. 663), of which the first was, not acceptance of Islam, but simply belief in one God. Parties wishing to retain a legal position under Guided Democracy had to be prepared to acknowledge and accept the panla sila, and this a handful of parties, including paradoxically the PKI, did. The PKI, which had earlier in its career antagonized Muslims by a dogmatically Marxist position vis-à-vis religion, was now guided by leaders who had drawn the moral of the two disasters of 1926-27 and 1948, and were con-
ounced that the only way to power was through slow and careful building up of support by legitimate means throughout the country without risking further suppression. The Maqam and the PSI were, in contrast, banned in 1960, partly as a result of the complicity of a number of their leaders in the anti-Sukarno revolt of 1958 in Sumatra. In 1961 and 1962, a number of troublesome Islamic revolts were also crushed, including a major one, led by Darul Islam, a fanatic Muslim organization, which had lasted for thirteen years in West Java. A National Front was also formed in August 1960, in which the surviving parties were obliged to participate, for example by helping to disseminate Sukarnoist ideas. As compared with the pre-1958 period, the parties had suffered badly by the introduction of Guided Democracy in respect of their freedom of political action and movement. The banning in 1965 of Partai Murba, a left-wing nationalist but anti-communist party, continued the process of political simplification and polarization.

However, Islam continued to play a vital political role in the opposition which its organized manifestations put up at all levels, from the village to the Governmental, and in all social organizations and strata, to the steady accretion of strength to the PKI and its various "front" organizations. Clashes between Muslims and communists were common, and culminated in the aftermath of the "September 30 Affair". This was an attempted pre-emptive left-wing coup in the face of threatened suppression of the PKI by the Army in 1965, and its failure precipitated nation-wide massacres in which untold thousands of communists and their supporters were killed. At the time of writing (March 1966), it is not yet clear what the attitudes of the new Army leaders in Indonesia will be either to Islam or to the political parties, but already the PKI has been banned.

**Hizkili**, the biblical prophet Ezekiel. His name does not occur in the Kūr'ān, but traditional exegesis regards him as that prophet of the people concerning whom the Kūr'ān speaks in these words (II, 243/244): "Hast thou not regarded those who went forth from their habitations in their thousands fearful of death? God said to them "Die!", then He gave them life" (tr. A. J. Arberry). According to exegetical tradition, this took place in the time of the prophet Hizkili b. Bādhī (or Būdī, corrupted into Būrī; in the Bible עז וּֽבְרִי—Ezziel, I, 3); the immediate cause of this mortality was an outbreak of plague (אֲדָמָא); and the description given of the resurrection (a temporary one, until the predeter-

**Hmād u-Mūṣā** (šīʿa), great saint of southern Morocco and patron saint of Sūs, was born about 846/1440 at Bū Merwān in the territory of the Ida u-Semlāl, at the western extremity of the Anti-Atlas. He died, after living more than a century, in 975/1563, and is buried in the region of Tazerwalt where crowds still come to venerate his tomb.

Hmād u-Mūṣā adhered to the tariqa [q.v.] founded in the 10th/15th century by Abū ʿAbd Allāh Muḥammad al-Diraḍūlī (*see al-Diraḍūlī*). This last had devoted himself to spreading the teaching of al-Shādhili (7th/13th century), himself a disciple of the famous 'Abd al-Salām b. Māshīḥ [q.v.], whose master was the great Andalūsī cūfī, Abū Madyān [q.v.].

Al-Shādhili's school recalls, in some aspects of its teaching, the Persian al-Din Muḥammad bin Abī Ṣafī al-Mawardī, who founded the Ṣad'ī school, which itself derived from the teachings of the Christian mystics, the Bohemians. It forbids monasteries and bids its members lead a wandering and contemplative life, without resorting to begging. This suited Hmād u-Mūṣā, who enjoyed travelling. In the course of his stormy youth, he liked to wander across the country in cheerful company. Touched by divine grace, he undertook the classic journey to the East and went as far as Baghdaḍ. On his return to Morocco, he visited Marrākūš, Taroudant, and finally Bū Merwān, his native village. Then he gave up these lengthy journeys to found a niyya in the Tazerwalt region, situated at the south-west edge of the Anti-Atlas.

By a kind of transmutation well known in the Maghrib, and upon which there is need to elaborate here, Hmād u-Mūṣā became a Marabout, spiritual head of a community and father of a vigorous dynasty destined to reign in the Tazerwalt, which became a kingdom independent of the Maghrib. In the 10th/16th century, Hmād u-Mūṣā supported the Sa'dī Shīrīa who were fighting the Portuguese; but very soon his successors cut themselves off from the central power and founded the kingdom of Tazerwalt with Ilīgh as its capital.

The first half of the 11th/17th century was the
apogee in the history of this kingdom. Sidi ‘All, grandson of the Marabout and the foremost member of the dynasty, felt strong enough to make a bid for the Sharitian throne against Ahmad al-Mansur’s successor. However, towards the end of his reign, the power of Hmäd u-Mũsũ’s descendants, which extended greatly beyond the boundaries of Tazerwalt, was threatened by the progress of the ‘Alawī Shūrā of Taflilīt. The second half of this century brought the temporal power of the Marabout’s descendants to an end for at least a hundred years. Indeed, the kingdom was unable to withstand the strength and energy of the ‘Alawī sultans, Mawũlī al-Raḫād and Mawũlī Ismā‘īl.

Between the end of the 18th century and the end of the 19th, the Ulād Sidi Ḥmād u-Mũsũ regained their power, but the Sultan Mawũlī al-‘Hasan (1290-1311/1873-94) took it from them again.

From then on, although the princes of Tazerwalt had lost their kingdom, yet their spiritual authority, thanks to Ḥmād u-Mũsũ, still remained intact down to the beginning of the 20th century. Large crowds continue to assemble for the three annual pilgrimages (March, April and September) around the tomb of Ḥmād u-Mũsũ, who has remained the patron saint of travellers and the great saint of the Sūs.

Bibliography: A few lines on him can be found scattered among a dozen or so pages (see index s.v. Ahmad Ou Mousa) in R. Montagne, Les Berbères et le Maghreb dans le Sud du Maroc, Paris 1930. In the first place one should consult: L. Justinard, Notes sur l’histoire du Sous au XVIe siècle, in AM, xxix (1933); Dj. Jacques-Meunin, Génealogie-Cités des Maroc, Paris 1951 (the chapter Chronique du royaume de Tazeroual, 198-217, very clearly expressed, is an excellent résumé of the history of the house of Tazerwalt from the 16th to the 20th century); L. Justinard concluded his research on the kingdom of Tazerwalt by publishing his notes as a small treatise called Un petit royaume berbère, le Tazeroual, un saint berbère Sidi Ahmed ou Moussa, Paris 1954; the author gives here the Arabic manuscript sources for the life and legends concerning the saint. (A. Faure)

HOMILETICS [see WA‘Ī].
HONOUR [see 3RD, MUṆĀKhARA].
HORDE, term originating from the Turkish ordũ, via the Russian ordũ and Polish horda, and assimilated into European languages from the 16th century onwards, is the name given to the administratıve centre of great nomad empires, particularly also to the highly adorned tent of the ruler (cf. the Golden Horde); to such nomad confederacies themselves, insofar as they formed a tenuous association linked to no particular place, substantially different in their way of life and government from the European states, and inflicting considerable damage on this population by their marauding attacks. In the Islamic world it was mainly the Turkish and Mongol conquerors of the 7th/13th century onwards who ruled their empires from a tented encampment. The rulers of such states often remained for decades in this non-sedentary life, migrating with their court and the nucleus of their people according to the rhythm of the seasons, between northern and southern (high and lowlying) areas. Their tents, not only living quarters, but mosques and churches, as well as the harems, were transported on their tents (araba). The wanderings of such a horde (for the Golden Horde, see BĀṬūR) were described in detail by the Flemish traveller William of Rubruck, 1254-56, and by Ibn Baṭṭūṭa [q.v.] in 1333 (Ibn Baṭṭūṭa, ii, 379-87, 398-412, trans. Sir Hamilton Gibb, ii, Cambridge 1962, 451-5, 490-8; condensed in Spuler, Horde4, 264-6). When the peoples of these nomad empires gradually became sedentary, they grew accustomed to a particular place of residence and to permanent wooden or stone houses, and their rulers built themselves palaces (Sarāy, Tafrīz, Sulānīyya, Kāra Korum, Ḩanbalīk = Pekin, Karšh in Central Asia, etc.; see these articles). Thus the original “horde” gradually disappeared from the Islamic world from the 11th/12th century onwards; nevertheless, the raids of the Crimean Tatars in Podolia and Wolhynia (well into the 14th/15th century) and the marauding attacks of the Turkmen into northern Persia as late as the 19th century kept alive the memory of this kind of state. For a long time, too, in Islamic states, military units were quartered in tented encampments or barracks, which (like the Roman Pretorian Guard or the bodyguard of the ‘Abbāsīds) were situated at some distance outside the capital and other large cities, to prevent their becoming a danger to the rulers or the population, or lending support to insurrections. Soldiers in such military encampments (to which too the name of ʿordũ was given) could usually be quickly installed (cf. the Janissaries). A lingua franca often developed amongst them. In these camps in central and western Asia in the 8th/9th century, Turkish replaced Mongol as the language of the nomad invaders and of the court. A similar function was fulfilled by the military encampments of the Muslim rulers of Northern India, particularly the Great Moguls. The language which developed here, a mixture of Hindu, Persian and Arabic elements, was recognized after 1947 as the official language of Pakistan, and still bears today the name which reveals its origin, Urdu [q.v.].

HUBAL, an Arabian god whose worship was fostered in Mecca by the Khūzā‘ī ‘Amr b. Lubayy [q.v.] in the first half of the 3rd century A.D. Represented at first by a baetyl, like most of the Arab deities, it was later personified, with human features, by a statue made of cornelian, with the right arm truncated (cf. Judges iii, 15, xx, 16) and which the
HUBAL — HOD

Kurayshis are said to have replaced by a golden arm (al-Azraki, Akhbdr Makka, ed. Wiistenfeld, Leipzig 1858, 74). It was from a town with thermal springs (hamma) that it was apparently brought to the Hijaz. Having come there to bathe in the waters and thereby being cured of a serious illness, 'Amr b. Luhyay, it is said, had taken back this statue with him. As to its place of origin, tradition hesitates between two towns. For al-Azraki (31, 58, 73), this town is Hit in Mesopotamia, a town situated on the Euphrates, and on the edge of the desert (al-Mas'udi, Mushaf, 234; Yâkid, 997-8; cf. R. Dussaud, La pénétration des Arabes en Syrie avant l'Islam, Paris 1955, 86, n. 2), and today still renowned for its springs of bitumen (cf. E. Dhorme, Recueil, Paris 1951, 749); for others (Ibn Higham, 51; al-Mas'udi, op. cit., iv, 46; Yâkid, 652 ff.; al-Shahrastâni, 431), it is Ma'lab, in the district of al-Balka, in Transjordania.

Having asked the local inhabitants what was the justification of their idols, 'Amr b. Luhyay is said to have received the following reply: "These are the lords (arabû) whom we have chosen, having [simultaneously] the form of the celestial temples (al-hayâkîl al-ulayyîya) and that of human beings [cf. Iamblichus, De Myst., III, 30]. We ask them for victory over our enemies and they grant it to us; we ask them for rain, in time of drought, and they give it to us" (al-Shahrastânî, loc. cit.).

In the Ka'ba, Hubal must have preserved this original character of a stellar deity; but his most characteristic role was that of a cleromantic divinity. Indeed, it was before the god that the sacred lots (istîkšâm [q.v.] bi 'l-âsîdâm) were cast. The statue stood inside the Ka'ba, above the sacred well which was thought to have been dug by Abraham to receive the offerings brought to the sanctuary (al-Azraki, 31). Another somewhat surprising fact indicates a connexion with Abraham: in the mural paintings of the pre-islamic Ka'ba, Hubal, represented as an old man holding arrows, seems to have been assimilated with Abraham (al-Azraki, 111).

The earliest mention of the name Hubal occurs in a Nabatean inscription (CIS, ii, 198), in which it appears as an associate of Manawat. According to al-Azraki (74), its cult was the best organized in the Ka'ba; a hajib guarded the idol; he received the offerings and sacrifices that were brought; he shook the arrows of divination before it. When a Meccan returned from travelling, he used to go to give thanks to the god before going to his own home. In the field of popular piety at least, it eclipsed the other deities in the Meccan pantheon, to such an extent that there has been some speculation whether the unaniety regarding this cult did not help to prepare the way for Allâh (cf. J. Wellhausen, Reste, Berlin 1897, 75; Dussaud, op. cit., 143 ff.; an opinion disputed, though wrongly, by Lammens, Les Cultes à la Mekke, in BIFAO, xiv (1918), 24).

Bibliography: In addition to the authors referred to in the text, see Yâkid, iv, 549-50. The essential facts concerning this deity will be found in T. Fahd, Une pratique clérémoniale à la Ka'ba présislamique, in Semitica, viii (1958), 55-79, particularly 58 ff., 73 ff. (T. Fahd)

HUBAYSH B. MUBASHSHIR [see qâfar b. mubahshir].
HUBB [see 'irgh].
HUBUS [see warf].

AL-HUBUS (Hassil), a tribe, for the most part settled, of al-Sharkiya district in 'Umân, south-eastern Arabia. Al-Hubûs belong to the Hinâwî political faction (see hinâ, banû) of 'Umân, and members of the tribe are adherents of the Ibâdîyya [q.v.]. They, together with al-'Hîrân and al-'Hâshîyya-

Allâh and his descendants, formed the tribal block upon which the Imâmate relied in al-Sharkiya until the events of 1377/1957 [see umâk].

Al-Hubûs are settled in a group of villages, known collectively as Balâdin al-Hubûs, in upper Wâdî 'Andâm. Their tribal capital is Muşaybî, which since 1377/1957 has been administered by a wâdî, 'All b. Zâhir al-Hînâwî. Other important villages of the tribe are: Balâdin al-Hubûs, 22 km. south of the Mutaylîf, al-Wâfî, al-Radda, al-Shârik, al-Zâhib, and al-'Aynam. Muhammâd b. Sa'îd b. Muhammâd al-Awâlî Rashûyad section, residing in al-Fath, was paramount sâbîkîd of al-Hubûs in 1384/1965. Final authority in the area, however, rested with the appointed governor. Important tribal sections of al-Hubûs are al-Ghanâmîm, al-'Asàsîrî, Awlân ribâb, and al-Shamâzîrî are Bedouin sections that share the northern part of Ramât Âl Wâhîbî with Âl Wâhîbî.

HÜD, the name of the earliest of the five "Arab" prophets mentioned in the Kurân (Hûd, Shâhîb, Ibrâhîm, Shu'âyb and Muhammâd). In his history, which is related three times (on this repetition, see al-Djahîz, Bayân, ed. Hârûn, i, 105) in slightly different forms (in chronological order: XXVI, 63-72, XLVI, 20/21, merely a restatement), the Kurân represents him as an Âdî sent to this people [see ad] to exhort them to adore the One God; but, like Muhammâd later in Mecca, he found only incredulity and insolence among the people and his followers were few; God therefore punished the Âd, destroying them with a "roaring wind" (XLI, 15/16, LIV, 19, LXIX, 6). Later traditions, however, say that they suffered three years of drought, the Âd sent a deputation to Mecca to pray for rain. God made three clouds appear in the sky, one white, one red and one black. One of the deputation, called Kayl, was given the choice of one of the three by a voice from heaven. He chose the black one, with the result that a terrible storm broke over the Âd and destroyed the whole people with the exception of Hûd and his followers; they went to settle in Mecca, where the prophet stayed until his death at the age of 150 (according to another tradition, he did not make the pilgrimage to Mecca and until his death never left his people; Ibn Rusta, 26, trans. Wiet, 24).

There exist several traditions concerning the genealogy of Hûd, going back to Âd b. 'Yây b. Arâm b. Sâm b. Hâyâ. But he is sometimes associated with 'Âbar (the biblical Heber, ancestor of the Hebrews) or regarded as a son of the latter. Since the word Hûd is also, in the Kurân, a collective noun denoting the Jews (II, 105/111, 129/135, 134/140) and that the root h.w.d. has the meaning "to practice Judaism, to profess the religion of the Jews" (II, 59/62, IV, 45/46, etc.), the proper name certainly appears to be derived from this root, which would also confirm the identification of Hûd with the
ancestor of the Jews; thus Hirschfeld is perhaps correct when he calls Hud an allegorical figure (Beiträge z. Erklärung des Korān, Leipzig 1886, 17b. 4).

The South Arabian tradition transmitted by Wabbb b. Munabbih [q.v.] gives other details about Hud, making him a brown-skinned merchant with handsome features and flowing hair.

The Kabr Hud, situated at the mouth of the Barḥūt [q.v.], in the Ḥadrāmawt, is a place of pilgrimage still frequented. R. B. Serjeant (Hud, 1297, 1297) verified on the spot the facts related by al-Harawi (Ziyārat, 97/220-1), who described, at the gate of the mosque, on the west side, the rock onto which Hud climbed to make the call to prayer and which Hud climbed to make the call to prayer and which the prophet of the walls of the Great Mosque of Damascus (see J. Sourdel-Thomine, Plerinages damascins, in B. F. Or., xiv (1954-4) 75, n. 7; Ibn Battuta, i. 205, speaks only of the south wall); this is certainly the reflection of a local tradition, giving proof of the interest which the Muslims attached to the prophet of the 'Ad.

Hübān Bān [see supra 1096].

Hūdā [see QHIMĀ].

Hūdā, MAHMūD b. FADL ALLāH b. MAHMūD, better known under his mahkāj Hūdā?i, born at Koczbiar in 950/1543-4 (Hūdā?, al-Tūbr al-masḵāk, Istanbul, Selim Ağa, Hūdāyī collection no. 250, vol. i, fol. 71v., 81v., 87r.; op. cit., Bursa, Orhan, Ulű Cami collection no. 1753, fol. 258v., 290r., 404v.). Almost nothing is known of the first twenty-seven years of his life except that he was an orphan from early childhood (op. cit., Selim Ağa, Hūdāyī collection, no. 250, vol. i, fol. 76v., vol. ii, fol. 64v.), and that he spent a number of years at Sivrihisar where he was in contact with the disciples of Shaykh Baba Yūsuf (op. cit., vol. i, 27v., vol. ii, 15v., 69v.). In 978/1570-1, he entered the service of Naṣīrī, in the medresa of Selim II at Edirne (Hāṭa, Dīkhā al-masḵāk, Istanbul, Selim Ağa, Hūdāyī collection no. 1268, 760, cf. 421). He followed his master when the latter was appointed kādī, first at Damascus, then at Cairo and finally at Bursa (Muḥarram 981/May-June 1573). He was then moved to the medresa of the temple of old mosque (Dīkhā-i 'āṭīḥ, and of teacher (mūḍērīs) at the Fāhrādīyya medrese (Hāṭa, op. cit., 760, cf. 421). There then followed a period of misfortune which coincided with a religious crisis. He lost his position as nāḥī, perhaps because of an error which he made over a legal matter (İsmā'īl Bēlîg, Ǧūdeste, Bursa 1302, 335). When his patron was transferred to Edirne on 30 Ramdān 1579/9 October 1575, he remained at Bursa and on 1 Dhu 'l-Ka'da' 984/18 January 1577 he became the disciple of Shaykh Uṭfāde, the founder of the Djīl-watiyya [q.v.] order. At the end of 986/1578, he also lost his post at the medrese and fell into poverty. His period of initiation under Uṭfāde lasted for three years. On Saturday, 1 Dhu 'l-Ka'da' 987/19 December 1579, only a few months before Uṭfāde's death in 988/1580, Muḥammad ibn Abd al-Qādir Bālīkmānij, Beldeccanu-Steinberger, Schirkeb Uṭfāde, der Begründer des Geleitweiss-Ordens, Munich 1961, 131 ff.), the latter sent him on a mission to Sīvrībāṣh. Other journeys followed (Abd al-Ghāni al-Nābulūsī, Sharī-ı Tadhjīliyyat-i Hūdā?, Ankara Dîl ve Tarih-Cografya Fakültesi, i. S. Sencer collection, i,3515, fol. 2v.). He settled finally at Istanbul, on the Asiatic side, at first in the district of Camiğlī and later at Uskūdar in Djiha'de-i 2ıo. February-March 1594, he was appointed preacher (nādīr) in the mosque of Meḥmūned II through the good offices of the kādī-i ḥakīm of Rumeli, Sun' Allāh, and received 100 akçe from the foundation (Pecēw'i, ii, 36; 'Atā', op. cit., 761). On the completion of his own mosque, in 1003/1594-5, he resigned from this post. Instead, he preached on Thursdays in the Miḥrīmeh mosque and, from 1020/1611-2, on the first Monday of each month in the Sultan Ahmed mosque ("Atā', op. cit., 761). He died in 1018/1608-9. His tūrbe is adjacent to his mosque.

Hūdā?i enjoyed a very great prestige in his own day. His convent was a refuge for dignitaries who had fallen out of favour (Pecēw'i, ii, 357; Na'īmā, Tārīḵ, 1280, ii, 155, 159; Hammer-Purgstall, Histoire, viii, 168, 233, 251, 272). Although Uṭfāde must be considered as the founder of the Djīl-watiyya order, there is no doubt that it was due to Hūdā?i that the order survived. Faithful to his master, Hūdā?i gave it a firmly orthodox bias (cf. his attitude to the disciples of Bahr al-Dīn: M. Šaraf al-Dīn, Samānūa-ḫāššī-oglu šaykh y bād al-Dīn Istanbul 1340, 72).

There exist some poems by him of a mystic character and some short works relating to religious matters, seven of which are mentioned in M. Gūlğen (Kulliydt-i hadrat-i Hūdā?), Istanbul 1338), some letters and a journal in Arabic which he began at the time he attached himself to Uṭfāde (and from which have been taken the main dates of his life). The section which runs from Muḥarram 975 to 9 Shawwāl 975/March-April 1577 to 27 November 1597, has the heading Kalimdt. . (I. Beldiceanu-Steinherr)

AL-HUDAYBIYA, or AL-HUDAYBIYYA, a medium-sized village on the edge of the Haram or sacred territory of Mecca, one marjāla from Mecca itself. Both the village and the Mosque of the Tree (presumably on the site of the pledge described below) were unknown in the time of al-Fāṣi (d. 582/1190). One authority says the name was derived from a dome-shaped or hump-like (hūdāb) tree, but this may be conjecture.

The village gave its name to an important Muslim expedition from Medina, led by Muhammad, in Dhu 'l-Ka‘da of the year 6 (March 628). Muhammad had a dream (cf. Kur‘ān, XLVIII, 27) in which he saw himself performing the rites of the lesser pilgrimage (‘umra) at Mecca, and decided to make an expedition to Mecca for this ostensible reason, though in so doing he would also demonstrate to the pagans of Mecca that Islam was an Arabian religion and would not threaten the prestige of their sanctuary. Muhammad hoped that the nomadic tribes near Medina would join him, but they saw little prospect of booty and were afraid the expedition might end in disaster. He set out with only about 1400 followers, mostly from Medina itself, and they had with them camels for the sacrifice. The Meccans, realizing that after the failure of their attempt to besiege Medina they would be considered weaklings if they let Muhammad enter Mecca even as a pilgrim, sent out 200 cavalry to bar his way. These Muhammad eluded by taking an unusual and very difficult route, and so reached al-Hudaybiya on the edge of the Haram. Here he decided to halt and negotiate.

A number of emissaries came and went between himself and the Meccans. Eventually a treaty to last ten years was agreed on, of which the following were the chief provisions: for the present, Muhammad and his followers were to withdraw, but in the next year Mecca would be evacuated for three days to let them perform the ‘umra; there was to be no raiding between the two parties; Muhammad was to send back to Mecca anyone of Kuraysh (presumably minor or woman) who came to him without his permission or protection; and others than Kuraysh were to be free to enter into alliance with either side. On the conclusion of the treaty Muhammad and his followers sacrificed their animals and returned to Medina. Many were disappointed; some thought Muhammad's policy mistaken. The expedition to Khaybar about six weeks later was in part to console them for this disappointment.

A year after the original expedition Muhammad performed the pilgrimage with a party of about 2000. The treaty continued in force for only about ten months more, because a quarrel between allies of the contracting parties led to Muhammad’s victorious entry into Mecca (Ramadān 8/March 630).

While the Muslims were at al-Hudaybiya negotiating, it came to be believed that one of their number was slain by Al-Mu‘awiyah, and the latter was in part to console them for this disappointment. Muhammad then called on them to take an oath to support him, known as the Pledge of Good Pleasure (bay‘at al-ridāwān) or the Pledge under the Tree. It is usually said to have been an oath not to flee, but it is more likely that (as stated by one authority in al-Wākidī) it was an oath to follow Muhammad in whatever he decided. If the latter, the oath marked an increase in Muhammad’s constitutional powers. Rīḍawān is used because Kur‘ān, XLVIII, 18 says God was “well pleased (radiya) with the believers when they pledged themselves under the tree”.

(W. Montgomery Watt)
Hudhayl has occupied much of the territory immediately west and east of Mecca and on up to the mountains towards Tihama; there is no tradition of its having migrated here from elsewhere. This territory, which has been called “the heart of Hijaz”, includes the valley of Ban Tammour Marr al-Zahrân (modern Wadi Fâtimma) between Mecca and the present port of Djidda and the valley’s main tributaries, Nakha al-Shâmiyya (or al-Sha’ânîyya) and Nakha al-Yâmâniyya [see al-

According to Ibn al-Kalbi, the people of Hudhayl were the first among the descendants of Isma’il to become idolaters. At a place called Ruhât they had the idol Suwâ’. Although Ibn al-Kalbi locates Ruhât in the environs of Yanbu’, it was more probably close to Mecca and may have been in Nakha al-Yâmâniyya (see Yâkût, s.v., and al-Azraqî, 1, 78, 79; al-Sukkâri, i, 105), however, identifies Ruhât as the only Ruhât mentioned by the poets of Hudhayl, as being in the land of Banû Hilâl, three nights from Mecca). The custodians of Suwâ’ were Banû Liyân [q.v.], a division of Hudhayl. Hudhayl also had ownership, or shared it with Khuzâ’a, of one of “the daughters of Allâh”, Manât [q.v.], a stone at Kudayd on the way from Mecca to Ya’thrib reputed to be the oldest of the Arab idols.

In the legendary accounts, Hudhayl plays a leading rôle in the visit of tubba’a As’ad Kâmil (Abû Karîb) to Mecca and in the expedition of Abrahâ [q.v.] against the town. During the pre-Islamic period Hudhayl engaged in numerous feuds with the neighbouring tribes. The famous ode of vengeance by Ta’ababbâta Sharrâ’ [q.v.] of Fahm was directed against Hudhayl, who had killed his uncle. Hudhayl used to sell prisoners taken in battle as slaves in Mecca. During the struggle between the Prophet and Kuraysh, most of the members of Hudhayl, with Liyân in the forefront, sided with their kinsmen of Mecca. The Muslim commander given a stick by the Prophet as guarantor for his victory over Hudhayl was ‘Abd Allâh b. Unays (not Uwais, as in El-Attar), the first among the descendants of Isma’il that entered into Islam; he became a faithful companion and servant of the Prophet as guerdon for his victory over Hudhayl. After the conquest of Mecca, the Muslims obliterated the idols of Hudhayl. ‘Amr b. al-‘Ash destroyed Suwâ’, and various persons, including ‘Ali, were credited with the destruction of Manât. Hudhayl joined Kuraysh in embracing Islam.

Although most of Hudhayl were slow in coming in, one man prided himself on being among the earliest converts. This was ‘Abd Allâh b. Masa’d [see Ibn Mas’ud], who may have been a client of the tribe, though Ibn Hazm lists him as a Hudhayl by descent; he became a faithful companion and servant of the Prophet and a prolific traditionist. The historian al-Ma’sûd [q.v.] claimed him as an ancestor.

Hudhayl stands out among the Arab tribes for its bountiful poetry, its renown in this field being due in part to the fact that its tribal al-dâm is the only one to have survived in extenso. Among the scores of poems of the stock of Hudhayl were Abû Dhû’sayb, Abû Kublî, Abû Khirrâsh, and Abû Sakhr [q.v.]. Not many of the Hudhayl poets lived wholly in the Djâhilîyya; a number began life in that period and ended as Muslims.
the aid of Uddi b. Shakh (given in other sources as Uddi b. Haddi), whom al-Hamdani calls "the 
Slave of Mecca" (probably a Turkish slave of the 
"Abbadids appointed to be governor of the Holy 
City).

Given the proximity of Hudhayl to Mecca, it is 
surprising that the chroniclers of the city provide 
very little information on the doings of the tribe. 
Hudhalls often took part in the campaigns of the 
Hshmlid sharifs, but in general the tribe had a 
bad name for harassing pilgrims. Out of fear of Hudhayl, 
travellers often chose the blistering road along the 
coast to Medina in preference to the cooler road east of 
the mountains of al-Sarat.

In the 19th century J. Burckhardt gave these 
notes on Hudhayl: "They must one thousand 
matchlocks, and are reputed the best marksmen in 
the whole country. They are a famous tribe, eminent 
for their bravery. The Wahabys killed above three 
hundred of their best men before the tribe would 
submit". The most attractive villages of Hudhayl 
were in the mountains west of al-Taar, including 
Karähudhalls were settled in the Meccan quarter of 
al-Ma'abida, and the division of Libyan was 
established in Hadda and Bahra, the main stations on 
the road from Mecca to Djudda.

Coming down the old road from al-Taar to Djudda, 
Doughty met Hudhalis: "Their skins were black and 
shining; and their looks (in this tropical Arabia) 
were not hollow, but round and teeming". Philby 
found members of the tribe along the same road, 
leading a hard life "in worsted boots ... perhaps 
not more than three or four feet in height ... tending 
bees and sheep and doing a certain amount of 
cultivation on the torrent-irrigated terraces ...; 
they also rear camels of a diminutive and extremely 
hardy highland breed, of which it is said that they 
can climb up the steep flanks of the hills as surely 
as goats".

The old grouping of the tribesmen into Hudhayl 
al-Sha'm and Hudhayl al-Yaman is still preserved. 
Perhaps the most important centre of the tribe is the 
 oasis of al-Zayma at the point where the old road 
from al-Taar leaves Wa'di al-Yamaniyya (the modern 
name for harassing pilgrims). Out of fear of Hudhayl, 
these people along the same road, 
leading a hard life "in worsted boots ... perhaps 
not more than three or four feet in height ... tending 
bees and sheep and doing a certain amount of 
cultivation on the torrent-irrigated terraces ...; 
they also rear camels of a diminutive and extremely 
hardy highland breed, of which it is said that they 
can climb up the steep flanks of the hills as surely 
as goats".

The old grouping of the tribesmen into Hudhayl 
al-Sha'm and Hudhayl al-Yaman is still preserved. 
Perhaps the most important centre of the tribe is the 
 oasis of al-Zayma at the point where the old road 
from al-Taar leaves Wa'di al-Yamaniyya (the modern 
named of southern Nakhla) to run southwards and 
then westwards to Mecca, though the oasis is likely 
to become a backwater now that a new and more 
direct paved road to Mecca is in use.

The people of Hudhayl are relatives and close 
friends of the Djahadila, whose range lies near the 
Djahadila.

Hudhud, the hoopoe, belongs to the order 
Scansores and bears a remarkable tuft of feathers on 
its head. Only a part of what is related concerning 
its habits and character can be mentioned here. Its 
piety is particularly emphasized. In Umayya b. Abi 
'l-Salt (ed. Schulthes, in Beiträge zur Assyriologie, 
vi, 26, 84 f.; cf. also Ibn Kutayba, al-Shirr, 279 f.) 
there is a story that the hoopoe enthroned its dead 
mother and carried the body on its back and head 
till it found a resting-place for it; this is why its back 
is brown; but it is also related that the tuft of feathers 
was a reward for this act.—When its mate dies, the 
hoopoe does not look for a new wife.—When its 
parents grow old, it feeds them. It bears different 
 kunyas in Arabic, e.g. Abd 'Ibhad, Abu l-Saddjihdi, 
after the numerous bows of its tuft as it walks. It 
makes its nest in dung so that it has an unpleasant 
smell. Its eggs are white or purple and black etc. are used in various ways. 
The Prophet is said to have forbidden it to be killed; 
hence, according to some, its flesh is forbidden 
(though other schools regard it as permissible). The 
hoopoe plays a prominent part in the legend of Solo- 
mon and Bilqis (q.v.), which was apparently already 
developed by Muhammed's time as may be concluded 
from Sura XXVII, 20 f. In this passage we are told 
that Solomon assembled the birds and the hoopoe 
was missing. When he arrived late, he gave an account 
of the queen of Saba and was entrusted by Solomon 
with the bearing of a letter to the Sabaean.

The later writers as a rule give the whole story as 
follows. The hoopoe possesses the power of seeing 
where water is through the earth. He was the therefore 
used by Solomon on his pilgrimage to Mecca to find 
water. But on one occasion the hoopoe whom Solo- 
mon had appointed for this purpose, named Ya'fur, 
or Yaghfur, while on the journey, took a trip to the 
south and reached the garden of Bilqis where he made 
the acquaintance of another hoopoe named 'Ufayr. 
The latter told him a great deal about the queen of 
Saba. In the meanwhile Solomon was looking in vain 
for water for his army (or according to another 
versions for ritual ablation). He sent the vulture (nasr) 
to assemble the birds and as the hoopoe was missing 
the eagle ('Ufayr) was sent to fetch him. But he was 
already on his way back and was brought by the 
eagle before Solomon, who talked to him severely 
but finally, after hearing his account of Bilqis, sent 
him with a letter to the Sabaean.

Another version of the beginning of the story 
relates that Solomon on his pilgrimage was being 
carried with all his retinue on a carpet by the winds 
out into the sea and said "Now eat, O thou Prophet of God! if
the meat be lacking, there is at least plenty of sauce". Solomon and his soldiers laughed for a year at this joke.

On the relationship of the Jewish hoopoe-legend to the Muslim, see M. Grünbaum, Neue Beiträge zur semitischen Sagenkunde, Leiden 1895.

In North Africa, hoopoes are mostly used for silk, feathers, etc., and used for magical purposes (Doutte, Magie et religion dans l’Afrique du Nord, 270).

Hūdīds, in Arabic Banū Ḥūd, ‘sons of Ḥūd’, a family of Arab extraction, as rulers of Sarakūsta (Saragossa) among the more important of the Partya Kings (mulūk al-tawdīf, reyes de Taifas) in 5th/11th century Spain. Hūdīds [q.v.] was well known as the name of a prophet sent to the people of ‘Ād (sūra VII, 63 ff., etc.); his descendants, the Banū Ḥūd, is mentioned in legend (e.g. Ibn Khaldūn, Beirut ed., iv, 308, 384). The ancestry of the historical Banū Ḥūd is traced to an eponymous Hūd, said to have been the first of the family to enter al-Andalus. He was, according to some, a great-grandson of Sālim, the freedman of Ṭūḥayyata, a famous Companion of Muhammad. But Sālim is stated to have died childless (Ibn Kutayba, Mu‘āṣirī, 139), and, since the names of members of the family is regularly given as Dījaḥīz, it seems slightly more probable that, as others claimed, the Banū Ḥūd of Saragossa were descended from the celebrated Rawb b. ‘Zinbā’ al-Dījaḥīz. The first Hūdīd to come into prominence was:

1. Abū Ayyūb Sulaymān b. Muhammad b. Hūd al-Dījaḥīz, later styled al-Musta’īn b. ‘illāh (al-Musta’īn I). Sulaymān is mentioned before the revolution which produced the Partya Kings as a military officer on the Upper Frontier (al-tawdīf al-‘aṣkāf). He supported the Tūdūbīds [q.v.] of Saragossa and took part in the disastrous campaign of the caliph al-Murtadā against Granada (408/1018). While governor of Lārida (Lerida) he entertained the unfortunate ex-caliph Hīṣām III al-Mu’tadīd [q.v.] till the latter’s death in 427 or 428 (Ibn al-Athīr, ix, 199, cf. ‘Abd al-Wāhid al-Marrākūshī, 41). Shortly after the murder of the Tūdūbīd Mughīrī II b. Yaḥya, Sulaymān b. Hūd occupied Saragossa (Muḥārāt 431/ September-October 1039) and became ruler of an extensive kingdom which included most of the Ebro valley and, in addition to Saragossa itself and Lerida to the east, Huesca to the north, Tudela and Caltatayud to the west, and territory to the south in the direction of Valencia. In 433/1043-44, according to Ibn Ḥayyūn (quoted Ibn ‘Idhārī, al-Dabāyīn, iii, 219), Sulaymān was head of one of the political parties in Muslim Spain, and he blames him and Ibn Dīja ‘I-Nūn [see qur’ān ‘L-‘Nūn] for inviting the Christians to attack Muslim territory on the Upper and Lower Frontiers, which they did in 437/1045-46. Sulaymān survived his successful coup for only a few years. Having divided his possessions among his five sons, he died in 438/1045 and was followed at Saragossa by:

2. Abū Dīja’ār Aḥmād I b. Sulaymān b. Hūd al-Muṭḥadīr. He set aside his brothers in turn, pursuing with the eldest, Yūsuf b. ‘Arifīn of Lerida, called al-Muṭṭafarīn, an especially bitter struggle which went on till the last years of his reign. In 453/1061 al-Muṭṭadīr obtained control of Tārūsh (Tortosa), and in 460/1069-70 he expelled the ‘Ammārīs A‘lī b. Muḥjābī hostility to the Almoravids became more and more pronounced. In 470/1079, after the death of Tūdūbīd Dījaḥīz b. ‘Alī, the pressing with the eldest, Yūsuf b. ‘Arifīn of Lerida, called al-Muṭṭafarīn, an especially bitter struggle which went on till the last years of his reign. In 453/1061 al-Muṭṭadīr obtained control of Tārūsh (Tortosa), and in 460/1069-70 he expelled the ‘Ammārīs A‘lī b. Muḥjābī hostility to the Almoravids became more and more pronounced. In 470/1079, after the death of Tūdūbīd Dījaḥīz b. ‘Alī, the
and on 3 Ramadan 512/18 December 1118 Alfonso I of Aragon, el Batallador, took Saragossa after a siege of 7 months (May–December). 'Imād al-Dawla held out in Rueda, while the Christians began to occupy the lands of the Frontier piecemeal. 'Imād al-Dawla died in Rueda in Shābān 534/1330 (the date 513, frequently accepted, in the text of Ibn Khaldūn is a slip for 523, cf. Dozy, *Scriptorium Arabum Locii de Abbadiatis*, ii, 144, n. 12). He was succeeded by his son, the last of the line.6

6. Abū Dja'far Ahmad III b. 'Abd al-Malik b. Hūd Sayf al-Dawla ('Zafadola') al-Mustansir bi'llah. In 534/1334 or earlier he exchanged Rueda with Alfonso VII for what Ibn al-Abbār calls 'half the city of Toledo', but more probably was territory in the province of Toledo and perhaps Estremadura (Codera, Prieto y Vives). In 539/1144, when the revolt against the Almoravids was general, al-Mustansir b. Hūd, as representing ancient native royalty, found himself with partisans everywhere in Muslim Spain, and, taking the field, occupied successively Cordova, Jaen, Murcia and Valencia. Ultimately, in a battle with the Christians in the east of Spain near Dianjāla (Chinchilla) in Shābān 540/February 1146, al-Mustansir was defeated and killed, and with him the dynasty came to an end. (The account of the death of al-Mustansir given by Ibn Khaldūn is the same as that in the date, A.H. 539, is not right.)

It remains only to notice Muhammad b. Yūsuf b. Hūd al-Djūdhāmī, called al-Mutawakkil, who claimed descent from al-Musta'sīr b. Abbadīs. In Rueda in Shamān 524/1130 (the date 513, frequently accepted, in the text of Ibn Khaldūn is a slip for 523), Imad al-Dawla died, while the Christians began to occupy the province of Toledo and perhaps Estremadura (Codera, Prieto y Vives). In 539/1144, when the revolt against the Almoravids was general, al-Mustansir b. Hūd, as representing ancient native royalty, found himself with partisans everywhere in Muslim Spain, and, taking the field, occupied successively Cordova, Jaen, Granada, Murcia and Valencia. Ultimately, in a battle with the Christians in the east of Spain near Dianjāla (Chinchilla) in Shābān 540/February 1146, al-Mustansir was defeated and killed, and with him the dynasty came to an end. (The account of the death of al-Mustansir given by Ibn Khaldūn is the same as that in the date, A.H. 539, is not right.)

HUDJARIYYA [see HUDJARI]

HUDJARIYYA (أ.), pl. HUDJAR, both proof and the presentation of proof. The term is Kur'ānic, and is applied to any argument—one that attempts to prove what is false ("worthless argument"), as well as one that attempts to prove what is true ("decisive argument"). Men should have no *hudjaria* against God (4, 142), if they argue (yuhaddiun) against Him. This argument is worthless in His (Ex. XLI, v, 17, cf. XLI, 25). It is to God that "the decisive argument" belongs (VI, 149), and it was God who gave Abraham the (decisive) argument against his people (VI, 83). In the sense of "proof", *hudjariyya* is very close to *dali* [q.v.]; in the sense of "argument", it is very close to *burhān* [q.v.]. But whereas *dali* is, in the first place, the "indication", the "guide" that leads to certainty, *hudjariyya* suggests the conclusive argument that leaves an opponent without a reply; and whereas *burhān* is, in the first place, as it were the clear evidence of an irrefutable proof, and, consequently, the correct reasoning that leads to it, *hudjariyya* retains the idea of a contrary argument. "Dialectical proof" would perhaps be the translation that best renders the primary meaning of *hudjariyya*.

This shade of meaning, however, is often almost (but not quite) the last shade of meaning of *hudjaria* also assumes a precise technical meaning in the science of *hudjariyya*, and moreover becomes one of the initiatory degrees of the Ismā‘īlī gnosis. When used by the *mutakallimūn* and the *falāsifa* (in treatises on logic or discussions of methodology), it remains, according to the authors' inclinations, somewhat imprecise. An exhaustive recession would be very long, but a few references may be given here.

Ibn Snā in Avicenna *dali* may refer to any argument or demonstration; in a narrower sense it denotes the *burhān al-inna* (or *al-in*), the demonstration of existence. The meaning of *hudjariyya* in Avicenna is very wide. The section of the *Shīfiya* that deals with logic takes it in a general sense as a process of argumentation, for it subdivides it into syllogism (baṣṣā‘a), induction (istibhār), analogy of like with like (ijtihād), and *falsāfah* (in treatises on logic or discussions of methodology). On the following page *hudjariyya* is defined as the point of arrival (mašhu’sa) of acceptance or judgment (falsāf). The term is characteristic of the old Latin translations should here have rendered *hudjariyya* by ratio (cf. A.-M. Goichon, *Le lexique de la langue philosophique d’Ibn Sīnā*, Paris 1936, no. 120). We find the same idea, contained in the plural form *hudjarid*, in the *Ijīrāt*, and the same three-fold division (ibid. Forget, 64 ff.); the *Mantiq al-maqbūlsa‘ya* (Cairo 1328/1910, 10) also repeats the idea of the *Shīfiya* (*Makbul*, 19): *hudjariyya* is the point of arrival of judgment or acceptance. However, in the *Ashāb al-‘ulām* al-‘aṣḥābiyya (in *Tisrā sā‘a‘*), Cairo 1326/1908, 177 *hudjarid* are distinguished from *burhān*, and resume the more precise meaning of "dialectical arguments" (fīl ‘ardhīl), designed to convince an opponent. Alpago translates as *argumentatio* (cf. A.-M. Goichon, *Ibid.*).

*‘Im al-kalām*. The object of the science of *kalām* being to reply to "doubters and deniers", the term *hudjariyya* is often used in it, concurrently with *dali*, in the presentation of arguments (e.g. al-‘Aṣkālānī, *Al-bayān *an al-farā’bayn al-mudjazzīna wa-l-kalām*, ed. R. J. McCarthy, Beirut 1958, index). But it only rarely receives the force of an exclusively technical term. The "proof" of *‘im al-kalām* is primarily *dali* (pl. adhilla), or *dālā’, in several
Mu'tazzili texts as well as in al-Šā'arī (Kitāb al-
Lumān), ed. R. J. McCarthy, Beirut 1953, 6, 12; al-
Bašlāni states in his Kitāb al tudhīja (ed. Luciani, Paris 1938, 5[18-9]), al-Džuwaniy, after
speaking of reasoning (našar), devotes a paragraph to "proofs"; he uses adillā, and distinguishes between rational (ʿabīliyya) proofs and traditional or author-
itive (sāmiyya) proofs. Many other examples
could be listed.

Al-Džuwaniy (iḥbīd) and al-Bašlāni before him, define proof, dalīl, as giving knowledge of what is hidden. Now, al-Bašlāni states in his Kitāb al-
Tuhbījī (ed. McCarthy, Beirut 1957, 14) that this
dalīl, which is also referred to as dīdā, and which is
that by which something is proved (mustudād), is the
budīdja. In fact, the demonstration of that which is
not exclusively and necessarily known, the actual
definition of dalīl, is that which, in the context of
kalām, can convince an opponent, and be the decisive
budīdja against him. In speaking of "rational proofs"
the Tuhbījī sometimes uses adillā (13), and some-
times budīdja (102, 119). When, however, it is a
matter of distinguishing clearly between rational (and
"necessary") proofs and textual proofs, al-Bašlāni
prefers to use adillā (Tuhbījī, 9, 12, 14).

In the methodology of his Bayān ‘an ṣūrīl al-imān
(MS 577 of al-Maktāba al-ʿUthmāniyya in Aleppo,
communication of Shāykh Kawīṣari and G. C.
Anawatī), Abū Džāfar al-Sumānnā (a disciple of al-
Bašlāni), follows the "line of the Ancients", also uses adillā to denote the arguments
for, and the proofs of, kalām. He defines "rational proof",
however, as budīdja al-ṣulāl, which operates according to five processes: elimination, verification, attribution, generalization, and generalization simultaneously (cf. Anawatī and Garden, Introduction à la theologie musulmane, Paris 1948, 365-7); the last four processes are described as
dependent on a biyāḍ in the primary sense of the
word, an analogy of like with like. This, in kalām, is
one of the clearest instances that we have of awareness of the "logic of two terms". One might say that
budīdja was here most definitely seen as dialectical
argument.

Al-Ghazālī. The vocabulary of al-Ghazālī is
distinctly Arabic rather than in the point of meeting between those of falsaṣa and kalām. He readily employs dalīl, adillā, in a sense very close to that used by Ibn Sinā.
At the beginning of the Munḥakī it is specifically stated that dalīl (here = reasoning) presupposes
recourse to first principles. However, al-Ghazālī’s
personal attitude is known—he was, besides, in-
fluenced by Džuwāniy— as is his mistrust of recourse exclusively to dalīl, thus understood: it is takhaffu
al-adillā, where proofs that balance each other
disappear before an interior illumination of a
different order. More often still, it is true, al-
Ghazālī leaves to dalīl its primary meaning of a
suggestive indication leading to manifest certainty.
He who was to be called budīdja al-Imām certainly
uses dalīl more than budīdja to denote rational proof.

He does, however, use budīdja with the common meaning of "convincing argument", which demands, or should demand, the acceptance. Basically, using a
term in a more technical sense, when he presents his
own theses on formal logic, he repeats almost word
for word the definitions and distinctions of the
Maktab al of the Shīʿī: budīdja, which is used to mean
any argumentative process, "is of three sorts: syllogism, induction, analogy of like with like or parable (tamthil)" (Maṭbāʿ al-ʿilm, Cairo 1346/1927, 86). Cf. also Farid Jabre, La notion de certitude selon

Ghazālī, Paris 1938, index s.vv. dalīl and budīdja.

In the methodology of falsaṣa and kalām, the term
budīdja receives fairly widely differing meanings,
sometimes being almost identical with dalīl, and
sometimes being distinguished from it; sometimes
suggesting any process of argumentation, the syl-
logism (and induction) of three terms as well as
reasoning of two terms, sometimes signifying rather the
dialectical argument that confines and convinces an
opponent. It is apparently in this last case that
it retains its most specific meaning. Budīdja, as
translated by H. L. Cadoc (La profession de foi d’Ibn
Batūta, Damascus 1948, 90, n. 31), "... a proof that
one produces against an opponent; it is the victorious
proof, whether it is a matter of prophetic teaching,
the merits of the Companions (id., 116) or the
dialectical effort of the human reason.

In Shiʿī Terminology

The notion that something or someone was visible "proof" of God’s presence or will must
have antecedents among monotheists before Islam. Among Shiʿīs, the term budīdja, "proof", has been
used in at least three ways. It refers most generally to
that person through whom the inaccessible God
becomes accessible, who serves at any given time
as evidence, among mankind, of His true will; thus
the Prophet was budīdja of God. Very early, the
term received a more specialized meaning: among some
of the Ghāzālī, it referred to a particular function
within the process of revelation, sometimes identified
with the role of Salmān as witness to ‘All’s status as
imām. The term was also sometimes used to refer to
any figure in a religious hierarchy through whom
an inaccessible higher figure became accessible to
those below.

In Iṣmāʿīlī dogmatics, the first use of the
term was systematized. It designates the category
formed by prophets and imāms together, in that
either a prophet or an imām must always be present
as guide to God’s will. Thus the section in Kūlini’s
al-Kāfī dealing with prophethood and imāmate is
titled budīdja. The argument is that if there were no
representative of God among mankind, God would
remain unknowable and human beings could not
serve him; and they must always have a represen-
tative, for records of a former representative, even
the Kurʿān itself, will give rise to disputes and
uncertainty unless there is an authorized interpreter.
The present budīdja is the hidden twelfth imām.

Among the Iṣmāʿīlīs, the term usually referred to
a particular figure in the religious hierarchy, thought
of as fulfilling a function in revelation. In Fātimid
times, it was used for the chief dāʿīs, directing the
ordinary dāʿīs. In numerical passages, the budīdjas are
twelve, presiding over twelve districts; or, occasionally,
twenty-four—presumably twelve as dāʿīs in their districts and twelve at the court of the
imām. A chief budīdja is mentioned, identical with
the chief dāʿī. The Ṭayyībī Iṣmāʿīlīs (Bohrs) have
retained Fātimid usage in their dogmatics, but not
in their organization. Among the Nizārīs, the term
had a complex development. It was probably used
for Ḥasan-i Šābāh [g.v.] as visible head of the
movement when the imām was hidden. Later, when
the restored imām was treated as the locus of divine
self-revelation, there was one budīdja (identified
with Salmān, the ideal believer), who alone, by
divine inspiration, could fully perceive the reality of
the imām. The exact rôle of this budīdja passed
through several phases as Nizārī teaching evolved;
eventually, the *hudidja* was normally the imam's heir-apparent. In the present *hudidja* lists of the Niṣāfīs, each imam is assigned a *hudidja* as spokesman or visible token; the *hudidja* need not be a man or even a person.

**Bibliography:** For the *Ismaʿili* position, see Muhammad al-Kullānī, *Kīdāb al-hudidja*, in al-Kāfī. For earlier Ismaʿili usage, there is no one chief source; but Naṣr al-Dīn Tūsī, *Rauwat al-tasālim* or *Tawawurrat*, ed. W. Ivanov (in The Ismaili Sources, II, 195), Leiden, 1939, is especially useful for the later period (the translation is not dependable). H. Corbin, *Histoire de la philosophie islamique*, i, Paris 1964, discusses all usages (see index); on the Nizāris, he is to be supplemented by M. G. S. Hodgson, *The Order of Assassins*, The Hague 1955, which traces the variations in the concept in various historical circumstances.

See further *Khalwa*.

**Hudjriyya** (Hegiriyya), name of a tribe, and of an administrative division (*hdadīt*) in the Yaman, one of the four districts in the province (*liwāʾ*) of Taʿizz. It is to the east of the *hdadīt* of al-Makhā and to the south-west of Taʿizz, on the frontier of the South-Arabian Federation. The area is entirely mountainous, well-cultivated (coffee, cereals) and rich in livestock; according to Heyworth-Dunlop it is famous for producing a kind of ass called *saawirka*yya. The number of inhabitants in this district was given by the same author in 1952 as 192,392,250 about one-third of the total population in the *liwāʾ* of Taʿizz. Its most important town is Turbat al-Dhubbān, belonging traditionally to the important clan of the *Shardjahb* (*Shirgāb*); Von Malzau rated the number of its inhabitants at about 800, and that of the Jews among them at about one-fifth; the place has the remains of old *Himyar* buildings. Another powerful clan is that of Hammād, whose town is called Dār Shawwar.

The Hudjriyya claim to be true descendants of ancient *Himyar*, and are said to have at one time formed one tribe with the *Ṣubaybā*, who live to the south of their territory. *Ṣabīb* is like all the other inhabitants in what is now the *liwāʾ* of Taʿizz, and having a common language, but they have become subject to the *liwāʾ* of Shāfī; they have been called by invaders *Hudjriyya,* and to the south of their territory. Their number is given by Ibn Asakir, as well as by Ibn al-Makrizi, as 32,000. Von Malzau rated the number of its inhabitants at about 800, and that of the Jews among them at about one-fifth; the place has the remains of old *Himyar* buildings. Another powerful clan is that of Hammād, whose town is called Dār Shawwar.

The most interesting section of the *Kashf* is the 14th: "Doctrines professed by the various Şûfi sects": he lists twelve of them and explains the doctrine of each. One only, that of the Malikis, appears to be mentioned in older works on Şûfism; brief references to other sects found in later works (e.g., the *Tadhkirat al-awliya*) are probably borrowed from it. It is not clear whether these sects actually existed or whether they were invented by Hudjwiri in his desire to systematize the doctrine of Şûfism; but there is every reason to suppose that he often mingled his own personal views with his exposition of the doctrines which he attributed to the founder of each school. It is possible that the main source of the information in the *Kashf* was oral, but Hudjwiri does mention a treatise on Şûfism, the *Kitâb al-Luma* (in Arabic of Abu Naṣr al-Sarrâdī (d. 377/987-8), one of the earliest of this type (a passage from it is included in the *Kashf*, tr. 341); a comparison of the two works reveals that the plan of the *Kashf* coincides with that of the *Luma*; the *Kashf* includes references to three other mystic writers (tr. 26 and 114).

In the introduction to his translation of the *Kashf* (2nd ed., revised), Nicholson has this to say: "Though Hujwiri was neither a profound mystic nor a precise thinker, his work on the whole forms an admirable introduction to the study of Şûfism: it... has the merit... of bringing us into immediate touch with the author himself, his views, experiences, and adventures, while incidentally it throws light on the manners of dervishes in various parts of the Moslem world. His exposition of Şûfi doctrine and practice is distinguished not only by wide learning and first-hand knowledge but also by the strongly personal character impressed on everything he writes".

In addition, Žukovskiy, in his important introduction, gives a list of the works which Hudjwiri consulted (21-5) and a list of the Muslim writers who used the *Kashf* (36 ff.); he examines carefully the peculiarities of the author's language (40-51) and gives a judgement of the book as a whole (31 ff).

*Hudna*, abstract noun from the root *h.d.n*, with the sense of "calm", "peace". Other terms which have the same meaning are *muwa'da*, *muṣālaqa*, *musâlama*, and *mutâraka*, the general meaning of which in Islamic law is the abstention of the parties concerned from hostilities against each other. The process of entering into a peace agreement with the enemy is called *muḥādārana* or *muwa'dāa*, but the instrument of peace is hudna (peace agreement).

In Islamic legal theory, normal relations between the *dâr al-ḥarb* [q.v.] and its ene mies (at least) were not peaceful, and there existed a state of latent or open hostilities which jurists nowadays call a state of war. Short intervals of peace were, however, permitted by divine legislation (Kur'ān VIII, 63; IX, 1 and others) and the Muslims could establish peaceful relationships with non-Muslims, individually and collectively, if such a peace was not inconsistent with the interests of the Muslims.
the individual level, the ḥarbi (person from the dār al-ḥarb) could enter the dār al-Islam unmolested, provided he obtained an amān (q.v.) see also MUDRADA) beforehand from any believer, whether in an official or an unofficial capacity. But as a territorial group, the unbelievers could obtain such a temporary status only by an official act, either directly or indirectly granted by the Imām, which conferred upon the inhabitants of the territory whose ruler entered into a peace agreement with the Muslims the benefits of the amān obtained by a single individual. It is clear that the mudradda or muwadda is, as Kasānī observes, a form of amān. But the amān is a temporary peace given to an individual ḥarbi, although his country is still in a state of war with Islam, while the mudradda or muwadda is a temporary peace extended to a certain town or a country (including its people) by an official act. Hudnā in Islamic law is thus equivalent to "international treaty" in modern terminology. Its object is to suspend the legal effects of hostilities and to provide the prerequisite conditions of peace between Muslims and non-Muslims, without the latter's territory becoming part of the dār al-Islam.

The Kurʾān provided for the Muslims not only the possibility of entering into a peace agreement with the enemy, but also the obligation to observe the terms of the agreement to the end of its specified period (Kūrʾān IX, 4; XVI, 93), once the agreement was accepted by the Muslims. This is the principle pacta sunt servanda, stressed both in divine legislation and juridical writings. Thus hudnā in Islamic law was established by practice (i.e., agreement and consent of the parties concerned) and validated by authoritative sources. The treaty-making power rested in the hands of the Imām, but this power might be delegated to commanders in the field who were empowered to negotiate with the enemy if the latter was willing to come to terms with Islam. However, the Imām reserved the right to repudiate the treaty if it proved to be inconsistent with the interests of the Muslims. The Imām's approval or ratification was, therefore, necessary to make the treaty binding upon the Muslim community. Even after the treaty was ratified, the Imām had the power to terminate the treaty (nabhd) provided a prior notice was sent to the enemy to that effect. The Hudaybiya treaty, concluded by the Prophet Muhammad with the unbelievers of Mecca in 6/628, provided a precedent for subsequent treaties which the Prophet's successors made with non-Muslims. Although this treaty was violated within three years from the time it was concluded, most jurists concur that the maximum period of peace with the enemy should not exceed ten years, since it was originally agreed that the Hudaybiya treaty should last ten years.

The Prophet and his successors concluded treaties with the People of the Book [see AḤL AL-KĪTĀB], but these treaties were not temporary in nature, since both the people and the territory were incorporated in the dār al-Islām and the aḥl al-kītāb became subjects of the Imām. Since these were not required to become Muslims, they were regarded as protected members of the state and called ǧissīmīs (q.v.). The treaties with aḥl al-kītāb were, accordingly, not strictly international treaties, but covenants (ahd) or a form of constitutional charters which fall under Islamic constitutional law, not under the Islamic law of nations (for a model text of such a charter, see Shāfiʿī, al-Umm, IV, 118-9).

An examination of the treaties concluded by the Prophet and his successors leads us to establish certain general characteristics which may be summed up as follows: (1) the treaties were, on the whole, brief and general, and no attempt was made to supply details as to their applications; (2) the preamble consisted of the basma ("in the name of Allāh"), the names of the parties and their representatives, and their titles; (3) treaties were temporary agreements, the duration of which was specified, except those with aḥl al-kītāb, although it was understood that a treaty might be renewed; (4) the provisions were stated in written form and were confirmed by witnesses; (5) that the text of the treaty must be written and signed by the parties and often the names of the witnesses were added at the end of the text. The writing as well as the signing and the dating of the treaty are not, strictly speaking, legal prerequisites; but Hanafī jurists insisted that treaties, in order to be binding, must be written and duly signed.

(M. Khadduri)

HUDNA, current orthography Hودنا, a low-lying region in the centre of the upper plains of Algeria, at the foot of the mountains of Wernougha, Hodna and Belezma, and lying open to the south-east towards the Saharan region of Zāb (Biskrā). It covers an area of 8,600 sq. km and is made up of the hills of the Djerr in the north and east, immense alluvial plains in part flooded by water from the wadis that come down from the chain of mountains in the south, a sandy region, the Rmel. The country, which is very hot in summer and very dry (annual rainfall 200 to 300 mm), is a sub-desert steppe devoid of alfa-grass. It is quite well supplied with water, thanks to a number of springs which emerge from the limestone mountains, the abundant but very irregular flooding by the wadis (Oued el-Leham, el-Ksob, Selmari, Magra, Barika, Bitham), and the high water-table (partly artesian) in the sub-soil. The Hodna has thus always been a country of both agriculture and stock-breeding, inhabited alike by a sedentary population and by nomadic herdsmen. In ancient times it formed part of the Roman limes, and a series of towns marks the route leading to the east and north from the Sebkha, while forts guard the south. In the early Middle Ages, along with Zāb it formed a military, political and economic march for Ifriqiya, facing the pastoral steppes of the central Maghrib and the Sahara. Fortified agricultural centres, often marking the site of ancient cities, are scattered throughout the nomads' pasturages—Tobna (Tubunae), Ngaous (Nevivibus), Maggara (Macri); Msila was founded in the 4th/10th century close to the ruins of Zabi; in the following century it was momentarily eclipsed by Kūfa, a temporary capital set up in the mountains.
HUFASH, high mountain in South Arabia, belonging to the al-Mašānī' range of the Sarāt group, on the Wadi Surdud near Harāz [q.v.]. It is often mentioned by Hamdānī, along with the adjacent large mountain of Milbān (called after the Himyari Milbān b. 'Awf b. Mālik) the real name of which was Rayshān. In Hamdānī's time the latter was said to possess no fewer than ninety-nine springs and had a large mosque (called Masjidī Shāhīr) on its summit, Shāhīr. It was popularly believed (also according to Hamdānī) that not far away there lay a treasure which many Arabs sought but could never reach, as a snake barred the way in the shape of a high mountain, as soon as they tried to approach it. In Niebuhr's time, Hufash formed a separate district to which Djabal Milbān also belonged. Among places of some importance in Hufash he mentions Seefekin, a small town surrounded by a wall, the residence of the Dawla (Dūla) and the two villages of Bayt al-Nuğhelli and Bayt al-Shumma.

**Bibliography:** Hamdání, 652,4-8, 791,13-18, 133,3-5, 125,6, 126,5-16, 190,4-13; C. Niebuhr, Beschreibung von Arabien, 249; Pet. Mitt., xxxii (1886), pl. i. (J. Schleiper) al-HUFUF, or al-HUFUF according to an older form, and in English most frequently Hofuf, a town in eastern Saudi Arabia, capital of the oasis of al-Hasa [q.v.]. The name derives from haffa, to kiss, or hāf, which was first used by a group of gardens near the old capital of al-Hasa. The population is estimated at about 80,000 inhabitants, some 40% of whom are Shi'īs.

Until the 1930s/1950s, al-Hufuf was surrounded by a large wall with a number of defensive towers. Six gates gave access to the town. The wall enclosed the town's three main quarters: al-Kūt, al-Rifā'ī, and al-Naşīfī. al-Kūt, which was the first administrative offices, the garrison, and the homes of officers and functionaries, was itself fortified by another wall and surrounded by a moat. The gradual modernization of the town has necessitated the demolition of most of the walls, and to avoid overcrowding two extramural suburbs, al-Si̇l̇ibiyya and al-Ru̇kayyika, have grown at the southern edges of al-Hufuf and have substantial populations.

Al-Hufuf succeeded al-Hasa, which itself had succeeded Hadjar, as the administrative centre of the oasis as well as of the region which since 1371/1952 has been called the Eastern Province of Saudi Arabia. During the Turkish occupation, 1289/1871 to 1322/1913, al-Hufuf was the residence of the Mutaṣṣarīf Faṣḥa, who governed the sandgāb of al-Hasa (misnamed Naḍīl) under the jurisdiction of Basra. After the conquest of al-Hufuf by ʿAbd al-ʿAzīz Ibn Su'ūd in 1322/1913, the town continued to be the provincial administrative centre until 1371/1952 when the capital was moved to al-Dammām [q.v.].

Besides its administrative functions, al-Hufuf, as the capital of Saudi Arabia's richest and largest oasis, has long been an important trade and manufacturing centre. Its production of textiles, coffee-pots, weapons, and jewellery was long well known in the Persian Gulf, and its weekly Thursday market still attracts large crowds from the entire province. Al-Hufuf is now connected by asphalted road and by railroad with both the provincial capital at al-Dammām and the national capital at al-Riyāḍ.

**Huelva** [see Walba].

**Huesca** [see Warna].

**HUKM** (ا. pl. akhām), verbal noun of ḥakama, which originally means "to withhold, restrain, prevent!", is used in a number of technical meanings in the field of religious law (see AHKAM), philosophical (see below I), and grammatical (see below II). On the different meanings of the term ḥukm, see Dict. of technical terms, i, 372 ff.; L. Gauthier, La racine arabe س and ses dérivés, in Homenaje a Don Fr. Codex, Saragossa 1904, 435-54.

I. Ḥukm means in philosophy, the judgement or act by which the mind affirms or denies one thing with regard to another, and thus unites or separates them. According to al-Dżurđānī, it is "the act of establishing a relation between one thing and another by affirmation or denial" (Tu'rifāt). Ibn Rushd explains the combining of certain concepts which are juxtaposed terms of the bipartite statement are set forth as a judgement and a proposition only if the copulative—verb or personal pronoun—is under- (sharīf, conditional. But this can occur in two different ways. In the first case, the condition involves only one consequence, either positive or negative: the judgement is then expressed in a conjunctive conditional proposition (mutadiqālā); e.g. "if the sun rises it is daylight". In the second case, the consequent implies an alternative of which one member necessarily excludes the others, e.g. "this man is either old or young"); the statement of such a judgement is called a "disjunctive conditional proposition" (munfassāla) (Manṭik al-maghibriyyīn, 60-1, see also 62). This passage is among the few which make it clear that the judgement the central point of explanation; it is not even mentioned in a closely related text (Ighrárī, 22-3; Fr. trans., 124-6). This theory of conditional judgement and those of the proposition and syllogism which arise from it, are not of Aristotelian inspiration. Together with other indications, they pose the problem of other sources, notably Stoic, of Arab philosophy.

"The definite proposition has four forms" according as "the judgement applies to all by way of affirmation", then it is "a universally affirmative statement", or "applies to all by way of negation", "a universally negative one", or "applies to some by way of affirmation" or "to some by way of negation", particular propositions either affirmative or negative. Moreover "an indefinite judgement is the same as a particular judgement". According to another series of distinctions, the judgement expressed in any proposition is either necessary, possible, or impossible, the necessary being to some degree included in the possible (Dāneṣghnāme, 35-45, trans. 36-41; Manṭik, 63 and Nadād̮, 19-20). Nadād̮, 18, explains the subject and the predicate in connexion with their place in the judgement.

Ḥukm means also sensory intuition, where assent of the mind is necessitated by sensation, e.g. "our judgement that fire burns"; the judgement of experience which follows repeated sensory intuitions, e.g. "our judgement that a blow administered with a piece of wood is painful"; the practical judgement, e.g. "our judgement that the sun exists"; the judgement which follows a strong intellectual intuition (the principle of the discovery of a scientific explanation); the judgement that follows on the fundamentals of what our education has taught us without that having compelling force on our intelligence as such, e.g. "our judgement that it is wicked to steal the property of another". But in order to distinguish judgements relating to first principles, by an absolute necessity of the human mind, Ibn Sinā uses had̮, which expresses the ineluctable character of the act, e.g. "our judgement that the whole is greater than the part" (Ighrárī, 56-9, trans. 176-80).

In the statement of the attributive proposition, and therefore in the formulation of the judgement, there is an important difference between Persian, where the grammatical copula is explicit, as in European languages, and Arabic where it can be omitted. It nevertheless exists in the mind, and the two juxtaposed terms of the bipartite statement are set forth as a judgement and a proposition only if the copulative—verb or personal pronoun—is understood by implication (Ighrárī, 27, trans. 126-7).

II. In grammar, Ḥukm can be understood only if the term, in the world's thought of the Arab grammarians, is assigned its proper place in the whole grammatical system that they elaborated. In this system,
the Arabic language is considered as a logical and harmonious entity, subjected to the rules of wisdom, intelligence and justice. The organization of this entity has been achieved especially:

(a) by the establishment of hierarchies (see especially K. al-Insâf, 35, lines 14-6), of subordinations: the governing power of the verbs is the strongest; among the hurâf, the particles governing nouns, ʿawâmil al-asnâm, are stronger than the particles governing verbs (op. cit., 233, 3), etc.; among the words, there are primary forms: a typical example is the word yadâr; called maṣâdir because it is the "original" of the other forms of the verb (see question 28 of the K. al-Insâf); we may also cite the singular considered as prior to and stronger than its corresponding internal plural or plurals. These last considerations influence the explanation of syntactical relationships.

(b) by the search for the asl, the base: the basic meaning of words, of grammatical constructions: "we [the Basrans] are attached to the asl, and he who is attached to the asl is ex各大 from establishing the proof (al-dâlî)" (op. cit., 199, 1); pointing out this asl as it was a conclusive argument (cf. in the Luma al-adilla, of the same author, 106, line 11). Examples: for asl, Inṣâf, 198, 19; for the vocative form allâhumma, ibid., 151, 19. In the case of words, one determines its basic position, its marâba or ru̇ba, that is to say its “rank”. This rank is a consequence of the preceding factors, or may be simply an affirmation, sanctioned by the consensus (ʿâdîm) of the grammarians of Baṣra, but it is a particularly important element of the system; for it is exactly at its marâba in which it is placed that the word exercises or has to exercise its hukm.—Besides this, there is an extensive use of bi-yâsîd.

For hukm, it means: (i) the proper function which the word performs at its marâba in which it is placed, its activity; (ii) the proper function to be performed by the word at its marâba in which it is placed. It may be translated by "part played or to be played", but this translation gives no indication of the whole system in which hukm is involved. The distinction indicated may sometimes not be obvious in the use of hukm in the texts; there are times when it can be taken in the one sense or the other. The following examples allow this distinction to be clearly recognised.

For (i): (a) Inṣâf, 121, 19-24 (cf. 39, 20-1): laawà (= law + lâ) is compound (ru̇khkharî); the word loses the hukm (specific activity) of its components and acquires a new hukm (a new activity); therefore this is compared with the adwîya, remedies, which are compounded of various ingredients: their compounding annuls the hukm (efficiency) of each one in its separate state, and confers upon them a new hukm (power to act). According to the present example, it should be understood not mean "intrinsic task in performance", but rather "faculty, power of acting in respect of some specific task", which would introduce an ontological aspect.

(b) Inṣâf, 176, 10-12: in an oath one can say annu lâhâ. The asl is asyamn lâhâ; yâ sâhîna has been suppressed, but, as this suppression was not necessary, its hukm (activity) remains.

(c) Inṣâf, 199, 11-12: to be astonished one must first know; this is why it can be said, in determining the meaning of al-ta'âsdiyîn: mà zayra hukmâ wa-hâlîsya sahabûh, “its intrinsic task has not [yet] appeared and its cause is [still] hidden”.

(d) Inṣâf, 123, 15-6: on the subject of ilâ, the particle denoting exception: ilâ cannot have the meaning of wasâl, for ilâ with the meaning of “except” excludes the word following from the hukm (field of activity) of the preceding one; but ma joins together; and in joining together it necessary zayr (yâsdiyî) the introduction of the word following into the hukm (task being performed) of the preceding one.

For (ii): (a) Inṣâf, 175, 12-3: in the construction la-sayyâd afjalâ, the grammarians of Kûfa perceive a lâm coming after an oath (was-lâhà) which is not expressed. The Basrans regard it as the lâm al-aslâdî. Their argument against the Kûfians is: if the lâm in question were the lâm of the oath (guanâb al-basâm), it is not permitted to be used to cancel the governing influence of the verb yâmmâ, when it is introduced into the phrase; one says zaynàt sayyâd kâ'imî,“and with the lâm: zaynàt la-sayyâdî kâ'imî”; now the hukm (task to be fulfilled) of the lâm al-basâm (lâm of the oath) is kull mawdi, in any circumstances, is to exert no governing influence, either before or after it.

(b) Inṣâf, 175, 15: a’ilâhî mà fâ’âlîs. This form of oath can be used only with the divine name Allâh: wa-kâhisâs hadda ’l-ism bi-hadda l-hukm hadda bi-hadda, “and the particular use of this name for this hukm (task to be fulfilled = vocative with the particle a) is the same as the particular use of lâm with hûna.”

(c) Inṣâf, 184, 23 and 185, 1: one says, mararû bi-hîlî abramwâya, and mararû bi-hîmî hilayhîm, wa-hâqûhûsa hukm âdafa hilîla ilîlî la-mushar wa-l-mudmar, “so this is the hukm (task to be fulfilled) of the grammatical annexion (in âdafa of hilîla) to a noun (mushar) and a pronoun (mudmar)”. Other examples can easily be found in grammatical literature; thus: al-Zâridjâdîjî, al-Djum, 129, line 3, 312, foot; al-Zamâkshârî, Mufasal, § 517, title of § 697; Ibn Yâ'qîb, 187, line 13, 628, 1, 3, 1144, 11. 20-7; Ibn Djiinî, Sîrînîn, i, 35, 1, 2; Ibn al-Hâdîbî, in Zahrî al-Kûsî’s of Rûdî al-Dîn al-Ashtarâbî, 4, 297, 1. 4.

In determining the meaning of hukm, we have restricted ourselves to a single author, Ibn al-Anbârî, in a work of unique importance for the method of the Arab grammarians, his CdÂd al-Inṣâf. All the examples given refer to arguments of the Basrans; but at Inṣâf, 92, 18-22, it is the Kûfians who are speaking: "... because we say: that is performed by the hukm (task being performed)". But as the Kûfians do not accept the doctrine of the marâba or this system of Basrâ mentioned above (see G. Weil, Einleitung, 30-1), it is natural that they should understand hukm in a more ordinary sense, as when we translate it by “part to play”. The word in its marâba possesses a right, fâkû, to give due weight to its hukm, according to whether it accomplishes its task partially or wholly. This is the
The word is thus endowed with a sort of juridical personality. In the system of the biyās. Indeed the biyās (see its definition in the Luma' al-adillā of Ibn al-Anbāri, Damascus 1377/1957, 93) involves a communication of hukm, from the asl to the farā', in recognition of the resemblance of the farā' and the asl, by virtue of the principle (enunciated, ibid., 99, lines 16-7) that the resemblance necessitates a similarity of hukm.

On this logical and formal gap between resemblance and hukm, see also the chapter of al-Suyūṭī, al-‘Aqīdah wa-l-nassir fi l-tulūb, Hadhārābdāb 1359, l. 217-21.

On some different meanings of hukm, see Ibn Dīnān, Khāṣṣāt, iii, 57-6, 59-67, 157-64, and the chapter of al-Suyūṭī, op. cit., 221.

If such is the meaning of hukm in grammar, why then the choice of such a word for such a meaning? In fact, hukm is the infinitive of hakama yakhumu hukmān "to pronounce a sentence", with bi- "on", with li- "in favour of", with ala- "against". In law, hukm means "judge's decision, his judgement in a disputed question and also in a less litigious matter like the nomination of a guardian". Hukm in grammar, into which the concepts of law penetrate, must itself also imply the expression of an authoritative decision, a judgement. In the background of hukm there is hakama. The divine origin of language, which is wāḥy wa-lhukmān "closed revelation" (see H. Fleisch, in Orients, 1963) and, more particularly for the Muslim Arab grammarian, the belief in the Arabic language as the organ of expression of the divine Absolute in the Kurān, kālim Allāh in this connexion, see, in Mufassāl, § 522, Ibn Yaḥyā, 1123, lines 14 ff., the audacity, al-‘alwā ‘ala-lhukm [Muf., al-ibād ‘ala kālim Allāh [I-Y., which was alleged against al-Hādhālī (ibid., 285). In this kālim Allāh, this utterance of Allāh, the word can accom-

The plural of hukm is hukmān, in the event of a plurality of hukm, e.g., Inṣāf, 64, line 13-26, line 4; or Ibn Hīṣām al-Anṣārī, in the Shādhil of his Shuḥdār al-qādīh (Cairo 1371/1951, 416, line 7); but this seldom occurs in the current texts. It is not rare in the chapter-book on Hukm (‘Ilm, Biblioth. Islam., iii, 140, 142, 144, 146, 147; Ibn Dīnān, Khāṣṣāt, ii, Cairo 1374/1955, 108; al-Zadī-Jādī, al-Dīnawal, 277, akhām al-hamās fi l-khāfif (cf. al-Dānī, Muḥarrīb (Biblioth. Islam., iii, 63). The meaning can be expanded and so translated by "behaviour, situation, conditions", while in the previous example it would be "situation of the hama in writing". Bibliography: G. Weil, Abu 'l-Barakāt Ibn al-Anbāri, Die Grammatikalen Streitfragen der Baster und Kufier, Leiden 1913, Kitāb al-Inṣāf fi masa'il al-khāfif bayna l-naḥqayyin al-basriyayn wa-l-kāfīyayn, Einleitung, pp. 1-93, particularly 15; idem, Zum Verständnis der Methode der moslemischen Grammatiker, in Festschrift Sachau, Berlin 1915, 380-92; H. Fleisch, Traité de philologie arabe, Beirut 1961, 1-18. In addition, the authors cited in the text. (H. Fleisch)

On the political and administrative use of hukm, see akhām, diplomatic, KFāmān.

Hukk, pl. of hāk [q.v.]. legal rights or claims, and corresponding obligations, in the religious law of Islam. One distinguishes the ḥukk Allāh, the rights or claims of Allāh, e.g., the ḥadd [q.v.], punishments, and the ḥukkā ādāmīyān, private, and essentially civil, rights or claims. Used of things, ḥukk signifies the accessories necessarily belonging to them, such as the privy and the kitchen of a house, and servitudes in general; this term is of common occurrence in the legal formalities (ṣirūt [q.v.]). In contemporary terminology, ḥukk means merely "law" in the modern meaning of the term, and Kullīyyat al-Ḥukkā is "Faculty of Law".—In the terminology of the Sufis, ḥukk al-nafs denotes the essential requirements for the existence of the soul, as opposed to any additional elements which are called ḥayāq. Bibliography: Mikhail ‘Id al-Bustānī, Maraqīj al-julūb, Beirut 1914, 39-41; J. Schacht, Introduction to Islamic Law, index. s.v. ḥukk ādāmī and ḥukk Allāh. Tahānawī, Dictionary of the technical terms, s.v. ḥukk al-nafs.

Hukkām, in modern Arabic "government". Like many political neologisms in Islamic languages, the word seems to have been first used in its modern sense in 19th century Turkey, and to have passed from Turkish into Arabic and other languages. Hukkām comes from the Arabic root ḥ-k-m, with the meaning "to judge, adjudicate" (cf. the related meaning, dominant in Hebrew and other Semitic languages, of wisdom. See ḤKMĀ). In classical usage the verbal noun hukkām means the act or office of adjudication, of dispensing justice, whether by a sovereign, a judge, or an arbitrator, as for example in some enumerations of the hereditary functions of Kuraysh in Mecca (the Jerusalem concordance lists occurrences in T.A., ix, 68, l. 1; L.A., xiv, 95, l. 17, xv, 31, l. 24, 177, l. 11 and 16, 304, l. 25; xvi, 41, l. 13; Aḥfānī, x, 63, l. 4-5, 165, l. 7; xili, 134, l. 1; references communicated by Dr. M. J. Kister. The last example is particularly clear. fākur ḥukkām bi-lḥukkāmāt al-‘ilāma. Other examples in Ibn Ḫutaybā, plish only the task allotted to it by the decision of the Wādī, its sovereign Founder. Hukm "judgment" is to be understood in the passive sense, which the infinitive can have—judgment on the word in relation to its activity, the task it has to perform.
Government in the Islamic states before the 19th century is examined in the articles on Khilafah, Sultan, Wazir, etc. The articles that follow here are concerned with the introduction and development of the modern apparatus of government in the 19th and 20th centuries. See further Dim'iyva, Quumhüriya, Dostur, Hizb, etc.

I—Ottoman Empire

The introduction of the modern European type of governmental apparatus in the Ottoman Empire began in the reign of Sultan Mahmud II [q.v.], 1808-39. He came to the throne at a particularly critical period of Ottoman history, when the authority of the central government was almost non-existent. The ayyan and derebeys [q.v.] were supreme in the peripheral provinces of the Empire, while the Janissaries continued to terrorize the capital. Mahmud's first task, therefore, was to restore the authority of the centre, and in this he was largely successful during the first half of his reign. The Janissaries had become the main stumbling block to military reform—and all other reform was incidental to this, were suppressed in 1826, when they rebelled against the measure to establish a new style army. Their destruction marked the end of the purely military phase in Turkish modernization, and Mahmud was now able to proceed with the reform of institutions.

The Serasker replaced the Agba of the Janissaries [see Râbi, Seraskeri]. He performed the functions of a commander in chief and Minister of War; by the end of the 19th century the Serasker was occasionally a civilian appointment (see Shaykh-ı-İslâm Djemal al-Din, Khârîrât-i siyâsîyye, Cairo 1917, 10-12). It was only after the revolution of 1908 that the Seraskerate was transformed into the War Ministry. The religious institution was also bureaucratized and brought firmly under the Sultan's control. This was marked by the creation of an official office for the Shaykh-ı-İslâm known as the Bâb-i Maqâlîhâ [q.v.] or Fetâwâhâne. Mahmud ended the financial independence of the religious institution by setting up an inspectorate of the waqfs, which later became a ministry. The Shaykh-ı-İslâm was now no more than a civil servant with advisory and consultative functions. After the introduction of the cabinet system, he became a member of the cabinet, though he enjoyed the privilege of being appointed directly by the Sultan and not by the Grand Vizier.

In 1835 Mahmud turned his attention to the Sublime Porte [see Râbi, 'Fânil], for the past two centuries the very heart of Ottoman government. The old office of the Kâhya first became the Ministry of Civil Affairs (Mülkiyye) and later the Ministry of the Interior (Dâkîhiyye Nezâreti), while the office of Reis al-Küttâb became the Ministry of Foreign Affairs (Kâhrîdîyye Nezâreti). Two years later (1837) the Defterdarlîhâ was transformed into the Ministry of Finance. These ministers assumed many of the prerogatives traditionally belonging to the Grand Vizier, and the abolition of that title was, therefore, no more than the reflection of his declining position.

On 30 March 1838 the Grand Vizier ('Sadîr-i a'zeam) was given the modern title of Prime Minister (Başwcheh) and in the Council of Ministers he became primus inter pares. But the new title was dropped in the following year; despite brief reappearances in the period 1876-82, it came into permanent use only after the fall of the Empire, when at times it took the form of Başbakan.

Mahmud's reforms and innovations in government
were not intended as an exercise in western governmental practice. Their prime aim was to centralize and consolidate in the person of the Sultan the power released by the break-up of the traditional order. As the central government grew stronger and more confident it increased its area of activity. The Ministry of Public Works was set up in 1839. With the steady secularization of government following the Imperial Rescripts of 1839 and 1856 [see Taanzimat] and the promulgation of the constitution of 1876 the government extended its control over areas which had been part of the religious domain.

A Ministry of Education was set up in 1857 and a Ministry of Justice in 1879. Police duties had already been taken away from the Serasker in 1845, and in 1870 the Ministry of Police was established [see Dastiyya]. The Seraskerate was renamed Ministry of War in 1879, but this was soon dropped in the interest of tradition and was only re-adopted by Abd al-Hamid on 22 July 1908 as a concession to the constitutionalists. The nucleus of a European type of governmental structure was formed by the creation of these departments. There were later additions, such as the Ministry of Trade and Agriculture [see Filiına, iv, 908], the Ministry of Posts and Telegraphs [see Posta], the Ministry of Marine [see Barııiya, iii, 948b], and in 1918 the Ministry of Food.

But the introduction of ministers and ministries with European titles did not at once lead to the practice of Western government with ministerial responsibility. Just as these modern institutions had emerged as a result of growing centralization and the increased power of the Sultan, so ministerial responsibility was to be the outcome of the Sultan's declining position and the emergence of a new bureaucratic elite, itself the child of centralization and determined to have a share in the government.

Consultation (maghsoret [see Mashwarah]) has always been regarded as a fundamental principle of Islamic government. Its rôle in the Ottoman State, however, always depended on the relative strength of the Sultan and his ministers. Thus, under Mahmud, the Privy Council (Meflis-i Kâdis) represented little more than the Sultan's will; he appointed and dismissed the ministers. But the increasing centralization of the government and the growing complexity of the administration led to the formation of specialist bodies such as the Council of Justice, the Council of Reform and the Council of Military Affairs. All this increased the importance and independence of ministers and their committees, and in time, such ministers as Fuad Pasha [q.v.] and Ali Pasha [q.v.] were even able to challenge the authority of the Sultan.

It was the Constitution of 1876 which first gave legal recognition to a Council of Ministers presided over by the Grand Vizier and dealing with "all important matters of State, both internal and external" (article 28). Now for the first time there was a cabinet but no cabinet responsibility. The Sultan continued to appoint the Grand Vizier and the Shaykh al-Islam and to nominate the other ministers by Imperial irade (article 27). All ministers were individually responsible to him (article 30). The principle of cabinet government had been firmly established; the support to make it a practical reality was still missing. Parliament was inexperienced and divided and the Sultan retained full control. He promulgated the Constitution in 1876. In 1877 he revealed his complete authority by proroguing parliament and putting the Constitution in abeyance for the next thirty years.

After the revolution of July 1908 the Imperial Charter (Khâtis-i Hâmidî) of 1 August was an important landmark in the evolution of the cabinet system of Turkey. Article 10 of this Charter conceded to the Grand Vizier the right to appoint all ministers other than the Ministers of War and Marine, who, like the Grand Vizier and the Shaykh al-Islam, were to be appointed by the Sultan. The Young Turks, not satisfied with this concession, forced the Sultan to surrender his prerogatives of appointing ministers other than the Grand Vizier and the Shaykh al-Islam. The constitutional amendments of 1909 made the Grand Vizier responsible for forming the cabinet (article 27; amendments to the 1876 Constitution are given in A.S. Gözübüyük and Suna Kili, Türk Anayasa metinleri, Ankara 1957, 70-3; see also nusrûs). For the first time the principle of collective responsibility of the ministers for the overall policy of the government was stated (article 30). The Sultan became a figure-head and power passed into the hands of the ministers and parliament.

Perhaps the most important effect of the introduction of a modern governmental structure was the creation of a new civil service and the growth of a bureaucratic class. It was easy to establish a European type ministry; the real problem was manning it with officials having a modern outlook. And wherever a traditional institution was replaced by a modern one there arose the need for men with a modern education. Mahmud had opened the Translation Bureau [Terdijîme Odasi [q.v.]], where Turks learned the languages of Europe and replaced the traditional Greek dragomans. In the same way, trained revenue collectors had to be found to replace the old taxfarmer (mutezini) and provincial administrators to rule in place of the ayyân and derebeys. A civil service school (Mekteb-i Mülkiyye) was set up to provide men for the new ministries, but the problem of recruitment remained acute into the present century.

By the 1880s the civil service had become stratified. Recruitment was by patronage and apprenticeship, making the bureaucracy a closed shop. In many ways it soon became traditional in outlook, so much so that the present-day bureaucracy of Turkey seems to have inherited some of this traditionalism. But in the latter half of the 19th century, right up to the fall of the Empire, the new-style bureaucrat had replaced the soldier as the spearhead of modernization in the Ottoman Empire.

Bibilography: In addition to the works mentioned in the text, see Abd al-Raḥmān Shereef, Ta'rîkh-i Devlet-i ʿOthmânîyye, 2 vols., Istanbul 1909, and idem, Ta'rîkh musâhabeleri, Istanbul 1930. The first is a general survey of the period, while the second work is a series of essays on personalities and events in the 19th and early 20th centuries. See also Ahmed Lutfî, Ta'rîkh-i Lutfî, 8 vols., Istanbul 1290-1328 (not seen); Muṣṭafā Nūrī Pasha, Nâṣîr al-dīn al-muṣâhâbāt, 4 vols., Istanbul 1294-1327; and Ahmed Dje wedet Pasha, Tesâhir, ed. Čavid Baysun (Ankara 1953 ); idem, Maʾrûdî, in TOEM, 78-93. The best modern historical survey for the period 1826-1907 is Enver Ziya Karal, Osmanlı tarihi, v-viii, Ankara 1947-62; in this work both Turkish and western sources have been extensively used. The volume Tamîmah, consisting of a collection of essays published in 1940 to commemorate the
The administration of the Kâdîr dynasty, which came to power in 1779 and the last ruler of which was deposed in 1820, followed, until the constitutional revolution of 1905-6, the general pattern of medieval Persian administration, although certain changes, mainly of form, were introduced during the second half of the nineteenth century. The chief minister was known as the sadr-i a'zam and in the early period held the title I'timâd al-Dawla (as had the chief minister in Şafawi times). The chief financial official was the mustawâfi al-mamâlik and the head of the chancery the munshî al-mamâlik. The number of ministers from the time of Fath 'Ali Shah (1797-1834) tended to increase. The shah was absolute, and elevated and degraded his ministers at will. A council of state composed of ministers, leading members of the Kâdîr tribe and others was occasionally summoned to discuss matters of importance and to submit its views to the shah. Its functions were purely advisory. It did not meet regularly and its composition was of an ad hoc nature. It was summoned, for example, when Muhammad Shah (1834-48) contemplated marching in person against Herat in 1836, and advised against the Russian frontier commission, the introduction of the tax collecting service, the sale of the Persian frontier commission, the introduction of the law courts, the abolition of the semi-religious religious class, and the suppression of various intrigues to overthrow the shah.
In an essay entitled *Kīṭdbfa-i ghaybl yā daftar-i tanzimāt*, written between 1858 and 1860, he urged the separation of the legislative from the executive power. He pointed out that the institution of a council of ministers after the fall of Mirzā Aḥmad Khān Nūri had, in fact, made little difference because of the failure to separate these two powers. He proposed that a council of eight ministers, presided over by the shah, should be set up. This would propose legislation to an assembly to be called the majlis-i tanzimāt. He also proposed that the civil service law and regulations for the organization of the various ministries should be drawn up (Majdīmā‘-i āṭārī Mālkhān Khān, ed. Muhammed Muḥīṭ Ṭāṭabbā‘ī, Tehran 1948-9). Malkam Khān sent this essay to Mirzā Husayn Khān Mūṣhir al-Dawla, who became sadr-i ā‘ṣam in 1871. In another essay, *Daftar-i khānīn*, Malkam Khān stated that the fundamental mistake of the Persian system of government was the failure to separate the legislative power from the executive. In *Tanzimāt-i lāghar wa majlis-i idrār yā iniṣāmāt-i lāghar wa majdisi-i tanzimāt* he stated that he pointed out that the greatest achievement of the Kāḏārs was the establishment of different ministries, but that this was not enough: a majdis-i tanzimāt was also needed, and in *Nīdā-yi a‘dālāt* he urged the need for the collective responsibility of ministers (ibid.).

In 1871 a council of state (dār al-ḡawrā-yi khwāra) composed of sixteen members was set up on the orders of Nāṣīr al-Dīn to carry on the affairs of government (Mustawfi, i, 152). On 12 December 1871 Mirzā Husayn Khān Mūṣhir al-Dawla, who had been appointed minister of war with the title sipāḥsādār-i ā‘ṣam on 27 September 1871, became sadr-i ā‘ṣam, the office being filled once more after some thirteen years. He began a thorough-going reform of the administration. On 23 November 1872 an imperial decree was issued reorganizing the council of state, which was now called the darbār-i ā‘ṣam (though it subsequently reverted to its earlier title), and dividing the affairs of the kingdom into nine ministries (interior, foreign affairs, war, finance, justice, education, public works, commerce and agriculture, and court) under the presidency of the sadr-i ā‘ṣam, who was to be the leader of the government (ghāṣbs-i darbār-i ā‘ṣam) and the presiding member of the council of state (ra‘īs-i darbār-i ā‘ṣam). The appointment and dismissal of ministers was to be by the order of the shah on the recommendation of the sadr-i ā‘ṣam. There was also to be a council of ministers (majlis-i wuzūrāt) which the decree stated was “called a cabinet by Europeans”; it was to be presided over by the sadr-i ā‘ṣam. Each minister was to be in full control (kāmīs-e muṣalaf) over his ministry and not to interfere in the affairs of other ministries. The ministers were to meet regularly to consult on all matters of concern to the government and were to be collectively responsible for the affairs of government. They were to report to the shah through the sadr-i ā‘ṣam, who was responsible to the shah (Mustawfi, i, 163 ff.). The council of ministers was opened on 3 December 1872.

Neither the council of state nor the council of ministers had in fact much in common with the cabinet of Western European constitutions. The council of state, perhaps, most closely resembled the Imperial Council of Russia, upon which it was probably modelled. It was a purely consultative body convened sometimes to advise the shah beforehand or, more commonly, to discuss the fulfilment of his orders when already delivered. The shah continued to be the sole executive.

Mirzā Husayn Khān was dismissed in 1873. His reforms proved largely abortive. In 1888-90 the council of state numbered thirty members, but in the later years of Nāṣīr al-Dīn and under Muṣaffar al-Dīn (1896-1907) it seldom met. The number of ministers with and without portfolios varied. In 1900 there were ministers of foreign affairs, war, finance, the court (darbār), justice, commerce, education, telegraphs, posts, agriculture, crown lands, public works, awbāf and pensions, publications, crown buildings, the shah’s cabinet (wāzīr-i Mālkhān), mines and industry, the military, the army, and the air force. The last two being subordinate to the minister of war. The sadr-i ā‘ṣam held the ministries of the interior, treasury and customs. Some of the ministries existed only in name and some of the ministers were rarely consulted.

Among those who campaigned for governmental reform in the early years of the nineteenth century little attention appears to have been paid to the powers and functions of the government. At a meeting of the *sandjūman-i makhkhi* on 9 March 1905 a demand for the codification of the law was formulated; and in the code envisaged the duties of ministers were to be laid down, and limits set to the powers of governors (Nāzīm al-Īslām, Tā‘rikh-i Bīdar-i Īrānīn, Tehran n.d., 182-3). It was not until the constitution was granted by Muṣaffar al-Dīn on 30 December 1906 that a fundamental change was brought about in the position of the council of ministers, who, although not members of the National Consultative Assembly, were made responsible to it and given the right to be present at its sessions and to speak (Fundamental Laws, arts. 29, 31, 40 and 42). The Supplementary Fundamental Laws of 7 October 1909 further laid down that no one could attain to the rank of minister unless he was a Muslim by religion, a Persian by birth and a Persian subject (Art. 58), and excluded from the office of minister princes of the first degree, i.e., the sons, brothers or uncles of the reigning shah (Art. 59). The ministers were made individually responsible for the affairs pertaining to their own ministry and collectively responsible for one another’s actions and affairs of a more general nature to the National Consultative Assembly and the Senate (Arts. 60, 61 and 65). Article 67 stated that if the Nāzīm al-Īslām did not agree with the decision of the National Consultative Assembly or the Senate by an absolute majority declared itself dissatisfied with the Cabinet or with one particular minister, the cabinet or minister should resign or his ministerial functions, and that ministers could not divest themselves of their responsibility by pleading verbal or written orders from the shah (Art. 64). The constitution thus marked the beginning of a new period in the government of Persia in which the ministers were no longer simply the servants of the shah, but were individually and collectively responsible to an elected assembly.

iii.—EGYPT AND THE FERTILE CRESCENT

In Egypt, and in the countries of the Fertile Crescent (modern Syria, Lebanon, Jordan, and Iraq), the expansion of the administrative system, of the scope and function of government (i.e., generally of the temporal power of the state), occurred under the Mamluks and the Ottomans. In fact, long before the disintegration of the Islamic Empire and the sack of Baghdad by the Mongols in 656/1258, the political and military fragmentation of the realm had been a reality. Thus the caliph, the imam of the community, had not only been shorn of all temporal power, but his spiritual authority had been greatly compromised and, in fact, curtailed. Provincial governors in Egypt and Syria, for instance, had established their own autonomous governments and often founded independent dynasties. Government in Muslim lands became a plain monarchy, in which the will of the strong ruler was supreme. Government was more often than not tyrannical and harsh. Satraps who could legitimize their power by sheer might abounded everywhere. In the Fertile Crescent, traditional sectarian, ethnic and tribal differences and conflicts came to constitute once more the real substrata of politics and government.

The rise of a modern secular government and administration in Egypt is associated with the reign of Muhammad ʿAli (q.v.) “the Great” (805-49). He founded an autonomous modern state ruled by himself and his heirs after him. In addition to creating a strong, modern army modelled on European lines, Muhammad ʿAli established a powerful central administration that closely supervised and controlled all the affairs of state. From Europe he borrowed and applied two major—and for Egypt, novel—concepts of government: rational-secular administrative techniques, and wide governmental functions and regulatory powers. The latter extended over every aspect of public endeavour: agriculture, commerce and trade, industry, and education. Only matters of personal status were left to the jurisdiction of the Sharīʿa law and courts. Yet even this area of life was, under Muhammad ʿAli’s policy of centralization, subject to closer governmental control. Thus, there was the deliberate further bureaucratization of the ādāmāt, the general administration reform of al-Azhar and its institutions, and the eventual fiscal control imposed by the government over waqfs and other properties of religious institutions.

Very early in his reign, Muhammad ʿAli formed a governmental council, al-Diwan al-ʿĀlī, to assist him in all the affairs of government and administration. The Council was headed by his deputy, the Katkhudā Bey, who had extensive powers in all governmental matters. This Council may be considered the forerunner of the modern Council of Ministers; for, until 1878, it was known as the Khedivial Diwan, or Council of Assistance (Diwan al-Muwāwaana). Simultaneously, Muhammad ʿAli organized separate councils for each branch of government, e.g., War (Dīkhādīyya), Navy (Bahriyya), Commerce, Education, Public Works, and Foreign Affairs. These served as executive agencies, or departments, of the government’s Council of State. The expansion of governmental functions led in 1834 to the creation of a new Higher Council of State consisting of the heads of the separate departmental councils. The ruler included in its membership two personal merchants, and notables from the provinces. A Consultation Council (Malāʾiṣ al-Maṣṣawār) founded earlier in 1829 had no more than advisory functions and was intended by the ruler simply to associate with his regime a wider number of local, tribal and other native leaders of the country.

Most significant for the establishment of orderly government and systematic administration in the country (in addition to the ruler’s successful imposition of public order) was the Organic Law of 1837, known as ʿĀkūn al-Siyāsāt. This was actually a government reorganization measure, which defined the system of the government and the area of responsibility as well as the functions of each department. It reorganized the government in seven councils, i.e., departments, or incipient ministries. The original Higher Council of the State (which later became the Khedivial Diwan) possessed, in addition to its responsibility for general internal policy, judicial powers in certain criminal cases involving the maintenance of public order and security in Cairo, as well as responsibility for the administration of state buildings, hospitals, waqfs, and other institutions. A department of revenue supervised all revenue from the provinces in Egypt, from Crete, the Sudan and other foreign territories. It was also responsible for customs revenues and had the authority to appoint provincial and other inspectors. In addition to the War and Navy departments, the Diwan of Schools supervised and controlled the new state school system, the state printing press at Būlāk, and related activities. A Department for “Frankish” Affairs was an embryonic ministry of foreign relations and commerce. Finally, a Department of Factories looked after state industrial enterprises.

Along with this sweeping reorganization, Muhammad ʿAli formed a Special (private) Council (Dīwān Rāḥiyya) to deal with general matters of policy, to initiate legislation, and to issue directives to all government departments. A special council in the department of finance and revenue dealt with fiscal policy matters.

Muhammad ʿAli’s government reorganization and reform constituted the introduction of the first modern administration in the country. All departments of government and all councils had strictly executive functions, and were responsible to him. Furthermore, he reorganized the administrative division of the country into seven provinces and five governorates, for which he appointed the first provincial and district governors as public officials of the central government. He also organized a modern police force headed by a governor, or commissioner, who had under his command officers stationed in the various parts of the country.

Even the judiciary was affected by Muhammad ʿAli’s new system. Although this branch of government continued to be largely the function and responsibility of the religious institutions, Muhammad ʿAli had, by the 1830s, granted judicial powers to his Council of State. In 1842, he introduced a novel institution, al-Dīmāʾiyya al-Ḥabbānīyya, a precursor of an Administrative Council of State, and empowered it to try higher government officials, and to deal with administrative offenses referred to it by the various departments of government. He also founded a Commercial Court (Malāʾiṣ al-Tijdāra) to adjudicate commercial disputes among natives and between natives and foreigners. With this, the tentacles of modern, secular governmental power began to encroach further upon an area of state authority until then reserved for the Sharīʿa.
Another area where traditional authority was eroded was education. State secular schools, new colleges, trade and technical schools, and educational missions to Europe produced a new group of native Egyptian administrators and technicians in the employment of the state, who were to influence further the development of secular administration and modern government in Egypt.

The second major stage in the evolution of modern government in Egypt was under the Khedive Ismail [q.v.] (1863-79). During this period there was a large influx of Europeans into the country. Ismail's development programme in all fields was too ambitious and rapid for the resources of the country. This was to lead to his indebtedness to European creditors, to his eventual bankruptcy, to the imposition of European financial and political control over the Egyptian government, and ultimately to the British occupation in 1882. All these factors, however, prompted further changes in the administrative system. The most significant of these was the establishment of a Council of Supervisors (i.e., ministers), Madjlis al-Nuzār, in August 1878, responsible for the administration of the country. What this meant was that an absolute ruler like Ismail was obliged, under pressure, to introduce a modified version of the European system of cabinet government, in which the council, or cabinet, were responsible for the policy and administration of their respective departments. They were also given control over all public officials, or civil servants, in these departments. The Council had a president, or chief minister, who was now responsible for the selection of the other ministers.

Until that time the Special Council had assisted the ruler of Egypt with the administration of the country. Its members as well as the heads of the various government departments were employees of the ruler without any responsibility of their own. With the new Council, the divāns, or departments (e.g., Interior, Justice, War, Navy, etc.), became in effect ministries, and the Council superseded the old "Special Council" as the legal body recognized as the government of Egypt. But it reorganized the administrative division of Egypt into 13 provinces and 8 governorates, a division which persists almost unaltered today.

The most far-reaching changes occurred in the fields of legislation and the judiciary. While matters of personal status remained within the jurisdiction of the Shari'a and ecclesiastical courts, the encroachment of man-made law in all other areas became pervasive. Commercial, civil, criminal and penal codes modelled on European ones were prepared and promulgated. By the 1880s they became the basis of a national judiciary. Under Ismail a number of magistrate's courts and courts of first instance were organized throughout the country. The work for the creation of National Courts began under Ismail and was completed under Tawfiq Pasha [q.v.] in 1883. The Mixed Tribunals to deal with litigation between nationals and foreigners were founded in 1876. The new Ministry of Justice was responsible for the new National Courts and for all other grades of the judiciary in the country.

With the institution of Dual Control over Egypt's finances in 1876, direct European influence reached the Egyptian government and administration. Budgetary control, fiscal solvency and administrative efficiency were made the most important areas of governmental reform for the next thirty years, and especially during the British occupation. A system of European—later British—advisers to key ministries, directors of public utilities, works and communications, and inspectors became an essential part of Egyptian administration, particularly under Cromer.

From independence in 1923 to the overthrow of the ancien régime in July 1952, the administrative machinery in Egypt was substantially that first developed by Muhammad Ali and Ismail, and reformed under British tutelage. The rapid growth of population and the rise of a small native industry, and with it a small labour force, called for the further extension of governmental functions and regulation of powers. Most significant was the formation in 1939-40 of a Ministry of Social Affairs and within it a department of the Fellāh. This Ministry soon came to deal with matters of labour, social security and welfare, presumably on a national scale. The general working force increased during the Second World War so that a Ministry of Labour became inevitable. The War also produced a Ministry of Supply.

Perhaps because until recently Egypt's economy remained basically agricultural, and dependent on the proper distribution and utilization of the Nile waters, one of the most crucial functions of government has been since Muhammad Ali that performed by the Ministry of Public Works and Irrigation.

The political situation after the War was such as to create a large and influential ruling class of politicians, whatever their political persuasion, and the masses. The hardships of the War and subsequent unemployment raised new problems that called for administrative action. After the War the idea quickly spread that the major function of state and government is to provide social services and welfare on a grand scale. Moreover, state and government came to be viewed by the people as agencies for change and development. Meanwhile Egyptian governments were preoccupied with domestic squabbles involving the political parties and the king, as well as with the evacuation of the British forces from the Suez Canal area. In this interlude (1946-52), the police and security forces—one of the agencies of government most effectively organized and developed over the previous fifty years with British help—sustained the administration. Harassment and sometimes violent, from such groups as the Ikhān al-muslināmin [q.v.], governments were using their security agencies and the various departments of the police to their maximum capacity.

When the parliamentary system collapsed and the monarchy was overthrown by the "Free Officers" in July 1952 and the following months, the latter simply took over the existing government services and placed them under military supervision. After the abolition of the monarchy in June 1953, a republic was proclaimed and by 1956 a presidential form of government was established. This has been characterized ever since by a strong and highly centralized executive power. With its emphasis upon and concern with economic development, social justice, and welfare policies, the new regime made radical changes in the administration in that its functions were greatly expanded. A number of new ministries emerged, as it were automatically, from the regime's commitment to national planning of the economy, rapid industrialization, and mass political mobilization (a small Ministry of Industry had existed before 1952; a Ministry of National Guidance and Culture, for instance, was an innovation).

The extensive nationalization of economic and commercial enterprises in 1961, which inaugurated a socialist policy, further transformed the functions...
of government to embrace practically every field of national and private endeavour. Pursuance of a policy of agrarian reform, land reclamation, and the redistribution of land to peasants (with the resultant policy of agrarian reform, land reclamation, and the redistribution of land to peasants) further expanded the activities of the government in these fields.

Although the state has been committed to free and compulsory education for all Egyptians since 1950-1, governmental activity in this area has recently increased greatly, especially at the higher levels of technical and university training.

The nationalization of the press in 1960 and the take-over of publishing houses by the government has rendered such organizations and occupations too agencies of the state and its administration. The governmental, or public, corporation has also appeared in Egypt under the present régime, of which the most prominent example has been the Suez Canal Authority. The Aswan Dam project, begun in 1960, has been so colossal as to require its own special ministry.

At present (1966) the cabinet in Egypt is strictly an administrative executive. The President, together with one or more vice-presidents whom he may choose to appoint, makes national governmental policy. Under the March 1964 Provisional Constitution, the cabinet is a presidential cabinet, that is, with no strictly independent juridical status. Cabinet ministers administer the affairs of government by guiding and coordinating the work of their respective ministries and by drafting legislation for the President's consideration. But the President in consultation with his government (the vice-presidents and cabinet ministers) draws up the general policy of the State. He issues all security regulations and orders, and supervises their implementation.

Since 1962, a mass political organization has been formed by the state to encourage the participation of the people in national programmes. The Arab Socialist Union is reported in 1966 to have 6 million members. It is organized on the local, the provincial and the national levels. The President is Chairman of its Supreme Executive Committee, whose members he appoints. On the other hand, local government arrangements, a central result of the implementation of the administrative system which has evolved from the past. Local government officers are by and large public officials subject to the Ministry of the Interior.

The organization of the judiciary still follows the old pattern of a Court of Cassation, under which function six Courts of Appeal, several Primary Courts (i.e., courts of first instance), and many more summary courts. One radical change was wrought by the new régime when it abolished the Shari' courts in 1955-6.

To govern Iraq had been for the Ottomans before 1914 both difficult and expensive. Even though the country was by then organized into four major administrative units, namely, the wilayats of Mosul, Baghdad and Basra, and the mutasarrifiyya of Dayr al-Zor, the authority and control of the various governors appointed from Istanbul were for long rather nominal. Inhabited by an ethnically and religiously fragmented society—Kurds, Turcomans, "Assyrians", Shi'is, Yazidis, marshland and other tribesmen—Iraq was difficult to subject to a central authority or to its representatives in Baghdad. The development of some communications and postal services in the 19th century might ultimately have led to its pacification and subjection to central control.

It took the British occupation forces two years (1918-20) to impose some semblance of order and security throughout the country. A civil commissioner under the British Commander-in-Chief founded the nucleus of an administration to govern Iraq by creating new and modern departments of government in Baghdad. The most important were those concerned with public order and security, especially since several regions of the country were openly defiant of the authority of Baghdad. Important also were those dealing with agriculture, public works and irrigation, health and sanitation, not to speak of finance. The administrative authority of the new government departments was exercised throughout the country by means of a provincial organization. This was virtually the same as the system of administrative units which had existed before the First World War, sixteen in number. Today there are fourteen such units.

When military rule ended in October 1920, an Iraq Council of State was formed as the state agency responsible for administration, but advised by British officials. This system of an Iraqi cabinet government under a measure of British tutelage in all departments continued under the monarchy from 1922 to 1932, when Iraq achieved independence and was admitted to the League of Nations. The British Mandate was then formally ended and replaced by an Act of the Iraq Parliament.

The formation of a relatively strong army, air force, and police force in Iraq was essential for the governing of the country. By 1936, all three executive arms of the government were greatly advanced in comparison to those in other states of the Fertile Crescent. Equally essential was the development of a good judiciary, in view of the separatist, tribal and ethnic divisions in the country. In fact, despite the greater centralization of power in Baghdad, special arbitration courts and administrative procedures for the tribes were maintained.

The development of national resources early became a government responsibility in Iraq, particularly in the fields of irrigation and agriculture. Municipalities were encouraged and financially aided to develop their localities (Municipal Law of 1925). As communications improved, direct government administration from Baghdad progressed at the expense of local and other forces, especially the tribal leaders.

The system of provincial courts of first instance closely resembles that in Egypt. In Iraq, however, the Ottoman Civil Code, Meşelle [q.v.], remained in force until 1952, when it was replaced by new codes. But as in Egypt, provincial administration in Iraq is controlled by the Ministry of the Interior, in the capital, so that local initiative remains limited. This is of greater importance in Iraq, where so many groups tend to challenge the authority of the central government. Nonetheless, over the years, a body of permanent civil servants was created, which has increased in number, as in other Arab states, and particularly since the military coups beginning in July 1958 which tended to incorporate wider welfare functions into the state administration. The civil service generally continues to absorb the largest number of educated Iraqis. A law in 1957 has improved Civil Service procedures and established a Public Service Council. As in Egypt, the administration of the labour and social security services became a state responsibility in 1939-40, and was further extended in 1956. A major governmental function since 1953 has been the rational utilization of revenue from oil royalties for major development projects.
Compulsory free education has also been a state responsibility administered by the government since 1940. Yet political instability, as reflected partly in the continuous involvement of the military in politics, various tribal uprisings in the past, and the current conflict between the government and the Kurds has adversely affected the smooth operation of administrative agencies. Efficient government has also been eroded since August 1958, when the Law against Conspiracy led to purges and with it to the rise of parliamentary organizations in political parties, popular militias and other such groups.

Since the 1958 coup d'état, there has been a greater tendency for the military to control the state and the government. This has resulted in a more haphazard functioning of governmental processes. The new Constitution of May 1964 introduced greater executive power (greater than under the monarchy) in a presidential system of government. The President appoints and dismisses cabinet ministers, and governs in conjunction with a Council As in Egypt, a single state political organization, the “Iraqi Arab Socialist Union”, has been announced. Moreover, there is a pronounced state commitment to planning which guides the national economy, a wider cooperative system, and recently a series of nationalizations of enterprises.

In Syria and Lebanon, just as in Iraq and perhaps indeed to a greater extent, political, social and ethnic fragmentation has hampered government at all times. The Ottomans had attempted to maintain some form of administration there, based on a varying division of the country into provinces. Yet, until the Egyptian invasion and occupation in 1831-3, Ottoman governors were able to administer directly only Damascus and other major towns. Elsewhere, tribal chiefs and local potentates ruled undisturbed. The short-lived Egyptian domination attempted to establish a strong central government and to impose regular taxation to counter these separatist local tendencies. As part of the Tanjimî reforms, the Ottoman authorities introduced some measure of administrative reform in terms of regular payment of salaries to local officials, and extended the educational facilities. Soon afterwards European and American influence in the form of religious-educational missions entered the area. This coincided with the development of communications in the country.

Lebanon, or at least the Mountain part of it, was until the mid-19th century governed as a Principality of two powerful families. The last, that of the Shihâbîs, was destroyed in 1842, and the Ottomans divided the province into a Druze and a Maronite sandîqâh. The first sandîqâh of Mount Lebanon. The first constitution in 1926 also formalized the communal-sectarian basis of government, making the Lebanese President a Maronite and the Prime Minister a Sunni Muslim. The emphasis in government has been on a powerful executive authority residing in the President and exercised through the Council of Ministers. The President and Council can initiate legislation and actually issue laws. The machinery of government is highly centralized, so that provincial governors are actually representatives of the central authority and local councils have only advisory functions. Since 1955 there has been an attempt to decentralize the administration to some extent.

Because of the peculiar sectarian basis of Lebanese politics and government, there has been a popular tendency to view cabinet ministers and heads of government departments as representatives rather of communal interests than of the specialized activities of their respective ministries. The allocation of civil service posts, as of cabinet portfolios, has for long been based on the balancing of communal interests. Under the pressure of modern nationalist notions, administrative reform was attempted in 1958-9, and a Personnel Law was passed in 1959, which also set up a Public Service Council. The purpose of this new legislation is to set up generalized, impartial standards and criteria for appointments to the public service.

In many respects, the state in Lebanon governs by adjudicating between the interests of the various religious communities rather than by administering sanctions directly for the enforcement of its effective judgements. It also administers services. There is therefore much government by the “entourage” which one finds surrounding a President, a Prime Minister or a Cabinet Minister. As the President wields considerable power, the Chamber of Deputies (in an unicameral legislature) tends to be subservient to the executive.

In the field of the administration of justice, new civil and penal codes replaced the Ottoman laws as early as 1931-2. The Minister of Justice, however, has merely an executive function. Justice is administered by a Supreme Council of Justice, which has control over judges. Courts are organized much as in Syria and Iraq; that is, there are first instance courts, appellate courts in each major provincial centre, and a Court of Cassation in the capital. There is also a State Council to dispense administrative justice. Unlike the situation in Egypt, however, Shari‘i and ecclesiastical courts continue to function in matters of personal status.

Whereas the political history of Syria during and
since the French Mandate has been more turbulent, the administrative machinery of government followed similar lines, although it lacked the communal or sectarian basis which was formalized and tacitly accepted in the Lebanon. After separating what is now the Republic of Syria into four states (Latakia for the 'Alawis, Aleppo, Damascus, and Djiabal Druze), the French incorporated all of these into one state in 1936. They divided the new state into nine administrative provinces, in addition to the City of Damascus, administered by appointed governors who were assisted by local councils. The 1950 Constitution provided for a Cabinet government responsible to a unicameral legislature. In 1953, under the new Shi'ishkil constitution, these were made responsible to the President, so that in Syria too the trend has been towards greater executive power. The State moreover, as in the other countries, took on greater responsibility for the organization and planning of the national economy.

The organization of the judiciary in Syria closely resembles that of Lebanon and Iraq, although in Syria there have been separate administrative courts and a Council of State. The 1950 constitution introduced a Supreme Court to test the validity of legislative acts and decrees.

Considering the frequent political upheavals in Syria, it is fair to conclude that at present (1966) the administration of the country is controlled by the military.

Jordan, as a constitutional monarchy, places the responsibility of government and administration upon a cabinet, although since 1952 (when the 1952 Constitution superseded that of 1947) the President is responsible to the National Assembly. Further control of the Council of Ministers by the Assembly was introduced in 1955, especially as regards questions of votes of confidence in the government and its resignation in case of a dissolution of the Assembly.

Under the British Mandate (1922-46), the monarch ruled in Jordan (then the Emirate of Transjordan) with the assistance of a Legislative Council (set up in 1929 in accordance with the Organic Law of 1928) and an Executive Council. With independence in 1946, and the proclamation of a kingdom, the latter Council became the Council of Ministers.

As in Iraq, there were in Transjordan British advisers. The representatives of the British High Commissioner to Palestine resident in 'Amman advised the Transjordan administration on all important matters of policy. In fact, all decisions dealing with defence, finance, and external relations had to have his concurrence. The security forces and the Army in particular were, until 1956, organized and trained by British officers and financed by subsidies and loans from the British Government.

Until 1952, the monarch possessed extensive ruling powers, and governed with the help of his security forces. Until 1950, the judiciary largely retained its Ottoman stamp, using Ottoman commercial, civil, and penal codes. Since then, new codes have been promulgated and have come into use. There are now civil, religious, and special courts, in addition to a Special Council (Dīwān Khāṣî) which interprets laws.

While the new 1952 Constitution granted greater powers to the Cabinet and the Legislature, and thus curtailed those of the throne, there was, as a result of the incorporation of Central Palestine into the kingdom, a greater centralization of the administrative functions and a rapid increase in the number of public officials. This was largely due to the large refugee population that came in with this incorporation, and all the new social and economic problems which it brought. Another consequence was that the membership of the cabinet expanded with the transformation of governmental functions. The need for social legislation and economic planning for development led to the organization of such official agencies as the Development Board, the Aqaba Port Authority, the Development Bank, and the Bank of Reconstruction.

The administrative division of the country now (1966) comprises eight provinces (liwa'), each administered by a governor appointed by the central government. These are in turn subdivided into districts administered by a hādīm-mahādīm or district officer, and into wājīyas of villages headed by a mudīr. Moreover, towns and cities usually have elected mayors and municipal councils. The districts have administrative councils.

In both Egypt and the countries of the Fertile Crescent a major feature of government has been the centralization of administration and the rapid transformation and expansion of government functions which has accompanied the greater need for public and welfare services.

Except for Lebanon, where a pluralist system permits the resolution of conflict through a compromise based on the delicate balancing of sectarian-communal interests, government in Egypt, Iraq, Syria, and even Jordan, is highly centralized and ultimately dominated by the military. Whereas in Lebanon one observes a public preference for as little government as possible, this is by no means the case in the other countries of the Fertile Crescent and Egypt. In all of these, to a greater or lesser extent, government is viewed as an agency of change and development, and one which must provide social services and economic benefits. Moreover, in Egypt, Iraq and Syria, government tends towards personal, authoritarian rule. Thus the constitutional provisions in these countries do not reflect accurately the ways of government and administration. Executive power seems to predominate over legislative assemblies wherever and whenever they exist. In the latter, there has lately developed the preference, especially in Egypt, for corporate (or occupational) representation. There is consequently no relation between the life of a cabinet or a government (especially today under presidential systems) and that of a legislature in these countries. In other words, executive power is hardly bound by the strictures of an elected legislative body so long as this power has the support of the army.

Neither in Syria nor in Iraq—and only to a slight degree in Lebanon—has government completely eroded sectarian, tribal, and parochial loyalties. With the exception perhaps of Lebanon, governments in these countries (Jordan being included for a different
reason, namely the Palestine Question) continue to depend rather on coercion than on persuasion for governmental action. The central rôle played by force in the government of these countries is perhaps reflected again in the rule of the state by the military; and failing that, in the mixture of military and civilian elements in their administrations.

Because of their social composition and ethnic and religious diversity, the principal function of government in Iraq and Jordan was, for many years, the imposition of public order and security; in other words, the major task of the central government was to ensure that its authority was widely recognized and accepted by all groups within the state. This was necessary also in order to achieve the more systematic collection of taxes, to provide the revenue essential for the development of agriculture and the execution of public works.

In Syria and Iraq especially, recent political instability, as reflected in coups, counter-coups and purges, has caused the work of their permanent administrative cadres to suffer greatly. A worse consequence has been the resultant public mistrust and suspicion of all administration, which in turn makes the work of any government more difficult.

All the countries considered here have experienced some form of British or French tutelage, which has affected their governmental structures and procedures, especially in the judiciary, in provincial administration, and in the administration of public education. Their real independence is so recent that one may assume that they are undergoing a period of transition. Yet the difference between government in these countries now and in the past is that, in addition to maintaining law and order, it has assumed new and wider functions of planning and, in certain instances, managing the national economy, as well as providing extensive social welfare to the populace.

A more recent development in some of these countries seems destined to lead to ever greater centralization of power and hence to stronger administrative regulation and control; this is the phenomenon of the single-party state political organizations such as the Arab Socialist Union in Egypt and the Iraqi Arab Socialist Union in Iraq. Thus, state control is not exercised only through the government and administration, but also through its mass political organization, which has no competitors since the latter are precluded by law from at least public existence.

(P. J. Vatikiotis)
It was Mahammad Bey's successor, his brother Muhammad al-Safik, who promulgated on 26 April 1859, after having consulted Napoleon III at Algiers in the previous year, a series of legislative measures which might be regarded as a constitution. Its rules concerning the succession to the throne remained unchanged until 1957. A ministry was formed, responsible to the Bey; a supreme council of 60 members appointed by the Bey and the government shared the responsibility for the development of the legal system and for voting the state budget; the independence of the judiciary was guaranteed. These reforms were introduced before public opinion in Tunisia, even among the ruling classes, was prepared for them. And since, in addition, the financial situation led to taxes being raised, in 1864 a section of the population rose in revolt. After this the 1861 constitution was suspended, in fact if not in law.

The last Tunisian to introduce reforms before the establishment of the French protectorate was the general Khayr al-Din [q.v.], who held the office of minister on several occasions, and notably that of Prime Minister from 1873-77. The belief in the need for reform was a result not of circumstances but of his own conviction as is proved by his book: Abwâd al-masmik fi ma'rifat ahwâl al-mamâlik (Tunis 1867). Once he was in power, he made great efforts to introduce his programme of modernization by European methods but within a completely Muslim framework. After four years the manifold intrigues which surrounded him and the inability of public opinion in Tunisia to understand his aims led him to abandon his efforts. After this, the financial collapse of the country, European intrigues, and the incompetence or the doubtful honesty of the new Tunisian rulers merely aggravated the crisis, which ended in the formation of the French protectorate.

The development in Morocco followed a similar pattern, though at a later date. It was not until the middle of the 19th century that Morocco came into closer contact with Europe, through a brief war with France (August 1844), the commercial treaty of 1856 with Great Britain and the Spanish-Moroccan war of 1859-60.

The sultan ruling in 1860, Muhammad b. 'Abd al-Rahmân (1859-73), realized that henceforth the country could not conform as it was. Already in his father's lifetime he had attempted to introduce some reforms in the Moroccan army. When he became sultan, he tried to lead the country towards a modern economy and to curb the corrupt practices of some of the officials by paying them salaries. But his task was made very difficult by European intrigues and the Moroccans' failure to understand his aims; and the agricultural crisis of 1869-70 forced him to renounce his attempts.

His son al-Hasan (1873-94 [q.v.]), also aware of the need to transform the Moroccan state, decided, on his accession, to resume his father's economic and military projects: it was he who brought to Morocco European instructors for his army. However his reforms, limited in scope, perpetually hindered by European rivalries and weakened by the financial crisis which began to be apparent in Morocco in the last quarter of the 19th century, only succeeded in irritating Moroccan public opinion, not only in the towns but even among the dissident tribes. All that remained were a few fortifications on the coast, a few batteries of field artillery and much ill-feeling.

When his son 'Abd al-'Aziz (1894-1908 [q.v.]) came to the throne, the situation was not favourable for reform: Morocco was retreating more than it was advancing. Until the death of his vizier and mentor Ahmad b. Mūses, the new sultan scarcely exercised any power, but once he found himself alone (May 1900), he wished to introduce reforms, partly because of the situation in Morocco but also because of his own modernist outlook. He brought a quantity of machines and equipment in Europe, intending to build a railway to Fez, but chiefly he envisaged a reform of the Moroccan finances by decreeing that all taxpayers were equally liable to pay land-tax (tarîbîh). The violent reactions of the Moroccan tribes against the exacerbated rivalry of several of the European powers plunged Morocco in fresh disturbances that in 1908 'Abd al-'Aziz was forced to abdicate without his attempts at reform having produced any result.

Before he had relinquished power, his elder brother 'Abd al-Hafiz (1907-12 [q.v.]) was proclaimed sultan at Marrâkûsh in order to resist European encroachment, and he finally mounted the throne in 1908. But he was confronted by a financial crisis, tribes who were in an excitable state and ready to revolt, and European powers with heightened ambitions in Morocco. Like his predecessors, he acknowledged the need for the reforms which he was being urged to make by a number of Moroccans, who saw in them the only means of escaping from the hold of the European powers. One of these groups, based in France and reinforced by Syrrians expelled from Tunisia, went so far as to draw up a draft constitution, dated 24 June 1908 and published in a Tangier Arabic journal, Sawl al-Maghrib (French translation of it published by J. Robert, in La monarchie marocaine, Paris 1963, 311-23). This constitution was not adopted by the Moroccan government and the failure of various successive plans for reform led to the signing of the treaty of protectorate on 30 March 1912 at Fez by the sultan and M. Regnault, as representative of France.

Thus it can be seen that the attempts of the rulers in the 19th century to modernize the government of their respective countries were in vain because local opinion was completely unprepared for these changes, which it believed (not without some reason) to be a result of European influence, which it mistrusted, and because no ruler was strong enough over a sufficiently long period to impose a new system of government.

The European occupation of North Africa, mainly French, resulted in considerable changes in the organization of the governments there.

In Algeria, after an inevitable long period of trial and error, the government of the Republic, by the decree of 9 December 1848, divided the country into three departments under the direction, as in France, of prefects; before this the French citizens resident in Algeria had been given the right to send deputies to the National Assembly. It can be said that, as from 1848, in spite of various vicissitudes of no great importance, the administrative assimilation was recognized as an accomplished fact.

All the same, because the administration of the native population presented its own problems, a special department was instituted in Algeria, in 1857, and there was formed at an early date a real government of Algeria, consisting of a governor-general to whom were responsible for most of the time the various public services establishments locally. The office of governor-general was suppressed and replaced, from 24 June 1855 to 10 December 1860, by a minister for Algeria based in Paris. Then the government of the Third Republic, while restoring the governor-general,
made the various officials serving in Algeria directly responsible to their ministry in Paris. This experiment lasted until 31 December 1896, but proved so unsuccessful that the earlier system was restored. In both cases it had been apparent that overcentralization did not produce good results and that Algeria ought to be governed from within the country, under the authority of the French government and the control of the French parliament.

In fact it had been realized from the very first years after the conquest that the French administration needed to be applied without modification, since the customs, the reactions and the innermost beliefs of the Muslim population differed so greatly from those existing in France. Thus, in spite of the prefects, the laws and regulations and all the French institutions which were transplanted into Algeria, there existed always two systems of government, because the one country contained two entirely different populations without enough in common for a unification to be considered. This system began with the Arab bureaus, a military organization responsible for the administration of the Muslim populations, and ended in the statute of 20 September 1947 instituting in Algeria two electoral colleges: one for the Europeans and one for the Muslims, very unequal in number and in composition, however, since Muslim women were not given the vote until 1958.

The staff of the governor-general's office and of the administrative departments under it were usually of French nationality, and it was not until after the Second World War that Muslim Algerians began to occupy a few posts of responsibility in them. Thus the administration of Algeria during the French period was a hybrid one in which the metropolitan French and the French of Algeria played a preponderant rôle, while the Algerians themselves were reduced to a completely secondary position, in spite of their claims, and especially from 1936 onwards.

In Tunisia, the convention of Kasr Sa'id, known as that of Bardo, of 12 May 1881, established a provisional French occupation which the convention signed at La Marsa on 8 June 1883 converted into a French protectorate. The Tunisian government and its administration still continued to exist, but the Resident-General and his staff unfailingly showed to the Sultan and his Moroccan entourage proved with what sincerity this system was applied. Nevertheless, to an even greater extent than in Tunisia, because the Moroccan ruling classes were much less prepared for modern and western ideas, the French were obliged to begin to create technical departments, of necessity staffed by Frenchmen, so that the process already observed in Tunisia was repeated exactly in Morocco, where there gradually grew up a kind of French administrative “feudal system” beside the Moroccan officials and those they governed. In their plan for reforms in 1934, the Moroccan nationalists, at this extent than in Tunisia, because the Moroccan ruling classes were much less prepared for modern and western ideas, the French were obliged to begin to create technical departments, of necessity staffed by Frenchmen, so that the process already observed in Tunisia was repeated exactly in Morocco, where there gradually grew up a kind of French administrative “feudal system” beside the Moroccan officials and those they governed. three under-secretaries of state, and two directors, one of the broadcasting service, the other of the presidential cabinet. The functions and personnel of this ministry have remained unchanged, except for the death of the Secretary of State for Internal Affairs, who was immediately replaced.

In Morocco there were six successive ministerial cabinets between 4 December 1955 and the promulgation of the constitution of 7 December 1962, the last two of them presided over by the kings Muhammad V (26 May 1960) and Hassan II (2 June 1961). Once the institutions provided for by the constitution were established, King Hassan II appointed as Prime Minister Mr. Ahmad Ben Bella, who formed a cabinet composed of fourteen ministers and five under-secretaries of state. After a re-organization of ministerial posts in 20 August 1964, a new government was formed on 8 June 1965 under the presidency of the king and its composition was slightly altered on 10 July. These arrangements were made after the king had decided, on 7 June, to proclaim a state of emergency as provided for by article 35 of the constitution of 1962. The present government (December 1965) is composed of twenty ministers, three directors of the royal cabinet and two under-secretaries of state. It is responsible only to the king, parliament having been suspended for an indefinite period.

In Algeria, after the confused political crisis which followed the granting of independence, the Assembly elected on 20 September 1962 instructed Mr. Ahmad Ben Bella to form the Algerian government and to hold the office of Head of the Algerian State until a constitution should be worked out and promulgated. This government consisted of a vice-president and thirteen ministers. A reorganization of the cabinet followed the granting of independence, the Assembly having been suspended for an indefinite period.

Before independence, the area which is now East Pakistan formed part of the province of Bengal. This was the earliest territory in India to come under British rule, and was divided into administrative districts of enormous size: for example, the population of Mymensingh District is larger than that of Switzerland. The Collector of the district was the principal official responsible for public order and the collection of taxes. A District Judge was the head of the judiciary. Away from district headquarters, the only representatives of the government were police officers. The Governor of Bengal was assisted by a Council, from which evolved a Legislative Council, out of which Ministers were selected from 1919 onward to take charge of the departments of the provincial government.

The area which is now West Pakistan had none of the uniformity of administration described above. There were three provinces—Punjab, Sind, and the North-West Frontier Province—divided up into administrative districts, which were on a much smaller scale than in Bengal. Because these provinces were the last to be added to British India, there was a frontier character about the administration. At first, all the functions of government in the district (including the judicial) were exercised by one British officer, the Deputy Commissioner, though later separate District Judges were appointed. The Deputy Commissioner was assisted by a strong corps of officials, stationed at the lesser centres of the district. However, only about half of the area now in West Pakistan was under direct British administration. There were also a number of princely states, the largest being Bahawalpur and Kalat together with Amb, Chitral, Dir, and Swat. These were recognized as having complete internal autonomy: Kalat was subdivided into dependent chieftdoms, among which Khair-khan was semi-independent. In addition, a large portion of the North-West Frontier Province and a large part of Baluchistan (in which Kalat is situated) were treated as 'unadministered territory', in which the British law did not prevail. Here the tribes followed their own custom of long standing.

At the apex of the system, in charge of the whole of British India and in tutelary role over the princes, was the Governor-General. He was assisted in the
central administration by an Executive Council. The Members of Council each had charge of one or more departments of government.

Before the period of British rule, the Muslims had predominated in the administrative system. Gradually, the British substituted English for Persian as the language of higher administration while at the lower levels Persian and Urdu were replaced by the vernacular languages, such as Bengali. Also, appointment increasingly depended upon a competition in an open examination in which Western subjects were preferred to the classical, oriental subjects. In consequence, the traditional Muslim administrative families found themselves increasingly at a disadvantage. Their loss of administrative and judicial office was most striking in Bengal. In the old Bengal Presidency (which included Bihar and Orissa, as well as Bengal proper) the Muslims formed 31 per cent of the population, but by 1880 they held only 5.5% of the 'gazetted' (i.e., executive) posts. By contrast in Punjab, where Muslims formed 51% of the population they held 39% of the posts. However, the Muslims did succeed in retaining their position in some of the provinces. In the North-Western Provinces and Oudh (today called Uttar Pradesh, in the Indian Union) Muslims formed 13% of the population but held 45% of the gazetted posts. Throughout India, they retained 20% of gazetted posts: not much less than their proportion to the population of India. The heads of districts (Collectors and Deputy Commissioners) and all their superiors were drawn from the Indian Civil Service. This service was wholly British until 1853, when it was opened to competition under stringent conditions. A candidate from a reformist Hindu sect gained a place in 1864, and thereafter a small but steady stream of Hindus gained admission. The first Muslim was not appointed to the I.C.S. until 1885. By 1915, there were a total of 1,371 members of the I.C.S. Of these, 1,305 were British, 3 were Eurasian, 41 were Hindu, 6 were Parsi, 7 were Indian Christians and 9 were Muslim. However, during the last 25 years of British rule, the Muslims did succeed in securing more places in the I.C.S. At the time of independence there were about one hundred Muslim I.C.S. officers. Of these one third were Punjabi, the remainder came from areas which were to form the Indian Union. There were none belonging to East Bengal, where the standard of education was low.

In addition, Muslims had secured a fair proportion of places in other higher echelons of the public service, especially in the Audit and Accounts Service. Among members of this service, one (Chaudhri Muhammad 'Ali) was to become Prime Minister and another (Ghulam Muhammad) the Governor General of Pakistan. From 1918, Indians became eligible for the officer cadre of the Indian Army, and Muslims also obtained a proportion of appointments and promotions commensurate with their total numbers, with a preponderance of officers from Punjab and the North-West Frontier Province.

After independence (1947) the elite character of the higher civil service was perpetuated. The I.C.S. was replaced by the C.S.P. (Civil Service of Pakistan). Recruitment is by a modified form of competition. The top 20% of places are filled by merit on the basis of open examination; the remaining 80% are allotted in equal numbers to the two 'wings': East and West Pakistan. By 1961, the C.S.P. numbered 357 officers (including 26 still under training). This service continued to supply the great majority of district officers and senior officials in departments and ministries.

The main task in government in the new state of Pakistan was to hold together the two wings, separated by over one thousand miles of Indian territory, and to bring East and West Pakistan into a reasonable balance. The administrative variety of West Pakistan complicated the problem. Gradually, the different elements were reduced to one. The princely rulers of Bahawalpur and Kalat were deprived of their powers. In 1955, the West Pakistan Act created one unit, with its headquarters at Lahore. The tribal areas of Baluchistan and the North-West Frontier, together with the little states of Amb, Dir, Chitral and Swat were excluded from the control of West Pakistan, as was Karachi, the capital city. These remained directly under the central government.

The way was now open to producing a constitution for Pakistan. For the first nine years, the country continued to be governed under the Government of India Act of 1935, somewhat amended. This retained a Governor-General at the apex of the system with a large reserve of power in his hands. Ostensibly, the government was in the hands of a Prime Minister and Cabinet responsible to a national legislature, but actually power was largely exercised by the Governor-General (who, from 1951, was the former senior official, Ghulam Muhammad, followed by another senior official, Iskandar Mirza). Under these men, the administrators and the police officers virtually governed Pakistan.

The 1956 Constitution introduced a number of limitations upon the head of the state, who was now designated President. But political instability continued, and in 1958 the President declared an emergency and abolished the constitution. Iskandar Mirza's successor, General (later Field Marshal) Ayyub Khan further strengthened the position of the president, and under the 1962 constitution (Article 31) 'The executive authority of the Republic is vested in the President'.

In order to safeguard the armed forces, the constitution further provides (Article 238) that the Minister of Defence must be a person who has held the rank of Lieutenant-General, or its equivalent in the navy or air force. Other members of the President chooses the Council of Ministers without outside restriction. Ministers may participate in the proceedings of the National Assembly, but they are answerable to the President.

Shortly after the military revolution of 1958, the capital was moved from Karachi to Rawalpindi, pending the construction of a new capital, Islamabad, nearby. The Ministry of External Affairs remained at Karachi; all other ministries moved to Rawalpindi. There are eleven ministries: Defence; External Affairs; Finance; Commerce; Home and Kashmir Affairs; Industries and Natural Resources; Communications; Education and Information; Law and Parliamentary Affairs; Agriculture and Works; Health, Labour and Social Welfare. Important agencies are the Central Intelligence and the Federal Investigation. The head of the department is termed Secretary to Government. The senior hierarchy is composed of Secretaries, Joint Secretaries, Deputy Secretaries and Under Secretaries. In 1956, all 19 Secretaries belonged to the West wing, together with 36 of the 41 Joint Secretaries and 123 of the 133 Deputy Secretaries.
Resentment at alleged dominance by the West Wing causes constant agitation for wider autonomy for East Pakistan. Certain concessions have been made. The railways have been transferred from central to provincial control. The two provinces are administered by Governors, appointed by the President. The governors may be civil servants, army officers, or political leaders. Each province has a Secretariat, composed of the Departments which are under provincial control, such as education, public health, and agriculture. The provinces are divided up into major administrative areas called Divisions. There are four Divisions in the East and twelve in the West wing. The principal administrative area remains the district, under the Deputy Commissioner or Collector. There are 27 districts in the East and 51 districts and 17 divisions in the West wing.

An innovation carried out by President Ayub Khan is the creation of a consultative system of administration for economic, social and political development with its base among the people. Councils, known as Basic Democracies, are elected by the people at the village level and in the wards of the towns. These Union Councils send up members to sub-district councils (Thana or Taqsi Councils) and these in turn contribute to District Councils. At the lower levels, the representatives of the people (the Basic Democrats) predominate, but higher up the infusion of administrators and the technical services becomes stronger. Above these come Divisional and Provincial Councils in which one-third of the members are drawn from the Basic Democrats. A description of government in Pakistan would be incomplete without some reference to the rôle of the armed forces in government. Although the air force is modern and powerful, the main element is the army, with its armoured division and six (or more) infantry divisions. The army has many times been required to restore public order when the civil administration has lost control, while in times of public disaster (such as the cyclones which periodically devastate East Pakistan) the armed forces are the principal organizers of relief. Army officers have been called upon to administer the programme of the Basic Democracies, while the armed forces are authorized to take 10% of the candidates for the C.S.P., and in practice the percentage is often higher. Under these circumstances, it is important that the armed forces are, to an overwhelming degree, recruited from the West wing, mainly from Punjab and the North-West Frontier. In 1935, of the 900 army officers of the rank of Major and above, only 14 came from East Pakistan, and of the 680 air force officers, 40 came from the East.

This imbalance is unlikely to be altered for many years, and is a major cause of the movement for greater provincial autonomy which constantly agitates East Pakistan. However, it appears safe to predict that the two wings will not separate, and that Pakistan will remain a unique example of a single state and government resting upon the two sides of an interjacent state.

VI.—INDONESIA

From its beginnings in the early 17th century, the United East India Company's authority in the Indies had been exercised by a governor general, assisted by a Council of the Indies (Raad van Indië), with full local legislative and executive powers, but with ultimate control being strictly exercised by the Company's governing board, the Gentlemen Seventeen (Heren Zeventien) in Holland. When the Crown assumed the Company's responsibilities in 1800, the governmental machinery in the Indies remained by and large unchanged, a state of affairs which, in fact, continued even when the Dutch parliament in the years after 1848 wrested control over colonial matters from the royal prerogative (in the East Indian Government Act of 1854 and the Accounting Act of 1864). Though henceforth responsibility for colonial government and the colonial budget lay with a Minister of Colonies accountable to the Second Chamber, there were four Divisions in the East and twelve in the West wing. The principal administrative area remains the district, under the Deputy Commissioner or Collector. There are 27 districts in the East and 51 districts and 17 divisions in the West wing.

An innovation carried out by President Ayub Khan is the creation of a consultative system of administration for economic, social and political development with its base among the people. Councils, known as Basic Democracies, are elected by the people at the village level and in the wards of the towns. These Union Councils send up members to sub-district councils (Thana or Taqsi Councils) and these in turn contribute to District Councils. At the lower levels, the representatives of the people (the Basic Democrats) predominate, but higher up the infusion of administrators and the technical services becomes stronger. Above these come Divisional and Provincial Councils in which one-third of the members are drawn from the Basic Democrats.

A description of government in Pakistan would be incomplete without some reference to the rôle of the armed forces in government. Although the air force is modern and powerful, the main element is the army, with its armoured division and six (or more) infantry divisions. The army has many times been required to restore public order when the civil administration has lost control, while in times of public disaster (such as the cyclones which periodically devastate East Pakistan) the armed forces are the principal organizers of relief. Army officers have been called upon to administer the programme of the Basic Democracies, while the armed forces are authorized to take 10% of the candidates for the C.S.P., and in practice the percentage is often higher. Under these circumstances, it is important that the armed forces are, to an overwhelming degree, recruited from the West wing, mainly from Punjab and the North-West Frontier. In 1935, of the 900 army officers of the rank of Major and above, only 14 came from East Pakistan, and of the 680 air force officers, 40 came from the East.

This imbalance is unlikely to be altered for many years, and is a major cause of the movement for greater provincial autonomy which constantly agitates East Pakistan. However, it appears safe to predict that the two wings will not separate, and that Pakistan will remain a unique example of a single state and government resting upon the two sides of an interjacent state.

See further DUSTÜR-Pakistan, and PAKISTAN. (H. TINKER)
virtual bureaucratic monopoly on the reins of colonial government having failed, the dichotomy between democracy at home and autocracy in the Indies continued until the turn of the 20th century. Beginning in 1903, a few cautious attempts at decentralization were made, and municipalities, in particular, henceforth came to enjoy a modicum of self-rule which, however, benefited the European settlers rather than the natives. It took almost another fifteen years for more far-reaching reforms to be introduced. The first attempt to introduce a semblance of democracy to Batavia of an advisory chamber, the Volksraad (People's Council), which opened in 1918. Shortly thereafter, and in part guided by the recommendations of a Commission appointed by the Governor General in 1918, the home government enacted more far-reaching decentralization legislation, providing an administrative and in part also political underpinning for the hastily-born central People's Council. At the same time, the new basic law for the Indies (Indische Staatsinrichting) of 1925 opened the way towards greater colonial autonomy vis-à-vis the metropolitan parliament, especially with regard to the budget. Decentralization within the Indies—limited to Java until the mid-1930's—attempted to free the native administrative corps, largely recruited from among the Javanese aristocracy, from the micromanagement of European officers in the BinneAland Bestuur. New territorial corporate entities—Provinces and Regencies (regentschappen)—were called into being for purposes of administrative devolution, but also to provide lower-level conciliar bodies, the Provincial and Regency Councils; these were filled partly through appointments though to a larger extent through elections based on a rather narrow franchise. The 6o-odd Regency Councils acted as electoral college for the island's three Provincial Councils which, in turn, served in the same capacity for the Volksraad.

The quasi-democratic scaffolding hastily if belatedly attached to the bureaucratic polity had barely two decades in which to be consolidated before the Japanese occupation of the Indonesian islands. Its success in that short period was uneven, greatest perhaps at the centre, where the Volksraad in spite of many shortcomings, was more than a freely elected inter alia boycotted by many nationalist groups—provided some kind of schooling in modern political procedures. In the late 1920's it acquired a bare Indonesian majority and was also granted co-legislative powers, especially significant with regard to the annual budget. But the increasing radicalization of Indonesian political life, highlighted by armed revolts in 1926-7, and the subsequent strengthening of the bureaucratic apparatus, greatly reduced the usefulness of the Volksraad. Coming so soon after the sweeping decentralization measures had been introduced, the resurgence of bureaucratic power also considerably inhibited the proper functioning of the lower conciliar bodies. When administrative decentralization was extended to the Outer Territories in the late 1930's, it was almost wholly devoid of the political experimentation that had taken place in Java. Dutch rule thus bequeathed to Indonesia a basically centralized state structure still dominated by officialdom, and with only some incipient and frail features of democratic self-rule.

In spite of its brevity, the Japanese interregnum in Indonesia (1942-5) wrought several far-reaching changes in the Dutch system. Quite apart from the temporary dismemberment of the archipelago (the different islands were administered by separate military commands), the Japanese dismissed Dutch officials, replacing them by Japanese and Indonesians, and in the place of the Western-style, quasi-democratic deliberative bodies they provided appointive councils of extremely limited competency. It was in the field of agitational politics, however, that major changes occurred which, combined with Japanese organizational innovations, profoundly affected the population, most notably the younger generation. This rapid mobilization of Indonesian political life, sharpened by ideological cleavages and by the rise to political prominence of military and paramilitary forces, stood in marked contrast to the basically unaltered conservatism of the increasingly Indonesianized bureaucratic administrative machinery. Governmental authoritarianism, albeit in a more ruthlessly arbitrary form, was similarly unaffected by the change in colonial overlord.

Indonesian independence (proclaimed in August 1945) and the subsequent four-year struggle against Dutch military attempts at re-colonization sharply raised the politicization of Indonesian society. The first provisional constitution of the Indonesian Republic [see DUSTRK], promulgated only three weeks after the Japanese surrender and still influenced by Japanese tutelage, provided for a presidential form of government. An elected legislative assembly was envisaged under the constitution, but owing to the revolution and continued armed conflict with the Dutch, national elections took place only in 1955. In the interim, an appointed Central Indonesian National Committee functioned as a legislature; its prestige was considerably heightened when late in 1945 cabinet responsibility was shifted to the (numerically augmented) Committee which very soon was greatly influenced by the emerging political organizations, prominent among them the Nationalist, Masjumi (Muslim), and Socialist parties.

The republican organs of government were only operational in some parts of Indonesia, most notably in Java and Sumatra. Elsewhere, the return of Dutch military forces and administrative personnel inaugurated a wide variety of semi-autonomous 'states' under the Dutch aegis, culminating in the late 1940's in sixteen distinct political entities (including the United States of Indonesia). It was in this bicausural Republic of the United States of Indonesia that the Dutch transferred sovereignty in December 1949; but within less than a year the federal charter gave way to Indonesia's third provisional constitution (1950) which, in turn, remained in force for less than a decade. It established a unitary and parliamentary system. Cabinets were based on coalitions among the three major parties [see U22, viii] that had gained prominence (Nationalists, Masjumi, and Nahdlatul Ulama [Muslim Scholars' Party]) before, but especially after, the general elections of 1955. The fourth important group, the Communist Party, remained outside the government coalitions, though wielding increasing influence at the centre and particularly among the electorate. During the interim period, the liberal-democratic system, though far from properly rooted in Indonesia's political culture, appeared to be working fairly smoothly, a beginning being made with political decentralization proper: regional and local government devolved on elective assemblies. But growing ideological polarization between Islamic and 'secular' groupings—particularly pronounced in the Constituent Assembly, likewise elected in 1955—, proliferation of parties coupled with lack of internal party discipline,
cabinet instability, continued international frustrations caused by the Netherlands’ retention of West New Guinea (Irian Barat), economic deterioration coupled with regional discontent, but also increasing military interference in the political process—all these adverse factors helped to discredit constitutional government among members of the élite and wide sectors of the political public.

In the wake of widespread armed revolt and threatened secession in the outer territories, both the central military authorities and the chief executive embarked on a progressively authoritarian course. The president abrogated the deadlocked Constituent Assembly, proscribed some parties, most notably Maṣjumi, and from 1957 on gradually inaugurated a new political system, “Guided Democracy”. The Republic’s first provisional constitution of 1945, which was reinstated by presidential decree (July 1959), provided the legal basis for the new order. Parliamentary government had thus been forced to yield to a centralized system not too dissimilar, in substance, to earlier forms. The instrumentalities of Guided Democracy, created in piecemeal fashion and by no means clearly coordinated, before long overshadowed the parliament which—reflecting the steep decline of the political parties—was in fact reconstituted as a ‘Mutual Aid’ legislature on an appointive basis in 1960, its membership enlarged by several ‘functional’ groups, particularly the military. New and often unwieldy bodies with overlapping authorities and duties were rapidly added at the president’s behest and choosing, including the High Advisory Council and the People’s Provisional Consultative Assembly (both in fact provided for in the 1945 charter), as well as a National Planning Council, and for that matter a presidential cabinet comprising some 90 ministers. It was the Consultative Assembly (not the parliament), with a membership exceeding six hundred, that served as the nation’s de jure supreme body, empowered to elect the chief executive who, in turn, was accountable to it.

The smooth working of Guided Democracy did not, however, overly depend on the formal structural arrangements that appeared to be lacking in cohesion. Actual political power had been drained from the ten or so political parties still permitted to exist, with the partial exception of the Communist Party, whose massive organization constituted one of the real foci of political strength. It was paralleled and counterbalanced by the increasingly well-disciplined army, whose active participation in political and administrative matters had steadily grown as a result of internal disorder and foreign confrontations (with the Netherlands first, and the Federation of Malaysia thereafter). The army had also been the prime beneficiary of the nationalization of most foreign-owned enterprises, and of the dismantling of the political parties’ strength in the decentralized organs of local and regional government. At the apex of Guided Democracy stood the president, its founder and ideologue par excellence, invested with lifelong executive powers during the Consultative Assembly’s first session. By the early 1960s’ Indonesia’s military essentially moved ever closer to a highly personalized if not autocratic system of government. Yet while the president’s legal as well as extra-legal powers were very wide indeed, they were circumscribed less so formally than by the existence of other power factors.

A major political upheaval which started in October 1965 and whose causes and ramifications have remained partly obscured at the time of writing (mid-1960) may be expected to have profound effects on Indonesian government, even though the fragile constitutional framework of Guided Democracy has for the time being survived. One major result of these momentous events has been the decimation, if not the virtual destruction, of the Communist Party, achieved with the aid of militant Muslim groups. Another, though far less clearcut, result is a seeming diminution of the powers of the president, shorn of his lifetime incumbency by the fourth plenary session of the People’s Provisional Consultative Assembly. As of the mid-1960s’ the army appeared to be the major beneficiary of the political restructuring, to all appearances wielding power in a barely less authoritarian and centralized manner than that of the immediately preceding system. Whether political democracy could, or would, once again be grafted upon this old-new structure and whether, if once more attempted, it would strike stronger roots than before, must remain open questions.

Bibliography:

HULÁ, “ornaments, personal jewellery” [see Libás].

HÔLA, a town reported to be in Nadžd, Central Arabia. The description of this town published in EY, s.v., was apparently based only on a report by W. Palgrave (Central and Eastern Arabia, London 1885, 1, 361 and map). The name, of which there is no modern knowledge or historical record, is erroneous; Palgrave’s description may actually refer to al-Hawta [g.v.], a town to the north of Hula’s reported location. (J. MANDAVILLE)

AL-HÔLA, present-day name of the lake in Israel (35° 40’ E. and 33° 10’ N.), to the south of Mount Hermon not far from the sources of the Jordan, which flow into it. This lake, triangular in shape and 5-6 km. long, issues in the river Jordan at its southern extremity. It is 189 m. below sea-level and thus 256 metres above the level of the lake of Tiberias. Its water is fresh and it is famed for its fish and its aquatic birds. The plain which surrounds it, ard al-Hûla, was formerly a vast swamp covered with papyrus, reeds and giant water-lilies. The marshes in this basin are now almost all drained as a result of the widening and deepening of the bed of the Jordan. Thus the region now comprises
extensive areas of cultivation. But irrigation raises the problem of the distribution of the water among the adjacent countries. This lake has borne throughout the ages various names. The name al-Hula seems to derive from the Aramaean Oualatha, a place mentioned by Josephus. This name was used in 23 B.C. by Caesar, when he made over to Herod the inheritance of Zenodorus, consisting of Oualatha, Paneas and the surrounding region. Josephus calls the lake Semachonitis, and the Talmud Samachai. It is identified with the waters of Mesopotamia, where Joshua defined the arm of Japheth, King of Hazor (Joshua, XI, 5-7). Arabic writers sometimes refer such as al-Kaṭharshehni and Abu l-Fida (see). Sometimes it is reduced to the name of Lake of Baniyās (q.v.), probably because of its proximity to the town of this name. They also mention it under the name of Buhayrat Kadas, from the name of an ancient Hebrew town, the ruins of which are found on top of the mountain; Abu Shama refers to the lake as al-Mallaha (a place to the north-west possessing a good spring), a name also used by William of Tyre. There should also be mentioned the name of Babr al-Khayt, still in use by the local population today.

The names of al-Hula and Buhayrat Kadas have also been given to a lake situated between Hims and Tarabulus, which is often confused with the Palestine lake. It is the lake at Hims to which Abu l-Fida refers when he writes that in 584/1188 Salatī al-Dīn made his camp on the shores of the lake of Kadas; al-Dimashqī confuses the two localities: he refers to the lake of Kadas situated between Hims and Mount Lebanon and adds that the town of Kadas, which gave its name to the lake, was taken by Shurabgil b. Ḥasanā, whereas it was in fact the town in Galilee which the latter conquered.

HULAGÜ (Hulagu or rather Hulā'ū, the inter-vocalic ā being purely graphic), the Mongol conqueror and founder of the dynasty of the Il-Khāns (q.v.) of Persia, born ca. 1217, was the grandson of Čingiz-Khān (q.v.) by the latter's youngest son Toluy (q.v.). Sent by his brother the Great Khān Möngke at the head of an army against the Ismā'īlīs and the Caliph, he left Mongolia in the autumn of 1253, proceeding at a leisurely pace along the rivers for the easier passage of his forces. He delighted to live in north-western Adharbayjān, on the mountain; Abu Shama refers to the lake as the lake of Kadas situated between Hims and Mount Lebanon, was taken by Shurabgil b. Ḥasanā, whereas it was in fact the town in Galilee which the latter conquered.

HULAGÜ (Hulagu or rather Hule'ū, the inter-vocalic ā being purely graphic), the Mongol conqueror and founder of the dynasty of the Il-Khāns (q.v.) of Persia, born ca. 1217, was the grandson of Čingiz-Khān (q.v.) by the latter's youngest son Toluy (q.v.). Sent by his brother the Great Khān Möngke at the head of an army against the Ismā'īlīs and the Caliph, he left Mongolia in the autumn of 1253, proceeding at a leisurely pace along the rivers for the easier passage of his forces. In 23 B.C. he entered into the meadows of Kan-i Gul near Samarqand, where he remained till the beginning of the year November; and it was not till 1256 that he finally crossed the Oxus. Here he received the homage of most of the petty rulers of Persia and the Caucasus area; in the course of the year 1256 the greater part of the Ismā'īlī strongholds were taken without difficulty; on the fall of the dynasty see ALAMŪT, NIZĀRĪ. On 10 Muḥarram 656/17 January 1258 the Caliph's army was routed in a pitched battle; on 15 Muḥarram 656/22 January Hulagu in person sat down before Baghdad, which surrendered on 4 Safar/10 February; for details of the execution of the Caliph and the sacking of his capital see BAGDAD. An attempt made in 658/1260 to conquer Syria failed. Hulagu succeeded in taking Aleppo, and Damascus, deserted by its defenders, surrendered without a blow; but news of the death of the Great Khān caused him to return to Persia. The army he had left behind was destroyed by the Egyptians at ‘Ayn Djalūt (q.v.) in Palestine on 25 Ramadan 658/3 September 1260. On the unsuccessful war with the Golden Horde in 660/1262 see BERKE.

The petty kingdoms in Djazīra, Kurdistan and Asia Minor as well as the Christian territories south of the Caucasus were incorporated as vassal states in the kingdom founded by Hulagu so that his power stretched from the Oxus almost to the Mediterranean and from the Caucasus to the Indian Ocean. The sovereign took the title of Il-Khān ("subordinate khan") and he and his successors down to Ghazān Khān (q.v.) reigned in the name of the Great Khān in Mongolia (afterwards in China). The Christian element amongst his subjects was particularly favoured by Hulagu, and especially by his Christian wife Dokūz Khatun, often to the detriment of the Muslims. The towns destroyed during his wars were in part rebuilt even in Hulagu's time; he himself in times of peace delighted to live in north-western Aḏgharbayjān, particularly on the banks of Lake Urmīya, where many edifices, such as the famous observatory on a hill north of Marāḡa, a palace in Ala-Ṭagh, Buddhist temples in Khūy, etc. were constructed. He restored a strong castle (on the earlier fortification of Yākūt, i, 513) on the mountainous island of Shāhī (now Shaḩī). The remains still survive, according to the archaeologist E. F. Schmidt, “on the almost inaccessible summit of a great rock rising a thousand feet above the shore of the island.” Here he kept the treasures won in battle in Persia and elsewhere, and here was the burial place both of Hulagu himself and of his successor Abākā. Hulagu died on 19 Rabi` II 662/Februay 1265. In accordance with the Mongol custom several beautiful young women were buried with him; this is the last occasion on which human victims are mentioned in connection with the funeral of a Čingizid prince.

(H. BARTHOLOM.-J. A. BOYLE)

HULAGŪ, a Mongol noble of Lāhwār (Lahore), whose brief rise to power in that city in about 735/1335 was symptomatic of the general resentment felt at Muhammad b. Tughūk's rule. When the sultan had left Dīhil for the south of India to put down the
rebellion of Djalal al-Din Ahsan [q.v.] Hulagu lolled Tatar Khan, governor of Lahawr, appointed Gul rebellion of Djalal al-Din Ahsan Tatar Khan, governor of Lahawr, appointed Gul rebels were sent to imprisonment at Gwaliyar the rebellion must have been on a considerable scale. put down the rebellion; since 300 widows of the Khwazlr his independence. On the news reaching Dihli, the Khilafah Hulagu called the rebel Hulajw and his minister Kuldj. and in connexion with this they believe in the transmission of spirits, intihal. With reference to Sura XV, 29, f. they believe that God is embodied in every beautiful being and they therefore make sufjud before a pretty form. This point is mentioned, without names, by al-Ash'ari (d. 327/938) in Makdad al-Islamiyin (ed. Ritter, Bibl. Isl., 1929, 214), and by Mutahhar al-Makdisi, K. al-Badwa 'l-tarikh; ii (composed 355/966), ed. Cl. Huart, Paris 1901, 91 (text) and 81 (tr.). (2) They feel themselves, by their professed knowledge of God, relieved of all prohibitions and thus advocate licentiousness. Hugdjiwiri says that they are connected with "the Sâlimi sect of anthromorphists". These formed a philosophical madkhab in Baqra in the 3rd/9th century. Ibn Sâlim professed God's continued creation, for instance in the voices of reciters of the Kur'an, and he had the idea that God 'on the Day of Judgment will appear in a corporeal human shape, visible to the human eye. There may be some connection on this point, but the pretended tendency to ibâha of the Hulmîyana does not harmonize with the earnest asceticism of Ibn Sâlim and Abu Tâlib al-Makki, who calls him "our shaykh" (Kût al-kulbul, Cairo 1322, ii, 172, i1, 12-35) and who writes in his spirit. Al-Makki does not mention Abu Hulmán, nor does al-Qâzáli, but he concerns himself with the ideas of the Hulmîyana and refutes their works. Thus, in Ihyâ 'ulâm al-din, iv, 218 f. (ed. Cairo 1922) he condemns people who claim to appropriate to themselves divine character and the embodiment thereof through huqul, whereas God has reserved the perfect beauty for Himself. In al-Muhsid al-ansa (Cairo 1322, 110, 114 f.) al-Qâzáli speaks of sûfs who pretend to borrow (isti'âra) God's names and sifât and thus imply huqul. And in Mughbât al-anwâr (Cairo 1922, 51) we find the interesting remark that the idea of God's manifestation in everything of beauty, be it in man, animal or plant, to which the believers make sufjud as to their gods, is to be found among "the farthest Turks who have no religion and no shar'id". Bibliography: Abd al-Kâhir al-Baghîdâdi, K. al-Farîk bayna 'l-turk, Cairo 1328/1910, 215, 247, 245 f.; Hugdjiwiri, Kâtib al-albâbîn, trans. Nicholson, London 1936, 131, 260; L. Massignon, Al-Hallaj, i, Paris 1922, 362; idem, K. al-Tawâdûn, Paris 1913, 171. HULUL signifies etymologically, among other things, the act of loosing, of unfastening, of untying, or with bi or fi, of alighting at a place. Hence its various meanings in the Muslim religious sciences and in falsafa.

In grammar, *hulul* denotes the occurrence of the accident of inflexion (*ittihād*); (2) in law it denotes the application of a prescription; (3) in Hellenistic philosophy (*falsafa*). It denotes: (a) the inhesion of an accident in an object (*ma'addān*); cf. A.-M. Goichon, *Lexique de la langue philosophique d’ Ibn Sīnā*, Paris 1938, nos. 179 and 184; (b) the substantial union of soul and body: *hulul* al-rūḥ fi ’l-badan (al-Fārābī, *Āl al-madānah al-fajlīa*, Cairo 1906, 80); *hulul* al-lāhāl fi l-nūṣlīrāl (*cf. al-Hallāj*); (4) in theology (*kalām*), and mysticism (*taťawwul*), *hulul* expresses "infusion", the indwelling of God in a creature (see further *inma*, *tašāsuh*); it is often a synonym for *ittihād*. (q.v.).

The upholders of atomism, together with al-Ashʿarī, admit the *hulul* of soul in body because they consider the *rūḥ* (the soul) to be a rarefied body, even in the case of angels and demons; but, like the other mutakallimūn, they reject *hulul* in meaning (4).

Muslim authors give various descriptive definitions (*rusūm*) of *hulul*. For some it is the appropriation of one thing by another, or the "infusion" of one thing into another, such that when one is described the other is also described, whether this identification be as the "infusion" of sciences in intellectual beings. The following definition is also found: *al-* *hulul* is qualifying appropriation (*al-tibbātās al-'nādīd*), that is to say the appropriate dependence of two terms which makes one the qualifier and the other the thing qualified. The first is called *al-* *hāl* or the second *al-* *mahāl*. An example is the dependence of the whiteness that covers a body. Finally, *hulul* has also been defined as the existence of one thing in another in a dependent fashion (*al-* *hulul* *al-* *ālāt saḥīl al- tabāsīyya*), a definition that is virtually equivalent to the preceding one.

Two kinds of *hulul* are distinguished: (1) one extensive (*al-* *hulul* al- *saraydīn*) when the infuser (*al-* *hāl*) spreads to all parts of the receptive object (for example, the water rising in the stem of a flower); (2) the other generalized (*al-* *hulul* al- *nalāzīn*) or divided (*al-* *hulul* al- *usṭ-radius*). The "infusion" stands as an equivalent to "inhesion", or metaphorical "inhesion". The following definition is also found: *al-* *hulul* is qualifying appropriation (*al-* *tibbātās al-* *nādīd*), that is to say the appropriate dependence of two terms which makes one the qualifier and the other the thing qualified. The first is called *al-* *hāl* or the second *al-* *mahāl*. An example is the dependence of the whiteness that covers a body. Finally, *hulul* has also been defined as the existence of one thing in another in a dependent fashion (*al-* *hulul* *al-* *ālāt saḥīl al- tabāsīyya*), a definition that is virtually equivalent to the preceding one.

Two kinds of *hulul* are distinguished: (1) one extensive (*al-* *hulul* al- *saraydīn*) when the infuser (*al-* *hāl*) spreads to all parts of the receptive object (for example, the water rising in the stem of a flower); (2) the other localized (*al-* *hulul* al- *nalāzīn*) or divided (*al-* *hulul* al- *usṭ-radius*). The "infusion" stands as an equivalent to "inhesion", or metaphorical "inhesion". The following definition is also found: *al-* *hulul* is qualifying appropriation (*al-* *tibbātās al-* *nādīd*), that is to say the appropriate dependence of two terms which makes one the qualifier and the other the thing qualified. The first is called *al-* *hāl* or the second *al-* *mahāl*. An example is the dependence of the whiteness that covers a body. Finally, *hulul* has also been defined as the existence of one thing in another in a dependent fashion (*al-* *hulul* *al-* *ālāt saḥīl al- tabāsīyya*), a definition that is virtually equivalent to the preceding one.

These various precise definitions have enabled Muslim theologians to refute the idea of God's *hulul* in creatures: (1) such a *hulul* would exclude absolute necessity in God; (2) it would involve the existence of two eternals (God and the receptive object); (3) (God) would become divisible through the division of the receptive object, unless the latter were reduced to an atom, which is unworthy of God.

We see in al-Djurjānī-Tāštāzānī (*Sharḥ al-mawābih*, second marāṣid of the *ilāhiyyāt*, fifih *mahṣad*) how the upholders of *hulul* are classed: (1) the Christians (according to their various positions); (2) the Nusayris and the Igrākāriyya; (3) certain Sophists whose doctrines lie between *ittihād* and *hulul*. Their position, says al-Tāštāzānī, comes round again to that of the Christians.

Muslim authors normally call the Christian doctrine of the Incarnation *hulul*, although Christian authors speak of *taʻannus*, *tajaddud*, and also of *ittihād*. They sometimes use the verb *halla* to say that the Word "descended" into a human nature, or to speak of the descent of the Holy Spirit.

The Sunnis and Shiʿīs condemn the following sects as *hululīyya*, on the same grounds as the Christians: (a) the extreme Shiʿīs (*ghulūd*): Sabāʾīyya, Bayānīyya, Dījānīyya, Khattāṭīyya, Namūnīyya (*Nuṣayriyya, Mukanīyya, Rūzāmīyya, Bātīmīyya, *ʿAzākūra, Druses); (b) Sunni Ṣufis: Ḥusnīyya, Fārsīyya, *ṣīḥat al-ḥulul* (*cf. al-Hallāj*), Shabbāṣīyya; (c) Monists: *Itti- bādīyya* (Ibn Taymiyya refers to their *wāḥdāt al- wudūjād as *hulul* *muṣāb*); cf. *tajaddud al-ʾamāl* according to al-Fargānī, *Munāha l-madārīh*, Cairo 1293, ii, 84-6; cf. *Ibn al-ʿArabī*.

(L. Massignon-[G. C. Amawati])

**HULWĀN**, in Greek Ὠλών, a very ancient town which was situated near the entrance to the Pay- tak pass through the Zagros range, on the famous Khūrāsān highway. Its site has been identified with that of the present-day village of Sar-i Pul-i Duhūbā, which is 33 km. east by south of Kaṣīr-i ʿShīrīn (q.v.) (see H. C. Rawlinson, *Notes on a march from Zohāb to Khudūd*, in *JRS*, London, ix (1890), 46, and the *Guide Bleu, Moyen Orient*, Paris 1956, 605).

In Assyrian times the town was known as Khalman. In those days the town was situated on the natural frontier between Babylonia and Media (see Ritter, *Erkunde*, ix, 388). According to an Arab tradition quoted by al-Ṭabarī (see Nöldeke, *Geschichte der Perser und Araber*, 138), the town was founded by the Sāsānian monarch Kavādh (d. 531), but it is clearly far more ancient than that. From other Muslim sources it would seem that Kavadh established a land survey office in Hulwān, and that registers were kept there until after the Muslim conquest of *Aramey* (A. K. S. Lambton, *Landlord and peasant in Persia*, London 1953, 15, n. 3; cf. Dāfarī, 78a).

After the great victory of the Muslim Arabs at al-Кāsīdiyya (q.v.) in 616 and the subsequent evacuation of Ctesiphon by the Sāsānian court, al-Mādrīdī returned to Hulwān for a time, before continuing his eastward flight. Hulwān fell into the hands of the advancing Arabs. Hulwān then and for some time after was a flourishing town in a fertile district producing much fruit. The town was surrounded by a wall which had 8 gates; the principal mosque was in the centre, inside an ancient castle. The Jews had a synagogue there. Towards the end of the 4th/early 11th century, Hulwān was ruled by a quasi-independent dynasty which had been founded by Muhammad ibn ʿAnnāz and it became very well known under his son Abu ʿl-Šawāk [see *Annāzīds*]. The anonymous author of the *Hudūd al-ʾAjlām* (139) described Hulwān as "a very pleasant town, traversed by a river. It produces figs which are dried and exported everywhere".

Hulwān was taken by the Saljuqs in 347/1056, who set it on fire; its destruction was completed by an earthquake 3 years later. It was subsequently
HULWAN — HUMAM AL-DIN B. ‘ALÂ‘ TABRIZI
rebuilt on a smaller scale and it is now known as Sar-i Pul-i Dhuhab.

(L. LOCKHART)

HULWAN, town situated twenty five kilometres south of Cairo, four kilometres from the right bank of the Nile and approximately 35 metres above bank level. Hulwan is linked by road and rail with Cairo and is a rapidly growing industrial complex, containing a large steel works and the electricity generating plant for south Cairo. At the 1990 census, its inhabitants numbered about 95,000.

Historically, Hulwan derives its fame from its mineral springs. It would appear that the site was settled in Pharaonic times, for during the excavations of 1946 graves and pottery dating from the First Dynasty were uncovered; remains of Roman baths were also discovered. However, it was not until the period following the Arab conquest and the governorship of Abd al-Aziz Ibn Marwan that substantial settlement occurred upon the site. According to al-Maqrizi, when ‘Abd al-Aziz Ibn Marwan was forced to evacuate Fustat during the disastrous flood of the year 70/690, he moved south towards what is now Hulwan. The position pleased him, possibly because of its proximity to Fustat and its being above the level of the Nile flood. He set up his residence there, built palaces and mosques and planted palm gardens and vineyards. He also ordered the construction of a niometer; this was replaced by the niometer constructed on the island of Rawda in 967/975.

During the governorship of ‘Abd al-Aziz Ibn Marwan, Hulwan continued to prosper and its fame was celebrated in verse by the poet Ibn Kays al-Rukayyat. After Umayyad times, its position declined and, by the Mamluk period, the palaces and mosques had disappeared and the source of the mineral springs had become filled with sand. During the reign of the Khedive Abbas, the springs were uncovered and a centre was established at Hulwan for the treatment of soldiers suffering from skin diseases and rheumatism. Under Isma’îl and Tawfîk, Hulwan continued to grow and Isma’îl built there a palace for his mother (Kawar al-Wâlida). Baths were built near the springs in 1860 and, as the construction progressed, the remains of the Umayyad baths were discovered. The present baths were completed in 1892. On the banks of the Nile, adjacent to Hulwan, King Farouk (Faruk) built for himself a summer residence; this was subsequently known as Ru’kn Hulwan and became a museum and public park.

(J. M. B. JONES)

HULWAN, “douceur”, “donative” [see in ‘AM‘, MÃL AL-BAY‘A‘, FISKÂRA‘.

HUMÁ’(v.), the bearded vulture (Gypaetus barbatus), the largest of the birds of prey of the Old World, which is usually found in the regions of perpetual snow; it carries off the bones of dead animals, breaks on rocks and eats the fragments, which led the Persian poet Sa’dî to say that the humá‘ was superior to all the other birds because instead of feeding on living flesh it ate only bones (Gulistân, i, story 15). It was thought that anyone who intentionally killed a humá‘ would die within forty days. That this bird was considered to be of good omen is illustrated by another verse of the Gulistân (i, story 3): “Nobody will go to seek for the shadow of the owl, even if there were no humá‘ in the world”; it was believed in the ancient world that the shadow of the humá‘ falling on a person’s head predicted his elevation to royalty: thus this verse of the Bûsûdân (ed. Furughi, 26, v. 15): “I wished that, thanks to my fortunate star, the wing of the humá‘ would be spread out over my head”. Hence the epithet humâ‘yân (lit. meaning “august, royal, fortunate, of good omen”), and humâ‘y with the same meaning, which has become a proper name: e.g., Humâ‘y, the mobâd’ of Bahram Gûr, and Humâ‘y, daughter of Gushasp (Wolff, Glossar, s.v.). Humâ‘y, sister of the hero Isfandiyâr (Shâh-nâmâ, Tehran 1935, vi, 1613-4, v. 2077; tr. Mohl, iv, 428), Humâ‘y (Ar. Humâ‘yâ), daughter and wife of Bahman (Araxetxes) son of Isfandiyâr and daughter of Dârâb (Tehrân ed., vi, 1755 f.; tr. Mohl, v, xi-16; see Dârâb). Humâ‘y is the name of the prince of Zaminî ‘Alav and Humâ‘yân that of the princess of China in the verse romance by Khâdîjî Kîrmânî [see Kîrmânî]. The humá‘ is mentioned several times in Firdawsi’s Book of kings: the royal crown is sometimes ornamented with humâ‘ feathers; a steed seems like a humá‘ in full flight; the wings of the humá‘ cover a fortress with their shadow; a place is so terrifying that even the humá‘ is afraid to fly over it (for other examples, see Wolff, s.v.); in short, the poet makes use of the humá‘ to create striking images, but does not attribute to it the magical powers which he gives to the simârîg [s.v.]. On the statement of the Fihrist that the Thousand and one nights were written for the queen Humâ‘y, daughter of Bahman, see ALF LAYLA WA-LAYLA, col. 561a.

HUMÂN B. YÚSUF [see HAWWÂRA (Egypt and the Sudan)],

HUMÂN AL-DIN B. ‘ALÂ‘ TABRIZI, Persian poet of the Mongol period who was for some time vizier of Ardashîrâyûn. He was held in great esteem by contemporary men of standing such as Rashîd al-Din Fa‘îl Allâh and Shâms al-Din Muhammad Djwuwânî, the Safîb-Dawwân. In 866/1492-3 he accompanied the latter to Rûm for the sequestration of the property of the Pârâmîn Mu‘în al-Din—an event to which he alludes in his poems. Towards the end of his life he became the disciple of Shaykh Sa’îd Farghânî, and after performing the hajj, retired to the khânâbâh in which he had founded at Tabrîz with some financial assistance from the Safîb-Dawwân. Several sources state that he died in 713/1313-4 but in the Mudjam al-Yâsîbî it is mentioned that his death took place in 714/1314-5 at the age of 116. His poems were collected on the instructions of Rashîd al-Din Fa‘îl Allâh and edited posthumously with a preface in which he alludes at the age of his death was given as 78. He was buried in his khânâbâh at Tabrîz.

Humân has left a Dvin of 2,000 verses including some Arabic kasidahs in praise of Nadîm al-Din ‘Abd al-Ghaffâr, the Kâdî al-Kudât Mu‘în al-Din, Shaykh Ibrâhîm b. Sa‘îd al-Din Hamawi, Kutb al-Din Shirazi, and the Safîb-Dawwân. Some of his Persian poems are in praise of Ghâzân Khan. His kasâsals,
though elegant enough, show no outstanding originality but imitate for the most part the style of Sa’di. In nearly all the biographical notices of Humayd, his meeting with Sa’di is mentioned but there is no evidence for this in the works of either poet. One of his qasids appears to have been plagiarized by Sa’di and many of his poems are responses to a single bayt of Sa’di.

In addition to āsadīs and qasids, Humayd wrote a mystical mathnawi in the Ḥasaṣī metre entitled Suhbat-nama. This was dedicated to Sharaf al-Dīn Hūrūn, the son of the Ṣāḥib-Dīwān. R. S. Brown, iii, 152-4; Dawlat-shāh, 228-9; Muḥṣīl al-Faṣṣīḥ (ed. Farrukh), 22; Muḥammad ‘All Tariyābī, Dānṣīngīmān-dī Aḏāḥārādyādīn (Tehran 1314/1935-6 edition), 396-8 (containing an extract from the Suhbat-nama); ʿUṯlī All Bī Ṣāḥār, ʿAṣīghāda (ed. Nasīrī), 145-6; Rīdā Ḥūlī Ḥūyādī, Muḥṣīl al-Faṣṣīḥ (Tehran 1340/1961-2 edition), iii, 1449.

Selections from the Dīwān have been twice published: (a) Manṭūhkhirāt (Tehran 1309/1991-3). (b) Dīwān-ī Humayd al-Dīwān Tābīrī (ed. Muḥāyīyād Thāḥbīṭī, Tehran 1333/1954-5).

(G. M. Meredith-Owens)

HUMAYD, HUMAYA [see HUMA].

HUMAYD B. ‘ABD AL-HAMĪD AL-ŪTĪSĪ, ‘Abbāsīd general who was chiefly responsible for the victory of al-Maʿmūn over Ibrāhīm b. al-Mahdī; he died, poisoned, in 1210/825. His generosity and his magnificence were celebrated by al-Dīwān. Several poems, in particular by All b. Djiyābāla [see al-Sakawuk]. His sons, themselves poets though producing little [see Fihrist, Cairo ed. 235], became in their turn patrons, eulogized in particular by Abū Tammān al-Muḥṣīl and Abū Ṣulṭān al-Ṣadīq. Muḥammad b. Humayd, sent against Bābak [q.v.] and killed in 214/829, was lamented by Abū Tammān, over whose tomb his brother Abū Ṣulṭān erected a cupola; al-Ṣuṭluri dedicated to this Abū Ṣulṭān fifteen poems and also wrote panegyrics on his brothers Abū Ḍafār and Abū Ṣulṭān Musīl.

Bibliography: Dāhīz, Ḥayawān, vi, 421; idem, Rasālīn, ed. Ḥārūn, index; Ibn Kutayba, Muʿārif, index; idem, Shīr, ed. de Goeje, 550-2 (Cairo ed., 840-53); Ṣabārī, index; Aḥqāfīn, xviii, 100-14, passim.

HUMAYD B. THĀWĀR, AL-HILĀLĪ, Arabic poet of the 1st/7th century. Asmāʿī [Ibn] ‘Asākir, Taʿrīḥ Dimashq, iv, 457 calls him a poet of (early) Islamic times, whose language is correct, but he does not consider him a classic. Marzūbān [Muṣawwīshbāb, 80], Diṣmāḥil (Ṭabaḥāl, 113) and Ibn Kutayba [Shīr, 230] call him ilmām. Amongst his poems is a dirge on the murder of Uṯmān [Ibn] ‘Asākir, 458 and verses addressed to the caliph Marwān. Later authorities, however, thought that he was a companion of the Prophet and died in the reign of Uṯmān.

His poems (shīrīn) were collected by al-Asmāʿī, Abū ‘Amīr, al-Shāybaṇī, Ibn al-Sūkkaṭī, al-Ṭūsī and al-Sūkkaṭī [Fihrist, 158, 7; see also Kālī, i, 252/48 and 133]; they were still in the hands of Baṭrayawī [Ṭabaḥāl, 475, 1]. Ibn Ṣabīr [Fihrist, 397, 19] and even Abū al-Kādīr [Khizdān, i, 9] of al-Dabī, as well as a number of his poems were lost. Ibn al-Shaḍyārī, Hamāsa, 207, of the sandgrouse (kāṭā, Aḥqāfīn, vii, 159 = Aḥqāfīn, viii, 260; ʿAynī, i, 178) and of the dove (Yikūṭ, Geogr. Wtb., iv, 1006 f.).

Bibliography: In the article. His Dīwān was published by Abū al-ʿAzīz al-Maymānī, Cairo 1951. (J. W. FīcK)

HUMAYD AL-ARŷz, an Arab poet of the middle Umayyad period. Little is known of his life besides what can be gathered from his verses. His lifetime is fixed approximately by his poems in praise of al-Ḥadīḏādī; one of them [Bakrī, Sīm al-ʿalādīl, 649] in which he ridicules Abū ʿAlāb al-Bī Ṣabāḥy [q.v.] must have been composed during the siege of Mecca in 72/692-2. Another poem [Ṭabhārī, ii, 1139] refers to the war of al-Ḥadīḏādī against Ibn al-ʿAṣībīn and was therefore written somewhere between this date and 85 A.H. (cf. al-Fīrāsīb Muḥārīm, ii, 326). He is also credited with a satire [hīḏāyā] against al-Ḥadīḏādī (Bayhaki, Maḥāsīn, 394) but this seems unlikely. His poems were collected by al-Asmāʿī, Abū ʿAmīr al-Shāybaṇī, Ibn al-Sīkktī and al-Ṭūsī [Fihrist, 158]. His Dīwān was still in the hands of Ibn al-Mustawīfī [Khizdān, ii, 253]. Humayd was famous for his skill in writing ṣaṣāṣā poetry. He is reckoned by the Muslim critics amongst the best ṣaṣāṣā poets. Bayhaki was a forerunner of al-ʿAdīḏādī and Ṣubīn. His verses are not promptums but carefully composed poems which deal with all subjects typical of Arabic poetry. He describes, e.g., a horse (Mubarrad, Kāmil, 495), a hunting scene (Hamāsa, 793), a wild ass (Ibn al-Sīkktī, Manṭīk, 291), a lover's complaint (ibid. 496). There are some verses, referring to Sūra CV and the story of the Elephant, but they are also attributed to Thāwār (no. 77 Abīwardī). He also composed poems in other metres than ṣaṣāṣā (though some of them are also attributed to Humayd b. Thawr, Lane, i, 2112). Amongst them are two (Maydānī, i, 427 and Aynī, ii, 82) in which he blames a greedy guest. This conduct which ran counter to all canons of Bedouin hospitality led to Humayd's being counted as one of the world's greatest misers (Aḥqāfīn, ii, 163). Sometimes he is confused with his namesake Humayd b. Thawr [q.v.].

Bibliography: in the article. (J. W. FīcK)

AL-HUMAYDĪ, Abū ʿAbd Allāh Muḥammad b. Abū Naṣr Futūbī b. Abū Allāh b. Futūbī b. Humaydī b. Yāsur, Andalusian scholar of Arab origin. His family belonged to the Yemeni tribe of Asd. His father was born in al-Rūṣāfā, a suburb of Cordova, but moved to Majorca, where this son of his was born about 420/1029. Abū Ṣulṭān [Ṭabaḥāl, ii, 82] refers to the war of al-Ḥadīḏādī against Ibn al-ʿAṣībīn and became one of the most admired scholars of his age. His biographer al-Dabī and the latter's continuator al-Dhahabi, as well as al-Maḳkālī praise him in the most warm terms as a jurisconsult, traditionist, historian and poet, but the only work by him which we know, the Dhīḥāwī al-muḥāχībīs fi ḥīḏāyā wa-l-ṣaṣāṣā ṣaṣāṣā wa-l-kāṭā al-ḥadīḏādī, 207, of the sandgrouse (kāṭā, Aḥqāfīn, vii, 159 = Aḥqāfīn, viii, 260; ʿAynī, i, 178) and of the dove (Yikūṭ, Geogr. Wtb., iv, 1006 f.).
his teaching, one might have expected a better book, but since he wrote it to please his admirers at Bagh-
dād, who wished to know the state of letters in Spain, he relaxed upon his memory without having his
hand reference works which might have helped him in his task. It is therefore not a matter for astonish-
ment that the book contains many inexactitudes and is lacking in truly interesting information. In his dates he is content with approximations, which have been the
cause of some confusion and even of serious errors in some cases. For the rest, as Dozy says in a severe
judgement, he may be credited with a certain impartiality as an honest man; but nothing more, for his
mind did not rise above the commonplace.

AL-HUMAYMA, ruined site in Jordan, situated in Ṣn N. and about 35° 20’ E., some 50 km.

south-east of the town of Ma’ān, halfway between there and the gulf of Ṣāba. This place, mentioned by the Arab geographers as belonging to the djiand of Dimashq and to the region of al-Sharāt, is famous in history chiefly as

having been used as a residence by the Abbasid claimants of the secret revolutionary movement of which he

was the leading spirit. There he is said to have bought the “village” and built a fortified dwelling. It was there also that in the

Kādirī period an extension was obtained through the use of the yā-yi muṣhābī: darbār-i

humaymān (the royal court), al’lā sadrāt-i humaymān (the royal majesty). In recent years the epitaph has become obsolete. The Shāh is referred to now as

S̱hāhanshāh-i ārya-мīr.

With the spread of Persian culture and especially Persian chancery practice, the concept already in the

Seldjūk period reached Asia Minor and in the Timurid period, with the Mughal rulers, as far as India.

In India the word was used to about the same extent as under the Șafavīds. In Asia Minor, among the

Seldjūks of Rum, it seems to have remained confined to introductory or concluding formulas in the

various types of documents), and mahri-i humaymān (royal real). In addition there continued to appear

terms like hukm-i shāhānmat (a command, which the [whole] world obeys). In the 10th/16th century the

epitaph was transferred also to the person of the

ruler: naswābi-i humaymān-i mā (our Royal Highness).

Humaymān referred also simply to the state, in the

designation of the administration of the state- and crown-lands as dastar-hānya-i humaymān wa ḫāsā.

In the Kadjar period an extension was obtained through the use of the yā-yi muṣhābī: darbār-i

humaymān (the royal court), al’lā sadrāt-i humaymān (the royal majesty). In recent years the epitaph has

become obsolete. The Shāh is referred to now as

S̱hāhanshāh-i ārya-мīr.
in the introductory formulas of documents: hukm-i humayûn shud (besides hukm-i cdli sddir shud) and in addition in combinations such as farâmin-i humayûn in the adhkarî and, as among the Kâdhârî, farâmin-yi humâynâni.

Etyologically humayûn is obviously connected with the Avestan mâyûd (joy, delight, happiness, blessing) and hu-mâyûd (blessed). This basic meaning has been retained also by the modern Persian humâyn, as is clear from the above-mentioned interchangeability with maymûn. In addition, already in the Safavid period the word was connected with humâ (phoenix, royal eagle). Thus Sebastian Beck in his grammar gives the definition humâynâni “Phönixgleichheit, die kaiserliche Majestät”.

(H. Busse)

**HUMAYûN, Nâsr al-Dîn HUMAYûN PADÎGHâH,** posthumously called Dânînât âghîyânî, eldest surviving son of Zahir al-Dîn Muhammad Babur, posthumously called Diânat Ashiyani, eldest surviving son of Zahir al-Dîn Muhammad Babur, declared himself emperor in 937/1531 subdued the Radja of Kalindjar, besieged Sher Khan at Cînaf in 938/1532. He then advancing from Bihar, led by Bayazid and conducted a campaign against the Afghans and Hindus in Eastern India. He took, in a race to capture Agra. After one year in Agra he set out in Safar 944/July 1537 to combat the growing power of Sher Khan Sîr in Eastern India. He took, leaving Gudîrûd in charge of `Askari, who abandoned it around May 1536, but was forestalled by Humayûn in a race to capture Agra. After one year in Agra he returned to Agra again. Humayûn barely escaped drowning and fled by Dîu. Humayûn entered Bengal by Gâtî, while Sher Khan escaped by Dîhârkand. In Humayûn’s absence in Agra, Hindâl assumed sovereignty in Agra, at which Humayûn set out from Gâtî in Bengal. Sher Khan blockaded Humayûn’s return to Chausa on the south bank of the Ganges. Kamrân then advanced from Lahore and displaced Hindâl at Agra, at which Humayûn negotiated peace with Sher Khan: but Sher Khan then attacked his unprepared army, routed it and drove it into the river on 9 Safar 946/26 June 1539. Humayûn barely escaped drowning and hastened to Agra with a few horsemen. He remained there about six months negotiating with his brothers. Kamrân retreated to Lahore, depriving him of many men, while Shâh Shâh (Sher Khan) advanced from Lahore to Diu. Sher Khan advanced to Kannawdi, near which after a month’s confrontation his forces were defeated and driven into the river on 10 Mubârram 947/1 May 1540. Humayûn once more narrowly escaped drowning and fled through Agra to Lahore, where a council of the royal princes and Caghâtâi Begs was held. Cross the River at `Shâh Shâh’s approach, Kamrân with `Askari took the road for Kâbul and Humayûn turned towards Sind, with whose ruler, Shâh Husâyyn Arghûn, he negotiated from Bhakkar in 948. In Radjab 948 he besieged Sehwan, but was harassed by Shâh Husâyyn, who induced Humayûn’s cousin, Yâdgâr Nâsr, with many soldiers, to desert him. Humayûn then retired by Dîojâs almer to Dîodhpur and then to Ameerqut, the Râna of which offered hospitality. There he by Bayazid May 1540, when 13 October 1542 his son Akbar [q.v.] was born. Humayûn then moved to Dîn, where he passed 6-9 months in desultory hostilities with the Arghûn ruler. In Radjab II 950/July 1543, with camels provided by the Arghûns, Humayûn set out for Kandahâr, but `Askari secured the town against him, and Humayûn travelled westwards to Sistân, narrowly escaping capture and obliged to seek the hospitality of Shâh Tâhâmrâs.
The year 951/1544 was passed in Iran. He was given a princely reception at Herat, and travelled by Mashhad over to Tabriz. Humayun, who joined Shah Tahmasp at his summer camp, in Djumad II 951/August 1544. Humayun gave Tahmasp his great diamond and was forced to sign papers professing Shi'ism. He was treated with alternate hospitality and coldness and remained with the Shah about 2 months. When he left, 12,000 Persian troops accompanied him to aid him. He visited Tabriz and Ardabil, and returned to Mashhad in Ramadan/Dekhad 951. From Mashhad he joined Humayun in October 954. In Djumad II/September 951 Askari surrendered the town, which was occupied by his Persian auxiliaries, but taken from them by Humayun one month later. He then marched on Kabul, taken from Kâmrân without a struggle in Ramadan 952/November 1545. Next spring he marched on Badakhshan, and in the autumn fell ill there, which led to a wavering of allegiance. Humayun then concluded peace with Sulayman Mirza and marched to Kabul with the Shah. A felicitous change occurred in midwinter. Kâmrân, who had reoccupied the town with Arghun assistance, fled in April to seek aid from the Ozbeks. Humayun was detained by dissensions among the Mughal nobles till June 1548, when he went to combat Kâmrân in Badakhshan. On 12 Rajab 950/17 August 1548 Kâmrân submitted, and Humayun returned to Kabul in October. In spring 956/1549 Humayun set out against Pir Mu'âmmad Khan, but retreated after an indecisive stand outside Balkh and was himself attacked by the Ozbeks. He reached Kabul in Ramadan 956/September 1549. In Djumâd II 957/June or July 1550 Humayun set out by Ghûrband against the still rebellious Kâmrân, but was routed and wounded at the Kîpçe Peninsula. Kâmrân surrendered to Humayun; Humayun regrouped his forces at Andarab, defeated Kâmrân within two months at Uglytargarm, and made his third victorious entry into Kabul. In 958/1553 Humayun marched out against Kâmrân, now in alliance with Afghan tribes. On 21 Dhul Qa'da/21 November, Hindal, the most loyal of Humayun's brothers, was killed in a night attack. In spring 1552 Humayun defeated the Afghan tribes, and Kâmrân fled to India. Kâmrân was killed by his Sultan, M. Sakkar. Humayun and, on the insistence advice of the Begs, blinded, probably in Ramadan 960/August 1553. From this Humayun finally achieved ascendency over the resources of his family.

In Dhul Qa'da 959/November 1552 Humayun advanced to Bangash, and in 960/1553 beyond the Indus. He then prepared for Kabul for the invasion of Hindûstân, but was diverted to Kandahar in an unfounded report of Bayram Beg's disloyalty and passed the winter of 960-1/1553-4 there. In Dhul Qa'da 961/October 1554 he reached Kabul again, and in November set out for Hindûstân. In December he crossed the Indus and in Rabî I 962/February 1555 entered Lahore. After an earlier success at Dipâlpûr, on 28 May Humayun's greatly outnumbered forces met the main body of Sikandar Shâh Sûr's army at Sarhind, and on 2 Shasba 962/22 June 1555 decisively defeated it. On 4 Ramadan/23 July Humayun entered Delhi and sat on the throne. On 7 Rabî I 963/January 1556, Humayun, who had gone to the roof of his library to observe the rising of Venus, while kneeling to the evening call of prayer, fell down the staircase and died of his injuries, on 13-14 Rabî I 16-7 January.

Humayun inherited no stable administrative system over the conquests in Hindûstân, and a family tradition of divided territorial inheritances. His 22 years of rule were a long struggle against his family, most of all Kamran, as well as external enemies, and in this he was often reduced to extremities. He lacked the strategic genius of his father, and in his early periods of success sometimes fell into heedless lassitude and opium-eating. His career, like Babur's, is a series of military adventures in different geographical areas, outside which he seldom succeeded in maintaining his control. After his Persian exile he showed a new resolution, and he had the courage and sagacity to keep the valuable final victory and to a conquest which survived his son Akbar's minority. In his later years he was a humane monarch and was devoid of sectarian intolerance. He was a keen patron of mathematics and astronomy, wrote Persian verse, and carried books on the roughest of his travels.

Bibliography: Four contemporary production (nos. 6, 7, 8 and 9 below) shed incidental light on Humayun's reign, but the chronicles of it were produced a quarter of a century or more after his death, and half a century after his accession. The record of his early years of rule in India is sketchy and there are difficulties of chronology, some discussed by Hodivala and by S. Ray (see below). The most copious source and official biography is (1) the Akbar-nâma of Abu 'l-Faḍl 'Allâmi, ed. M. Āṣâ Ahmad 'All and M. Abd al-Rahîm, Bibliotheca Indica, Calcutta 1877; English translation by H. Beveridge, Bibli. Ind., Calcutta 1897. The compiler was not one of the Central Asian nobility who had accompanied Humayun and he occasionally misunderstands information he has gathered. Next in importance are three memoirs compiled by those in close contact with Humayun, when the materials for (1) were being collected, ca. 1587 A.D.—(2) Humayun-nâma of Gulbadan Begam, ed. with Eng. tr. Mrs. A. S. Beveridge, Oriental Translation Fund, N.S., London 1902; (3) Tadbîkha-yi Humayun wa-Akbar, ed. M. Hidayat Husayn, Bibl. Ind., Calcutta 1941; translations by W. Erskine, British Museum MS, Add. 26,610: partial by B. P. Saxena, in Allahabad University Studies, ii/1 (1930), 71-148 and (1939), 1-84; (4) Tabkhat-i Akbari, ed. and tr. by B. De, Bibl. Ind., Calcutta, text 1913, translation 1913-27 (a succinct account of value); (5) Ḵndâmâr, Ḵndâni-i Humayûnî, ed. M. Hidayat Husayn, Bibl. Ind., Calcutta 1940, tr. Baina Prakash, Calcutta 1940; (6) Mirzâ Haydar Dughlât, Tārikh-i Rashîdî, text unpublished; Eng. tr., A. history of the Moguls of Central Asia, by N. Elias and D. Ross, London 1895; (7) Sîli 'All Ra'îs, Mir'ât al-mamâlik, Turkish, ed. Djewdet Pasha, Istanbul 1895; Eng. tr. and tr. by B. De, Bibl. Baina Prakash, Calcutta 1940; (9) Dattu Sarvani, in Lâṭîf-i Kâddâsî, Delhi 1890, 71-92; Eng. tr. by S. Digby, in Indian Economic and Social History Review, ii (1965); (10) Hâdi Hasan, The unique dawat of Humayun Bâdschh, in IC, xxv (1951), 212-76; (11) S. A. A. Ridâvi, Mughlâ Kâln
Humayun Shah Bahmani, the eleventh Bahmani dynasty and the third of the line to rule from Bidar, 862/1458 to 865/1461. He was the eldest son of Alâ al-Din Ahmad II, who designated him his heir shortly before his death, at the same time giving him shrewd if idealistic advice about the management of the kingdom (Nizâm al-Dîn Bâkhash, Tabâba'î-i Abhâr, Bibl. Ind. ed., Calcutta 1931, i, 421). Party faction was rife in the Deccan, and even before his accession, on rumours of Alâ al-Din Ahmad’s death in 859/1455, the king’s brother-in-law Dâjil Khalâl had proclaimed himself king at Nâlgonda. On his accession as (Alâ al-Dunya wa l-‘Ithin) Humayun Shan, he had immediately to contend with the proclamation of his younger brother Hasan as king and with a hired mob of unemployed islanders, regional historians of the Deccan, and gives him the sobriquet of Zalim; the author of the Burhân-i ma‘âthir is less vitriolic, but still gives some account of Humayun’s cruelty; and the poet Nâfîrî in a venomous chronogram gives dhawâh-i dâjâhn (= 865), ‘delight of the world’, as the year of his death. But all these authors were ‘foreigners’ in the Deccan sense, sympathizers with the punished party, and modern opinion is to regard them as grossly distorting the true picture. (T. Wolseley Haig, in Cambridge history of India, iii, 411-2, accepts their view uncritically). The unfavourable reputation, however, had obviously been so much fostered locally that it is the common belief at Bidar that Humayun’s tomb there was split in two when his body was placed in it, God refusing his throne (and his punishment of those seeking his throne (and his imprisonment of his own minister Mahmud Gawan—not a man given to idle flattery— in his letters, who praises his uprightness and kindness (Riyâd al-‘inshâ‘), Haydarâbâd 1948, letters 49 (p. 187) and 145 (p. 399); also his letter to the ruler of Gilân, ibid. no. 21 (p. 102), where he attributes to Humayun the improved stability of Deccan politics). Certainly there is nothing in the first two years of Humayun’s reign for which to execrate his name; and his punishment of those seeking his throne (and his occasional petulance of character.

HUMS, people observing rigorous religious taboos, especially Kuraysh and certain neighbouring tribes. The word is the plural of ahmash “hard, strong (in fighting or in religion)”, but one of the Hums is called ahmasi (fem. ahmasiya). Ibn Hishâm (128) thinks that tabammas, the observance of the taboos in question, was an innovation of Kuraysh about the time of Muhammad’s birth, and some changes may have been made to emphasize the superiority of Kuraysh to other tribes; but the nature of the taboos makes it likely they are older. In particular the Hums, during the period of the sacred Donation (hosha) for the pilgrimage, ate no cheese made from sour

Encyclopaedia of Islam III
milk, did not clarify butter, did not enter tents of camel-hair, did not enter the tents of Mecca to take part in the ceremonies at ‘Arafat. The chief difference between the Hums and others was that the others, the Hilla, could not circumambulate the Ka‘ba in ordinary clothes; they must either do so naked, or in clothes borrowed from the Hums; any ordinary clothes worn in circumambulation had to be discarded immediately afterwards, and became taboo for everyone (الكَبَارَ). The Hums connected with Mecca communities, and the following tribes were the Kinda, the Khaza‘a, and certain small tribes connected with Kuraysh in the female line, notably descendants of Mabdīt b. Taym al-Adram. It is possible that there was some observance of التامَسَنَس not connected with Mecca (cf. evidence in Wellhausen, Reste, 85 f.). Many South Arabian tribes belonged to the Tuls, a group with religious observances similar to the Hums in some points and to the Hilla in others. The Kur‘ān forbids some of the practices mentioned: II, 196/5, not entering houses by doors; II, 199/5, not going to ‘Arafat; VII, 31/9, nudity in worship. Hūn [see SIKKA—India]. 

Hūnayn, (modern al-Sharā‘?) a deep and irregular valley with clusters of palm trees, situated a day’s journey from Mecca on one of the roads to al-Tā‘if [q.v.], the scene of the famous battle, the second mentioned by name in the Kur‘ān (IX, 25-26), fought early in Shawwāl 8/630 soon after the conquest (فتح) of Mecca. The confederate tribe of Hawazin with its subsection of Thakif began mobilizing its forces soon after the Prophet left Medina. The confederates apparently hoped to attack the Muslim force investing Mecca. As each side maintained spies in the other’s camp, Mu‘ammad, about a fortnight after his conquest of Mecca, marched against Hawazin, and did not of twelve thousand men. The confederate commander, Malik b. ʿAwf al-Nahl [q.v.], brought Hawazin’s families and flocks along, though strong protests at their presence were made by Durayd b. ʿAl-Simma al-Dīghāmi [q.v.], the venerable poet and warrior who fell in the ensuing battle. On leaving the oasis of Hunayn, the road enters winding gorges, suitable for ambushes. Here Malik b. ʿAwf awaited the Muslims, who little suspected the presence of an enemy thought to be encamped at Awtās. Surprised by the precipitous charge of Bedouin cavalry, the Muslims retreated in disarray. From here on it is difficult to reconstruct the course of the battle for the various accounts of the Muhājirūn, Anṣār, Ḥāshimids, and ʾAbīs differ. It appears that the Prophet on his grey mule was isolated for a time with few attendants and in grave danger. The Muslims, however, assembly mountains near by, rallied, and attacked the enemy, who apparently was unable to exploit his initial success because of the congested and narrow battle-front. It is possible that Khālid b. al-Walīd [q.v.], who commanded the Muslim cavalry, deserves the credit for turning the tide, also claimed for the Anṣārīs by the Medineșe school. In any case, within a few hours the rout of the enemy was complete, as is testified by the negligible Muslim losses of some twelve killed, by the vast number of captives, including about 6,000 women and children and by the enormous booty of over 24,000 camels. The fleeing Bedouins, some of whom were pursued to Awtaś, sort out the scattered parts of al-Tā‘if, where Mu‘ammad besieged them. (H. Lammens-[Abd al-Hafez Kamal]) 

Hūnayn b. ʾIsḥāk al- ʾIbāḍī, the most important mediator of ancient Greek science to the Arabs. It was mainly due to his reliable and clearly written translations of Hippocrates [see BUKRĀT, in Suppl.] and Galen [see GALEN], that the Arab physicians of the Middle Ages became worthy successors of the Greeks. 

Life: Hunayn was born in 92/808 in al-Hira [q.v.], where his father was a pharmacists. The nisba indicates that he was a descendant of the so-called ibadi, i.e. Arab tribesmen who had once embraced Christianity and who after the rise of Islam remained faithful to the Syrian Nestorian church, refusing to adopt the new religion. Hunayn may be assumed to have been bilingual from his youth, for Arabic was the vernacular of his native town, and Syriac was the language of the liturgy and of higher Christian education. Later in life, when settled in Baghdad, he translated far more books into Syriac than into Arabic, in accordance with the wishes of his clients. He himself showed a certain predilection for the Syriac language at the expense of Arabic, which he blamed for its lack of an adequate nomenclature as compared with either Syriac or Greek or Persian (see a fragment of his Kitāb al-Nuṣba, ed. L. Cheikho, in Maqārib, xx (1922), 373). But in their Arabic translations he and his school avoided mere transcriptions of the Greek, and helped to forge the Arabic scientific terminology. He was also at pains to acquire a sound knowledge of Arabic grammar; he is even said to have studied it at Baṣra and to have brought from there al-Khālli’s Kitāb al- ʾAyn. That he had the advantage of meeting the famous grammarians personally, as Ibn Djalūjī and others point out, is impossible for chronological reasons (see M. Plessner, in RSO, xxxi (1956), 244 f.). The Arab bibliographers unanimously attest that Hunayn was ʾfasīḥ. How Hunayn acquired his astonishing knowledge of Greek is told by the eyewitness report of a certain Yūsuf b. Ḳibrīm (see Ibn Abī ʿUsaybā‘a, ed. Müller, i, 185 f.), which does indeed sound very trustworthy. It relates that Hūnayn began his study of medicine at Baghdad under Yūhannā b. Māsawayh, the famous court-physician and director of the bayt al-ʾikhwān [q.v.]. But as Hunayn used to ask too many troublesome questions, he incurred the anger of his master, who eventually ordered him to leave his school. Hunayn then disappeared from the capital for more than two years. The narrator himself is silent upon his whereabouts, but some sources contend that he went to Alexandria, others that he was staying in būdāl al-Ra‘w. When he came back, he was so thoroughly versed in the Greek language that
he could even recite from Homer. Afterwards he was reconciled with Ibn Māsawāyh, who also encouraged him further to translate from the Greek (cf. Les alexistes médicaux de Yohanna Ben Massawath, ed. F. Rosenthal, in Bulletin of the History of Medicine, xxx [1956], 52-87), whereas Hunayn had the full text before him.

In the Risāla he also gives some occasional remarks on his techniques of translating. They are not different from ours: he used to collect as many Greek manuscripts as possible and to collate them in order to get a sound textual basis for the translation (cf. nos. 3, 20, 74, 84). In search of manuscripts he travelled to Syria, Palestine and even to Egypt (cf. no. 115). But in one respect his philological principles deviate from the modern. Like other Christian translators he seems to have felt the attraction to eliminate all traces of paganism from the works of the ancients, e.g., to replace the pagan gods by the one God and His angels, etc.

Usually this did not impair the scientific value of his translations, but it did some harm to the rich mythological material found in the dream-book of Artemidorus (see G. Strohmaier, in F. Altheim and R. Stehle, Die Araber in der Altertum Welt, v, Berlin, forthcoming).

The Risāla also contains valuable data on the translations of Galen made by Hunayn's predecessors and contemporaries. He does not spare them harsh criticism, if necessary, and he often had to revise their Syriac or Arabic versions. He himself translated either into Syriac for his Christian colleagues or into Arabic for the Muslim sponsors of his work (see BAI m 062). It is remarkable that there is no word about the famous bayt al-khīma; the whole activity seems to have been based on a kind of private enterprise. He engaged two members of his family, his son Iṣḥāq, his nephew Hubayṣh b. al-Ḥasan al-ʿAṣam, and another pupil, ʿĪṣā b. Yāḥyā, who also took part in translating Galen. Since Hubayṣh and ʿĪṣā did not understand Greek well enough, they made Syriac translations after Hunayn's Arabic (nos. 36, 38, 119) or, much more often, Arabic translations after Hunayn's Syriac. This could lead to some deterioration (cf. Galeni Compendium Timaei Platonis, ed. P. Kraus and R. Walzer, London 1951, 22-4), if Hunayn or Iṣḥāq did not have the opportunity to compare these new versions with the Greek original (cf. nos. 20, 49, 56, 86, 113, 126). Usually the colophons in the manuscripts of these second-hand versions mention Hunayn as the only translator, a fact which is also reflected in the Syriac translation. The reason for this is not clear. Perhaps it is due to the modesty of the pupils themselves, or else they wanted to conceal the circumference of the double translation, as Muslim intellectuals had been well aware of its shortcomings.

Unfortunately, there exists no corresponding risāla for the non-Galenic writings, and it remains to be proved by an analysis of the language and by possible mistakes resulting from ambiguities of Syriac words, whether the present Arabic versions were made by Hunayn directly from the Greek or by someone else after his Syriac translation. Nearly all of these Syriac versions are now lost (for the possible ascription of some fragments to Hunayn see G. Führer in ZS, 11 (1924), 28 and J. Schleifer, in RSO, xvii (1940), 348).

Hunayn's own works: Besides his translations Hunayn composed numerous original works, mainly on medical, but also on philosophical, geophysical, meteorological, zoological, linguistic, and religious subjects. He is even credited with a history of the world from Adam down to al-Mutawakkil. His medical treatises are mainly epitomes and rearrangements of classical material. Many of them are written in the form of questions and answers, this curious

HUNAYN B. ISHÂR AL-IBÂDI — HÛR

HUNGARY [see BÁSHTÚR, MAJRÁSTÁN].

HUNS [see HAYÁTÎLA].

HUNTING [see BYÀZARA, FAHÎD, ŞAYD; for hunting-songs see TÁDIIYA].

HUNZA and NAGIR, two principalities in the extreme west of the Karakoram range of mountains, lie between Gilgit in the south, Ishkoman in the west, Afghan Wâkhis in the north and Chinese Turkistsâ in the north and east, i.e., approximately between 74°ro' and 75° 20' E. and 36° 10' and 37° N. The whole area is extremely rugged and mountainous and for the most part uninhabitable. Permanent settlements exist only in the river valleys where terracing and irrigation of the mountainsides is possible, principally along the Hunza river, which traverses Hunza from north to south and west, and its left tributary the Nagar river, which falls into the Gilgit river, a tributary of the Indus, below Gilgit town. The road beside it, skirting Mt. Rakaposhi (25,550 ft./7,780 m.) in the Kailâs range, provides the only access to the territory which does not entail crossing passes at 15,000 ft./4,500 m. or more. Although Hunza is much the larger of the two states, their populations are approximately equal, ca. 13,500 souls each (1931 census). Of these, two-thirds are Burusho, who speak Burushaski, a language with no known affinities. The remainder are Wakhis, in the north west of Hunza, and Shînâ speakers, in the south west of Nagir. The Nagirs are Shi'i Muslims, but the Hunzukuts have for the last four or five generations belonged to the Ismâ'îlî, or Mawli, sect led by the Âghâ Khân.

The Mîrs, or Thams, of Hunza and Nagir are drawn from two closely related families of legendary origin. Their capitals are at Bâtît (altitude 8,000 ft./2,400 m.) and Nagir (7,500 ft./2,350 m.) respectively. Hunza, reputedly the more vigorous of the two states, has maintained its independence since the earliest times, though occasionally paying nominal allegiance either to the Chinese or to the rulers of Gilgit. In the first part of the 19th century the Hunzukuts were responsible for a series of raids on caravans passing between Kâshghar and Kâshmir, many captives being sold into slavery in Badakhshan. When the Sikhs occupied Gilgit they attempted without success to subdue their troublesome neighbour. Only in 1869 did the Tham of Hunza, Ghâzan Kâhan, agree to pay tribute to the Dogra Mâhrâdât of Kâshmir, though no Kâshmirî was allowed to enter the valley. In 1891 the Thâm was murdered by his son Safdar 'Ali, who recommenced raids on Gilgit and accepted Russian overtures. This led to a small Indian force being sent into the states, which were thereafter included in British India. Safdar fled to Kâshghar and his brother Muhammad Nâzîm was proclaimed Tham in his place. He was succeeded peacefully by his son Ghâzan Khan in 1938. For recent history, see KâSHMIR.

HÛR (â.), pl. of hawârdî and its masc. hawârî, adjective from hawârî, the general idea of 'whiteness' (the root hâ.rî, signifying 'purity' or 'astonishment', which has occasionally been suggested, is to be rejected); hawârdî is applied more particularly to the very large eye of the gazelle or the oryx, the clear whiteness of which arises from the contrast with the blackness of the pupil and the iris; by extension, hawârôrî signifies a woman whose big black eyes are in contrast to their 'whites' and to the whiteness of their skin. The plural hârôrî is a substantival adjective used in the Kur'an for the virgins of Paradise promised to the Believers, the hourîs; the latter term has entered European languages through the Persian singular hûrî or hûrî behêshâtî and the Turkish hûrî, whereas the Arabic noun of unity, a secondary formation from hûr, is hûriyya, pl. hûriyyûdî.

The hourîs are mentioned in various verses of the Kur'an dating from the Meccan period, that is to say the period when stress is laid upon the Last J udgment and when the delights of Paradise are contrasted with the torments of hell. The Holy Book announces to the Believers first that they will have as wives hourîs (LI, 20; cf. XLIV, 54) like "the hidden pearl", in recompense for their actions upon earth (LVI, 22-3/23-4); they will be "spotless virgins, amorous, like of age" (LVII, 35-43/34-50; cf. LXXXVIII, 33, LXXXIX, 52) and will have "swelling breasts" (LXXVIII, 33); neither man nor djinn will have touched them (LV, 56, 74); they will keep their eyes modestly cast down (LV, 56, XXXVII, 47/48, LXXXVIII, 52); resembling "ruby and coral", they will be enclosed in pavilions (LV, 58, 72). The only detail added during the Medina period is that they will be "purified wives" (II, 22/25, III, 23/25, LXI, 12, IV, 60/57), which means, according to the commentators, that they are free alike from bodily impurity and from defects of character.

To these rather brief statements, tradition and traditional exegesis have added details giving a more precise form to the hourîs and a more sensual character to the pleasures promised.

Firstly, the verse saying that neither man nor djinn will have touched them suggests to some commentators that there are two classes of hourîs, one sharing the nature of men, the other that of djinn. As for the substance from which they are created, some believe that they are made of saffron, others of saffron, musk, amber and camphor, and that they have four colours: white, green, yellow and red. In any case their flesh is so delicate that the texture of the muscles of their legs can be seen, even through 70 silken garments. Their physical characteristics are described in general terms: their eyebrows are in contrast to their 'whites' and to the skin, the former being a name of Allah and one that of her husband. Their age is equal to that of their husbands, their virginity is perpetually renewed. The Elect will have the bliss of deflowering them, and their pleasure will be a

Afghan Wakhan in the north, and Chinese Turkistan in the north and east, i.e., approximately between 74°ro' and 75° 20' E. and 36° 10' and 37° N. The whole area is extremely rugged and mountainous and for the most part uninhabitable. Permanent settlements exist only in the river valleys where terracing and irrigation of the mountainsides is possible, principally along the Hunza river, which traverses Hunza from north to south and west, and its left tributary the Nagar river, which falls into the Gilgit river, a tributary of the Indus, below Gilgit town. The road beside it, skirting Mt. Rakaposhi (25,550 ft./7,780 m.) in the Kailâs range, provides the only access to the territory which does not entail crossing passes at 15,000 ft./4,500 m. or more. Although Hunza is much the larger of the two states, their populations are approximately equal, ca. 13,500 souls each (1931 census). Of these, two-thirds are Burusho, who speak Burushaski, a language with no known affinities. The remainder are Wakhis, in the north west of Hunza, and Shiî speakers, in the south west of Nagir. The Nagirs are Shi'i Muslims, but the Hunzukuts have for the last four or five generations belonged to the Ismâ'îlî, or Mawli, sect led by the Âghâ Khân.

The Mîrs, or Thams, of Hunza and Nagir are drawn from two closely related families of legendary origin. Their capitals are at Bâtît (altitude 8,000 ft./2,400 m.) and Nagir (7,500 ft./2,350 m.) respectively. Hunza, reputedly the more vigorous of the two states, has maintained its independence since the earliest times, though occasionally paying nominal allegiance either to the Chinese or to the rulers of Gilgit. In the first part of the 19th century the Hunzukuts were responsible for a series of raids on caravans passing between Kâshghar and Kâshmir, many captives being sold into slavery in Badakhshan. When the Sikhs occupied Gilgit they attempted without success to subdue their troublesome neighbour. Only in 1869 did the Tham of Hunza, Ghâzan Kâhan, agree to pay tribute to the Dogra Mâhrâdât of Kâshmir, though no Kâshmirî was allowed to enter the valley. In 1891 the Thâm was murdered by his son Safdar 'Ali, who recommenced raids on Gilgit and accepted Russian overtures. He was succeeded peacefully by his son Ghâzan Khan in 1938. For recent history, see KâSHMIR.

hundred times greater than on earth; some—such as Jesus—will have a hundred . . . in 17/638: as the Persian general al-Hurmuzan [q.v.], the defender of al-Ahwaz, was behaving in a threaten-

To complete the picture, we must consider the lot reserved for women-believers admitted to Para-

According to the Km°an, the Elect will meet in their wives and their descendants (XIII, 23; cf. XXXVI, 70 only wives are mentioned). The commentators maintain that every women who was married and virtuous by nature will meet her husband in Paradise and become again his legal wife; those who had several husbands will be able to choose the one they prefer; while polygamous husbands will be allowed to keep all their earthly wives. The women among the Believers will be 70,000 times superior to the houris, will know none of the cares of earthly life and will spend their time enjoying pleasures of every sort. The commentators remain silent on the fate of virtuous women who have remained unmarried, and give the impression that the daughters of Eve are definitely at a disadvan-

tage in comparison with men.

The traditional exegesis, although it readily admits all the concrete amplifications, does not always accept uncritically the popular materialistic and sensual idea of the houris and of the delights of Paradise in general which has become common. Al-

The name Huraymilâ is conventionally spelled with alif mam-

dâl, although its meaning is explained as the dimi-

utive singular of hârâm, a noxious shrub (Rhyza stric-

ta Decne.) common in the area. Huraymilâ and the neighbouring villages of al-Kârâna and Malham are sometimes referred to collectively as al-ghâib, the name locally applied to Wâdi Abû Kitâda. Al Muhârâk were still influential in Huraymilâ in 1965, although they shared the town with settled sections of Subây, al-Dawâsir, Banû Tamîm, Banû Hâjdîr, Kâhtân, and other tribes. The âmr, who reported directly to the Amir of al-Riyâd, administered the neighbouring towns and hamlets of al-Barîn, Malham, Sadûs, Shâlûbhî, Ghîyana, and al-Kârâ. The presence of the Prophet in Huraymilâ have usually not been natives of the town.

The economy of Huraymilâ, like that of other settlements of the area, is based on agriculture. Wheat, lucerne and, more recently, fruits and garden vegetables are grown in addition to the date palm. Sheep, goats, and cattle are fed on forage crops. A relatively dense growth of jak (Acacia sp.) is protected in a kimâd (pasture and forest reserve [q.v.]) in the wâdi bed immediately southwest of Huraymilâ.

J. Mandaville

Hurâkûs b. Zuhâyîr Al-Sâ'dî, Companion of the Prophet, who conquered Sûh al-Ahwâz, took part in the siege of "the House" and became a Khâridjî. Although there is no source which gives the date of his conversion, it can be deduced that it took place at a fairly early date from the fact that he was among the Muslims who swore obedience to the Prophet "under the tree" (6/628) at al-Âhdâybiya [q.v.]. The name of Hurûkûs is mentioned for the first time in the works of the Arab historians in 17/638; as the Persian general al-Hurmuzân [q.v.], the defender of al-Ahwâz, was behaving in a threaten-

slave delights, and at the same time, the allurement of the later fulfiments of Medina—in a word, all the benefits of the classical play of passions in the course of purific.

There is indeed practically no further mention of hours during the Median period when, in the sphere of human affections, the Prophet found his equilibrium.

Bibliography: the Kur'ânic commentaries on the verses cited; the collections of Traditions (see Wensinck, Concordances) and especially Bughârî, R. bâd al-jâhâl, bît fi sîyâs al-djanna; Sîdî b. âbdûn, Maqâmât al-Kurtûbî, Cairo 1300/1882, 112-3; Gazzâlî, Ihyâ', Cairo 1285, iv, 464; Ibn Kayyim al-Djâwâziyya, Hâdî 'l-arâfîh ilâ bidâl-arâfî ilâ bidâl-arâfî, Cairo n.d., passim; S. El Saleh, Les âlices et les tourments de l’au-delà, Sorbonne thesis 1953 (unpublished); see also the references given in the art. DJANNA and the works of oriental-

ists on Islam and the Kur'ân.

Huraymilâ, a town (est. pop. 3,000 in 1965) of al-Mahmâl district in Najîd, Central Arabia; in the early 12th/18th century residence of the reformer and founder of Wahhâbiasm [q.v.], Muhammad b. 'Abd al-Wahhâb. Huraymilâ is said to have been founded by Al Muhârâk of Al Ábl Rabba', a group of 'Anaza stock who left the town of Ushaykîr in al-

Washm after a dispute with Banû Tamîm. In 1045/ 1635-6 they settled on the site of Huraymilâ, where the gha'ib next known as al-Šhu’âb and al-Abkar join Wâdi Abû Kitâda (variant Kidâda). The name

Among Islamologists there are many who have tried to explain the picture which the Kur'ân gives of hours. Carra de Vaux, in the art. DJANNA in EI, suggests that in "some Christian miniatures or mosaics representing the gardens of Paradise . . . the figures of angels [may have been interpreted] as being those of young men or girls", but it is not easy to arrive at the real origin of the sensual concepts set out in the Kur'ân and amplified by tradi-

tion. L. Massignon (Mystique et continence in Islam, in Études carmélitaines, 1952, 95) considers that "the symbols have a deeper sense of Paradise . . . almost basically to the simple regaining, by the human species, of the first Paradise, where sexual life was well established". On the other hand, Ch. J. Ledit (Mahomet, Israël et le Christ, Paris 1956, 117) ob-

serves that the Kur'ân takes account of certain domestic difficulties of the Prophet, considers the houris, and finds in Muhammad's meditation "the compensation for a cruel situation, the sublimation of impulses which refuse to degrade themselves in
HURKOS B. ZUHAYR AL-SA'IDI — HURMUZ

... with the Muslims, 'Utba b. Ghazwan, the governor of Basra, warned the caliph 'Umar about this, and the latter sent troops under the command of Hurkus; having collected their forces, the Muslims marched against al-Hurmuzan and defeated him above the bridge of Sük al-Ahwaz (known more briefly as al-Ahwaz). It was Hurkus who took this town, imposed the jizya on the population of the territory, which extended as far as the outskirts of Tustar, sent to Medina the announcement of his victory and the ﬁfth of the booty, sent 'Umar b. al-Khattab an edict of protection for his tribe, the Banu Sa'd, was able to protect his tribe, the Banu Sa'd, was able to escape the ensuing massacre. The sources do not mention the presence of Hurkus at the Battle of the Camel, it is reasonably to assume that he had followed the policy of his fellow tribesmen who, belonging to the 'Umayyids, the party which was loyal to the caliph 'Umar, had no desire to ﬁght for 'Ali (al-Tabari, i, 3168). He was, on the other hand, present at Siffin in the army of the caliph; al-Dhahabi is the only writer, GO far as is known, to mention his presence at Harura ([q.v.]'Is'i), and his two refusals to become their leader, and finally his death among the Kharidjis of al-Nahrawan, and that he should be identiﬁed with Dhu 'l-Khuwaysra or Dhu 'l-Thudayya or al-Mukhdadj had given Muhammad the occasion to predict this movement, so that it was natural that 'Ali should seek to discover the mysterious personage among the Kharidjis of al-Nahrawan, and that he should be identiﬁed sometimes with Hurkus and sometimes with other warriors who were killed in the battle (citations and details in Caetani, Annali, 8 A.H. § 169 & n. i, 38 A.H. §§ 107, 112 & n. 2, 115, 119, 126, 129 (p. 111), 130, (p. 114), 139, 140, 150-3, 158).

The attitude of the biographers of the Companions towards Hurkus is worthy of note: Ibn 'Abd al-Barr ignores him in his Ist'ibād; Ibn al-Aqīl and al-Dhahabi have accepted his Kharidjism as a fact; Ibn 'Abd al-Barr informs us that there were doubts about the death of such a Companion among the Kharidjis at al-Nahrawan and, since a khaṭīb excluded from Paradise one of the participants in the oath "under the tree", he adds that this excluded individual had been identiﬁed with Hurkus, but he does not accept the responsibility of asserting this.

(L. Veccia Vaglieri)
Zoroastrian year. In the works of Muslim writers (especially the Iranians and particularly the poets) are found allusions which display a very imprecise knowledge of Mazdaism; although there occurs the name of Zoroaster (Zardusht), one searches in vain for the name of Hurmuz (cf. M. Moin, *Masdadavane*, parts 7 & 8) and the introd. by H. Corbin; however, according to Wolff (*Glossar*, s.v.), it is found—once in the *Shah-nama* of Firdawsi, who uses most often the name of Urmuzd (cf. M. Moin, *Zaratusht-nama*, a life of Zoroaster in 1580 verses, written in 677/1278), he mentions only Yazdan and, less often, Izad. On the other hand, the name Hurmuz(d) is found in the works written by the historians of religion: the *Baydn al-adydn* (479-548/1086-1153); the *Tabisrat al-awdmm* of Shaykh Murtadā (7th/13th century); the *Dabistān al-mädahdd (ca. 1064-7/ 1654-7)*. The author of the *Baydn states* (tr., 22) that the Persians called their supreme Divinity Hurmuzd, Izad (Old Iranian Yazata), Yazdn (Old Iranian Yazatahān); it was probably this text that Ak-Madjis followed (*Livre de la création et de Vhistoire*, Paris 1886-7) and by what stratagem Ahriman became the eldest and seized the product of this thought was the devil. It has also been said that, the Almighty created the world, he had a disturbing thought and exclaimed: 'Let me have no adversary!' and the origin of this thought was the devil. It has also been said that, the Almighty being alone, he was afflicted by sadness and there occurred to him an evil suspicion, the product of which was Ahriman. Ahriman gives an account of the Gal Fray the second and the universe, the creation of the two principles, and the age and the universe in the *Dabistān* is found verbatim the passage quoted on the creation of Ahriman (tr., i, 356-7) whereas on other pages (269 and 338) Yazdan appears under the name of Urmuzd. It should be added that Zartušt Bahrām, author of the *Zarautšt-nāma* (a life of Zoroaster in 1580 verses, written in 677/1278), mentions only Yazdan (e.g., in verse 535), Lord (khodvand) of the universe (ed. Rosenberg, Tehran 1959).

The name Hurmuz was borne by five rulers of the Sāsānid dynasty. Hurmuz I, who reigned for only a year (272-3 A.D.), had been governor of Khurāsān and distinguished himself in the war against the Romans; he gave his protection to Mani as his father Shāpūr had done. Hurmuz II (502-9) is said to have persecuted the Manicheans, according to traditions preserved in some Coptic texts (Christensen, 195, n. 7); nevertheless he left behind him the reputation of having been a gentle and just ruler; he was killed by the Arabs after having defeated them; he had two sons, Şāpūr II and a prince Hurmuz who, after being a prisoner for thirteen months, escaped and made his way to Constantinople, where he accompanied the emperor Julian in his Persian campaign. Hurmuz III, during his brief reign, was forced to fight against his youngest brother who had obtained the support of the Hephtalites (see *HAYATI-NA*); he was defeated and killed. Hurmuz IV (579-90) is represented by the Byzantine historians as a proud man of mediocré intelligence; according to al-Ṭabari on the other hand, his justice surpassed that of his father, Khusrav Anūshhvān, he being compassionate towards the common people but severe towards the nobles, which earned him the enmity of the latter and of the clergy; the hostilities continued, with the Byzantines gaining the advantage; Hurmuz having dismissed his best general Vakhrām Ćubin following a defeat, the latter led a revolt which became general; as a result Hurmuz was deposed and executed; this revolt and the love story of this king and Shīrin form part of the subject of several great Persian poems. Hurmuz V, having striven to gain power, was executed on the orders of the last of the Sāsānids (632 A.D.). The name of Hurmuz was borne by other persons who appear in the indices of al-Ṭabari, Yākūt and other writers; the most important was Hurmūzan [q.v.].

*Bibliography:* On Ahura Mazda, *Gr.*, i, ii, 632-3 (with bibli.); M. Moin, *Masdadavane*, ed. tr. Cl. Huart, i, 56); in chapter ii (tr., 35), he mentions again the dualism of Ahriman and Hurmuz; then, explaining the doctrine of Zoroaster, he mentions only Yazdan and Ahriman. Al-Shahrastānī, describing the beliefs of the Zarvans, explains (ed. Cureton, 183; tr. Haarbrucker, i, 277) how Ahriman and Hurmuz were born of Zarvān (cf. Chr. Christiansen, *Sasanides*, 145 ff.) and by what stratagem Ahriman became the eldest and seized the world has two creators: Yazdan, and Ahriman who is Satan (shaytdn); it is said that when the Almighty created the world, he had a disturbing thought and exclaimed: 'Let me have no adversary!' and the product of this thought was the devil. It has also been said that, the Almighty being alone, he was afflicted by sadness and there occurred to him an evil suspicion, the product of which was Ahriman. Ahriman gives an account of the Gal Fray the second and the universe, the creation of the two principles, and the age and the universe in the *Dabistān* is found verbatim the passage quoted on the creation of Ahriman (tr., i, 356-7) whereas on other pages (269 and 338) Yazdan appears under the name of Urmuzd. It should be added that Zartušt Bahrām, author of the *Zarautšt-nāma* (a life of Zoroaster in 1580 verses, written in 677/1278), mentions only Yazdan (e.g., in verse 535), Lord (khodvand) of the universe (ed. Rosenberg, Tehran 1959).

The name of Hurmuz was borne by other persons who appear in the indices of al-Ṭabari, Yākūt and other writers; the most important was Hurmūzan [q.v.].

*Hurmuz* (Hormuz, Ormus). The original town, or Old Hormuz, as it has been called to distinguish it from its island offshoot, was situated on the mainland of Persia, on the east side of the entrance to the Persian Gulf, at the head of a creek which has now largely silted up; the existing town of Mināb (27°09' N., 57°05' E.) stands on its site. Nearcharus and his fleet, when on their way from the estuary of the Indus to the head of the Persian Gulf, anchored at the mouth of the Amāris river (now the Mināb creek), in the district of Harmozeia (Hormuz) (see William Vincent, *The voyage of Nearchus and the Persians of the Erythraean Sea*, London 1809, 52, and idem, *The commerce and navigation of the Ancients in the Indian Ocean*, London 1807, i, 328-30). Ptolemy mentions the town as Harmuz, but gives its position incorrectly. It is possible that it may have been identical with Ammianus Marcellinus' *Hermopolis* (XXIII, 6, 49). Ardašīr I, the founder of the Sāsānid dynasty, has been credited with the foundation of the town, but it was probably in existence long before his time. In the 4th/10th century, (Old) Hormuz was already the seaport for the provinces of Kirmān, Sīstān and Khurāsān (see Yākūt, iv, 668; *Haddā al-ilām*, 124; Le Strange, 318). Marco Polo, who visited Hormuz in 1272 and again in 1293, after expatiating on the flourishing and widespread trade of the town, stated that it was a sickly place and that the heat of the sun in summer there was tremendous
HURMUZ

(see The Book of Ser Marco Polo, ed. by Sir Henry Yule and revised by Henri Cordier, London 1905, i, 107). A few years after Marco Polo's second visit, repeated raids by marauding tribes became so serious that Kublai Khan had the island totally abandoned. The city of Hormuz, in 700/1300, abandoned the site and moved all the inhabitants and their possessions to the small island of Diarrun, 60 km to the west and 6 km south of the nearest point on the mainland. A good harbour was constructed at the sheltered northern end of the island, and before long an exceedingly flourishing town grew up, which the Persians, with the assistance of the English vessels, forced the garrison and inhabitants of Hormuz to return known as Hormuz. The name Diarrun was transferred to the small town and port of Surú or Shahrú on the mainland 17 km to the north-west, where goods in transit to or from Hormuz were transshipped; this name became corrupted to Gamru, and further corrupted by Europeans into Gombrun and Gombroon. In 720/1320 King Kublai Khan captured the island of Kāys, which had then long been enjoyed great commercial prosperity, and also that of Bahrayn. Later in the reign of Kublai Khan the intrepid Moorish traveller Ibn Battūta visited Hormuz, which he described as a large and fine city, with busy markets, as it was the true port from which the wares from India and Sind were despatched to the Îrān, Fars and Khurāsān (see Ibn Battūta, ii, 230 ff. = Eng. tr., H.A.R. Gibb, ii, 400 f.; see also the account by Ibn Battūta's contemporary, Friar Odoric of Pordonone, in Cathay and the way thither, by Sir H. Yule, revised by Henri Cordier, London 1913, 112).

For the next three centuries Hormuz was extremely prosperous, despite its lack of fresh water and vegetation and the extreme heat in summer. The Russian traveller Afanasi Nikitin, who visited Hormuz in 1472, stated that it was a vast emporium where there were peoples and goods of every description from all parts of the world; however, he qualified his praise by complaining of the high duties there (Khozeniya za tri Morya, Moscow 1958, 21). The Venetian J. Barbaro, who also visited Hormuz some years later, likewise praised it as a commercial centre (Travels of Josafa Barbaro, tr. William Thomas, London 1873, 290 ff.).

In 1507 a Portuguese fleet under the great Albuquerqued appeared off the island. Realizing its great strategic importance owing to its situation at the entrance to the Persian Gulf, Albuquerqued seized the island, but a mutiny of his men forced him to withdraw. Seven years later, however, Albuquerqued returned, and this time the Portuguese occupation of the island was permanent. Occupied as he was with his great struggle with the Ottoman Turks, Shāh Ismā'īl I could do nothing except protest at this violation of his territory. Under Portuguese rule, Hormuz continued to prosper, but the fact that the island was in foreign hands was always deeply resented by Persia. The kings of Hormuz, who had hitherto been vassals of the Persian monarch, became subordinate to Portugal. The Venetian jeweller Gaspar Balbi, who was in Hormuz in 1580, described it as: una città non molto grande, ma popolosa, posta in un' isola di trenta miglia di grandezza, ma è la più sterile di quante mai io n'habbia viste; perciò che in esse non si trova altro che sale e le legne e le altre cose al viaggio necessarie vi vengono portate dalla costa di Persia, ch'è distante da questa città da 6 miglia; evice ne conducono in tanta quantità, che la città ne resta copiosamente fornita (see Balbo's Discrizione di Ormus, in Il Nuovo Ramusio, vi: Viaggi di C. Federici e G. Balbi alle Indie Orientali, ed. C. Pinto, Rome 1962, 118). The Englishman, Ralph Fitch, who was in Hormuz three years later, described it as 'the dryest island in the world, for there is nothing growing in it but salt' (Purchas his Pilgrimes, London 1625, Part II, 1731).

After Shāh ʿAbbās I had consolidated his power, it became obvious that to so nationalistic a monarch the continued presence of the Portuguese in Hormuz would soon precipitate a crisis. Already, by 1602, Albuquerqued had subdued Bahrayn. Later in the reign of Shāh Ismā'īl, Shahrukh had wrested Bahrayn from the feeble hands of the King of Hormuz, who, like his predecessors since 1514, was merely a vassal of Spain and Portugal. In 1614 the Persian forces occupied Gamru (Gombroon), the last foothold of the Portuguese on the mainland, thereby depriving the garrison and inhabitants of Hormuz of one of their sources of supply of water. Eight years later, Shāh ʿAbbās, by putting strong pressure on the English East India Company, forced it to allow a number of its ships to co-operate with the Persian land forces in an assault on Hormuz. Despite strong resistance by the Portuguese, the Persians, with the assistance of the English vessels, forced the garrison to surrender and to evacuate the island. Hormuz was soon deserted and many of its buildings were demolished in order to provide material for the erection of new buildings in Gamru, which was renamed Bandar ʿAbbās in honour of the Shāh. The part played by the English East India Company on this occasion not unnaturally aroused the anger of the Portuguese. The late Sir Arnold Wilson, in his book The Persian Gulf (Oxford 1928, 149), stated that it was difficult to discover what the East India Company gained from this action. It seems clear, however, that if the Portuguese had been allowed to remain in Hormuz, the East India Company would never have been able to compete with the flourishing Portuguese entrepôt at Hormuz, while its establishments on the coast and also its vessels would have been always in jeopardy from their ships based on that island.

At the present time the population of Hormuz is small and fluctuating. In the cooler months, the numbers increase when the salt and iron oxide and other deposits are carried in by the wind and water from the mainland, especially to Minā. The only relatively stable elements of the population are the fishermen.

AL-HURMUZAN

See also BANDAR SABBÄS. (L. LOCKHART)

HURMUZ, BĀ, a South Arabian makhšāfiy family, to which belongs the Hadrami sūfī 'Abd al-Rahmān b. Umar. Bā'ūrma Hormuz al-Shibāmī al-Akhḍar (b. in Shibam 840/1436, d. in Haynan al-Durrā al-mudPa fi 'l-nisba al-Hurmuziyya. entitled 914/1508). He was the spiritual father of the famous sūfī scholar and poet 'Umar b. 'Abd Allāh b. Ahmad Bā Maḥrāma (d. 952/1545; see MAKHRAMA, BA) and before him. Serjeant is said to have made beautiful women sing and dance to the music of the Maysan, to which he was a dramatic one; the latter obtained amān, thanks to a ruse; he was stripped of his clothing and his ornaments and the Companion Surākā b. Mālik b. Dījshum, who was as thin as he was, put them on, on 'Umar's orders. Al-Hurmuzān was invited to embrace Islam but refused, and the caliph, on 'All's advice, decided to banish the whole group of prisoners to Syria (or Egypt); during the voyage they were shipwrecked and the Persians, having saved embraced Islam; 'Umar then recalled the prisoners to Medina. Apart from these stories, the basic facts of which have evidently been embroidered, the sources supply other information which there seems no real reason to doubt: al-Hurmuzān became 'Umar's adviser on Persian affairs (the pension of 2000 dirhams, which, according to several sources (Ibn Sa'd, al-Balḍāharī, Yahyā b. 'Ādam, etc.) the caliph assigned to him as well as to other diḥāms, was perhaps in reward for their services); he was a person of some consequence at Medina (otherwise his murder would not have become a state matter); he embraced Islam (the sources agree on this point, even though his sincerity is sometimes held in question); officers of the Tribe of Harmānī were the earliest of the Persians who had become a Muslim, and Abū Lūlū'a (the murderer of 'Umar) and Dījafaya (also killed by 'Ubayd Allāh b. 'Umar), who remained Christian; al-Balḍāharī, Futāḥ, 453 f. and Yahyā b. 'Ādam assert that he pronounced the formula professing the faith of Islam when he saw that he was wounded, but it is possible that by this detail the traditionists wished to stress his firm adherence to Islam in the face of death rather than to delay his conversion to the final moments of his life. The doubt concerning his conversion rests in fact only on the phrase which 'Uṯmān is said to have uttered: "they [those whom 'Ubayd Allāh had killed] were in our dijama". But the facts which above all have made al-Hurmuzān famous in the annals of Islam are the following: when the Persian slave Abū Lūlū'a stabbed the caliph 'Umar in the mosque at Medina and was killed as he attempted to make a way for himself through the crowd, the suspicion spread that he had had accomplices. 'Abd al-Rahmān b. 'Awf (or 'Abd al-Rahmān b. Abī Bakr) remembered a few days earlier having seen Abū Lūlū'a conferring with his compatriots al-Hurmuzān and Dījafaya (the latter was a Christian from al-Hira whom Sa'd b. Abī Waḳḳās had brought to Medina); the three men,
he said, having got up as he approached, there had fallen to the caliph's son, 'Ubayd Allah, had threatened to make the Muslim pay double if his father died from his wound. The words of 'Abd al-Rahmān b. 'Awf confirmed him in the idea that the Persians who had been seen in conversation with 'Abū Lu'ū'ā had taken part in the attempt on Umar's life, and when Umar finally died (26 Dhū l-Hijādīa 23/3 November 644), he not only killed 'Abū Lu'ū'ā's wife and a young daughter who was a Muslim, but having made a pretext to call al-Hurmuzan aside, he wounded him mortally with his sword, and killed the caliph.

As took his sword away from him; Sa'ād b. al-Âbl Wakkās and 'Abd al-Rahman b. 'Uthman, had witnessed his murder. The words of Ibn al-Kathīr (al-Tabarl, i, 2795) or to some of the historians (al-Tabarl-Zotenberg, iii, 556-8; BГА&Ф, i, 2533-5, 2537 f.; Ibn Abī 1-Hadld, iii, 211, 215 f.; v, 8-10, 84 f.; al-Istakhri, Al-Masdlik wa 'l-mamd-s); Istakhri, K. al-Masdlik wa 'l-mamd-s); but it is also related (Ibn KatMr) that the reason for this is not clear, c; (3) in modern usage, used for both "free" and "slave" [see کررخیی, i]; (4) in modern usage, used for both "free" and "slave" [see کررخیی, i and ii and Ìستکیل].

The have been accused of having committed treason, and the judge, Judge of the tax (al-Tabarl, i, 2795). He was held back when 'Umar finally died (26 Dhū l-Hijādīa 23/3 November 644), he not only killed 'Abū Lu'ū'ā's wife and a young daughter who was a Muslim, but having made a pretext to call al-Hurmuzan aside, he wounded him mortally with his sword, and killed the caliph. This action, for reasons which are not clear, later became a charge of indictment against 'Uthman, and it is probably the resulting polemic concerning his intervention and his decision which gave rise to the divergent accounts of the sources on who were the persons competent to solve the question: it is related that 'Uthman handed over the murderer to the son of al-Hurmuzan, but that the latter renounced his right to vengeance and that, because of this generous act, he was carried home in triumph (Uṣūd, etc.); but it is also related (Ibn Kathīr) that al-Hurmuzan had no heirs; it is reported that he had wished to embrace Islam at the hands of al-Hurmuzan before and during the battle of al-Kādisiyā: 2249, 2258, 2266, 2245; at Bābil: 2240; in the Ahwāz: 2422; his defence of this territory: 2533-5, 2557 f.; 2534-5, 2545, 2555-9; at 'Ustār: 2554, 2555 f.; at Medina: 2555-60, 2569; he advises 'Umar: 2600 f., 2642; his murder: 2795-7, 2800 f.; and index; Tabarl-Zotenog, iii, 556-8; Mas'ūdī, Murâdh, ii, 226, iv, 221, 230, 353, cf. 357, 368; idem, Tambâh, in BGА, viii, 109; 'A'īnî, vii, 245 (only some verses which glorify al-Hurmuzan by placing him on the same level as the Kāris and the Kāysars); Īstâ'hâlī, K. al-Maslîk wa 'l-mamâ-
AL-HURR B. YAZID — AL-HURR AL-AMILI

AL-HURR B. YAZID B. NASIrYAH B. KANaB B. ATTAB B. AL-HaiTHAM B. AMIR B. HAMMaM AL-RiVaJ, AL-YARb‘uN, AT-TAMMIL came to the head of a group of hones from a Kudsiyya from the vanguard of the forces sent by ‘Ubayd Allâh b. Ziyâd, the governor of al-‘Irâk against al-Husayn b. ‘Ali b. Abî Tâlib [q.v.]. The latter was advancing at the time with a group of his kindred and followers in the direction of al-Kûfa. Al-Hurr was ordered to follow closely the group of al-Husayn so as to bring him to ‘Ubayd Allâh in al-Kûfa; he was however not told to fight. Accordingly he kept close to the camp of al-Husayn and prevented him from leaving his camp to Madîna, but agreed that he should proceed in a direction other than al-Kûfa. The relations between al-Hurr and al-Husayn were not at first hostile: he even prayed behind al-Husayn; he denied at the camp in the barren spot of Karbala’.

When ‘Umar b. Sa‘d b. Abî Wâkîs, heading the forces dispatched by ‘Ubayd Allâh b. Ziyâd, rejected the proposals of al-Husayn and decided to fight him, al-Hurr decided to join al-Musayyin, although knowing the proposals of al-Musayyin and decided to fight him, al-Hurr was ordered to fight the forces sent by al-Musayyin, the latter was advancing at a settled place, compelling them to pitch their camp in the barren spot of Karbala’.

When ‘Umar b. Sa‘d b. Abî Wâkîs, heading the forces dispatched by ‘Ubayd Allâh b. Ziyâd, rejected the proposals of al-Husayn and decided to fight him, al-Hurr decided to join al-Musayyin, although knowing the latter’s situation was desperate. He ex- pressed his regret, went over with a small group of his followers to al-Husayn and the latter promised him God’s forgiveness. He fought bravely, killed 2 warriors of the force of ‘Umar b. Sa‘d and was finally killed (10 Muharram 61/10 October 680).

The tradition about the repentance of al-Hurr, his audacity in the encounter and his heroic death became a part of the story of the martyrdom of al-Husayn.

AL-HURR AL-AMILI, laqab of the ‘Ilâm-‘a‘qarî shaykh Muhammad b. al-Hasan b. ‘Ali b. al-Husayn al-‘Amîlî al-Ma∫gharî (also of his brother, the historian ‘Abîmâd who died in 1120/1708-9 and who succeeded him in Ma∫gharî), was a pupil of the shaykh Yusuf al-Bahrani at the school of the shaykh Husayn al-Mahbûb (d. 1157/1743) and was buried in Mashhad on Friday 8 Râjîb 1033/26 April 1624 at Ma∫gharî in the Djabal ‘Amîlî, where he completed his first studies with his father, his paternal uncle, the shaykh Muhammad, his maternal grandfather, the shaykh ‘Abbâs al-Salâm b. Muhammad, and one of his father’s maternal uncles, the shaykh ‘Ali b. Muhammad, at Djabal, in the same Djabal, he was also the grandson of Muhammad b. Muhammad Al-Din, a great-grandson of al-Shâhî al-tha‘lîn (q.v.).

After remaining 40 years in the Djabal, during which he twice made the pilgrimage to Mecca, Muhammad visited the shrines of Arab ‘Irâk, whence he journeyed to Iran to settle in Ma∫gharî and to remain there as the shaykh al-Islâm of the sanctuary of Imam ‘Ali al-Ri∫î. In the course of another hajj, he passed through Isfahan, where he was favourably received by Muhammad Al-Hasan Al-Mâ‘şî to the Djabal, whence he returned to Isfahan and presented himself to Shâh Sülâyman, who also offered him his patronage although, it appears, he showed some surprise at first at the simplicity and lack of savoir-faire of the shaykh. He died at Ma∫gharî, where he had soon returned, and was buried in the sanctuary, near the madrasa of Mirzâ Dîvân. As a pupil of Zayn al-Dîn, who himself had been the pupil of Muhammad Amin Astarâbâdî (but who was also the grandson of such a well qualified representative of the wâdî school as shaykh Hasan b. Zayn al-Dîn, the author of the Ma∫lîm al-usâlî [see usûhilîyân]), it is not surprising to find him among the Alkabriyyin, whose methodology he strove to justify with arguments considered “more subtle than a spider’s web” (a‘han min bayî al-‘ankabûtî). His principal work is indeed a vast collection of hadîth, the Ta‘rîh usâsîlî al-‘Hûfa ila ‘abhâm al-shâri‘î (even his opponents admire the breadth and erudition of this work although they criticize its faults in juridical elaboration), which makes him the second of the “three great Muhammads of recent centuries” (the first being Mu‘înî-fî Faydî and the third Madjîlisî). The great work, composed over 18 years, was lithographed at Tehrân in 1323-4 (3 vols.) and was “completed” quite recently by Mirzâ Husayn Nârî (ed. Nizâmî, 1924, 129, 130; al-Madjîlisî) and especially of the “non-usîlî” scholars; the third of the three Great Muhammad Scholars was ‘Abbâs Al-Ma∫gharî and the master of the contemporary ‘A‘im A‘b Buzurg Thârîhî, who died at Najafî in 1320, with his Mustadrak al-usâsîlî wa mustanbâz al-mu‘assîlî (3 vols., litb. Tehran 1311-1321).

The second great work of the shaykh al-Hurr on hadîth, Ta‘rîh al-sanîs, is ‘l-‘ahôtîh al-budîsîyya, which also was printed in Tehran, 1302, is regarded as the first collection of hadîth budîsî. But the second Muhammad shared with the third (and these separate them both from the first) that hatred for Sûfism which inspired his Iblînd ‘a‘quarîyîn fi radd al-sûfîyya. He also worked in the field of ‘ilm al-rîdîqî, composing a biographical khdtima for his Wasâsî, and especially his very well-known Amal al-‘amîlî fi ‘llamî Dirâb ‘ámilî (litb. Tehran 1302) on the scholars of his native land, with a section devoted to the ruwâdî, and a continuation on the “non-usîlî” scholars from the time of shaykh Tûsî down to his own day: Tadhkit ar-mu‘alâbahîn ir fi ‘llamî al-mu‘a‘akbaḥârîn. The Amal al-‘amîlî was “completed” by the sayyid Muhammad b. ‘Abbâs b. Huraym b. ‘Ali b. Huraym b. ‘Abbâs Al-Bahrârî (fellow pupil of the shaykh Yusuf al-Bahrârî at the school of the shaykh Husayn al-Mâ‘shî, d. 1157/1743) with a Tadâm Âmîl al-
Àl-Hurr Al-‘Amilî — Hurriyya

589

... to the concept. Obviously, the actual situation varied greatly over the vast expanse of Muslim history, but some basic lines may be said to define the general picture: The individual Muslim was expected to consider subordination of his own freedom to the beliefs, morality, and customs of the group as the only proper course of behaviour. While he valued his personal freedom and was proud of it, he was not supposed to see in it a good to be defended at all costs against group demands. Politically, the individual was not expected to exercise any free choice as to how he wished to be governed. At times, he did stress his right to be considered and treated as an equal by the men in power. Under special circumstances, there was extensive community participation in the government (as, for instance, in early Islam or among certain sectarians), or, at least, a certain degree of wider distribution of the political power among the population (as, perhaps, in city states such as Seville). In general, however, governmental authority admitted of no participation of the individual as such, who therefore did not possess any real freedom vis-à-vis it. On the metaphysical level, the question of how much freedom could be vouchsafed to human beings in view of the omnipotence of God has occupied the Muslim mind from the very beginnings of Islam (see Hurriyya). Whatever concessions were made, however, were not made in the name of any kind of individual freedom, but in order to assure a better regulated society. Moreover, the widely adopted Ash‘arist solution of the free will dilemma, no less than all the others, was far too subtle for the masses to understand; at any rate it failed to impress them with the importance of the element of human freedom it contained.

(F. Rosenthal)

ii.—MODERN PERIOD

The Ottoman Empire and after. The first examples of the use of the word freedom in a clearly defined political sense come from late 18th century Turkey. The word used is not hurriyya but serbestîyet (later also serbestî), pseudo-Arabic and pseudo-Persian abstracts from serbest, an established Ottoman term connoting the absence of limitations or restrictions (thus, serbestîyet denotes collective rather than personal freedom—i.e., independence rather than liberty in the classical liberal sense. This is in the third article of the treaty of Kudîk Kaynardja [q.v.] (1774), establishing the short-lived independence of the Crimean Tatars from both Turkey and Russia. The two states agree to recognize the Tatars as “free and entirely independent of any foreign power”; the Sultan is regarded as their religious head, but without being “prophet of it, promising their political and civil liberty as established”. The forms of words in the Italian original...
of the treaty for these two phrases are "liberi, immediati, ed independenti assolutamente da qualunque straniera Potenza"; this is rendered in Turkish as serbestiyyet ve ghayri-i ta'alluk mustakbilin edinilmesi bir dewlete tabi olmanak üzre. ... and 'abd olman serbestiyyet-i dewlet ve memlekettekrine khâle getiirmiyeq (Turkish text in Djevol, Ta’rîkhî, i, 356-9; Mefîma‘î-i mu‘âkedâtî, iii, 254; Italian in G. F. de Martens, Recueil des traités ..., iv, Göttigen 1795, 610-2).

The French Revolution gave the word serbestiyyet a new meaning. Morall El-Seyyid ʿAli Endefi, the Ottoman ambassador in Paris under the Directoire, uses it several times in his sefârânâme to translate liberté, chiefly in relation to symbols and ceremonies (e.g., TOEM, no. 23 (1329 A.H.), 1458, 1460. On the display of the 'symbols' of freedom by Frenchmen in Turkey, see Djevol, Ta’rîkhî, vi, 182-3). The Re’sîs al-Kutâb ʿAbî Endefi, in his memorandum of 1798 on the political situation resulting from the activities of revolutionary France, shows a clearer understanding of the new political content of the term, and of the danger that it represented to the established order, in the Ottoman Empire as elsewhere. In his introductory account of the Revolution, he tells how the French nationalized the common people (üzânâm-i nân) to follow them with promises of equality and freedom (masâsüde ve serbestiyyet) as a means of obtaining complete happiness in this world. More specifically, he is alarmed by the actions of the French in the former Venetian possessions which they had acquired—the Ionian islands and four towns on the mainland. By evoking the forms of the government of the ancient Greeks and installing a form of liberty (serbestiyyet), the French had made clear their hostile intentions (Djevol, Ta’rîkhî, vi, 395, 400; cf. B. Lewis in J. Wild.Hist., i (1953), 120 ff. (revised version in G. S. Métraux and F. Croizet, eds., The New Asia, New York-London 1965, 47 ff.), and Slavonic Review, xxxiv (1955), 234-5).

The word liberté was one that the French had landed in Egypt, where General Bonaparte, on arrival, addressed the Egyptians on behalf of the French Republic, “founded on the basis of freedom and equality” (‘alâ asâs al-hurriyya wa-l-taswiya: versions in Dibart, Muṣḥir al-ṭabbâsî, Cairo n.d., i, 37; Nikûlâ al-Turk, Mühâqîrâtî, ed G. Wiet, Cairo 1950, 8; the text also appears in Dibart, ʿAdînâbî, iii, Cairo 1879, 4; Ḥaḍîr al-Shâhîbî Lubûnân, etc.). The word used for freedom is hurriyya, which, however, was still far from being a commonly accepted equivalent to the European term in its political sense. Ruphy’s French-Arabic wordlist, printed in 1802, renders liberté by hurriyya, but with the restriction “opposé à l’esclavage”; in the sense of “pouvoir d’agir” he prefers sarâā (J. F. Ruphy, Dictionnaire abrégé français-arabe, Paris, An X [1802], 120). As late as 1841 the Franshatât Handjeri renders “liberté civile” and “liberté politique” by ruḫšât-i şerîyye and ruḫšât-i mîhiyye respectively (Dictionnaire français-arabe-persan et turc, ii, Moscow 1840-1, 397, with explanations and examples).

Early references to freedom in works of Muslim authorship are hostile, and equate it with libertinism, licentiousness, and anarchy. A significant change can, however, be seen in a passage in the chronicle of Shahîd (1865) under 1230/1848, of discussing the nature of council meetings (keyfîyet-i meydânîs-i meşkveret), which became frequent at this time. Shânîzâde is careful to base the holding of such consultations on Islamic precedent and ancient Ottoman practice, and to give warning against its misuse; at the same time he points out that such consultations are normally held, with beneficial effects, in “certain well-organized states (duwel-i münaqṣama)”—a striking euphemism for the Empire of Europe—and attributes to the members attending the councils a representative quality entirely new to Islamic political thought. The members of the councils consist of two groups, servants of the state and representatives of the subjects (wâkil-i ra’îyyet); they discuss and argue freely (ber wedjîl-i serbestiyyet) and thus arrive at a decision (Shânîzâde, Ta’rîkhî, iv, Istanbul 1291, 2-3; cf. B. Lewis, in BSOAS, xxix (1966), 385-6).

In the decades that followed, the notion of political freedom became more familiar through discussions of European affairs and translations of European works (e.g. the Turkish version of Botta’s Storia d’Italia, Cairo 1249/1834, repr. Istanbul 1293/1876, which abounds in references to liberal principles and institutions). It was also discussed and developed by several Muslim writers, who were influenced more especially by the rather conservative constitutionalism of the post-Napoleonic era—the idea of the Rechtsstaat, or state based on the rule of law, in contrast both to the unbridled absolutism of Napoleon and the licence of the Revolution. One of the most important of these was the Egyptian Shaykh Rîf’î a-Râfî al-Ṭahâwî [q.v.], who lived in Paris from 1826 to 1831. His account of what he saw and learnt was first published in Bûlûk in Arabic in 1834 and in a Turkish version in 1839; it includes a translation with commentary of the French constitution and a description of parliamentary institutions, the purpose of which is to secure government under law and the protection of the subject from tyranny. What the French call freedom (hurriyya), says Shaykh Rîf’îa, is the same as what the Muslims call justice and equity (al-adl wa’l-insâf)—that is, the maintenance of equality before the law, government according to law, and the abstention of the ruler from arbitrary and illegal acts against the subject. (Taḥ邱îs al-ṭibrîs fi taḥ邱îs Bâris, ed. Mahîdî ʿAllâm, Ahmed Badawi and Anwar Lûkâ, Cairo n.d. [1958?], 148). Shaykh Rîf’îa’s equation of hurriyya with the classical Islamic concept of justice [see ‘ADL, INSAF, and ZULM] helped to relate the new to the old concepts, and fit his own political writings into the long line of Muslim exhortations to the sovereign to rule wisely and justly, with due respect for the law and due care for the interests and welfare of the subjects [see RA’UYYA and SYASÍA]. What is new and alien to traditional political ideas is the suggestion that the subject has a right to be treated justly, and that some apparatus should be put in place to secure that right. With remarkable perspicacity, Shaykh Rîf’î sees and explains the different roles of parliament, the courts and the press in protecting the subjects from tyranny—or rather, as he points out, in enabling the subjects to protect themselves. What is far from clear is the extent to which he felt these ideas and institutions to be relevant to the needs of his own country. In his later writings there is little suggestion of any such relevance; even his commendation of the Khedive Ismâ’il for setting up a consultative assembly in 1866 shows a traditional concern with the duties of the ruler—justice and consultation—rather than a liberal concern with the rights of the ruled. In his al-Murshîd al-ʿalîm (Cairo 1862, 127 ff.), he defines freedom under five sub-headings, the last
two of which are civic (madani) and political (siydsi). Both are defined in relation to social, economic and legal rights, without any specific reference to political rights in the liberal sense. The first three sub-headings are natural, social (i.e., freedom of 'conduct') and religious. Political freedom is the assurance of the state to the individual of the enjoyment of his property and the exercise of his 'natural' freedom (i.e., the basic innate power of all living creatures to eat, drink, move etc., limited by the need to avoid injury to himself or to others) (see L. Zolondek, *A大多数人和政治自由*, in MW, liv (1964), 90-7).

Şaykh Rifa'a's Turkish contemporary Şadıık Rifat Paşa [q.v.], though vaguer in his theoretical notions of the meaning of freedom, is more specific on its immediate application at home. In an essay first drafted while he was Ottoman ambassador in Vienna in 1837—and in close touch with Metternich—he discusses the essential differences between Turkey and Europe, and those respects in which Turkey might profitably seek to imitate Europe. Şadıık Rifat is deeply impressed by European wealth, industry and science, in which he sees the best means of regenerating Turkey. European progress and prosperity, he explains, are the result of certain political conditions, of stability and tranquillity, which in turn depend on 'the attainment of complete security for the life, property, honour and reputation of each nation and people, that is to say, on the proper application of the necessary rights of freedom (hubkât-i làzîme-i hüriyyet)'. For Şadıık Rifat, as for Şaykh Rifa'a, freedom is an extension of the classical Islamic idea of justice—an obligation of the ruler to act justly and in accordance with the law; but it is also one of the 'rights of the nation' (hubkât-i millet), and the establishment of these rights in Turkey is a matter of 'the most urgent necessity' (text in Şadıık Rifat Paşa, *Münkebakât-ı a háfar*, Istanbul, 1854). But he is said to have aimed at "republican government" (hükümâna dâjmühriyyâ), probably meaning some form of representative government (Anfûn al-Âaḫlîqî, ed. Yusuf İbrahim Yarbak, *Hwa wa-fima fi l-Ulbân*, Damascus 1938, 87; English trans. M. H. Kerr, *Lebanon in the last years of feudalism . . .*, Beirut 1959, 53. See further P. K. Hitti, *The impact of the West on Syria and Lebanon in the nineenth century*, in J.Wld.Hist., ii (1955), 629-30).

The intensification of Western influence during and after the Crimean War on the one hand, and the growing internal political and economic pressures on the other, both helped to bring a revival of libertarian thought and activities in the eighteen sixties. In Turkey, Şinâsî [q.v.] stressed the importance of freedom of expression in the introductory editorials both of *Terd/Lumdn-i Aftâr* (no. 1, 127/1860) and of *Taşvîr-i Efaâr* (no. 1, 15 June [O.S.] 1278/1862). In Syria, the Christian author Francis Fath Allah al-Marrâgh [q.v.] wrote an allegorical dialogue (chabâl al-bâb, Beirut 1866, repr. Cairo 1298/1880-x), which includes a philosophic and political discussion of freedom, and of the conditions that are required to maintain it. More directly political in content was the work of a Muslim author, the famous Khaýr al-Dîn Paşa [q.v.], one of the authors of the Tunisian constitutional enactment of 1861 (*Akwân al-masâlik fi mašrefat awhal al-mamâtîh*, Tunis 1284-5/1867-8; French trans. *Rformes nécessaires aux États musulmans*, Paris 1868; Turkish version, Istanbul 1296/ 1879). In this rather conservative programme of reform, Khaýr al-Dîn examines the sources of European wealth and power, and finds them in the political institutions of Europe, which secure justice and freedom. Identifying the two, he makes some cautious and rather obscure recommendations on how to secure them in the Islamic state without violating or departing from Islamic traditions and institutions, by reliance on 'consultation' (see MASHWARA), since the consultation of ministers,
HURRIYYA

"ulamā", and notables is the authentic Islamic equivalent of the European system of representative and constitutional government. It may be noted that neither as chief minister in Tunisia in the years 1873-7, nor as Grand Vizier in Turkey in 1878-9, did he do anything to restore the constitutions which had been suspended in both countries.

Already in 1836, in an ode addressed to Reshid Pasha on the occasion of the Reform Edict of that year, Shinâsî tells the reforming Pasha "You have made us free (a dabā), who were slaves to oppression (zulm)" and continues: "Your law is an act of manifestation (manifestum) which informs the Sultan of his limits (bildirik haddet)."

The radical implications of these words—the replacement of justice by freedom as the antithesis of tyranny, and the suggestion of a constitutional restriction of the sovereign's powers—were developed and made clear in the late sixties and seventies by the group of liberal patriots known as the Young (strictly "new") Ottomans [see yeni âmâniyât].

The political ideas of the Young Ottomans, though couched in European terms, were related to Islamic traditions, were sometimes with visible effort, to Islamic traditions, are of European origin, and express an Ottoman-Islamic adaptation of the liberal patriotism current in Europe at that time. Their ideal was the British parliament at Westminster, their ideology was drawn from the liberal teachings of the French enlightenment and revolution, their organization and tactics were modelled on the patriotic secret societies of Italy and Poland. In the political writings of the Young Ottomans the two key words are Watân [q.v.], fatherland, and Hürriyyet—freedom. The latter was the name of the weekly journal which they published in exile (London, June 1868-April 1870; Geneva, April-June 1870). In this journal, and in other writings, the Young Ottoman ideologists, above all Nâmîk Kemâl [q.v.], expounded their interpretation of liberty—the sovereignty of the people, to be secured by constitutional and representative government (see for example the article from Hürriyyet published by M. Colonoue in French translation in Orient, no. 13 (1960), 123-33). For Kemâl as for earlier Muslim writers, the primary duty of the state is still to act justly—but justice means not only care for the welfare of the subject, but respect for his political rights. These rights must be enshrined by appropriate institutions: "To keep the government within the limits of justice, there are two basic devices. The first of them is that the fundamental rules by which it operates should no longer be implicit or tacit, but should be published to the world... The second principle is consultation (mecbûret), whereby the legislative power is taken away from the government" (Nâmîk Kemâl, Hûbûk-i Stamped, in İbre, no. 18, 1872; repr. in Ebü'l-Diyâ Tewfîk, Nâmâne-i edebiyâtî-i ʿOthmânîyêt, İstanbul 1936, 357-8, and, in the new Turkish script, in Mustafa N. Özön, Nâmîk Kemâl ve İbre gazetesi, İstanbul 1938, 96-7; English trans. in Lewis, Emergence, 140). Like his predecessors, Nâmîk Kemâl tries to present these imported ideas as natural achievements, not confined the general precepts of law set forth in its preamble to personal freedom (hûrriyyeti şahsîyye) alone, which it interpreted as security of life, property and honour, but also proclaimed such other basic principles as freedom of thought (hûrriyyeti.cf.), sovereignty of the people, and the system of government by consultation [i.e., representative and responsible government], then only could it have taken the character of a fundamental charter..." (İbre no. 46, 1872, cit. Ihsan Sungu, Tanzimat ve Yeni Osmanlılar, in Tanzimat, i, İstanbul 1940, 845; English trans. in Lewis, Emergence, 169).

In 1876, with the promulgation of the first Ottoman constitution, the liberal and parliamentary programme of the Young Ottomans seemed to be on the point of realization. Article 10 of the constitution lays down that personal freedom is inviolable, and subsequent articles deal with freedom of worship, the press, association, education, etc., as well as with freedom from arbitrary violations of the rights of the person, residence and property. In its political provisions, however, the constitution is less libertarian. It derives not from the sovereignty of the people but from the will of the sovereign, who retains important prerogatives and all residual powers; it gives only perfunctory recognition to the principle of the separation of powers; it provides for a consultative assembly, even an elected one, and no other institutions: "To keep the government within the limits of justice, there are two basic devices. The first of them is that the fundamental rules by which it operates should no longer be implicit or tacit, but should be published to the world... The second principle is consultation (mecbûret), whereby the legislative power is taken away from the government" (Nâmîk Kemâl, Hûbûk-i Stamped, in İbre, no. 18, 1872; repr. in Ebü'l-Diyâ Tewfîk, Nâmâne-i edebiyâtî-i ʿOthmânîyêt, İstanbul 1936, 357-8, and, in the new Turkish script, in Mustafa N. Özön, Nâmîk Kemâl ve İbre gazetesi, İstanbul 1938, 96-7; English trans. in Lewis, Emergence, 140). Like his predecessors, Nâmîk Kemâl tries to present these imported ideas as natural achievements, not confined the general precepts of law set forth in its preamble to personal freedom (hûrriyyeti şahsîyye) alone, which it interpreted as security of life, property and honour, but also proclaimed such other basic principles as freedom of thought (hûrriyyeti.cf.), sovereignty of the people, and the system of government by consultation [i.e., representative and responsible government], then only could it have taken the character of a fundamental charter..." (İbre no. 46, 1872, cit. Ihsan Sungu, Tanzimat ve Yeni Osmanlılar, in Tanzimat, i, İstanbul 1940, 845; English trans. in Lewis, Emergence, 169).

"Under 'Abd al-Ḥamîd freedom was a proscribed word, and the ideals which it connoted became all the more precious. For Turkish modernists of that generation, the fountainhead was the West, which provided both material examples of the benefits of freedom, and intellectual guidance on the means of attaining it. "When you look upon this fascinating display of human progress", wrote Sa'dullâh from the Paris Exhibition of 1878, "do not forget that all these achievements are the work of freedom. Under the protection of freedom that peoples and nations attain happiness. Without freedom, there can be no security; without security, no endeavour; without endeavour, no prosperity; without prosperity, no happiness." (Sa'dullâh Pasha, 1878 Paris Eksposisyonu, in Ebü'l-Diyâ Tewfîk, Nâmâne, 288; English trans. in B. Lewis, Middle East, 47).

As an earlier generation had turned to Voltaire, Rousseau and Montesquieu, so the new generation read the writings of Haeckel, Büchner, Le Bon (specially favoured because of his sympathy for Islam), Spencer, Mill and many others. "If there
are today", wrote Hüsün Râmi in 1908, "men who can think, can write, and can defend freedom, they are those whose minds are enlightened by these sparks [of European culture]. In those dark and melancholy days, our friends, our guides were those intellectual treasures of the West. We learned the love for thinking, the love for freedom, from those treasures" (Preface to *Shipşevdî*, Istanbul 1912, English trans. in Niyazi Berkes, *Secularism*, 292).

In more practical political terms, freedom meant constituting voting representatives—the ending of autocracy, the restoration of the constitution, and the safeguarding of the rights of the citizen by free elections and parliaments. But freedom was no longer a purely political matter. For some, the exponents of materialist and secularist ideas, it involved an intellectual liberation from what they saw as the shackles of religious obscurantism. Perhaps the first to conceive of liberation in social and economic terms was Prince Sabâb al-Din [q.v.], who sought to lead Turkey from a collectivist to an individualist social order by a policy of federalism and decentralization and by the encouragement of private enterprise. In 1902 he founded a society dedicated to the achievement of these purposes. Similar ideas inspired the Liberal Entente (*Hürriyyet ve Pîlîdî* [q.v.]), which appeared in 1911 as a rival to the Union and Progress Party (see *îrîîâyiî ve baktîyiî*). An interesting example of the use of the word in a social and individualist connotation is in Kâsim Amin’s (q.v.) famous book *Tabrîr al-mar‘a*, the liberation—i.e., emancipation—of woman (Cairo 1316/1898 and 1905; Turkish versions: Cairo 1326/1908, Istanbul 1329/1911, and, in Northern Turkish, Kazan 1909).

After the revolution of 1908 the establishment, for a while, of effective freedom of thought and expression initiated a period of vigorous discussion, in which the problem of freedom, with others, was examined, analysed, and discussed from many points of view; political, social, economic and religious freedom all find their exponents and defenders. But as the bonds of autocracy and censorship were wound tighter by the Young Turks, the debate dwindled into insignificance. In the new Turkey they met mestuwe in the first and second republic. The discussion of freedom does not differ significantly from that of Europe, and need not be considered here.

Ottoman subjects from the Arab lands played a certain rôle in the libertarian movement almost from the beginning. On 24 March 1867, the Egyptian prince Mustafâ Fâdîl Pasha (q.v.) published in the French newspaper *Liberî* an open letter to the Sultan, advising him to grant a constitution to the Empire (reprinted in *Orient*, no. 5 (1958), 29-38). Besides ending them with their first manifesto, the Pasha also helped the Young Ottoman exiles financially, and was later succeeded in this by his brother the Khâdib Ismâ‘îl, who saw in them a useful instrument of his political purposes. In Hamidian times, one of the first libertarian journals published in exile was started by Salim Pâris, a son of Ahmâd Pâris al-Shidyâk [q.v.]. Published in London in January 1894, it was entitled *Hürriyyet*—a significant evocation of the earlier Young Ottoman weekly. He was later induced by agents of the Sultan to cease publication. Other exiles included the Lebanese amir Amin Arsîân, who published an Arabic journal called *Kashîf al-Nîbâ* in Paris in 1895, and a former Syrian deputy in the Ottoman parliament of 1876, Shahlî Gâhîm [q.v.], who became active in Young Turk circles. The ideas and arguments of the Young Ottomans and of the Young Turks found their echoes also in Arabic publications, which at this period tend to offer a provincial adaptation of ideas circulating among the Turkish ruling class.

Thus, the much discussed appearance of the motto *Hüb b al-waṣl min al-imân—"love of country is part of the faith"*—on the Syrian fortmightly *Al-Dîmân* in 1870 follows its regular use in the Young Ottoman weekly *Hürriyyet* from 1868 to 1870; the growth of federalist groups among the Ottoman Arabs must be related to the federalist movement among the Young Turks.

In Egypt, under Khedivial and then British rule, political thought evolved along different lines, more directly influenced by Europe, and less directly affected by events and movements in the Ottoman Empire—though even here these had their effect. Many of the leaders of thought were Arabic-speaking émigrés from the Ottoman lands; the occasional presence and activity in Egypt of such Turkish personalities as Prince Sabâb al-Din and ʿAbd Allâh Djestâd [q.v.] cannot have passed unnoticed. Wali al-Dîn Yâkân [q.v.], of Turkish origin and a participant in Young Turk politics, wrote extensively in Arabic on political and social problems. A work of some influence was Djestât’s Turkish translation of Vittorio Alfieri’s *Della tirannide*. Entitled simply *Istibbât*, it was first printed in Geneva in 1898 and reprinted in Cairo in 1909. This translation appears to underlie the famous Arabic adaptation of Alfieri’s book by the Aleppine exile in Egypt, ʿAbd al-Râhîm al-Kâwâkbî [q.v.], entitled *Tabâ‘î s-istibbât*, Cairo n.d. (Sylvia G. Haim, *Alfieri and al-Kâwâkbî* in *OM*, xxxiv (1954), 321-34; E. Rossi, *Una traduzione turca dell’opera “Della Tirannide” di V. Alfieri*, ibid., 335-7).

One of the earliest discussions of freedom—little noticed at the time—in Egypt, after Shaykh Râfî‘ (see above) is that of the Azhari Shaykh Husayn al-Marâṣî. In his *Risâlat al-kalim al-thamân—"Essay on eight words*"*, published in Cairo in 1298/1881, he examines and interprets, for the benefit of “the intelligent young men of these times”, eight political terms—“current on the tongues of men” (p. 2). One of them is *hürriyya* (pp. 36-7), which the Shaykh explains in natural and social terms—the difference between men and beasts, the human habit of social cooperation and the mutual recognition of rights. The Shaykh recognizes the necessity of freedom in this natural and social sense, but rather obscurely warns his young readers against untoward extensions of the concept into the realm of politics.

Despite such warnings, the influence of European liberal political thought continued to grow, and found frequent expression in Arabic as well as Turkish writings. The merits of freedom are variously described and defended. For some, a vaguely understood freedom is still the secret talisman of Western prosperity and power; its adoption is therefore desirable in order to achieve the same results. For others, freedom means the overthrow of tyranny, which for social cooperation and the mutual recognition of rights. The Shaykh recognizes the necessity of freedom in this natural and social sense, but rather obscurely warns his young readers against untoward extensions of the concept into the realm of politics.

Encyclopaedia of Islam III
defined and safeguarded by civil rights, which in turn are secured by political and legal arrangements and institutions. The action and interference of the State must be kept at the minimum; the freedom of the individual, however, is protected by a free press, an independent judiciary, and a constitutional régime guaranteeing the separation of powers.

Lufti al-Sayyid is concerned not only with the freedom of the individual, but also with that of the nation, which has corporate natural rights distinct from and additional to the aggregate of the rights of the individuals composing it. Rejecting pan-Islamism and disapproving of Arab nationalism, he sees the nation as Egypt, and argues for her liberation from both foreign rule and native authoritarianism.

The liberal interpretation of freedom continued to find exponents, particularly after the Young Turk revolution of 1908 and again after the military victory of the democracies ten years later. But in the meantime a new interpretation of freedom was gaining ground, resulting from the spread of imperialism and the rise of nationalism. As freedom is a synonym for independence—the sovereignty of the nation state, untrammeled by any superior, alien authority. In the absence of any such subordination to aliens, a nation is called free, irrespective of the political, social and economic conditions prevailing within it. This interpretation of freedom had less impact among the Turks, whose independence, though threatened, was never lost, than among the Arab peoples for whom the main theme of political life was the ending of alien rule. During the period of British and French domination, individual freedom was never much of an issue. Though often limited and sometimes suspended, it was on the whole more extensive and better protected than either before or after. The imperial régimes conceded freedom but withheld independence; it was natural that the anti-imperialist struggle should concentrate on the latter and neglect the former.

In the final revulsion against the West, Western democracy too was rejected as a fraud and a delusion, to which the Arab peoples clung with growing dissatisfaction, as the imperial régimes were more disposed to subordination to aliens, a nation is called free, irrespective of the political, social and economic conditions prevailing within it. This interpretation of freedom had less impact among the Turks, whose independence, though threatened, was never lost, than among the Arab peoples for whom the main theme of political life was the ending of alien rule. Thus in July 1912 the Khaldskdr Pdbifdn Grubu (the "Group of Saviour Officers"), a military extension of the Liberal Union, intervened, brought down Sa'd Pasha's cabinet (17 July), set up an anti-Unionist régime (21 July), and had the Chamber dissolved (5 August).

The Liberals assumed power at an unfavourable moment. Turkey was at war with Italy and on 16 October the Balkan War broke out. This war proved disastrous for Turkish arms, and as a result the government was discredited. On 23 January 1913, when Kemal Pasha, thought to be going from Istanbul to the Bulgaris, the Unionists overthrew the cabinet in the so-called "Beb-i 'Ali Wâkâfi" and set up a government of their own.

This marked the virtual end of the Liberal Union, though the party was never officially banned. Some of its members, however, were either bullied or bribed into leaving the country, 'Ali Kemâli going to Vienna, Rıfâ (Riza) Nür to Paris and Kamil to Cairo. In May-June 1913 the Liberals attempted to restore Kemâli, and in connexion with this abortive plot Mahmâd Shewket Pasha [q.v.] was assassinated on 11 June. Hereafter the opposition was ruthlessly crushed; some were hanged, some exiled to Sinöb, while others fled abroad. Colonel Sâîfî left for Cairo then to Paris, from where the Liberal organisation under Şarîf Pasha continued to plot against the CUP (see Tunâya, 289-94; and Albert Fua and Rekif-Nezâz, La trahison du gouvernement Turc, Paris 1914).

A second Hürriyet ve İtilâf Fırsâsi was formed on 22 January 1919, and once again the party was the last and most comprehensive attempt at rallying anti-CUP sentiment. In the post-armistice situation, the party advocated collaboration with Britain and the other occupying powers and strenuously opposed the nationalist movement in Anatolia under Muşâfâ Kemâli. Among the founders were 'Ali Kemâli; 'Abd al-Kâdir, a Kurdish senator; Muşâfâ Şâbri; Rıdâ Tewfîk [Bölükâş]; and Mehemd 'All; all five of these entered the cabinet of Dâmdâr Ferîd in March 1919, which has appropriately been described as a "Freedom and Accord cabinet" (I. M. K. Inal, Son sadrasanlar, 1940-1955, p. 2059), although Dâmdâr Ferîd himself did not take any office in the reconstituted cabinet. Rıdâ Nür by 1920 were firmly aligned with the Anatolian nationalists. In May 1919, upon the Greek occupation of İzmir, Şâbri, Rıdâ Tewfîk, and Mehemd 'All left the cabinet and the party, forming a dissident "Müteddi" ("moderate") Hürriyet ve İtilâf Fırsâsi. The party was reunited later under the chairmanship of Colonel Sâîfî. Its influence remained limited to Istanbul, and the elections of the fall of 1919 amounted to a repudiation of its policy not only in Anatolia but also in the capital. Its last general meeting was held in May 1920.

Hüruf ("ilm al-") is a branch of gîbas on which many Turks are interested, concerned with onomatomancy in the strict sense; but, among some esoteric sects, it became a sort of magical practice, to such an extent that Ibn Khaldûn (Muhaddima, iii, 137-61, Fr. tr. 188-200, Rosenthal 171-82) gave it the name of simâyid (şiiyetâ), which is usually reserved for white magic. It is based on the occult properties of the letters of the alphabet and of the divine and angelic names which they form. Three basic elements are involved in onomatomancy: arithmomancy or gemmata (hisâb al-djummal or, according to Ibn Khaldûn, op. cit., 190-239, Fr. tr. 241-5, Rosenthal, 243-5, hisâb al-nil), the knowledge of the natural properties of the letters ("ilm al-khawâsis"); based on alchemy, and their astrological conjunctures (bîrânâ). In this it is related to the talismanic art from which Ibn Khaldûn considers it derives.

The twenty-eight letters of the Arabic alphabet are divided into four categories, each of seven letters, corresponding to the four basic elements. We give here the classification favoured in the East, with the Western variants: fire: 'â, k, t, m, f, q (west) and dûf (east); air: b, w, y, n, s (west), t, di (east); water: dî, x, k, s (west), d, fî; and y (west): earth; d, h, l, r, dûf, s, m, w (west). It can readily be seen that it is a matter of dividing the Arabic abjad [q.v.] into seven groups of four letters as follows: bûdî, khuz, fîkh, mns (west mns), fûr (west fûr), stûkh (west stûkh), dûfîgh (west dûfîgh); the first letters of each of the seven groups are the fire letters, the second the air letters, the third the water letters and the fourth the earth letters. It is in short a kind of takshîr, "transposition", a procedure which performs a basic function in all forms of dûfîr. There should also be mentioned the harmonious division of the so-called "lunar" and "solar" letters.

The numerical value of the letters is established as follows: from aîf to t, the units (1 to 9); from y to s, the tens (10 to 90); from h to r, the hundreds (100 to 900); and dûf is the equivalent of 1,000. In the Maghribi, given the divergencies in the order of the letters, s equals 390, dûf = 900, gîb = 900 and dûf = 1,000; the four-letter group yûdîgh summarizes this system (see, for the Eastern system, R. Ihsân al-Šâfî, Beirut 1957, i, 51 ff.; P. Kraus, Jâbir Ibn Hayyân, ii, Cairo 1942, 224; for the Western system, Ibn Khaldûn, op. cit., i, 211 ff.; Fr. tr., 242 ff.; Rosenthal, 236 ff.; C. F. Rosenthal, 173, n. 809).

Starting from the principle of alchemy that, by analysing the letters which make up a word, it is possible to establish the qualitative and quantitative structure of the thing which it describes (cf. Kraus, loc. cit.), the literature of hüruf developed in two opposite directions: the first consists of combining the letters so as to obtain a whole possessing particular properties, which are supposed to lead to the required result (divination or magical effect), the second, with the same aim as the first, consists of splitting up certain names to which an esoteric character is attached, often because they are taken
from a sacred book, in this case the Qur'an, in order to apply to their consonantal elements a complex treatment based on numerical, qualitative, quantitative, astrological and theurgical factors.

In this way that between the letters and their numerical values there exists a series of relationships which reverberate from group to group. For example, the connexion between b (2), k (20) and r (200), which represent the different positions of the number 2, is reinforced by the groups d (4), m (40), t (400) and k (8), j (80), dā (800), which are multiples of 2; similarly with the group g (3) and its multiples k (6) and f (56) (on the properties of the numbers, cf. K. Itid†īf al-Sa‘fāf, i, 56 f.).

Arising from their distribution among the four elements, the “fire” letters, in divination and in magic, ward off all evils connected with cold, increasing the influence of heat wherever this is desired, whether in the physical or the astrological plane. Thus, for example, it is possible during a war to increase the influence of Mars by theurgic combination of the fire letters.

In the same way, the “water” letters are used to predict and to ward off all the ills associated with heat, such as the various kinds of fever, and to increase the influence of cold wherever this is required, on the physical or on the astrological plane. Thanks to them it is possible for example to make lunar influences prevail. And similarly for the other letters.

Apart from these conventional elements of numerical equivalents and co-ordination with the four elements, the science of letters consists only of mystical experiments based on the occult properties of the letters.

of the alphabet; and “to arrange alphabetically” is normally expressed as tarib "al-huruf al-hidjia." The dictionaries already mentioned also record the tartib normally expressed as tartib cald huruf ... true vocalic element: the sound a for alif layyina, the sound u for wdw sdkina, the sound i for ya* sdkina. But what is

The dictionaries already mentioned also record the tartib cald huruf, of the alphabet. See also Diet. of Techm. Terms, i, 319, line 1.

Al-Zajidjadi devoted four chapters to al-hidja (al-Djumal, 206-77). Throughout he is concerned with the condition of the letter of the alphabet. He distinguishes two kinds of hidja: one li 'lam "for seeing"; the other li-raf al-sayn "for seeing with the eye." Of the first he says only: huwa li-thammat wa'in al-ghir, "it is to establish the metre of poetry." The Muhsasas (loc. cit.) says nothing of this. It is probably a question in the verse scansion (tabi'i al-bayt) of division between huruf mutaharrika and huruf sakinah in order to identify or verify the component units (ajda'ia).

Spelling presupposes recognition of the identity of the harf and its pronunciation in accordance with the accompanying haraka; thus huruf al-hidja includes the designation of the sound of which the graphic sign is the symbol. In phonetics, Arab grammarians use buruf, pl. huruf, to mean the articulations of the Arabic language; the phonemes; they recognize 29 principal articulations (ajd). The huruf al hidjia, of course, offer only 28 signs. But it must be borne in mind that alif serves for two: the hamsa and alif lalayina [see HAMZA].

An expression related to huruf al-hidjia is huruf al-mu'djam. Ibn Djinji (Sirr sin'a, i, 38-45) discussed its meaning and grammatical construction. Al-mu'djam is an infinitive, here in grammatical annexation, of the same form as the nomen patientis (see Traité, § 94 n) of a fourth-form verb du'djam, the nominative of ajdama "obscure, lack of clarity," with a privative meaning: "to make the lack of clarity disappear." The huruf al-mu'djam are the huruf which are the object of this action. One must bear in mind the earliest form of Arabic writing, without diacritical marks, and the obscurity which shrouded most of the signs. The enlightenment in question was achieved by the addition of the diacritical points which made clear the graphic and phonetic nature of the harf in a common ductus. The huruf al-mu'djam are thus properly those huruf with diacritical points. In order to avoid any mistake in writing over the identification of a harf the ancient writers follow it with a gloss: mu'djam signifies the harf with point, muhmal the unpointed harf, e.g. khayn mu'djama, 'ayn mukhmal. This is the invariable usage of the Dictionary of Technical Terms (see Bibliography). For further details, see Wright, Ar. Gr., i, 4. In practice, the expression huruf al-mu'djam has become a synonym of huruf al-hidjia, to designate "the letters of the alphabet," but it refers solely to writing (see M. Bravmann, Materialien, §).

The huruf al-hidjia include all the articulations of the Arabic alphabet; we should therefore give here a brief account of the phonetic doctrine of the Arab grammarians concerning them and of the distinctions which they draw. The grammarians simply list these distinctions consecutively; the paragraph titles below have been added to relate them to European phonetics.

I. The genesis of the huruf. The point of departure is the sa'at el-sadr, the resonance emitted from the chest. This sa'at is an 'arad, "an accident," that is, something which exists in something else: the nasaf, "the [expiratory] breath," its marhab, "vehicle," as Râdi al-Dîn al-Astârâba'di says (Sharh al-Shâ'ifya, iii, 259, line 7). For this combination: sa'at el-sadr + nasaf, the Arab grammarians, in this genesis of the huruf, keep the simple name of sa'at; with it they contrast nasaf, the simple expiratory breath, treating them as two not only distinct but totally different realities. This contrast between sa'at and nasaf is fundamental.

The harf is the product of a ma'dhâ, "cutting," in this sa'at as it rises in the throat, then in the mouth, wherever the articulatory organs oppose this ma'dhâ to the moving sa'at. What properly constitutes the harf is its particular sound: dijâr (pl. adîrâs), the result of the application of the articulatory organs to the place of the ma'dhâ; the adîrâs differ according to the different ma'dhâ; for each ma'dhâ there is a dijâr, a harf, and one might say a harf sahib.

The harf, produced in this sa'at as it moves, naturally makes a ma'dhâra, for the pronunciation of which an absolute of nasaf is essential. The articulation of a ma'masa, on the other hand, only modifies the nasaf at the ma'dhâra of the harf; it is produced with and in the nasaf. The question then arises, how one passes from one to the other? The Arabs, from the definitions given by Sibawayh in the Kitâb (ii, 453, l. 21-2 and 454, l. 2-3) onwards, have seen the answer in the energy of the articulation: in strong articulation (awba'a l-'tâmîd), the nasaf is stopped, held back, there is nothing but sa'at for and in the harf and the harf is ma'dhîr; in weak articulation (udîrâ l-'tâmîd), the way remains clear for the nasaf: dijâr l-nasaf ma'a'hâ [al-harf], "there is nasaf with it," the harf is ma'mus.

The consideration of the articulatory force is thus very important, indeed the central pillar of the theory, beside the fundamental contrast between sa'at and nasaf. But in constructing their system so, the Arab grammarians introduced the weakest element: since how could a difference in articulatory force cause the presence of sa'at alone in the one case and of nasaf alone in the other? We have tried elsewhere (Examen, 204-5) to demonstrate what phenomena could have led the first Arab theoreticians to establish such a misleading distinction. However that may be, it should be noted from what a special single theory which opposes the sa'at to the nasaf, or allowing free passage to the nasaf. Their point of view is totally different from that of modern phonetics; we cannot therefore look to Arab theory for arguments against the modern doctrine of voiced consonants when we try to apply this to the sounds of Arabic.

In the genesis of the huruf, we must refer to the particular case of three huruf called al-huruf al-mu'tallal (or huruf al-'illa or al-Istalî), the "sick": these are alif lalayina, waw harf al-madd, and ya' harf al-madd. All three are sakinah by nature. Their ma'dhâra has the peculiarity of being muttassî, "wide"; the ma'dhâra has such amplitude that the ma'dhâ has no longer any means of existence; it takes on the dimensions of the ma'dhâra and loses all efficacity, becoming a word without significance. The sa'at flows in this ma'dhâra continuously and uninterruptedly: these are the huruf al-madd or al-madd wa l-'istallâ: a soft flow without rough friction; these are the huruf al-lin. These huruf al-mu'tallal are thus the continuous or soft huruf and their sa'at designates a true vocalic element: the sound a for alif lalayina, the sound u for waw sakinah, the sound i for ya' sakinah. But what is
it that is flowing with this sa'ar. It is air (hawd*).

They are thus fi 'l-hawd*, or hawd*iyya as well.

The division of the huruf* is thus complete. The karaca is not a huruf* and has no place here; but its description as a "little huruf*" permits its integration into the whole system of the huruf.*

II. The makhâridi or points of articulation. There can be no question of giving here another full account of all the makhâridi. One is easily accessible in the Cours de J. Cantineau (19-20) or in H. Fleisch, Traité (§ 44 b-g). The following notes will suffice:

Al-Khalli alone established terms by which to designate the huruf* according to their articulatory region. They are to be found in a text of which al-Azhari is one of the earliest known transmitters (Le Monde Oriental, xiv (1920), 45, lines 7-12).

al-khalisiyya, literally "the gutturals", are for us the laryngeals. Among these al-Khalli includes only *i, h, k, gh, while Sibawayhi includes also hamza and alif. These, with waw and yâ, are described by al-Khalli as dâfî (pl. adâfî): "because they emerge from the pharynx, the hollow of the chest", without any articulatory region to which they can be assigned except this dâfî; thus he sets them on one side, apart from the huruf* with a normal makhradji. This affected the order of the letters which he adopted in his Kitâb al-'Ay, as well as the arrangement of those lexicographical works whose authors followed the practice of al-Khalli (see Mufakham wa 'l munâm al-asaliyya: z, s, s.

The teaching of the whole grammatical tradition is that k and kh are among the khalisiyya. Modern phonetics considers them as velar, or, more exactly, postvelar [see ghayn].

al-mifîyya, "prepalatals": d, t, t, whereas Sibawayhi, followed by grammatical tradition, places the tongue "at the base of the central incisors" [see dâl].

al-qhalisiyya: r, l, n, and al-asaliyya: s, s, s.

The terms indicate articulation with the tip of the tongue but specify only the form of the tongue: flat and thinned at the tip for the first group and tall; dâfî mufruruf.

The term remains obscure.

It is clear from the foregoing notes that differences existed on the subject of phonetics between Al-Khalli and Sibawayhi, but, curiously enough, they found no echo in the Kitâb. There is an obscure point here in the origins of Arab phonetics.

III. The manner of articulation. (1) madghâra—mahmusa. madghâra, "striking", and mahlmusa, "stifled", express directly the acoustic impression as received and assessed. In reality there can be no doubt that they signify the manner of articulation acknowledged by modern phonetics as voiced and unvoiced. The theory of the genesis of the huruf* as set out above is sufficient of itself to demonstrate that the Arabs ordered them according to the correlation of their sonority. The definitions of Sibawayhi express the result of the test proposed for distinguishing a madghâra from a mahlmusa, the former a huruf* having only sa'ar, the latter being a huruf* with na'as; they also express the discriminatory part played by articulatory force. These are the definitions:

"The madghâra is a huruf* for which the pressure [of the articulatory organs] on the place [required] is made fully and which prevents the presence of [pure] breath with it, until the pressure [applied] for it is concluded and the sound [of this huruf*] is produced."

"The mahlmusa is a huruf* for which the pressure [of the articulatory organs] on the place [required for this huruf*] is made weakly, so that there is [pure] breath with it."

The huruf* al-madghâra are: hamsa, alif, 'ayn, gh, d, yâ, dâl, l, n, r, s, t, dh, b, m, waw.

The huruf* al-mahlmusa are: h, kh, k, sh, s, t, th. The Mufassal brings them together in the mnemonic: sâtsâhâshâhâ nakhâfah.

All the mahlmusa correspond with the unvoiced consonants of modern phonetics; but the presence among the madghâra of hamsa, f and k is noteworthy. As regards the first of these, the difficulty has been dealt with under hamza. For f, it was certainly a voiced consonant in the pronunciation described by Sibawayhi: an emphatic dâl; one text of his is decisive (ii, 455, l. 9), where he distinguishes between f and ñ only by the ildâk* "the velarization". For k: a voiced pronunciation of ñ must have existed, at least in part of the ancient Arab world; if not, it would be difficult to explain why it should be precisely the manner in which this phoneme is pronounced which at the present time has become a distinguishing mark between nomadic dialects (voiced) and sedentary dialects (unvoiced) (see Traité, § 40 b). On the history of the question, see J. Cantineau, Cours, ii-2, Essais, i, 46, b-c. (2) mu‘baka—munafitaka. Ibn Djallal (Sirr sindâ, i, 70, l. 12), taking up the main point of the explanations given by Sibawayhi (ii, 455, l. 5-7), describes al-ildâk* as an elevation of the back of the tongue towards the upper palate, the latter acting as a tabak (lid) over this part of the tongue (cf. Dict. of Tech. Terms, i, 323, l. 16-8). This movement, which presupposes the depression of the front part of the tongue, is in fact produced towards the soft palate or velum; ñbâk is well translated as "velarization" and mu‘baka as "velar". Munafitaka, literally "open, disengaged", designates the huruf* without ñbâk: it may be translated "non-velar".

The huruf* al-mu‘bakka are: s, ñ, t, ñ. All the other huruf* are munafitaka, but we shall have to distinguish those among them which are munafitâya (see (3)).

The huruf* al-mu‘baka are often called "the emphatic consonants"; but emphasis can exist in different forms. In the type of emphatic in the Semitic languages of Ethiopia, there is no velarization, but glottalization: occlusion of the glottis and audition of a hamsa with the articulation of the emphatic (see the details in J. Cantineau, Consonantisme, 291). Ph. Marpa, studying by radioscopy the Articulation de l'emphaxe dans un parler maghrébin (in AEIO Alger, viii (1948), 5-28), discovered another form of
emphasis: pharyngalization. But discoveries in this field may well not be completed. We therefore consider valid the type of emphatic described by the Arab grammarians (see Traité, § 46 k).

The huruf al-mustāʿliyya are the four mubāba that just discussed and b, zh, hh; the other huruf are munḥakfiḍa. The elevation of the back of the tongue for the mubāba makes these mustāʿliyya “raised”. But for b, zh, hh the elevation of the tongue does not go so far as to make a pāṭāb over the tongue, according to Radh al-Dīn al-Azārābdīl (Ṣahr al-Shāfiʿyya, iii, 262, l. 8-9). For him, it is therefore a matter of a diminished velarization or of the beginning of a velarization. The interest of these mustāʿliyya lies in the fact that they prevent i̮māda, as Sibawayh already observed (ii, 285, l. 20). They retain their interest for the student of modern dialects, where they are connected with questions of tāfjam. See J. Cantineau, Cours, 23-4; Traité, § 48b.

IV. The degree of aperture: shādīda—rikhwa—bayniyya.

The huruf al-shādīda are: hamsa, b, d, g, t, d, b. The huruf al-rikhwa are: h, b, zh, hh, s, r, t, th, dh, f.

The huruf al-bayniyya are: ‘ayn, m, n, r, s, d, y, ma, ya, alif.

The Muḥafṣal gives the following mononinics for the first class: ‘asfādā jahabak or ‘asfādūha ḥafṣiḍa; and for the last: līma yaraʿa und or lam yaraʿasen.

Bayniyya means “intermediary”; the term is recent but convenient; it is used by Mub. Makkī in his Niḥyā, completed in 1305/1887 (quoted in M. Bravmann, Materialien, 19). The ancient practice was to use a periphrasis, e.g. Muḥ. (§ 734): “those which are between the shādīda and the rikhwa”.

By their division into shādīda and rikhwa, the Arabs made the same point in fact as modern phonetics does by its own division into occlusive and constrictive. But the terms themselves do not express directly the physiological standpoint presupposed by the terms occlusive and constrictive, but rather greater or less firmness in articulation: shādīda “energetic” ruḫwa “relaxed”.

In the al-Tahānawī’s work the Arabs saw neither a normal occlusive nor a normal constrictive. There is something to be said for this view (see Cantineau, Cours, 22-3; Traité, § 47 c-d), except for ‘ayn, where one can see nothing to set it on one side. But the peculiarities of the bayniyya do not constitute a general third class. Of the explanations of them given by the Arabs, the clearest appear to be those given in Sāhih al-Shāfiʿyya (iii, 260, l. 18 f.) repeated in Dict. of Techn. Terms (i, 322, l. 20 f.).

Other minor divisions of the huruf have been established by the Arabs. It is sufficient to note here:

the huruf al-ḥalalā: b, d, g, t, d, b; the huruf al-ḥalāba: l, r, n, f, b, m (see J. Cantineau, Cours, 24; Traité, § 48 a and c). See further the Dict. already quoted, under hurf (l, 320-5).

For the numerical values of the huruf see Aḥmad: for the use of these huruf in magic, see huruf.

Works on phonetics: Ibn Diinnī, Sirr sīnāt al-ḥrāb, i, Cairo 1373/1954; the madhkāl (6-5) and the first chap. (46-77) are particularly important; Ibn Sīnā, Asbāb būdūh al-huruf, 20 pp. octavo, Cairo 1332; new ed., based on four other MSS, by P. N. Khālandīr, Tehrān 1333 (Publications of the University of Tehrān 207). See also, under hurf, Part I, the Dictionary of Technical Terms (K. Iṣfīdākī al-fūnum of al-Tahānawī), Calcutta 1862. Of the authors of taqādūm it is sufficient to mention: Dānīl, K. al-Tayṣīr fi l-ḥirāt al-sābī, ed. O. Pretzl (Bibliotheca Islamica, ii, 1930). The Mushir of Suyūṭi records many facts about phonetics (Bulāk 1282; Cairo [1323]) but being unwavelling it is difficult to use. The presentation of the text in the most recent edition, from the Maṣṭabat ‘Iṣā al-Bābī, is much more satisfactory; it is referred to as Mushīr.

Bibliography of European writers: J. Cantineau, Cours de phonétique arabe, Algiers 1941; idem, Esquisse d’une phonologie de l’arabe classique, in BSL no. 128, xilī (1946), 93-140; idem, Le consonantisme du sémitique, in Semitska, iv (1951-2), 79-94; these works were reprinted in the Jean Cantineau memorial volume: Études de linguistique arabe, Paris 1960. This memorial volume is referred to here (and elsewhere in my other articles from 192 onwards) under the abbreviated titles of: Cours, Esquisse, Consonantisme. The Esquisse (166-78) covers the phonological oppositions of Arabic phonemes and the question of incompatibilités (199-202), two subjects which could not be dealt with here. The Cours (123-5) contains a bibliography of Arabic and particularly of European authors for classical Arabic and the dialects, and this bibliography is taken up and continued in Notions générales de phonétique et de phonologie in the same memorial volume (128-30). It is enough to mention here: M. S. Howell, A grammar of the Classical Arabic Language, Part IV, Oxford 1925; H. Fleisch, Études de phonétique arabe, in Mlange USJ, xxviii (1949-50), 225-85; idem, La conception phonétique des Arabes d’après le Sirr sīnāt al-ḥrāb d’Ibn Diinnī, in ZDMG, cvii (1958) 74-105, a study which led to Genèse des huruf: Magdhūra, Mahmūsa (Examen critique), in Mlange USJ, xxxv (1958), 193-210 (referred to as Examen); idem, Traité de philologie arabe, Beirut 1961, 200-44, or § 41-50 (referred to as Traité). All the important points of classical and dialectal Arabic phonetics are touched upon by C. Brockelmann in his Grundriss der vergleichenden Grammatik der semitischen Sprachen, i, Berlin 1908, 142-283; S. Moscati confines himself to classical Arabic in Il sistema consonantico delle lingue semitiche, Rome 1954; M. Cohen covers a wide field, as the title indicates, in his Excursus comparatistic sur le vocabulaire et le phonétique du chami-semi-
AL-HIDJÁ—a Hurufiya
que, Paris 1947 (referred to as Essai comparatif).
Finally, a very important text of Sibawayhi, published in H. Fleisch, L’arabe classique, Esquisse
d’une structure linguistique, Beirut 1956, 134-36
(referred to as Esquisse). See also linguistics and
phonetics.
(H. Fleisch)

AL-HURUF AL-MULARA’AT [see al-
KUR'ÁN].

HURUFYYA, unorthodox Muslim sect of
gnostic-cabalistic tendencies founded by Fadl Allah of
Astarabad in Iran at the end of the 8th/14th century.

He was a descendant of 'Abd al-
Rahmán; he began his career as a Sufi famed particu-
larly for the care he took to avoid eating any
unlawful food, so much so that he was known as
halál-khor. He was a sayyid (descendent of 'Ali) and, according to some sources, was named
Muhammad Nafadji, the author of a
Db-náma-yi kabir. Like other “divine mani-
festations” before and after him, Fadl Allah seems
to have sought to convert to his doctrine the princes
and rulers of his time. According to Ibn Haidar al-
'Askallání (his contemporary, in Inbád al-ghumr fi
abná al-'umr), he invited Timurlang to embrace his
religion, and it is certain that he dreamed of marrying
the daughter of Toktamish, the khan of the Golden
Horde. He spent the last part of his life at Shírwán
(now Baku) where he had taken refuge with the
prince Mirán-sháh, son of Timúrlang, from Timúrl-
ang’s sentence against him issued at Samarkand
after a meeting with the orthodox juriconsults of
that city. Mirán-sháh, however, instead of helping
him, had him arrested. From Shírwán, where, in
prison, he wrote his Waqiyay-náma (Testament),
Fadl Allah was taken to the fortress of Alandjak
near Naghélwán, where he was executed in 796/1394.
The place of his execution (maka’t) at Alandjak
became for some time the Mecca of his followers, and
Mirán-sháh became the Antichrist of the new
religion (the Hurufí texts refer to him as Márán-
sháh, “king of the serpents”).

The first bháiifa of Fadl Allah was his disciple
'Ali al-Alá, author of various Hurufí books, whose
ambition was to win to Hurufism the Kara-Koyunu
prince Kara Yusuf, who had defeated Mirán-sháh.
He was also a missionary and had spreading
Hurufí doctrine in the country of Rúm (Anatolia),
where he appears as early as 802/1400, and having
helped to instil Hurufí ideas into the community of
the Bektashis (q.v.): he did indeed visit the tekke
of Hâdidjet Bektash at Kâs-eh. His propaganda
reached as far as Edirne, the Ottoman capital at
that time, and to the territory of the Laz and to
Trebizond. In 848/1444 a Hurufí missionary was
the guest at Edirne of the heir to the throne, Mehmeddem
the future conqueror of Constantinople),
who showed an interest in his doctrines; but he was
burnt alive as a heretic. In Anatolia the Hurufí
disciplines survived, along with others, in the strange
fraternity of the Bektashis, and Turkish literature
contains several good Hurufí poets, notably Nesimi
(q.v.) ([played alive at Aleppo in 809/1404]).

In spite of their short period during which it
was an organized movement, the Hurufí sect
suffered from heresies and schisms, the chief of these
being that of the Nuktawiyá founded by an “ex-
communicated” former follower of Fadl Allah,
Mahmúd Pasákhání, from Gilán.

There are three principal works by Fadl Allah, the
Db-náma-yi kabir, in prose, written half in Persian and
half in the Persian dialect of Astarábéd (a poetic
There exist numerous Hurufi treatises, short tracts and poems written by various followers of the founder of the sect, but of particular importance are the works of his ḥālīṣa and recognized interpreter, ʿAlī al-ʿĀlī, i.e., the Isḥāqī-nāma, the Maḥgūrī-nāma (in prose) and the four muḥāfazān poems Baghāvat-nāma (written in 803/1401), Tawḥīdī-nāma, Kuršīnāma (written in 814/1408), and Kyādārat-nāma (written in 814/1412).

Doctrines: Stress has been laid on the cabalistic character of Hurufism, which has in fact taken its name from this feature (ḥarf, pl. hurāf = "letter"). This is certainly its most obvious characteristic but it would be wrong to consider it the central point of its doctrine. The most important problems of Hurufism are its doctrines on prophecy and on man. The first arose fairly clearly in the following way: Muhammad may truly be called the "Seal of the Prophets" because with him prophecy ends and there begins new cycle, superior to that of prophecy, that of sainthood (wilāya) which in its turn, with the appearance of Fadl Allāh, was superseded by that of the revelation (ṣūhr) of the Divine in man. The second problem, that of the relationship between man and God, is solved not, as some would have it, in a pantheistic sense, but by an exact and continual theophany of the inaccessible divine treasure in man, (and in the Man par excellence, Fadl Allāh) on whose face is written in clear letters the actual name of God, Allāh, the nose being the alif, the two lobes of the nose two lām, and the eyes having the form of hā. The traditional eschatological ideas are, however, rejected by the Hurufis and the Kurʿānic anthropomorphism is explained in the sense that God can be represented only in Man. What other meaning could the following ḥadīth have: "Soon you will see your Lord as you see the moon when it is full; you will not be deprived of the sight of Him"? Man, naturally, is understood to be the particularly pure and holy man, in this case Fadl Allāh. Nesimi asserted that "God is none other than the son of Adam. The thirty-two letters are the words of the speech of God. Know that all the world is God himself—Adam is the soul and the sun is the face".

This leads us to Hurufī cabalism. The fundamental idea is that God (as we have seen, impossible to grasp in his essence) reveals Himself in the Word (Fadl Allāh was well acquainted with the beginning of St. John’s Gospel). Now the Word is made up of sounds, and sounds are always—in Islamic tradition—identified with "letters" (ḥurāf). The whole total of letters (and of their numerical relations according the abjad) is thus the total of all the emanating and creative possibilities of God, and is God Himself made manifest. Hence the enormous importance given to letters and to "interpretative" calculations made with them, the various methods of which are too complicated for examples to be given here: it resulted in an important chapter of the Isḥāqi-nāma of ʿAlī al-ʿĀlī. The ʾaḏān, for example, included formulae such as the following: ʾaḏḥāda anna lā ṭālah ilā ṭā H. F. H "(...) that there is no God but F. H"; the cabalistic formula for Fadl Allāh; ʾaḏḥāda anna ʿAdām ʾalḥāfat Allāh ("that Adam [= Man] is the vicar of God"); ʾaḏḥāda anna Muḥammad-nasāʿ Allāh ("this Imam [= the leader] is the vicar of God"); ʾaḏḥāda anna Ṣafwān ("this Imam [= the leader] is the vicar of God").

The pilgrimage to the place where Fadl Allāh was killed took place in the month of Dhu l-ʿKaʿda (the month in which he was killed) and, according to the same Isḥāqi-nāma, "... after 28 ṣawāf (circumambulations) around the door of the masābīl, they (= the Hurufis) name 40 Knowers of God in the East and in the West of the world, go into the bed of the river, pick up three times twenty-one pebbles, i.e., 63: 21 for the Earth, 21 for Water, 21 for the Air, and throw them into the Fire, which is the origin of Satan, with their faces turned towards the fortress of the accursed and foul Mārāngā (the king of the serpents = Mīrānghā) which is opposite the gate of the fortress of Alāndjak—may it be preserved from disasters and calamities—and is called "the fortress of Sāngār"; then they take off the pilgrim’s dress ...

When it began however, it was not intended that Hurufism should be merely a secret or esoteric religion but that it should become also (a premature ambition at that time) a visible religious organization, with autonomous rites; it was hoped that it would gain some rulers as its adherents. It did not succeed in this, but its doctrines penetrated into various quarters, not only into Bektāšism but also into certain aspects of Persian Sūfism, from some of whose doctrines (and from the ever-present undercurrent of Ismāʿīlī/gnostic beliefs) they had been in large part derived.

Bibliography: C. Huart, Textes persans relatifs à la secte des Hadroïfs ... suivis d'une étude sur la religion des Houroufs par le Dr. Kse Teufa ... (GMS, ix), Leiden 1909 (a useful collection of texts, but the translation is often doubtful and the introductory essay follows out of date historico-religious lines); H. Ritter, Die Anfänge der Hurūfishe, in Oriens, vii (1954), 1-54; Ṣādīq Kiyā, Nuhūtfayyān yā Pashtkhīyayn, Tehrān 1320/ 1941. In the above selection there will be found the whole of the basic bibliography on Hurufism.

AL-HUSĀM B. DĪRĀR, Abu l-Ḥasan, a Kalbi aristocrat of Damascus, who arrived in Spain as governor in the year 125/743 to replace the
successor of Baljî, Thâ'âbâ b. Salâma al-‘Amîlî, who had been mortally wounded at Aqua Portora. He managed to keep the unually Syrian ghunâds away from Cordova by giving them tiffs in the regions of Elvira-Granada, Reiyû (Archidona and Malaga), Jaen, the Algarve (south Portugal), and the district of Tumdrû (Murcia), though it appears that this conciliatory measure was taken on the advice of Ardabasto, the son of Witiza and chief of the Christian âdîmmîs, who had been given the task of collecting the kharâdî from them. But soon his Kalbi partisanship overcame his political prudence and his admiration for the kharâdî, through his bias against his enemies. The opposing Kays faction allied themselves with the Lâkhmî and the Diujdâm under the command of Sumayl who from this moment began to show a considerable activity, making himself little by little the justicification of the government's policy and even, ten years later, playing an important rôle in the rise of the Hispanic-Muslim emirate with Abu al-‘Abâma I. His coalition plans, which had been rejected over the rival of his allies, he succeeded in gaining the adhesion of Ëcija and Morôn, to whose Diujdâmî chief Thâwâbâ b. Salâma he shrewdly offered the command of the coalition. The revolt broke out in Andalusia, and the rebels concentrated in the district of Sidona in Ra¿djab 127/April 745; a little later they encountered Abu l-Khâ¢târ, who had hastened with his troops, on the banks of the Guadalete. Abu l-Khâ¢târ was defeated and taken prisoner and Thâwâbâ b. Salâma, on his triumphant arrival in Cordova, proclaimed himself governor of Spain. Abu l-Khâ¢târ did not long remain in prison; his followers attacked by night the prison in which he was being kept and carried him off to Niebla, from where he strove to re-group his followers, but he failed to get the upper hand over the coalition which had displaced him. As for his good relations with the vanquished Christians, we know only that when Sâra, the grand-daughter of Witiza, arrived in Damascus to complain to the Caliph HiÊhîm b. ‘Abd al-Malik of the dispossessio of which she had been victim at the hands of her uncle Ardabasto, Abu l-Khâ¢târ ordered to return her hereditary property.

Hûsâm al-Dîn [see Timurtash].

Hûsâm al-Dîn, Abu l-Shâwêk [see ‘Annâzîdî].

Hûsâm al-Dîn Cebelî, Hasan b. Muhammad b. al-Hasan b. Aqil Türk (d. 683/1284), fâvûrîte disciple and second murîd of Dijalâl al-Dîn Rûmî [q.v.], was born to a family which had come from Urmiya to settle at Konya (Aflâkî, Manâkîb al-‘ârisîn, ii, 759; tr. Huart, ii, 242). Since he became a murîd of Dijalâl al-Dîn as a young man and knew Shams al-Dîn al-Tabrizî (d. 642/1244), it may be assumed that he was born in about 626/1226 (cf. op. cit., ii, 738; tr. ii, 223). His father and grandfathers were prominent akhîs of Anatolia. Hûsâm al-Dîn lost his father at an early age, but was cared for by various notables of the day. When he reached puberty his beauty captivated all beholders (op. cit., ii, 738; tr. ii, 224). At this time he went with all his servants and young companions to Dijalâl al-Dîn, became his murîd, and released all his entourage from the duty of serving himself. He gave away all his wealth, down to his household goods, to benefit Dijalâl al-Dîn and his circle. His devoted attachment and probity impressed Dijalâl al-Dîn, who gave him the superintendence of the mawâls revenues which accrued to him through the gifts which he received from various persons. All these sums were sent to Hûsâm al-Dîn, who would distribute them first to Dijalâl al-Dîn's family and then among the members of his circle according to their degrees (op. cit., ii, 777; tr. ii, 255). He quickly became prominent among the murîds for his piety and his devotion to Dijalâl al-Dîn, whose regard for him was increased by the fact that he, unlike the others, showed great respect for the spiritual and religious bias against his enemies. The opposing Kays faction allied themselves with the Lâkhmî and the Diujdâm under the command of Sumayl who from this moment began to show a considerable activity, making himself little by little the justicification of the government's policy and even, ten years later, playing an important rôle in the rise of the Hispanic-Muslim emirate with Abu al-‘Abâma I. His coalition plans, which had been rejected over the rival of his allies, he succeeded in gaining the adhesion of Ëcija and Morôn, to whose Diujdâmî chief Thâwâbâ b. Salâma he shrewdly offered the command of the coalition. The revolt broke out in Andalusia, and the rebels concentrated in the district of Sidona in Ra¿djab 127/April 745; a little later they encountered Abu l-Khâ¢târ, who had hastened with his troops, on the banks of the Guadalete. Abu l-Khâ¢târ was defeated and taken prisoner and Thâwâbâ b. Salâma, on his triumphant arrival in Cordova, proclaimed himself governor of Spain. Abu l-Khâ¢târ did not long remain in prison; his followers attacked by night the prison in which he was being kept and carried him off to Niebla, from where he strove to re-group his followers, but he failed to get the upper hand over the coalition which had displaced him. As for his good relations with the vanquished Christians, we know only that when Sâra, the grand-daughter of Witiza, arrived in Damascus to complain to the Caliph HiÊhîm b. ‘Abd al-Malik of the dispossessio of which she had been victim at the hands of her uncle Ardabasto, Abu l-Khâ¢târ ordered to return her hereditary property.

Hûsâm al-Dîn [see Timurtash].

Hûsâm al-Dîn, Abu l-Shâwêk [see ‘Annâzîdî].

Hûsâm al-Dîn Cebelî, Hasan b. Muhammad b. al-Hasan b. Aqil Türk (d. 683/1284), fâvûrîte disciple and second murîd of Dijalâl al-Dîn Rûmî [q.v.], was born to a family which had come from Urmiya to settle at Konya (Aflâkî, Manâkîb al-‘ârisîn, ii, 759; tr. Huart, ii, 242). Since he became a murîd of Dijalâl al-Dîn as a young man and knew Shams al-Dîn al-Tabrizî (d. 642/1244), it may be assumed that he was born in about 626/1226 (cf. op. cit., ii, 738; tr. ii, 223). His father and grandfathers were prominent akhîs of Anatolia. Hûsâm al-Dîn lost his father at an early age, but was cared for by various notables of the day. When he reached puberty his beauty captivated all beholders (op. cit., ii, 738; tr. ii, 224). At this time he went with all his servants and young companions to Dijalâl al-Dîn, became his murîd, and released all his entourage from the duty of serving himself. He gave away all his wealth, down to his household goods, to benefit
the regular practice that the samd* [q.v.] took place after the Friday prayer and that the Mathnawi was read after the Kur'an had been read (Aflaki, ii, 777; tr. ii, 255). It was during its headship of the movement also that Diyal-al-Din's mausoleum was built, so that it possessed a focal point and centre, which might be called a Mawlavi kibla (cf. A. Gölpınarlı, Mevlândan sonra Mevlâvî, 24).

SULṬÂN HUSAYN MIRZA b. MÀSHÎR b. BAYKARA was born in Harât in Muḥarram 842/June 1438. At the age of 14 he entered the service of Abu’l-Kâsim Bâbûr. In 858/1454, when Abu’l-Kâsim Bâbûr made peace with Abû Sa’îd, Husayn Mîrzâ entered the service of the latter, but was imprisoned by him. After his release through the intervention of his mother, he returned to Abu’l-Kâsim Bâbûr, with whom he remained till his death (863/1457). He then joined Mu’âzî al-Dîn Sanghîr, who held Marw, Mâlghân and Djâm, and married his daughter; his eldest son, Badî’ al-Ẓamân, was born of this marriage. A period of struggle with Abû Sa’îd [q.v.] and his sons now began. Immediately after the death of Abû Sa’îd, Husayn Mîrzâ went to Harât and ascended the throne on 10 Ramadân 873/25 March 1469. With one brief intermission, he remained the undisputed ruler of Khorâsân until his death (917/1506). Husayn Mîrzâ showed Shi’i inclinations at the beginning of his reign, but abandoned these entirely under the influence of Naవî and others. He was a brave soldier, fighting personally in many battles. Husayn Mîrzà’s long reign in Khorâsân is more important from the cultural than from the political point of view. Under his rule relatively peaceful conditions were established in Khorâsân and the province enjoyed a period of prosperity. His capital of Harât became an important cultural centre. Poets, men of letters and of learning enjoyed the patronage of both Husayn Mîrzà and his close friend the Turkish poet Nâwî, the last great classical Persian poet Djâmî, the historian Mirghânâd, the miniature painter Bihzad [q.v.] and the calligrapher Sultan ʿAllî Mashhādī being among the most famous personalities of the court. Husayn Mîrzâ himself composed poetry in Turkish and Persian, using the mâkhâs Husâyni. His Turkish Divân contains ghâsals composed throughout in one and the same variant of ramâl, namely ـوــ ـوــ ـوــ ـوــ ـوــ, the most popular metre of the period. In spite of the high praise given them by Nâwî, these poems are of no more than average quality (the fact that the Şafwâdî Sultan Husâyîn ordered a translation of a selection of them into Persian (cf. British Museum, Or. 3379) is to be attributed rather to the importance of the person of the poet than to the intrinsic value of his poetry). He is also the author of a brief treatise in Turkish, a sort of apologia pro vita sua, which is interesting for its exposition of the ideals and concepts of a mediæval Muslim Turkish monarch. The Madâjîls al-şârîfîh, which is ascribed to him by Sâm Mîrzâ, is in fact, as Bâbûr and Khânâmîrî stated, by Kamâl al-Dîn Husâyîn Gâzûrgâhî.

HUSAYN, who was known until his submission to the throne as Sultan Husayn Mirza, was the eldest son of Shâh Sulaymân, the Şâfawî monarch who reigned 1077-1105/1666-94. Husayn, who was born in 1079-1088, was by nature quiet and studious, with an inclination in his earlier years to austerity. Having been brought up in the harem, in accordance with the pernicious practice inaugurated by Shâh ʿAbbâs I, Husayn was completely ignorant of state affairs and, indeed, of the world in general when, at the age of 26, he succeeded his father on the latter’s death. Husayn soon showed himself to be of weak character, and the court eunuchs took advantage of this fact to assume control over the government of the country, but intense rivalry soon developed between them and the madâjîls and mulkîs. Although at first violently against the drinking of alcohol, the Shâh was, by means of a subterfuge, induced to become addicted to it (see Krusinski, The History of the revolution of Persia taken from the memoirs of Father Krusinski . . . . . . by Father Du Corcaux, Dublin 1729, 54-6). Moreover, the Shâh by no means neglected the pleasures of the harem; thus his early tendency to austerity soon became a thing of the past.

The first few years of the reign were uneventful, but peace and calm were to prove transitory. Trouble first arose in Balûcîstân, but it was soon quelled by the able and forceful Giorgi XI, the King of Kartli and Wilî of Georgia; he was known to the Persians as Gurgîn Khan, and also as Shâh Nawâz Khan. A more serious revolt then occurred in Kandahâr, under the leadership of the astute Ghalzay chieftain Mir Wâs, after having Gurgîn Khan murdered, defeated the Georgian garrison. Although several attempts were subsequently made to subdue Mir Wâs, they all failed and he remained virtually independent for the rest of his life. After Mir Wâs’s death in 1126/1715, his brother and successor ʿAbd al-Šâzîr (erroneously named ʿAbd Allâh in certain sources) attempted to make peace
with the Persian court, but he was soon assassinated by Mahmūd, Mir Wāris's ambitious and brutal cousin.

Encouraged by the success of the Ghazazys, the Abdalī tribe, whose main centre was at Herāt, also revolted and frustrated all attempts by the Persians to subdue them. Trouble also occurred in the Persian Gulf, where the Muscat Arabs, under Sultan Ibn Sayf II, captured the islands of Bahrayn, Kishm and Larak in 1717. Two years later the turbulent Lezgis of southern Daghistān ravaged Shirwan and parts of Georgia. When Wādi de Gallois, the VVIP of Georgia and nephew of the late Giorgi XI (Gurgin Khan), had gathered his forces together and was about to crush the Lezgis, he received orders from the Shah to stay his hand. Wākhtang obeyed this order, but he was so enraged that he vowed never to take action in defence of Persia again. Late in the same year Mahmūd of Kandahār, with a force of some 11,000 men, invaded Persia and captured Kirmān. He remained in occupation of the town for several months, but was then forced to withdraw to Kandahār to quell a revolt there (the story that Mahmūd was forced to withdraw after being heavily defeated by Luṭf 'All Khan, the nephew of Fath 'All Khan Daghistānī, the Shah's šīrād al-dawla, though given in a number of sources, has no basis in fact).

In December 1720, Fath 'All Khan Daghistānī's enemies at the court procured his arrest on a trumped-up charge of treason and had him disgraced and blinded; his nephew Luṭf 'All Khan, the commander of the only well organized force in the country, was also disgraced and thrown into prison. It was at this juncture that a Turkish envoy named Dūrrī Efendi arrived at the Persian court. Rumours of the impending disintegration of Persia had reached the Turkish Government and it had sent Dūrrī Efendi to ascertain whether or not these rumours were well-founded. In his report Dūrrī Efendi predicted that the Safavid regime was apparently near its end, as there were no men in Persia who were capable of governing it (Relation de Dourry Efendy, Paris 1870, 54-5). Likewise very interested in the situation in Persia in the late 1720s was Peter the Great of Russia. His envoy Volynsky, who had been in Persia from the fall of the Safavids in 1722, had brought back disquieting reports of the situation in that country. In order to glean further and more recent information, Semeon Avramov, the Russian Consul at Rashīt, went on Peter's orders to the Persian court, where he arrived just after the departure of Dūrrī Efendi. At the same time Peter the Great sent Captain Baskakov secretly to Gilan to make a military report on the terrain. Avramov reported in much the same sense as Dūrrī Efendi (see P. G. Butkov, Materiali dlya Novoy Istoriī Kavkaza, 1722-1803, St. Petersburg 1869, i, 6).

The dismissal and cruel treatment of Fath 'All Khan Daghistānī, who was a Lezgi and a Sunni, so enraged his compatriots and co-religionists in Daghistān that they again invaded Shirwān, where they sacked the town of Shamakhi. Among those to suffer severe loss on this occasion were a number of Russian merchants. The rebels then appealed to the Sultan of Turkey for protection, who accepted them as his subjects. The news of this outrage at Shamakhi gave Peter the Great his excuse for invading Persia, which he did in the following year, advancing as far as Darband.

Meanwhile, Mahmūd, having put down the revolt in Kandahār, had once again invaded Persia. After occupying Kirmān again, he boldly advanced on Iṣfahān. Although greatly inferior in numbers, his men overwhelmed the royal forces near the village of Gahābād, some east-north-east of Iṣfahān. Three days later, Mahmūd had resumed his advance and soon encircled the capital. With Luṭf 'All Khan disgraced and in prison, the only leader capable of defeating Mahmūd and driving him back to Kandahār was Wākhtang VI of Georgia; in view, however, of his vow, he refrained from action. Although Tāhzāsp Mīrzā, the heir to the throne, escaped from the doomed capital during the siege, he made no serious attempt to raise forces to relieve the city, with the result that, after many thousands of the inhabitants had died of disease and starvation, it capitulated in October 1722. Mahmūd, having received the insignia of royalty from the unfortunate Shah Sultān Iṣfahān, entered the capital in triumph and mounted the throne.

Meanwhile, after Peter the Great had staged his invasion, Turkey also invaded the unfortunate country. War between Russia and Turkey then nearly ensued, but it was averted by the efforts of the Marquis de Bonnac, the French Ambassador to the Porte. He managed with great skill to arrange for a treaty to be signed by Turkey and Russia for the partition of much of northern and western Persia in 1724.

After his deposition, Sultan Iṣfahān was kept in confinement in Iṣfahān. In February 1725, Mahmūd, during a fit of insanity, murdered, largely with his own hands, most of the Safavid princes. He wounded the ex-Ṣāḥḥ himself, when he endeavoured to ward off a savage blow aimed at one of the young princes. Soon afterwards, Mahmūd, who had become completely insane, either died a natural death or was murdered by his cousin Aẖṣaf, the son of 'Abd al-ʼAzīz. Aẖṣaf thereupon mounted the Persian throne.

In the following year war broke out between the Ghazazys and the Ottoman Turks. In the late autumn of 1726 Aẖṣaf, on receipt of a rude message from Ahmed Pasha, the Turkish commander-in-chief, that he was going to restore Sultan Iṣfahān to the throne, sent emissaries to Iṣfahān, who put the unfortunate ex-Ṣāḥḥ to death. With the fall of the Safavids Predicted by Tragica vertentis Belli persici Historia per repetitas clades, ab anno 1711 ad annum 1728 continuata post Gallicos, Hollandicos, Germanacos ac demum Turcos Authoris typos Authorhe P. Greek renegade recruited into the ranks of the odiak, Husayn was dghd of the sipahis at the time of the war between Algeria and Tunisia (1704-5). Proclaimed Bey after the capture of Bey Ibrahim by the Algerian troops, Husayn first repulsed the Algerians, then got rid of the Dey, Muhammad Khodja, who was supported by the army, and finally also of Bey Ibrahim after he had been set free. Husayn was recognized by the Ottoman Sultan, who gave him the title of Pasha with the rank of Beylerbeyi, governor of the province of Tunisia (1708); he submitted from the list of his titles dâyi (Dey), which from that time on was given to an official of lower rank. While recognizing Ottoman suzerainty, Husayn at the same time persuaded the council of the highest military officers to grant him hereditary power, to be passed on to his descendants by the order of primogeniture in the male line (1720). Thus was founded the Husaynid dynasty, which continued to reign over Tunisia until 1957.

From 1705 until 1729 Husayn's reign was peaceful; his relations with the European powers were very good, and were distinguished by the conclusion of treaties with France (1710 and 1728), England (1716), Spain (1720), Austria (1725), and Holland (1728). Nevertheless the behaviour of the Tunisian privates, caused the French fleet to stage demonstrations off La Goulette in 1728 and 1731.

Internal political life was severely shaken in 1729 by the revolt of Husayn's nephew, 'Ali Pasha, who, deprived of political power, raised the central tribes with the help of his son Yûnus and, when defeated, fled to Algeria. After at first being interned there, 'Ali Pasha was later on supported by the Dey of Algiers, Ibrahim, and they invaded Tunisia together. Beaten in turn at Smendja (4 September 1735), Husayn retreated to al-Kayrawan, while 'Ali Pasha was proclaimed Bey in Tunis. Husayn endeavoured to take the offensive again, but failed before Tunis and retired once again to al-Kayrawan, where he continued his resistance for five years. The town was finally taken by Yûnus on 16 Safar 1157/25 May 1740, and Husayn was captured and executed a short time later.

During the first twenty years of his reign, Husayn showed much creative activity: he restored the walls of al-Kayrawan and built madrasas at Sousse, Sfax and Gafsa. In Tunis itself he was responsible for putting the aqueducts into good repair and for planning the suddle rs' quarter (Sâk al-sartâjin), for building the dyers' mosque (Pãmi al-hidâia), the madrasas al-Nâghlia, al-Husayniyya and al-Djiyidda, and the mausoleum of the Dey Kara Mustafa. In his reign, 'Aziza Uğmâna, grand-daughter of the Dey Uğmân and famous for her pious foundations, died. She was buried near the Madrasa al-Shamâmâyya. Furthermore, it was Husayn who transferred the centre of Tunisian government to the Bardo.

(R. MANTRAN)

**HUSAYN b. 'ALI, Amir and 'Grand Sharif' of Mecca and the Hijâdż from 1326/1908 to 1335/1916, and King of the Hijâdż from 1335/1916 to 1343/1924, was the elder son of the second 'Ali, of the first Sharifian line of Mecca of the 'Akhîlâ family of the 'Awn branch of the Meccan Sharifs, the famous Muhammad b. 'Abd al-Munîn b. 'Awân (who died in 1275/1858). In spite of almost-successful attempts by the long-dominant Zayd branch of the Sharifs to regain the Meccan amirate, the descendants of Muhammad ibn 'Awân in fact retained it until its disappearance.

Husayn, born in Istanbul in 1270/1853 or 1273/1856, passed his youth partly in the Hijâdż and partly in Istanbul, where he was, after 1311/1893, a permanent resident and political dîtenu. Bilingual in Turkish and Arabic, an abundant and mellifluous talker and writer, combining obstinacy with ambiguity and a dominating temper with outstanding charm, he was prominent in local society and developed the qualities which he was later to demonstrate in high office. His four sons (‘Ali, Abû Allâh, Fâyâsî, and Zayd [qq.v.]) were all Turkish-educated, but all, by order of their authoritarian father, passed prolonged periods also in Arabia. Husayn himself was appointed to the Ottoman Council of State, and moved acceptably in the highest official and Court circles.

One effect of the Turkish revolution of 1326/1908 was to displace into exile the ruling Amir of Mecca, ‘Ali ibn Abû Allâh, first cousin of Husayn. The succession fell to the latter's uncle, ‘Abd Allâh Pasha, but, already old, he sustained a fatal stroke before leaving Istanbul. After some days of eager canvassing between ‘Awân and Zayd interests, the candidate of the former, Husayn, secured the backing of the (reputedly Anglophile) Grand Vizir, Kâmil Pashâ, and was appointed by the Sultan (cf. Hilmi Kâmil Bayur, Sadrâcâm Kâmil Paşa, Ankara 1954, 287 ff.). He was received with great pomp at Djidda and at Mecca in the last days of 1326/1908.

In a situation of extreme delicacy vis-a-vis the Turkish wâli of the Hijâdż wâliâyet, the new Amir displayed at first every sign of loyalty to his Sultan-Caliph. He took up arms against Idrisi rebels in ‘Ašr, occupied Ibbâ, and carried out a partial through successful submission, of Kâmil Pashâ to the amirs' rights. Nevertheless he was, during these years, simultaneously formulating certain ambitions of his own highly inconsistent with loyalty to Turkey, and was insisting on all, or more than all, the privileges of his own position. He obstructed, and in the end through tribal action prevented, the extension of the Hijâdż Railway southward from Madina, successfully resisted Turkish attempts to normalise the administration of the province and to impose conscription, enhanced his personal position by daily entertainment on a lavish scale, and even, though invisibly, placed himself in touch with Arab secret societies in Syria and Egypt working for home-rule for the Arab provinces. His second son, ‘Abd Allâh, held tentative conversations with the British in Egypt.

On the outbreak of the First World War in 1914, the last-mentioned contacts were resumed, and Husayn's ideas for Arab, and personal, aggrandisement took shape. He temporised over the Turkish demand for the raising of Arab forces to aid his suzerain, and found himself unable to support the proclamation, in the Holy Cities, of Holy War for the Caliph. Closer contact was at last made through his son Fâyâsî, and with the British in Cairo through secret messengers. The latter negotia-
tions resulted in the "McMahon Letters" exchanged with Sir Henry McMahon, the British High Commissioner in Egypt: letters which seemed to express a broad Anglo-Arab agreement and later became famous and disastrous from their inconsistent and ambiguous. The impulse to proclaim an Arab uprising against the Turks was increased by Turkish anti-Arab repression in Syria, and not less potently by British promises of immediate aid, in arms and money, for such a revolt. In mid-summer 1335/1916 the Arab revolt was proclaimed by Husayn ibn 'All, military operations (in desert-Arab style) began, the Turks were expelled from Mecca, and soon afterwards from Djidda, the smaller Red Sea ports, and with little delay from almost the whole of the Hijāz except Madina. In the late autumn Husayn announced himself as "King of the Arab Countries" — a title unacceptable, however, to the Powers (Britain, France, Italy), who substituted that of "King of the Hijāz". Whirlwind military operations moved beyond the Hijāz, and particularly when British participation in officers, supplies, money and staffwork became all-important in the Arab forces, King Husayn could no longer control, or even appreciate, the course of events or plans, and perform he ceased, except by distant criticism and in some degree through influence over his active sons 'Abd Allāh and Faysal, to take any part. He stayed in Mecca, locally a dominant figure, eloquent, irritable, increasingly remote from realities, and of little weight in an Arab world less interested in him than he supposed. The end of the war in 1918 found him still hoping for a united Arab kingdom under his rule; but he was soon disillusioned by the course of events in the Levant and by the Allied attitude to his wide claims, though this could not have been entirely unknown to him. The Allied military occupation of all (geographical) Syria and 'Irāq and the arrangements embodied in the Sykes-Picot Agreement of 1916 precluded effective Arab rule. This agreement was published by the Bolsheviks in November 1917; at least the general terms had already been communicated to him by the Allies in May of that year (Dawn, The Amir... , 131). Husayn was powerless to influence these developments or even the acts of his own sons; he was still more at sea in all that was reported to him of the peace-making at Versailles, where Arab claims received little attention. King Husayn was in fact unable to play any rôle in affairs outside the Hijāz from 1337/1918 onwards.

In his own Kingdom, his maladministration became notorious. He failed to extend his rule over any other part of Arabia, and, angrily rejecting the Mandates applied to the northern Arab territories, declined to ratify the Peace treaty. He quarrelled with Egypt over arrangements for the Ḥajj (ceremonial, and, still more dangerously, with the central-Arabian power of Ibn Su'ūd over tribes, oases and rivers. His assumption of the Caliphate itself, while on a visit to 'Ammān, in 1343/1924, when that title and office was abolished by the Turks, was a crowning mistake; he was accepted as Caliph by only a small minority even of Arabs, aroused powerful opposition, and added nothing to his prestige (cf. the attack of Raşḥīd Rīḍa, cited by E. Kedourie in JRAS, (1965), 215).

The end came from the Wahhabī followers of Ibn Su'ūd, whom he had needlessly offended. These, with strong iconoclastic religious emotions and many old scores to pay off, invaded the Hijāz only six months after the assumption of the Caliphate. They swept to the walls of Mecca and forced the old King to abdicate in favour of his eldest son 'All, and retire to Djidda, and thence by British steamer to 'Akhaba. He took with him his whole personal fortune, amounting, according to some sources, to some millions of pounds sterling, mainly in gold coins packed in petrol tins.

After some months passed at 'Akhaba the King was removed by British cruiser to Cyprus, where he lived quietly in a villa at Nicosia. He was accompanied by his youngest son Zayd, and visited periodically by the others. His mood was one of disillusion and bitterness, but he had pleasure in conversation and in his horses. After sustaining a stroke in 1930 he moved—or was moved—via Beirut to his son 'Abd Allāh's court at 'Ammān, and died there in mid-summer 1931. He was buried in the Haram al-Sharif at Jerusalem

AL-HUSAYN B. AL-HUSAYN, the last dey of Algiers, was born at Izmır and ruled from 1818 to 1830. When his predecessor 'Ali Khodja died of the plague on 1 March 1818 Husayn was occupying the high office of khodjat al-khayr (tribute-collector). Husayn was raised to the dignity of dey without having sought it, and being of a moderate disposition opened his reign by gestures of clemency. His reward was two attempts at assassination. Thereafter he remained mostly in the kasbah, dominated the city of Algiers, surrounded by Kabyle guards.

There was unrest in Algeria: the beys of Constantine and Oran were faced with serious local rebellions which were maintained, especially in the Oran area, by religious groups. Thanks to his patience and the
activity of competent and devoted collaborators, Husayn finally re-established calm in 1826 in the east, and in 1828 in the west. Nevertheless external affairs were dominant during his reign. He had to send vessels and men to help the Ottoman government against the Greek insurgents. Previously he had been invited by the European powers, after the congress of Aix-la-Chapelle, to suppress piracy and abolish slavery. As he was evasive, a Franco-British naval demonstration had taken place off Algiers in September 1819.

Later, when he was using forceful measures against Kabyle rebels, the British consul stubbornly refused to hand over to him the Kabyle servants whom he employed. The dey retorted by expelling the consul, so Great Britain sent a fleet to bombard Algiers in June 1824. The effects of these reprisals were slight.

The affair of France's debt to the Jewish merchants Baci and Busnach and the dey himself, which had been simmering longer before Husayn had come to power, occupied him for the whole of his reign and caused his downfall. It was in connexion with this affair that he struck the French consul Deval with his fly-whisk on 30 April 1827 in the course of a very animated interview. As he refused to make the apologies demanded by the French government, the French fleet set up a blockade along the Algerian coast. Then there came the incident of 3 August 1829, when the Algiers revenue department was attacked and a goldsmith's workshop was plundered. The dey immediately resolved to take this as an opportunity to resolve the affair that he had not been able to solve. He decided to demand reparation for the damage inflicted on the French merchant vessels. Husayn had not given the orders for this, but refused to satisfy French demands for reparation. As a sequel the French government decided to organize an expedition to destroy the power of the dey, and on 4 July 1830 Husayn was handed the capitulation proposals from the commander of the French expeditionary force. He set his seal upon them on the morning of the 5th.

He left Algiers for Italy, where he lived for several years, then retired to Alexandria, where he died in 1838.

AL-HUSAYN b. 'ABB AL-LLAH [see ibn SINA]. AL-HUSAYN b. AHMAD [see 'ABB AL-LLAH AL-SHI; ibn 'ALGALAWANY]. AL-HUSAYN b. 'ALI [see ibn MARDUQ: AL-MAGHRIBI; al-TUGHI]. (AL-)HUSAYN b. 'ALI b. ABI TALIB, grand-son of the Prophet and son of 7Atima [q.v.], famous because of his revolt which ended tragically at Karbala` on 10 Muharram 61/October 660.

Childhood and youth. (Al-)Husayn was born at Medina, according to the majority of the sources in the beginning of 621/January 662. He was thus still a child when the Prophet died and could therefore have very few memories of his grandfather. A number of hadiths mention the affectionate Phrases which Muhammad is said to have used of his grandsons, e.g., "whoever loves them loves me and whoever hates them hates me" and "al-Hasan and al-Husayn are the sayyids of the youth of Paradise" (this statement is very important in the eyes of the Shi'is, who have made of it one of the basic justifications for the right of the Prophet's descendants to the imamate; sayyid shabib al-a'lima is one of the epithets which the Shi'is give to each of the two brothers); other traditions present Muhammad with his grandsons on his knees, on his shoulders, or even on his back during the prayer at the moment of prostrating himself (Ibn Khajr, viii, 205-7; there is also a tradition in which the Prophet promised his grandson that if he would pray the Prophet would remain within the house). The majority of the traditions containing accounts of this kind appear curious or, when they include angels, fanciful, but which do not appear so to Muslims, with their belief in the frequent visits of Djibril to Muhammad; it is in other accounts, on which see below under The Legend of Husayn (col. 61a), that the Shi'is influence is apparent. During his youth, Husayn lived in the shadow of his father, obeying his orders (see, e.g., al-Mas'udi, Murid, iv, 271, 279, 281 etc.) and taking part in his campaigns.

Attitude towards Mu'awiya. Even after the death of 'Ali, Husayn still does not stand out as a personality; an example of this is seen in his relationship with Mu'awiya: he reproached his brother Hasan for having renounced power, but himself submitted to the fait accomplis, accepting an appanage of one or two million dirhams; he also went often to Damascus, where he received further largesse. Several times, even before Hasan's death, the Shi'is suggested that he should revolt (e.g., Hudjr b. 'Adi [q.v.], but the reply was always the same: "so long as this man [Mu'awiya] lives, nothing can be done ... the directive is to think continually of future revenge, but to say nothing about it" (al-Baladhuri, 634-v, 636 etc.). Mu'awiya, although informed by his governor at Medina, Marwan b. al-'Hakam, of how the Shi'is frequented Husayn, was not alarmed by it; he prudently counseled Marwan to avoid a clash with Husayn and sent the latter a letter in which he mingled generous promises with the advice not to provoke him. The incident closed with a proud written reply from Husayn, which seems not to have worried Mu'awiya (Ibn Khajr, vii, 162). There is nowhere only one tradition on this question: when Husayn defended against some powerful Umayyads his right to certain possessions (Aghani, vi, 68-70) and when Mu'awiya asked the high officials of state to recognize his son Yazid as his successor; Husayn was then among the five persons who refused to submit to this claim, which introduced a new principle in the succession to the caliphate [see Wali 'am].

Further refusal of the bay'a to Yazid after the death of Mu'awiya and consequences of this. Immediately after the death of Mu'awiya (Radjab 60/March-April 680), the governor of Medina, al-Walid b. 'Uthba b. Abi Sufyán, on the orders of Yazid, invited to the palace at an unusual hour Husayn and 'Abd Allah b. al-Zubayr [q.v.] with the intention of obliging them to pay homage to the new caliph. Both of them realized that Mu'awiya was dead and, having decided to stand by their refusal to make the bay'a, feared for their lives. Whereas Ibn al-Zubayr fled the following night to Mecca, Husayn went to the palace, but accompanied by his supporters, and, after offering his condolence, asked that the bay'a should be delayed, under the pretext that, in order to be valid, it must be made in public; he succeeded in delaying it for two days and finally escaped at night with his family to Mecca, without however taking an
indirect route. Al-Walid b. Utba, although urged by Marwân to resort to violence, was unwilling to take serious measures against the grandson of the Prophet and paid for his caution with his life, even from his office. The situation created in Mecca by the arrival of Ibn al-Zubayr and Husayn cannot have been a very easy one. The inhabitants of Mecca liked to attend on Husayn, and Ibn al-Zubayr, who was already harbouring secret ambitions, was suspected of jealousy towards him (see al-Tabari, ii, 276).

The sources on al-Husayn's revolt and on his tragic end. Unless something new is transmitted in the Library attributed to Abû Mihâlân [q.v.] (see Ahlwardt, 9028-9, 9031-8)—which the author of this article is in the process of examining—prove to be entirely or partly authentic, the most important texts on Husayn's enterprise and its tragic sequel at Karbala remain al-Tabari and al-Baladhuri. The former relates (1) a great number of traditions on the authority of Abû Mihâlân (d.v. 157/774) with isdâs going back to contemporary witnesses; (2) other fairly numerous traditions of Highâm b. Muhammad al-Kâbi, most of them received from his master Abû Mihâlân; (3) a small number of traditions transmitted with their isdâs by other traditionists, which, however, add few variants to the preceding ones and most of which are unimportant. Al-Baladhuri almost always used the same sources as al-Tabari, but often made résumés of them, introducing them by kâbi; and he provides some additional verses and details. Al-Dinawari, al-Yâqûbî, Ibn 'Abd Rabbihi, etc. add almost nothing to our knowledge since they based almost the whole of their continuous accounts on Abû Mihâlân. So great was the respect accorded even among the Shi'is to the work of this sympathizer of Husayn that it is chiefly from his collection of traditions that their earliest writers (e.g., al-Mufîd, d. 413/1022), or those endowed with enough critical faculty to enable them to eliminate fantastic additions (e.g., the modern Uways), have drawn their narrative of Husayn's enterprise (their Shi'ism showing itself elsewhere). It was only much later (apparently beginning in the 7th/13th century) that the narrative of Husayn's enterprise became all the more important for its collection of romantic anecdotes (single combats in which the enemies of Husayn were killed by the dozen, Husayn defending himself like a lion and slaughtering his assailants, and other such fables). The exaggerations and the misrepresentations of the Shi'is were severely criticized by Ibn Ka'bî (viii, 201 f.).

Invitation from the Kufans. Mission of Muslim b. 'A'âlî to Kufa. The news of the death of Mu'awiyâ was greeted with satisfaction at Kufa, the majority of whose inhabitants were Shi'is. Soon there were sent out from there letters and messengers inviting Husayn to make his way to this town which could no longer tolerate the Umayyad régime, which they regarded as guilty of having seized the jayy [q.v.], allowed the possessions of Allah to pass into the hands of the powerful and the rich, and killed the best men (an allusion to Hudîr b. 'A'dî and his supporters) while allowing the worst to remain alive (see letter of Sulaymân b. Šurad al-Khuzâ'î and of other Shi'is; al-Tabari, ii, 234 f., etc.). Husayn replied that he understood their hope of uniting themselves, thanks to him, in the right way and in the truth. "The Imam," he added, "must not be other than a man acting according to the Book of God, taking [his subjects' money] with honesty, judging with truth, devoting himself to the service of God." Nevertheless, before making a decision he thought it prudent to send his cousin, Muslim b. A'âlî [q.v.], to Kufa to test the ground. Muslim soon gathered thousands of pledges of support and was even able to preside over an assembly from the minbar in the mosque (al-Tabari, ii, 257 f.; al-Dinawari, 252). But his intrigues were rejected by the caliph Yazîd who, no longer trusting the governor of the town, al-Nu'mân b. Bashîr al-Ansârî, gave the control of Kufa to the son of Ziyâd, 'Ubayd Allâh [q.v.], then already governor of Basrâ, with orders to go there immediately to quell the disturbances. Ibn Ziyâd, who had met, during this journey to Kufa, the majority of whose inhabitants were Shi'is, reiterated his advice, and with great insistence, at Mecca (al-Tabari, ii, 274 f.; al-Baladhuri, 639 f., etc.). Even 'Abd Allâh b. al-Zubayr had attempted to dissuade him from the enterprise, but hypocritically, since he was in fact very pleased that Husayn should leave the field free for him at Mecca (al-Tabari, ii, 274-6, etc.). In spite of all this advice, Husayn did not abandon his project. He performed the 'umra [q.v.] instead of the hajj, which his cousin Abû 'AbdAllâh had attempted to dissuade him from, and took energetic measures which terrified Husayn's sympathizers. Muslim, after attempting in vain to organize an immediate revolt, fled and went into hiding; he was discovered and put to death (9 Dhu-l-Hijjâ 60/10 September 680). Unfortunately for al-Husayn, he had written a very optimistic letter on the success of his propaganda and, it seems, had even sent him the thousands of pledges signed by the inhabitants of Kufa.

Husayn's departure for Kufâ. Already Ibn al-Hanafîyya at Medina (al-Tabari, ii, 220 f.), then 'Abd Allâh b. 'Umar and 'Abd Allâh b. al-'Abbâs, when they met him on the road from Medina to Mecca (al-Tabari, ii, 223), and others also, had warned Husayn against the dangers of a revolt: Ibn 'Abd Allâh had reiterated his advice, and with great insistence, at Mecca (al-Tabari, ii, 274 f.; al-Baladhuri, 639 f., etc.). Even 'Abd Allâh b. al-Zubayr had attempted to dissuade him from the enterprise, but hypocritically, since he was in fact very pleased that Husayn should leave the field free for him at Mecca (al-Tabari, ii, 274-6, etc.). In spite of all this advice, Husayn did not abandon his project. He performed the 'umra [q.v.] instead of the hajj and took advantage of the absence of the governor, 'Amr b. Sa'id al-Asdagî [q.v.], who was completing the rites of the Pilgrimage on the outskirts of the town, to slip away together with his own group: about fifty men—relatives and friends able to bear arms—women and children (8 Dhu-l-Hijjâ 60/10 September 680, the day of the tarwîya). The names of the places where he stopped on the way from Mecca to Kufa are still known (al-Tabari, ii, 278 f.; al-Baladhuri; Wellhausen has noted them).

Informed of Husayn's departure, 'Amr b. Sa'id went in pursuit of him a party of men under the command of his brother Ya'byâ, but all that took place between the two groups was a clash with whips and sticks. At al-Tan'm, not far from Mecca, Husayn met a caravan coming from the Yemen and considered that he had a right to seize its load which consisted of cloaks and plants for dyeing destined for the caliph. On the way, Husayn met several people: the poet al-Farazadak who, when questioned, told him frankly that the hearts of the 'Irâks were for him but that their swords were for the Umayyads (al-Tabari, ii, 277 and 278, etc.), and his cousin 'Abd Allâh b. Dja'far who, having obtained from the governor 'Amr b. Sa'id a letter granting him amân, had come to meet him. But Husayn's decision was unshakeable; his replies to any attempts to deflet him from his enterprise were always more or less in the same vein: "God does as He wishes . . . . I leave it to Him to choose what is best ... . He is not hostile to him who purposes the just cause (al-hâbb) ... ." Zuhayr b. al-Kayîn al-Badjâli, who was a supporter of 'Ughmân, and while journeying had avoided pitching his tents at the same place as Husayn, did on one occasion have to make his camp
near to him; invited by ʿUsayn to visit him, he changed his opinion during the interview with him and from then on became one of the most enthusiastic supporters of Ḥusayn.

ʿUbayd Allāh b. Ziyād had stationed men on the roads leading from the Ḥidjāz to Kūfah (al-Tabari, ii, 285 and 288) and had given orders forbidding all persons to enter or leave the territory bounded by them. Ḥusayn learned of this order from the Bedouins, but was not alarmed by it and continued his journey. It was at al-Thaqabiyah that he first heard, from some travellers, the news of the execution of Muslim and of Ḥānī b. ʿUrwa [q.v.] at Kūfah. He would then have turned back, but the sons of ʿAklī, determined either to avenge their brother or to meet the same fate, made him change his mind. Then, at Zubālā, he learned that his messenger (Kays b. Mushir al-Saydāwī or ʿAbd Allāh b. Ḥakīr, his foster brother: al-Tabari, ii, 288, 293, 303), sent from al-Ḥadījīz to Kūfah to announce there his imminent arrival, had been discovered and killed. Ḥusayn then read to his supporters a proclamation in which, after informing them of the doleful news he had received and of the treachery of the inhabitants of Kūfah, he invited them to leave him. Those who had joined his group during the journey did depart; and there remained with him only those who were related to him and to Khīlām.

Parties of horsemen were scouring the region. When they appeared on the horizon, Ḥusayn changed his direction towards Dhu Ḥusam (or Ḥusam) and there pitched his tents The horsemen, who were under the command of al-Ḥurr b. Yazīd al-Tamimī al-Yarburī, approached and, as the weather was hot, Ḥusayn gave orders for them to be given water. The situation at this time was still too free of tension that al-Ḥurr and his squadron took part that day in two prayers led by Ḥusayn (al-Tabari, ii, 297, 298) and, later, four Shīʿīs who had come from Kūfah were able to join the insurgents in spite of al-Ḥurr's attempt to oppose this (al-Tabari, ii, 302 f.).

After each of the two prayers, Ḥusayn explained to his adherents the motives which had caused him to send them. 'You are still free to submit and I should have been an instrument of union in the hand of God . . . We are more qualified to govern you than those others who claim things to which they have no right and who act unjustly . . . But if you have changed your minds . . . I shall go away' (al-Tabari, ii, 297 f.). Al-Ḥurr knew nothing of the letters which the inhabitants of Kūfah had sent to Ḥusayn but he did not change his attitude when the latter showed him two sacks full of them; he had received the order to take the rebel, without fighting, to Ibn Ziyād and he endeavoured to persuade Ḥusayn to follow him; when Ḥusayn continued his march, he did not dare to oppose him but instead made some suggestions to him: to follow a route leading neither to Kūfah nor to Medina and to write to Yazīd or to Ibn Ziyād; at the same time, he himself would write to Ibn Ziyād in the hope that he would receive a reply which would allow him to avoid a painful ordeal. But Ḥusayn would not agree to his proposals and al-Ḥurr therefore followed him closely, uttering warnings from time to time: "I remind you of God for your own sake . . . if there is a battle you will be killed . . . " But Ḥusayn did not fear death. When a halt was made in the district (nābiyā) of Nināwā (forming part of the diwān of Kūfah) a horseman arrived from Kūfah; without greeting Ḥusayn, he gave al-Ḥurr a letter from Ibn Ziyād ordering him not to allow the rebels to make a halt except in a desert place without fortifications or water. Zuhayr b. al-Ḥusayn b. ʿAmr b. ʿAbd al-Ṭālib then suggested that Ḥusayn should attack al-Ḥurr's small detachment and occupy the fortified village of al-Ṭālib, but Ḥusayn refused to open the hostilities.

On 2 Muharram he made his camp at Karbalāʾ [q.v.], a place belonging to the nābiyā of Nināwā; on the 3rd the situation worsened: there arrived from Kūfah an army of 4,000 men under the command of ʿUmār b. Saʿd b. Abī Waqṣārā who, appointed nābi b. al-Ṭabari, 39

On this occasion Ibn Ziyād was given evil advice by Shāmir [q.v. (usually known as Shīmūr b. al-Māʾshūḵ)] b. Dhi Ḥiṣāwān (an ex-supporter of ʿAlī who had fought with him at Siffin: al-Tabari, i, 330 f.); the governor would otherwise have been accommodating, but he was persuaded that he ought to force Ḥusayn to submit to him. Ibn Ziyād, so he had arrived, was in the territory which was under his jurisdiction. Ibn Ziyād therefore gave orders to Ibn Saʿd either to attack the rebel, if the latter refused to comply with the conditions laid down, or to hand over the command of the troops to Shāmir, who was the bearer of this order (al-Tabari, iii, 315 f.). He is said even to have added that, if Ḥusayn fell in the fighting, his body was to be trampled on, because the man was "a rebel, a seditious person, a brigand, an oppressor and he was to do no further harm after his death" (al-Tabari, ii, 316). Ibn Saʿd cursed Shāmir, accusing him of having envenomed an affair which otherwise would have ended peacefully; he was sure that Ḥusayn would not submit, for "there is a proud soul in him in his heart".

On the evening of 9 Muḥarram, Ibn Saʿd advanced with his men towards the group of insurgents. Ḥusayn was seated in front of his tent, leaning upon his sword, his head nodding drowsily; he had a vision in which the Prophet announced that he would soon be joining him. Warned by his sister Zaynab that the soldiers of Ibn Saʿd were advancing, he sent his brother al-ʿAbbās to find out the reason for their approach. While the messenger's return was awaited, warnings, reproaches and insults were hurled from both sides. When al-ʿAbbās returned, Ḥusayn, having learned Ibn Ziyād's demand, requested a respite of one night; this being granted, he delivered

Encyclopaedia of Islam III
to his relatives and supporters a discourse which his son 'Ali, the only male of his family to escape from the massacre, was later to recall: "I give praise to God Who has honoured us with the Prophethood and has taken us under the shadow of the Qura'ish... I know of no worthier companions... than mine nor a more devout family than mine... May God reward you all. I think that tomorrow our end will come... I ask you all to go away. I do not hold you back. The night will cover you. Use it as a steed..." (al-Tabari, ii, 320 f.). With a few exceptions, his supporters showed a complete devotion to his cause. Husayn, after reviving and comforting his sister Zaynab, who had fainted in despondency, went out to prepare the defences: the tents were brought close together, and tied to one another with ropes, wood and reeds were heaped up in a ditch ready to be set alight when necessary to prevent an attack from behind, and they passed the rest of the night in prayer (al-Tabari, ii, 317-24, 326). The next day, after the sahib, hostilities commenced.

The battle of Karbala: Main episodes. If we accept that Ibn Sa'd has sent some foot-troops and archers to oblige the rebels to surrender by forcing them to suffer thirst and to capture the Tālibīs by surrounding them (which is what an impartial study of the traditions would seem to suggest), we may accept also that the battle of Karbala was prolonged from dawn until the afternoon in a series of single combats, of attacks and partial repulses, of periods of inaction, of skirmishes in defence of the tents, etc., and that it was not until nearly sunset that Ibn Ziyād's troops, exasperated by the rebels' resistance, and determined to put an end to it, fell upon the surviving Tālibīs and massacred them. In such an encounter, which began as a sort of deadly tournament with only a small number of combatants and a large number of spectators and soldiers on guard, some of the dialogues between adversaries which the sources recount could have taken place. Lammens (Le Califat de Yazid 1er, 169) attributes great importance to a concise tradition of Abū Mīkhnaţ according to which the fighting lasted as long as a siesta (al-Tabari, ii, 374 f., etc.) and from this he deduces that: "The tragedy of Karbala instead of lasting for weeks consisted of only one action and was over in an hour..." Now among the accounts given by Abū Mīkhnaţ there are certainly some which are invented, but taken all together, they do serve to illustrate the narrative and consequently to select one single tradition in so far as it differs or appears to differ from the bulk of others is a critical method of disputable value, particularly as, in the present case, the traditionist is the same and as the tradition in question may be interpreted either as the boasting of a combatant before the caliph or as the description of the last act of the tragedy.

On the morning of 10 Muharram, Husayn drew up his supporters (32 horsemen and 40 foot-soldiers with Zuhayr b. al-'Kayn in command of the right wing and Ḥabbī b. Muẓāhr of the left) in front of the tents, and having entrusted the standard to his brother al-'Abbās, ordered them to set fire to the heaps of wood and reeds. He had had pitches for himself a tent inside which he coated himself with a depilatory paste and perfumed himself with musk diluted in a bowl. Then, on horseback and with the Kur'ān in front of him, he invoked God in a long and beautiful prayer (al-Tabari, ii, 327) and pronounced a discourse to his enemies in which, having declared that God was his walli—and God protects the devout—he invited them to consider well whether it was lawful for them to kill him, reminded them of Muḥammad's statement that he and his brother were the lords of the youth of Paradise, reviewed the great merits of the family of the Prophet, once again reproached the inhabitants of Kūfa for having summoned him, and asked to be allowed to make his way to the Tālibīs, which would offer him safety. When it was repeated to him that first of all he must submit to his cousins, he replied that he would never humiliate himself like a slave (other, longer, versions of his discourse are given in Muhšīn al-Āmīn, 255-60). He then dismounted and commanded that his horse should be hobbled, intending by this to signify that he would not fight, but would go to the Tālibīs to negotiate.

If the numerous accounts of episodes of secondary importance are removed, the phases of the battle can be followed fairly clearly. After Husayn's speech, it was Zuhayr b. al-'Kayn who exhorted their adversaries to follow Husayn; as he received in reply only insolence and threats, he requested them not to kill him (al-Tabari, ii, 331 f.). Then they began to shoot arrows and duels took place (ibid., 335 f.); the right wing of the Tālibīs, which was in command of Ibn Ziyād, attacked, but withdrew on meeting resistance, and the leader ordered his men not to engage in any more single combats (ibid., 337, 342 f.); they preferred to go on shooting arrows from a distance. An assault and an encircling manoeuvre made by the left wing on the orders of Ẓāhir led to losses, and the commander of the cavalry asked Ibn Sa'd for help from the foot-troops and archers (ibid., 344); Ṣahāḥ b. Riḥā', a former supporter of 'Abī who in this action was in command of Ibn Ziyād's foot-troops, when asked to attack, made it plain that he had no wish to do so (ibid., 344 f.) and it was the cavalry on armoured horses and 500 (sic) archers who went into action. Husayn's horsemen, having hamstrung their horses, fought on foot (ibid., 345). As Husayn and the Tālibīs could be approached only from the front, Ibn Sa'd sent some men towards the tents, from the right and from the left, to dismantle them, but the supporters of Husayn, slipping in among the tents, defended them energetically. Ibn Sa'd then gave orders to burn the tents and this was done, at first to the advantage of Husayn because the flames prevented the attackers from advancing on that side (ibid., 346). Ẓāhir, who had approached the tent of Husayn and his wives, would have set fire to this also, but even his comrades reproached him for this and he went away ashamed (ibid., 346 f.).

At noon, Husayn and his followers performed the prayer of the zuhr according to the rite of the ẓādāl al-khawaf [q.v.] (ibid., 347 f., 350). It was in the afternoon that Husayn's party became narrowly encircled; his supporters fell fighting in front of him (ibid., 354 f., 355 f.) and the way lay open through to the Tālibīs who, until this moment, had not entered the field of action, and their massacre began. The first to be killed was 'Alī al-Akbar, the son of Husayn (ibid., 356 f.), then it was the turn of a son of Muslim b. Ṭākī (ibid., 357 f.), of the sons of ʿAbd Allāh b. Ẓafar and of ʿAkkī, then of Kāsim, the son of Ḥasan, whose death is related in touching terms: he was young and beautiful; mortally wounded, he called for help to his uncle who swooped like a falcon on the assailant and struck him with his sword; but it was not Husayn who killed the attacker but the horses of Ibn Ziyād's soldiers who knocked him down and trampled him with their hooves. When the dust cleared, Husayn could be seen to take the corpse of his nephew in his arms, cursing
his murderers, and to carry him in front of his tent, where the bodies of Ali Al-Abi Talib's brother, Husayn, are not given in the texts of al-Tabari or of al-Baladuri, who limit themselves to relating (the former on p. 361, the latter on fol. 657r) that Husayn, overcome by thirst, made his way towards the Euphrates, but was prevented from reaching it; he then prayed to God that he who had prevented him from achieving his object should die of thirst (and of course his prayer was answered); wounded in the mouth and on the chin, he cast upwards towards heaven the blood which he had collected in his cupped hands, complaining to God of the suffering which was being inflicted on the son of the daughter of His Messenger. But there must certainly have existed also some traditions concerning al-Abbas, who definitely also fell at Karbala³, and al-Mufid (240) links them with that concerning Husayn; he relates that the two brothers went forward together towards the river, that al-Abbas, surrounded by enemies and separated from Husayn, fought courageously and was killed on the spot where later his tomb was erected (al-Mufid, 243).

By now Ibn Ziyad's soldiers were quite close to Husayn, but for some time nobody dared to raise a hand against him. Finally a Kifli, Malik b. Al-Husayn, surrounded him in the head, and Husayn's hood was filled with blood. While he replaced it by a balanswana, wrapping a turban round it, Malik seized the burnous, but it did him little good, for he was followed for the rest of his life by poverty and disgrace (ibid., 359). Another pathetic episode is the death of a child whom Husayn had placed on his knees (al-Ya'qubî, 290 f., explains the presence of this child on Husayn's lap at such an unsuitable moment by the fact that it had just been born). An arrow pierced the child's neck and Husayn on this occasion also collected the blood in his cupped hands and poured it on the ground, invoking God's wrath against the evil-doers (ibid., 359 f.).

The slaughter continued. Finally it was Shamir, the cursed of the Shi'is, who advanced with a small group of soldiers against Husayn, but even then he did not dare to strike him, and there merely ensued an altercation between the two of them (ibid., 362 f.). At this moment Husayn emerged from his inertia and prepared to fight (when considering the reason for his unwarlike attitude it should be remembered that he was nearly fifty-five years of age and that he had been ill). A boy placed himself bravely beside him, deaf to the order to return to the tent and to Zaynab's calling him back, and had his hand cut off by the stroke of a sword; Husayn comforted him, assuring him that he would soon meet his ancestors in Paradise. There were not more than three or four rebels surviving, and Husayn attacked the enemy. He was wearing well-made drawers of a shining material, but had rent them in advance because he feared that they would be looted from him after his death, a precaution which proved useless, for he was to be left naked on the field of battle (ibid., 364 f.). Ibn Sa'd having approached, Zaynab spoke to him: "'Umar b. Sa'd, will Abû 'Abd Allah (the kunya of Husayn) be killed while you stand and watch?" Tears flowed from the eyes of Ibn Sa'd (ibid., 365). Husayn fought vigorously. There are some sources (al-Ya'qubî, 291, and other Shi'is) which state that he killed many enemies, even dozens, but one tradition states that if his enemies had wished they could have killed him at once (ibid., 365). Finally, in spite of his last threat of Divine vengeance, he was wounded in the hand and the shoulder and he fell with his face to the ground (ibid., 366). Ibn Sa'd and Sinan b. Anas b. 'Amr al-Nakhî who, after striking him yet again, cut off his head, since Khawali b. Yazid al-Ashâbi, whom he had ordered to do so, was trembling too much to be capable of it. Sinan gave the head to this Khawali, who then carried it to Ibn Ziyad.

The combat having thus ended, the soldiers turned to pillage; they seized Husayn's clothing, his sword and his baggage, his dye-plants and the Yemeni cloaks, and they seized from the women their ornaments, and their cloaks (ibid., 366). A sick boy was lying in one of the tents and Shamir would have killed him also, but was restrained; Ibn Sa'd came up and forbade anyone to enter this tent (ibid., 367), and this boy, 'Ali, who was to be given the name of Zayn al-'Abidin [q.v.], was the only one of Husayn's sons to survive the massacre; as a sign of Divine favour, there were descended from him all the numerous line of the Husaynids. The martyrs of Karbala³ or of al-Taff— they are known also by this toponym [q.v.]—numbered 72, 17 of them Tâlibis (for a critical analysis of the other figures, see Muhsin al-A'min, 352; 88 soldiers of Ibn Ziyad fell on the field of battle (ibid., 368 f.). The latter total is given also by Muhsin al-A'min, although it is difficult to reconcile this figure with the notes scattered throughout his book (138, 267, 268, 269, etc.) on the number killed by this or that combatant: 40 by al-Hurr, 30 by Burayr, 12 or 13 by Nâfî etc., and a great number killed by Husayn.

Minor episodes of the battle. The account of the battle is filled with a large number of episodes; we give here the references for those which have formed the subject of the longest narratives and which have become fairly well-known (the figures in parentheses refer to al-Tabari, iii): the repenance of al-Hurr, his fighting beside Husayn and his death (332-4, 341, 345, 349 f.); the murder of a Kalbi and his wife for Husayn's cause (335, 336 f., 344, 346); death of Ibn al-'Abâb al-Huwáza following a prayer by Husayn (337 f.); Nâfî wounded, taken prisoner and executed (341 f., 350 f.); brothers fighting on opposing sides (341); 'Abis, an old and valiant fighter, killed by stones (353 f.); a supporter who fled (354 f.); heroes who fell in duels: Muslim b. 'Awaqda, a warrior who had taken part in expeditions against the infidels (343 f.), Burayr, the sayyid of the readers of the Kur'ân (338-40), Habib b. Muzâhir (348 f.), Zuhayr b. al-Kayn (349 f.), and others passim.

Events after the battle. Husayn's body, covered with wounds (ibid., 366), is said to have been trampled by the horses of ten men who volunteered to inflict this final indignity on the grandson of the Prophet. After Ibn Sa'd's departure, the headless body was buried with those of other "martyrs" by the Asadis of the village of al-Ghâdiriya in the spot where the massacre had taken place (ibid., 368) (on the sanctuary which was erected there in their honour, see karbala³). Husayn's head, with those of other Tâlibis, was taken first to Kûfa, then to Damascus. Ibn Ziyad and Yazid, when it was placed in front of them, each reacted differently: the former was insulting, knocking out some teeth with his switch, while the latter, according to most of the traditions, was respectful and appeared to regret the haste with which his governor had acted,
going so far as to curse "the son of Sumayya"; he is reported to have declared that if Husayn had come to him he would have pardoned him. The Tālibi women and children were also taken first to Kūfa, then to Damascus, where the caliph in the end treated them kindly, although at the beginning of his interview with them he addressed them harshly, to which Zaynab and 'Ali replied in a similar manner. The women joined Yazid's wives in their laments for the dead; they received compensation for the property stolen from them at Karbala\textsuperscript{2} and a few days afterwards were sent back to Medina with a reliable escort. 'Ali, who had run the risk of being executed because it was stated that he was already an adult, was treated by Yazid with an almost affectionate courtesy and instructed to accompany the Tālibi women to Medina. There are diverse accounts on the place where Husayn's head is buried: (1) beside his father 'Ali, i.e., at al-Najaf; (2) outside Kūfa but not beside 'Ali; (3) at Karbala\textsuperscript{2} with the rest of his body; (4) at Medina in the Bạḳī\textsuperscript{3}; (5) at Damascus, but exactly where is unknown; (6) at al-Rạḳja; (7) in Cairo, where it was allegedly transferred by the Fātimīds [see \textit{Aṣkālān}], and exactly in the place where there was built the mosque which bears his name (Muḥṣīn al-Amin, with many details, 390-4).

On the repentence of the inhabitants of Kūfa and their "revenge" in 65/683-5, see \textit{Sulaymān b. Shụrād al-Insānī} and \textit{Tawwābūn}; for the ceremonies commemorating the battle of Karbala\textsuperscript{2}, see \textit{Muḥrahā}; for the Persian popular dramas of which Husayn is often either the protagonist or a character, see \textit{Tāziya}.

**The Legend of Husayn**

In the legend of Husayn, a first distinction may be made between those beliefs in which the element of cosmogony predominates and an important part is played by "light", those which have an eschatological character and finally those (the most numerous) in which Husayn remains the historical personality known to us, but endowed with a halo of marvels which elevate him above the common run of human beings. In the first group, Husayn has in general a function of being the forerunner of that of the descendants of the \textit{aḥl al-bayt} [q.v.] and completely equal to that of his brother Hasan. For a detailed study of these beliefs, arising from the influence of metaphysical systems of a much earlier date than Islam and elaborated by the extremist \textit{Shi}\textit{is} (zhūlād), see \textit{Ismā'īliyya, Umm al-Kitāb}. We give here an example (Ibn Rustam al-Ṭabarī, 59): 7,000 years before the creation of the world, Muhammad, 'Ali, Fāṭima, Hasan and Husayn, figures (\textit{aṣghāb}) of light, praised and glorified the Lord before His throne. When God wished to create their forms (\textit{ṣawwar}) He forged them like a column (\textit{ṣawmi}) of light, then threw them into the loins of Adam and made them pass from thence into the loins and the wombs of their forbears. They are not tainted by polytheism or heterodoxy. Among the eschatological accounts is the following (which should perhaps be connected with the beliefs of the \textit{Shi}\textit{is} sect of the Mughirīyya founded by al-Mughira b. Sa\textit{'}īd al-\textit{Udālī}, d. 115/737), (Ibn Rustam al-Ṭabarī, 78): Husayn went to the Rādāw mountains where he will remain on a throne of light, surrounded by the Prophets, with his faithful followers behind him, until the coming of the Mahdi; then he will transfer himself to Karbala\textsuperscript{2} where all the celestial and human beings will visit him. Others of these eschatological accounts belong to the cycle of those which promise to the members of the \textit{aḥl al-bayt} a privileged position in Paradise; for example (Ibn Shahrāshūb, i, 219) Muhammad, during his \textit{mi\textacircumflex{a}}\text{ṣīd} [q.v.], saw a castle made of pearls and learned that it was intended for Husayn; as he advanced, he saw an apple, grasped it and cut it in two; from it there emerged a young girl, with the corners of her eyes like those of eagles, also destined for Husayn. Marcel are \textit{Sīgī} for the authors cited: Bal. = al-Balāḏūrī; \textit{T.} = al-Ṭabarī, ii; \textit{IIRT} = Ibn Rustam al-Ṭabarī; Mufl. = al-Mufīd; ISh. = Ibn Shahrāshūb, iii; Shi. = al-Ṭabarī, iii; IKh. = Muḥṣīn al-Amin. Details of later stories of a fabulous nature will be found in the book by Muhammad Mahdī al-Māzāndārānī al-Ḥārī which sometimes mentions as a source the \textit{Bihār al-anwār} of al-Maḍjlīsī, but also some recent texts.

\textit{Marvels concerning the birth and childhood of Husayn.} (IRT, 71; ISh., 209, 231, 237) Husayn was born three months prematurely and survived this very early birth—an extraordinary circumstance which occurred only to 'Isa and, it is said, also to Yābūy b. Zakariyyā\textsuperscript{3}. (ISh., 209, 239) Muhammad cared for him for 40 days, putting his thumb or his tongue or his own saliva into his mouth. (IRT, 79; ISh., 228 f.; parallel account: IRT, 73; ISh., 213) The number of angels who descended from heaven to rejoice, with Muhammad, at his birth, was about thousands (IRT, 72; ISh., 200; Muḥṣīn A. 163) Dījbīr brought to Muhammad at the same time the congratulations and the condolences of God. (Muḥṣīn A., 163) He gave him a handful of earth from Karbala\textsuperscript{2}. (ISh., 229) He handled Husayn while his mother was asleep. (IRT, 49; ISh., 228 f., etc.) An angel benefited from Husayn's birth: banished by God to an island as punishment, with his wings broken, he saw passing over him the band of angels on their way to offer their congratulations to Muhammad; having begged them to take him with them, he mended his broken wings simply by rubbing them against the newly-born child; he was pardoned through Muhammad's intercession and took his place again in Paradise, from then on being called the \textit{masāli} of Husayn. (IRT, 79) It is he who takes note of the visitors to Husayn's tomb at Karbala\textsuperscript{3} (IRT, 72, 193; ISh., 200; Muḥṣīn A., 234 f.) Muhammad had on his knees his son 'Ībrahim and Husayn; having learned through Dījbīr that God would not leave both of them alive and that he could redeem the life of one of them with that of the other, he, in tears, gave up 'Ībrahim in order not to make 'Ali and Fāṭima weep.

\textit{Marvels connected with his death:} When Husayn fell on the battlefield (Bal., 667r; Mufl., 251; ISh., 212 f.; Muḥṣīn A., 302 f., 305 f.) the day became dark and the stars were visible, etc., the sky became red etc. (Bal., 660v; Muḥṣīn A., 303 f.) It rained blood, which left traces on the heads and the garments of people as far as Khurāṣān etc. (Bal., 667v; ISh., 212, 218, 238; Muḥṣīn A., 304 f.) Blood appeared beneath the stones in Syria and elsewhere (similar accounts: ISh., 213, etc.). (Muḥṣīn A., 304) Blood exuded from the walls. (ISh., 213, 236; IKh. 200 f.; Muḥṣīn A. 163) On the night of Husayn's death, Umm Salama [q.v.] or Ibn 'Abbās saw in a dream Muhammad with his head and his beard soiled with earth, pouring blood into a phial. (IRT, 73; Mufl., 250 f.; IKh., 213; IKh. 199, 200 f.) The earth of Karbala\textsuperscript{2} which Dījbīr or another angel had given to Muhammad and which Umm Salama had preserved, turned into blood on the ninth following night. Umm Salama realized that the tragedy was accomplished and cried out; she was the first to cry out at Medina
(AL-)HUSAYN B. ‘ALI B. ABL JALIB

(All these accounts which show Muhammad collecting the blood of the martyrs of Karbala etc. are presented in the form of hadiths, with different isnads and many variants, especially in the musnads (canonical and non-canonical); for a collection of them arranged by subject see al-Muttaqi al-Hindi, cited in bibl.).

The givers wept and recited poems; the wives of the grooms lamented; Umm Salama and other women heard them. The angels wept when Husayn's head was taken to Damascus. (ISh., 238) Even the wild beasts and the fishes wept. (Muh.A., 164 f.) ‘Ali knew that his son would be killed at Karbala and, when he passed by this place, halted and wept and recalled Muhammad's prophecy. He interpreted the name of Karbala: karb wa-balá (affliction and trial). (I.Ka.b., 199) The martyrs of Karbala will enter Paradise without any accounting for their actions. (T., 385) An unknown person, heard by all but seen by none, recited during the night before the battle threatening verses.

Marvels of the severed head: (ISh., 217 f.) While the head was being transported, a mysterious quill wrote threatening verses on a wall. The same verses had been written in a church of the Rüm, built 300 years before Muhammad's birth. The head emitted a perfume; and a monk, impressed by the miraculous light emanating from it, paid a sum of money to be allowed to keep it in his cell; during the night the head spoke and the next day the monk embraced Islam; the dhimams which he had paid changed into stones. A snake crawled into one nostril of the severed head. (IRT, 77 f., etc.) The head recited verses of the Kur’an. (T., 369; ISh., 217 f.) Khawali having taken it to his house on the night of his arrival at Kufa and having put it under an urn, a column of light descended from the sky and a white bird circled around the urn.

Punishment of those who had insulted and wounded Husayn: All those who had wronged Husayn were visited by some immediate or eventual misfortune: (ISh., 214-6; Muh.A., 345-51) there are mentioned: murder, blindness, leprosy, unquenchable thirst, hands as dry as wood in summer, damp in winter), death from burns, stings from scorpions, loss of vigour, poverty, a man driven from his house by his own wife (some of these misfortunes are related by al-Tabarî, passim). Those who stole property belonging to Husayn were also punished: he who put Husayn's turban on his own head was afflicted with madness; he who put on his cloak, with poverty; he who used his perfume, his dye-plants and his clothes, with leprosy or the falling out of his hair. The items stolen underwent changes which made them unusable or caused them to lose their value: (ISh., 215, 218) the meat of the camels became bitter or caught fire; the dye-plants and the perfumes changed into blood, the gold into copper or fire in the hands of the gold-smiths; the saffron caught fire. On the marvels of the tombs, see Karbala.

Supernatural attributes of Husayn which caused marvels. (ISh., 230) His forehead was so white that he felt joy. God then revealed to him the fate of his future grandson. The mysterious verses of the Kur’an interpreted by the Shi’is as referring to Husayn. For a series of these verses, see ISh., 206 f., 236 f.; cf. Muf., 199. An example is verse XLVI, 14/15, which speaks of the pregnant mother bearing her child with suffering and giving birth to him with pain; it is interpreted as an allusion to Fatima, who, having conceived Husayn, was much distressed when she heard from Muhammad that he had received God's condolences on the fate of his future grandson. The mysterious letters K.H.Y.A.S., with which sûra XIX begins, had been explained by God to Zakariyya as follows: K = Karbala; H = halak al-sura; Y = Yezid; A = wa’shak; S = sabruhu. This explanation is merely a detail in a rather involved narrative (ISh., 237) forming part of a group of curious comparisons between the fate of Husayn and that of Yahyâ, the son of Zakariyya (perhaps owing to the motif of the severed heads placed on a dish): Zakariyya, who had learned the names of the Five from Djibril, was astonished by the fact that when he uttered the name of Husayn his eyes filled with tears, while when he uttered the name of Yahya it did not move him. He felt joy. God then revealed to him the destiny of Muhammad's grandson, and Zakariyya wept and sobbed, asking God to give him also a son who could cause him to endure a sorrow similar to that which He was to inflict on his beloved Muham-
mad. God granted him a son, Yabya. At each stage of his journey from Mecca to Kufa, Husayn recalled that his father, Yaftya, had done, and in order to quieten it God will kill 70,000 hypocrites, unbelievers and wicked believers, as he had also done for Yabya.

**Judgments on Husayn.** Throughout the Muslim world there was sympathy and a high regard for Husayn. It was only the adherents of the Umayyad movement who presented him as a ba'du* in'shā'āl al-bay'a*, that is as a rebel against the established authority, and thus condoned his murder by Yazid, but their opinion was opposed not only by those who despised the Umayyad régime (for an echo of the protests of the latter and their denial of the validity of the bay'a* to Yazid, see al-Mukram, 12-6, and Muhsin al-Amin, 67), but also by those Muslims who refused to recognize that the murderers had acted according to their consciences and at the same time sought pretexts to refrain from blaming either the rebel al-Husayn or the Companions and the *tabi* 'ūn who had remained neutral in order to avoid civil war (see Ibn Khaldun, Mukaddima, Būlāk 1284, 177, 181, fašī fi wilāyat al- ʿābd). In this almost universal exaltation of Husayn due to his descent from the Prophet and to the conviction that he had sacrificed himself for an ideal, it is not possible to make a clear distinction between the opinions of the Sunnis and those of the Shi'īs, except in the case of certain privileges and attributes which only the Shi'īs accord him. The very favourable attitude of the Sunnis was probably strongly influenced by the pathetic accounts which Abū Mīkhaṣaf collected, either directly or with a very short *imād, mainly from the Kufans who repented of their behaviour towards the Prophet's grandson; it was these traditions, suffused with the sentiments of the Kufans and marked by the notoriously pro-'Alīd character of Abū Mīkhaṣaf's collection, which formed the basis of the account of the later historians and through them spread throughout the Muslim world.

As there exists no work which can serve as a guide to the ideas of all the groups of Shi'īs concerning Husayn, we limit ourselves here to the following notes: Husayn in his capacity as *imām* [see IMAMA] shares the various privileges accorded to the *imāms* (see Bausani, La religione . . ., 346 f.) by the Twelver Shi'īs [see ITHNĀ-ASHARĪYYA], the Ismā'īlīs [see ISMA'ILĪYYA], the Zaydis [see ZAYDIYYA], etc.: like the other *imāms*, he is a mediator with God for those who call on him; it is through his intercession (ta'awwūl) that his faithful followers obtain guidance and attain salvation. As a member of the holy Five he received the same divine grace as his brother Hasan [see ARL AL-BAYT, ARL AL-KISA', PĀTIMA, MUBĀHILA, etc.]. As a grandson of the Prophet he had the right to receive reverence (burma). In addition he possessed personal qualities, above all the attribute of piety, demonstrated by his 25 pilgrimages on foot from Medina to Mecca and the 1,000 *ra'as* which he performed each day (on this number, which is considered to be exaggerated, see Muhsin al-Amin, 124 f.). It was because of his longevity that he had little time to spare for his wives and consequently had few children. Other qualities which he possessed were generosity (there are several stories to illustrate this), forbearance (*kihm*), humility, eloquence (as a proof of this there are mentioned speeches and poems by him), and finally the qualities which may be inferred from his actions, such as his contempt for death, disdain for a life of humiliation, his pride, etc. (see, e.g., Muhsin al-Amin, 125-39, 132, 156 f.). But the basis of the exaltation of Husayn by the Shi'īs is found in the noble motives for which he sacrificed himself and of course in the moving fact of his edifying exploit. From the belief that the *imāms* know all that was, that is, and that is to come, and that their knowledge does not increase with time, it is inferred that Husayn knew in advance the destiny which awaited him and his followers; he thus set off from Mecca towards Kufa aware of his imminent sacrifice and yet without any hesitation or any effort to escape from God's will. A tradition according to which he was invited by God to choose between sacrifice and victory (helped by an angel) gives yet more value to his enterprise, since it makes of it a voluntary action, and hence of great significance. The question arises as to his aim in thus sacrificing himself. The Shi'ī texts are very clear on this point: Husayn gave his person and his possessions as an offering to God to "revive the religion of his grandfather Muḥammad", "to redeem it", and "save it from the destruction into which it had been thrown by the behaviour of Yazid"; furthermore, he wished to show that the conduct of the hypocrites was shameful and to teach the peoples the necessity of revolt against unjust and impious governments (*fāsīks*), in short he offered himself as an example before the Muslim community (see, e.g., Muhsin al-Amin, 135, 152 f.). The idea that his intention was to redeem men from their sins by his blood and to save them, that his action was a redemptive sacrifice for the salvation of the world, is, in these actual terms, foreign to Shi'ī beliefs; at least the writer of this article has found no trace of it in the texts consulted. It is possible that it penetrated later into the Shi'ī literature and its influence is discernible in recent poems, since the transition from ta'awwūl to this idea is an easy one and it may have been helped by the influence of Christian ideas.

Among western Islamic scholars, Wellhausen and Lammens have formed judgements on the character of Husayn after careful study of the sources available to them. The former, guided by his subtle intuitions of historical facts, painted a fine picture of the situation (see, e.g., Wellhausen, Die Chronologie und der innere Aufbau des Islames, xxvii ff.) among the Shi'īs concerning Husayn, considering them to be later forgeries. But although it is probable that the traditionists have re-cast or modified this material, it must nevertheless be admitted that there emerges from it as a whole and, more important, from the facts themselves, the figure of a man impelled by an ideology (the institution of a régime which would fulfil the demands of the true Islam), convinced that he was in the right, stubbornly determined to achieve his ends, as in general are all religious fanatics, and admired and encouraged by supporters who were also convinced that their cause was just. This interpretation may not be a true picture of Husayn as an individual; it was nevertheless that which the following generation, for motives either of sentiment (respect, pity for his death), or of politics (the campaign against the Umayyads), gave of him, which was shared by the
later Arabic historians and which led to his exaltation and his legendary position among the Shi'is.

**Bibliography:** Ibn Sa'd, *Tabaqat*, ii/2, 89, iii/1, 21, 26, 252, v, 107, 125, 176, viii/204 (the numerous inaccuracies (some are merely to facts which are well-known or are not important for the biography of Husayn); Baladhuri, *A'mad, ms. Paris: biographical notices 437v-438r, 632r-633v, invitations from the Shi'is.

imprisoned first in a dar at Medina (140-1/758) and then in a horrible prison at Kufa (144/762) by the Abbasids immediately attempted to re-occupy the mosque, and although at first they dispersed because their leader had been killed by Yabyya and Idris b. 'Abd Allah, they later took part in further fighting; hence the whole town did not fall into the hands of the rebels, whose situation became so precarious that, after having provided themselves with food and drink, they camped in the mosque and remained there for eleven days. Abu 'l-Faraj does not mention this active and passive resistance at Medina, nor certain actions of the occupiers of the mosque which shocked other Muslims and rendered it unsafe. Finally, on 24 Dhul-Qa'da, al-Husayn decided to extricate himself from this situation, which had reached an impasse, and, at the head of a group of 300 armed men who were joined en route by reinforcements from Mecca, he marched towards that town. Several members of the 'Abbásid family (notably al-'Abbás...
b. Muhammad, the uncle of al-Mahdi, and his son 'Ubayd Allâh, Sulaymân b. Dja'far al-Manṣûr and his sons Muḥammad and Músâ, Músâ b. ʿIsâ and his brother ʿIsâḏî b. ʿAbd Allâh b. Sulaymân d. 740 (whereas that of Muḥammad al-Nâs al-Zâkiyya and his brother was primarily of a legitimist character). There are resemblances between the formula of the bâṣaʾ prescribed by this Zayd to his adherents and that which al-Husayn proposed to his: in the former, Zayd promised to defend the oppressed, to give [benefits] to whoever had been excluded from them (al-mâhrâmîn) and—what is more striking—to share fairly the fāyʾ (q.v.) (his revenues or the fāyʾ itself?); al-Husayn also promised justice and equal shares, and, although he did not specify which resources were to be distributed, it may be guessed that he too was referring to the fāyʾ, since one of his first actions in his capacity as imâm was to distribute the money which he found in the treasury of the town and 10,000 dinârs which remained from the ʿâsâʾ. In addition it is interesting to note that, in his bâṣaʾ, the duty of the subjects to obey him depended on his keeping the promises which he had made and that a similar condition is found in the appeal of the founder of the Zaydi state in the Yemen, al-Hâdî ibn ʿIbâḥ (Van Arendonk, 122 f.). Al-Husayn's order, which proves that he intended to make social concessions to the Shiʿis of this region, was addressed also to slaves; it was proclaimed at Mecca that those who joined the revolt would be granted their liberty, and there were some slaves who took advantage of this opportunity; all the same al-Husayn had to return some of them to their masters who demanded them back (since the law did not permit an emancipation of this type).

Within his design of social welfare for his followers, al-Husayn succeeded in making the revolt a social phenomenon. Quite early (see Mulâṣîn al-ʾAmin, xvi, 403) describe al-Husayn's rebellion as "Zaydî", and rightly, in the sense that it had a social character, as did certainly that of the Shiʿis of this region. Many rebels saved their lives by hanging with the pilgrims, notably two ʿAlîs who were later to become famous: ʾIdrîs b. ʿAbd Allâh (q.v.) and Yâbîy b. ʿAbd Allâh (q.v.). When the news of al-Husayn's defeat reached Medina, al-ʿUmâr emerged from his hiding-place and, having returned to office, burned the houses of the ʿAlîs and of some of the supporters of al-Husayn (he even burned some palm trees) and confiscated their possessions as being war booty (zawâfî). Thus ended the revolt which, in the number of ʿAlîs killed, was surpassed only at Karbalâʾ. The sources give as its motive the events at Medina mentioned above, except for al-Yaʿkûbî who connects it with ʾIṣhâʿ urrest in Khorâsân which was caused, he says, by the harsh measures of the governor appointed by al-Hâdî and fomented by the local Tâlîbis; his information is most probably correct, since it was on reinforcements from the pilgrims going to Mecca that the organizers for the revolt were relying, and an agreement to this end had already been established; but, as there is too little time between the accession of al-Hâdî (8 Mar. 165/4 April 785) and hence the appointment of his governor, the appeals of ʾIṣhâʿi pilgrims and the beginning of the revolt at Medina, these troubles and the reaction of the central government must be traced back to the final years of the caliphate of al-Mahdi, particularly since there exists evidence of a reversal of the policy of this caliph, who at first adopted a conciliatory policy towards the ʾIṣhâʿi until he later became hostile, at least to the Ẓâdîs; al-Hâdî merely pursued this hostile policy more vigorously. The ʾIṣhâʿi sources (see Mûṣîn al-ʾAmin, xvi, 403) describe al-Husayn's rebellion as "Zaydî", and rightly, in the sense that it had a social character, as did certainly that of the founder of the Zaydi movement Zayd b. al-Husayn (q.v.), killed in 122/740 (whereas that of Muḥammad al-Nâs al-Zâkiyya and his brother was primarily of a legitimist character). There are resemblances between the formula of the bâṣaʾ prescribed by this Zayd to his adherents and that which al-Husayn proposed to his: in the former, Zayd promised to defend the oppressed, to give [benefits] to whoever had been excluded from them (al-mâhrâmîn) and—what is more striking—to share fairly the fāyʾ (q.v.) (his revenues or the fāyʾ itself?); al-Husayn also promised justice and equal shares, and, although he did not specify which resources were to be distributed, it may be guessed that he too was referring to the fāyʾ, since one of his first actions in his capacity as imâm was to distribute the money which he found in the treasury of the town and 10,000 dinârs which remained from the ʿâsâʾ. In addition it is interesting to note that, in his bâṣaʾ, the duty of the subjects to obey him depended on his keeping the promises which he had made and that a similar condition is found in the appeal of the founder of the Zaydi state in the Yemen, al-Hâdî ibn ʿIbâḥ (Van Arendonk, 122 f.). Al-Husayn's order, which proves that he intended to make social concessions to the Shiʿis of this region, was addressed also to slaves; it was proclaimed at Mecca that those who joined the revolt would be granted their liberty, and there were some slaves who took advantage of this opportunity; all the same al-Husayn had to return some of them to their masters who demanded them back (since the law did not permit an emancipation of this type).
possibly in the 150s, since he could remember an
incident that occurred in 160/775. With his childhood
friend Abū Nuwās [q.v.] he studied the "classics" in
his native town, but, more important, he was
present at gatherings of men of letters; he thus
learnt the poet's profession, and awaited a favourable
opportunity for the realization of the aspiration of
all Bahārāns who, if they felt themselves to possess
any talent, wished to receive the approbation of the
capital. Abū Nuwās was the first to learn to try his
fortune in Baghādād, and reports of his success soon
spurred Husayn to follow him. He seems quite
rapidly to have won sufficient renown to guarantee
a secure existence, though he was obliged to content
himself with singing the praises of a certain number
of exalted persons without ever securing admission
to intimate acquaintance with al-Rahlīd; however,
he entered the service of a dissolute prince, Sālih b.
al-Rahlīd, whose life of pleasure he shared and who
thereafter, despite some passing shadows, always
remained an active patron of the poet in times of
difficulty. At the same time he also attached himself
to another of the caliph's sons, Muhammad, the
future al-A'mīn, whose constant companion he was
until the end. On the latter's death (198/813), in
spite of the advice of the probably more astute Abu
'Alī b. al-Rahlīd, he decided to leave in order to
safeguard his future, he allowed it to burst forth in a
series of threnodies which caused al-Ma'mūn to take
ummbrage; this fidelity to the dead caliph—which
even included a refusal to believe in his death—and
the graceless allusions which he made to the rival
at the time of the conflict between the two brothers
alienated al-Ma'mūn who, on his entry into Baghādād,
struck Husayn off the list presented to him and
refused him admittance to the court. Traditions
concerning the poet's fortunes during al-Ma'mūn's
calliphate are not very clear, but it is certain that al-
Khalīfī returned to Bahāra, where the affluence that
he owed to al-A'mīn al-Makhlīfī allowed him to wait
for happier days, and he made various attempts to
be reconciled with the caliph who did indeed recog-
nize his talent; the intervention of Sālih b. al-Rahlīd
and his connections out of his tribe must have
influenced him, but it is possible that, as a result of a
particularly successful panegyric, al-Ma'mūn gave
orders that the regular payment of his pension should
be resumed.

On his accession (218/833), al-Mu'taṣim recalled
him to court and rewarded him for his first panegyric
by filling his mouth with pearls, which he then had
made into a necklace so that no-one might remain
unaware of the esteem in which he held the poet. He
took him with him to Syria and provided a house for
him at Sāmarra. Husayn was once again a privileged
courier, as is clearly shown on the accession of al-
Wāḥīk whom he saluted with a long kāṣida without
joining in the throng of poets who had come forward
to proclaim their self-interested praises. He remained
in al-Wāḥīk's service throughout his caliphate, taking
his turn of duty both by night and day in
response to his master's whims, playing backgammon
with him, accompanying him on hunting expeditions,
taking part in his royal potations and writing inci-
dental poems on varied but mostly frivolous
subjects.

On the accession of al-Mutawakkil (238/847), the
poet, who had now reached a very advanced age,
possibly to have kept aloof from the court, though still
continuing to lead a dissolute life as the caliph, was
also appreciated his talent, called upon him to give
proof of it and was able to affirm that old age had in
no way diminished the perversity of his tastes. He
survived al-Mutawakkil, whose death he nevertheless,
and himself died shortly afterwards, probably in
250/864, almost a hundred years old.

Husayn al-Khalīfī maintains with a certain simplic-
yty that all the successive caliphs, from al-Rahlīd to
al-Wāḥīk, struck at him, either through jealousy or
because he had a pernicious influence on their
children, and it can be understood that he should
have been looked upon as a dangerous companion
for the 'Abbāsid princes, since he could not fail to
encourage the strong tendency that they already
possessed towards frivolity and debauchery. Abu
'Alī-Farādž al-Iṣfahānī, who is certainly lavish with
scandalous details, reports numerous anecdotes
concerning the dissolute nature of this man who
spent the greater part of his time drinking with
caliphs, princes or others of exalted rank, listening
to singing girls and dallying with young men.

The attraction of Husayn b. al-Dāḥhāk's company
resided in his light-hearted and original character,
and also in the facility with which he tackled the
poetic forms favoured in his day. In the fraction of
his work which we have survived, we find first of all
all kāṣidas of a "modernist" type in praise of the
caliphs; written in relatively simple language,
these panegyrics naturally lay stress upon the
qualities, whether real or imagined, of the personages
to whom they are addressed, and in them can be
observed the recurrent idea that God has chosen the
best of men to govern Islam. It is only in these
circumstances that he mentions the name of God,
and one cannot fail to be struck by his utter detach-
ment from matters of religion while noting that,
unlike Abū Nuwās and other dissolute poets, he
seems to have written hardly any zākīyya to
prepare for the after-life, although he did make the
pilgrimage to Mecca. His bacchic poems are not
lacking in originality, and tradition has it that Abū
Nuwās was sometimes rather put out by them, but,
when not shamelessly plagiarizing them, he consoled
himself for their success and felicities with the thought
that posterity would not fail to attribute to him,
Abū Nuwās was sometimes rather put out by them, but,

Husayn b. Hamdan — Husayn b. Hamdan

Zahr, index; idem, Dfawc, 171; Brockelmann, S I, 112; Pellat, Milieu, 163-5; Rescher, Abiss, ii, 441-2.

... Al-adawi al-taghlibi, the first member of the Hamdani family. Husayn b. Hamdan was active not only locally in the Djazira but also in Baghda and in other regions of the empire. His career benefited from an opportunist support of the caliph al-Mut'adid by giving up to him in 282/895 Ardumush, whose defence his father had entrusted to him as he fled, and becoming a valued ally of the caliph. In the following year, placed by the latter at the head of a large body of troops, he was chiefly responsible for the capture of the Kharidji Harun al-Shari, which enabled him to secure the liberation of his father who had been captured, the lifting of a tribute imposed on the Taghlibis and the command of a body of 500 Taghlibi horsemen.

He next distinguished himself in the operations against the Dulafid of the DJbail, Bakr b. Abd al-Aziz b. Abd al-Dulaf, probably in 283/896; this is alluded to in a verse of the bashida which Abu Firas devoted to the glory of the Hamdani family.

During the caliphate of al-Muktafi (289-95/902-8), in 291/905, as lieutenant of Muhammad b. Sulayman, sahib al-aqaykh, he gained in Syria a brilliant victory over the Karmati Husayn b. Zikrawayh (the Sakhb al-khali), who fled and was soon afterwards captured. With the same Muhammad b. Sulayman, he took part in the re-conquest of Egypt from the last Tulfunin in 292/904-5, as commander of the vanguard. It was he who first made contact with the conspirators who were plotting to rid themselves of the Tulfunin and who pressed him to march on Fustat. According to one tradition, Muhammad b. Sulayman offered him the governorship of Egypt, but he refused, preferring to return to Baghda, taking with him a considerable amount of booty.

In 293/905-6, he was put in command of an army sent against the Kalbis of Syria who had revolted at the instigation of the Khatami and behold he had been appointed caliph. He undertook, or was instructed, to remove the vizier al-Abbas b. al-Hasan al-Djurdjuri who, unlike the secretary Muhammad b. Dawa'd, uncle of 'Ali b. 'Isa, had approved al-Muktadir's accession. With two other conspirators he attacked and killed al-Abbas on 20 Rabii I 296/17 December 908 and tried to assassinate the young caliph, but unsuccessfully, for the latter had already left the hippodrome where Husayn was intending to take him by surprise and had shut himself in the palace. After the conspirators had proclaimed Ibn al-Mu'tazz caliph, Husayn went to the Hasani Palace to force al-Muktadir to dethrone him, being assumed that he would readily accept his dethronement. But Husayn encountered the resistance prepared by the chamberlain Sawsan and the two Mu'nis (al-Khidam and al-Khazin). Although he set fire to the gates of the palace, he was unable to force a way in. Al-Muktadir's party triumphed and Husayn fled to Mosul, then to Balad and spent some time wandering with his adherents in the Djazira. His brother 'Abd Allah Abu 'l-Haydib was sent in pursuit, but it was Husayn who surprised and defeated his pursuers. Encouraged by this success, Husayn, through his brother Ibrâhim, asked the vizier Ibn al-Furat for aman and although, with Muhammad b. Dawa'd and the kadi Abu 'l-Muhannan, he had been one of the main conspirators, he was restored to favour; but, to remove him from the capital, he was appointed governor of the districts of Kumm and Khashan in the Djibal. As governor of this region, he gave support to the caliph's troops under Mu'nis al-Khidam against the Saharid al-Layth b. 'Ali who had made himself master of Sijistani and of Fars, then against the latter's general, Subkarâ, who, after abandoning al-Layth's party and joining Mu'nis against him, had risen in rebellion at the instigation of his lieutenant al-Kattal. In 298/910-11 the two rebels were defeated and, while Subkarâ took refuge with the Sâamand, al-Kattal was taken prisoner, by Husayn himself according to the bashida of Abu Firas.

This same bashida states that Husayn was offered the governorship of Fars, which he refused. In any case he returned to Baghda. The vizier Ibn al-Furat, who seems to have mistrusted him, sent him away again, to be governor of the Djurdjuri. In this capacity, he was in command of a campaign against the Karmatis and the Ktabi in 301/913-4. For reasons which are not clear, perhaps because the vizier had deprived him of the financial administration of the province, perhaps because Husayn did not fulfil scrupulously his financial obligations, or perhaps because he aspired to independence, a conflict arose between him and the vizier 'Ali b. 'lsa and he came out in open rebellion, probably in 302/914-5. A first army sent against him met with defeat, and it was Mu'nis, recalled from Egypt, who took him prisoner while he was attempting to reach Armenia, in Sha'ban 303/February 916. He was taken to Baghda and exhibited dressed in a cap of shame and a long brocade tunic, made to ride on a camel all the way from Bab al-Shammasiya to the Palace, and then imprisoned under the guard of Zaydan, the intendant of the Palace. He remained in prison for over two years and was executed in Djumad l 306/October-November 918, on the orders of the caliph al-Muktafi, for reasons which are not clear.

Very probably his execution was connected with the revolt of the governor of Ardabaryan and Armenia, Yusuf b. 'Abi 'l-Sajj, which also coincided strangely with the dismissal of the vizier Ibn al-Furat.
It appears that at one point either Munis or the vizier Ibn al-Furat may have suggested that Husayn be released in order to put him in charge of the war against Yusuf, which he refused. It may be that the caliph suspected an alliance between Yusuf and Husayn against him and gave the order for Husayn's execution. Or Ibn al-Furat may have been involved in a conspiracy designed to further the Shia cause to which both he and Husayn were devoted. Ideas on this matter can only be hypothetical. In any case the caliph must have feared that if Husayn were released he would once again start a revolt, either on this matter can only be hypothetical. In any case the caliph must have feared that if Husayn were released he would once again start a revolt, either against the caliph or in support of a Shia caliph. In order to avoid attempts by those (probably numerous) who desired his release to secure it by force, the caliph preferred to take a measure which put a stop to all intrigue.

Among the generals of the caliph of this period, Husayn b. Hamdan stands out more clearly than the supreme commander Munis or any other military leaders. But his valour and the service he gave by his action in many battles are not enough to cancel the memory of the spirit of rebellion which too frequently possessed him, and his pride and ambition. It appears nevertheless that even in his acts of revolt his motives were disinterested and honourable. He seems to have thought that it was necessary to support Ibn al-Mu'tazz in order to bring about a beneficial change in the system of administration and a reform in the government. Like many who had Shia sympathies at this time, his ambition was to see prevail an ideal Muslim government which for many people the 'Abbasids no longer represented, and which it was possible to imagine realized only by the imminent or future accession to power of a family glorified by the sacrifice of so many martyrs and endowed with real or imaginary qualities which contrasted with the "vices" of the 'Abbasids.

Certain characteristics of Husayn b. Hamdan show him to have been an unusual man. In addition to the prestige of his Arab birth, which distinguished him among the mawali of all races, and to the native qualities of his Taghlibi family, he seems to have had an open-mindedness not possessed by the other military leaders, and an understanding of the great ferment of ideas which was discriminating the Muslim world at this time. It was certainly not an accident that he was in communication with the famous mystic al-Hallaj and that the latter dedicated a political work to him.

The founder of the Hamdanid dynasty was not Husayn b. Hamdan but his brother, 'Abd Allâh Abu 'l-Haydja*, but he was the first member of the family who really brought glory to it, inculcating in it the realization of its valour and strength and developing in it the ambition for glory and power. All this is attested in the verses of Abu Firas.

Bibliography: A biography of Husayn b. Hamdan is found in Ibn 'Asâkir, iv, 291-2. See also the historians Tabari, 'Arîb, Miskawayh, Kamâl al-Din, Ibn al-Âthîr, index. See also Ibn al-Dawwâdârî, 86, 81. For further details on his historical rôle, see M. Canard, Histoire de la dynastie des Hamîdînides ii, 397-40 and the sources mentioned in the notes. The great básida of Abu Firas to the glory of the Hamdanid family (ed. S. Dahan, ii, 103 ff., 154 ff.) with the commentary by Ibn Khâlawayh on the verses relating to Husayn b. Hamdan (ibid., 126-30, 150, 165-7) provides details which are sometimes lacking in the historians. On his political rôle at Bagdad, see also D. Sourdel, Vizirat 'abbâsida, 370-1, 373, 389, 403-13. (M. Canard)

**HUSAYN B. AL-SIDDIK AL-AHDAL** [see AL-AHDAL].

HUSAYN ‘AWNI PASHA, Ottoman general and Grand Vizier under Sultan ‘Abd al-Aziz, was born at Gelendost, a village of the sanjak of Isparta (muhiyet of Koyua) in 1236/1820-1; his father was a poor peasant named Ahmed Agha and was promoted to staff captain in 1264/1848. After a few years of teaching at the same institution, on the outbreak of the Crimean War (1853) he joined the army with the rank of Lieutenant-Colonel. He distinguished himself on the Balkan front, especially at the battle of Cetate and participated later in the Mingrelian campaign as chief of general staff of the serdar-i ezem ‘Omer Pasha. On the conclusion of the war (1856), he was appointed director of the Mektebi Harbiye, during the war with Montenegro (1862) he commanded a division. Back in Istanbul he was nominated, early in 1863, to the presidency of Dār-i Şâhârd-yi ‘Asheri (High Military Council) and promoted to muhtir (general commander) in Safar 1280/July-August 1865; during the second grand vizierate of Fu’ad Pasha [q.v.], he was appointed ser’asker hâkim-mâbâmi (interim War Minister), a position he kept until his dismissal on 5 Şâban 1282/24 December 1865. He was sent to Rumelia in Dhu l-Hijjah 1283/April 1867 as commander of Yanya and Yefi-shehr, but he left for Crete when, on 16 Djumâdâ II 1284/15 October 1867, he was entrusted with suppression of the Cretan revolt. His success in crushing the revolt resulted in his nomination, on 29 Shawwâl 1285/12 February 1869, to the office of ser’asker in ‘All Pasha [q.v.]’s last cabinet. The military reforms he accomplished on the Prussian model, during his first period of office in the War Ministry which lasted two and a half years, rightly established his reputation as the re-organizer of the army. But the death of ‘All Pasha on 20 Djamâdâ II 1288/September 1871 and the treatment of his enemy Mahmûd Nedim Pasha [q.v.] to the grand vizierate, brought about his dismissal and banishment to Isparta. Recalled from exile in Djumâdâ I 1289/July-August 1872, he was sent to Izmir in Ramadan/November of the same year as ‘All Pasha and transferred, on 17 Dhu ‘l-Hidjdja 1290/25 January 1873, he was appointed Minister of the Navy in the cabinet of Muterdjîm Medîmed Rüştî Pasha, which took place on 7 Djamâdâ I 1305/10 May 1876 to the office of ser’asker for the fourth time. He played the principal part in the deposition of Sultan ‘Abd al-Aziz, which took place on 25 March/13 April 1876, as a result of his collaboration with the Grand Vizier Muterdjîm Medîmed Rûştî Pasha, the Shaykh al-Islâm Hasan Khayr Allâh Efendi and Mîhad Pasha [q.v.]. He was shot dead by a young officer called Cârkes Hasan, seemingly for a personal grievance, on the night of 13-16 June 1876, at a ministerial council held in Mîhad Pasha’s house in the Başýedî quarter and was buried in the courtyard of the Suleymaniye Mosque.

An intelligent and authoritarian soldier, he favoured absolutism; his collaboration with the constitutionalist Mîhad Pasha was due to his personal hatred for ‘Abd al-Aziz fostered since his exile in 1871, probably mixed with a sincere desire to save the Empire from misgovernment.

**HUSAYN BAYKARA** [see HUSAYN].

**HUSAYN DJAHÅNŞâZ** [see HUSAYN].

**HUSAYN DJÂHÏD** (mod. Turkish Hüseyin Çarîf Vâlçeyn, 1847-1935), Turkish writer, journalist and politician. His parents were from Istanbul. He was born at Balikesir while his father ‘Ali Rıdâ was serving as government accountant in the province. He attended the primary school at Serres in Macedonia and the lycée at Istanbul. On completing his studies at the School of Political Science (Mekteb-i Mülkiye) in 1869 he became a civil servant in the Ministry of Education. In the meantime he had taught himself French. He taught Turkish and French in various schools and became the headmaster of the f'dâii school of Merdijan, one of the leading lycées of the time.

Upon the restoration of the Constitution in 1908, which put an end to ‘Abd al-Hamîd II’s despotic rule, he entered political life, joined the Committee of Union and Progress, and founded the newspaper Tanin, which he made the organ of the Committee. He was elected a member and later president of the Parliament. During the Mutiny of 31 March/13 April 1909, a counter-revolution by the reactionary elements, his printing-house was raided and destroyed by the rebels and another deputy, and the members of his family were arrested. Soon after he later served as creditors’ delegate to the Administration of Ottoman Public Debts. Soon after the armistice of 1918 he
was exiled to Malta by the British, together with a number of leading Turkish intellectuals and politicians; there he learned English and Italian, and on Gökalp's advice translated historical works (see below). On being released from Malta he resumed the publication of Tann (1922) and began to criticize violently the new Ankara régime of Mustafa Kemal.

During the first years of the Republic his unsympathetic attitude towards the authoritarian administration of the government, which was carrying out a series of radical reforms, was considered defeatist and he was twice tried by the Tribunal of Independence. His indignation as an 'advocate of freedom and democracy' protesting against the 'arbitrary rule' of the Nationalist government were found 'grotesque' as coming from a man who for years had defended and excused the many abuses and crimes of the Unionist régime of the pre-1918 period. He was first acquitted but in the second trial he was sentenced to banishment to Corum in Central Anatolia; on being set free in 1926, he retired from politics.

In 1930, during the First Turkish Language Congress which had been proposed by Mustafa Kemal himself in order to initiate the government-sponsored language reform, he was the only prominent writer publicly (and in the presence) to opt for the Persian alphabet, maintaining that it would do more harm than good and that the language should be left to its own course of natural development.

Until 1938 Husayn Djahid's publications were confined to non-political matters. After Atatürk's death he re-entered political life, was a deputy (1939-50) and resumed the publication of his newspaper Tann. Later he was made the editor of Ülas, the organ of the Republican People's Party. His violent criticisms of the Democrat Party government caused his arrest and imprisonment for a few months (1954), but he was set free because of his advanced age. He died in 1957 in Istanbul.

Husayn Djahid's career may be divided into two distinct periods, before and after 1908. Before the Second Constitution he was a prominent member of the Progressive Party [q.v.] literary movement and was known as a novelist, short-story writer and particularly as a critic. After 1908 he gave up literature and became active as an ambitious politician and a combative journalist, with more tranquil intervals as a prolific translator and author of didactic magazine articles.

As a child Husayn Djahid was particularly impressed by the novels of Ahmed Midhat [q.v.]. At the age of fourteen he wrote his first novel Nâdide, which was a successful imitation of the 'Master's' genre, with sickly sentimentalism, endless moral exhortations and philosophic remarks. By spending all his savings he was able to publish this enormous volume.

Under the influence of French authors, whom he constantly read and translated, and of his writer friends of the Therwe-i Funun, he soon got over this early enthusiasm and became a staunch defender of the modernist movement of the Edebiyyat-i Dîdide (New Literature). His other novel Khayal tâinde (In a Dream, 1901) and his novel short stories (collected in three volumes: Hâyât-i mahyâyet (A Dreamed Life, 1890), Hâyât-i habîbîyê şahenleri (Scenes of Real Life, 1910), and Nişan aldâvîlarîmîş? (Why do they Deceive?, 1924), where realism is mixed with sentimentalism and sympathy for the poor and the weak, cannot be reckoned among the best productions of the school; but they impress by their unadorned, natural language and style, as compared with the very involved, recherché language of the leading members of the movement such as Tewfîk Fikret, Djenaş Shâhâbeddin and Khâlid diyâ. But this characteristic of Husayn Djahid, shared by his novelist friend, Mehemd Ra'ûf (and later by Khâlide Edib of the following generation), was not a matter of policy but was due simply to the fact that these writers, having an insufficient background of Arabic and Persian, were incapable of handling the involved Ottoman Turkish. Husayn Djahid himself confessed that the 'naturalism' of his style, admired by later critics, was due simply to his 'ignorance' (see Edebî hâtâralar, 133).

Husayn Djahid's real contribution to the movement was his articles on criticism, which defined the aims of the Edebiyyat-i Dîdide writers, and his defence of them against the ceaseless attacks of various hostile groups which accused them of destroying the old dîdide tradition in literature, of being blind imitators of French writers, of ignoring the splendours of the old Arab-Muslim culture, or of being too exclusive, even 'decadent'. Most of Husayn Djahid's articles on literary criticism, which are of documentary importance for the literary history of the period, have not been published in book form and are scattered in many reviews and newspapers, particularly in期刊 Therwe-i Funun and Tanîm). Some of his polemics have been collected in the volume Kânhâlarım (My Polemics, 1910).

After 1908, Husayn Djahid gave up his literary interests and became an uncompromising 'Unionist', which he remained all his life, devoting most of his time and energy to defending the principles and actions of the Committee. Hence his hostile attitude towards the early Republican régime, which liquidated the last vestiges of the Union and Progess Committee.

Husayn Djahid's contribution to Turkish culture as a translator is remarkable. Apart from hundreds of articles on literary criticism and social and political problems, mostly published in reviews and newspapers, he translated from French, English and Italian a great number of important works on history, sociology, political science and literature.

Husayn Djahid is also the author of the first Turkish grammar which is not based on the method of the Arab grammarians (Türkiye zâre ve nabû, 1911), an adaptation of the French grammar to Turkish. His biography of the Unionist leader Ta'alat Pasha (Ta'alat Pasa) is not unbiased. From the 1930 onwards, apart from his valuable literary memoirs (Edebî hâtâralar, Istanbul 1935), Husayn Djahid serialized his memoirs in various papers and reviews, which have not yet been published in book form: Malta adasında: esaret hâtâraları, in Yedigün, nos. 87-122, 1934; On yihin hikâyesi: 1908-1928, in Yedigün, nos. 120-250, 1933-37; Meşruyetîl hâtâraları: 1908-1928, in Fikir hareketleri, nos. 1-224, 1935-38; Meşruyetîl devri ve sonrası, in the daily Halkû, nos. 170-375, 13 June-31 December 1954; Mercan'dan Babâtdîye, in Yedigün, nos. 267-84, 1938. These memoirs, although somewhat tendentious because of his 'Unionist' approach to most events and problems, are of great documentary value, as he had first-hand knowledge of Turkish literary and political history during the last decades of the Ottoman régime.

Bibliography: The best source for Husayn Djahid's life and works is his memoirs listed in the

HUSAYN DJAHID — YUSAYN HEZARFENN

Isma'il Habib, *Turk edebiyati tarihinde*, Istanbul 1340, 536-40; and section nine (very short) with the discovery of America. MSS are numerous: Babinger, 229-30; 1st. Kut. TCYK, i/i, 324-7.

Husayn Efendi, known as Djinji Khodja, preceptor and favourite of the Ottoman Sultan Ibrahim (q.v.), was born at Zaferanbolof (Safranbolu, now a kaza of the vilayet of Zonguldak), the son of a certain Seyyid Mjemud, son of Seyyid Ibrahim; he claimed to be descended from the Shar al-Din al-Konewi (q.v.). He was an able student, but he more than compensated for this failure by the political influence and the material wealth which his skill at sorcery gained him the nickname Djindji (“sorcerer”). He amasses wealth for himself by the selling of offices. He persuaded two dragomans of the Porte to translate his History (no. i below) he used Greek and Latin sources (as had Kātib Celbi [q.v.]; some years earlier): he had no knowledge of the languages, but persuaded two dragomans of the Porte to translate for him (see TM, x, 368, n. 14). Furthermore he was persuaded by the translator of the "Arabian Nights" (Antoine Galland, 1646-1715), who used his *Nights*, compiled the *Harîb-i mülûk*, and, about 70 years old in 1671 (Babinger, 228, n. 2), the date given by Mehemed Tahir, 1089/1679-8, is more likely.

His works are intrinsically of secondary importance, but Hezārfenn himself is of some interest in that for his History (no. 1 below) he used Greek and Latin sources (as had Kātib Celbi [q.v.] some years earlier): he had no knowledge of the languages, but persuaded two dragomans of the Porte to translate for him (see TM, x, 368, n. 14). Furthermore he was known to various European diplomatists and orientalists resident in Istanbul: the French ambassadore de Nointel and Antoine Galland (1646-1715), the Austrian envoy Niggl (1646-1715), the English ambassador de d’Antoine Galland, ed. Ch. Schefer, Paris 1881, ii, 150-1 and (?) 58); and Count Marsigli (1658-1730), who used his *Talkhis al-bayān* (no. 2 below) when compiling the *Stato militare dell’impero ottomano* (Amsterdam 1732), spoke of him as “persona che passava per il più letterato di Costantinopoli” (Babinger, 228, n. 2, and E. Rossi, in OM, xi (1931), 416, and others).

His principal works are: (1) *Tanzih tawārīkh al-mulākā*, a fairly short universal history, composed about 1081/1670 and 1083/1673; mainly abridged from the works of Djinji (q.v. in Supp.), Mirkih*ān*, ‘All, and Kātib Celbi (qq.v.), it is in nine sections (contents listed in Hammer-Purgstall, ix, 184 f.); the part of section four dealing with the Dūälāmdīs is translated by A. D. Mordtmann in *ZDMG*, xxx (1876), 468-71; section five, on the Ottomans, reaches to 1083/1672; section six, on Ancient Rome, contains a chapter on the ‘sayings’ of the philosophers (see H. F. v. Diez, in *Denkwürdigkeiten von Asien*, i, 71 ff.) section seven deals with the history of the Byzantine Empire, section eight with China, the East Indies and Ceylon, and section nine (very short) with the discovery of America. MSS are numerous: Babinger, 229-30; Ist. Küt. TCYK, i/i,
Ijusayn Hezarfenn — Husayn Kamil

The work was used by Demetrius Cantemir (1673-1723) in his History of the Ottoman Empire (Eng. tr. from Latin, London 1734) (Karatay, no. 2773), may be identical with (3). In a collection of 38 tales (Karatay, no. 2773), composed in 1080/1669-70, on 'good government', partly based on the treatises on the subject by Lutfi Pasha (q.v.), and 'Ayn-i 'Ali and on the Dastur al-'ulamâ of Katib Celebi (ed. A. Anhegger, in StLT, iv, 243-5; Babinger, 228-31 (with further references); Bombaci, SALT, 402 f.). (V. L. Ménage, Les Histoires de l'histoire et de l'histoire politique, ii, 243-5; Babinger, 228-31 (with further references); Bombaci, SALT, 402 f.)

Husayn Hilmi Pasha (Hüseyin Hilmi Paşa), twice Grand Vizier of the Ottoman Empire, was born in Mitylene (Mîdiillî) in 1855. He came from a modest background, being the son of Kü tahyalizâde Mustafâ Efendi, an ordinary merchant. After receiving a traditional education — first in a medrese, then in a rûçîye (secondary school), and learning fiqh (Islamic jurisprudence) and French from private tutors — Hilmi entered the local bureaucracy in 1872.

He remained in Mitylene for a further nine years and then saw service in Aydîn (1883), Syria (1885) and Baghîdî (1892); he became governor (secilî) of the Yemen in 1898. In 1903 he was appointed Inspector-General of Macedonia, as one of the officials implementing the scheme to reform that province. In this post Hilmi won a reputation for honesty, efficiency, independence and liberal ideas, both among Europeans and among the Young Turks.

After the constitutional revolution of 1908 Hilmi became Minister of the Interior in Kâmil Paşa's cabinet, and kept his position even when the new regime's political aloofness lost him the support of all groups. Hilmi Pasha's detachment would have been a great asset in less turbulent times, but in the chaos which followed the re-establishment of the constitution, his many talents were destined to be wasted and go unrecognized.

the official opening of the Suez Canal in 1869, after which he was sent on a diplomatic mission to Victor Emmanuel, King of Italy, in Florence. In 1870, he returned to Egypt for good and was given a succession of posts in the administration. As Inspector of the Delta, he lived for a while in Tanta and supervised the improvement of irrigation canals in that area. He also served at various times in the ministries of Education, Waqfs, Public Works, Interior and Finance.

In 1879, upon the deposition of his father, Husayn Kamil went with him into exile to Naples, where he stayed for three years. He returned to Egypt after the revolt of Urabi Pasha [q.v.] in 1882.

During the reigns of Khedive Tawfik (1863-92) and of his nephew Khedive Abbas II (1892-1914) he devoted most of his time to his private business and agricultural interests. He served on the boards of many foreign companies such as the Delta Railways. His greatest contribution, however, was to the improvement of Egyptian agriculture. He founded the Khedivial Agricultural Society, which played an important rôle in the organisation of the Ministry of Agriculture in 1913. Earlier, he had organized agricultural exhibitions in Alexandria (1896) and Cairo (1898), as well as a joint industrial-agricultural exhibition in 1900. With the help of privately subscribed funds, he opened an industrial trade school in Damanhur. He was also active in the organization of agricultural societies such as al-Djamhurya al-Khayriyya al-Islamiyya and Djamhuriyyat al-Islamiyya.

Turkey, the suzerain power over Egypt, declared war on Great Britain in November 1914. Suspicious of the young Khedive Abbas II's sympathies with Turkey and familiar with his past activities in support of anti-British nationalists in Egypt, the British authorities proceeded on 18 December 1914 to declare a Protectorate over Egypt [see HIMAYA]. With this declaration, Turkey's sovereignty over Egypt was for all practical purposes terminated. At the same time, Britain deposed Abbas, then in Turkey, from the Kedivial throne of Egypt, and appointed Prince Husayn Kamil, the oldest male member of the family of Muhammad Ali, Sultan of Egypt.

The acceptance of the sultanate by Husayn Kamil in these conditions was, from his point of view, a dangerous political step. It met with the opposition of the nationalist elements in the country who considered Husayn's acceptance of the sultanate under the conditions of a British occupation, military government, and protectorate as constituting a national humiliation. Many among them viewed his acceptance as an act of treason against the Muslim Ottoman Empire at war with infidel Britain. However, Husayn's refusing the post could have endangered the survival of the ruling house in Egypt.

This situation, together with the difficulties of wartime conditions, led to a deterioration of public security in the country. A series of terrorist political acts aimed against members of the Egyptian government and the Sultan himself were committed in 1915. Both the Sultan and the wartime Egyptian government of Husayn Ruhud Pasha were considered by the extreme nationalists as mere tools in the hands of the British occupation authorities to be used for the prosecution of the War. They were viewed, moreover, by these nationalists as having left the pale of the Islamic community and its consensus (bimarja min al-ijma'). As greater hardships and privations caused by the necessities of war affected greater numbers of Egyptians, especially in 1916-17, so the public became increasingly alienated from this government and from the Sultan.

Soon after his assumption of the duties of Sultan, Husayn Kamil proceeded to remove the remaining vestiges and institutional manifestations of Turkish sovereignty in Egypt. Thus, when he was presiding over a meeting of the Egyptian Council of Ministers on 21 December 1914, the decision was taken to abolish the office of Kadi of Egypt (the Kadi had always been appointed by the Ottoman Sultan in Istanbul).

Yet Husayn Kamil's relations with the British authorities in Egypt were not always amicable or close. The British in Egypt looked askance at the Sultan's frequent visits to schools and institutions of higher learning, and at his tours of the provinces, suspecting that he sought to strengthen his links with a nationalist movement. The Sultan on his part felt that the material and human demands of the British military authorities and the burdens which they placed upon the country were too great and that they caused undue hardship to a poor people. Another cause of this deterioration in the relations between Husayn Kamil and the British authorities in Egypt was the frustration the Sultan experienced under the strong hand of a wartime British government, that was prompted in its policy perhaps solely by the needs of the Great War. Thus while the British disapproved of the Sultan's attempts to project the image of a popular leader, the Egyptian public disapproved of him as a tool of the British.

Husayn Kamil's health began to deteriorate in 1916; he was ill for most of 1917, and died on 9 October 1917. Earlier his son, Prince Kamal al-Din Husayn, had publicly renounced his right to succeed to the Egyptian throne. Thus Prince Ahmad Fu'ad succeeded Husayn Kamil, later to become King of Egypt (1917-1936).

[HUSAYN AL-KHALI (see (AL-)HUSAYN B. AL-DAHABIR).]

[HUSAYN NIZAM SHAH, the third ruler of the Nizam Shahi sultanate of Ahmadnagar, reg. 961-72/1554-65. He was the eldest son of Burhan I Nizam Shah, whose example he followed in adopting the Shafi'ite forms of worship (for the political implications of this in the Deccan see NIZAM SHAH); he succeeded him as al-Mu'ayyad min 'ind Allah Husayn Shah (regnal title from Burhan-i ma'dh); no coins of this reign are known) without difficulty, having been able to remove other possible claimants from Ahmadnagar city during his father's lifetime, but was soon faced with further claims on the succession from other sons of Burhan Shah, especially 'Abd al-Kadir, who had refused to accept Shi'ism and was supported by the Dakhni faction at court. Miran Shah Haydar, a younger half-brother, also made an attempt to seize the throne, supported by

**Encyclopaedia of Islam, III**
his father-in-law Khwaja Djahan of Parenda; defeated by Husayn ʿAdil Shah, who also coveted the fortresses of Kalyani and Sholapur [q.v.]. Thus began an almost constant warfare between the ʿAdil Shahi and the Niẓām Shahi sultanates; the other sultanates, Barār, Golkonda and Bīdar, were drawn into the conflicts by one side or the other—associations were formed by both. More significant was the participation of the ruler of Vidjayanagara, Rām Rāy, brought in by the Bidjiapur ruler to strengthen his hand against Aḥmadnagar. The excesses of this Hindū ruler and his troops against Islam, and his demands from his allies after each campaign, caused Muslim rivalries to be set aside, and Husayn entered into an offensive alliance with the other Muslim rulers of the Deccan whereby Rām Rāy was beaten, and the Vidjayanagara empire broken up, at the battle of Tālīkōfā [q.v.] in 972/1565; here the centre was commanded by Husayn, whose courage won the day against enormous odds. Half a year later Husayn died in his capital.

His whole reign was spent in almost continual warfare, mostly with Bidjiapur, and little could be done to stabilize the internal affairs of the kingdom; he was undoubtedly a courageous and intelligent soldier, and he left behind him a reputation also for piety and justice. There is little evidence of cultural progress in Aḥmadnagar during his reign, although it is known that after the defeat of Vidjayanagara the Aḥmadnagar court was enriched by the migration of poets and painters from Hampi, encouraged no doubt by Husayn’s brilliant daughter Când Bibī. Husayn Niẓām Shah ii, the fifth sultan of the dynasty, succeeded his insane father Murtada I in 996/1588, after having brought about his death by confining him in an overheated bathroom. He was a drunkard, debauched and bloodthirsty, and effective power was in the hands of Mīrzā Khān al-ʿawbī. The following year Husayn was deposed in favour of his cousin Ismāʾīl. Husayn Niẓām Shah iii, the last sultan, was raised to the throne by his troops against Islam, and little could be done to stabilize the internal affairs of the kingdom; he was undoubtedly a courageous and intelligent soldier, and he left behind him a reputation also for piety and justice. Sha'bân 1100/May 1689 he was appointed muftî, with the rank of vizier, of Sedd al-Bahr at the entrance to the Dardanelles (op. cit., ii, 433). In Sha'bân 1103/May 1691 he was summoned to Istanbul to act as kâdim-i hadâ'îd. At an assembly of the Grand Vizier (op. cit., ii, 570); in Djamâdâ I 1103/January-February 1692 he was dismissed and sent back to his Dardanelles post, but was recalled to serve as kâdim-i havâmân again from Djamâdâ I-Shawwâl 1105/January-June 1694 (op. cit., ii, 738).

In Djamâdâ I 1106/December 1694 he was appointed Kapudân Paşa (Grand Admiral) and ordered to proceed immediately to the Levant (T. Sakîz [s.v.]), recently occupied by the Venetians (Şafvet, Kapudân Maşumârma Hüsyan Paşa, Istanbul 1327, 87 f., 93 f.; Sildâr Findikhü Mehem Ağâ, Nüsurnâmâ, ed. I. Parmaksızoğlu, Üz, Istanbul 1962, 10). In two engagements fought off the Köyün Adaları (Spaldamîr Islands) in the Bay of Chios in Djamâdâ II-Ra'dâb 1106/February 1695 he defeated the Venetians, who immediately abandoned the isla (M. Gallibet, Histoire de Venise, Paris 1847, 433 f.; Nüsurnâmâ, ii, 11-18). At the end of Ra'dâb 1106/May 1695, Hüsyan Paşa was appointed muftî of Chios, but a few months later (in Rabî I 1107/November 1695) was sent as governor to Adana and after one year (in Rabî I 1108/September-October 1696) he appears as muftî of Belgrade. The advice which he gave in the council of war held there in Muharram 1109/August 1697 was overridden; but after the disastrous battle of Zenta (q.v.) and the death of the Grand Vizier (Elmas) Mehem Pasha (q.v.), Mustâfa II summoned him to the Ottoman camp to succeed him.

Next year, while the peace negotiations were proceeding at Carlowicz (see Karloviç, Hüsyan Paşa remained with the army at Belgrade, prepared for action in case of a breakdown in the discussions. After the conclusion of the peace (Ra'dâb 1107/January 1699), Hüsyan Paşa remained in office for less than three years: the growing influence over the Sultan of Fâyîd Allâh Efendi (see Muştafa II) and his own poor health led him to resign office on 11 Rabî' I 1114/4 September 1702. He retired to his estate at Silivri, where he died very shortly afterwards (29 Rabî' I 1122/29 September 1702).

The sources agree that Hüsyan Paşa was an honest and efficient statesman (P. Lucas, Voyage au Levant, The Hague 1709, ii, 154; Marquis de la Gall, Histoire du Levant, Paris 1907, i, 371v., 372v., 207v. ff., 211r., 225v., 228r. ff., 261r. ff., 264v., 273r., ii, 180v.; Sâhnîzâde, Taβîhî, iv, 104; Hâmâr-Purgstall, vi and vii (passim); I. A, s.v. Hüsyein Paşa, pp. 646-50 (of which the above is an abridgement), with further references.

**Hüsyan Paşa** (Küçük Hüsyein Paşa)
Husayn Pasha — Agha Husayn Pasha

Pazvandoghlu Othma'n (q.v.) (10 April 1798). Under his command on this expedition were some of the leading men of Anatolia, such as Kara Othma'noglu and Djahhab-rade, as well as the sulûls of Rumelia and Anatolia, and Tepedelenli Ali Pasha. Küçük Hüseyin Pasha first captured the places in the vicinity of Vidin which had fallen into the hands of Pazvandoghlu and finally besieged Vidin itself, both by land and, with a small fleet, from the Danube. He met with unexpected resistance, however, and through lack of men and supplies and inability to receive money in time, he failed to bring the siege to a successful end. Finally, the sultan Ilhami Hüseyin Pasha was himself wounded and no longer able to prosecute the siege of Vidin because of the French landing in Egypt, Pazvandoghlu Othma'n offered his submission to the Ottoman government. Küçük Hüseyin Pasha then returned to Istanbul. He sailed to Alexandria, with the fleet which he had prepared, in the summer of 1799. Although not showing much activity at first, he joined with the Egyptian fleet in the squadron which went to the Mediterranean, following the signing of the agreement of 20 June 1801, whereby the French were to evacuate Egypt, he entered Cairo on 10 July 1801. He caused the khâlîqa to be read in the name of Selim III and was active in the punishment of some Mamluk beys. Although this latter activity lead to coolness in his relations with some of the British admirals, the affair was closed by his return to Istanbul.

Küçük Hüseyin Pasha went out on Mediterranean campaigns in 1802 and 1803, but in November of the latter year illness forced him to return to Istanbul. He died on 7 December 1803, in the residence of Esma Sultan at Kurucesme on the Bosphorus, and was reburied in the Topkapu cemetery in Istanbul.

Anderson, Naval wars in the Levant, Princeton 1952, index; Thomas Hope, Anastassias, London 1819, reprint. Paris 1831; A. F. Miller, Mustafa Pasha Bayraktar, Moscow 1947, index. (Müke Arkefe) Agha Husayn Pasha, Ottoman vizier

Husayn Pasha noted for his leadership in the suppression of the Janissaries in 1826, was born at Edirne in 1790/1776-7. His father, Hâkümdâr Mustafa, believed to be from Rusçuk (q.v.), moved to Bender (q.v.), where Husayn enlisted in the 9th Janissary boltûk (q.v.) and reached Istanbul in 1203/1788-9. He had begun his career as a porter, then took part in the campaign against Russia in 1807-12. Husayn became an usta (serasker) and associated with (Silâhdâr) Ali Pasha, who recommended Husayn to Mahmoud II between 1811 and 1817 when Ali was the sultan's sword-bearer (Djewdet, Ta'rîh, xii, 72; Siğîlî-i 'Othmânî, ii, 562-2). Thanks to 'Ali Pasha's influence and despite the enmity of Hafiz Efendi (q.v.), Husayn became taşkıdârî başîl (q.v.) and colonel of the 64th regiment, i.e., the third most senior of the Janissaries, on 23 Safar 1238/10 November 1822, three days before Hafiz Efendi's dismissal. Benefiting from Mahmoud II's promotion of trustworthy officers, he rose to be hui kebîhîdadî on 10 Rabî'I 1238/25 December 1822 and Agha (commander) of the Janissaries on 14 December 1822. He was dismissed after his forces were defeated by Ibrahim Pasha (q.v.) at Baylan (q.v.) on 9 May 1827, but was unable to prevent the loss of the forts of the Milas Idrasî, and set out with the new army for the Russian front four days later. He defended his headquarters at Shumla, but was unable to prevent the loss of the forts of the lower Danube to Russia. Reshid Mehemet Pasha took command in the spring of 1829, when Husayn became muhâfsîz (fortress commander) of Rusçuk, and won others to his cause. Made a Vizier for these services in the autumn of 1823, he became known as Agha Pasha. To shield him from reprisals by the Janissaries, Mahmoud II replaced him as Agha on 20 Safar 1239/26 October 1823, and appointed him governor of Bursa and Kogjaeli and commander of the European Bosphorus forts, so that he was available nearly in case of need.

Husayn strongly supported reform, including Mahmoud II's abortive Efkâmîdî (q.v.) reorganization of the Janissaries in May-June 1826. He led the loyal artillerymen and infantry who quickly shattered the resistance of the Janissaries along Diwan Yolu and at their barracks in Et Meydanî, and finally put an end to their uprising on Thursday 15 June 1826.

Husayn, retaining his positions, also became serasker (q.v.) of the new army ('asâkir-i mansûrê) whose formation was decreed simultaneously with the Janissaries' abolition on 22 Dhu 'l-Qu'da 1241/27 June 1826. Replaced as serasker by Khüsrew Pasha (q.v.) on 9 May 1827, Husayn retained his governorship and on 13 Rabî'I 1241/25 February 1826, appointed him governor of Bursa and Kogjaeli and commander of the European Bosphorus forts, so that he was available nearly in case of need.

Husayn was powerfully built, fearless and intelligent, and, despite his illiteracy, favoured reform. Among the buildings he commissioned are the Serasker's fire tower (now in the grounds of
Istanbul University), military hospitals in Edirne and Vidin, a fountain in Rãskãyã, a stone clock tower at Mirgãn, the water system and a stone bridge at Şumula, and a mosque and school in Silifke.

(H. A. Reed)

**Hâgâr HÜSAYN PASHA**, known as **MEZZOMORTO**, Algerian corsair and Ottoman admiral (d. 1113/1701); he owes his Italian nickname "half-dead" (Turk: *helemed*; *helemede*; *helemeda*) to the fact that as a well-known corsair, in 1674 (Grammont, *Relations entre la France et la Régence d’Alger au XVIIIe siècle*, Algers 1955, 53), and gradually made himself one of the most prominent figures of Algiers. When the resistance against Baba Ilasan, killed him, and had Baba Hasan, but he persuaded the French admiral to send him back on shore. He led an insurrection against Baba Hasan, killed him, and had him executed. Opposing fire on the French fleet, he obliged Duquesne to raise the blockade; in 1684 he made peace with Louis XIV (Grammont, 83; E. Plantet, *Correspondance des Dey’s d’Alger with the cour de France*, 1579-1833, Paris 1889, 84; Zinkelsen, *GOR*, v, 51 f.).

In 1686 the Ottoman government summoned him, as *begierbebi* of Algiers, to send ships for the campaign in the Morea. The peace with France was soon broken, and when the French fleet bombarded Algiers again in 1688, Hüsâyn retaliated by attacking the French coasts and shipping. In 1689, the Porte had decided to appoint Hüsâyn Pasha Grand Admiral of the Ottoman fleet (*Kapudan Paşa* [q.v.]; but before the summons reached Algiers, Hüsâyn Pasha’s power there had been seriously shaken by internal dissensions; he was obliged to flee to Tunis, and thence to Istanbul (and the post of *Kapudan Paşa* was given to Mürzîzâde Ibrâhim Pasha).

In 1101/1690 Hüsâyn Pasha was appointed to command the Danube fleet, with orders to support the operations against Austria in the Danube valley. He later commanded in the Black Sea; and in 1104/1691, a time when anxiety was growing over the threat of Venetian action in the Aegean, was made *sandik-begi* of Rhodes, with command of the Imperial galleons (balâyân). When in 1106/1694 the Venetians occupied Chios (Turkish: *Sâlde* [q.v.]), Hüsâyn Pasha played a prominent part in the two engagements (*Rzâddâ* 1106/February 1693) which led to the recovery of the island (*Saîvet*, *Koyun Adalari* *Güše-i Hüseynê* ve *Saîkitê kurartilishi*, in *TOEM*, i/3 (1326), 150-77).

In Ramadan 1106/May 1695 Hüsâyn Pasha was rewarded with the post of Kapudan Paşa, in succession to (‘Abdûzâde) Hüsâyn Pasha [q.v.] (*Silahdar Fundukhî Mehmet Ağa, Nursetnâme*, ed. I. Parmakszûzhoğlu, i/1, Istanbul 1962, 28-9), and turned all his efforts to the expulsion of the Venetians from the Aegean: in Şafar 1107/September 1695 he defeated, off Lesbos (Midilli), a Venetian fleet bound for Chios and Cos; in the course of operations in the Morea in 1696 he brought the Venetian fleet to battle between Andros and Euboea; on 15 Dhu ‘l-Hijjâda 1108/July 1697 he defeated a Venetian fleet under Alessandro Molino off Tenedos and again, on 14 Şafar 1109/September 1697, off Andros. On 15 Rabî I 1110/21 September 1698 he brought the Venetian fleet under Giacomo Cornaro to battle off Lesbos: Western sources (*Zinkelsen, GOR*, v, 183) depict the engagement as a Venetian, Turkish sources (*Silahdâr*, *Râşîdî*, ii, 440) as an Ottoman victory.

Hüsâyn Paşa did not live long after the conclusion of the peace of Carlowitz: in 1113/1701 (the exact date is uncertain; his successor as Kapudan Paşa, *Abîl-Fettâh Paşa* was appointed in Rabî I 1113/August 1701) he died on the island of Paros and was buried on Chios (*İstanbul Başvâklet Arşivi, Mühimme defteri no. III, p. 644; A. de La Motraye, i, 210*).

Hüsâyn Pasha’s services to the Ottoman Empire were not confined to the winning of battles; he also played an important part in the reform and strengthening of the Ottoman fleet and in the regularizing of the naval service by a code of regulations (*hânam-nâme*) which he drew up (see I. H. Uzuncarsılı, *Osmanlı devletinin merkez ve bahriye teskilatı*, Ankara 1948, 498-9, 523, etc.).

Husayn Rahmi, in modern Turkish HÜSEYIN RAHMI GÖRPINA (1864-1944), Turkish novelist and short story writer, who although outside all the literary currents and movements of his time, remained the most popular writer from the 1900's until the late 1920's.

Husayn Rahmi was born in the Ayaspasa quarter of Istanbul on 17 August 1864, the son of Mehmed Sa'id Paşa, an aide to Sultan 'Abd al-'Aziz. The family came originally from Aydin. He lost his mother at the age of three, when his father was serving in Crete. He attended primary and secondary schools in Istanbul and later the Istanbul University, where government clerks were trained. At the same time he was taught French by a private tutor. In 1878 he entered the School for Political Science (Mülkiye), but left after two years because of ill-health. He became a government official and served in the Ministries of Justice and Public Works until 1908, when he resigned to devote all his time to literature. In 1912 he moved to Heybeliada, where he built a villa from the income of his novels. In 1919 he took a role in the Turkish parliament as deputy between 1936-43.

Husayn Rahmi began his first experiments as a writer at the age of twelve and saw his first writing in print at the age of twenty (1884). He published his first short story, Istanbulda bir Fransız in the same paper, on 29 November 1889.

He wrote his first novel Şıkik in 1886 and sent the first part to Ahmed Midhat, the leading popular novelist, publicist and journalist of the time, who immediately recognized his talent and invited him, by a flattering open letter published in his newspaper Terjemi-i Hikayet, to come and see him in his office. He urged him to complete the novel, which was serialized in the newspaper in 1887 and then published in book form in 1889. Ahmed Midhat took him onto the staff of his newspaper and the young writer began to fill the columns of the paper with a flood of articles (mainly didactic), short stories and novels, mostly translated from the French (Paul Bourget, Emile Gaboriau, Paul de Kock, etc.). In 1894 Husayn Rahmi left the Terjemi-i Hikayet and joined the staff of the İblam, where several of his novels were to be serialized.

After the publication of his novel Mürübbiye in 1897 in İblam his distinct literary personality was recognized by the critics and his popularity was secured. This occurred, strangely enough, just at the time when the exclusive and fashionable Terjemi-i Hikayet movement with its slogan 'art for art's sake' was at its zenith.

Husayn Rahmi is the author of some 40 novels, several volumes of short stories, a few minor plays and a number of translations. Most of his articles, polemics, criticisms and a few short stories and novels published in various newspapers have not yet appeared in book form. His major novels, typical of his genre are: (1) Şıkik (The Snob, 1888), his first novel, a sketch on the type of some of his later novels (nos. 4, 6, 8) where the 'Westernizing snob', the blind imitator of European manners and customs, is ridiculed; (2) Ilif (1897), the story of a well-educated young girl who, falling into poverty, struggles to save her honour in the face of most difficult circumstances; (3) Mutatâba (The Divorcee, 1898, German translation Die Geschiedene by Imhoff Pascha, 1907), describes the tragic consequences of chronic quarrels between a daughter-in-law and her mother-in-law; (4) Mürübbiye (The Governess, 1898): Dehri Efendi, a retired civil servant and a blind admirer of 'Western ways of life' hires a Frenchwoman to 'educate' his two sons and his grandson. She settles in his sea-side villa and soon dominates and disrupts the whole household by seducing all the male members of the family, ending up with Dehri Efendi himself; (5) Bir Mu'addele-i Sevda (A Love Equation, 1899) is a strong social criticism directed against the traditional custom of parents choosing their sons- and daughters-in-law without regard for their children's wishes; (6) Mufrade (The Mistreated, 1900), another satire against 'Westernizing snobs' of the turn of the century with the unusual inclusion of a woman snob; (7) Tesādūf (Chance Meeting, 1900) exposes with satirical humour all the tricks of the traditional fortune-teller who used to pester the lower and lower-middle class families of Istanbul; (8) Şikşer (Always in Love, serialised partly in İblam in 1901, suspended by the censor, published in full in Sabâh in 1908, first published in book form 1912, German translation Der Liebeskranke Bey by Mubins, 1916) usually considered his masterpiece, is a further development of the theme already treated in his earlier novels. This is a powerful character study of a snob. Meftün Bey is a flippant young man. On his father's death, his rich uncle sends him to Paris, where he learns only to live the life of Parisian idlers. When his uncle dies, he has to rush to Istanbul, to be the head of a crowded konak in the country. He immediately begins to reorganize the house alla franca ('Alaforgança') was the original title of the novel when it was first partly serialized in İblam in 1901) and to re-educate the whole household, imposing on them European dress, food, manners, etc.; (9) Güllü Yabanı (The Ogre, 1912) and (10) Deli Dehri (The Wise Witch, 1914) are satires on the superstitious beliefs and naive credulity of some people of the period; (11) Tesabsim-i Elem (A Sad Smile, serialization in İblam suspended in 1914, published in book form 1923), an interesting analysis of awkward relations between men and women of the period; (12) Son Âres (The Last Wish, 1918), the unhappy love of a young girl forced to marry a man she does not love; (13) Diktenemmi (The Damned, 1919), against the marrying of young girls to elderly men; (14) Bakka Sıkikhindik (God Preserve Us!, 1919), the sufferings of the lower and lower-middle classes during the years of the 1914-18 War in Istanbul; (15) Tutuşmâr Gençler (Hearts Aflame, 1922) and (16) Biliyor Kalb (A Heart of Crystal, 1924), both on the problem of the emancipation of women in post-war Istanbul; (17) Mezhlâmelde Hanımlar (Ladies in a Tavern, 1924), a warning against the 'excesses and misunderstanding' of the emancipation of women; (18) Ben Deli Mişim? (Am I Mad?, 1925) where most of the controversial philosophical topics of the post-war period are discussed; (19) Ummâma Adam (The Shameless Man, 1930), a social satire in the form of a character study of a man who succeeds in life by completely ignoring all rules of the moral code.
Husayn Rahmi's short stories (about 70) have been collected in eight volumes.

Husayn Rahmi occupies a unique place in the history of pre-Republican Turkish literature. Unlike most of his contemporaries he did not follow any earlier Turkish or French model; but assimilating very soon various influences he developed a powerful independent literary personality. As an admirer of the prolific popular writer Ahmed Mïdhat (1844-1912) he owes a great deal in his narrative technique, conversation, imitation of the minorities, handling of certain topics, to the traditions of the Turkish popular arts and literature (i.e. karargâh, meddâh, fulâdâ technique in ortaoylu and folk tales of various kinds). Whereas in Ahmed Mïdhat these elements are used freely and loosely with a mixture of such French influences as Alexandre Dumas père, Husayn Rahmi polishes them and assimilates them for his own purpose, blending them successfully with the technique of the French realists and naturalists, particularly Maupassant and Zola. This combination of the colourful Turkish popular tradition of story telling, the careful study of the naturalist technique, an accurate observation of the life and types of Istanbul lower and lower-middle class families, a penetrating analysis of the burning social problems of his time, an acute sense of humour and satire, made Husayn Rahmi the most original of all Turkish novelists until the 1930's.

Husayn Rahmi's novels and short stories are almost of documentary value. The everyday life of families and individuals and their development within the disintegrating Ottoman society and all the social problems arising from the impact of western ideas and customs are meticulously studied, with the addition of humorous, satirical and grotesque elements. The tendency to imitate blindly everything Western, the inferiority complex vis-à-vis Europe, the demoralizing customs are meticulously studied, with the addition of certain episodes, even for the preference of certain topics, to the traditions of the Turkish popular arts and literature (i.e. karargâh, meddâh, fulâdâ technique in ortaoylu and folk tales of various kinds). Whereas in Ahmed Mïdhat these elements are used freely and loosely with a mixture of such French influences as Alexandre Dumas père, Husayn Rahmi polishes them and assimilates them for his own purpose, blending them successfully with the technique of the French realists and naturalists, particularly Maupassant and Zola. This combination of the colourful Turkish popular tradition of story telling, the careful study of the naturalist technique, an accurate observation of the life and types of Istanbul lower and lower-middle class families, a penetrating analysis of the burning social problems of his time, an acute sense of humour and satire, made Husayn Rahmi the most original of all Turkish novelists until the 1930's.

Husayn Rahmi's technique is unequal. Most of his novels consist of a series of powerful sketches loosely connected by (mostly irrelevant) passages of philosophical or didactic remarks and observations which rather spoil the type of Western, the inferiority complex vis-à-vis Europe, the demoralizing customs are meticulously studied, with the addition of certain episodes, even for the preference of certain topics, to the traditions of the Turkish popular arts and literature (i.e. karargâh, meddâh, fulâdâ technique in ortaoylu and folk tales of various kinds). Whereas in Ahmed Mïdhat which he has not been able to cast out. His style, too, although much more polished than that of Ahmed Mïdhat, suffers from the same defect: when he reproduces direct speech he is masterly. He uses the most natural, fluent spoken Turkish, but when he begins to argue or elaborates some social or philosophical theory he falls back to the type of flowery style which he himself condemned in his various writings. However, he noticed this shortcoming in the 1920's, after the triumph of the 'New Language' movement and, like most of his contemporaries, began to simplify the style of his novels and short stories in their later editions. His complete works are being edited with some alterations in the light of recent changes, and there are signs that a revival of Husayn Rahmi's popularity is possible in spite of the radical change in theme and scope in the Turkish novel since the 1930's.

date of its conquest is yet to be established). An enlightened and liberal ruler, he treated his Hindu subjects with generosity and appointed many of them to high offices. He built mosques, madrasas and other buildings of public utility, for whose maintenance he created endowments. He "was unquestionably the best, if not the greatest of the medieval rulers of Bengal ... and had almost become a national institution ...". He died in 926/1519 and was succeeded by his son Nūrān Shah.

**HUṣAYN SHAḤ (2), b. Ṣaḥbārī, al-Dīn Husayn ‘Sallm’, reg. (849/1443-863/1458) was the last of the line of the Shah Sultanī of the independent kingdom of Dāvwāpur. Al-Dīn Ṣaḥbārī, who ascended the throne in 838/1434 after the death, in an armed conflict, of his elder brother Muhammad Shāḥ, at that time engaged in hostilities against Buhūlā Lōdī [q.v.], the king of Delhi. Husayn, immediately on his accession, concluded a four-year truce with Buhūlā. He utilized the respite by leading a powerful army into Tirhut and Orissa, both of which he reduced, compelling the Hindu ruler of Orissa to pay a huge ransom. In 871/1466 he laid siege to the fortress of Gwāliyār [q.v.], held by the Rājput prince Pur-bī Sūltān, al-Dīn Husayn Shāh, c. 878/1473, taking it after a bitter struggle. But while his victorious army was retreating, Buhlūl fell upon it. In 879/1474 Husayn, losing all hope of recovering his lost possessions, repaired to Kahlān and joined the service of Bahūrūn, with whom he had to flee for his life, the ladies of his harem, including the queen, falling into the hands of his conqueror. But this offer was contemptuously rejected by Husayn. Urged by his favourite queen Bibi Khānunza (not Dariālā, as given by the *Camb. Hist. of Ind.*, iii, 231, 255, which is a misreading for Ḩālīla, cf. Fīrīgha, Lucknow ed., ii, 602), entitled Malik-i Dāhshān, a daughter of the fugitive Sayyid king of Delhi, al-‘Aẓīm al-Dīn, to regain her father’s lost possessions, he marched against Delhi in 878/1473, taking advantage of Buhūlā’s absence in the Pāndjāb. Buhūlā, his army vastly outnumbered, sued for peace, and this offer was contemptuously rejected by Husayn. In the ensuing conflict the scales turned against him and he had to flee for his life, the ladies of his harim, including the queen, falling into the hands of the victor. But his army turned the Tables and defeated and killed in battle. On the death of his father al-Dīn Husayn Shāh was proclaimed the ruler of upper Sind at Nasīrpūr where he was then however, outmanoeuvred and overcame Barbak, who had been captured, and he had to flee into Bihar, closely pursued by Buhūlā, his army vastly outnumbered, sue for peace, and was taken captive, and absorbed his principality into the Lōdī kingdom of Delhi. Husayn, losing all hope of recovering his lost possessions, repaired to Kahlān and joined the service of Bahūrūn, with whom he remained for two years. The domestic quarrel having been patched up he returned to his father. In 926-27 he was deputed by Shah Bēg to help Dāwandī, the ruler of Thāffa, whose territory had been invaded by his rival Dāwandī al-Dīn, whom he defeated and killed in battle. On the death of his father in 926/1521 Husayn Shāh was proclaimed the ruler of upper Sind at Nasīrpūr where he was then

**HUṢAYN SHAḤ ARGḤŪN** (also known as Mirza Husayn Ḩasan) b. Shāh Bēg Arghūn, the founder of the Arghūn dynasty of Sind, was born in 896/1490 most probably at Kandahār which was then held by his father. On Bābur’s occupation of Kandahār in 913/1507 Shāh Bēg came to Sind and occupied the adjoining territories of Shāh and Siwī (modern Sibi). In 921/1515 Husayn Shāh fell out with his father and joined the service of Hamtār, from whom he remained for two years. The domestic quarrel having been patched up he returned to his father. In 926-27 he was deputed by Shāh Bēg to help Dāwandī Pirūz, the ruler of Thāffa, whose territory had been invaded by his rival Dāwandī al-Dīn, whom he defeated and killed in battle. On the death of his father in 926/1521 Husayn Shāh was proclaimed the ruler of upper Sind at Nasīrpūr where he was then
camping. Soon afterwards he marched against Thaffa, as Djam Furuz had refused to recognize his suzerainty, defeated him in a closely contested battle and occupied the town. The Djam fled to Godlarat [q.v.] where he died in exile.

In 931/1524 Husayn Shah marched against Multan [q.v.], capturing and destroying the forts of Siwär, Ma‘ūn and Uchq [q.v.] on the way. The latter place was given to plunder and the fortified and deserted of the fort carried to Bhakkar [q.v.]. Hearing of the invasion Mahmūd Khān Langāh, the ruler of Multan, marched out to meet the enemy with an army 80,000 strong but at the very first stage of the expedition fell ill and died. His successor Sultan Husayn Langāh II [q.v.] considered it prudent to make peace with the invader. Frustrated and baulked of his booty Husayn Shah marched against the desert fort of Derawar (in the former Bahawalpur state) which was said to contain a huge hidden treasure. After a stiff resistance the fort surrendered and the treasure was secured. Burning with ambition and anxious to extend his rule Husayn Shah again thought of conquering Multan. Towards the end of 932/1526 he set out on his campaign and laid siege to the town which dragged on for a year. Unable to stand the terrible famine during which even dogs and cats were used as human food, the garrison ultimately surrendered without a fight. All the inhabitants between the ages of seven and seventy were either made prisoners or put to the sword and a very large booty fell into the hands of the invader. According to Firūṣta (Gulshan-i Ibrāhīmi, ii, 321), Husayn Langāh was also taken prisoner and the government of Multan entrusted to Khādīja Shams al-Din Mahūnī (cf. Ta’rikh-i Ma’sūmī, 150). After his victorious return to Bhakkar, Husayn Shah learnt that Rāy Khāngār of Khuch (Kashqā) was preparing to attack Thaffa. Husayn Shah immediately left for that town, engaged the enemy in battle and completely routed him. Hamūyūn [q.v.] on his arrival in Sind in 947/1540, after his defeat at the hands of Shīr Shah Sīr [q.v.], sought the help of Husayn Shah in the hope that as a former servant of his father he would not hesitate to come to his help. Husayn Shah, however, doubted Humāyūn’s intentions and sincerity, procrastinated. Enraged at his cold behaviour Humāyūn occupied the fort of Bhakkar [q.v.] and appointed his uncle Yadgar Nasir Ma’mūr, as its commandant. On a rapprochement being effected Husayn Shah agreed to render some help. Husayn Shah, however, doubting Humayun’s intentions and sincerity, procrastinated. Enraged at his cold behaviour Humayun occupied the fort of Bhakkar [q.v.] and appointed his uncle Yadgar Nasir Mirza, as its commandant. On a rapprochement being effected Husayn Shah agreed to render some help to Humayun but as soon as the latter left Sind, he promptly drove Yadgar Nasir Mirza out of Bhakkar and reoccupied the fort.

In 962/1554 the Arghuns and Tarkhans of Thaffa conspired and rose in revolt against Husayn Shah, who had been ailing for long and was unable to discharge the functions of state. A compromise was, however, effected and the revolt consequently fizzled out. Enfeebled and paralysed Husayn Shah did not live long and died at the village of Allpōta on 12 Rabī‘ I, 974 February 1555 after a rule of 34 years, aged 66.

He was first buried under a dome in the Maklī necropolis, near Thaffa, but after a lapse of two years the coffin was transferred to Mecca where it was interred near the grave of his father. A grand building was erected over his grave which is no more in existence.

A brave and cultured ruler, Husayn Shah was well-versed in the traditional sciences and held the maghsūm, ‘ulamā‘ and scholars, on many of whom he had settled stipends, in great esteem. A poet in Persian, he used to compose verses occasionally under the name of plume of Sipāhī. He had two wives, one of whom was his cousin Māh Bēgām, a daughter of his uncle Muhammad-Maktoom. Another daughter, Cūkā Begām, was married to prince Kāmrān, who had been blinded by Humayūn, and in spite of her father’s entreaties, remained firm in her resolve to accompany her ill-starred husband to Mecca, where he had been exiled.

**Nāṣir al-Dīn ḤUSAYN SHĀH CĀRKH** [see KASHMIR].

**HUSSAIN SHAH LANGAH I,** son of Rāy Sāhār entitled Kūt al-Dīn, the founder of the Langāh dynasty of Multān, who had usurped the throne by treacherously ousting his son-in-law, Shaykh Yūsuf Kurayyshī, succeeded to the rule on the death of his father in 874/1469. Adventurous by nature, he began his reign by launching a succession of campaigns against the neighbouring forts of Shīr (modern Shorkhā), Cuniṣh [q.v.] and Kahrī (modern Kahrī Pucca), which he easily reduced. At this time Shaykh Yūsuf Kurayyshī, who had taken refuge with Buhāl Lōdī, the king of Delhi, persuaded his protector to march against Husayn Shah in recovering his lost kingdom. Buhāl set out twice from Delhi with the intention of conquering Multān, but had to abandon the attempt owing to the threatened invasion of his capital on both the occasions by the Şāhī sultans, Maḥmūd and Husayn Shah [q.v.]. It is difficult to fix the exact dates of these two abortive attempts as the authorities widely differ. The third time, when Husayn Langāh was occupied with quelling the rebellion of his brother, who had assumed the title of Shīhāb al-Dīn and proclaimed himself king at Kahrī, which he had assigned to him, Buhāl deputed his son Bābak Shīhāb to reduce Multān. He was joined en route by the forces of Tātār Kān Lōdī, the governor of the Pandīb, Husayn Langāh, hearing of the invasion and having completely crushed the revolt of Shīhāb al-Dīn, reached Multān by forced marches and gave battle to the invaders, who suffered a crushing defeat and fled to Delhi. It was during his reign that Ismā‘īl Kānī and Fath Kān, the two Balūc brothers and founders respectively of Dīra Ismā‘īl Kānī and Dīra Fath Kān [see DERĀDĀT] came from Mukrān [q.v.] and joined his service. This event marks the settlement of the Balūcs in large numbers in the neighbourhood of Multān. In his old age Husayn Shah...
Langah abdicated in favour of his son Firuz, a dissolute and worthless youth, who was poisoned by the prime minister 'Imad al-Mulk to avenge the death of his son Buhbol Lodi. Husayn Shah Langah, a boy of only three who had been proclaimed king, was protected by the regent and patronize Shi'a and Tashkhi and Tashkhi, the second son of Bubur, the independence of Multan was lost for ever and it became, shortly afterwards, a dependency of the Mughal empire.

HUSAYN SHAH LANGAH II, son of MAHMUD LANGAH (reg. 904/1498-9—931/1524-5), the ruler of Multan, while he was only one or two stages away from his death, was poisoned by the traitor Langaf Khan, who in his turn was replaced by Mirza Karmar, the aged father of Bubur. The independence of Multan was lost for ever and it became, shortly afterwards, a dependency of the Mughal empire.

HUSAYN WAT'K KASHFI [see KASHIFI].

HUSAYNABAD, called Husaynabad the Great (bussurg), is to be distinguished from two other Husaynabads, one of which existed in the modern Murshidabad district and the other in the 24 Parganas. Husaynabad the Great was a town, now in the Malda district of West Bengal, which flourished during the times of the Bengal sultans Husayn Shah, Nasrat Shah, Firuz Shah and Mahmud Shah III. The name appears on the coins and inscriptions of Husayn Shah, but only on the coins of the other three sultans. It is not certain if it was identical with Gaur, in which case it was named after Husayn Shah, or it was a suburb of the city actually built by the Sultan himself. The latter opinion, however, appears to be more probable. According to Ghulam Husayn Salim, Husayn Shah transferred his seat of government to Ekdal adjoining the city of Gaur. This Ekdal was situated near the village of Ramkeli on the western outskirts of the city. It is possible that this Ekdal was later re-named by Husayn Shah as Husaynabad the Great. Besides being the metropolis during Husayn Shah's reign, Husaynabad the Great also appears to have been the capital of the western region (iklim) of the kingdom. The capital of the eastern region was probably Mumgarmanabad (near Mymensingh).

HUSAYNI DALAN, a Shii shrine in the old city of Dacca, seems to have been originally built in 1052/1642 by one Sayyid Murad during Prince Shujji's governorship of Bengal. Prince Shujji, although himself a Sunni, was eager to preserve and patronize Shii institutions. The tradition is that Sayyid Murad, having seen al-Husayn in a vision erecting a ta'ziya-khanna (house of mourning), was inspired to raise the building, which he named
Husayni Dālan—Husaynīds

Hisaynī Dālan. The original building may have been a small structure, expanded to its present form in later times. It was repaired in 1807 and in 1810 by the East India Company, and a portion of the building was reconstructed after the earthquake of 1897.

The building stands on a high platform ascended by a flight of steps on the east side, and consists of two main halls placed back to back. The shīrīnī hall, facing south, is coloured black to indicate sorrow and mourning for the death of al-Husayn, and the muḥba hall, facing north, is a minarī with seven wooden steps. In the latter hall are hung several religious symbols. To these two halls have been added subsidiary halls in two storeys on the right and left, probably meant for women. The southern façade of the building is flanked by two three-storey polygonal hollow towers, crowned by domes. The parapet of the building consists of coloured merlons, and over its four corners are four kiosks. The building, as a whole, gives a modern appearance with remnants of older architecture here and there.

From the first to the tenth day of Muharram, the Husayni Dālan becomes the chief attraction of the city. Mourners, including Sunni Muslims, assemble there, listen to sermons and join in passion plays [see ta'ziya]. On the 3rd of Ziyara [q.v.], a great procession parades through the main streets of the city to a place in the western part of the city called Karbalā.

(A. B. M. Husain)

Husaynī Śādāt Āmīr, popular name of Husayn b. 'AḤīl b. Aḥ-Sāḥān al-Husaynī, an Indian mystic poet and a distinguished disciple of Shaykh Bahā al-Dīn Zakariyyāy of Multān [q.v.] (d. 1210-35). Owing to disturbed conditions in his home-land, he seems to have spent a considerable time in Multān during the reigns of Balban (664-86/1266-87) and Dījalāl al-Dīn Firdūs Ṣāḥib Khādījī (689-95/1290-96) (some of his verses in praise of the latter are given in Rāhnumā-yé Kūtīb, see Bibl.). He died in Harāt after 729/1328 (the date given by Dījalāl, 16 Shawwāl 718/November 1318, is obviously wrong, as he completed his work Zād al-mutāṣfīrīn in 729/1328) and was buried near the tomb of 'Abd Allāh b. Di‘ā‘ar Tayyār.

Husaynī was a notable mystic thinker; he, 'Irākī and Awhadī form that famous Suhrawardi trio which played a very prominent part in popularizing mystical ideas through their works—Lāmā‘at, Tārdī‘ and Zād al-mutāṣfīrīn. Dījalāl Ṣāḥib calls him a second Ḫunayd in scholarship and eminence; a modern literary critic places him next to Sa‘dī and Rūmī in the history of Persian literature (Rāhnumā-yé Kūtīb). He possessed a unique gift of communicating mystic ideas through the medium of stories and fables. His works embody mystic reactions to the social and moral anarchy that came in the wake of the Mongol invasions. Of his works, the Nūḥat al-awrād (Mudi-tābāt Press, Delhi; commentaries by 'Abd al-Wahīd Ḥirbārī Bilğrāmī, MS Bodleian 1257; and Bahā al-Dīn Budd, MS personal collection), the Ṭabār al-muṣafārīn (MS I. O. Ethē no. 1289), the Zād al-mutāṣfīrīn (MS I. O. Ethē no. 1283), which was probably written by Qādī Yākub in 1284, whereas the name of the author is wrongly given as 'Abd Allāh Ṣāḥib Wāzīr al-Kāshīfī, and the Kāns al-rumāz (MS Brit. Museum, Rieu, CM, ii, 845 b; I.O. nos. 1830-31) are well known. A poetical collection Haft gandji has recently come to light (Rāhnumā-yé Kūtīb). Copies of other works, like the dīwān, Shirāt al-mustahkīm, Anbā‘ muğārib, Rūh al-arwād and Sīrādīma, probably perished as the result of the Mongol cataclysm. For some stray prose and versified compositions reference may be made to Aṣghar-i muṣafārīkā, MS I. O. Ethē no. 1747, fol. 68 a; Bodleian 1212, fol. 1074; Kalandar nāma, MS Brit. Museum Add. 7611, fol. 549b; Brit. Museum, Rieu, ii, 834a; Mājmū‘ al-insād, ed. Muḥ. Amīn-i Banī ‘Īsā‘ī, MS I. O. Ethē no. 2122.

(K. A. Nizami)

Husaynīds, a dynasty which reigned in Tunisia from 1705 until 25 July 1957, when the Tunisian republic was proclaimed. The founder of the dynasty was al-Husayn b. ‘Allī [q.v.] who came to power in 1705, after the defeat and capture by the Algerians of the Bey Ibrahim al-Sharif. Proclaimed Bey and later recognized as Beylet beyi (governor) of the province of Tunisia by the Ottoman Sultan Ahmad III, Husayn persuaded his Council of military leaders to adopt a system of hereditary succession within his family by primogeniture on the male side. The greater part of his reign passed with-out problems, but the end was troubled by the suc-cessful revolt of his nephew, ‘Ali, who, with the help of the Algerians, dethroned him and was created Bey in his place (1755-56).

For nearly twenty years, ‘Ali Paša ruled without incident but in 1752 he was faced with the revolt of his son Yūnus, and, more serious, in 1756 with that of his cousin Muhammad, son of Husayn, who con-quered Tunis with the help of Algerian troops. These sacked the town which was poorly defended by native soldiers whom ‘Ali Paša had recruited in the place of the Turkish Janissaries.
Muhammad (1756-9) was succeeded by his brother, Ali Bey (1759-82), who returned to the earlier policy of excluding Europeans in the Tunis. While recognized by the Ottoman Sultan only as Governor of internal affairs, at any rate until 1835, and the Bey was able himself to sign treaties with European powers. Differences of opinion between Tunisia and France first arose under Ali Pasha in 1764-1, concerning the Africa Company and, much more seriously, in 1769-70, under Ali Bey, in connexion with the annexation of Corsica by France and the monopoly of coral-fishing. Thanks to the intervention of the Bey’s son-in-law and Chief Minister, Mustafā Kaḥdīa, the dispute was settled, and from that time on a French Consul-General was established in Tunis.

The next Bey, Hamūdā Pasha (1783-1814), found himself in violent conflict with the Venetians (1784-92), who bombarded Susse and Goletta, and with the Algerians, who twice, in 1807 and 1813, invaded Tunisian territory. In Tunis itself, Hamūdā Pasha had to deal with a revolt of the Janissaries. With the help of Yūṣuf, Sāhīb al-Ṭawāf (guardian of the state seals) and in effect Chief Minister, he was able to put down the rising and finally dissolved the Corps of Janissaries (1811). Hamūdā Pasha was responsible for the construction of the Dār al-Bey near the qaṣba, as well as of the palace of Mūnūba.

After the brief reign of Uṯmān Bey (September-November 1814), his brother Māḥmūd (November 1814-March 1824) returned to the practice of recruiting Janissaries in the Orient in order to repel the Algerian attacks; finally, however, he made peace with the qaṣba of Algiers in 1821. Most important of all, he had to suppress the privateer raids upon the demands of the European powers after the Congresses of Vienna and of Aix-la-Chapelle (1819); this meant an important loss to the Tunisian economy. Husayn Bey (1824-35) supported the Ottoman Empire in the various phases of the “Eastern Question”, the result of which was the destruction of the Tunisian fleet at Navarino [q.v.]. He thought also of intervening in Tripolitania following the incidents which occurred there Company between 1819 and 1835, but when the Turkish government once again made Tripolitania a province directly administered by Ottoman officials, he gave up these pretensions. Under Muṣṭafā Bey (1835-37) and Ahmad Bey (1837-55), tension grew between Tunis and Istanbul. The Sultan, supported by Great Britain, tried to bring Tunisia back to more strict obedience, while Ahmad Bey, upheld by France, endeavoured to protect its autonomy. Finally, the Bey succeeded in his refusal to pay the tribute claimed by the Porte, received the titles of wāḥl and muṣḥūḥ, but was obliged to continue the practice of receiving firmans of appointment to office and certification in it. Furthermore, Ahmad Bey showed his allegiance to the Sultan by sending a Tunisian expeditionary force to Turkey during the Crimean War. He was also the first to introduce reforms in the Tunisian public works and to launch great public works. All this involved enormous expense, and caused the Bey to contract debts, which mainly profited European businessmen and the Minister of Finance, Muṣṭafā Khaṇznādār, and involved levying new taxes. In addition, Ahmad Bey abolished slavery and did away with the statute which had kept Tunisian Jews in an inferior position.

Muhammad Bey (1853-59) and his brother Muḥammad al-Sādīk (1859-82) were determined reformers, but often badly advised. The first instituted the ‘Uyun al-Mustafa, a model of the “Facte Fondamentale” [Fundamental Law] on 10 September 1856 on the model of the Ottoman Khattat al-umumyyān of February 1856 [see TANZIMAT]. This pact gave all Tunisians equality, liberty of conscience, and freedom in commercial matters. It also allowed foreigners to acquire property in Tunisia and to take part in every kind of economic activity. The administration was re-organized on the European model and in 1861, Muhammad al-Sādīk, who was the first to introduce the conception of state-seals (Moncef) Bey (19 June 1942-13 May 1943) retrieved some of the prestige of the Beys’ throne by putting himself at the head of the nationalist movement, at that time deprived of its other leaders. During his short reign, he showed himself an energetic sovereign, who rallied the bulk of the population around him and caused his dynasty to be regarded as a kind of guarantee and repository of national sovereignty.
Munṣīf Bey was forced to abdicate shortly after the reconquest of Tunis by the allied armies and was replaced by his cousin, al-Ambī (Lamine) Bey (13 June 1953–25 July 1957). He did not possess his cousin's strength and energy of character, and after the war political initiative returned to Ḥabīb Bourguiba and the other leaders of the Néo-Destour. From 1952 to 1954, Lamine Bey tried rather timidly to resist French demands, and his passive resistance, combined with the militant behaviour of the Néo-Destour, brought the French government to agree to his first resignation (25 June 1955) and then to full independence (20 March 1956).

A short time after this, the family of the Bays ceased to enjoy any special privileges and, by a decree of 3 August 1956, the exercise of power was taken away from the Bey and given to the First Minister. On 25 July 1957, the Constituent Assembly proclaimed the fall of the Husaynid dynasty and the establishment of a republican régime. For a short time placed under house arrest near Tunis, Lamine Bey was later given complete freedom. He died in 1964.

The Husaynid dynasty, although of foreign origin, was able at times to go—though never to a very marked degree—the impression of being the national dynasty of Tunis. Turkish in origin, it preserved the traditions of the Ḥanāfī school of law, marriage to Ottoman princesses, and recognition (until 1881) of the suzerainty of the Ottoman Sultan.

Tunisia, in ET, pt. 3, Turkish period, and pt. 4, French Protectorate (bibliography very complete up to 1931), further: Farragia di Candia, Monnotés hussemites, in RT, nos. 11-12 (1932), 379-98; nos. 13-14 (1933), 215-30; no. 17 (1934), 73-92; no. 21 (1935), 15-36; Grandchamp, Les différends de 1832-33 entre la République de Tunis et les royaumes de Sardaigne et des Deux-Siciles, in RT, N.S., no. 5 (1931), 1-91; idem, Le différend tuniso-sarde de 1843-44, in RT, nos. 13-14 (1933), 127-215; idem, Documents relatifs à la révolution de 1864 en Tunisie, 2 vols., Tunis 1935; P. Marty, Histoire de la mission militaire française en Tunisie (1837-1882), in RT, N.S., no. 22 (1935), 1, 7; no. 24 (1935), 2-15; no. 26 (1936), 11-26; no. 27 (1936), 27-33; no. 31 (1940), 1-31; no. 34 (1943), 32-40; L. Berchet, En marge du building of houses, the working of mines and the use of iron, in the foundation of Babylon, Susa and the Caspian Sea. His place in the series of the mythological kings (Pishdadiyan) is vague: sometimes he is the contemporary of Tahmūrāḥ [g.v.]; sometimes his successor; sometimes Gayūmār comes before both of them. The Pahlavi texts add little to the Avestan texts. The Arabic texts, which supply much detail, also disagree over the place of Hūshang in the series of the Pishdādiyān, but recognize him as the first civilized: al-Ṭabārī-Balā'īnī, then al-Thālibī, attribute to him the initiative in the building of houses, the working of mines and the use of iron, as re-cast by Ibn 'al-Mu‘affa, whereas Firdawsī bases himself on the early Iranian edition of this work (see Firdawsī, col. 918b). Thus the recension followed by the Arabic authors attributes to him a reign of forty years, whereas Firdawsī has only thirty. Firdawsī makes him the grandson of Gayūmār (the first man) and the avenger of his own father Sīyāmāk; to the enterprises of Hūshang mentioned above, he adds the creation of canals to water the land; he is the only one in these details and circumstances of the discovery of fire, as a result of the clash of two stones, one of which was thrown by Hūshang at a dragon “and he gave orders that prayers should be said facing a fire, saying: It is the spark given by God (Isād); worship it if you are wise”; completely contrary to this account, Abu 'l-Mā‘ālī, the author of a Bāyān al-adīsān in Persian (485/1092), declares (perhaps under the influence of Islam) that Hūshang was a promoter of idolatry, because he went into a
state of contemplation before a statue of his deceased daughter. Al-Tabari and other early writers in Arabic wished to introduce Gayumard and Hushang into the genealogy of the personages of Biblical antiquity, the former being Adam and the latter Mahalaleel (Genesis, v, 12-7) or his son, or else Heber the descendant of Noah. Some writers stressed the proofs of wisdom given by Hushang, to whom they attributed a collection of moral sayings (Diividan khvād, “The eternal wisdom”).

HUSHANG SHAH GHURI, ruler of Malwa [q.v.] from 808/1405 to 831/1432. He is first mentioned as Alp Khan, the eldest son of Dilawār Khan [q.v.], by Fīrūghta, who represents him as ambitious for Malwa’s independence from Dihlī and resentful of his father’s homage to Mahmūd Khaldji of Dihlī when the latter was a fugitive in Dhār from the Timūrid invasion in 808-9; indeed, during Mahmūd’s presence at Dhār he withdrew from the court to Māndū [q.v.] where he put in order the fortifications of the old Paramāra stronghold, and after Mahmūd’s return to Dihlī in 804/1401 he encouraged his father to assert his independence. When Dilāwār Khān died suddenly in 808/1403 Alp Khān succeeded to the throne as (al-sultan al-aḍādi) Husmān al-Dunya wa-l-Din Abu l-Mudhjīd Hushang Shāh (cf. H. N. Wright, Catalogue of the coins in the Indian Museum, Calcutta, Oxford 1907, ii, 246-7); suspecting that Dilāwār Khān’s sudden death was the result of poison administered by orders of his son, Muzaffar I of Gudjārāt marched on Malwā the following year to avenge his death, captured Hushang, and took him off prisoner to Gudjārāt. Hushang was later restored to his kingdom, but finding a cousin, Mūsā Khān, had usurped his power in Māndū; but he regained that stronghold by collecting the revenues of the kingdom before Mūsā had the chance to do so, and thus deprived Mūsā of the means of paying an army.

After his restoration (at the hands of Ahmad Khān, the grandson of Muzaffar I of Gudjārāt; later Ahmad Shāh I) he was soon engaged in repeated hostilities with Gudjārāt from 812/1410 to 816/1415. In 820/1417 Hushang supported Nasr Khān of Khāndēsh [q.v.] against his younger brother Hasan in that divided kingdom (he had previously married their sister); Hasan was championed by Ahmad I of Gudjārāt, whose dominions were invaded by Nasir at Hushang’s instigation. Hushang gave Nasir only lukewarm support, and the latter was obliged to swear loyalty to Ahmad I. The discovery of Hushang’s complicity Ahmad retaliated by invading Malwā in 822/1420 and 823/1420, effecting little but the plunder of some outlying districts, but at the same time convincing Hushang of Gudjārāt’s superiority in arms.

It was thus most probably to reinforce the strength of the army that Hushang set out on his most adventurous expedition, in 824/1421, against the rādīa of Djamnagar in Uṣīrā [q.v.] in order to obtain elephants. The story of Hushang’s strategy, in the disguise of a horse-coper, is told in full by Fīrūghta (Eng. tr. Briggs, i, 178-9). During Hushang’s absence Ahmad Shāh again invaded Malwā, but on this occasion the superiority was with the Malwā army, and Malwā thereafter experienced no trouble from Gudjārāt. (A Hindū source, the Siwandān of Kommana, claims a victory ‘of the sultan of Dhār’ by the Reddi general Allāda, an ally of the rādīa of Uṣīrā; this probably refers to the skirmish in which Hushang relieved the rādīa of his elephants. See N. Venkataramanyya, The Gajapati Prakhadeva, i, in Prakriti, 1928.)

It seems to have been on his return from Uṣīrā that Hushang overcame the Gond rādīa of Khershī [q.v.], a small principality to the north of Barār, and exacted tribute; this seems to have been Hushang’s first serious attempt to extend his possessions. In 825/1422 he turned his attention to the north, capturing first Gagrawn (24° 38’ N., 76° 12’ E., in south-east Rajālisān) and then besieging Gwālīr [q.v.] until it was relieved by Mubārk Shāh the Sayyid king of Dihlī. In 831/1428 Hushang’s new tributary the rādīa of Khershī was attacked by Ahmad Shāh Bahmani; Hushang marched to his relief, and pursued the retreating Bahmani army for three days until the latter turned to give battle. Hushang at first succeeded, but an ambush put the Malwā army to flight.

In 834/1431 Hushang attacked the town of Kalpi [q.v.] on the river Djamnā, a nominal possession of the Sayyid kings of Dihlī, simultaneously with Ibrahim Shārkgī of Dānwvpur who later withdrew. Hushang accepted the surrender of Kalpi from Kādir Khān, the governor, whom he appointed as his own governor. The details of his career after this are not clear, but it is known that he spent some time superintending the destruction of the Bhōjīśāgara dam at Bhōpāl, and Malwā thereafter experienced no trouble.

Hushang’s reputation rests on his military achievements of his twenty-seven years’ reign, which saw the Malwā territories extended northwards to Kalpi and southwards to Kershī, involving conflict with Dihlī, Dānwvpur and the Bahmani kingdom as well as the old rival Gudjārāt. He had a fine taste for architecture, which made Māndū a magnificent city (for his works there, especially the Djamnā masjīd, the Dihlī darwāza, and his own tomb, see MĀNDŪ) as well as an impregnable stronghold. He was well served by his ministers (especially his cousin Malik Muqīth and Muqīth’s son Maḥmūd Khān, the later Maḥmūd I Khaldji [q.v.], seems to have been an impartial ruler (for the dedication of Djamnā images in his reign see Campbell, op. cit. below, 161), and was popular with his subjects, his tomb acquiring sanctity and receiving a yearly ‘urs in his honour, still held in 1844 when the ‘Bombay subaltern’ was writing.

He was succeeded by his eldest son Ghazni Khān as Muhammad Shāh, who exterminated his collaterals and alienated his nobles and was promptly poisoned; for a few days his son Maḥmūd Khān was raised to the throne, but Maḥmūd Khān, having first offered the crown to his father Malik Muqīth, ascended the throne himself, and the Ghōrī line came to an end.
HÜSHANG SHAH GHURİ — AL-HUSRİ

(For the *nisba* Ghuri, see under DILAWAR KHAN.)

(H. Burton-Page)

HUSREV [see HUSSEY].

Al-Hûşri, the name of two men of letters of the same family, who take their *nisba* from al-Hûş, a village near Kayrawân: 1—Aâb Ishâq Ibrâhîm b. ‘Ali b. Tamîm al-Kayrawânî, died near Kayrawân at al-Mansûriyya in 413/1022. Little is known of his life, which appears to have been passed peacefully at Kayrawân, then a flourishing centre of Arabic culture. A famous poet and man of letters, he became a central figure for the young people of Kayrawân—especially Ibn Rashîk and Ibn Sharâf (qq.v.)—who profited from his vast erudition in matters of literary tradition and from his ideas concerning the concept of adâb. Although we possess a number of his verses which, incidentally, mainly reveal his technique but which are without a fine sensibility, his fame rests chiefly on his prose works, entitled *Zahr al-îdâb, Djâmî al-îdahshîr, Nûr al-îrât wa-naur al-îrâf*, and *Kitâb al-Maşrûn fî sîr al-âlâî al-mâkânîn*. The author recognized that his function was limited to making a choice from this, but this nonetheless indicates the quality of the monk who named it and reveals a â-Hûşri's individual conception of the literary form, adâb, and his own didactic methods. He ignores everything that is too well-known and, indeed sometimes licentious side of this literary form was thought to be incompatible with the seriousness of the "great" work (al-kišib al-kabîr). Furthermore, the student, the apprentice âdab, the future writer, needs to be prepared gradually for a fruitful use of this perfect work; *Nûr al-îrât*, written like *Djamî al-iđâshîr* after *Zahr al-îdâb*, answers mainly practical and didactic needs.

1. *Zahr al-îdâb wa-thamâr al-âlîb* was printed first on the margin of the 'Idh and then edited by Zakî Mubârâk; ‘Ali Muḥ. al-Bâdâjwî finally published a more complete and reliable edition in Cairo in 1372/1953. This work is an anthology, in which al-Hûşri, faithful to the fundamental principle of adâb, which involves instructing but never boring the reader, used only varied and relatively short texts, so that they could be learned by heart and used as models. The book passes from serious to pleasant matters, and from poetry to prose, although prose forms the main subject-matter.

The author strives, however, to achieve a certain homogeneity, especially in his constant endeavour to draw almost exclusively on representative extracts of the rich and "flowery" style in the works of the "moderns". The book was printed together in 405/1014-5 at the request of a secretary to the Chancellery, Abu 'l-Fadl al-Abbâs b. Sulaymân, to whom also the two following works seem to have been dedicated, and who had brought back from the East a vast collection of contemporary literary data. The author recognized that his function was limited to making a choice from this, but this nevertheless indicates the quality of the monk who named it and reveals a â-Hûşri's individual conception of the literary form, adâb, and his own didactic methods. He ignores everything that is too well-known and, like Ibn 'Abd Rabbih, confines himself to eastern material, which he wanted first to reveal and then to make familiar to his young disciples. This too-much neglected work was known in Spain and formed part of the curriculum of literary studies (see Ibn Khayyâr, *Fihrist*, i, 380; H. Pürse, *Poezie andalouse*, 28 and index; Ibn Barri, among others, made an abridged version of it).

2. *Djamî al-iđâshîr fî l-îlâlîk wa-l-nâsîrâr* first published in Cairo under the title *Dhayl Zahr al-îdâb*, then in 1372/1953 by ‘Ali Muḥ. al-Bâdâjwî under its real name, is comparable to the *Zahr al-îdâb* in the method followed, but differs from it by the choice of material, which is more limited and homogeneous, although it comes from the same collection brought from the east by al-Hûşri’s patron. It is, in fact, essentially a collection of anecdotes, of "modern" jokes and tales about love from which, however, anything indecent is omitted, the author’s aim being to teach the art of conversation which is amusing and refreshing, without ever causing offence or becoming boring.

3. *Nûr al-îrât wa-naur al-îrâf* (Escurial*, 392, Gotha 2129; *Kišib al-Naurây* according to Yâkût), is conceived in the same spirit and drawn from the same sources as *Zahr al-îdâb*, which it could replace for a reader with too little time or knowledge to use it. Far from merely repeating themselves, these works form a real trilogy which shows admirably al-Hûşri’s conception of the literary form adâb. Although this is on the whole identical with that of traditional adâb, for him it is more strictly defined in its characteristics, and above all in its practical and didactic aim. *Djamî al-iđâshîr*, in fact, fills a lacuna in *Zahr al-îdâb*, in which the pleasant, light, indeed sometimes licentious side of this literary form was thought to be incompatible with the seriousness of the "great" work (al-kišib al-kabîr). Furthermore, the student, the apprentice âdab, the future writer, needs to be prepared gradually for a fruitful use of this perfect work; *Nûr al-îrât*, written like *Djamî al-iđâshîr* after *Zahr al-îdâb*, answers mainly practical and didactic needs.

4. *Kitâb al-Maşrûn fî sîr al-âlâî al-mâkânîn* (Leiden Or. 2593/463), which might, to a certain extent, be linked with adâb because of the literary detail in which it abounds, reveals an aspect of İbrâhîm al-Hûşri’s literary activities hitherto unknown. The work deals with the sentiment of love in general and principally with its manifestations in a thousand different aspects in spite of a desire, conscious or not, to conceal it. It is a monograph of encyclopaedic character, which endeavours to be "technical" or even scientific on matters concerning love. In contrast to al-Hûşri’s other works, where information and subject-matter are for the greater part second-hand, the development of the theme here, apart from quotations in prose and verse, is the author’s own work. The authorities cited are not all Arabs—names of Greek thinkers, scholars and philosophers recur frequently—and the whole conception of the work in dialogue form suggests Hellenistic inspiration. Al-Hûşri also contemplated a work on the "classes" of poets, probably of Kayrawân, but he seems to have abandoned the project after the virulent protest of Ibn Rashîk, who, as the youngest, did not want to be "classified" last.

By his direct teaching, by the didactic aspects of his work, al-Hûşri enriched his own concept and his method in dealing with adâb, above all by his vast knowledge, İbrâhîm al-Hûşri while still young—he was to die in the prime of life—asserted himself as a master whose influence transcended the limits of Ifrikiya and, in a short time, had a profound effect on the astonishing progress in the art of letters in the Muslim West in the 5th/11th century. His example as a writer and his anthologies, which are not unlike those of al-Taḥṣîlî (qq.v.), contributed to the
spare of a taste for a compressed and artistic prose style. He introduced into Ifrījīya the literary form of the makāma, which was soon to be developed so successfully by at least one of his pupils, Ibn Sharaf. His project, too quickly abandoned through a weakness of character manifested in other ways, of a work on the "classes" of poets, probably inspired the Unmudhādī of another of his pupils, Ibn Raḥīl. Finally, it seems very likely that the Kitāb al-Maṣṣān had a direct influence, whether profound or not, on the Taqwā al-Ḥamīma of Ibn Ḥażzm of Cordova. But traditional adab, being at its apex under the influence of the Arabian core, was to triumph in that same 5th/11th century and the ʿAlīūr little by little fell into obscurity, the victim of his own revolutionary impulsiveness (cf. al-ʿUmarī who quotes Ibn Bassām. See Bibli.).

Bibliography: Yahūtī, Udbadhī, ii, 94-7, 169; Ibn Khallikān, Cairo 1948, i, 37-8 (where the passage saying that al-ʿAlīūr was dead was in 453 is certainly an interpolation; cf. ed. de Slane, Paris-London 1846, i, 35 n. 4); Ṭūḍūbībī, al-Muḥdīr min al-Bagdādī, Cairo (7) 1934, 89, 159, 177, 179; Ibn Faḍl Allāh al-ʿUmarī, Masālik al-āṣāṣr, xvii, ms. II.—Abū l-Ḥasan ʿAlī b. ʿAbd al-Ṣanḥ Āl-Ḥusrī, celebrated blind "reader" and poet, born at Karwānīn about 400/1010. Probably the nephew, rather than the cousin of al-Ḥusrī, he left his native city in 418/1028-9 to conform with the death of his father, Bānū Hilāl and, after a stay in Ceuta, went to Spain about 462/1069-70 in response to a long-standing invitation from al-ʿAlīūr maddī ʿAbd, ruler of Seville, and lived there until approximately 468/1075-6. Courted by the mulāḥ al-faṣāṣīfī, who outbid one another in generosity towards him, and feeling the envy and numerous enemies aroused by the favour of princes towards him, his poetic talent, the extent of his knowledge, his arrogance, his little-disguised contempt for Spain and some of its petty kings, its people and its scholars, not to mention aggressive and bitter satires, he moved from one place to another in the peninsula. He stayed mainly in Malaga, Dénia, Valencia, Almèira and Murcia, before finally settling in 483/1090 in Tangiers, where he died in 488/1093.

He was well-versed in the ʿUrfānic sciences, which he taught all his life and in which he acquired the reputation of a great master (al-ustadī al-āṣāṣr according to Ibn Ḥūyā in particular). He was a letter-writer, a talented poet of astonishing virtuosity, combining all this with a vast knowledge of Arabic and complete mastery of versification. ʿAll al-Ḥusrī is thus considered one of the greatest representatives of the startling literary progress which took place under the Zāirīds, whose brilliance he, along with other İfrīkiyan exiles, helped to spread into Spain, where he was regarded as a literary leader (raʾīṣ adāʾiṣ), according to Ibn Bassām.

His works, apart from his epistles (most of which have been lost), are the following:

1. A didactic poem of more than 200 lines on the Qurʾān "readings" of ʿNāṣīf (in ms. at Tunis, according to Abu l-Ḥasan al-Ḥusrī, 67, n. 4. See Bibli.).

2. al-Mustakṣans min al-āṣāṣr, a collection of his panegyrics of al-Muʿtamid, which he offered in a supreme and touching homage to his former patron when this deposed king passed through Tangiers in 840/1051-2, his way to exile. (This might perhaps be the Kitāb al-ʿAṣāṣrī which Ibn Kunfudh attributes to him).

3. al-Muʿaṣṣākardī (this is No. 5 in Brockelmann attributed wrongly, as is also No. 4, to Ibn Rāhīm; published in Abu ʿl-Ḥasan al-Ḥusrī, 212-40); it consists of "ten line stanzas" in which each letter of the alphabet is used for the rhyme and for the beginning of the ten lines which make up each of these 29 short poems, lām-ḥayf counting as one of the letters. ʿAll al-Ḥusrī is said to have invented this form. The poet here laments an unhappy love in the pure tradition of the perfect ḡawrī lover; a great sense of desolation emanates from these poems, caused by the infidelity of a beautiful woman. The unity of tone and subject-matter and the evident sincerity of the sentiments, seem to point to the abandonment of the ageing poet by his young and beautiful wife, whom he loved passionately. If this is so, because of their personal lyricism and despite the dazzling technical virtuosity of their art, these "ten-line stanzas" form one of the most beautiful love-poems in all Arab poetry.

4. ʿIrshād al-ḥarīr wa-ʿṣīrāt al-ḥarīr (published in Abu ʿl-Ḥasan al-Ḥusrī, 256-490) was written upon the death of his favourite son, which probably occurred in 475/1082-3 after a grave illness, and the flight of his mother, the unfortunate wife. It was put together five years later. This work includes, apart from three introductions: (a) one part in ornate prose (confused by the authors of Abu ʿl-Ḥasan al-Ḥusrī with the third introduction): there is a homely, serm and expression of hope in God after his heavy trials; (b) another part in verse comprising poems ingeniously arranged by the rhyme according to the letters of the alphabet; these, arranged about 2,600 lines and they are the only ones of his enormous production which al-Ḥusrī decided to collect for preservation. These poems are a most valuable documentary source for the biography of the author. By their extent, their moving expression of the father's profound sorrow, these poems, where the poetical skill of al-Ḥusrī, without stifling his sensibility, reaches its highest point, are likewise the most successful examples of the poetic form of threnody and, together with the Muʿaṣṣākardī, assure ʿAll al-Ḥusrī's place as one of the greatest of Arabic elegiac poets.

5. Among the fragments and poems preserved in books of adāb (collected partly in Abu ʿl-Ḥasan al-Ḥusrī) appears the most famous of all, Yā layl al-ṣābāb, which has continued to inspire imitators up to the present day. Finally, Ibn Saḥīr al-Mukhī (Dar al-ṣāḥīf, 39) includes the following about 2,600 lines and the writers of muwāṣṣakāhūt; but these, like the greater part of his satires and panegyrics, have not come down to us. The extraordinary virtuosity ʿAll al-Ḥusrī showed in the construction of his poems, the structure of his lines, his use of the inexhaustible resources of the Arabic language in ornate style and complicated rhymes, have caused him to be compared with al-Maʿarrī. Like him, al-Maʿarrī was a blind poet.

**AL-ḪUTAYM** [see *Muğdâb*; *Yâkût*; *Zûj*].

**AL-ḪUTÂY’A,** nickname of the Arab poet Dârwâl b. Aqîs, who traced back his genealogy sometimes to the *'Abîs*, sometimes to the Dhîhîl, but who, in reality, was probably the natural son of a woman named al-Dârâh; his nickname probably derives from his ugliness and appears to signify "deformed". He belonged to the *mukhadramûn* [*q.v.*], and Ibn Sallâm places him in the second class of the poets of the *gâhiliyya*; since he is regarded as the *ra'isi* of Zhâbîr b. Aqîs [see *Zûj*], he must have been born about forty years before the *ḫidrâ* and his earliest poetic activities probably took place about a time well before Islam, but the major part of his surviving work belongs to the Islamic period. His conversion to Islam appears to have been merely superficial, since he apostatized at the time of the *riddâ* [*q.v.*] which took place during Abu Bakr's caliphate; his reversion scarcely seems to have been sincere, if we are to place any credence in traditions regarding his "testament," which depict him as confessing to follow the Islamic rules in respect of the apportionment of inheritance between boys and girls.

The character of al-Ḫutayṭ’â is presented in a very unfavourable light; his avidity (see Ibn Raṣîhî, *'Umda*, i, 50), avarice (he ranks as one of the four Arab misers [see *Bukhârî*]) and venality constitute the principal elements motivating his literary career; his malice was so dreaded that men gave him gifts to safeguard themselves from it. Passing from tribe to tribe, and changing his genealogy according to whether he was satisfied or displeased with the treatment accorded him, he appears as an itinerant mendicant poet, lavishing dithyrambic poems on any liberal patron but threatening the less generous with his vituperation. Passing from tribe to tribe, and changing his genealogy according to whether he was satisfied or displeased with the treatment accorded him, he appears as an itinerant mendicant poet, lavishing dithyrambic poems on any liberal patron but threatening the less generous with his vituperation.

During the *riddâ* he violently attacked Abu Bakr, and later, under the caliphate of *'Umar b. al-Khaṭîb*, he poured invective upon the governor of Medina, al-Zâribkân b. Badr, though not without also attacking the caliph, who threw him into prison and released him only on the intervention of Kurayyî notables; at the same time he heaped panegyrics upon an eminent member of the Banû Anf al-Nâkî, Baghdî b. 'Āmir. It is not known with certainty in what year he died, but his connexion with Sa'dî b. al-Šârâf, governor of Medina after 41/661, confirms the tradition that he survived into the reign of Mu'âwya. Arabic critics place great emphasis upon the talent of al-Ḫutayṭ’â and his skill in the successful handling of inventive, panegyric, personal glorification and *nasib*; the author of the *Aghâni* held him in high esteem, Ibn Shârâf regarded him as an immortal poet, and later poets looked on him as a distinguished precursor (see *ZDMG*, xvi, 41; al-Kumayt, ed. and trans. Makkarî, *Nakt*, no. 4, v. 11; Bahâ‘î al-Din Zuhayr, ed. Palmer, 217) and he has been held up as a model for imitation in modern times, since critics recognize that his poetry, which he wrote with great ease, is flawless.

Hammâd, the grandson of Ibrâhîm al-Mawṣûlî, wrote his biography under the title *Akkâh bâl-Ḫutaym* [*q.v.*], but this work is lost, while the works of philologists of the 2nd and 3rd/8th-9th centuries who set out to collect his *Diwân* have survived in part. The recension of Abu 'Amr al-Shâybânî and Ibn al-Aqsâ'î, which dealt very leniently with the apocryphal parts of the *Diwân* which had suffered from interpolations at an early date, notably by Hammâd al-Râwîyâ, has survived in its entirety, while the recension of Abû Ḥâtim al-Sidjastânî, who took a stricter attitude towards suspect passages, has survived only in fragments.

The *Diwân* of al-Ḫutayṭ’â was published in Istanbul in 1890, and subsequently by I. Goldziher (in *ZDMG*, xvi-xvii and reprint, Leipzig 1893) with an introduction and explanatory notes; Ahmâd al-Shânikî produced a new edition in Cairo in 1905 with al-Sukkârî’s commentary and glosses; the edition of 'Isâ Sâbî, Beirut 1951, although providing notes, is rather more commercial, while that of N. A. Tâhâ, published in Cairo in 1958, with the commentaries of Ibn al-Sikhtâr, al-Sukkârî and al-Sidjastânî and notes partly based on the apparatus criticus of Goldziher, is of an informed scientific character.

There were at least two prominent works in the 6th/12th century who bore the name al-Ḫutayṭ’â (see al-Subkî, *Tabâkât al-Ḫâfîfiyya*, iv, 234, 279).
certainly is that the noble Arab tribes unanimously hold that members of Hutaym are not asil, i.e., hold that members of Hutaym are not asil, i.e., Arabs of noble race, such as the neighbouring folk of 'Anza, Harb, and Shammar, do not intermarry with Hutaym. Although Hutaym in turn are not supposed to intermarry with negroes, Doughty found violations of this rule in certain villages of Najd.

The head of the section of Āl Barrāk, who in 1963 was Nāḥīl Ibn Barrāk, is the paramount chief of the tribe. Among the other sections are Āl Kālādān, Āl Ṣumayyān, the Ṣaqqāra, the Nawāmsa, and the Fuhayghtāt.

**HUWA HUWA,** literally "he is he", or "it is it", means:

*A in logic:* what is represented as entirely identical, e.g., "Muhammad b. 'Abd Allāh" and "the Prophet". (Peano and the modern logicians express this equation by the sign $\equiv$;)

*B in mysticism:* the state of the saint whose perfect personal unity testifies to divine unity in the world.

**AL-HUWAYDIRA** [see AL-HADIRA].

**AL-HUWAYṬAT,** tribe with its main centre in northwestern Saudi Arabia and southern Jordan. The tribal range extends from the vicinity of al-Karak in the north to the vicinity of Taymā' [qv.] in the south, and from the Red Sea in the west to Wādī al-Sirḥān and al-Djawf [qv.] in the east. The eastern part of this range is properly the homeland of Banū 'Atiyya, with whom the Huwayṭāt as good allies share watering and grazing rights. This whole area corresponds in a general way to that occupied by the tribes of 'Udhra and Ḫuwaḥam [qv.] in the late Ḫubāliyya and the early days of Islam [see the map in EI, i, 981].

According to a story current in the tribe, mankind originally consisted of three professions: tentmakers, farmers, and raiders, with the raiders being the Huwayṭāt. The suggestion that the Huwayṭāt are descendants of the Nabataeans [qv.] seems to stem largely from the fact that the tribal range is roughly identical with ancient Nabataea. Equally improbable is the suggestion that the Huwayṭāt are sharifs of the lineage of the Prophet. The genealogical table given by Oppenheim for the tribe shows the eponymous ancestor as Huwaṭ b. Barakāt, Barakāt [qv.] being a name common among the sharifs of al-Hidjab. More weight may be given to the tradition that Huwaṭ was an Egyptian who came to al-'Arab as a pilgrim and became associated with Banū 'Atiyya. Some members of the Huwayṭāt name Hām rather than Barakāt as the father of their ancestor. It is not, however, likely that an Egyptian strain is dominant in the Huwayṭāt of Arabia and Jordan. Despite the various suggestions of a non-Arab origin, the Huwayṭāt are not classified as pariahs.
like the Şhârdât [q.v.], some of whom roam in their range, or Hutaym [q.v.], in the area southeast of Banû 'Aţâyj, which they are called the Huwaytât. Since the 12th/18th century the Huwaytât have been split up into several branches, which at times have come into conflict with each other. In the late Ottoman period the branch known as Huwaytât Ibn Dîjât cupped along the Syrian pilgrim route in the region of Ma‘ân in summer and farther east, in the region of the 'Awdas, Tukayjk, and Wâdî al-Sîrân in winter. The Ottoman authorities paid these Bedouins to maintain security along their stretch of the pilgrim route, and the inhabitants of Kāf in Wâdî al-Sîrân, of Dîjât, and of Taymâ paid them ḥâkay (q.v.) to refrain from raiding their oases.

The Alâlîwîn, semi-nomads north and east of al-‘Akkâba, used to protect Egyptian pilgrim caravans part of the way when they came overland. This branch of the tribe is also known as Huwaytât Ibn Nîjîd (wrongly given by Shukâyj, Jaussen, Mûsil, etc. as Ibn Dîjât) after the name of its paramount chief. South and east of al-‘Akkâba is the branch of Alî 'Îmrân, along the coast where the port of Hâkî lies. Its chief, Ibn Mâbkûû, owns palms in al-‘Akkâba, as does Ibn Nîjîd.

The southernmost branch is Huwaytât al-Tahama (see Oppenheim, i, 157). Its members hold the coast of northern Madyan and the highlands of Hîmâş facing the sea; its shukâyj, Abu Tukayjka, has his headquarters in the Red Sea port of Dâbâ. In this area the Huwaytât have almost entirely supplanted Banû 'Ukbâ, descendants of Dîjûtâd. Bordering the area to the south is the range of the tribe of Balî, traditional enemies of the Huwaytât, but even here the aggressive Huwaytât are sending immigrants in. Other old foes are Shamar in the east and Banû Şâhîr to the north (q.v.).

The Sa‘dîyûn of the depression of al-‘Arâb south of the Dead Sea, now a virtually independent tribe, reveal their origin in their war-cry: Ŝubâyj al-Huwaytât (see Oppenheim, ii, 299 for the connection with the line of Huwaytât).

Even though the Huwaytât may think of themselves as the world's first raiders, the shirâmât indications that the core of the bulk of the tribe to nomadism took place fairly recently. Doughty found some of the tribesmen subsisting as nomad herdsmen, but others as "husbandmen of palms and savers of grain". In his eyes the Huwaytât resembled Syrian villagers much more than "the lithe-limbed and subtle-brained and supple-tongued Arabians of landward Najd". After feasting with Ibn Nîjîd and his men, Doughty thought that "he had not ever seen such a strange thick-faced cob-nosed cobblers' brotherhood" (Ar. Des., i, 275, 276, 85).

When the Huwaytât adopted nomadic ways, they did so with a vengeance. Two decades before the outbreak of the First World War, the chieftainship of Ibn Dîjât was challenged by the clan of the Tawâyjja. ‘Awda b. Ḥarb Abû Tâyj, who became head of the clan in 1325/1907, won fame as the most formidable Bedouin raider of modern times. T. E. Lawrence described him in 1917 as "tall and straight, usually built, spare and powerful . . . His lined and haggard face is pure Bedouin: broad low forehead, high sharp hooked nose . . . The Howeïtât pride themselves on being altogether Bedu, and Auda is the essence of the Abu Tayj. His hospitality is sweeping . . ., his generosity has reduced him to poverty, and devoured the profits of a hundred successful raids. He has married twenty-eight times, has been wounded thirteen times, and in his battles has seen all his tribesmen hurt, and most of his relations killed. He has only reported his ‘kill’ since 1900, and then they now stand at seventy-five Arabs; Turks are not counted by Auda when they are dead. Under his handling the Towihaḥ have become the finest fighting force in Western Arabia. He raids as often as he can each year . . . and has seen Aleppo, Basra, Tail, Wejh, and Wâdi Dawasir in his armed expeditions" (Secret dispatches, 113-32; cf. Seven pillars, 228).

Among the Huwaytât, all the sections siding with one another in battle form an 'ilâm, at the head of which is an 'âlam. ‘Awda was the 'âlam of one 'îlam, and Ibn Dîjât the 'âlam of another.

In 1335/1917, before the capture of al-‘Akkâba, ‘Awda joined the šurif Faysal of Mecca in the Arab Revolt against the Turks and distinguished himself as a dashing commander in the field from then until the fall of Damascus in 1337/1918. ‘Awda died in 1342/1924, not long after he had shown a leaning towards the cause of ‘Abd al-‘Azîz Al Su‘ûd of Nađjd. When the Iḫwân of Nađjd thrust close to Ammân less than a month after ‘Awda’s death, Huwaytât of Jordan joined in opposing them, and a nephew of ‘Awda’s fell in the fight. The Jordanian Huwaytât continued to be embroiled with forces of Ammân for some years thereafter. In 1351/1932 Abû Tukayjkâ of the southern Huwaytât joined Ibn Rîfâdâ of Bâlî in an unsuccessful rebellion against King ‘Abd al-‘Azîz.

In Sinai the range of the Huwaytât is a wedge of island territory southeast of Suez in the vicinity of Djabal al-Râbâ. Of all the Arabs in these parts, the Huwaytât are regarded as the most recent immigrants and they are said to be swarthier than the rest, perhaps because of a negro admixture (Murray, 243). The Huwaytât of Sinai have especially close ties with the Tukayjkât of Huwaytât al-Tahama. In the dichotomy of Sinai tribes (Sa‘d and Harâm) the Huwaytât belong to the faction of Harâm, in which they are allies of the Tûwara, the Ûhaywât, and the Tarîbân. The Tayjâh and others belong to the faction of Sa‘d.

Elements of the Huwaytât are scattered about in different places in Egypt. Some are nomads in the rugged country south of the road from Cairo to al-Îsmâ‘îliyya, while others have becomefellahs near Tantâ. The Huwaytât of al-Kalûbîyya were formerly suppliers of camels to the Egyptian pilgrim caravans, and the guides for these caravans hailed from this group. In Upper Egypt there are Huwaytât in al-Fayûm. If members of the tribe have penetrated into the Sudan, they would appear to have lost their identity there.

The Huwaytât are not among the great camel-raising tribes, but in the past they have been active as camel merchants. One of their busy routes crossed the mouth of the Gulf of al-‘Akkâba from the port of al-Shaykh ‘Ummayd on the Arabian side to al-Nabâk on the Sinai side, whence the journey to Suêz took ten days or so.

AL-HUWAYYAT — HUWIYYA

(G. RENTZ)

HUWAYYAT [see HAWIZA].

HUWIYYA is one of the abstract words that were coined in order to express in Arabic the nuances of Greek philosophy. It has been translated in a number of ways, in mediaeval Latin as well as in modern European languages. “Ipseity” would seem to be the term with which it most precisely corresponds. In modern Arabic it is retained with the meaning “identity”.

Huwiyya is formed from the pronoun huwa and the normal abstract termination -yyya, according to the explanation given by Ibn Rushd. He attributes this formation to a desire to avoid the ambiguity of the word mawjud, translating ṭū ḫv, as the Arabic participle has the original meaning of “found” (cf. Munk, Mêlanges de philosophie juive et arabe, 242, note 2, referring to Abbé de Metaphysique, beginning). The term was established early by the translator of the work for the Latin translation of Aristotle’s Metaphysics and is found also in the so-called Theology attributed to the same author. One, at least, of the translations of the Metaphysics was made by Ustāth for al-Kindī (Walzer, Greek into Arabic, Oxford 1962, 187). A curious passage in a Risâla of al-Kindī (ed. Abū Rida, i, 161-2) exhibits the word assimilated into the language in the form of a triliteral root ṭ ḫv ṭ, which possesses a fifth form verb, with a mawdar, sometimes given a plural, and a passive. The discussion concerns the One; among sensible things, a being is both one and many. “… If there were no unity there would be no multiplicity. Thus every multiple (being) is made what it is (or: is made itself by unity) tawāhuw huwā ḫusūṣ huwa biʾ-ʾwāhāda. If there were no unity the multiple would have had huwiyya (ipseity).” The flux of unity that comes from the first and true One is the tawāhuwi of every sensible being*, its establishment as an individual being, as it were. It is thus the One that is “the creator of all the mutahawwiyyāt (all the beings that are constituted as individual beings, that are characterized). There is thus no huwiyya (ipseity), except because of the unity that is in it”. Cf. also p. 123, line 5, and the explanation given at 129, note 4: “… a huwiyya, that is to say a thing subsisting by itself”, and so a substance (referring to huwa huwa).

In the Liber de Causis, ed. Bardenhewer, 89, huwiyya is used in the singular and the plural with the meaning of “being”, ens and entia (reference given by S. Afnan, Philosophical terminology in Arabic and Persian, Leiden 1964, 123, but four out of seven of the references indicated in notes are incorrect). The word is applied to “the first huwiyya, which established the things that have no limit”, then to the intellectual and the sensible huwiyyâ; in other terms, to the first Being, to the beings that are pure intelligences and finally to the beings that possess sensibility.

The so-called Theology of Aristotle, the texts of which are now identified with long fragments of the Ennéades (cf. Plotiniana arabica, ii, ed. P. Henry and H.-R. Schwzyer, Platoniana arabica, with English translation by G. Lewis, Paris-Brussels 1959), also uses huwiyya, generally translated by “identity”, and more rarely by “own self” (383) and “being” (393). “Ipseity” translates mawjud; huwiyya, which is opposed to ḥayyiyya, “otherness”, ḫruwiyya (Lewis, 271, rendering Theology, ed. Dieterici, 109, lines 7-8, ed. Badawi, 112, line 11). At the beginning of chapter X of the Theology, however, the account of the first huwiyya, the huwiyya of intelligence, is not suited to the translation of au ṭōtō ḫv by “identity” (Lewis, 291, Dieterici, 136, Badawi, 134), for the accent is on the action produced by a substance. This is more precisely stated subsequently (Lewis, 293, Dieterici, 137, lines 13-16, Badawi, 135, lines 13-15), and it is difficult to allow the transposition: “The true One originates the identity of the mind because of the intensity of its repose. When that identity looks at the true One…”, etc. The discussion obviously concerns a substantial form, which is engendered by the true One and contemplates it. “Ipseity” therefore seems preferable.

In the translation of Aristotle’s Metaphysics which accompanies the Commentary of Ibn Rushd, huwiyya is commonly used to render ṭū ḫv and ṭū ḫv, “being”; in the plural, “beings” (cf. ed. Bouyges, Index C a, principaux sujets traités, pp. (38) and (97-8), and Index D a, termes de sciences philosophiques, p. (270), with references to the text and for the usages totally disregard the idea of identity, being concerned either with being, the supreme abstraction: al-huwiyya waʾ-ʾwāhāda, being and the one, translating ṭū ḫv xal ṭū ḫv (1001 a 4), or with beings, ṭū ḫv xal ḫ, huwiyyâ, engendered from the elements (1001 a 16). In Metaphysics 1017 a 22, xl ḫ, huwiyyâ, is said to assume as many meanings as Aristotle has Categories (ed. Bouyges, 555, 2). The translator thus adopts it in order to render all the meanings of the word “being”, whether applied to substance or to accidents. “Ipseity indicates what a thing and its truth are, al-huwiyya tadull ‘alad innisyiyat al-ṣayr wa-ḥabbiṣātiḥ” (1017 a 31, where the much-discussed term annisyiya or inniyya is used to translate ṭō xal̲sīyya)

Ibn Rushd states that the word is applied to the Categories like the word mawjud (559, 15). It is, then, not, in Rushd’s usage in the Commentary, giving several meanings according to what is generally understood by it, but a kind of ʾisṭārāk al-ʾism, indicating here a relationship founded on reality, since the categories exist only through substance (805, 5-11; Ibn Rushd’s expressions are very close to those of Metaphysics Γ 2, 1003 a 33-5). He points out another analogous use: “The noun huwiyya that denotes the essence of a thing is something different from the noun huwiyya that denotes what is true (actual, existing). It is the same with the word “being”, maʾwjud” (562, 5). In other words the word has a conceptual, logical meaning, and an actual meaning, as explained by the commentator (739 d and 740 g) on Metaphysics 1027 b 18, trans. 736, 12, where he demonstrates the difference between the huwiyya qulm and...

Ibn Rushd later uses huwiyya in an abstract meaning, different from that given by the translator. Lafaṭ al-huwiyya denotes the use of the pronoun huwa as a copula. This is in connexion with huwa in the phrase “Socrates is not-white” (1017 a 34), translated as: ḫlas huwa aḥāba. Ibn Rushd here distinguishes between lafaṭ al-huwiyya indicating the copula that is in the spirit, and (the word) indicating the essence that is external to the spirit, and so actual (562, last line—562, line 1). But contrary to the interpretation of S. Afnan (op. cit.,
HUWIYYA — HYPOSTASIS

(22), the word huwiyya is not used as a copula, this role being reserved for the pronouns huwa, hiya, etc. Study of the passages indicated in Bouyges's Index is fundamental for determining the meaning of the word.

The terms that express identity are translated in the Metaphysics by huwa huwa or even al-huwa huwa, but not huwiyya. Sometimes the word is omitted: thus ta'utotik (995 b 21) does not appear, and only kafunotik is rendered by al-mutafiddd, contrariety (172, 14); the commentary does not rectify this omission, but later (178, 516) writes al-huwa huwa wa-l-ghayr, "the same and (the) other". The fragment corresponding with another use of the same word (1018 a 7) is missing in the translation. The expressions ḍ alūts and ṭ alūts are always translated by huwa huwa or hiya hiya, for example in chapter I 3 (1054 a 1 and b; trans. 1286-92), and the commentary follows this. Shay' wāhid, the same thing (346, 2-3), is also found, but never huwiyya.

The Arabic-speaking philosophers thus found this word already well established. They used it without explaining it as Ibn Rūḍīd was to do subsequently. Al-Fārābī begins his Fugās with a distinction between conceptual essence and essence actualized in an existing individual: "We have accepted that every existing thing has a quiddity (essence) and an ipseity, māhiyya wa-huwiyya, but its quiddity is not its ipseity or even an integral part of it. If man's quiddity were his ipseity, the concept of man's quiddity would be the concept of his ipseity, and by conceiving what man is, mā l-insān, you would conceive: huwa l-insān, he is the man (in the sense of: there is a man), and you would recognize his existence". For al-Fārābī, then, huwiyya expresses man as nature actualized and existing. A. Nader gives "ipseity" as the translation of huwiyya, p. 158 of the glossary accompanying his edition of the Kitdb al-Insān, another work of al-Fārābī (Beirut 1959). The same translation is given by Gardet, La pensée religieuse d'Aïcence (Paris 1951, 167). But, quoting the Libr de Causis where the word is applied to the first Cause, he writes "1'Existant pur", "the pure Existing Being" (ibid., 634).

From the examination of a certain number of uses of huwiyya in the texts of Ibn Sinā, which eleven are noted in A.-M. Goichon's Lexique de la langue philosophique d'Ibn Sinā, no. 735, the most precise equivalent of the term would seem to be "subject-substance, first substance, as opposed to māhiyya, quiddity, which denotes second substance, predicative substance. Its abstract form expresses 'being a first substance'". Again, huwiyya denotes "a concrete being considered universally" (Introduction to the French translation of the Shifa by Ibn Sinā, 48; cf. also 305 and 307, n.). The meaning "ipseity" is confirmed by al-Ghazālī in a line of argument designed to prove that the soul subsists by itself (Ihtījāt, ed. Bouyges, Index C no. 826, and p. 321, 5). The glossary accompanying the critical edition of the Metaphysics of the Shifa (Cairo 1960, 477) gives three renderings of the word according to the mediaeval translation: Id quod est, essentia, identitas. This last seems somewhat ill-chosen in the following chapter heading: "Consequences of unity consonant with huwiyya (identitas) and its divisions ..." (303). In the extant fragment of the Latin translation of the Logic it is also translated as identitas (Index ed. Cairo 1952, p. 157, on Madqal, 13, 5 and 7). However, al-huwiyya is here joined with al-waḥda, and is thus connected with the usages considered above, where being and the one are inseparable; identitas, then, is unjustified. Huwiyya does not appear in the indices to the other volumes. According to that of the Sophistic (Shifa, M a n i t b, vii, 132), the idea of identity is rendered by huwa huwa, with or without the article.

The ancient meaning of huwiyya refers to the peculiar characteristics of that being which is huwa, exclusively itself, rather than to a recognition, a comparison or an identification of such a being. The modern meaning does not involve an incorrect usage. Huwiyya is habitually used to translate into Arabic the expressions "identity card", ḏ aḥbat al-huwiyya, and "identity papers", awrād al-huwiyya (see Ṭ aḥkīrah). 'Urifī huwiyyatuhu, "to be identified", is also used. The modern meaning correctly refers to the idea of subject-substance, in order to denote precisely the person who exists specified by the card.

Bibliography: apart from the references in the text: Dūjdzjānī, Ta'brūjīīt; this definition was cited verbatim by Dūyī, ii, 707, who however was unable to identify it and refers only to the Muḥīt al-mukhīt.

HUWWĀRA (see HAWWA=R). HUWWĀRIN or HAWWARIN, place in Syria between Damascus and Palmyra, half way between Ṣadad and al-Karyatayn. On the site of an antique town, Huwwārin is known mainly for the fact that the Umayyad caliph Yazīd I had his residence, died and was buried there, as is attested by the poets of the period. A building still existing there, and still partially remains of the residence of the caliph, who is known to have planned to irrigate the fertile area round Huwwārin by means of a canal which was never completed. Some vestiges of this canal, which according to the sources was intended to permit the development of the high plain of Sabṣḥān, have been identified within the boundaries of the region of Hims.

‘Ibad [see Naṣārā].

Ibadan, town in the Western Region of Nigeria, originated during the 1820’s on the site of an Igbaa village as a war encampment set up by groups of wandering Yoruba soldiers from the old Oyo Empire, Ile Ife and Ijebu. Those were times of great upheavals in Yorubaland. The Oyo Empire had been rapidly disintegrating as a result of serious internal cleavages and mounting external pressure. The Fulani had been pushing southward, using Ilorin as a base, and eventually in 1837 they forced the evacuation of old Oyo, whose inhabitants fled southward. Some of the refugees built up the new city of Oyo, about 100 miles to the south, while others settled in Ibadan. In southern Yorubaland a fierce strife went on among the Yoruba states over the capture of slaves and the control of trade routes to the coast.

Ibadan grew rapidly, as more and more refugees from both the north and the south of Yorubaland sought the protection of its hills and the military might of its soldiers. By the middle of the 19th century its population was estimated at between 60,000 and 100,000. In the 1911 census the population reached 172,000 and in that of 1932 459,196. To-day Ibadan is the largest city in tropical Africa. Except for a relatively small number of migrants from other ethnic groups (only about 5% in 1952) all of its population are Yoruba (p.c.), hailing from different sections of Yorubaland. Ibadan has often been described as a ‘city-village’ because a large proportion of its population live from farming in the surrounding countryside.

In the course of the 19th century Ibadan developed an elaborate political constitution which was geared to war and defence and which differed markedly from that of the typical traditional Yoruba kingdom. By its military prowess and strong defences Ibadan succeeded in halting the Fulani onslaught and in repulsing all pressure on it from the southern Yoruba states and eventually became a great power in its own right with many vassal states around it.

That period of long war came to an end when the British extended their control northwards from the coast and finally, in 1893, imposed a treaty, on Ibadan. Peace and British power undermined the authority of the city’s chiefs. But with the development of Indirect Rule, the British placed Ibadan under the legal and spiritual authority of the Alafin of Oyo who, in collaboration with the British Residency, controlled the appointment of the chiefs. However, this subversion of Ibadan to a small and weak Oyo could not last for long, and in 1936 Ibadan became finally independent of Oyo and the Alafin assumed the new title of ‘Olubadan’. In 1952 Ibadan became the capital of the Western Region of the Federation of Nigeria.

Islam penetrated into Ibadan from the north early in the 19th century through the activities of Muslim traders and itinerant maulims. During the 19th century its military chiefs appointed Muslim imams so that there would use their magic, prayers, charms, and blessings to secure victory in war. But the massive conversion to Islam in the city began only when the British came; it has since been progressing rapidly and peacefully, often at the expense of better organized and more adequately financed Christian churches and missions.

Apart from a relatively small number of people who are affiliated to the Ahmadiyya sect, all the Muslims of the city are Sunnis who follow the Maliki school. Some of these Muslims have adopted the Kadijitya order but not the Ijma order of the Tijaniyya order (q.v.). There are in the city several formally organized Islamic associations, most of which are mainly concerned with the development of Islamic schools and the establishment and maintenance of mosques. There are also some Islamic missionary organizations. A council of ‘ulama’ supervises and administers the affairs of the city’s Central Mosque and selects the Chief Imam and his two assistants, though the formal appointment of the Chief Imam is officially made by the Olu of Ibadan in a special ceremony.

The Friday mid-day prayer at the Central Mosque is regularly attended by many thousands of men. Between 1948 and 1952 a series of bitter disputes arose between the city’s Imam and the migrant Hausa community, when the latter decided to secede from the predominantly Yoruba Central Mosque and to hold the Friday prayer in a special mosque within their Quarter, which is locally known as ‘Sabo’. Despite sustained opposition by the Olu of Ibadan and by the British officials, the Hausa have continued to hold a separate Friday prayer. A few other Muslim groupings have since done the same. To-day the only occasion on which all the Muslims of the city gather together is the massive, colourful, but brief ceremony held in the open just outside the city on the morning of the first day of each of the two Muslim feasts. This division of the Friday ritual congregation, which is unknown in the Islamic cities of northern Nigeria, is symbolic of the fact that Islam in Ibadan is not formally associated with political authority.

beginning where the former leaves off. Both are now being prepared for publication. A collection of scholarly papers by a number of specialists dealing with many fields of life in the City, including one dealing specifically with Islam, is now published: P. C. Lloyd, A. Mabogunje, and B. Awe (eds.), The City of Ibadan, Cambridge 1967.

(A. COHEN)

'IBADAT' (pl. of 'ibadā), submissive obedience to a master, and therefore religious practice, corresponds, together with its synonym iḍā's, in the works of fikhi, to the performance of the duties prescribed by the Law (we do not say "cult", see below), as opposed to the muṣâmalat which include more or less all the rest (but which, in the strict sense, correspond to synallagmatic contracts only). The distinctions are elusive, as some often in these matters. Sālāt is quite certain an 'ibadā, but some affirm that marriage is also one (which is the more remarkable in that the Muslim marriage does not imply any religious ceremony), and here it must be understood that it is a matter of a "pious practice". Moreover, distinctions between the different sections of muṣâmalat are also discussed by the authors (see W. Heffening, Zum Aufbau des islamischen Rechtes, in Festschrift P. Kahle, Leiden 1935). In treatises of fikhi, subjects are not set out in any uniform order, except that the 'ibadāt always appear at the beginning, while in treatises of 'aman (judicial practice) this subject is obviously absent.

If we translate 'ibadāt as "cult" we are committing something of a theoretical error (Tor Anderæ), for it has quite correctly been said that, strictly speaking, Islam knows no more of a cult, properly speaking, than (Snouck Hurgronje) it does of law; nor, we should add, of ethics. Fikkī is, in fact, a deontology (the statement of the whole corpus of duties, of acts whether obligatory, forbidden or recommended, etc.) which is imposed upon man. Therefore, what we call "cult" is a part of the duties prescribed by Allāh and formulated in minute detail by learned writers in the works of fikhi, whereas in other religions the object of the cult there is to bring the believer closer to the divine and into contact with it; it is not concerned solely, or even principally, with carrying out the divine will. This is purely theoretical; speaking sociologically and from the psychological point of view, the matter appears to be far less clear-cut: from both these points of view Islam is certainly familiar with a cult or forms of worship: to be convinced of this one need only interrogate, for example, the pilgrims who have performed the salāt around the Ka'ba, an observance which, incidentally, in that place, is curiously enough not an obligation of the hadīth (this demonstrates once again the difference between theory and reality; here, on two grounds).

In the books of fikhi, the 'ibadāt precede the muṣâmalat; questions of ritual purity (taḥārā), a necessary condition for the valid performance of prayer, appear at the beginning. The remainder almost always come afterwards in the following order: prayer, salāt, fasting, pilgrimage. The first "pillar" of Islam in the strict sense has to be pronounced at the time of prayer, so simple a matter that the books of fikhi make no mention of it. In connexion with the 'ibadāt other subjects are dealt with, about which we must say a few words. Circumcision is, in theory, no more than recommended; although the sociological reality is quite different, and the scholars barely refer to it when considering the 'ibadāt. Here too may be mentioned the proper way of fulfilling natural needs, the veiling of nudity, and the attentions that have to be given to dress and body for the Friday prayer, etc. Everything relating to funerals is examined in relation to prayer (since the prayer for the dead is considered a religious duty), etc. The spiritual retreat, or 'ibādāt, is studied in connexion with fasting. It is also possible to link with 'ibadāt, as scarcely belonging to the muṣâmalat: the provisions relating to food and drink, whether licit or illicit, those dealing with hunting and ritual slaughter, vows and oaths (together with methods of expiation in the case of perjury). To give only one example, in the Tafsīr al-Khallī (Maliki), the laws in connexion with it). The holy war is not a fard 'āyn (it is an obligation which falls only on the community in general, provided that there are enough volunteers), nor is it one of the five fundamental obligations of Islam, but it has an obvious religious character. In the above-named work it occurs at the end (after criminal law); in the Muhākharat of al-Shāfī (Maliki), on the other hand, it occurs among the 'ibadāt.

In their general outline, the provisions relating to 'ibadāt are the same, not only in the four Sunni schools but also in the Shi'ī and Ibadī schools. There is thus no necessity to discuss them further in this general article on 'ibadāt. So much for the theory.

In regard to actual social practice, one of the most urgent and interesting present-day tasks that is still to be undertaken in this field, and indispensable for religious sociology in general, consists of studying the extent (which is extremely variable) to which the practices of a religion, in this case Islam, do in fact correspond to the requirements laid down by theory, in this case by fikhi on the subject of 'ibadāt; this is to be done, particularly, according to the methods first demonstrated, for Catholicism, by Le Bras. In this field, from the start, facts of a qualitative kind will be discovered, and they will show us what the religious life there really is. Some of these studies, even the early ones, still retain their value—Lane, Manners and Customs of the modern Egyptians, for example, and Snouck-Hurgronje's Mecca, which are admirable. For Indonesia, one may consult G.-H. Bousquet, L'Islam indonésien, in REI, 1939. But, for future work, this stage ought to be regarded as superseded, and a new and more promising stage will be discovered, and it is that statistical stage which must now be reached. In this respect, Muslim sociology is very backward (some indications in this direction, though cautious and inadequate, can be found in G.-H. Bousquet, concerning religious practice in North Africa, especially Morocco, in Études d'orientalisme ... Léo-Procemai, ii, 1962, 495-501). As a very rough approximation, it can be suggested here that (1) ritual practice, considered as a whole, varies less from one country to another than does the practice of these duties envisaged singly; (2) in fact, in certain regions a fundamental obligation may be very much neglected, while in other parts it is scrupulously observed (for example, fasting in Java and North Africa respectively); (3) in backward regions, in the process of Islamization, practice coincides with the standards of the Law; (4) on the other hand, it is relaxed in those countries where European civilization is developing (for example, increasing disregard of fasting in North Africa). Of course, external piety is only an indication, and often an insufficiently accurate one, of internal piety. However, religious sociology in general is not yet in a position, in this last instance, to be of assistance to Islamic studies.
Bibliography: The regulation of Ḥbdūd has its somewhat restricted basis in the Kur'ān. It is developed very fully in the Sunna (cf. Wensinck's 
Handbuch für die verschiedenen moslemischen Glaubensbekenntnisse). The same is true of the books of fīqh of the various schools and in works of ikhṭilāf. A more detailed bibliography can be found by consulting such articles as Ǧawwāl, Ḍaqq, etc. A general, clear, but necessarily brief survey is given in G.-H. Bouquet, Les grandes pratiques rituelles de l'Islam, Paris 1949. (G.-H. Bouquet)

Al-Ibādīyya, one of the main branches of the Khāridjīs (q.v.). The Wellhausen School of which are today found in 'Umān, East Africa, Tripolitania (Djiabal Nafusa and Zuagha) and southern Algeria (Wargla and Mzab). The sect takes its name from that of one of those said to have founded it, 'Abd Allāh b. Ṭabarqa al-Mūźabī. The form usually employed is Abādīyya; this is true not only of North Africa (e.g., in the Djiabal Nafusa, cf. A. de C. Motylinski, Le Djiabel Nefousa, Paris 1895-9, 41 and passim), or even among the Christians of the Ist/Ist century, as by the Ibādī writer al-Barrādī (Kūtāb Dādurah al-
muntahāt, Cairo 1302, 155), but also of 'Umān (Niebuhr, Voyage en Arabie, 1780, ii, 198); nevertheless, the contemporary Ibādī writers often use the first form as being more correct (cf., e.g., Muhammad b. Yusuf Atīfiyyah al-Miṣrī, Risāla šīfāyī fi baḏ' al-tawḥīd, Algiers, n.d., 49). Yet another form of the name is known: Ḥmāja (al-Handānī, Ǧisāf Dīnīat al-ʿArab, ed. D. H. Müller, Leiden 1884-91, i, 88). According to Niebuhr (op. cit., i, 198 200, 201), the Ibādīs of 'Umān also had the name of Bāsiās, Belāsī or Bāmādī (cf. also Badger, History of the Imāms and Seyyids of Omdurman by Sallal-ibn-Raschīd, London 1871, 387). It appears that the last name (for Bayādī) is connected with Mubāyūdīya, a name given to the Khāridjīs in general (see Brūnnow, Die Charidschiten unter den ersten Omayyaden, Leiden 1884, 30 n.). The Ibādīs also give themselves the name of Shūrāt [q.v.], in which fact refers to the first Khāridjīs al-Muḥākkima (al-Barrādī, op. cit., 175; A. de C. Motylinski, Chronique d'Ibn Sağhir, in Actes du XIV* Congrès Intern. des Orient., Algiers 1905, 81; cf. also al-Yaḵūbī, Bulāḏīn, 352).

According to the tradition recorded towards the middle of the 2nd/8th century by Abū Miğīnaq, this sect appeared in 65/684-5, represented by Abū Bilāl b. Ḥanāṣīr who broke away from the Khāridjī extremists over the attitude to be adopted towards the other akhī al-ṭawḥīdī (Brūnnow, op. cit., 60-1; W. Wellhausen, Die religiö-politischen Oppositionsparteien im alten Islam, Berlin 1901, 28-9), but in fact the origins of the Ibādīyya seem to be much older than modern scholars have thought. The present author's view is that the pre-history of this sect, together with that of another moderate Khāridjī sect, the Sufrīyya [q.v.], should be connected with that group of the baʿada (quietist, see Brūnnow, op. cit., 29; Wellhausen, op. cit., 29) Khāridjīs which grew up towards the middle of the 7th century at Baṣra around one of the men most venerated by the Khawāridjīs, Abū Bilāl Mīrāḏ b. Uṣayyā al-Tamāmī. Ibādī tradition mentions Abū Bilāl among the precursors of the Ibādīyya, or even among the first imāms of the sect (al-Shammakī, Kūtāb al-Šīrāzī, Cairo 1301, 66 ff.; al-Barrādī, op. cit., 167 ff.; b. Sālimī, Kūtāb al-Luʾma al-murdiyya, 1326, 187; Siyar al-ʿUmāniyya, University of Lwów, MS no. 1082, ii, 135, 654-5; it should be mentioned that the other writers have considered Abū Bilāl to be the imām of the Sufrīyya, see, e.g., al-Isfaraʾīnī in Haarbrücker, asch-Schah-

Rastānī's Religionserhebungen und Philosophien, Halle 1850, ii, 406). This tradition seems very probable, particularly if it is remembered that among Abū Bilāl's intimate friends there were several who later became prominent Ibādīs after the death of the Ibādīyya, as, for example, the real organizer of the sect, Dābir b. Ẓayy (see al-Šīrāzī, op. cit., 79) and al-Walid al-ʿAbdī, one of the leaders of the moderate Khāridjīs who broke away from the extremist Nāṭī b. al-ʿAzrāk (al-Shammākhi, op. cit., 79). Furthermore, the doctrines preached by Abū Bilāl, such as, for example, the defence of ʿaṣıraḏ (quietism) of Ibn Ibaḏ was probably prompted by the hope of reaching an understanding with the Azbāqīs in 63. The extremists pronounced a khuṭbah against the Zabāyrids and left Baṣra, while Ibn Ibaḏ left the city some months later with his supporters (al-Barrādī, op. cit., 135-6). Thus began the first period in the history of the Ibādīyya, which can be called the period of the kitāmān (= secret, on this term see below and al-Barrādī, op. cit., 136).

Very little is known of ʿAbd Allāh b. ʿAbd. According to the Ibādī writings, he was the first scholar of the sect (Siyar al-ʿUmāniyya, 74, 198). He is often called in Ibādī sources ʿīmām ʿalī al-taḥkīk, ʿīmām al-mudālimīn or ʿīmām al-baʿwa (al-Shammākhi, op. cit., 77; Siyar al-ʿUmāniyya, 108, 111; al-Barrādī, op. cit.; P. K. Hitti, al-Baghdādīs Characteristics of Muslim Sects, Cairo 1924, 87). It seems that this title belongs only to the period in which Ibn ʿAbd took part in the defence of Medina (64/683-4); the state of kitāmān in which the Ibādīs lived after 65 seems to exclude the possibility of the existence of an imāmāte in the political sense of the word. Perhaps also there should be seen in this title an allusion to his rôle as president in a sort of secret theocratic Ibādī government known as dījmat al-Muslmīn, which is mentioned by historians of the sect. This was a council composed of a number of the most important ʿaṣīrīs (among them al-Walid al-ʿAbdī) which may be compared to the council of the ʿaṣīrīs of the North African part of the umma for the collapse of the imāmāte of the Banū Rustām. The ʿuṣīd (quietism) of Ibn ʿAbd was probably prompted by the hope of reaching an understanding with the new Umayyad caliph ʿAbd al-Malik b. Marwān (65-86/685-703). In fact, he succeeded in entering into correspondence with this ruler, and there are preserved in the Ibādī chronicles two ʿaṣīrī letters (letters of good advice) from Ibn ʿAbd which bear witness to their friendly relations; one of these letters is a reply from the Ibādī leader to a communication which had been sent to him by ʿAbd al-Malik through the intermediary of a certain Sinān b. ʿAṣim (see al-Šīrāzī, op. cit., 77; al-Barrādī, op. cit., 135-67; Siyar al-ʿUmāniyya, 445-55; Sachau, Religious Anschauungen der Ibādīschen Muslmänden, in MSOS A.S., ii, 52-9). The first of these letters must have been written after 67/686-7, since it mentions the defeat of al-Μukhtar b. Mṣṭah, the brother of ʿAbd Allāh b. ʿAbd-az-Zabāwī, which took place in that year (al-Barrādī, op. cit., 163; cf. Brūnnow, op. cit., 86-90). The letters of Ibn ʿAbd contain a brief account of Ibādī principles, which is the first of this type (see also on Ibn Ibaḏ's relations with ʿAbd al-Malik b. Marwān, R. Rubinacci, Il califfo ʿAbd al-
Malik b. Marwan e gli Ibbiditi, in *Al-Ibādiyya*, n.s. v (1954), 99-121). According to al-Shammakhi (op. cit., 77), Ibn Ibad was also the author of *munaẓẓāt* (polemical writings) against the extremist Khāridjīs. The date of his death is not known; the Ibadī biographies reveal only that he belonged to the second *fabaka* of scholars. The opinion of al-Shahrastānī (*Mīlāt*, ed. Cureton, 100) and of al-Kazwīnī (*Yāqūt*), ed. Wustenfeld, i, 37) that Ibn Ibad was still alive as a very old man under Marwān b. Mūhammad (127-34/745-52) does not seem very convincing.

Ibn Ibad’s policy at Basra towards the Umayyad caliphs was continued by his successor Abu ‘I-Sha’ībā'ī Dīābīr b. Zayd al-Asṭīl, the chief scholar of the Ibadī sect and an eminent traditionist. This scholar, who came from ʿUmnān, from near the town of Nazwā (see *Siyār al-Umamīyya*, 675; Yāḥūt, ii, 243-4), is considered by the Arab authors to be one of the chief Khāridjīs of the early period (al-Shahrastānī, *op. cit.*, 102). His probable date of birth was 18/639, and the date of this death is given as 93, 96 or 103 (see al-Barrādī, *op. cit.*, 155; al-Shammākhī, *op. cit.*, 77; al-Sālimī, *Lumā‘*, 172; *Siyār al-Umamīyya*, 686). He was thus the contemporary of ʿAbd Allāh b. Ibad. Dīābīr b. Zayd was one of the best friends and disciples of ʿAbd Allāh b. al-‘Abbas (q.v.), from whom he received a number of hadiths (4-6, 243-4; al-Shammākhī, *op. cit.*, 70, 96; al-Barrādī, *op. cit.*, 151). It was probably owing to this fact as well as to his profound scholarship that Dīābīr was held in great esteem by all the Muslims of his time; al-Shammākhī (*op. cit.*, 70) mentions in this connexion the opinion of Mīlāk b. Anas. He was probably the author of the earliest collection of traditions. His work, called *Dīābīrī*, consisting of five parts, is identical with our Maskalā (identical with our Maskalā) who died in a battle against Abd al-Ragman’s army a detachment composed of men from Kūfa and Basra and under the command of one Bīstām b. Māskūla probably identical with the Bīstām who died in the battle with all his men (al-Shammākhī, *op. cit.*, 111; Wellhausen, *op. cit.*, 46-7; Pèrier, *op. cit.*, 173, 176, 184, 191-3). The activity of these Ibadī zealots led to the withdrawal of al-Hādījī’s support. The immediate cause of his definite break with Dīābīr was probably the murder, at Dīābīr’s instigation, of one of al-Hādījī’s spies (al-Shammākhī, *op. cit.*, 75). He began a cruel persecution of the Ibadīs. The majority of the Ibadī leaders and notables were either exiled to ʿUmnān (Dīābīr himself, for example, and another important Ibadī Shaykh, Hubayra; cf. al-Shammākhī, *op. cit.*, 76, 81) or imprisoned (on this see also *Siyār al-Umamīyya*, 250). Among the Ibadī leaders imprisoned was the most scholarly of Dīābīr’s pupils and his future successor as president of the Ibadī community in Basra, Abū ʿUbaydā Muṣliḥ b. Abī Karīma al-Tammī (al-Shammākhī, *op. cit.*, 87), who was probably the greatest, both as scholar and as statesman, of all the Khāridjī leaders known to us and who played an important political rôle under the last Umayyads.

Abū ʿUbaydā was probably of Iranian origin (according to *Aḥābi*, xx, 97, his personal name was Kūdīn; and according to al-Dīābīr, *Risāla*, i, 132 and ii, 126, it was Kardīn or Kūrīn and *mawālī* of the Arab tribe of the Banū Tamīm (al-Shammākhī, *op. cit.*, 83). He studied with Dīābīr and also with other famous Ibadī Shaykhī of the second *fabaka*, such as Dīāfār b. al-Sammāk al-ʿAbdī b. Şuḫar al-ʿAbdī (al-Shammākhī, *op. cit.*, 79, 81). After the death of al-Hādījī (95/714), who was succeeded by Yazīd b. al-Muhallab, Abū ʿUbaydā was released from prison with the other Ibadīs and appointed leader of the Ibadī community in Basra (al-Shammākhī, *op. cit.*, 87). The Ibadī writers refer to him as *imām al-Muslimīn* (Siyār al-Umamīyya, 111), but he seems in reality to have been, as was his predecessor relations between them deteriorated. It appears that one of the causes of this change was the death of the caliph ʿAbd al-Malik (86/705), who was, as mentioned above, fairly well disposed towards the Ibadīs. Another was that the Ibadīyya of Basra entered into dealings with the family of the Muhallabids, which the powerful governor of Iṣrāʾīl detested. In fact among the most fervent Ibadīs of Basra was ʿĀtika, the sister of Yazīd b. al-Muhallab, the former governor of Kūrsaʿn, who had been deposed through al-Hādījī’s efforts, and imprisoned by him in 86/705; among the Muhallabids converted to Ibadism was there another woman, Halbiyya, who lived at Mecca in about the first half of the 2nd/8th century (al-Shammākhī, *op. cit.*, 88, 117; J. Pèrier, *Vie d’al-Hādījī* ibn Yousof, Paris 1904, 221, 232). In addition to these two facts, a third should be mentioned: the increasing radicalism of the Ibadīs of Basra, among whom the revolutionary elements gained control, that is the supporters of the Khāridjīs who wished to change their position as kāfara for that of ḥurāt. From the writings of the sect we know the name of one of the leaders of the revolutionary party: Bīstām b. ’Umar b. al-Mūsīb al-Dabbī, known also as Maṣkāla, a former Shīʿī and supporter of Shābūb (q.v.), who, after Shābūb’s defeat in 776/696, was embraced by the Ibadīs. He was not only a famous warrior but also a mutakallim (theologian). It appears that the Ibadī zealots of Basra took part in the revolt of ʿAbd al-Rāḥmān b. Mūhammad b. al-Aṣḥāb b. al-ʿAbbas (81-2/701-2); in fact we find in ʿAbd al-Rāḥmān’s army a detachment composed of men from Kūfa and Basra and under the command of one Bīstām b. Maṣkāla (probably identical with the Bīstām who died in the battle with all his men). The Ibadī zealots led to the withdrawal of al-Hādījī’s support. The immediate cause of his definite break with Dīābīr was probably the murder, at Dīābīr’s instigation, of one of al-Hādījī’s spies (al-Shammākhī, *op. cit.*, 75). He began a cruel persecution of the Ibadīs. The majority of the Ibadī leaders and notables were either exiled to ʿUmnān (Dīābīr himself, for example, and another important Ibadī Shaykh, Hubayra; cf. al-Shammākhī, *op. cit.*, 76, 81) or imprisoned (on this see also *Siyār al-Umamīyya*, 250). Among the Ibadī leaders imprisoned was the most scholarly of Dīābīr’s pupils and his future successor as president of the Ibadī community in Basra, Abū ʿUbaydā Muṣliḥ b. Abī Karīma al-Tammī (al-Shammākhī, *op. cit.*, 87), who was probably the greatest, both as scholar and as statesman, of all the Khāridjī leaders known to us and who played an important political rôle under the last Umayyads.

Abū ʿUbaydā was probably of Iranian origin (according to *Aḥābi*, xx, 97, his personal name was Kūdīn; and according to al-Dīābīr, *Risāla*, i, 132 and ii, 126, it was Kardīn or Kūrīn and *mawālī* of the Arab tribe of the Banū Tamīm (al-Shammākhī, *op. cit.*, 83). He studied with Dīābīr and also with other famous Ibadī Shaykhī of the second *fabaka*, such as Dīafār b. al-Sammāk al-ʿAbdī b. Şuḫar al-ʿAbdī (al-Shammākhī, *op. cit.*, 79, 81). After the death of al-Hādījī (95/714), who was succeeded by Yazīd b. al-Muhallab, Abū ʿUbaydā was released from prison with the other Ibadīs and appointed leader of the Ibadī community in Basra (al-Shammākhī, *op. cit.*, 87). The Ibadī writers refer to him as *imām al-Muslimīn* (Siyār al-Umamīyya, 111), but he seems in reality to have been, as was his predecessor
Djabir, only the president of the djamd'at al-Muslimm of Basra and the mukaddam (leader) over the Ibadiyya of Basra and the mukaddam (leader) over the Ibadiyya of Basra, and even over his former teacher, Dja'far b. al-Sammak (see Siyar al-'Umdniyya, 672). Abū Ubayda was an eminent scholar and the author of a collection of the hadīths transmitted by Djabir b. Zayd, Dja'far b. al-Sammak and Šuhār al-Abdī (Lewicki, Une chronique ibadite, in RÉ, 1934, 72; see also al-Shammakhi, op. cit., 85; al-Sālimi, Lum'a, 185). The Ibadiyya from all parts of the Muslim world turned to him (see Abd Allāh b. Yahyā al-Bārūnī, Risāla sullam al-'āmma wa l-mubāditin ilā ma'ṣīfati al-imām al-dīn, Cairo 1324, 6-8). Abū Ubayda's policy at first conformed completely with Ibn Ibād's tendency to come to an understanding with the Umayyads. This was facilitated by the benevolent attitude of the new governor of Irāk, Yazaḍ b. Muhallāb, who was closely linked with the Ibādis of Basra through his brother Atīka, a fervent Ibādi as mentioned above. The hopes of the Ibādi Shaykh of winning the Umayyads to their cause increased with the accession to the throne of the devout caliph Umar II (99/101/717-20). Abū Ubayda sent to this ruler an embassy, among whose members were Sālim al-Hilālī and the scholar Shaykh Dja'far b. al-Sammak who, because of his connections with the Ibādis, was considered by them as imām al-Muslimm. This mission was still at the court of Umar II at the time of the death of his son, 'Abd al-Malik b. Umar (al-Shammakhi, op. cit., 79-82; Siyar al-'Umdniyya, 111, 665, 666). It should be added that the Ibādis were not the only ones wishing to reach an agreement with Umar II.

It is known that another Khurāṣī group, whose leader was Shawkānī (on him see Wehlhausen, op. cit., 48) and which lived in the district of Rabi'ā' in Mesopotamia, sent a mission to this ruler (see Mas'uḍī, Murāḍī, v, 434+). The results of this mission are not known; it may have been due to it that the Ibādi Iyābī b. Muḥāwiya was appointed bāṣīlī of Baṣra (al-Shammakhi, op. cit., 81). But this favourable state of affairs for the Ibādiyya did not last long. When Yazaḍ b. Muhallāb died in 717-18, his successor Yazaḍ Yezīd was unfavourably disposed towards the Muḥallābīs, the patrons of the Ibādis of Baṣra. Details of the fortunes of the Ibādiyya of Baṣra during the first two decades of the 2nd/8th century are not known; there certainly took place at this period a complete change in their attitudes and there even appeared some revolutionary tendencies. Leaders of the revolutionary party which favoured direct action were Abū Nūh, the supporter of a definitive rupture with the caliphate, and a famous ḥanīfī, Abū Muhammad al-Nahdī, who, in his sermons delivered in the mosques of Baṣra, overtly incited the crowd to revolt against the governor of Irāk, Khālid b. 'Abd Allāh (105-207/723-38) (see al-Shammakhi, op. cit., 88, 97; al-Sālimi, Lum'a, 185). The activities of the zealots of Baṣra were facilitated by the attitude of indifference of the governor of this town, Bilāl b. Abū Burdā al-Ashtar (al-Shammakhi, op. cit., 97). Abū Ubayda was at first opposed to direct action since he still hoped to win the caliphs to Ibādism. He also saw that the chances of an Ibādi khurāṣī similar to the revolts of the Azrākī extremists were very slender; but in the end, after consulting the important members of the sect, he was obliged to change his attitude through fear of a khurāṣī revolt from the Ibādis of Baṣra, the majority of whom wished to move from the position of ḥanīfī to that of ṣuyūṭi (see below; cf. al-Shammakhi, op. cit., 83-8). Yet he adopted a line of action completely different from that of the other Khurāṣī leaders. He did not wish the Ibādis of Baṣra to leave the town in order to found an imāmāte somewhere outside the capital, following the example of Nāṣīf b. al-Azraq; on the contrary, he planned to make use of the rich and numerous Ibādi community of Baṣra only as a base for Ibādi propaganda, which should embrace the whole of the Muslim world. He decided to provoke Ibādi insurrections in the various provinces and to create a universal Ibādi imāmāte on the ruins of the Umayyad caliphate. In order to achieve this, Abū Ubayda formed a kind of revolutionary government in which he himself was in charge of everything concerning religious action and missions, and another eminent Ibādi Shaykh of Baṣra, Ḥādīb al-Tā'ī, dealt with matters of war and of finance (al-Shammakhi, op. cit., 92, 114; Siyar al-'Umdniyya, 665). A bayt al-māl was formed; its assets must have been considerable since it is stated, for example, that a single rich Ibādi merchant, Abū Tahir, paid a net sum of 10,000 dirhams (al-Shammakhi, op. cit., 114-5). There was created at Baṣra a centre of learning where Abū Ubayda secretly trained for the task of being missionaries who came to him from all the Muslim provinces. These missionaries were then sent out in teams commanded by the Ibādiyya of Baṣra, and these khulāṣī al-'ilm were to spread propaganda in the various provinces of the caliphate and, after gaining a certain number of adherents, to pronounce the state of ṣuyūṭi (see Masqueray, op. cit., 29, 20, 21; al-Shammakhi, op. cit., 124; Siyar al-'Umdniyya, 676; al-Sālimi, Lum'a, 185). According to the Ibādi historians, Abū Ubayda sent such teams to the Maghrib, the Yaman, Ḥadramawt, 'Umān and Khurāṣī (al-Shammakhi, op. cit., 114; al-Sālimi, loc. cit.). The operation had a tremendous success; in the midst of the general disorder which preceded the fall of the Umayyads, the influence of the Ibādis spread widely. After only a few years, there were Ibādis in various Muslim countries. To the Ibādi historians, Abū Ubayda placed the candidate for the dignity of imām and the future Ḥādīb. These khulāṣī al-'ilm were to spread propaganda in the various provinces of the caliphate and, after gaining a certain number of adherents, to pronounce the state of ṣuyūṭi (see Masqueray, op. cit., 29, 20, 21; al-Shammakhi, op. cit., 124; Siyar al-'Umdniyya, 676; al-Sālimi, Lum'a, 185). According to the Ibādi historians, Abū Ubayda sent such teams to the Maghrib, the Ḥadramawt and 'Umān, several Ibādi revolts which constituted a greater threat to the caliphate than did the Azrākī movements (see below).

During this period of Ibādi expansion, the Ibādiyya of Baṣra continued to live in a state of kitāman, keeping their beliefs secret. The advent of the Abūbāsīdids nothing to change this situation except that the Ibādiyya succeeded in gaining the protection of some influential members of the family of the new caliphs. Among these should be mentioned especially the aunt of the caliph al-Mahdī (158-69/775-86) and her husband 'Abd Allāh b. Rabi', whose son even became an Ibādi (al-Shammakhi, op. cit., 107-8).

It appears also that the caliph Abū Dja'far (136-58/ 753-75) was for a time fairly well disposed towards the Ibādis; it is known, for example, somewhere that he was much in sympathy with Ḥādīb al-Tā'ī (al-Shammakhi, op. cit., 91). Abū Ubayda and Ḥādīb both died during Abū Dja'far's reign (al-Shammakhi, op. cit., 83, 91). The statement of the 5th/11th century Ibādi historian Abū Zakariyya? Yahyā b. Abī Bakr al-Wardījīn that Abū Ubayda died during the reign of the Rustāmidīdūm Abū al-Wahhāb b. Abd al-Rahām (160-80/776-93; Masqueray, op. cit., 51) should in turn be rejected.

After the death of Abū Ubayda there began the decline of the Ibādi community of Baṣra, as, if
we may believe the sectarian sources, had already been observed by the caliph Abu Djacfar ... it was Abd Allah b. Sacid al-Hadrami who was considered as the successor of this imam by the Ibadis of the tladra-

Yet soon after the affair of al-Nukkar, al-Rabi and the other Ibadis emigrated to Umân, where already al-Rabi's successor, Abû Sufyân Mahbûb b. al-Ra^î, was resident (on al-Rabi and Abû Sufyân see Siyar al-^Umâniyya, 667; al-Salîmi, Lum'a, 182, 186; Masqueray, op. cit., 124 n. 2, 136-7; Lewicki, Une chronique, 70-2; idem, Notice sur la chronique ibadite d'ad-Dargini, in RO, xi, 159-60).

The Ibadî groups outside Basra

(a) At Kûfa. In spite of the opinion of Wellhausen that the Khâridji of Kûfa disappeared completely after the massacre of 59/679, the available sources enable us to establish that the Ibadîyya remained in this town during at least the whole of the 2nd/8th century. In fact it was from Kûfa that there came the founder of the Ibadî sect of al-Hâritîyya (see below), which existed in the first half of the 2nd century. Among the Ibadî-Wahbî jâhîks of Kûfa may be mentioned Abu 1-Muhâdjîr al-Kâfî, one of the doctors of the second half of the 2nd/8th century (see Masqueray, op. cit., 139 n.; al-Shamâmkhi, op. cit., 121; Wellhausen, op. cit., 54).

(b) In the rest of Irâk, Ibadîyya, belonging to various groups of this sect, probably lived in villages on the road from Basra to al-Mawâslî (see al-Shamâmkhi, op. cit., 120-1).

(c) At al-Mawâslî Ibadîs were to be found. Among the Ibadî doctors of this town there should be mentioned, on the evidence of the Ibadî sources, one Abû Bakr al-Mawâslî. It seems very probable that there were some Ibadîs among the Khâridji mentioned by the authors of the 4th/10th and 5th/11th centuries in the province of al-Djazîrât, to the west of al-Mawâslî (al-Salîmi, Lum'a, 180; Siyar al-^Umâniyya, 667; al-Mas'âdi, op. cit., vi, 230-1; Hûdud al-^âlam, 140).

(d) Hîdžâz. It appears that the Ibadîs were fairly numerous at Medina and Mecca and that even in the 2nd/8th century there were Ibadî doctors in these towns. Mecca was probably in the 2nd century one of the centres of very vigorous Ibadî propaganda. Remnants of the Ibadîyya still existed in Mecca in the 6th/12th century. Among the Ibadî doctors of Hîdžâz in the 2nd and 3rd centuries were: Abu 1-Hurr 'Ali b. al-^Usayn al-Anbari, Muhammad b. Hâbîb, Muhammad b. Salîma and Ibn 'Abbâd al-Mawâslî (see al-Shamâmkhi, op. cit., 64, 125-3, 147; al-Shamâmkhi, op. cit., 97-9; al-Salîmi, Lum'a, 485; Siyar al-^Umâniyya, 679).

(e) Central Arabia. Abû Ubâyda seems to have sent hamalaat al-^Umm to the centre of the Arabian peninsula, perhaps to the Yamama where there had existed shortly before a Khâridji imâmate of the Ibadîyya sect, linked to the doctrines of Ibn Ibad (see al-Bârdînî, Sallam, 7; Wellhausen, op. cit., 29-32; Brünnow, op. cit., 64).

We cannot, however, take all the Ibadîs of Syria and Arabia as forming a single sect. The opinions of the Ibadîs and their practice of religious observance were quite diverse, and the political and social conditions in which they lived were very different from time to time. Among the Ibadîs there was a movement for the recognition of the authority of desert hajjîs, who were chosen by the Ibadîs as successors of the imâm by the Ibadîs of the Hâdrâmawt and Yemen. The origins of Ibadîsm in the Hâdrâmawt and Yemen are rather obscure. The Ibadîs were perhaps the most ardent in the spread of this movement by the first leader of the Ibadî sect, 'Abî 'Abd Allah b. Ibad, who died, according to Ibn Hawâlî (i, 37), in the canton of al-Mughaykhîra in the south-west of the Yemen. Ibn Ibad's arrival in the Yemen was probably connected with the conquest of southern Arabia by the Khâridji, which took place between the years 65 and 73/685-92. The Khâridji's control of this country did not last long and ended in 73 with the Ibadî agitators in the south-west of the Yemen, to the west of al-Mawsil (al-Salîmi, op. cit., 121; Wellhausen, op. cit., 183; al-Masqueray, op. cit., 185; Shammakhi, op. cit., 120-1).
mawt and by the Ibadi *masākiyr* of Başra. The Ibadi imāmāte still existed in the 5th/6th century. According to al-Hamdānī, it was the town of Dawʾan (198/813) in 822/233 CE, which was the capital of the imām of the latter part of the 3rd/9th century. The last mention of the Ibādīs of the Ḥaḍramawt belongs to the second half of the 5th century.

Of the history of the Ibādīyya of the Yemen after the defeat of the imām ʿAbd Allāh b. Yahyā almost nothing is known. Crushed in 130/748 by the army of ʿAbd al-Malik b. ʿAbbāy, they then became subjects of the ʿAbbāsīd state. Several Ibadi groups still existed in the Yemen at least until the middle of the 6th/12th century. They became the vassals of the Ḥaḍramawt and ʿUmān, also professed the Ibādī doctrine. The population of this country paid tithes to the imām of ʿUmān at about the beginning of the 3rd century. There were also Ibādīs outside the former imāmāte of Talib al-Ḥakk, on the island of Soocotra, whose inhabitants were related to those of Mahra. According to al-Hamdānī, there was on this island a group of al-Shurāt (what is this writer calls the Ibādīs) who were hostile to the Sunnis and the Kharijī (as al-Kuland b. al-Djuland), who was the descendent of the former princes of the country of Mahra. For the later history of the Kharijīs of Mahra, see T. Lewicki, *Les Ibdites dans l’Arabie du Sud au moyen âge*, in *Folia Orientalia*, 1 (1955), 3-18.

(6) ʿUmān. Another region in which the Ibādīs were active in Arabia was ʿUmān. Not much is known of the origins of the Ibādīyya in this country. The prehistory of Ibādīsm there appears to be closely linked with the activity of the pre-Ibādī Khāridjī group of Abū Būlāl. It is known in fact that, towards the second half of the 1st/7th century, the inhabitants of ʿUmān were fervent admirers of this Khāridjī hero. Moreover, for some time until the year 73, ʿUmān belonged to an imāmāte formed in Arabia by the Khāridjī sect of the Naǧjadīs. From the end of the 1st/7th century, the Khāridjīsm of the inhabitants of ʿUmān took on a purely Ibādī character, perhaps owing to the activity of Ḥawīr b. Zayd, as well as to the influences of other Ibādī doctors of Basra who had been exiled there by the Khāhidjīs. The modern Ibādī scholar ʿAbbāsīyah is thus right in stating that the history of the Ibādīyya in ʿUmān begins with the period of the Tābiʾīn because it was the first half of this state in the 3rd century that the more serious preaching of Ibādī doctrines begins, probably owing to the hamālat al-ʿimām who were appointed by the inhabitants of ʿUmān at this time by Abū ʿUbaydah. These missionaries were helped by a famous faṭḥ of ʿUmān, one ʿAbīr b. Sālim al-Tāʾi, and another doctor of the country, Mūsā b. ʿAbī Dābī al-Azkanī. As a result of this preaching, an Ibādī revolt broke out in ʿUmān in 132/749. At the head of the rebels was the descendent of the former princes of the country, al-Djuland b. Maṣʿūd (referred to by al-Barrādī as al-Kuland b. al-Djuland), who was elected imām. This Ibādī imāmāte, which extended also to the ʿAṣīr and the Yemen, lasted only a short time and collapsed in 134/752 as the result of an ʿAbbāsīd expedition led by the general Khāzm b. Khuzayma; the imām was killed in a battle. The Ibādīyya of ʿUmān seem to have been considerably weakened by this defeat, although the ʿAbbāsīd governor placed in the country by al-Saffāh appears to have been tolerant towards the sect’s doctrine. But already towards the second half of the 2nd/8th century, as a result of new hamālat al-ʿimām (in particular the famous al-ʿAṣīr b. al-Muṣṭahir) sent to this province by Abū ʿUbayda’s successor, al-Rabit b. Ḥābīb, and of the activities of Mūsā b. Abī Dābī, the Ibādīs rose up again and recommenced their activities in ʿUmān. The centre of this new movement was the town of Nazwa and it was then that, in 177/793, a council held under the presidency of Mūsā b. Abī Dābī al-Azkanī, there was proclaimed imām of ʿUmān Muḥammad b. ʿAffān (known also as Muḥammad b. ʿAbī Allāh b. Abī ʿAffān or Muḥammad b. Abī ʿAffān), a member of the Axī tribe of Banū Ḥamīd. It seems that under the reign of his successor, al-Wāriʿ b. Kaʿb al-Kharṣ (179-92/795-808), the *masākiyr* of Basra transferred themselves to ʿUmān, which then continued to exist as the centre of the spiritual geography of the ʿAṣīr and the Hadramawt. The Ibādīyya this Ibādī saying is significant: *bāda ʾ-l-ʿimām bi-ʾl-Madīna wa-farrābā bi-ʾl-Basra wa-fāra ʿl-ʿumān, “Knowledge was laid in Medina, hatched in Basra and flew to ʿUmān” (see al-Sālimi, *Lum’a*, 1, 183). It should be added that the identification of al-Wāriʿ b. Kaʿb al-Kharṣi with al-Wāriʿ b. Kaʿb al-Ḥaḍrami, the Ibādī imām of the ʿAṣīr, who lived in the second half of the 2nd/8th century, is very possible. Among the other Ibādī imāms of ʿUmān should be mentioned Ghassān b. ʿAbī Allāh al-Yahmadi al-Azdī (died 207/822-3), “Abī al-Malik b. Ḥāmid (who reigned for 18 years), and al-Muḥanna b. Dīʾaʾar (226-37/841-52). During the latter’s reign, the Ḥaḍramawt formed part of the kingdom of ʿUmān. His successor, al-Ṣalt b. Mālik, reigned until 273/887. One other Ibādī imām of ʿUmān of this period is known: Rāghī b. al-Nadr, who reigned immediately after al-Ṣalt b. Mālik. He then had now already begun the period of discord and internecine strife (the war between the Nizārī and the Hinawī tribes). During the 3rd/9th century, certain Ibādī chiefs of ʿUmān bore the title of wāṣī (governor) or of mutaḥaddīs (chief), since during this period it was the Rustomids who were recognized as universal imāms of the Ibādīyya. Nevertheless, these Ibādī rulers of ʿUmān were elected by the inhabitants of the country and not appointed by the imāms of the Maghrib. ʿUmān was divided into several districts with governors in charge of them. The imāms or the mutaḥaddīms lived at Nazwa. In 280/893 ʿUmān was reconquered by the ʿAbbāsīds, it was theçe of Musa b. Abī Dābī al-Kharusi (179-92/795-808), the Ibādī imām of the ʿAṣīr, who was killed. ʿUmān’s dependence on the ʿAbbāsīd caliphate was only superficial; in actual fact the Ibādī imāmāte continued to exist there without interruption. The Ibādī sources mention the names of several imāms who reigned in the 4th/10th century. During the first part of this century the Ibādīyya of ʿUmān continued to exercise their authority over the country of Mahra. For the later history of the Ibādīs of ʿUmān reference may be made to the plentiful literature on this subject which is cited at the end of this section. It should be mentioned that the chronology of the facts mentioned above is not always certain and there will be found some discrepancies between facts given here and those in earlier works by this author.

Little is known about the precise distribution of the Ibādīs in Yemen during the Middle Ages. From the chronicles of the country, such as Siyar al-ʿUmānīyi-ya, *Kashk al-khummä*, etc., it can be established that the most important Ibādī groups in ʿUmān were found to the south of an imaginary line drawn between the towns of Şuḥrā and Tawwām (now al-Tawwām or al-Bereyma). The Ibādīyya occupied particularly the district of al-Bātina and the surroun-
of the Ibadī cants and districts mentioned in the sources. Among these places were: the Talid al-Hadrami. Under these two leaders, who also depended on the Hawwara, the remainder of what is now Tripolitania was referred to by the mediaeval Arabic authors as Uman. Today, the majority of the Ibadis in the 6th/12th century (al-Idrisi, tr. Jaubert, 92, 205; op. cit., fol. 4v.). Salama’s activity appears to have been fairly successful, the limits of the area occupied by the Ibadis were much narrower than those of Uman itself, especially during its greatest period in the 3rd/9th century. Today Ibadism is the religion of the main fractions of the Uman tribes of Ghāfīrī and Hīnā (al-Shammakī, op. cit., 78, 93 and passim; al-Dardjīnī, Kitiš Tabābālī al-maṣāyib). MS no. 275 of the Cracow collection, f. 14v-15v; the Barrādī, op. cit., 170; Siyar al-Umāniyya, 174, 219, 277, 667, 676, 677 and passim; Masqueray, op. cit., 136-43; Al-Salīmī, Tuhafat al-ayyām bi-sīrat al-Uman, i-ii, Cairo 1247, passim; al-Tabarī, iii, 78, 81, 484, 501; Sāli ibn Razīk, History of the Imamas and Seyyids of Oman,.., tr. G. F. Badger, London 1871, passim; E. Sachau, Über eine arabisch chronik aus Zanzibar, in MSOS, i, 19-19; C. Huart, Histoire des Arabes, ii, Paris 1913, 257-82; L. Massignau, Annuaire du monde musulman, 56-60; H. Klein, Kapitel XXXIII der anonymen arabischen Chronik Kalif al-Qumma al-Gaṃīs, aṣṣābūn al-umma beteiligt, Aṣṣāb al-Uman min aṣsalāmātik til ḥaftā kalimatikhu... (thesis), Hamburg 1938; Le Vecchia Vaglietti, L’imamato ibadīs da’l’ Omaņ, in AIUON, n.s. iii (1949), 245-82; T. Lewicki, Les Ibadites dans l’Arabie du Sud, passim; several references to the Ibadis of Uman are found also in the works of many Sunni Arab geographers and historians).

The origins of the Ibadīyya on the coast of Africa (the Bilād al-Zanj) are found in the 6th/12th century. Among the Ibadī ghayyabs of the 6th/12th century is found an East African doctor, al-Walīd b. Bārid al-Kūlī al-Ibadī, from the town of Kilwa. The Ibadī element in the Bilād al-Zanj appears to have grown in the 11th-12th/17th-18th centuries when the major part of the east coast of Africa was linked with Uman. Today, the majorities of the Ibadīs of East Africa live in Zanzibar (Sāli ibn Razīk, op. cit., 92, 205; Siyar al-Umāniyya, 671).

(K) Egypt. At a comparatively recent period, the Ibadī doctrine was spread also in Egypt, which soon became one of the main centres of Ibadī learning together with Basra and Medina. The Ibadī sect mention two persons from ‘Uman and Basra who were at the same time merchants and Ibadī scholars, Abū ʻUbayda Abū Allāh b. Kāsim al-Ṣaghīr and al-Nazar b. Maymūn, who went to China in the 2nd/8th century (al-Masquray, op. cit., v, 231; al-Salīmī, Lum’a, 183; Sāli ibn Razīk, op. cit., 35); Lewicki, Les premiers commerçants arabes en Chine, in RO, xi, 173-86).

(L) Idrīsīya and the Maghrib. The Ibadī groups of North Africa played for a certain period a predominant role in the history of this sect. The first to preach the Ibadī doctrines there was Salāma b. ʻAbd (Salma b. Sa’d), a ghayyab of Basra who appeared towards the beginning of the 2nd/8th century at Kayrawān accompanied by the Şūrfi missionary Ikrīma, a mawāl of Ibn ʻAbbās (d. 1077/725-6; cf. Masqueray, op. cit., 3-4; al-Shammakī, op. cit., 98; al-Dardjīnī, op. cit., fol. 4v.). Salāma’s activity appears to have been fairly successful, since we find in Tripolitania, about twenty years later, a fairly large Ibadī group under the leadership of a certain ʻAbd Allāh b. Mas’ūd al-Tajjībī. This leader drew his support at first from the Berber tribe of the Hawwārā [q.v.], which in the Middle Ages occupied Tripoli and the region to the east of it as far as the ṣaḥba of Tārūgha. The authority passed next to two Ibadī chiefs, ʻAbd al-Di‘abār b. Kays al-Murādī and al-Harībī b. Talīd al-Haḍramī. Under these two leaders, who also depended on the Hawwārā, the remainder of what is now Tripolitania should be mentioned in particular Abū Ghanīm Bishr b. Ghanīm al-Kurāshī (3rd/9th century), the author of the famous work known under the title of al-Mudawwana, Ibadis are also found at about the beginning of the 2nd/8th century in Fars. It is not known whether the Ḥamzīyya, whose existence in Persia is mentioned by al-Mas’ūdī, were followers of the Ibadī sectarian Hamza al-Kūfī (see below) or were a sub-branch of the ʻAdārīda (al-Shammakī, op. cit., 87, 88, 113, 116, 118, 119; Siyar al-Umāniyya, 667; al-Salīmī, Lum’a, 185, 186; al-Mas’ūdī, op. cit., v, 230-1; al-Sahbāstānī, tr. Haar- brücker, i, 44-5; A. de C. Motylinski, Le nom berbère de Dieu chez les Abadistes, in RAfr., (1905), 146).

(M) Idrīsīya and the Maghrib. The Ibadī groups of North Africa played for a certain period a predominant role in the history of this sect. The first to preach the Ibadī doctrines there was Salāma b. ʻAbd (Salma b. Sa’d), a ghayyab of Basra who appeared towards the beginning of the 2nd/8th century at Kayrawān accompanied by the Şūrfi missionary Ikrīma, a mawāl of Ibn ʻAbbās (d. 1077/725-6; cf. Masqueray, op. cit., 3-4; al-Shammakī, op. cit., 98; al-Dardjīnī, op. cit., fol. 4v.). Salāma’s activity appears to have been fairly successful, since we find in Tripolitania, about twenty years later, a fairly large Ibadī group under the leadership of a certain ʻAbd Allāh b. Mas’ūd al-Tajjībī. This leader drew his support at first from the Berber tribe of the Hawwārā [q.v.], which in the Middle Ages occupied Tripoli and the region to the east of it as far as the ṣaḥba of Tārūgha. The authority passed next to two Ibadī chiefs, ʻAbd al-Di‘abār b. Kays al-Murādī and al-Harībī b. Talīd al-Haḍramī. Under these two leaders, who also depended on the Hawwārā, the remainder of what is now Tripolitania...
AL-IBADIYYA

came under the control of the Ibadiyya. Among the Berber tribes converted to Ibadism at this period were the Zanata of western Tripolitania and the Nafusi of the coastal road which linked the Tripolitanian Djebel which today still bears their name. Al-Harbîh is said to have been proclaimed imâm al-akhkâm, but it is more likely that al-Harith and Abd al-Djabbâr reigned together (Ibn 'Abd al-Hakam, Futûh Mısır, ed. Torrey, 244; al-Barrâdî, op. cit., 170; al-Shammâkhî, op. cit., 175, 597; T. Lewicki, La répartition géographique des groupements ibadîtes dans l’Afrique du Nord au moyen-âge, in RO, xxi (1957), 297; Ibn Khâdir, Vies des Berberes, tr. de Slane, i, 219). After the deaths of al-Harbîh and of Abd al-Djabbâr, who killed each other in 133/750 (or in 132/749-50), it was Ismâ‘îl b. Ziyâd al-Nafûsî who was elected leader by the Ibâdi Berber tribes of Tripolitania with the title of imâm al-dîfî* (imâm of the caliphate), but it was killed near this town in an encounter with the troops of Abd al-Rahmân b. Habîb, the Arab governor of Kayrawân. His death took place soon after his election (T. Lewicki, Études ibadîtes-nord-africaines, part i, Warsaw 1957, 23, lines 1-2 and 127-8). It was probably at this time that there appeared the Ibâdi (of Berber origin) 'Umar b. Imkaten. According to the early Ibâdi chronicles he was the first to teach the Kurân in the Djaral Nafûsî, having learned it himself on the great coastal road which linked the Maghrib to the East, in the region of Maghmâdâs (the Macomades Syrtsis of antiquity and the present day Marsa Zâfrânî; al-Shammâkhî, op. cit., 142; Lewicki, Études ibadîtes nord-africaines, 55). After the death of Ismâ‘îl b. Ziyâd al-Nafûsî, the Ibâdi state of Tripolitania collapsed, but the population remained Ibâdi. It was from Tripolitania or from the neighbouring districts of southern Tunisia that, in the years after 140/756, several Berbers came to Başra to study under the president of the Ibâdi madhâhîl there, Abû 'Ubayyadâ al-Tamîmî. Among these persons, who later returned to preach the Ibâdi faith in Tripolitania, were a certain Ibn Mağhîr (Ibn Mughîr), a Nafûsî who was still alive in about 195 (Strothman, Les Berbères, xvi, 266; Lewicki, op. cit., passim; al-Shammâkhî, op. cit., 34; al-Bakri, op. cit., text 7, tr. 22; Ibn Khâldûn, op. cit., i, 374-5; Fournel, op. cit., i, 358-60; Lewicki, Études ibadîtes-nord-africaines, 113-4). The remnants of the Ibâdiyya either withdrew into the interior of Tripolitania or crossed into the central Maghrib. Gradually there arose new centres of resistance against the 'Abbasids. Thus Abû al-Rahmân b. Rustâm, the former Ibâdi governor of Kayrawân and one of the hamalât al-ilm, fleeing from the Arab army which had re-taken Ifrîkiya, went (by way of Sûf Adjîdûlî to the west of the Bilâd al-Djarîd, where there had collected several Ibâdi scholars from Tripolitania) towards the present-day Algeria, where he founded (or rather rebuilt) the town of Tâhert. Soon several of these Ibâdi fractions (most of them probably emigrés from Ifrîkiya), such as the Lamâya, the Lawâtâ and the Nafzawî, rallied to this leader. Abû al-Rahmân b. Rustâm seems to have been fairly powerful, since the leader of the Ibâdiyya of Tripolitania after the death of Abû 'l-Khaṭṭâb, the Hawwâri Abu Hatîm al-Malzûzî, for a time sent him the zakât, thus acknowledging his supremacy. In addition to these two leaders, there were others in North Africa at this time, as for example 'Aṣîm al-Sadrâtî, who is even referred to as imâm by the Ibâdi writers, and al-Miswâr al-Zanâtî (Masqueray, op. cit., 40-2; al-Shammâkhî, op. cit., 133, 135, 138, 141; al-Bakri, op. cit., text 68, tr. 140; Ibn Khâldûn, op. cit., i, 220, 221, 375, 380; Fournel, op. cit., i, 371). As a result of the activity of these various leaders, there broke out in North Africa, in 135/768, an Ibâdi revolt which the Sûfrs also joined. At the head of the rebels was Abû Hâtîm, who took the title of imâm al-dîfî'. The Arabic sources provide details of this revolt, the most famous episodes of which were the capture of al-Kayrawân by Abû Hâtîm, who took it from the Arabs, and the siege of Tûbûna in the Zâb. After some years of fighting, Abû Hâtîm yielded to the army of the 'Abbasids general Yâsîr b. Hâtîm, which had attacked him in the east of Tripolitania, and he died in 155 (Masqueray, op. cit., 41-9; al-Shammâkhî, op. cit., 135-8; Ibn Khâldûn, op. cit., i, 221-3, 375-8; al-Barrâdî, op. cit., 173; Fournel, op. cit., i, 364-80). After the defeat of Abû Hâtîm and the collapse of the Ibâdi imâmâte of Tripolitania, there took place a migration towards the west of the Berber Ibâdi fractions of Tripolitania and Tunisia. It was probably which was then in the possession of the Sûfrs of the Berber tribe of Warri'djûlûm. As a result of these successes of Abû 'l-Khaṭṭâb there arose a fairly important Ibâdi state, which included the whole of Tripolitania from the western frontier of Barka, Tunisia and the whole of the east of present-day Algeria, including the country of the Ketâmâ in the north of the department of Constantine. It even seems that Abû 'l-Khaṭṭâb also exercised a certain influence over the Sûfrs of Sûflûmâs (Masqueray, op. cit., 34; al-Shammâkhî, op. cit., 130 and passim; al-Bakri, Kitâb al-Malâkh was-łamamâkhî, ed. de Slane, 149, tr. 112-4). Ibn Khâldûn, op. cit., text 375; H. Fournel, Les Berbers, Paris 1875-81, i, 357; Lewicki, Études ibadîtes-nord-africaines, 112-4).
as part of this migration that some Kharidii fractions from Ifrikiya crossed into the country of the Kerad in 156, as mentioned by Ibn Khaldun. These emigrants probably joined ʿAbd al-Raḥmān b. Rustam, and the headquarters of the North African Ibādiyya became the town of Tāḥert. ʿAbd al-Raḥmān b. Rustam was elected imām in 160 or 162 (Masqueray, op. cit., 49 ff.; al-Shammākhī, op. cit., 138 ff.; A. de C. Motylinski, Chronique d’Ibn Saḥghir, 63-4). With this there began the consolidation of all the Ibādī groups of North Africa around the imām of Tāḥert. It was under the two successors of ʿAbd al-Raḥmān b. Rustam, namely ʿAbd al-Waḥhāb b. ʿAbd al-Raḥmān (168-208/984-823) and al-ʿĀlāb b. ʿAbd al-Waḥhāb (208-58/823-72), that the Ibādīsm of the Maghrīb reached its peak. <Abd al-Waḥhāb (208-58/823-72), that the Ibādīsm of Ifrikiya in the same year, 171, tr., p. 73), all the country between Tlemcen and Tripoli. To the west, the Rustamid state included the district around Tāḥert, as well as the territory of Sārū inhabited by the Ibādī factions of the Berber tribes of Tlemcen and Sārū (Kastīliya), Kāntara, Nafzawa, and Harthān. The remains of the state of Tāḥert continued to exist until 224/839, when the Aghlabid army, the last Rustamid imām, Abu ʿAbd Allāh al-ʿArifī, who founded the Fatimid state in Ifrikiya (cf. al-Shammākhī, op. cit., 88-9, tr. 63; Ibn al-Fakhīr, al-Buldūn, 79; M. Vonderheyden, La Berberie orientale, Paris 1927, passim; T. Lewicki, La répartition géographique des groupements ibaadites dans l’Afrique du Nord au moyen-âge, in RO, xxi (1957), 301-43; ibid., Les Ibādītes en Tunisie au moyen-âge, Rome 1959; idem, Un document ibādī inédit sur l’émigration des Nafusa du Gabal, in Folia Orientalia, i/2 (1960) 175-91, ii (1950), 214-6). Outside North Africa, the Ibādī groups of ʿAṣrā and throughout the East also recognized the supremacy of Ibn Rustam and of his successors and dated with his name their books and their testaments (Masqueray, op. cit., 53; A. de C. Motylinski, Chronique d’Ibn Saḥghir, tr. 65-71). This was probably the reason why the Ibādī rulers of ʿUmān sometimes, in the 3rd/9th century, bore the title of wāli (governor) or of muṭābaddīm (leader) together with that of imām (see above).

Towards the second half of the 3rd century, the imām of Tāḥert, split by the political schisms of al-Nukkār, of the Ḥulafāʾīyya, of Ibn Māṣūla (who created an independent Ibādī state in Tāḥert) and others (see below), and cut into two separate parts because of the success of the Aghlabids in conquering the whole of southern Tunisia, was approaching ruin. Rustamid influence in Tripolitania was completely destroyed in 283/896, when the Aghlabid army defeated in the famous battle of Mānūn (between Tripoli and Kābīs) the powerful Ibādī Berber tribe of the Naṣūf, which had been the main support of the Rustamid state in Ifrikiya (cf. al-Shammākhī, op. cit., 267-9; al-Dardjīnī, op. cit., fol. 31v; Masqueray, op. cit., 194-202; Ibn ʿIthārī, op. cit., i, 129; Fournel, op. cit., i, 575; Vonderheyden, op. cit., 44-5). The remains of the state of Tāḥert continued to exist until 296/909, when it finally fell before the armies of Abu ʿAbd Allāh al-ʿArifī, who founded the Fatimid state on the ruins of the Ibādī state, and the Fatimid states of Sigīlmsīa the new and powerful Fāṭimid kingdom. After Tāḥert had been taken by the Fāṭimid army, the last Rustamid imām, Abu Yūsuf Yaʿkūb, fled, with his family and with the most important scholars and men of influence from Tāḥert, to Sārū (in the oasis of Wargla) on the southern borders of the state of Tāḥert, where for a time they dreamed of re-establishing the Ibādī imām in this locality (al-Shammākhī, op. cit., 535;
Masqueray, op. cit., 251-8; Fournel, op. cit., ii, 52-93).
This idea was abandoned, perhaps as the result of a
Fatimid expedition in the direction of the oasis of
Wargla, mentioned in the works of Ibn Khaldun (op. cit., 220-1). Moreover, a
new Ibadi imamate was already being formed in
the Djibal Nafusa, where the Fatimid army did not
penetrate until very much later.

There should be mentioned here the activities of
Abū Yabāy Zakaryây? al-Irdjâm. This leader, who
is given in the Ibādî sources the title of ḥākim or of
imām muḍḍaf, and who lived in the Djibal Nafusa,
ruled for about fifteen years. This is the very example
known of a North African Ibādî-Wahbi chief taking
the title of imām after the fall of the imamate of
the Banû Rustam. His power did not extend beyond the
limits of the Djibal Nafusa, but he nevertheless
succeeded in preserving the independence of this
territory from the Fatimids. He died in 311/923-4. His successors, who bore the title of ḥākim, were
also in fact independent of the Fatimid state. Later,
one of the ḥākims of the Djibal Nafusa was forced, in
about 450-50, to recognize the supremacy of the
Zirids. The semi-independent Ibādī ḥākims (and later sha'yâkhs) of the Djibal Nafusa still existed in
the 8th/14th century (T. Lewicki, Ibādītica, 2: Les
Ḥākimī du Gabal Nafūsa, in RO, xxvi [1962], 97-123).

In the first half of the 4th/10th century, there took
place a further unsuccessful attempt to re-establish
the Ibādī state in North Africa. This time it was a
member of the Nukkāris sect, Abū Yazid Maḥlab b.
Kaydād (d. 335/946-7), who rallied round him the
Ibādī tribes of Tripolitania, the Zāb and the other
districts of the Maghrib (see EI 1, suppl., AL-NUKKĀR).
Twenty years later, the Ibādīyya of the Maghrib
made a further attempt, and declared in 358 a
ṣuqārī against the Fatimids. This revolt, which
broke out in the Bilad al-Djarid, was led by two
Ibādī-Wahbi sha'yâkhs of the tribe of the Banū
Kaydād and, after his death, Abū Khazar (according to Ibn Khaldūn, op. cit., ii, 542:
Abū Dja'far al-Zanātī); it achieved for the Ibādīs
temporary domination of Tripolitania, of southern
Tunisia, of the island of Djarba, of the Zāb and of
the oases of the Rīd and of Wargla (Wargla).
The wilâyat al-djirî was proclaimed, governors were
appointed for all the provinces and it was even
possible to enter into relations with the Umayyads of Spain. Abū Khazar assembled
an enormous army, the tribe of the Maṣāţa alone
providing him with 12,000 horsemen. But this
insurrection also failed, and, after the rout of the
rebels at Bâghāy, the Ibādīyya of North Africa had
to submit to the Fatimids (Masqueray, op. cit., 388-
370; al-Ṣaḥmāhī, op. cit., 346-62; Fournel, op. cit.,
ii, 349).

After this revolt, the Ibādīs of North Africa made
no further attempts to restore an imamate and they
returned to the state of kitmān. Nevertheless, in the
various parts of the Maghrib and Hīrikiya there were
formed small Ibādī-Wahbi political organizations,
independent or semi-independent of the Fatimids
and of the Sunni North African dynasties. There
have been mentioned above the Ibādīs of the
Djibal Nafusa and the Ibādī groups of Tripolitania and of the Fezzān which survived from the
Rustamid rule (which however in the majority of
these provinces came to an end towards the middle
of the 3rd/9th century). The history of the Ibādī
groups in Tunisia at this time has been dealt with in
T. Lewicki, Les Ibādīs en Tunisie au moyen-âge.

The oasis of Wargla was governed, towards the 4th/
10th century, by a council of notables (ṣuqārī,
ṣuqārī, al-djirî; cf. al-Dardjīnī, op. cit., fol. 38v;
al-Ṣaḥmāhī, op. cit., 365). Later, in the 5th/11th century, there appeared among the Ibādīs of
North Africa (alongside the ḥākim, the muḥammad and the raʾs) a new form of government: a theocratic
government formed by councils of recluses (al-
ṭuṣūs) presided over by a sha'yāk who exercised
authority over the entire life of the Ibādī groups (see Haša).

As a result of civil wars and of the defeat of the
rebels by the Fatimids, followed by the repression
of these rebels by the Fatimids and other Sunni rulers of North Africa, there began a decline of North
African Ibādīs which seems to have been accelerated
after the migration of the Banû Hillâl. The North Afri-
can Ibādīs withdrew, from the 6th/12th century
wards, into a few barely accessible regions where
they have continued to exist until the present day.
Thus the Ibādīs escaping from the central Maghrib
at first joined the Ibādī groups of the oasis of Wargla
and the Rīd and thereafter even founded new
colonies in the Mzaib, to which there came later the
remnants of the Ibādīyya of Wargla and of the Rīd.

The Ibādīs of Tripolitania were concentrated towards
the end of the Middle Ages in the Djibal Nafusa.
Today Ibādīs is practised in North Africa only
in Mzaib, in two-thirds of the island of Djarba,
and of the coast of western Tripolitania and
in half of the Djibal Nafusa. They are still
divided there into two main sects: the Wahbis and
the Nukkāris, the last remnants of a once-powerful
population which formerly played a very considerable
role in the history of North Africa.

The Ibādī imāms and doctors of North Africa
maintained fairly active relations with the muqaddâRAFT of Baṣra and Mecca and with the scholars of ʿUman.
There are preserved in the Ibādī chronicles of
the Maghrib several fragments of the letters exchanged
by the North African Ibādīyya and their co-
religionists in the East (cf., e.g., Masqueray, op. cit.,
65-6). Also the Eastern Ibādīs often travelled or sent
embassies to the Maghrib, especially during the rule
of the Banû Rustam, e.g., the journey made to the
Maghrib by the Ḫūrâsâni doctor Abū ʿAlî al-Ṣaḥmāhī (A. de C. Motylinski, Chemins des
Uman, 2, pp. 65-71; Masqueray, op. cit., 53-63, 74-5, 136-41). Conversely, scholars from the Maghrib often
travelled to the East (Masqueray, op. cit., 180-5; A. de C.
Motylinski, op. cit., tr. 112). After the fall of the
Rustamid imāmate, relations between the Ibādīs of
North Africa and those of the East became less close.
Nevertheless, as late as the 7th/13th century, the
muqaddâRAFT of ʿUman sent to the Maghrib several
Ibādī writings in the East, and one of the most
important North African Ibādīs writers, al-Dardjīnī,
was commissioned to write a history of the North
African Ibādīyya for the use of those of ʿUman.

(n) Western and central Sudan. In his important article Sur la diffusion des formes d'archi-
tecture religieuse musulmane à travers le Sahara, in
Travaux de l'Institut de Recherches Sahariennes,
xi (1954), no. 11-27, J. Schacht has demonstrated that it
was the Ibādīs of southern Tunisia, of Wargla and
of the Mzaib who brought the characteristic features
of Muslim religious architecture across the Sahara to the Hausa, the Kanuris and the Fulbe (Peuls). Thus the "staircase minaret" reaching the Sudan from southern Tunisia via Wargla, the rectangular minbar came from the Mzab, and the absence of a minbar among the Fulbe is due to the influence of the Ibāḍīs. According to J. Schacht, it was the Ibāḍīs also who introduced Islam itself into part of "Black Africa". The mediaeval Arabic sources, and especially the North African Ibāḍī sources, provide in fact many interesting and credible proofs of the activity of Ibāḍī missionaries, in western and central Sudan, from the 2nd/8th to the 8th/14th century. The town of Tahert, the capital of the Rustamid state, had in the 8th/14th to the 9th/15th century, the centre of intensive activity of the Ibacli sect of the Nukkaris against the Fatimids. According to al-Bakri, the route from Tāmdemka to al-Kayrawān, which was very important for Saharan trade, went through the (Ibāḍī) oasis of Wargla and through southern Tunisia, which also had a very numerous Ibāḍī population, as is known from other sources. There was also a caravan route which linked Tāmdemka to the town of Tripoli and which passed through Ghadames, a town which still had an Ibāḍī population in the 8th/14th century. The North African Ibāḍī chronicles provide various details particularly on the commercial relations between the oasis of Wargla, the Bilād al-Djarīd and the Djabal Nafūsa on the one side and Tāmdemka on the other.

As for commercial relations between Ibāḍīs and the central Sudan (the environs of Lake Chad) those mainly interested were the merchants of Tripolitania and the Fezzān, particularly those of the Djabal Nafūsa and of the little Fezzān state of Jawila (present-day Zouila), which had an Ibāḍī population as early as 145/762 and which was still Ibāḍī in the time of al-Yaʾṣūb, the second half of the 3rd/9th century. Jawila was considered as the gateway to the central Sudan, and it held a near monopoly of the slave trade in this country. Relations between the Ibāḍīs of the Djabal Nafūsa and the negro populations of the basin of Lake Chad were very close. The governor of the Djabal Nafūsa on behalf of the Rustamid imāms, Abū Ubayda 'Abd al-Hamīd al-Djanawunī (first half of the 3rd/9th century), spoke, in addition to Berber and Arabic, the Kanemī language, probably Kanonī. These commercial relations were in operation along a very ancient route which led across the Fezzān and the Kawkār. According to modern Ibāḍī writers (al-Barūnī, Rīḍā al-Sammā wa l-mubātādi'n, Cairo 1324, 23-4), there were still supporters of Ibāḍīsm in the Sudan towards the end of the 19th century (J. Schacht, op. cit., passim; T. Lewicki, Quelques extraits inédits relatifs aux voyages des commerçants et des missionnaires ibadites nord-africains au pays du Soudan occidental et central au cours des VIIIe-XIIe siècles, in Bibliographie Islamique, ii4 (1964), 513-35; idem, Traité d'histoire du commerce transsaharien, Marchands et missionnaires ibadites en Soudan occidental et central au cours des VIIIe-XIIe siècles, in Etnografia Polska, vii (1964), 291-332).

(o) Spain and Sicily. From the Maghrib, Ibāḍīsm penetrated at a comparatively late date into Spain. Among the six members of the ghūrā of Tāmdemka that had to choose the imām in 168/784-5, after the death of 'Abd al-Rahmān b. Rustam, there were two of Spanish origin: Masudd al-Andalusi and 'Ulama b. Marwān al-Andalusi (Masqueray, op. cit., 145). Remnants of the Ibāḍīyya still existed in Spain in the 5th/11th century (Ibn Hazm, Fīṣāl, iv, 170, 192). Similarly, there was an Ibāḍī-Wahhabi colony in Sicily in the 4th and 5th centuries (al-Wisānī, op. cit., 159-60).

**Doctrine**

The Ibāḍīyya, together with another Kharājī sect, the Shīrīyya, form the moderate branch of the Kharājīs. The Shi'ite branch of the Kharājī sects was represented by the Azařīk (see AΖARĪKA), on several
points, the most important of which is the belief that non-Kharidii Muslims are regarded as heretics; this was how the affair of the schism of al-Nukkār came about. The imām could be deposed if he did not observe the dogmas; the judges who had to decide whether he was conforming with the doctrine were probably the most important among those of Basra (Masqueray, op. cit., 144-5, n.). It seems that custom allowed several Ibādī imāms to exist simultaneously in different countries of the Muslim world; indeed, there were at the same time Ibādī imāms at Tāhert, in ʿUmān, the Ḥadramawt, etc. This principle was clearly expressed in the doctrine of the Hamzīyya, a branch of the Khāridji sect of the Adākrida, a group in which the simultaneous existence of several imāms was permitted until the whole world has been finally converted (see al-Shahrastānī, tr. Haarbrieker, i, 145). Nevertheless, there had been a tendency for the Ibādī world to form itself into a universal imāmate, which did in fact succeed towards the end of the 2nd/8th century, though only for a rather short period. We are referring here to the Rustamī imāms, who were recognized for a certain period by all the Ibādī groups of the west and the east, although of course, because of their distance from one another, these groups could neither unite nor achieve uniformity (Masqueray, op. cit., 51, 74-5). From the historical accounts, although they are rather uneven, it can be concluded that in addition to the imāmate there was also practised in certain cases another form of government—a sort of condominium, as in the case of al-Ḥārīth and of ʿAbd al-Djabbar, who were, according to the expression of al-Barrādī (op. cit., 170) muḍtārīḥīn fiʾl-mulk. It is true that this fact, which was a denial of the cardinal principles of Khāridjism, was an embarrassment to the doctors of the sect (see al-Barrādī, op. cit., 170-2).

In general, the dogma and the politico-religious theories of the Ibādīyya resemble on certain main points those of the Sunnis. The Ibādīyya differ from the Mālikīs on only a few points, among which is their theory on the creation of the īrān in the time of the Prophet must be considered as the most important (see Z. Smogorzewski, Un poème abddite sur certains divergences entre les Mālikites et les Abdites, in RO, ii, 260-8). There has also been pointed out the very close affinity between the Ibādī dogma and that of the Muʿtazila (Goldziher, cf. al-Shahrastānī, op. cit., 170); C. Nallino, in RSO, vii, 455-60). Unfortunately the existing sources do not provide a clear outline of the historical process by which the Muʿtazilī elements mingled with the Ibādīyya. It must, however, be mentioned that this Muʿtazī influence on Ibādī doctrine was so considerable that the Arab geographer al-Bakrī refers to the Ibādī sect as al-Wāsliyya-Ibādīyya (op. cit., tr. text, 72). The relations between these two sects even led to the foundation of a number of mixed sects.

It should be added that the Ibādīs were also eminent theologians. The earliest mutakallīm known was an Ibādī of Basra, Bīstam b. Umar b. al-Muslib-al-Dabbī (see above), who worked there between 77 and 81 (see al-Shamīkhī, op. cit., 111; on the Ibādī mutakallīms of the early period, see al-Shahrastānī, op. cit., 82, 83); the Muʿtazī mutakallīms consisted of the MĀliki scholars as the earliest do not appear until the 2nd/8th century (see Goldziher, op. cit., 80). On Ibādī doctrine, see, in addition to the works mentioned in this section: al-Shamīkhī, Kitāb al-Ībād, 1309, i-iv; al-Diyātālī, Kandārī al-bḥkrāyyā, 1307, i-ii; al-Sadrādī, Kitāb al-Dālī ʿal-ī-ibhrūn, 1306; Abī al-ʿAZīz (of the Bnī Īṣqūn), Kitāb al-Nī, 1305, i-ii; Aṭṭīyyaṣṣ, Sāḥib Kitāb al-Nī; Zeyd, Legislation
The religious and political unity of the Ibad sect was broken at a fairly early date by a number of schisms (ifirākh) and heresies (kādār), which resulted in the formation of numerous semi-political, semi-theological subdivisions (jirāḥ). These schisms were at first, during the period of hīman, of a purely dogmatic nature. Later, from the first half of the 2nd/8th century, these and other sects which were the result of political crises, which, in a theological system like that of the Ibadīyya, always appear as schisms. Among the political causes of the Ibadī schisms, two appear to have been of especial importance: the question of the condominium (iftirāk) (khilaf, mukhdāfa), and heresies (jirāḥ). This was concerned with the usurper Ibn Massala (or 'Abd al-Wahhāb b. al-Aswān), referred to by Ibadī authors as al-Hārith. The first half of the 2nd/8th century was purely political in origin, was founded in southern Arabia by 'Abd Allāh b. Ṭarfī, one of the companions of the imām Ṭabīb al-Hādhak, ca. 213/747. Its adherents were found mainly in the East, where Ibn Massala was an innovation (khutba). According to Nafath, the Ibadī sect known as al-Nafathiyya (or al-Naffatiyya), which was pure political in origin, was founded in Tripoli, towards the end of the 2nd/8th century by Khalaf b. al-Samb, a descendant of the imām 'Abd al-Wahhāb b. al-Aswān; it was not until later that it assumed the character of a schism over dogma. This branch had many adherents, especially in north-western Tripolitania. In the 3rd/9th century there took place another political schism among the Ibadīs of the Maghrib. This was concerned with the usurper Ibn Massala, the Ibadīs of the tribe of the Hawwāra, who founded an independent Ibadī state in the neighbourhood of Tāher. The Ibadī sect known as al-'Umarīyya was founded probably in the first half of the 2nd/8th century by ʿAbd Ṭarīq b. Umar (or 'Umayr). The 'Umarīyya differed considerably from the Wahhī Ibadīs and, according to 'Abd Zakariyya al-Wardānī, the doctrines of these two sub-sects differed completely. In matters concerning the Kurān, the 'Umarīs
followed the text of ‘Abd Allâh b. Mas‘ûd. Their adherents were found only in North Africa.

Some of the doctrines of al-‘Umariyya were similar to those of the Ibad branch of al-‘Haşan-iyâ (or al-Husayn-iyâ). The name of this scalar sub-sector, which was widespread only in North Africa, derives from its founder, Ahmad b. al-Husayn (al-‘Haşan) al-‘Aţrâbulusi al-Ibâdi, who appears to have lived in the first part of the 3rd/9th century. His diswâdân was known at Wargla towards the beginning of the 4th/10th century. Adherents of this branch still existed in the 6th/12th century in some districts to the east of the Djabal Nafusa.

In the first half of the 4th/10th century, there was formed the Ibâdi branch of the Fârîhiyya. Its founder, Sulaymân b. Ya‘kûb b. Aflâh, a descendant of the Rustamid imams who lived in the oasis of Wargla, forbade the eating of the large intestines of sheep (fârîh), hence the name of the sect. It may be that Sulaymân’s opinions were also influenced by the diswâdân of Ahmad b. al-Husayn al-‘Aţrâbulusi.

Nothing is known of the period when Sakkakî, the founder of another Ibâdi sect, the Sakkâkiyya, was teaching. This doctor considered that the communal prayer and the call to prayer were innovations; he also rejected the Sunna. The Wahbî Ibâdis described the Sakkâkiyya as mushrikun.

In addition to the works mentioned in the article, see: J. K. All A (I) (A.), a verbal noun meaning originally “belief” and “polytheism” there exists ma‘rîjat Allâh “knowledge of God”.

The adherents of the Ibâdi subdivision of the Hâﬁziyya, founded at an unknown period by Ḥâfîs b. Abî ‘l-Mîdkâm, maintained that between imân “belief” and ǧîrkh “polytheism” there exists ma‘rîjat Allâh “knowledge of God”.

The adherents of the Ibâdi subdivision of the Hâfziyya, founded at an unknown period by Ḥâfîs b. Abî ‘l-Mîdkâm, maintained that between imân “belief” and ǧîrkh “polytheism” there exists ma‘rîjat Allâh “knowledge of God”.

The sub-sector of the Yazidiyya, adherents of Yazid b. Abî Anisa (or Yazid b. Unays), and to be distinguished from another Ibâdi subdivision of the same name which is identical with the Nukkâris, held as one of their principal beliefs that God will reveal a new Kur’ân to a Persian prophet. It can thus be seen that Yazid carried to great lengths the theory of the fâhîrûd, “eminent qualities”, of the Persians and the Berbers in comparison with the Arabs, the gods of which are found also among the Wahbî Ibâdis.

Relations between these various Ibâdi subdivisions were in the main hostile. The Ibâdi historians often mention wars waged by the different branches, particularly the Nukkâris, the Banû Maşšâila and the Khalaﬁs, against the Rustamids. Nevertheless, there can be noticed from time to time, after the collapse of the imâmate of Tâherit, attempts at a reconciliation between several Ibâdi branches. Thus, for example, the population of the district of Zizû on the western coast of Tripolitania, composed of the adherents of the Ibâdi subdivisions of the Wahbiyya, the Nukkâr, the Khalaﬁyya and the Naffâhiyya, lived peacefully together under the direction of a common council, at the head of which in the first half of the 4th/10th century, was a Wahbî who had entrusted juridical decisions to a Nukkâr, the Ramâdân prayers to a Khalaﬁ and the call to prayers to a Naffâhi (T. Lewicki, Les subdivisions de l’Ibâdiyya, in Stud. Isl., ix (1958), 71-82).

**IBâHA (I) (A.), a verbal noun meaning originally “making a thing apparent or manifest”, with the implication that the beholder may take it or leave it, and then “making a thing allowable or free to him who desires it”; it has become a technical term with several connected meanings in the religious law of Islam; istisbaâha, taking a thing as allowed, free, or lawful; muhâb (the contrary of mahûf); “indifferent”, i.e., neither obligatory or recommended, nor forbidden or reprehensible; it is to be distinguished from its near synonym di‘âdha, “unobjectionable, valid, permitted”; the concept ha’âl, i.e., everything that is not forbidden, is wider.

The root does not occur in the Kur’ân. The earliest use of the word as a technical term, from Shâfi’i onwards, seems to have been with regard to those things which every one is permitted to use or appropriate; this meaning of ibâha is expressed, though still without using the term, in a tradition from the Prophet according to which “the Muslims have equal
rights to three things, water and fodder and fire" (Ibn Mādīq and Ahmad b. Ḥanbal; an earlier variant, in Abū Dāwūd, can be dated in the generation of A'māsh, d. 147 or 148/764-5). This has become a general rule of Islamic law, and also an article in the Maǧālila [q.v.]. In a narrower sense, the term may denote the authorization, given by the owner, to consume (part of) the produce of his property; this excludes appropriation and disposal in favour of a third person by the beneficiary; this rule, too, appears in the Maǧālila.

Dāi'ī madhhab, regard to acts is defined as "permission to carry out an act as the agent wishes" (Ḍihrāḏūni) or "a ruling which is not a request but gives the choice of acting or not" (Ṭahānawi); the performance of these acts is not meritorious, nor is their omission reprehensible. The details have been the subject of several controversies which in the works on usūl al-aʃār are often discussed in the sections devoted to the interpretation of the Kurān (an arrangement already apparent in the Kitāb Mafāštāh al-ʿulamāʾ of Khūwārzimān, 2nd and half of the 4th/10th cent.). The earliest of these controversies centred round the question whether the consumption of foodstuffs which had not been explicitly forbidden in the revelation was to be considered lawful or not. A tradition in Abū Dāwūd (415/31, 30) makes the Prophet say: "The pagans used to eat certain things and to refrain from certain things because they considered them unclean; now Allāh has sent His Prophet, has revealed His book, and has declared lawful and unlawful what is to be lawful and unlawful; therefore what He has declared lawful is lawful and what He has declared unlawful is unlawful, and what He has said nothing about is anything forbidden", etc. (Kurān, VI, 145). Also Kurān VII, 31 is taken to imply that all food and drink which has not been explicitly forbidden is lawful. Būkahārī, in the heading of a chapter (ʿīṣām, 27), without directly contesting the principle, makes the point that prohibitions enunciated by the Prophet must be taken to be declarations of unlawfulness unless it can be shown that the act in question is mubāh.

A similar doctrine is supported by the doctrines of the Khārfīḏs, and in particular the followers of Nāṣīda among them (al-ʿAṣhārī, Mākālātā, i, 90, 10-15, 127, 4-6); they were of the opinion that for religious duties to be incumbent, they must have been proclaimed by a Prophet, and that the individual could regard as lawful everything the prohibition of which had not been proved to him, so that he was excused if he was ignorant of the prohibition; the group of the Bayḥayṣyā ī went so far as to say that wine was originally permitted and there was nothing (in the Kurān) to forbid drinking it, even to the point of drunkenness (ibid., 117, 61).

In the controversies raised by the Muṭṭazilā [q.v.], this became a general discussion of the abstract quality of human acts, i.e., whether human acts, before revelation (or in the interval between two revelations), were to be regarded, in principle, as allowed or forbidden. The Muṭṭazilā, starting from their premise that reason decided whether acts were good (useful) or bad (harmful), were divided on the question of how to consider acts in which the qualificati ons of good and bad were evenly balanced, so as not even to lead to a preference for performing or avoiding them; the majority, it seems, regarded them as indifferent (mubāh), others as forbidden (maksūr), and others as left in abeyance (maḥṣūr) until their qualification was settled by revelation; nevertheless, these acts, not being positively bad, might be regarded as belonging to the category of good (in a wider meaning of the term) and such a distinction [q.v., too], together with "all ḥāris and groups among the followers of kiyyāt", concluded on the basis of Kurān X, 59 and XVI, 116 that the qualification must be left in abeyance. The opinions within the orthodox schools of law and theology, which in any case hold that the religious and legal qualities of goodness and badness are known not by reason but by revelation alone, were much firmer. The very basis of the reasoning of the Muṭṭazila, are divided; sūrā V, 1 and 4 are adduced in favour of the opinion that the acts in question are, in principle, forbidden, and sūrās II, 29 and XX, 50 in favour of the opposite opinion; the majority of the Ḥāfīzh class that they are allowed; the prevailing opinion among the Mālikīs and the Shāfiʿīs is that it is meaningless to apply those categories before revelation; the Ḥanbalīs are divided.

All are agreed, however, that in the actual law of Islam, generally speaking, everything which is not forbidden (or reprehensible) and does not, on the face of it, involve causing damage, is mubāh. This general rule has often found expression, from an early period onwards, in sayings of the most highly esteemed authorities, although it does not play a significant part in the doctrine of usūl al-aʃār. But al-Dāi'ī madhhab uses the principle that "everything that is not forbidden in the Kurān or in the sunna of the Prophet is lawful and unrestricted" (mubāh mualk) in an amusing way in order to show as legitimate the entertainment of male companions by singing slave-girls (Risālat al-Kiṣād, ed. Finkel, Cairo 1926, 56; transl., Pellat, in Arabic, i (1963), 125).

Among Sufis, antinomianism seems to have been later in developing; early Sufis were commonly rigorists in the cult and tutorists in points of conscience. But when Islamic spiritual life began to flow largely through Sufi channels, antinomian thinking appeared there too. Sometimes Sufis probably fell heir to the experience and even the language of earlier Shi'i traditions.

For Sufis, as for Shi'is, the texts of Kur'an and Hadith concealed a batin, a secret spiritual meaning; and some Sufis felt that following the batin was dispensed from the literal prescription. But whereas Shi'i antinomianism reflected the historical role of the imam and the elite community of his adherents, Sufi mysticism, like any mysticism, suggested a more personal rejection of literally formulated prescriptions. The batin was not an arbitrarily allegorical meaning of the letter, but rather an inner spirit to which the letter was an approximation, symbolization, or even exemplification, adapted to less spiritual minds. Accordingly, it could be expected that once this inner spirit was entered into, the actual letter was superfluous—the spirit would of itself call forth whatever action was needed.

This point of view took several forms. If God enlightened consciences directly, the scholastic interpretation of rules by shari'a scholars was artificial in comparison; hence, even those Sufis who upheld the norms worked out by the 'ulama' tended to argue on the basis of loyalty and exemplary zeal rather than claim that the shari'a 'ulama' really understood God's will better. Then Sufis believed that the advanced mystical devotee was the friend of God; and just as some Shi'is felt that whoever was devoted to the imam, even though not actually dispensed from shari'a rules, would be forgiven his transgressions, so some Sufis believed that the friend of God was free—that even if he still ought to perform God's commands, he did them out of uncoerced love; and if he slipped, he would be forgiven. Some held that the perfected Sufi saint could by his nature do no sin: whatever action he seemed to do must be understood otherwise.

Sufi discipline itself made for tension with the shari'a. The devotee who had reached high spiritual states might be so wholly in God's hands that he was not responsible for his own actions: if he did perform the ritual worship, it might be unawares—God took care of his enraptured worships. Especially illegal utterances (shakhsiyya') were held blameless under these circumstances. In any case, the novice must agree to obey his pir implicitly; many would add, even in seeming contravention of the shari'a. Moreover, Sufi ways of worship often seemed opposed to the shari'a—music and dance; even, eventually, taking drugs, or gazing at beautiful figures. Sufi apologists claimed that what was for a devotional purpose was exempted from the rules. Some of the Malamatiyya (q.v.), who made a point of concealing their virtues and not their vices, seem to have adopted the same positions on purpose to display them.

In all these cases, it was ordinary Sufi teaching which, however cautiously couched, at the least gave to a Sufi's obedience to shari'a rules a distinctive flavour. But all Sufism was esoteric: only the initiate could understand the real truth behind what was taught. Hence radiantly declared that the shari'a rules did not really apply to initiates at all. Moreover, as Sufis came to see all religions as equally legitimate—if not equally perfect—ways of approaching God, the rules of any one religion could seem little more than transient expedients.) Such radicals ranged from those who asserted antinomianism only as an esoteric principle, not to be actually practised, to those who, alleging some religious pretext, ignored the rules of any one religion could seem little more than transient expedients. But all Sufism was esoteric: only the initiate could understand the real truth behind what was taught. Hence radiantly declared that the shari'a rules did not really apply to initiates at all. Moreover, as Sufis came to see all religions as equally legitimate—if not equally perfect—ways of approaching God, the rules of any one religion could seem little more than transient expedients. (For example, the Nakshbandiyya and the Khadiriyya (q.v.); others, such as the Bektashiyya (q.v.), notably flouted conventional standards. Some jariyas were noted for insisting on the shari'a—for instance, the Naqshbandiyya and the Khadiriyya (q.v.); others, such as the Bektashiyya (q.v.), notably flouted conventional standards. Some jariyas were called in Persian, bid'at.

For some centuries, certain extreme antinomian dervishes were referred to as Kalandars (q.v.). But even within shari'a-observant jariyas, individual shaykhs might take a bid'at position.

Shi'i antinomianism sprang from chiliastic hopes: the hypocritically unjust world was to be transformed
and filled with justice by God's agent; what mattered was to dissociate oneself from the world and its ways and to stand ready to support the new order. Şifî antinomianism sprang rather from a mystical experience and vision, in which an inner ethical responsiveness made all external rules seem trivial or arbitrary. But the two sorts of vision, chiliasm and mystical, were often combined, especially in the later medieval period, when a Şii sect like the Nizâri Ismâ'îlîs took on the aspect of a Şii fârîka, while more than one Şii fârîka was adopting a Şii and more or less chiliasm outlook.

Bibliography: Most Şii writings of this period while upholding the şâ'irâ, have displayed one or more of the tendencies toward ibâda cited; Djiaâl al-Dîn Rûmî's Mathnawi exemplifies most of them. Ghâzâlî's polemic against the Ahl al-ibâda is edited and translated, with a useful introduction, “De Antinomismus der islamischen Mystik”, by Otto Pretzl, Die Streitschrift des Ghazali gegen die Ibadjija, Munich 1933 (SB Bayer. Ak., Phil.-hist. Abt., Jahrgang 1933, Heft 7).

( M. G. S. Hodgson)

IBÂHATIYA, Hindu sect. The Ibhâhtiyâ were, by some writers on Indo-Muslim history, confused with the Ibhâhtiya or Aṣhâb al-İbâha. As the Ismâ'îlîs are included among the latter, the writers have thought that the term Ibhâhtiya applies to them. A closer examination of the evidence, however, leads to the conclusion that the references are to a Hindu Tantric sect, which was also known as Vâma-mûrgî or Vâma-câri (“followers of the left hand path”) and formed a sub-section of the Shâktas. The Tântras form the scriptures of the Vâma-mûrgî. The essential requisites of Tântric worship are the five mûkharas, wine, flesh, fish, mystical gesticulations and sexual intercourse. They worship the female principle. The form of this worship is promiscuous intercourse in the form of communal orgies. The women place their cölîs (bodices) in a jar. The male worshipers pick out a cölî at random and have intercourse with its owner (H. H. Wilson, Religious sects of the Hindus, 245-63). The ceremony is called Bharatî-lahra (S. H. Hoджvlâs, Studies in Indo-Muslim history, 1, 342). The followers of this sect were specially strong in Orissa during the period of Muslim rule.

The Fustâhî-i Firuzshâhi mentions that the Ibhâhtiyâ sect was very strong in Orissa, and it worshiped it. This was probably a symbolical representation of the female sexual organ. The Sûrat-i Firuzshâhi (p. 146) says that the Ibhâhtiya “have an appointed day when they gather at a place fixed for the purpose. They plaster the ground with cowdung and, in accordance with the custom of the idolaters, scatter rice and flour on it. They then ask the person whom they want to turn into a follower to prostitute himself on the ground, and teach him formulas of infidelity to repudiate Islam and to say that he has become their follower. That night they collect their daughters, wives, mothers and sisters and give them pork to eat and wine to drink. Then the lamp is put out and they take off the garments of the women. Every one then pulls out a garment and cohabits with the woman to whom the garment belongs, even though she may be his own daughter, sister or daughter”. This is precisely what the Vâma-mûrgî did. The text clearly says later (p. 59) that the inhabitants of Dîândnagars (Orissa) “all are Ibhâhtis, worship images and have temples in every town, their main place of worship being the temple of Dîjagnâhî”. In those days Vâma-mûrgî Tântrism seems to have been very strong in Orissa.

H. Qureshi)

IBÂHIYYA [see IBBA (II)].

IBB, formerly the capital of the bâdî of the same name in the sandâb of Ta'izz in the Yemen; now, since 1946, a separate ibdî, comprising the bâdî of Ibb, `Udeyn, Dîl Sufîl, Kû^tâbâ and Yerim. Besides the pronunciation with i peculiar to the Yemen, we find also Abb (in Niebuhr: Aebb). At an earlier period the walled town, with a population estimated at 4,000, belonged to the territory of Dîl Djibîla. It is situated on the ‘upper road’ leading from ‘Adan to ŞanÂ‘â. According to the proposals of the A. Beneyton mission of 1912 for the construction of a railway from al-Hudaydah to Ta'izz, it was to be a station on this line, as it is now an important station on the motor-road from Ta'izz to ŞanÂ‘â. But this project was never carried out, and the later development of motor-traffic made it superfluous. It lies, 2050 m. above sea level, in a fertile region where cereals and fruit are grown, and also coffee, bâdî, indigo and walnuts. There are about 60 mosques within the town; the water-supply is provided by an aqueduct bringing water down from the mountains, which are about 3200 m. high. In the vicinity there was at one time a silver mine (photographs in the İslâm-Stichung in Leiden).

IBDÂ, absolute creation, primordial innovation.—The term itself is no longer in use, but the Kur'ân calls God Bâdî, Absolute Creator, Innovator. The two verses ii, 117 and vi, 101 assert that God is “Creator (Bâdî) of the heavens and the earth”; we should obviously understand by this, of everything. The commentators emphasize that God is called Bâdî by virtue of His (absolute) creation of the heavens and the earth, and Kâhîl by virtue of His creation (khâlîf) of man (“made of clay”), LV, 14.

There is another distinction founded on the Kur'ân: the text frequently contrasts “the first creation” with “the second”, that of the resurrection of the body. In this case it is never the verb bâdî or its fourth form abâdî that is used, but the expression bâdî al-khâlîs, “He began to create” (e.g., X, 4, 34; XVII, 64, etc.). Every form of the verb bâdî implies, strictly, not a “first time”, but a radical innovation, an absolute bringing into existence.

Taking its meaning from the divine name Bâdî, the maḍâr of the fourth form comes to express, in the elaboration of Muslim thought, the actual act of God. Ibdâ belongs above all to the vocabularies of Şii Islam.
(particularly Isma'īlism) and falsafa: its meanings here depend on the respective world-views. *Ibn al-Kādūm* gives it a further technical meaning consonant with the Sunni can of 'creation'.

References to *Shī* thought — *ibdā* is thought of in connexion with the divine *kun*, the *Be*! of the Word that brings into existence. "The Creator (*Bāḍī*) of the heavens and the earth, when He decrees a thing, He says to it only "Be!", and it is" (Kūrān, II, 117). But "the heavens and the earth" of the verse are subject to interpretation. By *ibdā*, by His "primordial establishing", as H. Corbin translates it, God brings into existence from an existing higher world of the *mubādʿa*, that is to say Intelligences capable of hearing the divine call, and of answering it (cf. the 9th-10th century, Abū Yaḥyā al-Sījdīstānī, Kitāb al-Yandī, § 40, ap. H. Corbin, *Trilogies ismaïliennes*, Teheran-Paris 1961). Such is the "world of the *ibdā*", to be distinguished from the lower "world of the *kalāl*". More precisely still, the divine *ibdā* is addressed to the First Hypostasis, *al-mubādʿa* al-*awwal*, in which the intelligible pleroma is contained. One might even say that, for al-Sījdīstānī, the formulated and active (or *mubādʿī*) *ibdā* is the First Hypostasis. The same line of thought is found in Nāṣīr-i Khusrav.

We later find the Imām Mūsā Ṣadrā Shīratī (10th-11th/16th-17th century) protesting against those who identify the radical Will (*maṣūfa*) with the divine Essence, and make the *ibdā* into the First Emanation. For him, referring to the 5th Imām, *ʿAlī Rīḍa, no distinction exists between radical Will, act of Will (*irḍa*) and *ibdā*; they are three names for divine Activity. Now, divine Activity is God, but as manifested in the First Cause, Essence being God unmanifested. From the First Cause emanates the "Muḥammadan Reality", "the mass of primordial Light ... from which come the fourteen higher archangelical Lights" (cf. H. Corbin, introduction and notes to Kitāb al-maṣūfa, "Book of metaphysical Penetrations", Teheran-Paris 1964, 83, 121, 168, and *passim*). These various nuances of *Shī* interpretation appear to represent various attempts to discern the absolute immediacy of the *ibdā*, the creative Word *kun*, in an emanatist cosmogony where "*Sunna* comes from the One but the One".

_Falsafa._ — Abū Yaḥyā al-Kindī, closer in this to the Muʿtazilis than to other "philosophers", takes *ibdā* in the sense of temporal creation _ex nihilo_ (*Rasāʿīl al-Kindī, ed. Abū Rida, i, Cairo 1360/1950, 207, 270; cf. R. Walzer, _Greek into Arabic_, Oxford 1962, 188-9). For later falsāsifa, Ibn Rusdh as well as Ibn Sīnā or al-Fārābī, *ibdā* denotes the absoluteness of the creative (emanative) act in the production of beings that have no reason for existing in their own essence. Here too we find an emanatist of a neoplatonic kind, and the idea that "nothing can come from the One but the One"; the First Intelligence is the first of the *mubādʿāt* (cf. al-Fārābī, _ʿUyun al-maṣāʿīl_, apud Al-Fārābī’s _Phil. Abhand_.), ed. Dieterici, Leiden 1890, 58). But while *Shī* thought as such puts the accent on the divine imperative *kun* and its immediacy, _falsafa_ whatever *Shī* influences it may have undergone, emphasizes above all the idea of _ibdā_ an absolute production of being. Here, as an example, is a brief analysis of Avicenna's vocabulary.

Two questions are found in Ibn Sīnā: (1) production of being; (2) the method of this production.

(1) _Production of being._ In his explanatory and didactic works, Ibn Sīnā certainly uses _khalā_: "_Khalā_ signifies first of all to make to receive being, whatever it is" (*Rasāʿīl*, Cairo 1326, 101). But in the texts that serve as a prelude to his _Fiḥma maṣūfīyya_, in which he expresses a more personal thought, *ibdā* seems to him best to denote the absolute innovation, considered non-temporally, of a being not necessary in itself, which is really preceded by nothing, not even not-being, and which takes all that it is from the First; thus Iṣḥāq, ed. Forget, Leiden 1892, 153. The First created thing, _al-mubādʿa_ al-*awwal* (*ibdā*, 431), is the first Hypostasis or the Intellect of the All. More clearly still, the "Commentary" (*garh*) on the pseudo-"Theology of Aristotle" (ed. A. Badawi, Cairo 1947, 60) takes *ibdā* as the "creative trance" where "*kun*" and 'creation' (or *gushing out*) when the procession of beings from the first Being is considered, and 'creation' (*ibdā*) when the relationship of the first Being to the other beings is considered". The accent is still laid on radical coming into existence brought about by *ibdā* (*ibdā*, 64).

(2) _The method of production._ (cf. Iṣḥāq, loc. cit.; Ṭisʿ ṛaʿdūl, 101-2, etc.). In a more limited sense *ibdā* denotes the production, without any kind of intermediate pre-existence, of _incorrupible and eternal_ beings, whether above all incorporeal or corporeal (the celestial spheres): here again we find the "world of the *ibdā*" (or _dār al-ibdā_*) of *Shī* thought. _Khalā_ denotes rather the production, with or without an intermediary, of corporeal beings, whether _incurruptible_ or _incorruptible_: _khalā_ denotes the production, with an intermediary, of corruptible beings (in a sense that is quite close to that of _sunn_, another of Avicenna's words). Finally, *ṣūlāth* should be noted; this term emphasizes the non-necessity of the final product; it could thus be applied to any being that is not necessary of itself, although it preferably implies a temporal beginning (cf. A.-M. Golechon, _La distinction de l'existence et de l'existence d'après Ibn Sīnā_, Paris 1937, 241-59). Thus, then, in Avicenna's texts, *ibdā*, _khalā_ and _ṣūlāth_ suggest above all, but in differing degrees, creative emanation proceeding from the first Being; _takwin_ and _sunn_ are reserved for the production ("manufacture") of compound beings from pre-existing elements.

To conclude this brief (and fragmentary) lexicographical study: in _Shī*ism as in _falsafa_, *ibdā* puts the accent on the absolute power of the creative act (or gushing out). The way in which this term is applied to the beings thus produced, the *mubādʿāt*, depends on the particular cosmology or world-view.

*Ibn al-Kādūm._ — It was apparently after the conflicts with _falsafa_ (e.g., al-Shahrastānī, etc.) that *ibdā* was fully accepted into the vocabulary of the _muḥallīmān_. It bears the same fundamentally basic meaning, but its connotations are certainly closer to those it has in al-Kindī than to those it has in Avicenna or the *Shīs*. For the sake of brevity, we shall confine ourselves to referring to the _Ṭaʿrīfāt_ of al-Djurjānī (ed. Flügel, Leipzig 1845, 5-6), which summarize with precision the usage of the school in its conflicts with *falsafa_.

To conclude this brief (and fragmentary) lexicographical study: in _Shī*ism as in _falsafa_, *ibdā* puts the accent on the absolute power of the creative act (or gushing out). The way in which this term is applied to the beings thus produced, the *mubādʿāt*, depends on the particular cosmology or world-view.
thing. Khalk and tahwin are distinguished from one another, in that khalk emphasizes the idea of creating, whereas tahwin emphasizes that of forming or fashioning. Al-Dinwalla emphasizes that onomatopoeic verbs known as "replacement" (ibdal) is used for the formation of the heavens and the earth, and the verb khalka for the creation of man.

**Bibliography:** In the article.

**IBDÁL (a.), "replacement", "mutation", technical term in Arabic grammar indicating on the one hand morphological features involving a mutation of a phonetic character, the grammatical (nahwi) ibdal as in il-taṣāla < it-taṣāla [see HAMZA, NAHW, TAYNIR, etc.] and, on the other hand, in its lexicographical sense, the doubles ibdal, muḍāra, muḍākaba, nāzīr, etc. which are very common in Arabic and which differ from each other only by a single consonant: madāha/madāda "to praise", kaṣṭa'al-kaṣama "to cut", etc. This lexicographical (lughawi) ibdal has intrigued the philologists, who from an early period have studied the phenomenon and especially have drawn up lists of examples, though generally neglecting to indicate their provenance. Two main problems presented themselves: first was the question whether doubles of this type existed in the same dialect with an identical meaning, and the second, whether the quality of the consonants in question played any part in their formation. Not all linguists have seen these problems very clearly and many have limited themselves to listing the examples which may be classified under the same rubric according to the "permutation" in question (I, II, III, etc.). A scholar such as Ibn Fāris (d. 595/1004) has no hesitation in stating that the Arabs have a habit (min sunan) of replacing one phoneme (harf) with another (ṣabi'), ed. Choueini, Beirut 138/1964, 203-4), and Ibn Sidūd (d. 458/1066) admits the existence of muḍāra in the speech of one single tribe (Muḥṣasas, xiv, 19). On the other hand, Abu 'l-Ṭayyib al-Lughawi (d. 421/1030), and who seems to consider that these doubles are not found within one single dialect (K. al-Ibdal, ed. Iṣṣ al-Dīn al-Tanukhi, Damascus 1379/1960, i, 261) and he is even more categorical in his introduction, a passage from which has fortunately been preserved by Suyūṭi (Muṣḥur, i, 273; 2nd ed., i, 460): he does not see the phenomenon of ibdal as intentional, but as consisting of the appearance of variants (lughawi), of paronyms used in different tribes. He does not, however, consider that this paronym necessarily implies that the phonemes in question have adjacent points of articulation, for he cites cases of ibdal which are very far from complying with this condition: ḥij, ḥij, ḥid, etc. Al-Mubarrad (d. 285/898), however, had already considered it essential that they should be adjacent (Kāmi', Cairo 1308, ii, 97); Ibn Dīnār (d. 932/1002) in his Sīr al-sīnā (i, 197) and Ibn Sidūd (Muḥṣasas, xiii, 274) followed him on this point.

The examination of doubles was also to lead to the formation of a more general theory on the origin of language; Ibn Dīnār (Khaṣṣī, i, 46) had already ruled out the fact that onomatopoeic words formed a large part of the vocabulary, but it was Fāris al-Širāḍī (q.e.) in particular who developed this theory in his Sīr al-layḥi fi 'l-kab ṣa wa l-ibdal (Istanbul 1248); he points out that the verbs which imply, for example, an idea of rupture, breaking, etc. offer many examples of doubles, and considers that the onomatopoeic bilateral form with a long second radical (verbs known as "deaf") is the earliest (e.g., baṭa "to cut") and that the Arabs consciously replaced the second element of the doubled consonant in order to express a different shade of meaning (hence baṭa'a, baṭama, etc.); obviously one is led to ask whether a bilateral has become a trilateral, and thus the whole question of biliterality is raised.

We cannot investigate in detail here the rules which the obliques have attempted to isolate. For example, al-Farrā' (d. 207/822) had stated that before kh, ch, c or l, the sibilant s changed to the emphatic s; al-Sid al-Baṭalwāyisi (d. 520/1126) adds to this qayn; and al-Ḥarīrī, in the maḳāma haḥlibiya, delights in collecting doubles in s and g. In addition, the grammarians enumerate very carefully all the phonemes which permute in the type of ibdal known as nahwi, but they do not agree as to their number.

From another point of view, it is perhaps not without interest to mention the idea of the editor of the K. al-Ibdal of Abu l-Ṭayyib, who suggests (Introduction, 41-2) that the use of doubles to enrich modern terminology and proposes, for example, ta'rīth "demarcation" and ta'rif "land survey", or mirdaḵa "walnut-cracker" and mirdaḵa "hazelnut-cracker" which would probably lead to a certain amount of confusion.

After allowances have been made for artifice and error (in particular the ṣabī', misreadings which have led to a fair number of bādais), it would be useful to collect the examples cited in the monographs, to compare them with the roots of the other Semitic languages and submit them to detailed analysis. This would permit, to the extent that they can be localized, the production of maps showing the linguistic geography of ancient Arabia (cf. C. Rabin, Ancien West-Arabian, London 1951).

**Bibliography:** Grammatical works generally contain a paragraph on ibdal, but the most complete synthesis is that of Suyūṭi (Muṣḥur, i, 272-8; 2nd ed., i, 458 ff.) and the most profound study is that of Iṣṣ al-Dīn al-Tanukhi, in his Introduction to K. al-Ibdal of Abu l-Ṭayyib, 5-42; see also B. Bustani, in F. Bustani, Dā'irat, 42-43; and the bibliography cited there. Besides the K. al-Ibdal already mentioned, the other ancient monographs which have been preserved are those of Ibn al-Sikkit, al-Kab wa l-μaḍākaba wa l-nāṣī'ir, ed. Tanukhi (in the press).
the camelus dromedarius, which lives in the area from the Indus valley to the Sahara and the Congo, and for convenience we shall call it "camel".

Early poetry and works of lexicography bear witness to the extraordinarily rich vocabulary which Arabic possessors to describe this animal, which provided the Bedouin with a large part of his food, his clothing and his shelter, and served as a mount and a means of transport (see, e.g., Ibn Silduh, Muhhasas, vii, i-174; F. Hommel, Die Namen der Säugetiere bei den südsemitischen Völkern, Leipzig 1879, notes more than 160 words); there are terms for the camel at different stages of growth (for the modern period, see, e.g., Jaussen, Moab, 270), many descriptions based on physical characteristics, and equally numerous metaphors, but only four terms are really specific: itil (fem.) indicates the species and the group, ba'tir, the individual, regardless of sex, nāba the female and diimal the male (sometimes used equally with itil for the species; see Ch. Pellat, Sur quelques noms d' Animaux domestiques en arabe classique, in GLECS, viii (25 May 1960), 95-9).

There are four terms found in the Kur'ān, in particular appears in the edifying stories of Šālīb, the Thamūd, etc. (see VII, 71, 75, X1, 67, XVII, 61, XXVI, 155, LIV, 27, XCI, 13). Dīnimal seems to come from Hebrew (gimel being a reminiscence of the form of its neck) and to be itself the origin of Greek καμήλος and Latin camelus.

The Kur'ān certainly says (LXXVIII, 17): "What, do they not consider how the camel (itil) was created?" but some interpret this verse as an allusion to the clouds. The popular belief that this animal is descended from demons (ṣayātīn) survived into Islam (cf. al-Djahiz, Hayawān, i, 297, 343; Ibn Kūtayba, Muḥāsibī al-khādījī, 163); moreover, it can happen that dīnīn here forms the title of a camel (E. Westermarck, Pagan survivals, London 1913, 6); according to a current legend, the camel urinates backwards because it was "modified" in order not to soil Abraham (see especially H. Massé, Croisances et coutumes persanes, Paris 1938, i, 187). The early Arabs believed that the descendants of the herds which had belonged to the annihilated peoples of ʿAd, Thamūd, etc. had taken refuge in the country of Moab, where they lived in a wild state (raḥīl); the males then bred with "Arab" female camels and produced the "mēhara" (mahriyya), a species famed for its speed and the slimmness of its limbs and body, as well as other less well-known species; this belief is perhaps a survival from the period when the camel lived wild in Arabia. It is worth noting also that the giraffe is considered either as belonging to the camélidae or as being the result of a cross between a camel and a panther or other animals (see al-Dībāzh, Tarbi', index, s.v. sarāfa).

The camel, unlike the horse, played an important rôle in sacrifices; before Islam, camels were ritually slaughtered at the time of the pilgrimage to Mecca (see J. Chelhod, Le sacrifice chez les Arabes, Paris 1955, index s.v. ēdāy). The recitation of one eye was performed on a stallion as a rule when the herd numbered a thousand, and the second eye suffered the same fate when this number was exceeded (see al-Dībāzh, Hayawān, i, 17); this practice, intended to ward off the evil eye, to avoid distemper, and to protect the herd from the attacks of hostile tribes, may be compared with the uṣūra (q.v.); ignipuncture was practised on a healthy animal to cure animals afflicted with mange (uṭra). The reception of guests by a generous host was always marked by the slaughter of a camel, and the unfortunate beast was also the victim in the game of māsār (q.v.). Closely associated with its Bedouin owner during his lifetime, his camel often followed him in death (see maʿlīyya) to serve him as a mount on the Day of Resurrection. Even recently a camel-owning tribe would make the animals take part in mourning by inducing the female camels and their young to emit cries resembling lamentations (see A. Dhin, Nomadisme, 427-8). The camel is one of the animals endowed with baraša (q.v.), and to eat its flesh amounted to an act of heresy (cf. J. Wellhausen, Restauration, 115, n. 2); in Morocco, the Prophet is made to say: "He who does not eat of my camels does not belong to my people" (Westermarck, Survivals, 105-6). Its flesh is indeed perfectly licit, whilst it is abominated by the Jews because its hoof is not cloven (Lev., XI, 4; Deut., XIV, 7). A camel seen in a dream is usually a good omen, but in Persia, if it falls asleep at the door of a house, the owner will die (H. Massé, Croisances, 1, 193).

Pre-Islamic poetry gives pride of place to the she-camel, the Bedouins' favourite mount, and the rakīl of bāṣīda is the occasion for detailed descriptions accompanied by extremely eulogistic epithets; that of Ṭarafa, in his muṣāllaka, is justly famous (Fr. tr. by Cauvin de Perceval, apud A. Machuel, Auteurs arabes, Paris 1924, 45-7; Eng. tr. A. J. Arberry, The seven odes, London and New York 1957, 85-9), but many other poems contain lyrical passages on the camel, which seems to be so intimately linked with the very structure of the bāṣīda that some modern poets, who have rarely if ever seen riding-camels, feel that they too must conform artificially with the tradition. What the poets most esteem is the smooth gait, the speed, the sobriety and the endurance of the "ship of the desert" (ṣafinat al-barr; Eng. tr. by C. Naim, in DMC, xlv (1890), 165 ff., analysed by G. H. Bouquet, in Arabica, vii/3 (1960), 255-6). During their long journeys across the desert, the Bedouins loaded their water-supplies on camels specially kept for this purpose (rawiya), but they sometimes had to tie up the mouths of some of their animals in order to prevent them from ruminating, and thus be able to find in their stomach, in case of need, water which was still drinkable (Westermarck, Survivals, 357); at other times they cut the throat of a sacrificed animal to collect and drink its blood (madjdābī) (see Arabica, ii/3 (1955), 327). It was also said that camels prevented blood from being spilt, for they were used to pay blood-money (diya [q.v.]); it was in camels also that a bride's dowry was paid; thus the hādīt (?): "Do not speak ill of camels for in them is found a means of avoiding bloodshed (rabib al-dam) and of paying the dowry of a woman of noble birth"; according to another hādīt: "Camels are a source of power for their owner, sheep a blessing, and good is attached to the forelock of horses until the Resurrection".

The character of the camel, its spiteful disposition (cf. H. Massé, op. cit., 187), and its stubbornness have often been stressed; the rutting stallion (cf. Leo Africanus, i, 557) has an extraordinary strength and will let no-one approach the herd of which he is the head; he makes the soft palate (ṣibāṣibā) project from his mouth, belling violently. Of the males, only those selected when young for breeding are kept uncastrated; this avoids fights to the death between stallions. Animals destined as mounts and those to be used as beasts of burden are also selected at an early age. Each tribe branded its herds with a red-hot iron, which gave occasion for ceremonies...
whose significance has somewhat changed in the course of time [see MAWSIM].

The strength of the camel is admired, also the ease with which (thanks to its long neck, which serves as a balance) it can get up from the ground when laden with heavy burdens; in Islamic literary sources it is compared with the elephant, and it is in a sense the symbol of the Arabs just as the elephant is of the Indians.

For transport, the early Arabs used a rudimentary pack-saddle (ibd) or a qadad of the size of the hump, which, when the camel was reared, took the place of the lant (lant, Q.v.). The question of the riding-camel and of the position of the rider in relation to the hump has been studied by W. Dostal (in L’antica societa beduina, t. 15 ff.); according to this writer, the practice of sitting behind the hump is earlier than that of placing the saddle directly on the hump, which dates from the beginning of the Christian era; Leo Africanus (i, 35) mentions the use of a saddle between the hump and the neck, corresponding to the rahla of the present-day “mehrāristes” (troops mounted on fast camels)—a light saddle placed on the withers of the animal. The early Arabs must sometimes have ridden bareback, but generally they used a saddle (rahāl), which was called ribāla when it was adorned with skins; this saddle was made of wooden bows (katad) joined together with leather thongs; it was separated from the hump by cushions and was held in place by girths passing under the breast (ghurda), the belly (hakab) and the loins (rabad) of the animal. A rope threaded through a nose-ring (ḫiṣama) made control of the animal easier than when the simple halter (rasan) was used, and a curved stick (mīgħjan) was used to guide it. Women of a certain rank rode in a palanquin (hawadaj) made of hoops arranged to form a dome and draped with hangings to screen the traveller from prying eyes; one of these palanquins has remained famous in the history of Islam—that in which ‘A‘īsha sat during the Battle of the Camel [see AL-DJAMAL]. Palanquins of this type are still in use nowadays, particularly during marriage ceremonies, and are called ʿajūfī, bāṣqr, etc.; moreover modern descriptions of the harnessing of camels correspond very closely with what we know of those used in earlier times, and the terminology itself has scarcely changed (see, e.g., Jaussen, Mosb, 272-3). Among the Touareg (Tawārīk [q.v.] of the Sahara, apart from the rahla of the “mehrāristes” four kinds of saddle are in use: tarik, with a pommel in the form of a cross; tamak, of the same shape but more luxurious; tahyast, simpler, with a pommel in the form of a rectangular batten; and ʿaggāwi, a woman’s saddle, wider and heavier and provided with semi-circular hoops attached to the side (see Ch. de Foucauld, Dict. touareg-français, Paris 1951, ii, 547, 723, iii, 1273, iv, 1623).

Among tribes which are at least partly settled, the camel is still used for agricultural work—ploughing, threshing, etc. (see G. Boris, Documents, passim, with illustrations and vocabulary), and Leo Africanus (ii, 40) already mentions the custom throughout Numidia of ploughing with a team consisting of a horse and a camel. Nowadays the peasants of Cape Bon (Tunisia) often harness a camel to a two-wheeled cart, and in the streets of Karachi (Pakistan) tall camels may be seen drawing four-wheeled wagons. Yet such work does not make the best use of the camel’s attributes, which are perfectly adapted to the conditions of life in hot deserts and which are pre-eminentely suitable for journeys across long stretches of desert and for forays [see GAZAW] in regions where the climate and the vegetation are unsuitable for the rearing of horses in great numbers. In the early period of Islam, the camel was used as a mount and as a beast of burden for long or short expeditions; during the conquest of Ṣrāk, the Persian commander himself was mounted on a dromedary, but it was on horseback that the warriors were accustomed to face their enemies in single combat; and it was also on horses, which until then had been led, that the mounted fighters formed themselves into line of battle to commence the attack (tandzala: to dismount from a camel and mount a horse in order to fight). The historians relate that the rebels who went to meet ‘Ali at Basra had a certain number of camels [see AL-DJAMAL], but later, as the theatres of operations became more distant, the camel no longer appears except in the baggage-trains, and it is worthy of note that in the characteristic texts assembled by G. Wiet (Grandes traditions musulmanes d’Islam, Paris 1964) the camel is not mentioned after the battle of that name. Even when ‘Ukba b. Nāfi’ [q.v.] set off on the conquest of Fazzān [q.v.], he assembled a light force of 400 horsemen accompanied by 400 camels carrying 800 skins of water (Ibn ‘Abd al-Hakam, Conquête de l’Afrique du Nord, ed. and tr. A. Gateau, Algiers 1947, 61). Historians and geographers give very large numbers when they speak of the herds of camels of the Nejd (J. R. Mauny, op. cit., 289-91), and Ibn Khalid, for example (Berbères, ii, 70), tells how the Almoravids made off with 50,000 animals belonging to the government of Siddījīmā; such figures do not seem exaggerated when it is recalled that at the beginning of the 20th century there were 180,000 head of camels in the province of Oran alone. The Andalusians alone among the Arabic-speaking peoples were deprived of the familiar sight of riding- and pack-camels (cf. H. Pérès, Poésie andalouse, index). At the beginning of the 10th-16th century, Leo Africanus devoted a substantial chapter to the camel (Description de l’Afrique, ii, 555-8). He rightly remarks that “all the Arabs who own camels are lords who live in freedom, for with these animals they can remain in the deserts”. Some of his statements may be exaggerated, as for example when he says (cf. Anf. i, 717-18) that in Africa can carry their burdens for forty or fifty days without its being necessary to feed them in the evening; they are unloaded and allowed to graze in the surrounding country on a little grass, thorns and a few branches”, or when he gives distances which are patently excessive; he mentions moreover that the camel, after journeying five days without eating, loses the fat of its hump, fat of which the early Arabs were especially fond. He states that the camel drivers urge on the exhausted beasts by singing to them rhythmic chants (ḥiḍāṭ; see GHA’NA’), and relates that in Cairo he saw a camel dance to the sound of a drum. Leo Africanus specifies that an animal in bad physical condition sold for a few dinār, and adds that 1000 ducats represented the value of 100 camels; a more precise figure cannot be expected, for the prices varied according to the condition of the animal: if it belonged to a rich lord, it was worth more, if it was under the control of the government, less; if it was in a large city, there was competition between the buyers. The camels used by the camel-owning tribes of the desert consist of slow and sturdy transport-camels, while the riding-camel, the “mehrā” (mahri), is confined to the desert where, after a fairly simple training, it is used for swift
journeys. The gestation period of the mahríyya is twelve months, and when she has given birth her baby camel is lovingly cared for; for several days a wide belt is put round it to support its intestines and hold in its belly, and it is kept in the tent to accustom it to human company. In spring its hair is cut; only at the end of a year is one of its nostrils pierced—this is later threaded with an iron ring. At the same time a piece of pointed wood is inserted into it so that when it tries to suck, it pricks its mother, is kicked and abandoned the udder for fresh grass. At the age of two years its training begins; it is first taught to stand motionless, not moving from one spot, then it is introduced to the saddle and the nose-ring, through which a guiding-rope is passed; it is taught to run as fast as possible by light whipping, and to kneel at the voice of its master. The conditioning of its reflex actions is made very easy by the sensitivity of its skin to the slightest blow. Its life-span is about 25 years. Its speed varies from 16.1-25 miles an hour, and it can cover 90 miles in 15 or 20 hours, but thereafter it must rest. The pack-camel walks at 14 ft. or 3 miles an hour and covers distances of 15 or 20 miles at a stretch with an average load of 3 or 4 cwt.s. The sobriety and endurance of the "ship of the desert" are legendary; in its five "water buckets", it stores a considerable amount of water, of which it can drink a considerable proportion. In its five "water accounts of the sin of Adam and Eve, Iblis retains his proper name when it is a question of his refusal to bow down before Adam (II, 34-35, 116); but when he is the tempter, he becomes al-ghaylān, "the demon". The revolt of Iblis and the scene in the Garden as described in the Kurʾān may be compared with Christian traditions. In the Life of Adam and Eve, § 15 (Kautzsch, Apokryphen), it is stated that the Archangel Michael had invited the angels to worship Adam. The devil objected that Adam was less than they were, and younger; he and his host refused to worship and were exiled to this Earth. According to the Schatzkiste (ed. Bezdol, 15-6 of the Syro-Arab text), God gave Adam power over all creatures. All the angels therefore bowed before him, with the exception of the devil, who, overcome by jealousy, exclaimed: "It is he who should adore me, who am light and air, whereas he is only earth." He was then driven out from heaven together with his host, and was, from that moment, named Satan, Demon, etc. Thus until the Day of Judgement God will allow Iblis to tempt the angels, the servants of God (Kurʾān, XV, 39-42; cf. XXXIV, 20-1). He is the "sly tempter" who whispers evil thoughts into men's hearts (ibid., CXIV, 4-6). The hādīf [q.v., so well known in Arabic literature, who is heard but never seen, has on several occasions been a manifestation of Iblis. It was in this form that Iblis is said to have warned 'All not to wash the body ofMuhammad; but after this another hādīf recalled the Prophet's son-in-law to the correct course (al-Thalib, Kisās, 44). This produces the problem of the "distinction of the spirits" on which many Sufis meditated. At the end of time Iblis is to be thrown into the fire of hell, with his host and with the damned: "then they (the false gods) shall be pitched into it, they and the perverse and the hosts of Iblis, altogether" (Kurʾān, XXV, 43). This verse is reminiscent of Matthew, XXV, 41: "Then shall He say also unto them on the left hand, Depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels." It is only a few Sufis of extreme tendencies who envisage a "pardon of Iblis". There are two questions which are the subjects of thought or meditation among Muslims. 1. The nature of Iblis. Is he an angel or a jinn [q.v.]? We have seen that there are many
Kur'anic texts which seem to count him among the angels: “All the angels bowed together, except Iblis...” 

2. The sin of Iblis. On the other hand, tradition has no hesitation concerning the character of Iblis, his disobedience, the divine curse upon him, and the character of “enemy of God and of mankind”, of perpetual tempter, which will be his until the day of the Last Judgement.

The two sins which are constantly attributed to Iblis are pride and disobedience. The origin of his revolt seems to have been pride: we have seen that he not only declared himself to be superior to Adam and refused to bow down before him, but, according to al-Ta'bari (i, 83), he considered himself superior to the other angels. It is also said (ibid., 79) that he was an angel and as such reigned over the djinns, on earth and in the lower heavens. It was after he had rebelled that he was called by God al-ghayyân al-radîm.

But the question then arises as to how he can have been so blinded by power as to have been confirmed in a perpetual state of disobedience and how he could justify to himself his attitude.

Some mutakallimûn and many Shi'îs meditated on the “disobedience of Iblis”: the reason why he disobeyed God and was thus placed among the unfaithful was that he did not submit to the unconditional Will of God, preferring the general Law which had been given (“to worship God alone”) to the short-term Commandment (“bow down before Adam”). 

Al-Hallâj makes him say: “No, I shall worship only Thee”. Some suggest that he believed God was setting a trap for him and that his duty was to evade it by an affirmation of uncompromising monotheism. Even more: he preferred to risk incurring God’s curse and to be in hell, and to be, even against God so to speak, the mysterious witness of the absolute Divine Unity. By the expedient of such analyses, Iblis is accorded a certain grandeur, and there can sometimes be recognized in some of the Shi'îs a kind of secret sympathy for the one who was “forced to be disobedient”, a victim of the incomprehensible and inscrutable Commandment of God.

But al-Hallâj nevertheless firmly maintains that this disobedience is certainly a pre-sin of pride. He devoted to the drama of Iblis the very beautiful text of the Tā sin al-azâl (Arabic text ed. L. Massig-...)

We shall not enumerate all the “accounts” concerning Iblis, either in the pre-eternity before the creation of man or when he played his part in the Garden of Eden. It can in any case be said that Muslim thought remains undecided as to whether he was an angel or a djinn, and does not pronounce an opinion on the possibility of his being a “fallen angel”!

IBN (A.), son. The Arab grammarians and lexicographers, who tend to trace all words to three root elements, generally attribute ibn to a root *b.n.w.
and consider that it derives from a hypothetical *banawun by loss of the 3rd sonant radical. Others state that the root is b.n.y. and that the word ibn comes from the verb bandā (to set up [a tent] on*), and, by extension, "marry". In reality, we have an ancient semitic biliteral, which is nevertheless triliteralized in the relative adjective banawi and in the abstract noun bunuwaa. The fem. bint, formed with the fem. indicator -t, has a rival in a secondary form ibnat*. In the pl., banān and abnā (the latter, however, being specialized [q.v.]) correspond to ibns and bandat. The word ibn is constantly employed in genealogical series, and then offers some grammatical peculiarities. On the one hand, the prosthetic alif disappears when it is preceded by the name (ism) of the person and followed by the appellative of his father (except at the beginning of a line), while it is maintained after a kunya or a laqab and before an appellative referring to the mother or an ancestor of the person quoted immediately before, that is to say, the name of the person corresponding to a true patronymic name (see below). On the other hand, the presence of the word ibn exerts a regressive effect on the preceding name; the tanuin, where there is one normally, disappears (e.g., Muhammad ibn Ahmad instead of Muhammad ibn Ahmad), as if ibn "defined" this name, while in fact it is in apposition; in the vocative, an analogous regressive effect is optional, in the sense that the first name may be put into the accusative case like itself or remain in the nominative, while a progressive effect is exercised obligatorily on the epithetic adjective, so that the latter need not be in the same case as the noun to which it refers (ya Muhammed [or Muhammad] bn Ahmad [never bahim]).

Ibn enters into the composition of a certain number of names of animals or plants: ibn 'irs, "weasel"; ibn awwar, "sand truffle", etc., the pl. then being bandā (though bandā is sometimes found). Equally, it is used in a sense similar to ābā or to sāhib: ibn 'ishrin sana, "20 years old", ibn sablī, "traveller", etc. In these two uses it appears strongly expressive.

It occurs that certain persons are known by an appellative composed of Ibn and a woman's name; one might see a vestige of matriarchal society in this, but in the Islamic period these designations have a peculiar significance, and are designed, either to humiliate the person so named or to emphasize that his father is unknown (Ibn al-Maragha for Djarlr of al-Maragha, the sultan appointed him to the office which he occupied until his death, in 728/1328). Ibn entered into the composition of a certain number of names of animals or plants: ibn 'irs, "weasel"; ibn awwar, "sand truffle", etc., the pl. then being bandā (though bandā is sometimes found). In addition to the commentary on the Ḥikam, Ibn ʿAbbād left some letters containing spiritual directions and collected in Rasāʾīl ʿAbbād, lhr. Fez 1930, 262 pp.) and Rasāʾīl ʿAbbād (ed. P. Nwyia, 1957, 138 pp.) and some unpublished works: Fatḥ al-tufā (a collection of hadīths in the form of an manual of devotion); Duʿāʾ bi l-asmb al-husnā; a collection of Friday sermons; a versification of the ʿHikam. Ibn ʿAbbād’s work marks a return to primitive ʿṢūfīsm (Muḥāṣibī), for he did not like Ibn Sābīn and only rarely cites Ibn al-ʿArabī.

Bibliography: P. Nwyia, Ibn ʿAbbād de Ronda, i (1933), 7-79.

IBN ʿABBĀD, Abu ʿl-Kāsim ʿIsāmīl b. ʿAbbād b. al-ʿAbbās b. ʿAbbād B. Ahmad B. ʿIdris, vizier and man of letters of the Bāyād period, known as al-Shaykh al-Amīn (i.e., the honorific title which he may have owed to his relations with Abu l-ʿFaṭḥ Ibn al-Amīd [see Ibn al-ʿAmīd, ii], but more probably to his loyalty to the amīr Muʿayyid al-Dawla [q.v.]; Born probably at Ṣafākh on 16 Dhu l-ʿKhāda 326/14 September 938 (but the sources disagree on his date and place of birth), of a family of high officials (his father at least, known as al-Ṣāhibī al-ʿAmin, had been a ṣāhib and then become vizier to Rukn al-Dawla; see Abu Ḥayyān, Maḥāshībī, index; Ibn al-Djawal, Munlaqīn, vii; Yakūt, Udabī, vi, 170-2), he spent his childhood at Ṭalālān (near Kazwin), and then settled at ʿIṣfāhān. After the death of his father (334 or 335/946 or 947), he attached himself to Abu l-ʿFaṭḥ Ibn al-Amīd, first as his devoted disciple and later as his secretary. In 347/958 he was chosen to accompany the amīr Abū Manṣūr (Muʿayyid al-Dawla) to Baghdad as a clerk, and it was at this period that his friendly relations with the Bāyād prince began. He may even have been at about this time the tutor of another son of Rukn al-Dawla. On the latter’s death (366/976), the governorship of ʿIṣfāhān and its dependencies fell to Muʿayyid al-Dawla who confirmed the kāhib Ibn ʿAbbād and the vizier Abu l-ʿFaṭḥ Ibn al-Amīd, the son of al-Ṣāhibī’s master [see Ibn al-ʿAmīd, ii], in their offices. Abu l-ʿFaṭḥ then began to engage in intrigues and to incite against the vizier the army of Rāy, with the result that Muʿayyid al-Dawla, with the help of ʿAḍud al-Dawla [q.v.], succeeded in getting rid of his vizier and replacing him by Ibn ʿAbbād.

It is not easy to study in detail the vizierate of Ibn ʿAbbād, whose political activity is confused by the chronicles with that of his masters [see B. Al-ʿAbbād, Abū l-Kāsim ʿIsāmīl b. ʿAbbād B. Ahmad B. ʿIdris, al-Dawla, in the sole surviving volume of the Rasāʾīl, which consists exclusively of diplomas of appointment and official letters or of correspondence with the author’s eminent personal friends. The matters with which they deal naturally extend beyond a single vizierate and thus cannot be listed or covered in the manners of the Daylami vassals of the caliph’s secretary Abu Ishak al-Sabi[3]. Among the sources and studies, among which there should be especially mentioned M. Asin Palacios, Un precursor hispano-musulman de San Juan de la Cruz, i (1933), 7-79.

It is not easy to study in detail the vizierate of Ibn ʿAbbād, whose political activity is confused by the chronicles with that of his masters [see B. Al-ʿAbbād, Abū l-Kāsim ʿIsāmīl b. ʿAbbād B. Ahmad B. ʿIdris, al-Dawla, in the sole surviving volume of the Rasāʾīl, which consists exclusively of diplomas of appointment and official letters or of correspondence with the author’s eminent personal friends. The matters with which they deal naturally extend beyond a single vizierate and thus cannot be listed here. But it is interesting to note the way in which precision is combined with style in the administrative communications written by Ibn ʿAbbād. The letters of course concern general politics, and also the policy of ʿAḍud al-Dawla, the ruling head of the Bāyād family, in his struggles against his cousin ʿIzz al-Dawla Bahkhtyar, and against Fakhr al-Dawla, the Sāmānids, the Kurds, etc.; the letters also cover the matter of the Daylami vassals of the dynasty and of its changeable relations with its Adharbayjānī vassals. Above all, the correspondence demonstrates a constant and efficient administration with exactitude in the management of the finances and the maintenance of public order; on the second of these points the vizier appears to have been hostile to the urban futūwawān [q.v.]; on the first he pays attention to the efficient collection of taxes, but also to the orderliness of their administration and, when circumstances allowed, he was not unwilling to have taxes reduced.[4] For this policy of ʿAḍud al-Dawla, who for himself had always refused to have only one vizier with full powers, should yet have encouraged his brother to grant him his favour only to this all-powerful minister, in whom he had absolute confidence. After the death of ʿAḍud, soon followed by that of Muʿayyid, Ibn ʿAbbād acquired more completely autonomous power, his prince, Fakhr al-Dawla, being now the eldest of the family and no longer owing allegiance to anyone; but this prince continued to have full confidence in the vizier, who, after having fought against him while his brothers were alive had, against all expectation, summoned him to succeed the second of them. Ibn ʿAbbād had attempted to make him play the dominant rôle in the dynasty by his interventions first in support of Shams al-Dawla against Bahāʾ al-Dawla, then of the second against the first: this apparent volte-face is explained by the fact that the struggle between the two young princes had resulted in their territorial possessions changing hands and that in ʿAḍud’s view Fakhr al-Dawla should support the master of ʿIrāq against the master of Fārs, who might covet ʿIṣfāhān. Naturally Fakhr al-Dawla, true to tradition, laid hands on the rich heritage of his minister, who had expected this, and no further member of his family is found among the high officials of the dynasty. But Ibn ʿAbbād himself is remembered as one of the great viziers of Muslim history, even by those who were his adversaries in doctrine (see, e.g., Niẓām al-Mulk, Siyāsat-nāma, xi, 33 and xii, 21-6). Like the latter, he belongs to the category of ministers who, in the service of princes who were either not suited to or were indifferent to the tasks of administration, were able to acquire an almost autonomous personal power and to become temporarily the true masters of affairs. Ibn ʿAbbād would not, however, have gained such wide fame if he had not also occupied a foremost place in the history of Arab literature, as much through his own works as through his patronage of scholars and poets. In addition to being apprenticed in his youth to the profession of kāhib, to which he appeared to be destined by his birth, he had the good fortune to have as his mentor Ibn al-ʿAmīd, who
possessed a strong traditional cultural background and no slight knowledge of theology and philosophy. During his stay in Baghdād he was able to frequent the literary circles in which many traditions of which he was later able to make use. Finally, in addition to many chance teachers, he was in contact, at al-Rayy, with the grammarians Ibn Fāris [q.v.], modestly calling himself his pupil. These favourable circumstances allowed him to acquire an extensive knowledge in all the fields of Arabic culture, from exegesis and ḥadīth to history, and including grammar, literary criticism and dogmatic theology. 

His varied works may be classified under the following headings: (I) Dogmatic theology: al-Ibāna ‘an mdhādhab ahl al-qal bi-hudūdī al-Kur‘ān wa-li-sabl, a statement of some points of Mu‘tazīlī doctrine in contrast with other sects and schools (ed. M. H. A. Yāsin, in Nafṣīs, i, Nadjaf 1372, 20 pp.); al-Tadhkīra fi ‘rū‘ al-‘ilm al-dhīma, a short history of the life of the Prophet and of those who were proclaimed to be the Caliph; al-‘Ibāna wa-l-haddār, a short history of the life of the Prophet and of the members of the Mu‘tazīlī school at Baghdad (ed. M. H. A. Yāsin, ii, Nadjaf 1373, 9 pp.); Risāla fī ‘l-hidāya wa-l-dalāla, on predetermination (ed. H. ‘Alī Maḥbob, Tehran 1374/1955). Among works which are not known to have survived, the following would come into this category: K. Muḥtāṣar asma‘ Allāh wa-sifātih, al-Ma’mūna, in which he proclaimed the superiority of Allāh while accepting the imāmat of his predecessors; al-Zaydiyya; al-Khādār wa-l-haddār, al-Nawrūz; al-qulub, a lost work which raises the question which religious school Ibn ‘Abbād adhered to. There is no doubt that he was a good Muslim and an Arabophile, in spite of his non-Arab origin, but his biographers, his friends and his enemies disagree completely when it comes to specifying to which school he belonged. Some Shī‘īs like Ibn Bābūya (‘Uṣūn aḥhār al-Rādī, 3) and others unhistorically claim him as one of them, and the Mu‘tazīlīs bādī‘ Abūl-Dībāb ān al-‘Ism al-Madani, who sang his praises; it is even said that 100,000 poems were attributed to Ibn ‘Abbād, but it is known that he is prejudiced. There is no doubt that he himself, being accustomed to receive praise, had a high opinion of his own worth and that his vanity was agreeably flattered by the “five hundred poets among the employees of the diwāns” who sang his praises; it is even said that 100,000 couplets (some go so far as to say 100,000 poems) were devoted to his praise, but this eulogy was not enough for him, since By also addressed a megaronic poem to him and ordered a poet to recite it in his presence. He did, however, possess a fair amount of kīm [q.v.] and knew how to behave humbly with those whom he regarded as his masters, and, although accused of avarice, he could on occasion show generosity, at least when he considered it opportune to do so.

As a writer, Ibn ‘Abbād shows a marked taste for rhyymed prose, the long sentences in which the figures of bādī‘ above and which are thus very close to poetry, but his prose remains readable and, to a certain extent, light; it is in any case less precious than his poems, in which he makes use of all the ornaments and artificial characteristics of the poetry of the period. With Ibn ‘Abbād, al-Amid, al-Hamadhānī [q.v.], and al-Khuwarizmi [q.v.], Ibn ‘Abbād is one of the main representatives of the school of literature which introduced rhymed prose into the official correspondence and then into all types of writing; a kīthā and poet from Spain, Ibn Shihāy [q.v.], however, omits Ibn ‘Abbād and considers only al-Hamadhānī and Kūbās [q.v.] as really representing the new tendency (apud Ibn Bassām, Dabḵhira, i, 1, 202).
Al-Sahib Ibn 'Abbad died at Rayy on 24 Safar 385/30 March 995.

Biography: Ibn al-Nadim, the contemporary of al-Sahib, devotes to him only a brief mention (Fehrist, Cairo ed., 194), but Tha'alibi gives a good deal more (Yaština, iii) and Yākūt provides a considerable amount of information (Udabī, vi, 168-313; xiv, 206-10; xv, 113-5) partly taken, it is true, from the works of Abū Hayyān al-Tawbī, whose Makhālib al-namāyn are now published (ed. Ibrāhim al-Kaylānī, Damascus, 1979), but see also by the same author, al-Imāl: wa-l-mu'tanās, i, 55; Ibn al-Anbārī, Nuzha, 397-401; Ibn al-Imād, Thāgharāt, i, 113-5; Ibn Khallikān, i, 206-10; Suyūṭī, Buḫyā, 196-7; Tha'alibī, Maḥšad al-anfās, i; Sādī, Anṣāb, 364; Ibn Ḥāḍir, Līṣān al-Miṣām, iii, 413-6; Kūfī, Inbāh al-ruwaḍ, i, 202; Khīrāsārī, Kawa'd al-djamāl, 109; Mez, Renaisance, index; A. Amin, Zuhr al-islām, i, passim; Sartori, i, 686; Brockelmann, i, S, 198; Tha'alibī, Fihrist, iv/4-v/1; Zurkullāh, Ahjad, 451; Ibn, Aṣkr, iii, 307 in which he 176-205; M. H. Al Yāsīn, al-Sahib Ibn 'Abbad haydūt wa-adabhū, Baghdād 1376/1957 (very thorough study of the life and particularly of the works of Ibn 'Abbad). On his activity as vīnir, see especially: Miskawayh, Tāḍārib, vi; Abī Ṣuhdā, Dhāhil Tāḍārib al-unmām, 163-70 and passim; Ibn al-Athīr, vi; Ibn al-Djawzī, Munṭasaṣ, vii; Sīḥ Ibn al-Ḏjwīl, Miḥrāb al-bāqūm (unpublished); Ibn Isfandiyar, Tabaristān, index; Nīẓām al-Mulk, Siyāsāt-nāma, index; see also the Bibli. of the article Būyids. (C. Cahen and Ch. Pellat)

IBN 'ABBĀD [see 'ABBĀDIS; AL-MU'TAMID]}

IBN AL-ABBĀR, Abū 'Abd Allāh Muḥammad b. 'Abd Allāh b. Abī Bakr b. 'Abd Allāh b. 'Abd al-Rahmān b. Amīd b. Abī Bakr al-Kūfī, historian, traditionist, litterateur, and poet, belonged to a family which had its origin in Ouda, the patrimony of the Kudāsī of Spain; he was born in Rabi' I 595/February 1199 at Valencia, where he passed his youth studying under the direction of several teachers whom he quotes in his Muṣījam. For more than twenty years he was the disciple of the most learned traditionist in Spain, Abū 'l-Rabī' b. Sālim, who persuaded him to complete the Shī'a of Ibn Baṣhkuwāl. He made several journeys in the Peninsula fi ṣalāb al-'ilm and acted as secretary to the Mu'āmmī governors of Valencia. This town, after being taken by Ibn Mardānshī [q.v.], was besieged in Ramadān 635/April-May 1238 by James I of Aragon; thereupon Ibn al-Abbār was besieged in Ramadan 635/April-May 1238 [q.v.], it was captured by James I on 17 Safar 636/28 September 1238 and acted as secretary to the Mu'mīnīd governors of Valencia. He returned to Valencia, but left it a few days after it was captured by James I on 17 Safar 636/28 September 1238 (Dozy, Notices, 190). Al-Ghubri al-Abbār (an unред, 183) states that he stopped at Bougie before going to Tunis, where, received favourably by Abū Zakariyyā, he was appointed chief of his chancellery, but was ordered to leave a blank in official documents and to fill in; Ibn al-Abbār did not carry out this instruction and was soon dismissed and put under arrest in his own house. However, he was pardoned and re-instated in his office.

When Abū Zakariyyā died, his successor, al-Mu'tanṣir, kept Ibn al-Abbār close to him, but his attitude so much irritated the sovereign and his courtiers that he was ordered to be tortured. His writings were confiscated and a satire against the sovereign was discovered and burnt. The reading of this piece enraged the amīr even more and he ordered Ibn al-Abbār to be killed by lance-thrusts. Ibn al-Abbār died on the morning of 20 Muḥarram 658/January 1260. On the following day his corpse, his books, his poetry, and his diplomas were burnt together on the same pyre.

We possess a certain number of official letters (Maṣāḥif, vi, 211 ff.) and poems (ed. Analecetes, i, 658, 658, ii, 762; ed. Aṣkr, iii, 223 ff.) of Ibn al-Abbār, who is the author of fifteen or so works (forming about 45 volumes) among which the following have been preserved:

Bibliography: Besides the works cited: Ghaib.) al-Abbār, G. R. R. al-Ālīrī, fi mān 'urfūn min al-'ulāma'; fi l-ma'ārif l-sīyāh bi-Bidāgīya, Al-Muṣījam, 1328/1910, 183; Kutubī, Fawā'il, Būlāk 1290/1882-2, ii, 226; Maṣhāri, Analecetes, index; edem, Aṣhrār al-rīyād fi al-ḥabbār Ḫayd, Cairo 1939, index; Ibn Khallud, Berberes, tr. de Slane, i, 307, 347-50; Zarkāšī, Tāriba al-dawlatāyīn, tr. Fagnan, Const. 1895, 36, 38, 48; Pons Boigues, 409; Gayangos, Hist. de la Mon. dynasties in Spain, ii, 528 ff.; R. Brunschvig, Ḫayd, index; F. Bustānī, Dā'ūrat al-muṣījā, ii, 294; Brockelmann, I, 3401, i, 580-1. (M. Ben Cheneb-[Ch. Pellat])

IBN AL-ABBĀR, Abū Daʿīfat Abū Allāh Muḥammad al-Kirmáni, an Andalusian poet who lived among the entourage of the early 'Abbābids [q.v.] of Seville and died in 433/1041-2. Of his Didam only a few poems survive, in particular a panegyric of Isma'il Ibn 'Abbad, some occasional verse and some descriptions; floral poems seem to have occupied a leading part in his work, which drew its inspiration from the life of the Andalusian aristocracy of the time: wine, pleasures, country-walks, women—these for the most part are his favourite subjects, and an element of sensuality is visible in his poems. His

Encyclopaedia of Islam III
technique is excellent, metaphors and similes abound, and the basic is applied with assurance and felicity. Ibn al-Abbar, nos. 304, 305, 306 and 307, appears to confuse this Ibn Abbar with the historian who is the subject of the preceding article.

[see 158].

**IBN ABD AL-BARR AL-NAMâRî** [al-Numârî], apppellative of a family of Cordovan scholars, the principal representative of which is Abû 'Umar Yûsuf b. 'Abd Allâh, born in 368/978. He studied in his native city under masters of repute, engaged in correspondence with scholars of the East and travelled all over Spain "in search of knowledge", but never went to the East. Considered the best traditionist of his time, he was equally distinguished in fikhn and in the science of genealogy. After displaying Zâhrî tendencies at first, in which he resembled his friend Ibn Hazm, he later followed the Mâlikî doctrine, not without some inclination towards Shâfi'î teaching. He held the position of kâdi at Lisbon and Santarem under the Muzaffar b. al-Alâs, and died at Jâ'tiva in 463/1070.

Ibn 'Abd al-Barr is the author of a considerable number of works on all kinds, of which there have been preserved especially:—K. al-Iṣãhâf fi ma'âštî al-Abbâr, biographies of the Companions of the Prophet, ed. Haydârîbâd 1318-9, then on the margin of the Isbâb of al-'Askâlânî, Cairo 1323-5, and finally ed. 'All Muh. al-Badwî, Cairo 1957-60, 4 vols. (for the abridgments of this work, see Brockelmann).—Diwânî baydân al-ṣîm wa-ṣâfî-hî wê mà yawna tâbî fi rsâdî-hî wê-hami-hî, Cairo 1346.—al-Ka'fî fi 'l-ṣîhâ, a manual of Mâlikî law (see Brockelmann, S I, 297, 628-9, foot).—al-Tarsîfâ al-ṣâfî wê wafa'ta min al-ma'ârif wê al-asâsî, on the methodology of hadîth (see Brockelmann, S I, 298, 629).—Kitâb al-isdrûkâr fi gharî madâkhût 'ulumâ' amâsîr, a summary of the preceding (see Brockelmann S I, 297, foot).—al-Iṣdrûkâr li-madâkhût al-a'âsîr fi-mâ tâdâmânama-hu 'l-Muwaçîna min ma'ârîn 'i-râva wa-l-akhir, commentary on the Muwatta'.—Kitâb al-Intîbâh fi faddîl al-ḥalîlîhât al-ṣâmîma al-γâkâhî, on Mâlikî, Abû Hanîfâ and al-Shâfîî, Cairo 1350.—al-Iṣâdîj fi-mâ bayn al-'ulumâ' min al-θâlîlîs, ed. Cairo, in Madâ'âmût al-râsîlî al-mu'nîriyya.—al-Ka'd wa l-amâm fi-l-γârîf bi-γâlî al-'Arab wa-l-'Adîm wa-man awwal mon takallama bi-l-γârîbîya min al-umâm, in genealogies, Cairo 1350; French trans. A. Mahdjoub, in Kâfrîn, xiix (1955-7).—al-İbnâb 'alâ kâhî l-rûwâhî, on the genealogies of transmitters, printed and in the science of genealogy, in official correspondence, including a fiscal rescript clarifying his financial policies (H. A. R. Gibb, in Arabic, ii (1955), 1-6). It exemplifies the deep influence of religio-legal thought upon Muslim historiography, and it is particularly valuable as the oldest preserved representative (apart from the Sîra of the Prophet) of Muslim biographical writing on the large scale in monograph form.

2. 'Abd al-Ḥâkam, the eldest of 'Abd Allâh's sons, died under torture during the misappropriation trial in November 851. Like Sa'd, who appears to have been the youngest of the four brothers, he did not leave much of a permanent mark.

3. Abû Muhammad 'Abd Allâh b. (al-)Abd al-Hakam, was esteemed by his contemporaries as the outstanding member of the family. Born on 15 Dhu 'l-Hijâja 182/27 January 799, he studied with al-Shâfîî but later wrote a "Rebuttal of al-Shâfîî where he was in contradiction to the Kur'an and the Sunna." It was he who was summoned to Baghdad to subscribe to the dogma of the createdness of the Kur'an, but he refused to do so and was sent back to Egypt. His works, none of them preserved, included polemical treatises directed against the 'Irâkîs and against Bishr al-Marisi, as well as studies of special legal questions. In the manuscripts of his father's biography of 'Umar b. 'Abd al-'Azîz, he is stated to be its transmitter (an addition in his name appears on pp. 121 f. of the edition). The date of his death is variously given as Wednesday, 4 or 15 Dhu 'l-Ka'dî 58/10 June (Thursday) or 6 June (Wednesday) 882, or 269/882-83.

4. Abu 'I-Kasîm Abd al-Rahmân b. 'Abd Allâh (born ca. 382/979-99, died 527/871) is famous for his work on "The Conquest of Egypt and the West" (Futûh Misr), the oldest preserved work on the subject (ed. C. C. Torrey, New Haven 1922; another old manuscript in Manisa, General Library 281, 2,
IBN 'ABD AL-HAKAM — IBN 'ABD AL-MUN'IM AL-HIMYARI 675

cf. A. Ates, in Revue de l'Institut des Manuscrits Arabes, iv (1956), 20 f.) Two long appendices deal with the chief judges of Egypt down to the year 1466/67 and with the companions of the Prophet who came to Egypt, and the hadiths transmitted there on their authority. The main body of the work consists of a history of Egypt that starts out with the legendary early beginnings and ends with the death of 'Amr b. al-Á‡, following throughout the chronological sequence of events. It then continues with the recital of the subsequent conquests of Northwest Africa and Spain. The author includes important information on such matters as the historical topography (khittâd) of Fustat and the problems of financial administration. His point of view (like that of his sources) is that of the legal scholar rather than the historian. Characteristically, he begins with the admonition to respect the original Coptic inhabitants of the country. The section on the Western conquests has been translated into French by A. Gateau (Algiers 1942, 2nd ed. 1947 [1948]; for an analysis of this section as a historical source, cf. R. Brunschvig, in AIEO Alger, vi (1942-47), 108-55.

Gateau's trans.; 'Îbrâhîm A. al-'Á‘addâwî, Ibn 'Abd al-Á‡âkam, rá'îd al-mu'arrîkhîn al-Á‘rab, Cairo 1963.

[F. Rofenthal]

IBN 'ABD AL-MALIK AL-MARRÂKUSHI, his full name being Abû 'Abd Allâh Muhammad b. Muhammad b. Muhammad b. Sa'd b. al-Á‘swî al-Á‘nârî al-Marrâkushî, chief kâdî in Marrâkush under the Marinids, and author of a bibliographical dictionary indispensable for a knowledge of the illustrious men of the Muslim West. He was born, probably in Marrâkush, on 14 Dhu 'l-Khâdîda 614/6 July 1237 and died in Tiâmen in 703/1303-4. His work, still in manuscript, comprises several volumes and bears the title al-Dhâlî'î wa l-takmilâh li-khatâbihîn l-mawâ’il wa l-Siâ, that is to say Sequel and Supplement to the Kitâb al-Mawâ’il fi ta'iîrîkh 'ulamâ' al-andalus of Ibn al-Farâidi [q.v.], which died in 403/1012-3, and to the Kitâb al-Siâ fi al-hadîth al-Á‘ndalusi of Ibn al-Bashkûwât [q.v.], which died in 528/1132-3. It is one of the sources habitually used by Ibn al-Khâtîb [q.v.], Ibn al-Kâdî [q.v.], Leo Africanus [q.v.], etc. in the article devoted to him by 'Abâs b. 'Îbrâhîm (see Bibl.) will be found a long list of his teachers and pupils and of his other writings, with numerous references, and even the names of some thirty personages who are of importance for the history of Marrâkush and whose biographies are provided by Ibn 'Abd al-Malik.

IBN 'ABD AL-MUN'IM AL-HIMYARI (or rather al-sâjjî al-sâjî al-'âdî Abû 'Abd Allâh Muhammad b. Abî 'Abd Allâh Muhammad b. Abî Muhammad 'Abd Allâh b. Abî Muhammad 'Abd Allâh b. Abî Muhammad 'Abd Allâh b. Abî Muhammad 'Abd Allâh, author of the important Arabic geographical dictionary entitled Kitâb al-Rawd al-mîdhâr fi khabar al-Á‘dâr. Nothing is known of this writer apart from the facts that he came from the Maghrib and that he was a jurisconsult (jâfîh) and a kâdî's assessor or notary ('âdî). E. Lévi-Provençal was responsible for the discovery and the publication of a large part of his work (La ptimônsule Ibérique au Moyen Age, d'aprés le Kitâb ar-Rawd al-mîdhâr fi khabar al-Á‘dâr d'Ibn 'Abd al-Mun'îm al-Himyari, Leiden 1938). In this edition, Lévi-Provençal used several manuscripts (of Meknès, Fez, Salé and Timbuktu) dating from the 11th/12th and 12th/13th centuries. To these manuscripts should be added two others found after 1936: one copy, preserved in the Nuroumosiyan library in Istanbul, written before the year 1045/1635-6, and another, made in 971/1563-4, and in the library of the Djeddja, Cairo 1635-6, and another, made in 971/1563-4, and in the library of the Djeddja, Cairo 1635-6. Another, made in 971/1563-4, and in the library of the Djeddja, Cairo 1635-6, and another, made in 971/1563-4, and in the library of the Djeddja, Cairo 1635-6, and another, made in 971/1563-4, and in the library of the Djeddja, Cairo 1635-6. The full introduction to Ibn 'Abd al-Mun'îm al-Himyari's geographical dictionary reveals that the author used as his main sources three important Arabic geographical works of the 5th/11th and 6th/ 12th centuries: the Kitâb al-Masâlik wa l-manâlik of al-Bakrî (ca. 460; 967-8); the Nuzhat al-mushtâk fi hadâr'ir al-Á‘dâr (748/1348) and the geographical treatise entitled Kitâb al-Á‘dâr fi 'adjâdîb al-amâr (ca. 587/1194), which is in fact only a rewriting of al-Bakrî's work with the addition of some personal observations by the author. It would seem that the Rawd might be important for any future edition of the Kitâb al-Masâlik wa l-manâlik, since the extracts from the latter work which are dispersed in the dictionary of al-Himyari would, if put in order, give a fuller and at the same time a somewhat different version from that known from the editions of de Slane, Kunik-Rosen and Kowalski. Thus the description of the town of Brâgha (Prague), taken by al-Bakrî from the account of 'Îbrâhîm b. Ya'kûb al-Turâqî (ca. 555/965-6), is completely different in the extract given by al-Himyari from the version published by Kowalski. The extracts from the Nuzhat al-mushtâk, which are very numerous especially in the parts of al-Himyari's dictionary which deal with the Iberian peninsula, could also be used for a complete edition of al-Idirisi.

The Rawd was not entirely unknown before its discovery by E. Lévi-Provençal. In fact it is mentioned, ed. 1067/1657, in the Ka'îf al-zunnûn of Hâdîddî Khalla (ed. Flügel, iii, 490, no. 6597), under the title al-Rawd al-mîdhâr fi khabar al-Á‘dâr, as the work of one Abû 'Abd Allâh Muhammad b. Muhammad b. Muhammad b. Muhammad al-Himyari, who died in 900/1494. E. Lévi-Provençal had already suggested that this
was the same work as that which he had discovered. This supposition seems to be entirely justified by the fact that the brief description of it given by Hadjidi Khalifa lists (iii, 491), immediately after al-Rauḍ al-miṣfār, as no. 6398, a second work of the same title as that of no. 6597. The name of the writer of this second work—a writer of whom Hadjidi Khalifa tells us nothing as far as we know—was shaykh al-ṣumāda Abū ʿAbd Allāh Muhammad b. Muhammad b. ʿAbd Allāh b. ʿAbd al-Munīm al-Himyar. In his attempt to clarify matters, Lévi-Provençal comes to the conclusion that there must have been two redactions of the Kitāb al-Rauḍ al-miṣfār written at different times by two members of the Ibn ʿAbd al-Munīm al-Himyar family. A first redaction, which has now disappeared, dates from the end of the 7th/13th century. This hypothesis is supported by two facts: (1) that among the written sources used by al-Himyar, the great treatises of the 8th/14th and 9th/15th centuries are lacking; (2) that the majority of the historical events mentioned in this dictionary do not go beyond the end of the 7th/13th century. The second redaction (of 866/1461) is represented by the numerous manuscripts mentioned above. It certainly seems to be the first, hypothetical, redaction to which the citations in al-Kalkashandi (d. 821/1418) refer. It should, however, be stressed that the problem of the writing and of the author of the Kitāb al-Rauḍ still remains open and that it is not likely to be resolved before the publication of a complete critical edition of the work.

It should be mentioned that since 1938, in spite of the continual interest in it since Lévi-Provençal published the passages from it concerning the Iberian Peninsula and southern France (having published also, in 1935, the description of the Pharaohs of Alexandria), only very brief extracts from al-Himyar's dictionary have been published. Thus Ch. Pellat published in 1954 a description of Başra and in 1956 there appeared that of Crete, published by Lévi-Provençal, and that of the Italian islands and Leghorn, in 1959-60, the description of Prague (Brăţa) and of the Polish state of Mieszko I (Migka) and in 1962-3 A. Malecka published that of certain places and coastal regions of East Africa. There should also be added the brief survey given by T. Lewicki in 1960 of all the information on Eastern, Central and Southern Europe scattered throughout the dictionary.

The work acquired a great popularity, albeit almost entirely within the Maghrib. Apart from al-Kalkashandi, who reproduces passages from the earlier redaction, extracts from it are found in al-Makkari (11th/17th century), in Makdsh (12th/18th century) and in al-Nāṣir al-Salāwī (13th/19th century). The Dīwān al-ḥāfīz min al-Rauḍ al-miṣfār of al-Makrī (d. 845/1442), however, considered by some to be a rewritten version of al-Himyar's work, seems, as a result of more recent research, to be rather a résumé of the Nuzhat al-muṣḥabāt of al-Iṣrāʾīl.

**Bibliography:** Brockelmann, art. ʿΑΛ-ΜΑΚΡΙΖΗ, in EI2; W. G. Levi Della Vida, ii, Rome 1956, 49-57; T. Lewicki, Brāḏa i Miṣfār aŭd ar-Rauḍ al-miṣfār li-ʿbn <Abd al-Mun*im al-Himyari, as a source of information on the history of Islam, which is of little value and hardly tells anything new, even on Spain. Ibn ʿAbd Rabbih placed this poem at the end of the 15th book of his principal work, in which he had collected a good number of his own productions, al-ʾIḥd “The Necklace”, which copyists have entitled al-ʾIḥd al-farid “The Unique Necklace”. To justify his title he divided the work into 25 books (kiṭāb), of which each is divided into two ʿdzūs’s, and gave to each kiṭāb the name of a precious stone: (1) al-ḥuwaʿ; (2) al-farid; (3) al-sabargāda; etc.; the 13th book is called al-ʾIḥd al-lajdīl al-Thānīya.

Fundamentally the ʾIḥd is a book of adab, for which the materials are drawn from the works of al-Džāhi, Ibn Kutayba, and other authors who had assembled the elements of Arab culture; it may thus be considered as a sort of encyclopedia of the knowledge which is useful to a well-informed man, and as a more or less successful attempt at orderly classification of the notions which constitute general culture: Book I: Government; II: War; III: Generous Men; IV: Delegations; V: How kings should be addressed; VI: Religious Knowledge and the Principles of Good Conduct (adab); VII: Proverbs; VIII: Homilies and Asceticism; IX: Condolences and Funeral Orations; X: Genealogies and Virtues of the Ancient Arabs;

A basic characteristic of this encyclopaedia is that, apart from a portion of the above-mentioned mgūza, it contains absolutely no tradition of Andalusian origin. The author, Ibn Quddama, who had himself studied under al-Bahuti and al-Abd al-Baki, a native of Baclabakk, had himself studied under al-Bahuti. He had little information on his life, and the dates both of his deposed and thrown into exile, there began "an era of the first Arab governors (wall) of Jaen and was thus going first to Mecca, where he found the teaching of al-Maʿmad, had been begun under his father's guidance. He learned the Qurʾān by heart and first studied Hanbali doctrine, which originated in the kūra of Jaen and was descended from al-Samh b. Malik b. Khawlan, one of the first Arab governors (wall) of al-Andalus. Several members of the family, which was very numerous, occupied important administrative posts in the time of the Mutlak al-faḍālī according to Ibn Bassām, who quotes in this connexion some satirical points out some manuscript sources not used in the preparation of this article); Makkari, Analectes, ii, 404-5; H. Péres, Poesie andalouze, index.

(From the Library of Dr. Lucien-Janke)

Ibn ʿAbd al-Wahhāb, Muhammad b. ʿAbd al-Wahhāb, Hanballi theologian, founder of Wahhabism, was born in 1115/1703, in the centre of the Najd at al-ʿUyayna, an oasis which at the time was enjoying some prosperity. There had already been several representatives of Hanbalism in the Najd, and the young Muhammad belonged to a family which had produced several doctors of the school. His grandfather, Sulaymān b. Muhammad, had been mufti of the Najd. His father ʿAbd al-Wahhāb was kādi at ʿUyayna during the emirate of ʿAbd Allāh b. Muhammad b. Muʿammār; he taught hadith and fikr in the mosques of the town and left several works of Hanball inspiration, which in part survive.

Muhammad b. ʿAbd al-Wahhāb's education was begun under his father's guidance. He learned the ḥurūf by heart and first studied Hanballi doctrine in the works of Shaykh Muwaffaq al-Din b. Kudama (d. 620/1223) and in particular in the ʿUmda, which, according to Shaykh Ibn Bīrī, was regarded in the Najd at that period as the standard authority. In the time of this author and on the ʿUmda see H. Laoust, Le précis de droit dʾIbn Qudama, in the series PIFD, Beirut 1950).

The young theologian soon left ʿUyayna, in what circumstances it is not clear. It may be that he had already begun his teaching against the cult of saints and the paganism which was rife among the Bedouin, and that the amir showed little inclination to follow him in this matter. It is also likely that, as the oasis of ʿUyayna offered relatively few intellectual resources, the young shaykh felt the need to go and complete his education in other centres.

Little is known of the chronology of his journeys "in search of learning". He performed the Pilgrimage, thus going first to Mecca, where he found the teaching disappointing. The stay which he made after this at Medina was decisive in shaping the later direction of his thought. At Medina, he met especially a Hanballi theologian who was to have a decisive influence on him: Shaykh ʿAbd Allāh b. ʿIbrāhīm al-Najḏī, who had become a supporter of the neo-Hanbalism of Ibn Taymiyya and who had himself been the pupil of Shaykh ʿAbd al-Ṣāliḥ al-Hanbalī (d. 1071/1661); ʿAbd al-Ṣāliḥ, a native of Baḥābakk, had himself studied under al-Bahūtī (q.v.) and al-

avarice of the new masters—the Almoravids, for whom he was now writing panegyrics—and his wanderings in which he encountered no friends (Analectes, loc. cit.). The memory of the fallen al-Muʿtamid's generosity was to stay with him all his life and faithful, like Ibn al-Labbāna (q.v.), to the poet-king, he went shortly after the latter's death (488/1095) to Aqshāt, where he was so daring as to kiss his tomb and to recite, on a feast day, before a large crowd which was moved at the sound of his poetry, a long impassioned elegy in which he called him "King of Kings" and described him "as though he possessed two similar versions (Ibn Khākān, Kālidīdī, Būlāk 1283, 30-1; Ibn al-Khadīth, Amdāl al-ʿalām, Beirut 1956, 165-7, who has preserved more than a hundred lines) has been used by R. Dozy, Hist. Mus. Esp., iii, 175, and by E. García Gómez, in al-Andalus, xviii (1953), 403-4.

Bibliography: In addition to the works already quoted: Ibn Bassām, Dhakīrīa, iii (ms.); Ibn Saʿīd, Muṣīrīb, ii, 203-4 (in which the editor points out some manuscript sources not used in the preparation of this article); Makkari, Analectes, ii, 497; H. Péres, Poesie andalouze, index.

(F. de la Granja)
Marî; he taught for a long period at Medina and then returned to Damascus, where he continued his teaching at the Umayyad mosque. At Medina b. 'Abd al-Wahhab met also, among other 'ulama', Muhammed b. Hayât al-Sindi (d. 1165/1752), a Hanafi, who does not seem to have had a great influence on him, and Muhammed b. Sulaymân al-Kurdi (d. 1194/1780).

Muhammed b. 'Abd al-Wahhab went next (it is not known exactly at what date) to Basra, which was still an active centre of Islamic culture, and where he seems to have stayed for a fairly long time. The names are known of several of the teachers whom he met at that period, in particular that of Muhammed al-Madimu't, under whom he studied philology and the sira. Probably also, in a town with such a mixed population as Basra, he had the opportunity of making the acquaintance of a wider circle of spiritual groups than that in which he had been educated, in particular the mystic fraternities and the shî'î sects. The spectacle of popular idolatry such as that in which he had been brought up, seems to have led the young shaykh to embark at this period on his campaign of reform. His departure from Basra, which seems to have occurred in 1152/1739, marks in any case the end of the period of his education and the beginning of his religious and political apostolate.

According to the anonymous author of the Lam' al-qahhâ fî ta'rîkh M. m. 'Abd al-Wahhab (ed. Ahmad A. Abu Hâkîma, Beirut 1967), the legendary character of which seems to evidence on many counts, Muhammed b. 'Abd al-Wahhab, after spending four years at Basra, went to Baghdad, where he made a wealthy marriage and remained for five years. He next appeared in Kurdistân, at Hamadân and at Isfahan, where he arrived about 1148/1736 at the beginning of the reign of Nâdîr Shâh and studied philosophy and Sûfism. He next went to Damascus and to Cairo. Similar journeys had already been attributed to Ahmad b. Hanbal.

On leaving Basra, Muhammed b. 'Abd al-Wahhab went to Huraymila, where his father (d. 1153/1740) had just settled. It was here that Muhammed composed his first work on the unity of God (tawhîd) and really began his apostolate, gathering round him his first disciples and thus extending his influence not without some difficulties, since the hostility of the Banû Khâlid was still to be feared. In 1157/1744, the amir and the theologian swore an oath of mutual loyalty (bay'a) to strive, by force if necessary, to make the kingdom of God's word prevail. This pact, which was always faithfully adhered to, marked the true beginning of the Wahhabî state, which transformed a small Bedouin principality into a legally constituted empire. Henceforward it was impossible to separate the destiny of the shaykh from that of the Su'ûdi dynasty.

Until his death in 1206/1792, Muhammed b. 'Abd al-Wahhab continued his activities in the religious as well as the political field. He taught at the mosque in Darîyya, wrote theological works and sent out numerous letters to win to his cause new supporters in the Nadîd and the neighbouring regions. He also remained the political counsellor of Muhammed b. Su'ûd (d. 1178/1765) and, to a lesser degree it seems, of his successor 'Abd al-'Azîz (1765-1801).

Muhammed b. 'Abd al-Wahhab's literary and doctrinal works, which have appeared in many editions for the use of Wahhabî missionary activity, are important. Most of his writings are fairly short, full of quotations from the Qur'an and hadîths; the Kitâb al-Taghî, his main work, often reprinted and of the subject of many commentaries, sets out his teaching in the line of the strictest Hanballi doctrine. His Kitâb al-Uṣûl al-thaqîla, written at the request of the ruler 'Abd al-'Azîz, is a type of official catechism, which is still esteemed. His Kitâb Kâshf al-ghubûhî, more polemical in presentation, condemns Muslims who do not practise the true tawhîd.

The Muhammed b. 'Abd al-Wahhab, in his work Kitâb al-qubûs al-nasîhî (Cairo 1346) mentions several other short treatises by the shaykh defining his conception of faith (imân) and of Islam (Uṣûl al-imân; Fadl al-Islâm; al-Kabdîr; Naṣîhat al-Muslimîn).

Several of the sons or the descendants of Muhammed b. 'Abd al-Wahhab carried on his work. His son 'Abd Allah, who accompanied Su'ûd b. 'Abd al-'Azîz (1803-14) on his conquest of the Hijaz in 1805-6 and supported his action in 'Irât, wrote an important refutation of the doctrines of the Twelvers and of the Zaydiyya, published in the Madimā'at al-rasâ'il wa'l-masâ'î al-nadîdiyya (iv, 47-222; the greatest part of volume i of this collection consists of his writings). 'Abd al-Wahhab often mentions in his works non-Hanballi Sunni sources (among them Ibn Hazm).

Sulaymân b. 'Abd al-Wahhab, the grandson of the shaykh Muhammad and also greatly devoted to the principle of reform, was hâdi of Darîyya; he was violently hostile to the Ottomans and forbade all relations with them. He was sentenced to death by Ibrâhîm Pâsha after the capture of Darîyya in 1233/1818, while his brother 'Ali was pursued by the Egyptians and killed at Qâdirjî. Sulaymân wrote a work which is interesting for the study of the relations of Uâyyna. The Nadîd was at this time in close relationship with the inhabitants of al-'Absâ, among whom were some Shî'is, who tended to be alarmed by the shaykh's preaching.

Because of their intervention (and also that of the Banû Khâlid), Muhammed b. 'Abd al-Wahhab left Uâyyna. He went to Darîyya (near Riyâd, the present capital of Saudi Arabia), where he had acquired powerful protectors in some members of the family of the amir, Muhammed b. Su'ûd. After winning to his cause the amir's two brothers and his son, the future king 'Abd al-'Azîz (d. 1215/1801), he finally gained supremacy. He turned towards his new centre, though not without some difficulties, since the hostility of the Banû Khâlid was still to be feared. In 1157/1744, the amir and the theologian swore an oath of mutual loyalty (bay'a) to strive, by force if necessary, to make the kingdom of God's word prevail. This pact, which was always faithfully adhered to, marked the true beginning of the Wahhabî state, which transformed a small Bedouin principality into a legally constituted empire. Henceforward it was impossible to separate the destiny of the shaykh from that of the Su'ûdi dynasty.

Until his death in 1206/1792, Muhammed b. 'Abd al-Wahhab continued his activities in the religious as well as the political field. He taught at the mosque in Darîyya, wrote theological works and sent out numerous letters to win to his cause new supporters in the Nadîd and the neighbouring regions. He also remained the political counsellor of Muhammed b. Su'ûd (d. 1178/1765) and, to a lesser degree it seems, of his successor 'Abd al-'Azîz (1765-1801).

Muhammed b. 'Abd al-Wahhab's literary and doctrinal works, which have appeared in many editions for the use of Wahhabî missionary activity, are important. Most of his writings are fairly short, full of quotations from the Qur'an and hadîths; the Kitâb al-Taghî, his main work, often reprinted and of the subject of many commentaries, sets out his teaching in the line of the strictest Hanballi doctrine. His Kitâb al-Uṣûl al-thaqîla, written at the request of the ruler 'Abd al-'Azîz, is a type of official catechism, which is still esteemed. His Kitâb Kâshf al-ghubûhî, more polemical in presentation, condemns Muslims who do not practise the true tawhîd.

The Muhammed b. 'Abd al-Wahhab, in his work Kitâb al-qubûs al-nasîhî (Cairo 1346) mentions several other short treatises by the shaykh defining his conception of faith (imân) and of Islam (Uṣûl al-imân; Fadl al-Islâm; al-Kabdîr; Naṣîhat al-Muslimîn).

Several of the sons or the descendants of Muhammed b. 'Abd al-Wahhab carried on his work. His son 'Abd Allah, who accompanied Su'ûd b. Sulaymân b. 'Abd al-Wahhab, the grandson of the shaykh Muhammad and also greatly devoted to the principle of reform, was hâdi of Darîyya; he was violently hostile to the Ottomans and forbade all relations with them. He was sentenced to death by Ibrâhîm Pâsha after the capture of Darîyya in 1233/1818, while his brother 'Ali was pursued by the Egyptians and killed at Kâdirjî. Sulaymân wrote a work which is interesting for the study of the relations of Uâyyna. The Nadîd was at this time in close relationship with the inhabitants of al-'Absâ, among whom were some Shî'is, who tended to be alarmed by the shaykh's preaching. 
of Wahhabism with Trak, the K. al-Tawdifr 'an tawhid al-Khalldk fi gjawwb alhk al-Trak (Cairo 1319).

The doctrine of Muhammad b. 'Abd al-Wahhab was very strongly influenced by that of Ibn Taymiyya (d. 729/1329), to a lesser degree, by that of Ibn Kayyim al-Danjwiyah (d. 751/1350). But, beyond these two writers, it is still more closely linked to the formulation of Hanbalism as found in the works of earlier writers, such as the shaikh 'Abd Allâh (d. 290/903) or Abd Bakr al-Khalilî (d. 311/924). Very hostile to the sects which had always been denounced by the Hanballîs as incom- pact, Kalawun (d. 738/1340) declined and rejected the teachings of al-Pundîl (Jâhâl, etc.). Muhammad b. 'Abd al-Wahhab criticized, even within Sunnism, all the forms of kalâm or of Sûfîsm which tended to introduce into the dogma or the law of Islam innovations (bid'a) considered to be heretical or schismatic. He denounced no less violently the survival, particularly among the Bedouin, of practices going back even to the period of the Bihâbîyya. Although Muhammad b. 'Abd al-Wahhab was not confirmed or rejected by an important section of Muslim opinion, it was nevertheless to make a powerful contribution not only to a more profound Islamization of Arabia, but also to a general renewal of the Islam conscience immediately before the modern period of intrusion from the West.

IBN 'ABD AL-Zahir, Mu'âviya 'l-Dîn Abu 'l-Fadl Abu 'l-Abd Allâh b. Rashîd 'l-Dîn Abu Muhammad 'Abd al-Zahir b. Naṣîwân b. 'Abd al-Zahir b. Naḍîd al-Sâdî al-Rawî, born in Cairo 620/1223, died there 692/1292 (Wiistenfeld, Ktib al-Sirr Sabyb al-Inshâ*, Cairo 1939, 166 ff., and, for the author's place in the general history of Islam, Usur fi sirat al-Malik al-?ahir, ed. Murad Kamil, Cairo 1961, cited above). He compiled books, which were of use to later authors.

IBN 'ABD AL-ZAHIR (B. NADJDA AL-SA'DI) (Tashrif, i, 477; for the place in the general history of Islam, Usur fi sirat al-Malik al-?ahir, ed. Murad Kamil, Cairo 1961, cited above). He compiled books, which were of use to later authors.

It cannot be doubted that Ibn 'Abd al-Zahir engaged in much official activity as secret secretary, and it is difficult to identify the role of Fakhr al-Din in his history. An interesting document is quoted by Ibn al-Furat, a ta'addul drawn up by the sabil al-muhaddara fi akhibdr Misr wa 'l-Kadhira, 333; so too does al-Suyuti, liusn al-muhddara fi akhbdr Misr wa 'l-Kadhira, 65-74; Spanish translation, Pons Boigues, Ensayo, 190-8); reproduced in F. Busfutuwwa xii, 274 f., with German translation, A. Moberg, Urberichte aus der Geschichte der Staatskanzlei im Islamischen Maghreb, v, 318 f.; in Rabi I 695/March 1292 he wrote a decree for the initiation of the Kurd al-Hakkarl as a member of the madrasa Kubba. Nevertheless, Ibn 'Abd al-Zahir continued his activity during these years. In Djumādā II 679/October 1280 he drew up a ta'addul al-sultana for al-Malik al-Salih from Kalāwūn (op. cit., 200 f.; Subh al-aqūda, x, 173 f.; in Rabi I 679/June 1280 he produced a decree about the leadership of the Jews (Tabari, iii, 236); in Rabi I 695/March 1292 he wrote a decree for the king and the government of the city and the enumeration of some great characters and explanations, as was realised by Abu 'l-Kasim Abd al-Malik b. Mu'ādh al-Mawsil, better known as al-Murādī of this city, which sets out to call to mind all the kings killed since the beginning of mankind and is an elegy on the end of the Aftasids, possesses a certain literary merit, yet real lyrical inspiration is missing and it is weighed down by the accumulation of proper names. Nevertheless, it is much admired by Arab critics, who consider it a veritable masterpiece.

In order to be intelligible, the poem needs precise explanations, as was realised by Abu 'l-Kāsim 'Abd al-Malik b. 'Abd Allah al-Hadrami, better known by his ma'rifa or ma'rifat, who wrote a historical commentary on it. All we know of this Ibn Badrūn is that he came originally from Silves and was a contemporary of Ibn 'Abdūn. His work, however, which draws largely on Oriental sources, particularly the Murādī of al-Mas'ūdī, has survived and been published, together with the text of the poem and abundant notes, by R. Dozy, as Commentaire historique sur le poème d'Ibn Abdūn par Ibn Badrūn, Leiden 1863. The Prolegomena and edition of this celebrated Aben Abdūni poematis in hictuosum Aphtasidarum interitum.

Bibliography: The text of Ibn 'Abdūn's poem is to be found also in the Muqaddimāt of Māraḵuṣlī (ed. Dozy, 53-60; Cairo edition 1368/1949, 76-87); French translation, E. Fagnan, Histoire des Almohades, 65-74; Spanish translation, Pons Boigues, Ensayo, 190-8); reproduced in F. Busfutuwwa xii, 274 f.

IBN `ABDŪN, MUHAMMAD B. AHMAD, Spanish author of a treatise of hisba [q.v.] dealing with Seville. All that is known of him is drawn from his own work itself, the two known manuscripts of which give the author’s name in two slightly different forms (Muhammad b. AbdAllah al-Nakha‘i ‘Abdūn, and Muhammad b. Ahmad b. ‘Abdūn al-Tudīlī). He was either a āfīkh or a ḥāḍī or a muḥtaṣib, who was perhaps born, and certainly spent a large part of his life, in Seville, in the second half of the 6th/12th centuries, since on the one hand he refers as a direct witness to the early years of the reign of al-Mu’tamid, and on the other speaks of the Almoravids as being already masters of the town. His source, together with the similar work devoted to Málaga by his contemporary al-Sakātī, is a most valuable source on urban, economic and social life in Muslim Spain at this period. The text edited by E. Lévi-Provençal (JA, ccxvii [1934], 177-229; and ed. in Doc. arabes inédits sur la vie sociale et économique en Occ. mus. au moyen âge, Cairo 1955, 3-65) has been translated into Italian by F. Gabrieli (Il trattato censorio di Ibn ‘Abdūn sul buon governo di Siniglia, in Rend. Mem., 9th series, xi, 1935, 878-935), from French by Lévi-Provençal himself (Seville musulmane au début du XIIe siècle: le traité d’Ibn ‘Abdūn, Paris 1947), and into Spanish by E. Lévi-Provençal-E. Garcia Gómez (Sevilla a comienzos del siglo XII, Madrid 1948). [F. Gabrieli]

IBN `ABDUS [See AL-DAHSHIYYA].

IBN `ABDUS, ABū `ABD ALLAH MUHAMMAD B. IBRĀHĪM (202-60/817-73), faḥīk of Ifriqiya. (Tunis). His life, study and thought can be considered typical for those of the generation that followed Ibn Sahnūn and his followers said that man can be sure of his faith only for the past and present, but not for the future: if he were asked if he were muḥiimin he should say “muḥiimin in shā‘a ‘ārāh” (the satirical insult known as the satirical letter), using the signature of Wallada, and sent it to Ibn ‘Abdūn by the same go-between. The risāla became immediately famous because it was an attack on one of the chiefs of the town. Ibn ‘Abdūn avoided any open contact with Wallāda, whose attitude to Ibn Zaydūn had been cooled by the poet’s audacity; but after the latter left Cordova for Badajoz and then Seville, Ibn ‘Abdūn took over Wallāda completely, and she remained his mistress until her death. He died in 472/1079-80, at the age of 80.

IBN ABI ‘AMIR [See IBN-AL-MANṢŪR].

IBN ABI ‘ASRŪN,Sharaf al-Dīn Abū Sa‘īd Abū ‘AbdAllāh b. Muhammad b. Hibat ‘Allāh b. Mutahhar al-Tamīnī al-Mawṣūlī, later al-Halābī and finally al-Dīmahquī, was the most important ʂāfi‘ī scholar of his time. He was born in Rabī‘I 492 or 493/February 1099 or 1100 at Hadīth, studied at Mawṣul and then at Wāṣīt, with Abū ‘Ali al-‘Afdīlī, and at Baghdad, particularly with As‘ad al-Mayhānī and Ibn Burūnī (see the list of his teachers in al-‘Nu‘aymī, Dāris, 400). From 523/1129, he taught at Mawṣul, then went to settle in the region of Sindjār and was appointed ʂādi‘ of Sindjār, Nishābūn and Harrān, and later of Dīmahquī. He was deeply pious and well versed in ʂī‘a. He was also appointed administrator (muṣīr) of the wa‘fāt. He then returned to Aleppo, where he had had a madrasa built, and became again ʂādi‘ of Sindjār, Harrān and Diyar Bakr. Leaving his son Nadjīm al-Dīn to succeed him at Aleppo, he returned to Damascus in 570/1174 to teach at the Ghazāliyya madrasa, the lectures of which were given in the north-west sector of the Great Mosque. He was also appointed administrator (muṣīr) of the wa‘fāt. He then returned to Aleppo, where he had had a madrasa built, and became again ʂādi‘ of Sindjār, Harrān and Diyar Bakr. Leaving his son Nadjīm al-Dīn to succeed him at Aleppo, he returned to Damascus in 570/1174 to teach at the Ghazāliyya madrasa, and also in his own madrasa. In 573/1183, in the reign of Sa‘īd al-Dīn, he was appointed, after the death of Diya‘ al-Dīn al-Shahrāzurī, to succeed him as the chief ʂādi‘ ʂādi‘, the most important judicial office in Syria. In 575/1179-80 he had to retire, and died at the age of over 93 in Ramadan 585/October-November 1185 and was buried in the madrasa he had built opposite his house in Damascus, to the west of Bāb al-Barid.

Nūr al-Dīn had had built for him six madrasas: at Aleppo, Ba‘labakī, Damascus, Hamāt, Hims and Manbīdji. Ibn Abī ‘Asrūn wrote a number of works, which have been lost, but the titles of seven of them are mentioned by Ibn Kāhir, among them Safarīt
IBN ABI 'ASRŪN — IBN ABI 'L-AWWDJĀ

al-ma'dhab fi nihdyat al-maflab in seven volumes, K. al-Intisāf, and Faw'dād al-ma'dhab. His sons Nadīm al-Din and Muhbīl al-Din taught in the madrasas which he had founded at Aleppo and Damascus, followed by his grandsons and great-grandsons.

IBN ABI 'AṬIK is the usual appellative of the great-grandson of the Caliph Abu Bakr, ʿAbd Allāh b. Mūhammad (= Abū ʿAthīk) b. ʿAbd al-Raḥmān b. Abū Bakr. All that is known of him is that, after al-Ḥasan and al-Ḥusayn, he married, AL-RAHMAN B. ABI BAKR. All that is known of him is that he lived first at Basra, where (although even this is doubtful) he is supposed to have been a disciple of Ḥasan al-Baṣrī (q.v.), and seeking the company of wits such as Umayr b. Abī Rabiʿa and al-Thurayya. We may take this personage supplied by Muslim historians and theologians of diverse tendencies depicts him as a man of dangerous heterodoxy, who, on his own admission, invented the calendar and spread Manichaean propaganda by means of insidious questions relating to the problem of free will and determinism. What is more certain is that he frequented a very mixed milieu, rubbing shoulders with Muṭaṭazzīlīs such as ʿAmr b. Ubuyd and Wāṣīl b. ʿAtāʾ (qq.v.), with poets disapproved of by orthodox Muslims, such as Bashshār b. Burd and Sālīḥ b. Abī ʿAlī al-Kudūsī (qq.v.) and with other suspect persons. Expelled from Basra, he went to live at Kīfē, where he was put to death by the governor Muhammad b. Sulaymān, in 1557 or perhaps two years earlier; it is difficult to accept the date 67/783-4 accepted by L. Massignon; it is also doubtful whether one should accept as entirely historical the Ṣāḥīh accounts speaking of discussions carried on over a long period at Mecca between Ibn Abī 'l-Awwdjā and Dīārār al-Sādīk (q.v.). The arguments which, according to L. Massignon, would make him the compiler of the fīṣāḥāt of the iṣmāʿ Dīyar are also far from convincing.

This much, however, is clear: the information on this personage supplied by Muslim historians and theologians of diverse tendencies depicts him as a man of dangerous heterodoxy, who, on his own admission, invented numerous traditions, falsified the calendar and spread Manichaean propaganda by means of insidious questions relating to the problem of free will and determinism, and who was a believer in the eternity of the world and in metempsychosis (tannāsīn). Bibliography: The sources have been gathered together and discussed in G. Vajda's study, Les sīnīds en pays d'islam au début de la période abbasside, in RSO, xxvii (1937-8), 193 (21-26), 223 (51-225 (53); in addition al-Kulaynī, Uṣūl al-Khāf, i, Tehran 1375/1955, 74 ff.; Ch. Pellat, Le milieu basrien et la formation de Gāhīz, 1955, 219; L. Massignon, Essai sur les origines du lexique technique de la mystique musulmane, 1954, 182, 201, 205-6 (index to be corrected). H. Tālīzāda and A. Ašfār Shīrāzī, Mehr ve dīn-i a, Tehran 1355 S./1976, index s.v. Ibn Abī 'l-Awwdjā (p. 540). (G. Vajda)

in criticism over an anecdote in which ʿAṣīha appears, does not hesitate to accuse the Rāfīḍīs (q.v.), in their hostility to the Prophet's widow, of having invented the. Without going that far, we may legitimately suppose that the name of Ibn Abī 'Athīk could well have served to justify the development of the genre of jokes that flourished so much in the early days of Islam [see AL-QIYD WA 'L-HAZL, NĀDIRA].

IBN ABI 'L-AWWDJĀ, ʿABD AL-KARĪM, a notorious crypto-Manichean (sīnīdī q.v.), belonging to a great family (he was the maternal uncle of Mān b. Zādīqā (q.v.)). According to the most reliable information, he lived first at Baṣrā, where (although even this is doubtful) he is supposed to have been a disciple of Ḥasan al-Baṣrī (q.v.), from whom he parted on account of the latter's doctrinal inconsistency regarding the problem of free will and determinism. What is more certain is that he frequented a very mixed milieu, rubbing shoulders with Muṭaṭazzīlīs such as ʿAmr b. Ubuyd and Wāṣīl b. ʿAtāʾ (qq.v.), with poets disapproved of by orthodox Muslims, such as Bashshār b. Burd and Sālīḥ b. Abī ʿAlī al-Kudūsī (qq.v.) and with other suspect persons. Expelled from Basrā, he went to live at Kīfē, where he was put to death by the governor Muhammad b. Sulaymān, in 1557 or perhaps two years earlier; it is difficult to accept the date 67/783-4 accepted by L. Massignon; it is also doubtful whether one should accept as entirely historical the Ṣāḥīh accounts speaking of discussions carried on over a long period at Mecca between Ibn Abī 'l-Awwdjā and Dīyarīr al-Sādīk (q.v.); the arguments which, according to L. Massignon, would make him the compiler of the fīṣāḥāt of the iṣmāʿ Dīyar are also far from convincing.

This much, however, is clear: the information on this personage supplied by Muslim historians and theologians of diverse tendencies depicts him as a man of dangerous heterodoxy, who, on his own admission, invented numerous traditions, falsified the calendar and spread Manichaean propaganda by means of insidious questions relating to the problem of free will and determinism, and who was a believer in the eternity of the world and in metempsychosis (tannāsīn). Bibliography: The sources have been gathered together and discussed in G. Pellat, Le milieu basrien et la formation de Gāhīz, 1955, 219; L. Massignon, Essai sur les origines du lexique technique de la mystique musulmane, 1954, 182, 201, 205-6 (index to be corrected). H. Tālīzāda and A. Ašfār Shīrāzī, Mehr ve dīn-i a, Tehran 1355 S./1976, index s.v. Ibn Abī 'l-Awwdjā (p. 540). (G. Vajda)
IBN ABI 'AWN, IBRAHIM B. MUHAMMAD B. ABMDABI 'AWN B. HILAL B. 'L-NA'IM, man of letters who flourished in the 3rd/9th century. His bynaya is variously reported as Abū 'Isāḥ, Abū 'Imrān (Baghdādī, Farkh), Abū 'Amr (colophon of the Medina MS of his K. al-Taṣbihātī, no. 4 below). The above genealogy, given by Yaḥyā (Udabd*), is variously reported as Abu Ishak, Abu Lahab, Abu Thīhib as chamberlain and was appointed governor of ṭūṣī in 255/866, during the caliphate of al-Mu'tazz; he too was a poet, and verses of his addressed to Ibn Rūmī (p.v.) are quoted in al-Muwāṣṣadāt, 349.

Ibn Abī 'Awīn, a litterateur of the 2nd/8th century, on the Nahr cūtī; he followed the family profession of secretary, whence his designation as al-Kātib al-Baghdādī, and was for a time chief of the ghurī. He was the friend of al-Muktadir's secretary; his grandfather Ahmad was a scholar and the Medina MS of his K. al-Tashbihītī, (al-'Umdāta, Farkh), father Muhammad served Muhammad b. 'Abd Allāh b. Thīhir as chamberlain and was appointed governor of Wāṣṭi in 855/866, during the caliphate of al-Mu'tazz; he too was a poet, and verses of his addressed to Ibn Rūmī (p.v.) are quoted in al-Muwāṣṣadāt, 349.

The above genealogy, given by Yakut (Udabd*), kunya is variously reported as Abu Ishak, Abu Lahab, Abu Thīhib as chamberlain and was appointed governor of ṭūṣī in 255/866, during the caliphate of al-Mu'tazz; he too was a poet, and verses of his addressed to Ibn Rūmī (p.v.) are quoted in al-Muwāṣṣadāt, 349.

IBN ABI 'L-DAM, SUHAYR AL-DIN IBRAHIM B. ABU'LLAH AL-HAMWAI, historian and Shāfi'i jurist. Born in Ḥamāt on 21 Dūmād I 583/29 July 1187, he studied in Baghdād, taught in Ḥamāt, Aleppo, and Cairo, and finally was appointed judge in his native city. He went to Baghdād in 621 on an embassy for the ruler of Ḥamāt, al-Malik al-Muẓaffār, and, in the following year, when he was again on his way to Baghdād to announce there the death of al-Malik al-Muẓaffār, he was stricken with dysentery in al-Maʾarrā and returned to Ḥamāt, where he died upon arriving there on 25 Dūmād II 622/20 July 1224. He wrote two histories, one a brief annalistic work starting with the life of the Prophet and continued to the year 628, dedicated to al-Malik al-Muẓaffār, and the other a large biographical work in six volumes, entitled al-Ṭaʾrīkh al-Muẓaffārī. Only the former is preserved in manuscript (Ms. 1292b of the Municipal Library in Alexandria being another copy of it). He also wrote an often cited work on Muslim Sects (cf. H. Kitter, in Is., xvii (1929), 51), as well as legal works on ādāb al-ḥādīt (ḥādīt, ḫudūd), on (it seems) the transmission of traditions Tadākh al-ṭanīya fi taḥkīk al-riwdy waṭawiya, and commentaries on al-Ghazalī's Wasit (Ṣarḥ muḍqīl al-Wasit, obviously identical with the ṭāḥāḥ al-aṭāḥi, mentioned by Brockelmann, S I, 753, no. 49 f) and on the Tābīnī of Abū l-Isbākh (Ṣirākh, quoted by Damir, under zarīf). A legal opinion from these works was still debated by the Subkīs.

IBN ABI 'L-DĀ'ŪD [see al-ṣīdājīnī].

IBN ABI DĪNĀR, ABD ALLĀH MUHAMMAD B. ABI 'L-KĀSHIM AL-RUṢAYNĪ AL-KAYRAWĀNI, historian of Kayrawān. In 1092/1681 or in 1110/ 1698 he wrote a history of Tunisia entitled Kādāb al-Mun'īs fi adḥbār Irīṣiyā wa-Tūnīs, printed Tunis 1286/1621-2; tr. Pelissier and Remusat, Paris 1845. It is a mediocre work. Though of interest for the core of the period up to the date when it was written, it is hardly of interest for any others.

Bibliography: A. Bel, Les Benou Chānā, Paris 1903, Introduction; Roy, Extrait du catalogue des manuscrits de la Bibliothèque de la Grande
Mosquée de Tunis, Tunis 1900, no. 4960, 50; Brockelmann, II, 457, S II, 682; F. Bustād, DM, i, 205.

**IBN ABI 'L-DIYĀF, ABR 'L-'ABNĀS AHMAD, Tunisian chronicler born at Tunis in 1217/1802-3, died in the same town on 7 Jāhār ban 1291/20 September 1874. As secretary and counsellor to the beys, he was entrusted with the delicate missions to Istanbul in 1246/1830 and 1258/1842, and accompanied Ahmad Bey to Paris in 1262/1846. He played an active part in the drawing up of the Pacte Fondamental and of the Constitution of 1861 {see note 24}. After the date he seems to have fallen into partial disgrace, from which he was rescued only for a short time by Khāyār al-Dīn, who was chief minister from 1873.

The work of Ibn Abī 'l-Diyāf consists essentially of a history of Tunisia from the Arab conquest up to 1260/1846, the Istāfah abī al-samān bi-akhbār mušāk Tūnīs wa-‘l-adhn al-amān. Up to the period of the Husaynis, this chronicle is a summary devoid of originality, but it increases in extent and in interest as it approaches the events which were contemporary with the author.

**IBN ABI DU'DĀD [see AHMAD B. ABI DU'DĀD].**

**IBN ABI 'L-DUNYĀ, ABŪ BAKR 'ABD ALLĀH B. MUHAMMAD B. 'UBAYD B. SÛFYĀN AL-KURASH AL-BAGHĀDI, Arabic writer, born in 208/823 in Baghādād and died there in 282/894. Although he was a freedman of the Umayyads, he became the tutor of several 'Abbāsid princes and in particular of those who were later to become caliphs as al-Mu'tadid and al-Mu'taḍidī. Ibn Abī 'l-Dunyā was a learned teacher, highly respected for his exemplary way of life; he is counted as a "weak" traditionist only by the Shi'i [Māmākānī, Tanbīḥ al-mādoğ, 7028]. He led a pious and ascetic life (zaḥā), combined with an extensive teaching activity. His writings belong for the most part to the field of edifying literature: he preached patience, humility, penitence, trust in God, hospitality, vigils, silence, frugality, etc., and condemned envy, anger, drunkenness, the use of musical instruments, and "the World" (al-dunyā) in general; he treated also single themes such as the merits of Rāmādān and of 10 Dhu 'l-Hijjah (yawm al-adhāt), or general themes such as the moral characteristics which a man should seek to attain (mahārīm al-ṣabāb), or Joy after Sorrow (al-'afārā ṣabā al-ṣağṣa). The titles of a few historical works are also recorded. Altogether Ibn Abī 'l-Dunyā is said to have written over 100 works some 20 of which have survived. Siyāt al-Diawālī even speaks of more than 130 which were known to him. Indeed more than 100 titles can be traced, partly from Ibn al-Nadīm's Fihrist and Ḥājīd, partly from "reading lists" (fahdrīs al-shuyukh), in which later scholars, recording the works which they have studied, have mentioned also some by Ibn Abī 'l-Dunyā.

**IBN ABI 'L-HADĪD, SCHOLAR OF wide learning in the fields of Arabic language, poetry and adab, rhetoric, kalām [q.v.] and of the early history of Islam; in addition he was an avowed Shi'ī and an eminent writer of prose and poetry. Born at al-Madā'ín on 1 Dhu 'l-Hijjah 586/30 December 1190, he died at Baghādād in 655/1257 or 665/1258, i.e., either immediately before or immediately after the capture of the city by the Mongols (20 Muharram 655/28 January 1258); since Ibn al-Fuwāti states that he was able to escape the massacre by the invaders, it is likely that he spent much time in the desert and also in the house of the mawārī of the nāsās (the archives of the diwan al-sīmām), the second date is the more probable. His full name was 'Īzīz Abī Hindī al-Madā'ī, or Al-Madā'ī, less gifted than 'Īzīz Abī Hindī, was the younger of two brothers mentioned in the sources, one, Muwaffāq al-Dīn Abī 'l-Maṭālī Abī Hindī (or al-Kāsim), less gifted than 'Īzīz Abī Hindī (according to Ibn Ḥajjar), enjoyed a certain fame as a jurist, a man of letters and a poet; the other, Abī 'l-Barakāt Muhammad, kātib of the waqfs of the Nizāmīyya and also a poet, died at the age of thirty-four in 598/1201 (Ibn al-Sā'ī, 88).

'Abd al-Hamīd spent his youth in his native town, studied there the doctrines of kalām and showed a leaning towards Mu'tazilism; it was at al-Madā'īn, where Shi'īsm was predominant, that he composed several kasidas, known as fihrīs al-Awāsīyya, which are strongly Shi'ī in tone
He then went to Baghdad, where he mixed with scholars and moderated his opinions. He there enjoyed the patronage of the Seljuk caliphs, from whom he received gifts, and occupied official positions: kāthib in the dār al-taṣrīḥī (office of protocol), then in the Diwān al-Khiṭṭāt, then nāṣīr in the bimāristān (hospital), and finally director of the libraries of Baghdad (according to Muhammad Abu 'l-Fāḍil, in the introduction to his ed. of the Ṣabr al-Nakī āl-balāgah). Ibn Abī 'l-Hadīd himself relates (Cairo ed. 1339, iv, 41) an episode which throws some light on his work as a civil servant, which did not, however, prevent his devoting himself enthusiastically to learning and to poetry. It was the last minister of the 'Abbasids, Ibn al-Kalikānī, who showed him the greatest favour, there being political affiliations (tasāyyūnu) and literary connections between them.

Brockelmann gives information on only five of Ibn Abī 'l-Hadid's scientific works, whose titles are given here with some additional information: (1) a criticism of al-Muṭaḥal al-sāʾir fi ǧābūl wa-l-ğābir by Dīyā' al-Dīn Ibn al-Athīr (Brockelmann, I, 297, S I, 521), produced on the orders of the caliph al-Mustanṣīr and having the title al-ʿAlāk al-dāʾir ʿalā l-Muṭaḥal al-sāʾir, which immediately gave rise to refutations (see Ḥādjīlī Khiṭṭāt, ed. Flügel, v, 272); (2) Ibn Abī 'l-Hadīd's residence in Baghdad from 1236, this work was completed in fifteen days. (2) A commentary on the theological work Al-qārat al-Dīnayn (Brockelmann, I, 507, S I, 923) by al-Fāhrī al-Dīn al-Rāzī. (3) A commentary on Al-muṣannīfī min Shark Ibn Abī 'l-Hadīd (Brockelmann, I, 1, 405, S I, 703). This ʿSharḥ in zo ǧuzaʾ, which may be justly described as a masterly product of the best literary work in the Cairo 1239 ed.), is a mine of information of every sort, each fragment having been used by the author as a peg for explanations and digressions on literary, biographical and other matters (attention should be drawn to the historical excursus, because the author has inserted in his commentary long passages from monographs either earlier than al-Ṭabarī or not used by him); because of its value this work deserves the title of ʿAbd Allah b. al-Hadīd b. Ḥamza (Brockelmann, S II, 242) made an abridged version of the title al-MMāṭuṣrāhādī min ʿSharḥ Ibn Abī 'l-Hadīd, which was translated into Persian (Brockelmann, S I, 705). To Brockelmann's list there should be added: (6) al-

Ibn Abī 'l-Hadīd was also highly thought of as a poet and sometimes described by antonomasia as al-ṣāḥīf al-Tabarī (i.e., "the Tabarī poet"); since he was inspired by a sense of justice he was known under the name of ʿAbd Allah b. al-Hadīd b. Ḥamza (therefore Shīʿī) (the title of this work is not mentioned by Brockelmann). (7) A commentary on ʿAlī al-Muḥāṣṣib (i.e., al-Muḥāṣṣib; see Brockelmann, I, 424, S I, 754). (8) al-Hażrāwī ʿalā ʿAbd Allah b. al-Hadīd al-Muṣafṣāl fi l-nāʾiḥ (by al-Zamakhshārī, S I, 509). (9) Some very critical glosses (lūṭika) on al-Maḥṣūl fi ʿAlī ʾl-ṣīb by Fāhrī al-Dīn al-Rāzī (Brockelmann, I, 507, S I, 421). (10) A commentary (gharb) on the work Muḥāṣṣab al-abār min muḥāṣṣādat al-muḥāṣṣabīn wa-l-muṭaṭabbābīn, a philosophic text by the same Fāhrī al-Dīn al-Rāzī (Brockelmann, I, 507, S I, 923). (11) A commentary on the Muṣkātāt al-ʿalwār of Abuʾl-Ḥasan (or Abuʾl-Ḥusayn) al-Bāṣrī on the ʿAlī al-Muṣafṣāl (neither the work nor the author is mentioned by Brockelmann). (12) A theological, historical and literary miscellany under the title al-Aḥkār al-ḥāṣanīn, in which the author has introduced also some pieces of his own prose and poetry. (13) A commentary on al-Yābūlī by Abū ʾĪsāḥīr b. Nawbāghīt (Brockelmann, S I, 320). (14) Al-Wīṣāb al-ḥāḥābī fi l-ʿilm al-ʿUṣūl, on which no further details are known.

Al-Shīʿī Abū ʾĪsāḥīr b. Nawbāghīt wrote a number of scholars. There are mentioned the following poems by him: (1) the Diwān containing poetry of all types from panegyric to the ḡazal, but with a predominance of Şīʿī munādāt and muḥāṣāt (several examples are included in the ʿAbd Allah b. Ḥamza bibliography); (2) a philosophical text by the ʿAbd Allah b. al-Hadīd b. Ḥamza; (3) a commentary on the Al-ṣāḥīf al-Tabarī, which on which there exist at least four commentaries (Brockelmann, I, 249 f., S I, 497) and the subjects of which are: (a) the capture of Ḵhaybar; (b) the conquest of Mecca; (c) and (d) praises of the Prophet; (e) and (f) the murder of Ḵusayn b. ʿAlī b. ʿAbd Allah; (g) praises of the Prophet. (3) The Muṣannīfīyāt composed on the orders of the caliph al-Muṣṭanṣīr. Verses by Ibn Abī 'l-Hadīd are quoted by al-ʿArṣafādī and by Ibn ʿṢāhir in their biographical notices.

All the above information produces an image of a scholar of wide and complex intellectual interests, but different from many other Muslim scholars. It is the details given by the Rawdāt al-dhannāt and confirmed by the ʿAlī al-Muṣafṣāl which show Ibn Abī 'l-Hadīd to be a more interesting personality. These two sources show how difficult it was to class this author in one or other of the great religious and political movements of Islam; various judgements have been formed on him and, as his position was not clear, writers have resorted to making distinctions: Muṭaṭallī for the ʿUṣūl, but ʿṢāḥīhī for the ḡurāʾ (thus decidedly Sunni in this field), but objective in his attitude to the ʿAlī al-Bayt [q.v.] and explicit in his affirmation of the rights of ʿAlī (therefore Shiʿī); or else it has been suggested that, at first a Muṭaṭallī, he later became a Ṣāḥīh; it has also been said that he was between the Ṣāḥīh and the Sunni parties (bāyān al-farāḥ al-ṣāḥīh), since he was inspired by a sense of equity (insāf); his position in relation to the Sunnīs has even been compared with that of ʿUmar b. al-ʿAzīz [q.v.] in relation to the other Umayyad caliphs. Concerning the title al-MMāṭuṣrāhādī min ʿSharḥ Ibn Abī 'l-Hadīd, which was translated into Persian (Brockelmann, S I, 705). To Brockelmann's list there should be added: (6) al-
balágha, he often states that he is in agreement with al-Djahiz. A thorough and impartial examination of the many polemical passages in his Šahr Naḫdī al-baldgha will be necessary before his thought can be better understood and a sounder assessment made of him; it may, however, now be taken as certain that he was not an Imāmi. Bibliography: Ibn Kathlīkān, Būlāk 1299, ii, 209, Cairo 1310, ii, 158 (in the biography of Diyyā al-Dīn Ibn al-Aṭhir), tr. de Slane, iii, 547; Ibn al-Sā'rī, al-Dīmāl al-muqāvaṣah, ix, ed. (L. Vecchia Vaglieri)

IBN ĀBI ḤĀṢIŅA, Aḥmad b. Yāḥyā Shīrāzī al-Dīn al-Ṭīlīmānī, a poet and prose writer. He was born at Tilimsan in 725/1325 in the šarīa of his grandfather, who is said to have been given the nickname Abū Ḥāǧaqla (lit. ‘partridge’s father’) because a partridge laid an egg on his sleeve. Ibn Abī Ḥāṣina left Tilimsan for Cairo, then performed the Pilgrimage, after which he went to Damascus where he studied adab, in which he became proficient. He wrote a number of maḥānūs and many works in poetry and prose, a number of which are extant (see Brockelmann). He became head of a Sūfī monastery outside Cairo, but seems to have been more occupied with general literature than with mystical writing. He wrote kasidas in honour of the Prophet imitating the style of the kasidas of Ibn al-Ḥāǧaqla, whose views he more or less held. He belonged to the Ḥanafī madḥāhīb, but was inclined to the beliefs of the Ḥanafī Ismāʿīlī. Ibn Abī Ḥāṣina says he used to tell the Ṣhāfīʿīs that he was a Ṣhāfīʿī, the Ḥanafī that he was a Ḥanafī, and the traditionists that he was a traditionist. He died during a plague at the end of Dhu l-/Instruction 776/A.H.; Hagūl Khalīfa, ed. Shadḥūr, i, 248-97/1023-85. Ibn al-Ṣadūq, Fawūd, ii, 237; Ibn al-Wardī, Taʿrīḫ, i, 365; Ibn al-ʿAdīm, Zubda, ed. D. Dāhhān, Damascus 1959 in the published collection.

IBN AḤMAD B. ʿABBĀS AHMAD B. YĀḤYĀ SHĪRĀZĪ AL-DĪN AL-ṬĪLĪMĀNĪ, poet and prince belonging to the great Arab tribe of the Banū Sūlaym, which traces its descent from ʿAdnān. He was born at Maʿṣarr (Syria) in 388/998 and received his early education in his native town (which was at this time an important cultural centre), drawing on the same resources as al-ʿArārī, then completed his education at Aleppo, frequenting the literary circles there.

At the age of barely twenty he met Thīmālī b. Mīrādās at Raḥba and dedicated to him a poem which demonstrated his poetic gifts. When the Mirdādīs became governors of Aleppo (from 414 to 473/1025-83) he enjoyed their special favour and continued throughout his life to celebrate their virtues and their exploits. Sent by Thīmālī b. Mīrādās on a mission to the Fāṭimid calīph al-Mustanṣīr, he visited Egypt in 457/1065 and dedicated to this calīf a first panegyric, then a second one in 459/1068. Al-Mustanṣīr granted him a princely title, which permitted him to lead at Aleppo the life of an amīr. Ibn Abī Ḥāṣina also visited Damascus, where he met its scholars, wrote of the beauties of its situation and composed a fine elegy on the occasion of the death of the bābī of the town, Abū Yaʿṣīr Hamzah b. al-Ḥusayn. Ibn Abī Ḥāṣina, always loyal to the Mirdādīs, died at Sarūd j on 15 Shaʿbān 457/22 July 1065. Ibn al-ʿAdīm (Zubda, ii, 73) attributes to him a poem written in honour of Shāhār al-Dawla Muslim b. Kūrāysh after the taking of Aleppo in 473/1080, but the author of this must be another man of the same name—or perhaps there is confusion with Ibn Ḥāyyūn (s.v.).

He wrote panegyrics, love poetry, descriptive and elegiac poetry, but his main work was in the field of panegyric. He was distinguished by the quality of his language, his themes remaining the traditional ones.

Ibn Ḥāṣina’s đivāna was published in two volumes at Damascus in 1956 by Muḥammad Asʿad Tašāl. The first volume contains the poems, the second a commentary on them by Abu l-ʿAlāʾ al-Maʿṣarī, from which it may be deduced that he sent his poems to Abu l-ʿAlāʾ al-Maʿṣarī for him to comment on them.

This edition is based on a manuscript in Baghdaḍ (Iraqi Museum no. 1261) and on another in the Escorial, no. 275. It is evident that this edition does not contain the whole of the poet’s work, since the commentary by Abu l-ʿAlāʾ al-Maʿṣarī contains some first lines (matla) of poems which are not found in the published collection.

IBN ABDULWALID AL-MADINI (b. 74/693; d. 810/1407).

Ibn Abi Layla was appointed hadīth of Kufa by the recently appointed governor ʿIsa b. Mūsā in 123/741, and he held this office under the Umayyads and the ʿAbbāsids, except for an interval, at his own request, under the Khārījī usurper al-Daḥḥāk b. Kays, until his death. He based his judgments, as was customary in his time, on his own considered opinion (raʾy). A work on the law of inheritance (fuʿāda) went under his name (Fihrist). He was succeeded as ʿālī of Kufa by his nephew, ʿAbd al-Rahmān b. ʿAbd Allāh b. ʿIsa, who, however, died soon afterwards. His distinctive function in Kufa still had followers in the time of ʿShāfiʿī (d. 204/820).

A treatise of ʿShāfiʿī (Kitāb al-ʿUmm, vii, 87 ff., surprisingly called Kitāb al-ʿAsmāʾ wa l-ḥabībī in ʿAtīqī Khālīfah, v. 42, No. 938) is concerned with the differences between Ibn Abi Layla and Abī Ḥanīfa concerning technical details of legal doctrine. Ibn Abi Layla represents, generally speaking, an older stage of doctrine than his contemporary Abī Ḥanīfa, that is to say, he is more conservative; he also pays more regard to judicial practice. Ibn Abi Layla’s doctrine, taken as a whole, shows a considerable amount of technical legal thought, but it is generally of a primitive kind, somewhat clumsy and untrained, and therefore shortsighted and often unfortunate in its results. The striving for systematic consistency, the action of general trends and principles pervade his whole doctrine. A rigid formalism is perhaps the most persistent and typical feature of his legal thought. Ibn Abi Layla’s practical, commonsense reasoning often takes material, and particularly Islamic ethical, considerations, into account. There are numerous traces of his activity as a ʿālī in his doctrine, last but not least his conservatism.

Ibn Abi ‘l-Ridjal’s other astrological works include two important scientific works. It is a vast compendium of astrology, which contains references to the works of ancient astronomers and astrologers. The Arabic astronomical and astrological sciences in Latin translation, Berkeley-Los Angeles 1956, 150-4; Hebrew—M. Steinschneider, Die hebräischen astrologischen Texte der Araber in Übersetzung ins Deutsche, Berlin 1851, 233-40. For the various translations of the Arabic text there exists an Old Castilian translation made by E. I. P. de Lippert, 351-3) lists among the witnesses to observations of the summer solstice and the autumn equinox in Baghdad in 378/988; and, though his tombs are said to be beheaded in 379/990 (Ibr. al-Ridjal, vii, 119), he must in fact have lived several years longer, as he mentions the death (in 1037) of the Kabīl amīr of Sicily, Abū b. Mahfūz al-Sawā, in the region of al-Shabat, in the Yemen; he died on the night of Tuesday 5 or Wednesday 6 Rabi‘ I 1092/24-5 or 25-6 March 1618 at the age of 62 years 7 months, and was buried at al-Rawda. The biography composed by his brother Muhammad (MS Ambrosiana nuovo fondo 256, fols. 2-11) contains a wealth of minute details on the curriculum of his studies and provides evidence of the exceptional learning which he acquired, having as his teacher the most learned Zaydis of his day (among them the imām al-Mu‘ayyad bi‘l-llah Muhammad b. al-Kāsim and the shaikh Ibrahim b. Muhammad al-Mu‘ayyadi, Izz al-Dīn b. Durayb, Muhammad b. al-Hasan b. al-Imām b. Kāsim, Abū b. Sa‘d al-Dīn al-Miswārī, Ibrahim b. Yābya al-Suḥṣ, as well as many doctors of various schools. His fame earned him the friendship of the imām al-Mu‘ayyad bi‘l-llah and his son al‘lāh Ismā‘īl bi‘l-llah (d. 1087/1677), who employed him as secretary and court orator (khāṭib wa‘sū).

The work on which is rightly based his claim to fame is an alphabetically arranged collection of about 1300 biographies of famous Zaydis, of military as well as literary importance, of al-‘rāk and the Yemen: (a) the Mālah al-bu‘dār wa-majma‘ al-bubār. This monument of doctrine, which until the beginning of this century was thought to be lost, is an almost unique source of information, and all the more valuable because the Zaydis took especial care to remain silent on everything which concerned themselves; in addition, it contains a number of facts, drawn from sources which now exist only in part, which concern not only the history, but also the geography and the archaeology of the Yemen.

With a few exceptions, of the remainder of his works only the titles remain. They consist of: (a) biographical and genealogical works, such as (2) Taṣūr al-bī’tarādjam tarādjam al-tarāf al-lām (biographies of Kurān commentators); (3) Inbā‘ al-abnā‘ bi-tārīkh halafshīn al-‘ansū, the genealogy
of his own family); (4) Ta'lik (gloss) on al-Mushad-
diar (genealogy of the Zaydi imams) of Ibn al-Djalal
(MS Ambrosiana 681); (b) theological and juridical works: (5) Fudal-al-muwadit bi-khalam
saddathi al-`alam al-mawali (MS Br. Mus. Suppl.
217/2); (6) Taysir (Ta’isir) al-Shari‘a (MS Br. Mus.
Suppl. 217/1); (7) al-Riyad al-nadisyya fi anna
‘l-firka al-nadisyia hum al-Zaydiyya; (8) al-Mawazin
al-radiya li-bi‘arabihin al-sadihi, commentary on al-
`Alida al-sadihi by the imam al-Mutawakkil Isma‘il;
(9) Madzilis al-inhim; (10) al-Wadhi‘ al-audhi‘ fi
bukharu al-wadhi‘ al-audhia dayya; (11) Madzil
man arad al-hadihi min murad al-hadihi; (12) al-
Hadiyya ‘ilay man yuhibb ‘il-hadiyya ‘ilay man
yukabb; (13) al-Djawab al-shafis ‘i’ssadad ‘ilay ‘Abd
al-‘Aziz al-Damadi; (14) Taghkhirat al-bulabb allafi
‘i’ssadud ‘i’shayd al-aqzam allati ‘il-kubur; (15)
Rasa‘idon various subjects; (c) works of Kur‘anic
exegesis, as such as (16) Bughyat al-al‘al wa-salih
fi sabab ‘innad Walisyum Allah wa-Rashidukh
(Kur‘an, V, 60); (d) philological works, such as (17)
Hadiyya ‘ilay laf al-asjar; (e) poetry: (18)
Dawani, consisting of poems of a mainly religious
character, some fragments of which are contained
in his biography, while several others are cited in the
Malla al-budur.

IBN ABI SHANAB (in Algerian dialect BEN-
Shen and officially in French BEN CHENEN) MUHAMMAD B.
AL-Arab, Algerian teacher and Arabist, born at Tahk, near Medea (Algeria) on
10 Rajab 1286/26 October 1869 and died at Algiers on
27 Shawal 1347/5 February 1929.

Some of his ancestors, who were natives of Bursa,
were officers in the Turkish army stationed in Egypt,
and another of them settled in Algeria. His
grandfather, retired from the Turkish army, died at Medea during the siege of this town (May-June
1840) by the amir Abdelkader (‘Abd al-Kadir al-
Djaza‘ri (q.v.)). His father was a small farmer on the
outskirts of Medea and his mother, a Bashahtari, was
also of Turkish descent.

He was educated for a short time at the Kur‘anic
school then at the Ecole Francaise, next at the
College de Medea (now the Lycée Ben Cheneb)
and finally, for a year, at the teacher’s training college at
Bouzaréa near Algiers; in 1888, at the age of 19, he
became a teacher at Témjadré, in the durour of
Wamiri, in the mixed commune of Djeddel, 30
kilometres from Medea. Four years later he was
transferred to the Fatah school at Algiers; there he
achieved it was exceptional, endowed with a robust
nature left vacant by Rene Basset. In July 1928 he
was appointed professor in the Fatah school at Algiers. In 1924, he was appointed professor in the
Faculte des Lettres, while retaining his chair at the
madrasa. It was at this time that he showed his
abilities both as a teacher and in research. His
excellent teaching gained him the attention and the
veneration of an audience which increased daily. He
published books and articles in increasing numbers.
He travelled occasionally, notably to Oran and Constantine and to Tunisia and Morocco, presiding
over boards of examiners, taking part in scientific
congresses and discussions. He was in touch with
many orientalists outside Algeria and corresponded
with Codera and Miguel Aníbal Palacios in Spain,
with E. Griffith in Italy, with Krachkovsky in Russia,
with Ahmad Taymür in Egypt, with Hasan Husni
‘Abd al-Wahhab in Tunisia, with the members of the
Arab Academy at Damascus, and with many
‘ulamā in Morocco and elsewhere.

His scholarship was recognized in 1920 by his
election as a member of the Arab Academy at
Damascus and, in 1922, the award of the degree of
Doctor ès lettres d’État by the University of
Algiers. In 1927, he was appointed to lecture in
the Faculté des Lettres of the University of Algiers,
succeeding to the chair of Arabic language and litera-
ture left vacant by René Basset. In July 1928 he
represented Algiers University at the 17th Inter-
national Congress of Orientalists at Oxford.

Such a career, rare even in France and elsewhere,
was without precedent in Algeria, and even until the
time of his death there has been none to equal it. The man
who achieved it was exceptional, endowed with a robust
constitution and an inflexible will, which made him
tiredless worker and a patient, stubborn and metho-
dical scholar. His association with scholars like
Fagnan and Basset had made him quick to seize the
positive side of modern methods of work, based on
scientific discipline, without leading him to under-
estimate the fine values of his background, to
which he remained faithfully attached, refusing
to change his style of dress or his personal beliefs
and adhering scrupulously to his code of behaviour
as a strict but enlightened Muslim.

His scholarly works are spread over about thirty
years. They were prolific between 1906 and 1913,
ceased for a period during the First World War, and
were resumed between 1918 and 1928. They cover a
very wide field, in many disciplines: pedagogy,
education, Muslim law, hadith, popular poetry, proverbs, lexicography, grammar, poetry, lexicography, grammar, poetry, education, Muslim law, hadith, popular poetry, proverbs, lexicography, grammar, poetry, lexicography, grammar, poetry.

Ibni Abi Shanab — Ibn Abi ‘l-Shawarib

Ibni Abi Shanab felt himself obliged to conform to the old, but still admired, custom of writing in sazī (rhymed prose).

His work thus consisted on the one hand of the editing of Arabic texts, often with a French translation and notes, and on the other of original studies and the begin-
ing of an official creed. In the history of the "people of the Sunna" at the time when the "Abbasid caliphate with Sunnism, a reconcil-
iation which was itself the prelude to the estab-
lishment of an equilibrium, achieved with diffi-
culty, between the civil and religious powers and the formation of an official creed. In the history of this evolution there appear several persons named Ibn Abi ‘l-Shawarib, at first traditionists and, increasingly, jurists and kālidū. They are:

(1) Muḥammad b. ‘Abd al-Malik (d. 244/858).
(2) His son, Ḥasan b. Muḥammad, kālidū from 250 to 261/864-74. (3) ‘Abd al-Raḥmān, who succeeded his brother as judge in Baghdad in 272/885-6 according to al-Ṭabarī, iii, 1908, also the year of his death, but Ibn al-ʿAṣir (vii, 334), followed by Massignon, makes him die in 283. Both al-Ṭabarī and al-Khabīr al-Baghḍādi report that he remained in office for only six months. (4) ‘Abd Allāh b. ‘Allī, kālidū from 296 to 310/908-13. According to Ibn al-
Djazīrī (Munṣūmaṣ, i, 97, followed by Sourdel, 1964, 142), he was succeeded in 311/922-3 by Ibn Abi Shanab, who is, however, not mentioned by the other historians (cf. ‘Aṣir, 1964, 157, continuité, 39).

The first of these, Muḥammad, was mainly a traditionist, who, well versed in both Kur'ānic exegesis (he was the transmitter of Yazīd b. Zuray'ī) and in mystic kādidū, continued Abū ‘Aṣīm al-
Abbādānī (apud al-Kušayrī, Risāla, ch. Rīdā). He preserved the same strict principles adhered to by the "people of the Sunna" at the time when the latter were no longer in power: he advised his children to hold themselves aloof from public affairs. On the other hand, his activities, devoted almost entirely to kādidū, brought him into contact with men like al-Baghwī, al-Baghanti, Ibn Abī ‘l-Dunjāyā, al-Ṭabarī, i.e., the most eminent transmitters of the second half of the 3rd/9th century. Having contented himself with being an esteemed traditionist, he ended his days in his native town of Baṣra.

Very different was the career of his son Ḥasan, who, with his father, was the most distinguished member of the Banū ‘l-Shawarīb. At first, being the loyal servant of the caliph al-Muṭawakkil, he was sent by this ruler on a mission to the Byzantine frontier. After the assassination of this caliph, he was out of favour under al-Musta’in (245-51/862-6), but deprived of his office as official councillor in 250. With the accession of al-Muṭazz in 251/866, Ḥasan’s fortunes were restored; it was now the turn of the Zaydis, Qāḍīmīs or Rāfīḍīs to be excluded from the judiciary. The subsequent rulers, al-Muṭazz and al-Muṭamīd, retained their confidence in Ḥasan. On his death, his office was entrusted to his brother Allā who, according to the most reliable source, held office for no longer than six months.

From then on the family no longer has a place among the traditionists, but so far as its political fortunes were concerned this was merely a temporary eclipse. Soon ‘Abd Allāh b. Allī was able to play a political rôle. He refused, on the death of al-Muktafi, to let himself be persuaded by the supporters of Ibn al-Muṭazz, who had perhaps thought of him because of the loyalty which his uncle Ḥasan had shown to al-Muṭazz. This prudence was soon rewarded by al-Muktafi, who entrusted him with the judgeship of West Baghdaḍ, a sort of perquisite which reverted at intervals to the family of the Banū ‘l-Shawarīb.
Abd Allah b. 'Ali (unless it was his son Muhammad —see above) seems to have performed his office in a way which was very profitable to his own interests. 

Uncle to Mukhtar, a heavy tax was imposed on him by the vizier Ibn Dhuwa. He seems on this occasion to have had connexions with the al-Madhari family of financiers in Egypt.

His son Husayn, the last of the Banu Abi 'l-Shawari'ib to play a part in history, took up again the traditional office of his family at the end of the reign of al-Mu'tadid. Observing the prudence and impartiality traditional in his family, he witnessed important events in public life, for which when necessary he was competent to draw up documents. He directed the funeral of the caliph al-Mu'tadid, who was killed in battle. It is not certain whether he was kadi after 317. He may have held office at the same time as the famous Malikī kadi Abū 'Amar (H. Bowen, 'Abî b. 'Isa, the good vizier, 119), whose jurisdiction is said to have been limited to the western bank of the Tigris. This may have been the revenge of Abu Malik, whose jurisdiction is said to have been increased from six to ten: al-Baghdālī, Mīlīk, Abū Dāwūd, al-Nasā'ī, al-Bayhaqī, Ibn Abī Shayba, probably by the early Almohads, and in any case before 622/1225, the date at which al-Marraqu'ī (al-Mu'āqib, Cairo 1949, 275) relates that Abu Yusuf Ya'qūb gave orders that there should be extracted from al-Mūsannafāt al-thagāra the hadiths on prayer and everything connected with it, in order to put an end to the supremacy of the Malikī madhhab (cf. I. Goldziher, Muh. St., ii, 265).

Abū Bakr's brother, Abū 'l-Ḥasan Uģumān, was also a traditionist; he compiled a K. al-Sunan fi 'l-fihā, a K. al-Tafsīr, a K. 'l-Ā'yn and a K. al-Musnad. He was born in 1507/773 and died in 237 or 239/851 or 853.

Uğumān's son, Abū Dī'ār Muhamma, died at Baghdad in 297/909, after also compiling a K. al-Sunan fi 'l-fihā and a History of traditionists.

**Bibliography:** In addition to the works mentioned: Ibn Sa'd, vi, 288; Mas'ūdī, Murūdī, vii, 211; Fihrist, 229 (Cairo ed., 320); Tūsī, Fīrist, 185, 185; Khāṭib Baghdādī, Tārīkh Baghdād, x, 66-71; Dhāḥabī, Thaqāfāt al-buḫsī, ii, 19; idem, Mann al-tūdīd, ii, 71; Ibn Kashāshīb, K. al-Khāṣṣ, i, 250; Ibn 'Uṣayr, al-Ma'inī, ii, 85; Ibn Ḥadījar, Tāhābī, vi, 2; al-Andalus, x, i (1954), § 17; Brockelmann, S I, 215, 260; Fustānī, Dī'īrat al-ma'ārifī, ii, 314.

(Ch. Pellat)
is preserved and was edited, together with a German translation, by H. Keller (Leipzig 1908; ed. Izzat al-ʿAtṭār al-Ḥusaynī, Cairo 1368/1949). As far as we can judge, the work is a pioneering and highly successful effort in the field of political local historiography, leaning heavily toward literary and cultural matters. Its importance as a source is assured by its early date, its use of documents and sources now lost, and its author’s sense for the interesting detail. Ibn Abī Tāhir’s treatment agrees widely with that of the later Tahtār. Numerous quotations in his name in the Aḥānī show much agreement with his works, in particular the author of a universal History, Maʿādin al-dhāhib fi taʿrīkh al-mulūk wa-l-khulafa* (where even the Sunnite writers, whether or not they acknowledge the fact, were unable to refrain from utilizing. Important extracts from it are to be found preserved in the History of Ibn al-Furāt [q.v.], and the Rawdatayn of Abū Shāma [q.v.], dealing with the first three-quarters of the 6th/12th century; it was known also to ʿIrāz al-Dīn b. Shaddād [q.v.], among others, but with less certainty to the other great Aleppo historian, the Sunnī Kh̄alal al-Dīn Ibn ʿAddīn [q.v.], Ibn Abī Tayyīr’s continuation of the History with monographs on the reigns of Saladin and his son ʿAlī, Al-ibli, and Macdlim al-umam. He is also the author of numerous poems; ʿAbd al-Qādir wa-ʾl-fawdīd, Hikdāt al-atibbd* fi ḫildidt al-adwa* and Macdlim al-umam. He is also the author of numerous poems; ʿAbd al-Qādir wa-ʾl-fawdīd, Hikdāt al-atibbd* fi ḫildidt al-adwa* and Macdlim al-umam.

His son, Abu ʿl-Husayn Murūdī, continued his History with monographs on the reigns of Saladin and his son ʿZāhir of Aleppo, whom with he seems to have lived on friendly terms. It is more difficult to specify the titles and contents of his other works, several of which are perhaps merely adaptations of works by earlier writers. In any case, none of them attained the importance of the Maʿādin, which is of particular value as a history of northern Syria in the time of the Crusades, in view of the loss of the sources used (though they had also been drawn upon, but differently, by Kamāl al-Dīn Ibn al-ʿAdīn[ q.v.] and of the Shiʿī point of view of their general content; the Maʿādin also contains useful accounts on the subject of Egypt and, occasionally, even the Maghrib; for ʿIrāk and Persia, Ibn Abī Tayyīr was, broadly speaking, content to borrow from Ḫamīd al-Dīn al-Isfahānī.

**Bibliography:** The only surviving bio-bibliography of Ibn Abī Tayyīr is that of Yākūt, his contemporary, quoted by ʿSaʿdīs (MS. Sūleymaniye 842, fol. 30 v.), but omitted in our version of the Ḫīrādī. Modern studies: Cl. Cahen, Une chronique chīife au temps des Croisades, in Comptes-rendus des Séances de l’Acad. des Insr., 1935; H. A. R. Gibb, The sources for the history of Saladin, in Speculum, xxv (1950); these two articles, in the History and its sources, were corrected and completed by Cl. Cahen, La Syrie du Nord au temps des Croisades, Paris 1950, 55-77. (Cl. Cahen)}
but he owes his fame to his *Uyun al-anba? fi *abak,at al-apibbd*, a collection of 380 biographies which are of inestimable value for the history of Arabic science, in spite of a number of confusions, some long series of verses which have nothing to do with the main theme, and the one-sidedness of the choice of subjects: he provides no mention of persons such as Ibn Nafis, who, like him, was a pupil of Ibn al-Dakhwar (d. circa 628/1230), but whom he disliked. He based his work on the bibliographical productions of his predecessors (Ibn Djüdžil for example), and a compari-
son between their texts and that of Ibn Abi Usaybi'a showed how he either copies them, very often literally, or summarizes them, and how this mass of raw material was amplified by successive additions; the biographies are arranged by country and by generation (*tabakât*). The work appeared in two redactions: a major and a minor. The latter was completed in 640/1242 and, with the addition of new material drawn in part from the *Ta'änkhl al-kulub*, it produced the major recension (667/1268). From the two redactions a not very careful copyist produced a re-written version after the author's death. The literary style of the *Uyun*, which contains some features of a popular style, has been studied by A. Müllcr, who also prepared an edition of the text based on the two original redactions; but this work was so badly printed in Cairo (1299/1882) that he had to include a long list of corrections and to repeat the indices in a third volume which mainly contains the variants (*Ibn abI Usaybi' araIzeIgen von August Müller, Königsberg 1884*). The *Uyun* was later published in several commercial editions and was reprinted in Beirut (Dar al-Fikr, 1955-6) without any significant changes.

The importance of this text has been recognized by orientalists since the middle of the 19th century (Wüstenfeld, Leclerc): a French translation of part of it was published by Sanguineti (in JA, 1854-6) and a German translation by Hamed Waly; recently (Algers 1958), H. Jahier and Abdelkader Noureddine have edited, translated and annotated the chapter on the physicians of the Muslim West.

IBN ABI 'UYAYNA, name of two poets of Baṣra of the 2nd/8th century. (I) Ibn Abi 'UYAYNA the Younger or Abu 'l-Minhāl Abū 'Uyayna b. Muhammad b. Abu 'Uyayna is the better known. He was a great-grandson of al-Muḥallab and the son of a governor of al-Rayy under al-Mansūr. Towards the middle of the 2nd/8th century he became known in Baṣra through his love poems addressed to Dunyā, the distant cousin of Fatimah, the daughter of 'Umar b. Hafs (d. 153/770), who in spite of promises was refused to him and married to an 'Abbāsid prince, Ḥāšhā b. Ḫāšāymān. He was living at Kūfah in 159/775-6, then went to Djūrām, serving under his cousin Ḥāšhā b. Yaẓīm b. Ṣabīn, with whom he very soon quarrelled. He was not released until the accession of al-Muḥādīl in 169/785. He returned to Baṣra and assuaged his unhappy love and his hatred for Ḥāšhā by writing of his native town. He is mentioned under al-Raṣḥīd. According to one tradition he was received by al-Ma'mūn, according to another, al-Ma'mūn banished him for his anti-

Muḍārī opinions and he did not return to Ḥarak until after this caliph's death.

From an output estimated to consist of 4,000 verses there have been collected up to now only 41 frag-
ments totalling 325 verses, forming three groups: *ghasal of Fatimah, hidūf of Khalīd and descriptive poems about Baṣra. His themes are love, liberty and nature. For some time he was considered as one of the four born poets among the muṣālātad.*

(II) Ibn Abi 'UYAYNA the Elder or Abu Ḥajī 'Ar 'Abd Allāh b. Muḥammad b. Abu 'Uyayna, brother of the above, is heard of shortly before the fall of the Barmakids (187/803) and particularly during the struggle between al-Amin and al-Ma'mūn. He played an important part in rallying Baṣra to the support of al-Ma'mūn in 196/812. In the same year, after the battle of al-Abwāz, he came in contact with the general Tāhir b. al-Husayn. For some time he was governor of Baṣra and of the Yamama, then returned to Baṣra, where he took part in minor political intrigues. Later, falling out of favour with the general Tāhir, he remained faithful to the 'Abbāsids and hostile to the 'Alīids. He is mentioned again in 204/819. He survived his brother and probably also al-Ma'mūn.

From a production as large as that of his brother, 26 fragments have been collected, totalling 206 verses. They consist mainly of *mādh, of ḥāl and of fakhr.* He was more learned but perhaps also less gifted than his brother. A third brother, Dāwūd, a very minor poet, died young before 169/785.

IBN ABI 'UYAYNA [see MUH. B. ABI 'UYAYNA].

IBN ABI ZAMANAY, ABU 'ABBĀD ALLĀH MUHAMMAD B. 'ABBĀD ALLĀH B. 'ĪSĀ AL-MŪRRI, Andalusian poet and particularly jurist, born at Badaya (current Gavina in 52/656), died at Fez in 156/770.

The few verses of his which we have are of a somewhat religious nature and show a rather pessimistic attitude and a leaning to asceticism which is expressed in his *ḥayāl al-kulub*. However, he is principally known as an independent Mālikī jurist and author of several works, in particular a commentary on the *Mawāṣit* of Mālik, a summary of Sahnūn's *Mudawwana*, a book titled *Abūl al-trāmān* and a for-
mury which has been used with others by Abū Muhammad al-Kaysī (see Lévi-Provençal, *Hist. Esp. Mus.*, iii, 242 n.). None of his works seems to have survived.

IBN ABI ZAR', ABU 'L-ABBĀS AHMAD AL-
FĀSÍ, d. between 710 and 720/1310-20 at Fez, where he was imām, composed a history of Morocco ent-
titled *al-Anis al-mutrib bi-ra'ad al-bīrīfā fī aqībah mulūk al-Magrib wa-ārā'īn madinat Fās*, a title often abbreviated to *Ra'ad al-bīrīfā, or Kirīfīs.* The
text of this important work, several times printed and translated, has not yet been the object of a critical edition.

Translations: Dombay, Geschichte der mauritanischen Könige, Agram 1794-7 (German); Moura, Historia dos soberanos mahometanos, Lisbon 1824 (Portuguese); Tornberg (Latin; see above); Barbier, Histoire des souverains du Magreb et Annales de la ville de Fès, Paris 1860 (French); Huici, Madrid 1898 (Spanish).

(See H. R. IDRIS) IBN ABÎ ‘L-ZAWâ’îD [see sulaymân b. yahyâ].

IBN ABÎ ZAYD AL-KAYRAWânî, Abû Muḥâmâd ‘Abd Allâh b. Abî Zayd ‘Abd al-Karîm (310-86/922-965), head of the Mâlikî school of Kayrawân. He came of a family from Nafzawa and studied at Kayrawân, his birthplace, where, according to his knowledge, his literary gifts, his piety and his wealth very soon earned him considerable prestige throughout the Muslim world. He came under the influence of âshî’iism, which had a large following in Kayrawân at that time, and also that of mysticism, against whose excesses, and especially that of miracle-working, he fought. By teaching, delivering innumerable fatwâs and editing numerous works, he set in order, systematized and above all spread Mâlikism among the people, and the triumph of Mâlikism, made final by the rupture between the Zirids and the Fâtîmîds under al-Mu’âzîz b. Bâdis, is due primarily to his activities and to those of his emulators and disciples, the most prominent of whom in continuing his work was al-Kâbîsî. Ibn Abî Zaydî’s many and varied works include numerous epitomes and a number of subjects which have come to be regarded as a summary of Islamic dogma and liturgy, al-‘Abîdât wa djuamî multasara min wâdîb umâr al-diyânà, a biographical dictionary in alphabetical order, and above all the important al-Mudawwana: the publication and study of what remains of this epitome of Mâlikî fikû would be of great interest. His Muḥhallâs of the Mudawwana, which was at first highly esteemed, was, however, soon eclipsed by that of al-Barâdhî. Ibn Abî Zayd, who has been called “Mâlik the Younger”, ranks with al-Abhârî among the chief exponents of Mâlikism. He was buried in his own house and his mausoleum, which very soon became a place of pilgrimage, still exists. His son, Abû Bakr Ahmad b. ‘Abd Allâh, appointed kâdi al-Mudawwana in 435/1043 by al-Mu’âzîz b. Badis, who, as the result of an intrigue, had to revoke this appointment soon afterwards.

IBN ABî ‘DâhîRÎ [see ibn ‘îiqârî].

IBN AL-ADâM, Kamâl al-dîn Abû ‘l-Kásîm ‘Umar b. Ahmad b. Hîbat Allâh, historian of Aleppo, born there in 588/1192, died in Cairo in 660/1262. A wealthy and prominent family of the Arab origin, the Banû ‘l-Adîm acquired property in and around Aleppo and a number of dignities or eminence or office under the successive dynasties that ruled in that city. For five generations they held the office of hâlî; the historian’s father was a chief hâlî under Zangîd and then Ayyûbîd rule. He himself, after studies in Aleppo, Damascus, Jerusalem, Baghdad and the Hidjaz, served in Aleppo as a secretary, as a hâlî and later as wa’ir to the Ayyûbîd rulers al-Mâlik al-‘Azîz and al-Mâlik al-Nâşir. As an official he was again able to travel extensively. In 658/1260, when the Mongols sacked Aleppo, he fled to Palestine, and thence to Egypt. Hîlekiî invited him to return to Syria as chief hâlî, and the Mongol withdrawal enabled him to revisit Aleppo, but, finding it in ruins, he returned to Egypt where he died.

Ibn al-Adîm is credited with a number of writings, some of them extant, of which the most important are his two historical works on Aleppo. The earlier and more extensive is the Buğhîyat al-talab fi tariqât Hâlîb, a biographical dictionary in alphabetical order of men connected with Aleppo. Ten volumes survive in manuscript in Istanbul, additional manuscripts in Paris and Mosul. In these biographies Ibn al-Adîm uses oral information, documents, and a great number of manuscript sources which are meticulously cited and for the most part lost. The
work is thus a major source of historiographical as well as historical information. Some extracts were published and translated by Barbier de Meynard in "RHC. Or., iii (1884), 578-690, and others translated—not very well—by E. Blochet in "ROL, iii-vi (1895-98). A critical edition was finally undertaken by Sami Dahan ("Zubdat al-halab fi ta'rîkh Halab, 1951; ii, 1955; iii-vi (1895-98). A third volume in preparation in 1968.

Bibliography: Brockelman, I, 332; S I 568-9; Yakût, U'dabî, vi, 18-46 (including excerpts from his history of his own family); Sami Dahan, apud B. Lewis and P. M. Holt, "Historians of the Middle East, London 1962, 111-3 and index; idem, introduction (in Arabic) to vol. i of his edition of the "Zubdat al-halab, Damascus 1951; idem, "Bugyat al-talab ilî'mi l-Adîm, in Annale des archéologiques de Syrie, i/2 (1951), 207-25; J. Sauvaget, "Extraits du "Bugyat al-Talab" . . ., in "REI, vii (1933), 393-409; C. Cahen, "Les chroniques arabes . . ., in "REI, xi (1936) 359; M. Canard, "Quelques observations sur l'introduction géographique de la Bugyat at-talab of Kamal ad-din ibn l-Adîm d'Alep, in "âEIO, xv (1957), 41-53; Ali Sevîm, "Bugyât al-talab fi tartîkh-i Hâleb'i gûre Sultan Atîr Aşşu, in Belleten, xxx/xxv (1966), 205-42; B. Lewis, "Three biographies from Kamal ad-Dîn, in "Mêlanges Fuad Khâbir, Istanbul 1954, 7-9- (B. Lewis)."
short metaphysical treatises in which the author propounds, without actually naming it, the theory of the oneness of existence: *wahdat al-wujud*. In the first, he demonstrates how the Divine Essence remains identical to itself before and after it is irradiated—*tajdid*—in existence; in the second, he describes the existential veils behind which the One Essence conceals itself and through which it may be grasped according to three increasingly perfect modes of unity: *taqadd al-af‘āl, taqadd al-sifāt, taqadd al-dhāt*; (3) *Sharh Ta‘siyya* (Ibn ‘Arabi); (32) *Sharh Nasī‘iyah* (Shahristānī); (33) *Mī‘rād al-tashawwuf fi mut‘ād il-hakam al-tasawwuf* (Shahristānī); (34) *Sharh Tā‘yiyya fi ‘l-Khamra* (two commentaries, one short and one long, on a poem by his master Buziyyan); (36) *Sharh al-Mukaddima* (al-Suyūtī); (38) *Sharh ‘Ayniyya al-tashawwuf il-ḥakam al-tasawwuf* (al-Suyūtī); (41) *Tabsīrdt darbīyya*; (43) *Fi ‘l-mawadda*; (45) *Fi l-mawadda*; (47) *Al-tashawwuf il-hakam il-tasawwuf*; a little treatise of a few pages in which he sets out the technical terms of Sūfism; published Damascus 1350/1357 by al-Hāshimī [q.v.; Fr. tr. by J. L. Michon, see Bibl.; (34), (35) *Sharh Tā‘yiyya fi ‘l-Khamra* (two commentaries, one short and one long, on a poem by his master Buziyy); (36) *Sharh al-Mukaddima* (on two levels, grammatical and esoteric, of the treatise on grammar by Ibn Adjurrum; a *tāfriq* giving only the esoteric content of the work has been published, Baghdad 1235/1291; (37) *Hāshiyah ‘ala ‘l-Djami*—al-saghir* (al-Suyūtī); (38) *Dīwān* (4 hasīdas and various ta‘dhībāt, about 200 verses in all). To this list must be added: (38) the *Fahrasa*; (op. cit., i, 361; ibid., iii, 139-40; Mss. Ar. 340) and in particular Buziyyan al-Maskartī (Ṭabākāt darbīyyah). Sporadic references to his works are found in bibliographical compilations (F. Bustānī, *Dh.‘rat al-ma‘ārif*, iii, 358; Sarkīs, *Mu‘jam*, 169-70) and in manuscript catalogues (Allouche and Regragui, *Ms. Ar. Rabat*, 1; *passim*). The contemporary historian Muhammad Dāwūd accords him a prominent place in his *Ṭarīkh Tiwān* (see vol. iii, 1962, *passim* and vol. vi, to appear). These sources and data drawn from the author’s writings have been gathered together in a study by J. L. Michon, Ibn *‘Adība* et son Mī‘rād (thesis, Paris 1966).

**IBN ADJURRUM, Abu ‘Abd Allāh Muhammad b. Muhammad b. Dāwūd al-Sanḥādī, Moroccan grammarian born 672/1273-4, died 723/1323 at Fez, where he taught grammar and the art of Kur‘ānic recitation. Ibn Adjurrum is the author of a celebrated *Mukaddima* which bears his name, a little treatise of a few pages in which he sets out the system of the ṭarīb of words. This summary syntax, easy to memorize, has enjoyed to the present day great popularity in all the Arabic-speaking countries, in the west as well as in the east. Because of its extreme conciseness, the *Mukaddima* has provoked about 60 commentaries by subsequent grammarians, which testify to its wide diffusion among teachers. The *Mukaddima* has been known in Europe since the 16th/17th century, being one of the first treatises available to Arabs for the study of the Arabic grammatical system. It has been published a dozen times and translated into most European languages. It is to be remarked that al-Suyūtī (ibid., 102) considers Ibn Adjurrum to represent the Kūfa grammatical school, basing himself on the fact that he uses the term *khāl*, and that he considers the imperative to be *mu‘rab* and the particle *hay’ama* to govern the *djasm*.

His father, ‘Abbās al-Dīn al-Tilimīnānī (see al-Tilimānī), was a mystic who had left Tlemcen and settled in the *khānākh* of Sa‘īd al-Su‘ādā in Cairo, where the poet was born on 10 Di‘umād 1621/1 April 1263. While still young, Ibn al-‘Abbās went with his father to Damascus, where he completed his education under the direction of his father and a number of other scholars. He very soon obtained the post of treasurer, and lived at the foot of Mount Kāsīyūn.

From his youth he had devoted himself to poetry, with the encouragement of his acquaintances. His literary fame spread quickly; he secured access to the important people of his time, presenting his panegyrics to them, and in particular wrote of the merits of al-Manṣūr Muḥammad, the Ayyūbid ruler of Hamāt.

His poetry, relaxed in style, was highly thought of, but his enemies, jealous of his success, conspired against him; for some time he resisted this, then finally decided to retreat from the world and shut himself away in his own house. He died while still very young, at the age of 27, on 14 Rādjd 688/5 August 1289.

Ibn al-‘Abbās led a free and easy existence. His poetic gifts find expression chiefly in poems of love and wine, which reflect the dissolute life of the period; he wrote also *dābāys* and *mu’awṣakbāt*. His skill and facility of expression enabled him to avoid the mannered style in vogue in the poetry of his time. The love poems, generally addressed to men, could be given a Sūfi interpretation, but this is not probable.

The *dīwān* of Ibn al-‘Abbās, although rather short, has enjoyed a lasting fame; it has been published several times in Cairo (1274, 1281, 1308) and in Beirut (1885, 1894, 1907), but these editions are very mediocre (a critical edition is at present (1967) in preparation in Paris; on the manuscripts see Broekelmann, i, 300, S I, 458, adding MS Damascus, Zāhiriyya, no. 5126). There exist also some *Māhānāt* by him (MSS Paris 3176, 3947; Istanbul, Topkapı Sarayi 2402; Berlin 8594), one of which has been published in Damascus, n.d., and two *Mubāhas* (MS Berlin 3953).

Ibn al-‘Abbās al-Ahmār, byname of several poets, including an Arabī (q.v.; Fr. tr. by J. L. Michon, see Bibliography: Kutubi, Fawād, ii, 422; Dhabahl, *Ta‘rīkh al-Islām*, MS British Museum, Or. 53, fol. 62 v.; Ǧaṣfālī, al-Wāfi‘ī, iii, 129-36; Ibn al-‘Imād, Shadrādī, v, 405; Ibn Taqribīrī, vii, 381; Hādījī, Khālīfī, ii, 1786; Ẓirīkī, Allām, vii, 21; Kāhījāl, Mu‘āṣīm al-maʿāṣīfīn, x, 33; Broekelmann, i, 300, S I, 458. (J. Rikārī)

Ibn al-‘Abbās al-Ahmār, byname of several poets, including an Arabī (q.v.; Fr. tr. by J. L. Michon, see Bibliography: Kutubi, Fawād, ii, 422; Dhabahl, *Ta‘rīkh al-Islām*, MS British Museum, Or. 53, fol. 62 v.; Ǧaṣfālī, al-Wāfi‘ī, iii, 129-36; Ibn al-‘Imād, Shadrādī, v, 405; Ibn Taqribīrī, vii, 381; Hādījī, Khālīfī, ii, 1786; Ẓirīkī, Allām, vii, 21; Kāhījāl, Mu‘āṣīm al-maʿāṣīfīn, x, 33; Broekelmann, i, 300, S I, 458. (J. Rikārī)
al-'Amarrad b. Tamīm b. Rabī‘a b. Hīrām b. Farrāṣ b. Ma‘n b. Aṣ’ur al-Bahili. He is included among the muḥāhadranāmān [q.v.], embraced Islam, took part in the conquests in South-west Asia (in the course of which he lost an eye), settled in Syria and died during the caliphate of ‘Uthmān. His poems do not seem to have been collected, but he is often quoted as an authority on the Arabic language, although he is criticized for having invented four words. Ibn Sallām, authority on the Arabic language, although he is appreciated his language, but thinks that he uses too many rare expressions. Numerous anthropophagae appear in his poems, and a description of sand-gr Bour (kaṭāb) has remained famous.

**Bibliography:** Dībīḥ, Hayawān, Bayān, index; Ibn Kutayba, Uyūn, Aunu‘, Abd al-kabī, index; idem, Shīr, 315-8; idem, Ma‘arīf, 587; Būhtūrī, Hamās, 187; Abū Tammān, Hamās, ii, 314; Kālī, Amālī, index; Ibn Sallām, Tababāb, 492-3; Mubarrad, Kāmil, index; Kuraštā, Dījamāra, 158-60; Dījamalīkī, Mubarrad, 104, 142; Aga‘nī, xii, 144; ‘Amīdī, Mu‘alīf, 37; Marzubānī, Mu‘ājam, 214; ‘Askārī, Sind irrigation, 53; Ibn al-Abnārī, A∂ād, index; Baghdādī, Khūsānī, Būlāk ed., iii, 39-9; Ibn ‘Hāḍar, Isbāb, no. 6466; Ibn al-‘Abīrī, vi, 300; Aḥkārūs, 230-1; ‘Amīrī, Shīrān, index; (C. Pellat)

**IBN AL-AHNAF** [see ‘ABBĀS B. AL-AHNAF].

**IBN AL-AHTAM** [see ‘AMR B. AL-AHTAM].

**IBN ‘ĀDĪD,** the author of a work on the raids (magā’hīs) [q.v.], used by such later authors as Ibn Suyyīd al-Nās and al-Dhahabī. His given name was Muḥammad. His kunyā is variously given as Abū ‘Abd Allāh or Abū Ahmad, and his grandfather’s name as Sa‘īd or ‘Abd al-Raḥmān. Born in Damascus in 150/767, he died there on Thursday, 25 Rabi‘ II 233/December 847 (or in Dhu l-Hijāda 232/July-August 847, or in 234/848), having been the tax collector for the Ghūṭa under ‘Alī. As a historian, he stands in the tradition of al-Walīd b. Kub b. a. as the main or exclusive source for later biographers. The Ta‘rikh Dimashq further credits Ibn ‘Ādīd with a work on the Muslim Conquests and the Summer Campaigns and quotes some non-historical statements in his name. Since that name is not infrequent, however, it is not impossible that Ibn ‘Askārī conflated one or more persons. The situation is further complicated by the fact that the Fīhirst, 109, mentions a historian Ibn ‘Abīd (sic) as the author of a history of kings and nations, and this, in turn, obscures the relevance of the reference to a historian of the same name in Ma‘arīf, Murādī, i, 11. If Ibn C‘Ahdī left no mark in the earlier historical literature known to far, this may be due to his having represented a Syrian tradition unpopular at the time. It may be noted that (if we are dealing with one person) he was considered reliable as a transmitter, but he was also described as a Mu’tazilī (kadari).

**Bibliography:** al-Bukhārī, Ta‘rikh, i, 1, 207; Ibn Abī Ḥātim al-Rāzī, Dījak, iv, 1, 52; (al-Dawālībī, al-Khaṭṭāb al-Baghdādī, Ibn Mākūlā, all the preceding cited in Ta‘rikh Dimashq); al-Safādī, Wādī, iii, 181; al-Dhahabī, Tharī, Kuwait 1960, i, 414 (copied by Ibn al-‘Imād, ‘Abd al-Qadrī, ii, 78); Ibn Ḥāḍar, Tabāḥīb, i, 322-26; al-Sakhītwālī, 174, in F. Rosenthal, A history of Muslim historiography, Leiden 1952, 320, 322, 430, 432, (509).

**IBN ‘ĂISHA,** by-name of several persons, who may be distinguished as follows:

I. Muḥammad b. ‘Ăisha, Abū Da‘far, Medinan singer of unknown father. A pupil of Ma‘bad and of Mālik, he was regarded as the equal if not the superior of his masters, and celebrated for his skill at launching into a performance. He was highly respected at Mecca and at Medina, but, extremely vain, he would become very angry when asked to sing. He was invited to the court of Damascus, probably by al-Walīd b. Yazīd but during the caliphate of Hāšām b. ‘Abd al-Malik (105/274/43), and died accidentally on the way back, at Dhū Khurshub, when loaded with presents. Two monographs at least were devoted to him, one by Isākh al-Mawṣīli (Fīrikī, Cairo ed., 1348, 202), the other by Abū Ayyūb al-Mudnīl (ibid., 274).

II. Ibrāhīm b. Muḥammad b. ‘Abd al-Waḥrāb b. Ibrāhīm b. Māmān, known as Ibn C‘Aishā after his grandfather C‘Aisha bint Sulaymān b. ‘Abbī. Having retained a plot against al-Ma‘mūn, he was put to death in prison by the caliph and his body was hung up in a street of Baghdad in 209/ 824-5.

**Bibliography:** Tabārī, iii, 1022, 1073, 1075; Mas‘ūdī, Murādī, vii, 78-80; Muḥammad b. Ḥabīb, Muḥārāb, 489; F. Bustānī, Dā‘irat al-ma‘arīf, iii, 329.

III. Muḥammad b. Hāfs al-Taymī, Abū Bakr, genealogist, collector of traditions, and wit of Basra, who owes his by-name Ibn ‘A‘isha (al-Akbār) to C‘Aishā bint Ṭāha [q.v.], from whom he was descended.

**Bibliography:** Dībīḥ, Hayawān, i, 12, ii, 155; ibid., Bayān, i, 102, 320, ii, 290; Tabārī, index; Aghānī, index; Mas‘ūdī, Murādī, v, 343.

IV. ‘Ubayd Allāh b. Muḥammad b Hāfs, Abū ‘Abd al-Raḥman, the son of the preceding, from whom he takes his by-name Ibn C‘Aishā (al-Aghār) or C‘Aishā bint al-Ayghal. Also a traditionist, a rāwī and a celebrated orator, he settled in Baghdad in 219/834. He was considered very learned and is often quoted in ṣimāds, and it is generally he who is meant when the name Ibn ‘A‘isha alone is used. He reports very many historical and religious traditions on the authority of his father, and is even said to have been the author of an historical work. He died at Basra in 228/843.

**Bibliography:** Dībīḥ, Bayān, i, 102, 194, 239, 320; ibid., Hayawān, ii, 12; Ibn Kutayba, Ma‘arīf, 453, 523, 598; Mas‘ūdī, Murādī, vii, 288; Sha‘rānī, Ansāb, 379; Ibn Ḥāḍar, Tahdhib al-Tahdhib, vii, 45; F. Bustānī, Dā‘irat al-ma‘arīf, iii, 329-30.

**IBN ‘ĂKIL,** Abū Allāh b. ‘Abd al-Raḥman b. ‘Abd Allāh Bahl b. al-Dīn al-Ḥāshimī, born 694/1294 (or 698 or 700), died 769/1367, an important Shi’ī jurisconsult and grammarian. A native of Bālīs [q.v.] in Syria, he arrived destitute in Cairo, where his ability was recognized by his teacher in grammar, Abū Ḥāyyān al-Gharrānī [q.v.]. His main teachers in šiḥk were, among others, ‘Alī al-Dīn al-Kownī (Breakell, 11, 105; SI, 101) and the Chief Kāfij al-Dīn al-Din al-Kawzī (Subki, Tababāb, v, 238); having held various posts as substitute kāfīd
Ibn 'Aqil, born in 699 (880), he became the substitute of the Chief Kadilz al-Din Ibn Djamaca [q.v.], but was dismissed by him on account of unseemliness in a discussion. Ibn 'Aqil, however, won the favour of the amir Sarghit-minagh, who dismissed the amirs Jilali and put Ibn 'Aqil in his place in 759/1358. But when Sarghit-minagh fell from power immediately afterwards, Ibn Djamaca was reinstalled, and the term of office of Ibn 'Aqil lasted only 80 days. Ibn 'Aqil's short term of office became memorable through his considerable distributions of charity to the poor and the students, including a legacy of 150,000 dirhams which he distributed in sums ranging from 1 to 10 dinars. He also showed concern for the interests of ordinary people in the matter of making valid legacies.

Ibn 'Aqil taught several subjects of religious learning in a number of institutions, including tafsir in the mosque of Ibn tulun; his course took 23 years, and after that he started it again but did not live to complete it. His literary output does not seem to have been very considerable; he wrote a commentary on the hadiths of Ibn Djamaca [q.v.] wrote a gloss, and another commentary on the same author's Tashkil, both of which have been preserved; he also started an extremely detailed work, variously called Taysir al-isti'dad li-rubbat al-idhathad and al-Tas'is li-madhab Ibn Idris, in which he set out the ishihad and the various arguments, deciding in favour of the doctrine which he found best supported by traditions; four parts of it exist.

Ibn 'Aqil was very elegant in his dress, his food and his dwelling, and liked to mix in high society where he was well liked, but he was unreliable in business matters, though generous, and he died in debt. Siraj al-Din al-Bulkini [q.v.] was his son-in-law. 

Bibliography: Ibn Hadjar al-'Askalani, al-Durar al-kaminah, ii, 266 ff. (no. 2157); Ibn al-Kadi, Durrat al-hajij, ii, 347 f.; al-Suyuti, Usun al-mubaddara, Cairo 1321, i, 257 (a short notice among the grammarians); idem, Bughyat al-wu'ad, Cairo 1326, 284 f.; Ibn al-Imad, Shadhari al-dhahab, vi, 214 (year 769); al-Shawkan, al-Badr al-tali, Cairo 1348, i, 386 (no. 171); Khansari, Rawdat al-dimnai, iii, 458; Catalogue Cairo, iii, 212; Brockelmann, ii, 508, § 11 (at the end, read: Cairo ii, 121); S II, 104, § 12 (at the end, read: Ibn 'Aqil)]

Ibn 'Aqil, Abu 'l-Wafa, 'Ali b. 'Aqil b. Muhammad b. 'Aqil b. Ahmad al-Baghdbadi al-Zafari, Hanbali jurist and theologian (431/1040-1119), a great Sunni personality whose life and writings shed light on one of the most important periods in the development of Muslim religious thought, and who stands at the head of a progressive movement within Sunni traditionalism. 

Family origins and early youth. Ibn 'Aqil was born in Baghdad, on the left bank quarter of Bâb al-Tâk (see his Kitâb al-Fumûn, fol. 12b: "... Bâb al-Tâk, the quarter in which I was born"), in Djamâd II 431/February-March 1040. This fact, when added to others cited below, leaves little doubt that he belonged to a Hanafi family, not only on his mother's side (G. Makdisi, Ibn 'Aqil, 357), but also on that of his father. Some of his earliest recollections went back to this quarter where the great Hanafi mosque-college was located, along with the Shrine of Abû Hanifa and the great Hanafi cemetery. Mu'tazilism, during this period, had found a refuge within the Hanafi school of law, which helps to explain the interest Ibn 'Aqil took in Mu'tazilism, the independence of spirit which was never to leave him and which was to endow the Hanbal movement with a new direction and renewed vigour.

Education. This precocious young man had broad interests ranging from Qur'ân and traditions, grammar and prosody and the art of letter-writing, to those subjects in which he particularly excelled, the art of the sermon, dogmatic theology, dialectics and legal studies. Of the twenty-three teachers he himself names as those under whom he studied, only two belonged to the Hanbali School, Abû Ya'âla and Abû Muhammad al-Tamimi (d. 485/1095). The others were Shafi'i, Maliki, Hanbali-Maliki, and Hanbali-Shafi'i. Ibn 'Aqil, however, won the favour of the Sarghit-minagh, who appointed him to a chair in the Cathedral Mosque of al-Manṣur after his teacher Abû Ya'âla died in 488, an appointment made possible by his patron Abû Mansûr, earned him the hostility of a group of Hanballis led by the Sharîf Abû Dja'far (d. 470). The latter, twenty years the senior of Ibn 'Aqil, apparently resented the early distinction conferred upon the young man. After the death of
Abū Mansūr in 460 and the consequent loss of his protection, Ibn 'Aqīl had to go into hiding to escape the wrath of this group. From 460 to 465, he lived in hiding in the house of Būh al-Mārṭūs under the protection of Abū 'l-Ḵāsim b. Ṣawāna, also a wealthy Ḥanbalī merchant, son-in-law of Abū Mansūr.

Public retraction. On Monday 8 Muharram 465/24 September 1072, in the mosque of the Šarīf Abū Dja'far located in the quarter of Nahr al-Muʾalla, on the east side of Baghdād, Ibn 'Aqīl read the text of his retraction in the presence of a numerous gathering. The retraction was then signed by five ḡubūd-notaries, including two sons and two sons-in-law of the late Abū Mansūr. Two days later, in another ceremony in the Caliphal Diwān, Ibn 'Aqīl signed his retraction. In this document, Ibn 'Aqīl retracted writings in favour of Hallādī and of certain Muʿtazīlī doctrines.

There is no doubt that the Ḥanbalī school as a whole was opposed to Muʿtazīlīsm; and there is no reason to doubt Ibn 'Aqīl's sincerity regarding his abjuration of Muʿtazīlīsm. Although his later writings owe much to the spirit of inquiry he may have gained from his Muʿtazīlī professors, he cannot be said to share their theological doctrines. Therefore, in so far as Muʿtazīlīsm is concerned, Ibn 'Aqīl was thoroughly sincere in his retraction and remained afterwards true to Ḥanbalīsm.

However, as regards Hallādī. Ibn 'Aqīl's sincerity in retracting his veneration for him is, one may safely say, open to doubt. He was probably practising ḏikr Allah, invocation of the Divine Name, dhikr Allah. Later he authorized him to resume the lessons. He made him a shuhūd-notaries, by five figures given ranging from two hundred to as many as eight hundred volumes; only one volume is known to be extant. An abridgment in ten volumes (not extant) was made by Ibn al-Djawzi. Sibt Ibn al-Djawzi.

Among his other important works, now lost: 'Aqīl al-Waṭāfī 'ṣūr Allāh, Ibn 'Aqīl written in praise of al-Hallādī, in defence of the tradi-

balīsm, see H. Laoust, Le Ḥanbalīsm sous le Califat de Baghdād, in REI (1959), 104-5. For bibliography and further details on Ibn 'Aqīl, see G. Mokdisi, Ibn 'Aqīl et la resurgence de l'Islam traditionnaliste au XIe siècle, Damascus (PISI) 1963, esp. ch. V, and index s.v. (G. Mokdisi).

**IBN 'ALIWA, SHAYKH ABU 'L-'ABBAS AHMAD B. MUṢtáfā AL-SALAWI AL-MUSTĀQHĀMĪ, Ṣafi and poet, born at Mostaganem in Algeria in 1286/1869 of a distinguished but at that time indigent family. He never went to school and his handwriting remained unproficient all his life, but he was taught to read and given lessons in the Qurʾān by his father, though even these had to be cut short owing to his family's poverty, which forced him, from an early age, to take to cobbling and then later to open a small shop. In his spare time he attended a course of lessons in the Islamic doctrine of Divine Unity (tawḥīd). His father died when he was 16, and not long afterwards he entered the Ḥarawi [q.v.], an important by his father, though even these had to be cut short owing to his family's poverty, which forced him, from an early age, to take to cobbling and then later to open a small shop. In his spare time he attended a course of lessons in the Islamic doctrine of Divine Unity (tawḥīd). His father died when he was 16, and not long afterwards he entered the Ḥarawi [q.v.], an important by his father, though even these had to be cut short owing to his family's poverty, which forced him, from an early age, to take to cobbling and then later to open a small shop. In his spare time he attended a course of lessons in the Islamic doctrine of Divine Unity (tawḥīd). In his spare time he attended a course of lessons in the Islamic doctrine of Divine Unity (tawḥīd). His father died when he was 16, and not long afterwards he entered the Ḥarawi [q.v.], an important
On the death of the shaykh al-Buzlid, 15 years later, in 1905, the members of the order insisted that Ahmad b. Allwa should be their shaykh. Some five years later he decided to make his sauriya independent of the mother-sauriya of the Darkawiya in Morocco, and the new branch was styled al-Tarita al-Alawiyya al-Darkawiyya al-Shadhiliyya, whence he himself came to be known as the Shaykh al-Alawi. One of the reasons for the "rupture", which seems to have taken place around 1240 AD, is that he felt that his methods were different. As part of his method, the practice of spiritual retreat (khulou [q.v.]) in an isolated cell under his close supervision rather than in the wilds of nature according to the traditional Darkawi-Shadhili practice.

His fame spread over North Africa and a large sauriya overlooking the sea was built at Tidgitt, the purely Arab quarter of Mostaganem. As perhaps the most eminent representative of Sufism in his day, and looked upon by many as the maddadd (renewer) of 'Islam in its 14th century, he inevitably came into conflict with the enemies of Sufism, in particular members of the "reformist" Salafiyya [q.v.].

Partly as an antidote to their paper al-Shakhb, published at Constantine, he started a weekly review at Algiers, al-Baldgh al-Diazdirl, in which, established also other to al-Andalus in 123/741 with the vanguard of the Syrian contingent of Baldj b. Bishr al-Kushayri [q.v.] through his connexion in addition to his vindications of Sufism, he attacked in particular the enemies of Sufism, in particular members of the doctrine, expounding the relationship between the Divine Essence, Divine Being and the Supreme Spirit. The starting point for this treatise appears to be Abd al-Karim al-Djili’s al-Kahf wa ‘l-Rakim, but Ahmad b. Allwa’s treatment is the more subtle. In Lubab al-imr fi Sura‘a Wa’l-Nagim, he explains the nature of the Prophet’s two visions referred to in Qur’an LIII, one with the heart (fu’dad) and the other with the eye (basar). These three works, together with his poems (the third edition of his Divan was published in Damascus in 1963), are perhaps the most profound of his writings. His earliest book in vindication of Sufism, al-Kawi al-mawrf, first published in 1920, was followed up in 1927 by Risalat al-Nadr Ma’rif, an anthology of pronouncements in praise of Sufism by eminent jurists and theologians from the 2nd/8th until the present century. The first part of al-Mawadd al-ghaythiya, his commentary on the aphorisms of Shu’ayb Abū Madyan, was published in 1942, but the second part has not yet been published, neither has his commentary on the Sūrat al-Fātihā and the first 40 verses of the surah al-Kahf, in which each verse is given four different interpretations ranging from the literal to the purely spiritual. The unique manuscripts of these unpublished works are at Mostaganem.

IBN ‘ALIWA — IBN ‘ALKAMA
with Thakif, Tammam b. Alkama was one of the chiefs who supported Abd al-Rahman I, d. 187/803, but is given as 194/809-10 by Abu Bakr al-Razi (cited Ibn al-Abbar). He served as wazlr to the Umayyads Muhammad I (q.v.); Abu Bakr al-Razi, in the latter's successful bid (138/755-6) for independence, contributed to the disastrous defeat of the Caliph's army at Baghiriyya. According to Rashid al-Din he was confirmed in his post as wazir by the Mongols and, when he died on 2 Diunmad II 656/June 1258, was succeeded in that office by his son, Sharaf al-Din Abu l-Kásim 'Ali. On the other hand, Wasi'f speaks of his being passed over in favour in some other Ibn Amran, a man of the people from Bak'dah.

IBN AL-ÂLÂF, Abu Bakr al-Hasan b. Ah-mad b. Bashshar b. Ziyâd Ibn al-Âlâf (so called because his father was a seller of katt) al-Nahrawâni, poet and traditionist who lived to be a hundred (282-318/893-930), becoming blind in his old age. He frequented the court at Bagdad and was an intimate particularly of al-Mu'ta'ziz and Ibn al-Mu'tazz. He knew much poetry and composed a great many verses himself, some of which were collected by his son and accompanied by accounts of his relations with the persons on whom he had written panegyrics, occupied four hundred warâkas, if the Fikrist reading (Cairo ed., 238) is reliable.

IBN al-'Alâ'î's fame however is based almost entirely on a basâ'da of 65 verses (metrical muwaqit, rhyme -â), including here and there gnomic verses in which he laments the death of his cat, killed by the Mongols and accompanied by accounts of his relations with the persons on whom he had written panegyrics, occupied four hundred warâkas, if the Fikrist reading (Cairo ed., 238) is reliable.

IBN AL-'ÂLÂF's fame however is based almost entirely on a basâ'da of 65 verses (metrical muwaqit, rhyme -â), including here and there gnomic verses in which he laments the death of his cat, killed by the Mongols and accompanied by accounts of his relations with the persons on whom he had written panegyrics, occupied four hundred warâkas, if the Fikrist reading (Cairo ed., 238) is reliable.

family consisted of the father, Abu 'l-Kasim 'Abd Allah b. Amadiur al-Turki and of his son Abu 'l-Hasan 'Ali, and also of a freedman of the latter named Muflihi. They worked at Baghdad and at Shiraz between 272/885 and 321/933, making astronomical observations which have been in part preserved by Ibn Yunus. The son devoted much of his attention to the determination of the limits of the latitude of the moon, observing that it reached greater latitudes than those given by Hipparchus (2nd century B.C.) and finding considerable differences between his own various determinations; this implies some gain of the variation of the plane of the moon's orbit, demonstrates how exact was Abu 'l-IJasan's work. The three astronomers collaborated in compiling the tables called al-Badi'i, al-Mamarrat, al-Khaliis, al-Muzannar, and a version of the Sind-Hind, now lost, and some maps for Mars according to Persian chronology. Abu 'l-Kasim 'Abd Allah was the author of two other works: *Risammi akhla al-akba'il (Bibliotheca Nation. 58, 103 and 1170)* and Zad al-musifir (quoted by Ibn al-Kifti).

**IBN AL-'AMID**, the name of two viziers of the early Buyids, the first of them known also as a man of letters:

(1) Abu 'l-Fadl Muhammad b. al-Husayn b. Muhammad was the son of a pedlar or wheat merchant in the Shawabish town of Kumm in central Iran where later became a kāhib in Khurāsān, where he received the title of 'amīd [g.v.] which was in this region usually given to high officials. He appears at Bukhārā (Mathālī, 332-6) at an unknown date, perhaps later than his appearance in 322/933 as vizier of ᪜aghsānih in *Rayy* (quoted by Ibn al-Kifti) in *Fihrist*, and in 323 as vizier of letters at Rayy. In his correspondence, if we are to believe Miskawayh, he possessed a copy of it: this makes it all the more strange that almost nothing of it has been directly preserved and that all that is known of it comes from quotations by Abū Ḥayyān, al-Tha'labī and Yākūt; even al-Kalāshandi, though quoting so widely from his contemporaries and rival Abū Ishāk al-'Ṣabī', seems not to have known of it. So little being known, there should be pointed out ms. no 452, p. 449 of the Bihar Catalogue, a short recently copied collection of some of Ibn al-'Amid's letters, which deserves study and suggests that an earlier manuscript may exist somewhere in India or elsewhere. The critics' opinions on Ibn al-'Amid's literary worth depended however on what the writer considered to be the stylistic ideal and perhaps also on his personal relations with Ibn al-'Amid; while he is praised by Miskawayh, and in the *Yatima* there is found the formula which was later so often repeated according to which style "began with Ibn al-Hamid and ended with Ibn al-'Amid", Abū Ḥayyān considers him as the first corruptor of the language of al-Dhāhib and prefers to him his son Abu 'l-Fath and his rival mentioned above, Abū Ishāk al-'Ṣabī'.

Unfortunately practically nothing is known of his actual administration. Miskawayh, who had been his librarian, praises him, but in general terms only, for having been able to reorganize and maintain a regular system of administration. His father, having been vizier for 32 (lunar) years—a period whose length was to be exceeded later only by Nizām al-Mulk—died at Hamadhan on 5 Safar 360/9 December 970, having been vizier for 32 years—a period which he contracted during it gave his son the opportunity to make demagogic overtures to the troops, disregarding his father's disapproval. He died at Hamadhan on 5 Safar 360/9 December 970, having been vizier for 32 (lunar) years—a period which he contracted during it gave his son the opportunity to make demagogic overtures to the troops, disregarding his father's disapproval. He
the considerable influence exercised by Ibn al-
Amid must have been due primarily to his prodigious
memory in all matters, to his generosity (although
Abū Hayyān accuses him also of avarice on various
occasions), and to his friendly character. In letters,
as in politics, he was the master less of his own son
than of Ibn 'Abbād [q.v.] and of Abūd al-Dawla, who
always referred to him as al-Ustād al-Ra'īs.

**Bibliography:** See ibn yūnids. Apart from the
Tādājir of Miskawayh (to be completed by the
Ta'lima of Ḥamadānī, ed. A. Y. Kānānī, the main sources and references are: Ta'awwuz ed. Abū
Hayyān, Ta'awwuz, ed. ʻIbrāhīm ʻAlī, Kāyānā, Damāsca 1961 (especially 55-6, and from 212 to the
end), to be completed by the K. al-Imtd wa
l-mu'ānasa, ed. Ahmad Amin, especially vol. i
(index); and the Yaḥtaya of Thālibī. ʻĀkūtūs bi-
ography of Ibn al-Amid has not survived; that of
Ibn Ḥallikān (no. 707, de Slane, iii, 256 f.) is
based mainly on the Kālid al-Wuzārā of Ḥilāl al-
Sāhīb, of which this part is lost, and the K. al-
Tādājir of his ancestor mentioned above, Abū
Ishākh al-Sāhīb. The article by Amedroz, Ibn
al-Imtd, in Isl., iii, 323-51, consists essentially of
translations of the passages concerning him in the
Tādājir of Miskawayh, at that time unpublished.

I have not been able to see the brochure of Ḥallāl
Mustard, Ibn al-Imtd, Aleppo 1931.

(2) Abū ʻl-Fath ʻAlī b. Muḥammad ..., born 337/
948-9, son and successor of the above, who
accompanied his father on the Kurdish campaign
during which he died and during which Abū ʻl-Fath
attracted attention, in spite of his father's disapproval, by his
courting of the troops. He had the same intellectual
qualities as Abū ʻl-Fath and some writers even consider him to be a superior stylist, but he had the
rashness and inexperience of youth and made the
princes uneasy when his incautious expenditure in
the jealousy of ʻAbd Allāh b. Abbad and Ibrahim b.
Abbad, wished only for a quiet life, allowed him
to his father's suzerainty, with Abū ʻl-Fath as vizier of
this region. Abū ʻl-Fath, sent to sound the aged ruler
on the matter, had great difficulty in pacifying him,
and of Rukn al-Dawla attaching great importance to family
solidarity and loyalty; nevertheless, ʻAbd Allāh having
left, Abū ʻl-Fath remained behind at Baghādār where
he amused himself, amassed possessions, improved
his relations with Baghāthār and his vizier Ibn Bakīyya
[now], and received from the caliph, without
Rukn al-Dawla's having asked for anything, the
kābab of ʻAbd al-Ra'īs, in short gave the
impression of following his own personal policy against
the interests of Rukn and of ʻAbd Allāh. ʻAbd used him
again in 365/976 to settle with his angry father
questions concerning the succession; but in 366, Rukn
being now dead, ʻAbd Allāh intervened in ʻArāq, while Abū
ʻl-Fath, who remained at Rayy, quarrelled there
with the influential counsellor of Mu'āyyid, Ibn
ʻAbbād [q.v.], whom he feared and tried to get
removed and even killed, and finally, on the orders
of ʻAbd Allāh, Mu'āyyid's suzerain, was arrested,
tortured and put to death. The family, of whom no
other members are known, does not seem to have
played after this any role of importance.

**Bibliography:** See ibn yūnids and the
above article on Abū ʻl-Fath; there is a long biography
on Abū ʻl-Fath in the Irkādāt of Yatīma, v, 347-73,
based on the chronicle or the K. al-Wuzārā
of Ḥilāl al-Sāhīb, a Ta'īrīh of al-ʻĀbī, and an account
by Abū Ḥayyān which I have not been able to
find either in the Mu'āyyid or in the İmdād
both of which include several paragraphs on Abū
ʻl-Fath—see index); the life of Abū ʻl-Fath in Ibn
Khalikīn is also based on the Wuzārā, and on the
Tādājir of Abū Ishākh al-Sāhīb; see also the
following texts: Ta'īrīh of al-Maṭrūkh (Maṭrīf,
Arslan) and J. Chr. Bürgel, Die Hoheitsrepublik
Abūd al-Dawlas, 1969; the İmdād contains
nothing about him.

IBN AL-ÅMID [see ibn al-kalānisī; al-makīn].

IBN AL-AMĪN MĀHMŪD KEMAL [see inal].

IBN ʿĀMIR, Abū ʻUmar ʿAbd Allāh b. ʿĀmīr
al-Yaḥṣūbī, "reader" of the Kurān whose
Yaḥṣūbī [q.v.] is counted among the seven canonical
"readings". Of south Arabian origin, he belonged to
the first class of the Tabībīn [q.v.], his guarantors
being ʻUṯmān b. ʻAffān, Abū ʻl-Dardā [q.v.] and other
less famous Companions. He settled in Damascus
where he was appointed ʿaddāl by al-Walīd
b. ʻAbd al-Malik and chief of police by Yazīd
b. al-Walīd and İbrahim b. al-Walīd; his "reading"
was adopted by the inhabitants of Damascus. He
died in 1187/736, having had as direct disciples his
brother ʻAbd al-Rahmān and especially Yabhā b.
al-Ḥārith al-Dhimārī (ed. 145/762), whom Ibn
Kutayba (Maṣrīf, 530) includes among the authors of
canonical "readings", while mentioning Ibn
ʻĀmīr only incidentally. His reading was trans-
mitted indirectly by ʻAbd Allāh b. Ḥaykānīn (d. 241/856) and the ʻaddāl of Damascus,
Hālgām b. Ammar al-Sulami (d. 245/859).

Among others of the same name, the best known is
ʻAbd Allāh b. ʻĀmīr b. Kurayz [q.v.].

IBN-AL-ÅMIR, Abū 'L-MUTARRIF AMER, b. ʻAbd Allāh al-Makīmī, writer, poet and judge,
who was born in Valencia (Spain) in Rama-
dān 580/December 1184, and died in Tunīs in Dhu
l-Hijjah 656 or 658/December 1258 or November
1260 (his grandfather's name is given as ʻUmār āy in
the Dīdawgīt al-Isbīdāt of Ibn al-Kāḍī, 72). His
family originated in Alcira (Džazālrat Shukr), near
Valencia. He studied with the best Andalusian
scholars and then travelled probably to the East where
he acquired an immense knowledge of fikh, hadith
and literature, and also gained some acquaintance with
certain branches of the speculative sciences (maṣūfīāt),
philosophy, kalām, etc.

On his return, he settled fora time in his native
town, where he became one of the local dignitaries.
It was there that he started a life-long friendship
with Ibn al-Abbhār [q.v.]; shortly afterwards, he
became a judge at Ḥattiva, and he must have held the
same position in Majorca in about 627/1229-30,
for he was present in the island when it was con-
quered by James I of Aragon (Jaime el Conquistador);
he wrote an account of the event in a book,
the title of which is unknown and which is always
referred to as ʻAbd al-Kā'iūn Mayyārka; this is
his most famous work, and al-Maṣkārī (Analectes,
i\. Abbás Ahmad Al-Mangallílát and Abū ʾAbd Allāh Muhammad b. Muḥammad b. ʿAll, known nowadays in Algeria by the name of Sidi Ben ʿAll.

In 1166/1752 he decided to perform the hajj, and, six years later, after a stay in Cairo, withdrew to the Hijāz to end his days there as a muḥaddīṣ [q.v.]. According to certain indications, he was still alive in 1204/1799, and his death allegedly occurred in Mecca between this date and 1211/1796. This is all that is known of his life and studies. In Algiers he held the post of Māliki muṣṭaﬁ for a long time and taught kādiyya (an abridgement which omits most of the prose quotations); Ibn al-Muḥammad b. ʿAbd al-Wahab al-Rashid, the tenth Almohad caliph (630-40/1232-42), who appointed him secretary in the Chancellery. A little later, he was appointed kādi of the Hārijīn, his tribe, and then transferred to the following reign he appears as a kādi in Meknès. Later, he moved to Ceuta and from there to Ifrīqiya, where he entered the service of the Hāsjīdīn, in Tunis. He was appointed kādi, first of al-Úrbūs, then of Gābba; al-Mustansir bīllah (647-72/1249-76) made him one of his advisers, and he became his favourite courtier until his death, on 20 Dhuʾl-Hijjah 65/26 November 1260.

Ibn ʿAmir was a prolific writer of both prose and verse; the sources named in the bibliography reproduce an abundance of material, mostly in the form of official State letters and letters addressed to friends. Even his book on the fall of Majorca was a risāla addressed to a particular person. His prose is sober, elegant, beautiful and precise, but is surpassed in these qualities by that of his contemporary Ibn al-ʿAbbār. His poetry is better than his prose. The only work to have survived under his name is al-Thābīn fī ʿilm al-kalām (MS Escorial 296), and it seems in fact that this and the work on Majorca are the only books that he wrote, although several others have been attributed to him.

Bibliography:

Ibn al-Abbar, Muḥtadab min Kitāb Ṭuḥṭ al-kādīm, Cairo 1957, 145-50 (an abridgement which omits most of the prose quotations);

Ibn ʿAMMAR, Abū ʾL-ʿABBAS AHMAD, fakīḥ and poet, known at the present time in Algeria under the name of Sidi Ben ʿAmār. It is not known where or when he was born and nothing is known of his childhood, his youth and his early studies. He is said to have learned hadīṯ from Abū ʿAbd Allāh ʿUmar b. ʿAkdīl (or ʿUkāyil) al-Yaṣāli (sic) or al-Bāṣalāwī (probably al-Yaṣāli, i.e., of the Banī Yaṣā, a tribe of the lesser Kabylie) al-Makkī, who died in 1270/ 1756; he is said to have studied more particularly the Sahīḥ of al-Bukhārī under masters (?) whose line went back to Abū ʿUṯmān Saʿdī b. ʿAḥmad al-Makkī, a former muftī of Tlemcen (928/1521- 1011/1606). He is said, furthermore, to have been initiated into the mysteries of the fraternity of the Shāhīḥiliyya by Abū ʾAbbās Allāh Muhammad al-Munawwār al-Tīlīmsnā, a disciple of Mḥammad b. Nāṣir al-Ḥarīfī, and to have received his mystical education from a second line of masters going back to the Egyptian Abū ʾAbd al-Wahhāb al-ʿAffīfī.

For his literary education and notably for the composition of muḥaddīsah his masters are said to have been two well-known Algerians, Abū
always linked with the ‘Abbādīdīs. At the court he became the friend of the prince Muḥammad, accompanying him to Silves when the prince was made governor there; but as the prince, desiring to add to his power, invested his friends with disagreeable duties, Ibn ʿAmmār began to circulate about the two young men and al-Muʿtadīd, mistrusting their friendship, recalled his son to Seville in 450/1058 and commanded the poet to leave the kingdom. Ibn ʿAmmār then sought refuge in Saragossa, whence he addressed poems to the ruler of Seville and to his vizier, Ibn Zaydūn [q.v.], in vain attempt to make them relent. He had to wait until the death of al-Muḥammad ibn al-Ḥimād and the succession of his friend Muḥammad (who took the title al-Muʿtadīd) in 461/1069 before being recalled to Seville.

From then on Ibn ʿAmmār gave up poetry to some extent in order to devote himself to politics, in an effort to play a prominent part in Muslim Spain. Soon after his return he was appointed governor of Silves and later became al-Muʿtadīd's chief minister. In 460/1069, he took part in the annexing to the kingdom of Seville of the town of Cordova, which became the seat of the court; the following year he got rid of Ibn Zaydūn, whom he considered as his rival, by sending him back to Seville; he struggled successfully against the favourite ʿĪtimād, who was hostile to him, and succeeded in dominating the ruler completely and practically directing the state. He then advocated a policy of expansion based on the support of the Christians, i.e., of Alfonso VI, with whom he strengthened the relations of Seville to such an extent that he was even considered a traitor. His manoeuvres to take Granada with the help of Alfonso VI failed however, and his first action against Murcia (Tudmīr) had no greater success. This attempt was part of a plan which he had conceived in order to gain possession of the town for himself personally; he therefore set himself up as independent governor of Murcia as soon as he had succeeded in taking possession of it, with the help of Ibn Rāshīl [q.v.], in 471/1078. Taking advantage of this victory, he turned to Toledo, leaving behind in Murcia Ibn Rāshīl, who in turn betrayed him and declared himself independent. Dispossessed of his short-lived conquest, Ibn ʿAmmār took refuge once again with al-Muʿtadīd Ibn Ḥādī [q.v.], in whose name he took part in a number of successful expeditions; he was, however, captured at Segura in 473/1081 by al-Muʿjīb ibn al-Muʿtadīd, and was imprisoned in Córdoba from which he escaped and went to Seville, where he suffered the most degrading humiliations. In spite of interventions on his behalf, Ibn ʿAmmār was brought back to Cordova in chains and paraded on a donkey, then taken to Seville, where he suffered the most degrading humiliations. In spite of interventions on his behalf, al-Muʿtadīd stood firm and did not allow himself to be swayed again by the pleas which Ibn ʿAmmār addressed to him from prison; nevertheless, the poems with which he tried to soften the heart of his former patron, indeed, are said to have had some effect, and certainly such as to touch al-Muʿtadīd’s feelings, to the extent that he seemed at one time to be on the point of yielding and granting pardon, but his prisoner made a blunder which was skillfully exploited by his enemies, in particular by the son of Ibn Zaydūn, who had taken his father’s place, and al-Muʿtadīd in a passion of anger cut off Ibn ʿAmmār’s head with one blow of an axe (479/1086).

As regards his character, Ibn ʿAmmār is accorded in Spain the fame which he deserves; his intelligence and especially his unbounded ambition made him a dangerous and much-feared person, who knew too well how to attract people by charm of manner and conversation. His behaviour towards al-Muʿtadīd is judged with severity but does not prevent the critics from recognizing his poetic talent. His poetry, very personal in inspiration and composed with remarkable technical skill, is indisputably gifted and original, but his satires are bitter and his panegyrics often lacking in dignity.

His Diwān, which he composed in Seville, where it appeared in the two recensions, now lost, of Abu Ṭāhir Mū. b. Yūsuf al-Tamīlī and of Abu ʿKāsim al-Shībīlī; besides, Ibn Bassām included the poems from it which were considered the best in his Nukḥbat al-khittāyīr fī aṣghūr Ibn ʿAmmār (which is also lost). Recently, Ṣaḥāb al-Dīn Ḥaḳīm made an attempt to reconstruct it in a thèse complémentaire presented at the Sorbonne in 1953, also devoting to the poet a long chapter in his thèse principale on La vie littéraire à Séville au XIe siècle; the data thus collected were published in Baghādād in 1957 under the title of Muḥammad b. ʿAmmār al-Andalusī.

PELLAT)

 Ibn ʿAmmār [see ʿAmmār, bānū; al-Ḥakīm bi-amr Allāh; Ṭarbūlīs].

Ibn al-ʾAraḫī, Muḥammad b. Ziyād, Abū ʿĀbd Allāh, philologist of the school of Kūfa, who is said to have been the son of a slave from Sind who became a māuida of Abū ʿAbbās b. Muḥammad b. ʿAlī al-Ḥāshimi. Born at Kūfa in 150/767, he was the pupil principally of al-Kisāʾī [q.v.], of Abū Muḥāsīva al-Dāris, of al-ʿAskārī b. Maʿṣūn al-Maṣīdi (see Fīrāsī, Cairo, 193), and of al-Mufaḍḍāl al-Dābbī [q.v.], who had married his mother and whose Muṭfaḍḍāliyya he hand over; and he in his turn had many disciples, among them Thaʿlab [q.v.], Ibrāhim al-Ḥarbī and Ibn al-Sīkkit [q.v.], besides Saʿīd b. Saʿīd b. Kūṭayba, whose teacher he was. His biographers praise his learning in grammar, lexicography, genealogies and poetry, and it is said that he have drifted from memory, without having to refer to any book, enough material to have loaded several camels. Al-Dīḥījī, who knew him at Baghādād or at Sāmarrā, quotes him often as a ṭawī, without, it seems, resenting his ill-natured attack on the Bāṣra scholars Abū ʿUbayda and al-ʾAṣmāʾī, who, he maintained, knew nothing. He claims to have received from the mouth of the Bedouins many facts which contradict the affirmations of al-ʾAṣmāʾī, but
IBN AL-AfRABl — IBN AL-<ARABl
he himself indulges in fanciful interpretations and
accepts curious grammatical rules, to the extent
that his critics have easily been able to point out
proofs of his ignorance, even in the domains where
he is considered a master.
Afflicted with both a squint and a limp (Muht.
b. Habib calls him also al-Acradj), he seems not to
have had a very distinguished career, but his learning nevertheless met with some success, since audiences of more than one hundred crowded to his
classes. At Samarra, al-Wathik resorted to him for
the solution of a philological problem, which proves
that he enjoyed quite a wide reputation. In spite of
his hostility towards the MuHazills, it was Ahmad
b. Abi Du'ad [q.v.] himself who led the funeral prayer
at his grave, on 13 Shacban 231/14 April 846 (but the
date of his death varies from 230 to 233), at Samarra.
About twenty works are attributed to him:
K. al-Nawddir, K. al-Anwa*, K. Sifat al-nakhl, K.
Sifat al-zar<, K. al-Khayl, K. Ta'rikh al-kabd>il, K.
Ma'dni 'l-shi'r, K. Tafsir al-amthdl (Fihrist: alKabd*il, but that is an error), K. al-Nabdt, K.
al-Alfdz, K. Nasab al-khayl, K. Nawddir al-Zubayriyyln, K. Nawddir Bani Fafr'as, K. al-Dhubdb
(transmitted by al-Sukkari), K. al-Nabt wa yl-bakl,
and others listed by Brockelmann. Only a few of
these have survived, a K. al-Fddilfi 'l-adab, a collection of elegies published by Wright (Op. ar., 97-122),
a K. al-Bi^r (Cairo, vii, 652) [see BI'R], and the K.
Asmd* khayl al-^Arab wa-fursdnihd, which must
correspond to the K. Nasab al-khayl mentioned
above (ed. G. Levi Delia Vida, Les "Livres des
Chevaux", Leyden 1928); on his recension of alAkhtal's Diwdn, see AL-AKHTAL.

IBN AL-CARABI, ABU BAKR MUHAMMAD B.
C
C
ABD ALLAH AL-MA AFIRI, a t r a d i t i o n i s t belonging to Seville; b. 468/1076, d. 543/1148. In 4&5/
1092 he travelled with his father to the East, and
spent periods studying in Damascus and Baghdad.
In 489/1096 he performed the Pilgrimage, after which
he returned to Baghdad and studied under Abu
Hamid al-Ghazali and others. He then went with his
father to Egypt and met traditionists in Cairo and
Alexandria. After his father's death in 493/1100 he
returned to Seville, where he was credited with
encyclopaedic knowledge. He wrote books on a
variety of subjects, including jiadith, fikh, usul,
Kur3an studies, adab, grammar, and history. A long
list of his writings is given by Makkari, Analectes, i,
483 f. Among them is cArida al-Ahwadhi, a commentary on al-Tirmidhi's collection of traditions.
Many of his works are no longer extant. In Seville
he acted as kddt for a time, acquiring a reputation

707

for severity towards evildoers and kindness towards
humble people. He later resigned this post and
devoted himself to scholarship, both teaching and
writing. When the Muwafcfoids entered Seville he and
others were taken to Marrakush where he was
imprisoned for about a year. He died while on a
journey from Marrakush to Fez, where he was
buried. Makkari says a ziydra came to be held at his
tomb, which he himself had visited several times.
While Ibn al-cArabi was generally highly commended,
everyone did not accept him as an authority on
fradith. He has been called thika (trustworthy) and
thabat (reliable), but the frddi clyad b. Musa (d. 544;
1149), a contemporary who heard traditions from
him, said people criticized his traditions, and Ibn
Hadjar al-cAskalani (d. 852/1449) has called him
(toc*/(weak).

(J. ROBSON)
IBN AL-cARABl, MUHYI 'L-DIN ABU C ABD ALLAH
C
MUHAMMAD B. ALI B. MUHAMMAD B. AL-CARABI ALHATIMI AL-TA3!, known as al-Shaykh al-Akbar
(560/1165-638/1240), was one of the greatest Sufis of
Islam. He is usually referred to—incorrectly—as Ibn
c
Arabi, without the article, to distinguish him from
Ibn al-cArabi, Abu Bakr [q.v.]; in Turkey he is often
referred to as "Muhyi '1-Din cArabi"; whereas some
sources (e.g., al-Kutubi, Fawdt al-wafaydt, Cairo 1951,
ii, 487) give his kunya as Abu Bakr, in autograph notes
he refers to himself only as Abu cAbd Allah.
Life. He was born at Murcia on 27 Ramadan
560/7 August 1165 (see the note by Sadr al-Din alKunawi, reproduced by A. Ates, in TV, n.s. i/i (16)
(1955), PI. XXV), of a family claiming descent from
Hatim al-Ta'i [q.v.]; some Sufi adepts were numbered
among his near relations. When he was eight, his
father moved to Seville, where Ibn al-cArabi began
his formal education; as a young man he is said to
have acted as kdtib to various governors (al-Makkari,
Nafh al-jib, i, 568). At an early age, in the course of
an illness, he enjoyed a vision (Futufydt, iv, 552) which
changed the course of his life, leading him to regard
his earlier years as a period of dj_dhiliyya (Futuhdt, i,
207); the genuineness of this "conversion" much impressed his father's friend the philosopher Ibn Rushd
[q.v.], the fyddi of Seville (Futuhdt, i, 170). Although
Ibn al-cArabi claimed that his macrifa was communicated to him with no intermediary, he notes in his
works the names of many shaykhs whom he served
and whose company he sought, among them: Abu
Djacfar al-cUrayni (Ruh al-kuds [no. 8, below], fol.
41; Futuhdt, iii, 589, 596, etc.); Abu Yackub al-Kaysi,
a disciple of Abu Madyan [q.v.] (Ruh al-kuds, fol. 43);
Salili al-cAdawi, skilled at revealing the future; Abu
'1-Hadjdiadi Yusuf, etc. (Ruh al-kuds, fols. 46-73),
and two women: Fatima bint al-Muthanna and
Shams Umm al-Fukara3. Although he refers to Abu
Madyan (d. 598/1193) as his "shaykh", in fact he
never met him personally (Ruh al-kuds, fol. 66).
Ibn al-cArabi spent some ten years in various
towns of Spain and North Africa with these teachers,
but until 590/1194 Seville remained his home. In
that year, at the age of 30, he went to Tunis to
join a certain cAbd al-cAziz al-Mahdawi (Ruh al-


In the next year he went to Fez, where in 594/1198 he wrote his K. al-Isrā (no. 3, below). In 595/1199 he was in Cordova, where he attended the funeral of Ibn Rusd, and later at Almanzor, where he wrote his Mansāḥt al-nuṣūḥ (no. 7 below) (Naḥf al-fihū, i, 576); in 598/1202 he was back in Tunis and then, travelling via Cairo and Jerusalem, set out to perform the Pilgrimage (Rūḥ al-ḫūds, fol. 63 v.). Deeply moved by the sight of the Ka'ba, for him the point of contact between the worlds of the visible (ḵhawād) and the invisible (ḵhawād), he stayed (shuhūd), with the occasion of the funeral of Ibn Rusd, and later at Almānza—the investigation of which still remains incomplete. Ibn al-ʿArabi himself did not know how many works he had written; at the request of his friends he endeavoured to draw up a list, of which three (conflicting) versions survive: (1) Fihrist (Konya, MS Yusuf Āga 4989, pp. 378-89, on which see A. Ates, in TV, n.s. li (1955), 155-60, written by Sād al-Dīn before 612/1216, is incomplete; (2) a MS of 1337/1918-9 (copied from one of 639/1241-2) by Sadr al-Dīn, who was with him in his last days, spent his life in teaching and commenting on his master's works. Ibn al-ʿArabi died, in the house of the bādī Mūṭḥa li-Dīn Ibn al-Zakī, on 28 Rabīʿ II 638/16 November 1240, and was buried in that family's turba on the slopes of Mount Kāsimūn.

Ibn al-ʿArabi married several wives and presumably had many children, but only two of his sons are known: Sād al-Dīn Muḥammad, b. 618/1221 in Malātīya, d. 656/1258 in Damascus, a poet (al-Kutubī, Faḍīl al-ʿaṣfāyādī, i, 325 (which, however, gives the date of his death as 686); Naḥf al-fihū, i, 572; Brockelmann, i, 583); and ʿĪmād al-Dīn Abū ʿAbd Allāh, d. 667/1271 in Damascus (Naḥf al-fihū, loc. cit.).

The Ottoman Sultan Selim I, during his stay in Damascus after his Egyptian campaign (923/1517-8), ordered the rebuilding of the turba where Ibn al-ʿArabi was buried, and the construction nearby of a mosque and a takhiṣṣa (H. Laoust, Les gouverneurs de Damas . . ., Damascus 1952, 148-50; cf. Feridun, Muslkhālī, i, 404, 441, 444; Sād al-Dīn, ii, 379); on this occasion a āfād lauditing Ibn al-ʿArabi was given by Kemāl-Paštahāzād (q.v.) (text in Shāhābārī, v, 195).

Works. Ibn al-ʿArabi was certainly the most prolific of all Sūfī writers; although Brockelmann (i, 571-82, S I, 791-802) lists no less than 239 works (perhaps with some duplication of works with differing titles), he was unable to avail himself fully of the rich resources of the libraries of Istanbul and Anatolia—the investigation of which still remains incomplete. Ibn al-ʿArabi himself did not know how many works he had written; at the request of his friends he endeavoured to draw up a list, of which three (conflicting) versions survive: (1) Fihrist (Konya, MS Yusuf Āga 4989, pp. 378-89, on which see ʿAtes, in TV, n.s. li (1955), 155-60, written by Sād al-Dīn before 612/1216, is incomplete; (2) a MS of 1337/1918-9 (copied from one of 639/1241-2) by Sadr al-Dīn, who was with him in his last days, spent his life in teaching and commenting on his master's works. Ibn al-ʿArabi died, in the house of the bādī Mūṭḥa li-Dīn Ibn al-Zakī, on 28 Rabīʿ II 638/16 November 1240, and was buried in that family's turba on the slopes of Mount Kāsimūn.

Ibn al-ʿArabi married several wives and presumably had many children, but only two of his sons are known: Sād al-Dīn Muḥammad, b. 618/1221 in Malātīya, d. 656/1258 in Damascus, a poet (al-Kutubī, Faḍīl al-ʿaṣfāyādī, i, 325 (which, however, gives the date of his death as 686); Naḥf al-fihū, i, 572; Brockelmann, i, 583); and ʿĪmād al-Dīn Abū ʿAbd Allāh, d. 667/1271 in Damascus (Naḥf al-fihū, loc. cit.).

The Ottoman Sultan Selim I, during his stay in Damascus after his Egyptian campaign (923/1517-8), ordered the rebuilding of the turba where Ibn al-ʿArabi was buried, and the construction nearby of a mosque and a takhiṣṣa (H. Laoust, Les gouverneurs de Damas . . ., Damascus 1952, 148-50; cf. Feridun, Muslkhālī, i, 404, 441, 444; Sād al-Dīn, ii, 379); on this occasion a āfād lauditing Ibn al-ʿArabi was given by Kemāl-Paštahāzād (q.v.) (text in Shāhābārī, v, 195).

Works. Ibn al-ʿArabi was certainly the most prolific of all Sūfī writers; although Brockelmann (i, 571-82, S I, 791-802) lists no less than 239 works (perhaps with some duplication of works with differing titles), he was unable to avail himself fully of the rich resources of the libraries of Istanbul and Anatolia—the investigation of which still remains incomplete. IBN AL-‘ARABI

graph text of the second recension, in 37 volumes dated 633-7/1235-9, is preserved in Istanbul, MSS Türk-İslâm Eserleri Müzesi 1845-81; several printed ed. 1296, 1294, 1330. The work was begun in Mecca in 598/1201 and finished (according to one tradition) in 629/1231. In six (al-) subdivided into 556 bâb, it contains a full exposition of the author's Sufi doctrine. A commentary on its difficult passages was written by Ibn al-Karîm al-Dînî (d. 825/1908); Brockelmann, S II, 283, and there are abridgements by (Ibn al-Wahâbî) al-Shârâni [q.v.] (d. 973/1566); Lâwîlâlî al-al-‘âmâr ... (Cairo 1312); l-Kîlîbî al-fârîm ... (Cairo 1277); l-Yawdîrî wa l-Dawdîrî ... (Cairo 1277, 1305, 1321).

(2) Fûsûs al-khâm wa hâmîsîl al-kîlâm (Brockelmann, no. 11). MS written by Sdr al-Dîn in 630/1232-3, read to and corrected by the author, in Istanbul, MS Türk-İslâm Eserleri Müzesi 1933. This summary of the teaching of 28 prophets from Adam to Muhammad, dictated to the author by Damascus in the Prophet by a dream, has been frequently printed: Cairo 1252, Istanbul 1387, Cairo 1304, 1309, 1321, 1329, etc. Abridged Eng. tr.: Sâhib Khâja Khan, Wisdom of the Prophets ..., Madras 1929; partial Fr. tr.: T. Burchhardt, La sagesse des prophètes, Paris 1955; Turkish tr. in the series §arkîyat Mecmuasi, ii (1957), 49-130. A work of 55 chapters, composed at Mosul, on the “inner” significance of religious duties.

(9) K. al-Fârîyân; (12) and (14) the commentary on it: Fath (Kashî) al-‘alîkhârîr wa l-‘awdîr ‘ân wâdîh Tahrîm al-‘asîb wa l-‘asîb (Brockelmann, no. 129); Eng. tr. of text and part of comm.: R. A. Nicholson, Fath (Kashj) al-dhâkhîr wa l-‘aldîr (final ed. 1911); printed Bulâk 1271; lith. Bombay n.d.

(3) K. l-Istârâ lâ makâm al-‘asîr (Brockelmann, no. 15). MS Velîyûdîn (Istanbul, Bayezid Public Library) 1628, dated 633/1235-6, was read to the author. Printed: Haydarâbâd 1357/1948. A short work, written in rhyning prose (sâdî) in Fes in 594/1198, it describes Ibn al-‘Arabi’s “mi-râdî” from the world of being to the world of being, with the station (maûfî) in God’s presence. Commentaries by (a) his disciple from the world of being no. 15). MS Veliyuddin (Istanbul, Bayezid Pub-lic Library A 79; lith. Cairo 1281). A letter written from Mecca to his Tunis friend 4 Abd al-‘Azîz al-Mahdawî, with criticisms of the wordly ways of gâtîfs he had met and much information on the shâykhîm whom he had known in Spain (this section discussed with Sp. tr. by M. Âsun Palaci, Vidas de santones en Andalucía, Madrid 1933).

(5) K. l-Isfâr ‘an nâfâ’îdî al-‘asîr (Brockelmann, S no. 152); printed: Haydarâbâd 1367/1948. Perhaps identical with no. 10.

(9) K. al-Dînî (Brockelmann, no. 130). MS written during the author’s lifetime: Konya, Yusuf Ağa 5503, 5502; printed Bulâk 1271; lith. Bombay n.d.

(10) K. al-‘Asîrîn (not in Brockelmann), to the author, dated 588/1240: Konya, Yusuf Ağa 4859, fols. 4-38. On the three “journeys”, to, from and in God.

(11) K. l-Isfâr ‘an nâtâ’îdî al-‘asîr (Brockelmann, S no. 152); printed: Haydarâbâd 1367/1948. Perhaps identical with no. 10.

(12) Dîvân (Brockelmann, no. 130). MS written during the author’s lifetime: Konya, Yusuf Ağa 5503, 5502; printed Bulâk 1271; lith. Bombay n.d.

(8) R. ‘Alîl al-kudî fi munâdâsahî al-nafsi (Brockelmann, no. 56). MS copied in Rabî 1 600/1203, the month of composition: Istanbul University Library A 79; Cairo 1281. A letter written from Mecca to his Tunis friend 4 Abd al-‘Azîz al-Mahdawî, with criticisms of the wordly ways of gâtîfs he had met and much information on the shâykhîm whom he had known in Spain (this section discussed with Sp. tr. by M. Âsun Palaci, Vidas de santones en Andalucía, Madrid 1933).

For further details of MSS in Konya and Manisa, see A. Âtes, Konya kuîîphanelerinde bulunan baz mümîn yazmalar, in Belleten, xvi/51 (1953), 49-130; idem, Anadolu kuîîphanelerinden ..., in TV, n.s. li/4 (1955), 150-7; idem, al-Mahdawî al-arabîyya [q.v.].
Among the spurious works attributed to Ibn al-'Arabi are the so-called Tafsir al-Shaykh al-Akbar (Broeckelmann, no. 3); al-Shadara al-nu'maniyya (Brockelmann, no. 124); and a popular work on the interpretation of dreams (Ta'bir-nama-i Mushfi 'l-Din Arabi terjum, Istanbul 1939, etc.; most lately Rüyâ tâhirārī, Istanbul 1955). 

... to the effect that Ibn al-'Arabi's ideas were bid'a and that every word of the Fusus was kufr were given by, e.g., Ibn Maqallah (al-dawla al-'Uthmaniyya 2, ff.). Among the spurious works attributed to Ibn al-'Arabi is a manuscript, it is as yet impossible to give a complete survey of which has in fact been pronounced Tafsir al-Shaykh al-Akbar (Broeckelmann, no. 3); al-Shadara al-nu'maniyya (Brockelmann, no. 124); and a popular work on the interpretation of dreams (Ta'bir-nama-i Mushfi 'l-Din Arabi terjum, Istanbul 1939 etc.; most lately Rüyâ tâhirārī, Istanbul 1955). 

Ibn al-'Arabi's ideas are examined, it is necessary to consider his epistemological outlook. Like almost all Muslim şâfit, Ibn al-'Arabi regards human reason as severely limited: in the introduction of the Futufydt (i, 33 ff. and cf. iii, 205), he divides the branches of knowledge ('ilm) into three classes: (a) those which may be attained through reason ('qal); (b) the knowledge attained through "states" (hâl), acquired by perception of taste, colour, etc.; (c) knowledge of mysteries: this is the knowledge which the soul "blows" (mañatha) into the heart (râ); it is in part like (though higher than) the knowledge provided by 'âbî and hâl; in part it is knowledge arising from "communications" (ahhâdîr), i.e., the revelations of prophets. This last "knowledge", coming from God, with or without the mediation of an angel, and acquired only after a profound mystic training, is ma'drif. The true branches of knowledge are the ma'ârif; and he who knows these knows everything. The ma'ârif, and particularly those relating to the "way" of God, are not to be acquired by reason, or by reason's most effective instrument kiyya (q.v.), for "every day [Allâh] is upon some labour" (Kur'an, LV, 29). The truth of a statement depends on its source: the prophets recognized truths through inspiration (ihtikār); these truths are to be received by faith and are not open to dispute. Ibn al-'Arabi claimed a similar authority for his own teachings, since the waft (q.v.) is modelled upon and is the heir of the prophet; but he is far from claiming prophet-hood for himself, and hence the Batini, position (summary in al-Ghazali, Kitâb-ut al-Janâba, 1955). 

Ibn al-'Arabi's teaching as far as it has been transmitted to the east: it is baqâl bi'l-ilah. The traveller (sâlit) who is making the third journey performs those precepts of the şari'a which are šari'; externally, he is living with his fellows; but internally he is dwelling with God. Not every man is capable of more than the first journey; only those specially endowed (kiyds (q.v.)) may win to the vision of God, but even for them this depends on certain conditions (şuqûr), some fulfilled by the traveller (sâlit, murid) himself, some provided by the shaykh. Even the Prophet had a şaykh—Gabriel. The şaykhs perform the function which the prophets had performed in their day, except that they do not bring a new şari'a. Ibn al-'Arabi's views on the "travelers" are expounded especially in his Tuhfat al-safa'ra ila hadrat al-barara (Istanbul 1300; Turkish tr. M. Salim, Istanbul 1939) and diyâyat al-abâdî (Turkish tr. Enver, Istanbul 1936). The conditions he must observe are four: (1) silence (samî); (2) withdrawal from men (uzla); (3) hunger (dî'â) and (4) wakefulness (sahar). Through their observance with sincere intention (îkhlas), there will be awakened in his heart a love (mahabbâ), which grows to be a passion (îshk) quite distinct from selfish desires (ghafâ). It is this passion which particularly brings men to God. On the journey the şâlit experiences a series of "states" (ahwâl), some continuing and hence called "resting-places" (ma'âkim, mansul), at each of which he learns various ma'ârif. When the heart is thoroughly purified, the veil (kifâb) of those other things which hide God (md siwâ Allâh) is drawn aside; all things, past, present and future, are known; God grants the manifestation (lajjâll) of Himself; and finally, he is drawn on a "way" of God, are not to be acquired by reason, or by reason's most effective instrument kiyya (q.v.), for "every day [Allâh] is upon some labour" (Kur'an, LV, 29). The truth of a statement depends on its source: the prophets recognized truths through inspiration (ihtikâr); these truths are to be received by faith and are not open to dispute. Ibn al-'Arabi claimed a similar authority for his own teachings, since the waft (q.v.) is modelled upon and is the heir of the prophet; but he is far from claiming prophet-hood for himself, and hence the Batini, position (summary in al-Ghazali, Kitâb-ut al-Janâba, 1955). 

Influence. Thanks to the protection of influential supporters, Ibn al-'Arabi was only once in his lifetime in danger for his opinions; this was in Egypt (Makkari, Nafî al-lib, 1, 580). Neither he in his lifetime nor his followers after his death founded a şurika. The greatest influences in spreading his teaching were the works of his disciple Şadr al-Dîn al-Khnawî (q.v.) and Şadr al-Dîn's conventicle at Konya, where there forgathered learned şâfit who—many of them in flight before the Mongols—had come to Anatolia. The most important of these was the poet İrâki (q.v.); d. 686/1287, author of the Lamad'vit: this abridged paraphrase in Persian of the Fusûs carried Ibn al-'Arabi's teaching as far as eastern Iran (so that the Lamad'vit of Dâmî (q.v.) is written in imitation of it). Others were al-Ma'âyyâd b. Mahir, al-Diwanî, al-Ghazali, al-Sulayman b. Na'sîr al-Dîn al-Farghânî (Broeckelmann, S I, 812; see also A. Atez, in TM, vii-viii/2, 1945), 112 ff.). 

Ibn al-'Arabi's mysticism was widely taught in the Yemen, particularly at Zabîl, where it aroused much hostility; some ūbûhâh and bâdîîs sought the opinions of various doctors, and fatwa to the effect that Ibn al-'Arabi's ideas were bid'â and that every word of the Fusûs was hûf were given by, e.g., Ibn
Taymiyya [q.v.], Ta'bir, Brockelmann, ii, 106 and Badr al-Din b. Djamâ'î (d. 767/1366; Brockelmann, II, 86). Ibn Khalidîn [q.v.], in his Ḥikâyat al-sā'il, mentioned above, examined Ibn al-Arabi's mystical thought, and found it meaningless and heretical. That he had numerous followers, is made clear by the work of such notable works as Ibn al-Abdal's (d. 857/1455) Ḥikîyat al-qâhîrî (Brockelmann, S II, 239) and Badr al-Din b. Diama (d. 767/1366; Brockelmann, II, 86). Ibn Khaldun (Brockelmann, II, 239) and the works of al-Suyutî [q.v., Brockelmann, II, 106] and Taki al-Din al-Subki (d. 745/1344; ibid., 179). It was delivered by Kemal-Pasha-zade (d. 885/1480; Brockelmann, II, 179). It attacked the doctrines of al-Taftazani (fasc. 85, pp. 533-55), where further references are given. (A. ATEŞ)

IBN 'ARABSHAH, AHMAD B. MUHAMMAD B. 'ABD ALLAH B. IBRAHIM SHIHAB AL-DIN ABU 'L-'ARABSHAH AL-DIMASIKI AL-'ANAFI AL-SA'ADI, born in 727/1325 in Damascus, was taken with his family to Samarkand in 803/1400-1, when Timur conquered Damascus and carried off many of its inhabitants (cf. Vita Timuri, ed. Manger, Leeuwaarden 1767-72, ii, 143 ff.; there he studied with al-Djurjani, al-Djazari and others, and learned Persian, Turkish and Mongol. In 811/1408-9 he went to Khâta in Mongolia where he studied kadî with al-Shirâmi, later to Kâfarazm and Dâshî (at Se'ay and Hâjjî-Djâhî Târîkhân), where he still was in 814/1409-10 (Vita Timuri, i, 376). He came through the Crimea to Edirne, where he became a confidant of the Ottoman Sultan Mehemmed b. Bayezid. He translated several books for him into Turkish (al-Awfi, Ta'bir, Fliigel, ii, 510; ibid., 510-51), and a similar work was composed by 'All ibn Kâri (d. 1014/1605; Brockelmann, II, 519). From this time onwards, however, hostile writing ceased, and there appears a continuous stream of commentaries on and translations of Ibn al-Arabi's works, chiefly the Fusûs. A comparable influence in Anatolia was exercised only by Djalal al-Din Rumi; but here too his doctrines were attacked, e.g., with his Lawdîih, Shark al-Fusus, and al-Radd wa 'l-tasnim (Cairo 1951, ii, 336; Ibn Taghribirdi, ed. London 1958; Osman Yahia, Histoire de l'imagination créatrice dans le soufisme... Madrid 1931, and his Keldmdan tasavvufa, ibid., 149-67; Saffet Yetkin, Muhyî'd-dîn Arbî ve IA (fasc. 85, pp. 533-55), where further references are given. (A. ATEŞ)

IBN AL-'ARABI — IBN 'ARABSHAH

1110/1698, Iladjî Khalifa, iv, 190; vi, 544), in which Timur's conquests and the conditions under his successor are described. Timurî is represented as a cruel conqueror and tyrant, but towards the end of his reign (cf. ed. Manger, iii, 785 ff.) his great qualities are appreciated. The book contains valuable descriptions of Samarqand and its learned world (iii, 855 ff.). Latin translation by Golius, Leiden 1636, French translation by Vattier, 1668, English translation by J. H. Sanders, London 1936.
the month of Safar 852/1448 (Hādīdī Khalla, iv, 345) contains a mirror for princes and beast-foes, according to Hādīdī Khalla "like Kāliya wa Dinma and Sulūna al-Mustuq" (see Chauvin, Bibliographie, ii, nos. 140-4), but, as Chauvin has shown (op. cit., ii, no. 145-9), it is actually a version of the Persian Marwānīn-nāma in the recension of Sa’d of Varāvīn (cf. Houtsma in ZDMG, ii, 359 ff.; a selection in Freytag, Loci Muri Fabulae, 72 ff.; complete edition see below). The introductory portion of an edition of his al-Ta‘līf al-fāhīr fi ḥiyām ... Abū Sa‘īd Dhiqabak was published as a posthumous work of S. A. Strong in JRAS, 1907, 395 ff. Ten works are mentioned under his name, among them a work on Arabic, Persian and Turkish, Tarjumān al-murādijm (Hādīdī Khalla, ii, 278). See also Hādīdī Khalla, iii, 158; iv, 190, 232, 270, 311; v, 479, and Freytag’s work mentioned below.

Of his sons the following were authors: (1) Abū ‘Alī, wrote Idāb al-ṣulb wa-baydān fi ‘a‘rīsh al-Nabulúsī al-Khālidī al-Khwāndin, in which is still in manuscript, is now almost forgotten. (2) Abū ‘Alī, which has become a classic and is the object of a considerable interest which extended outside the Muslim West, of the doctrines of al-Ghazzālī, which seemed to infuse fresh, youthful blood into the quiet Spanish esoteric school, imparting to it a new vitality and, above all, a firm resolve to resist the persecutions of the fūbhakī. Men such as Ibn Barradjan of Seville, Abū Bakr al-Mayrūkī of Granada and Ibn Kāsī, who rebelled in the Algarve, owed the greater part of their firmness and intransigence to Ibn ‘Arīf.

His father had once been ‘arīf in Tangier, that is to say he was employed as head of the guard responsible for keeping watch in the town at night. From this circumstance came his surname Ibn al-‘Arīf. Although naturally inclined to a studious life, the young Abū ‘Alī was apprenticed to a weaver. However, his marked vocation for study became ever stronger and could not be resisted, in spite of constraints and threats. In the end, in Almeria, he was able to receive religious and philological instruction and to satisfy his taste for poetry. He earned a reputation as a traditionist, reader of the Kurān and poet. He taught in Saragossa, Valencia and Almeria.

It was in this last town that he achieved his greatest success. His exemplary life and his aptitude for asceticism and meditation enabled him to become a respected Sufi, surrounded by many disciples. Almeria was at that time one of the most vigorous centres of Andalusian Sufism, one of the focal points of opposition to the Almoravīd fūbahakī. It was there that a solemn condemnation was made, in a collective fujad, of the destruction of the books of al-Ghazzālī ordered by the kāfī of Constantine by Djuydīn al-Dīyūnī.

Ibn al-‘Arīf was initiated into Ṣūfism by Abū Bakr Ibn Abī al-Bākī. The complete chain of the succession will be found in the text of his epitaph, published and translated by G. Deverdun. We may note it in particular the name of one of the disciples of Djuynādī (298/910), Abū Sa‘īd ‘Abd al-‘Arīf (d. 312/921-2), whom Ibn Masarra, according to M. Amin Palacios (Abenmasarra y su escuela, Madrid 1914, 35) was later to meet in Mecca. Now, it is known that the teaching of Ibn Masarra (269-319/951-931) exercised a profound and lasting influence on Andalusian Sufi circles until the period of the dissemination, in the Muslim West, of the doctrines of al-Ghazzālī, which seemed to infuse fresh, youthful blood into the quiet Spanish esoteric school, imparting to it a new vitality and, above all, a firm resolve to resist the persecutions of the fūbahakī. Men such as Ibn Barradjan of Seville, Abū Bakr al-Mayrūkī of Granada and Ibn Kāsī, who rebelled in the Algarve, owed the greater part of their firmness and intransigence to Ibn ‘Arīf.

The first-named appeared to the local authorities to be highly dangerous. Did he share his views with Ibn al-‘Arīf? Ibn al-Khaṭīb (Kitāb A‘māl al-a‘lām, ed. Lévi-Provençal, Rabat 1934, 266) writes that he was named ‘Abd al-‘Atī ‘Alā al-Shāhīdī, a distinguished and translated by G. Deverdun. We may note it in particular the name of one of the disciples of Djuynādī (298/910), Abū Sa‘īd ‘Abd al-‘Arīf (d. 312/921-2), whom Ibn Masarra, according to M. Amin Palacios (Abenmasarra y su escuela, Madrid 1914, 35) was later to meet in Mecca. Now, it is known that the teaching of Ibn Masarra (269-319/951-931) exercised a profound and lasting influence on Andalusian Sufi circles until the period of the dissemination, in the Muslim West, of the doctrines of al-Ghazzālī, which seemed to infuse fresh, youthful blood into the quiet Spanish esoteric school, imparting to it a new vitality and, above all, a firm resolve to resist the persecutions of the fūbahakī. Men such as Ibn Barradjan of Seville, Abū Bakr al-Mayrūkī of Granada and Ibn Kāsī, who rebelled in the Algarve, owed the greater part of their firmness and intransigence to Ibn ‘Arīf.

The first-named appeared to the local authorities to be highly dangerous. Did he share his views with Ibn al-‘Arīf? Ibn al-Khaṭīb (Kitāb A‘māl al-a‘lām, ed. Lévi-Provençal, Rabat 1934, 266) writes that he was named ‘Abd al-‘Atī ‘Alā al-Shāhīdī, a distinguished and translated by G. Deverdun. We may note it in particular the name of one of the disciples of Djuynādī (298/910), Abū Sa‘īd ‘Abd al-‘Arīf (d. 312/921-2), whom Ibn Masarra, according to M. Amin Palacios (Abenmasarra y su escuela, Madrid 1914, 35) was later to meet in Mecca. Now, it is known that the teaching of Ibn Masarra (269-319/951-931) exercised a profound and lasting influence on Andalusian Sufi circles until the period of the dissemination, in the Muslim West, of the doctrines of al-Ghazzālī, which seemed to infuse fresh, youthful blood into the quiet Spanish esoteric school, imparting to it a new vitality and, above all, a firm resolve to resist the persecutions of the fūbahakī. Men such as Ibn Barradjan of Seville, Abū Bakr al-Mayrūkī of Granada and Ibn Kāsī, who rebelled in the Algarve, owed the greater part of their firmness and intransigence to Ibn ‘Arīf.
enjoyed, his unanimously recognized noble reputation and the favourable treatment accorded him by the court show clearly that, although belonging to the opposition, Ibn al-‘Arif was not as fully compromised by political activities as was Abū Bākṛ al-Mayyūrī, who took to flight when summoned to Marrākūsḥ, or again as was Ibn Barraḍān, whose body the prince ordered to be thrown onto the town dunghill.

The only work of Ibn al-‘Arif known today is the short work entitled Māḥāṣiṣīn al-madżalis, studied and translated by M. Asin Palacios. Ibn al-‘Arif’s biographies of Mūsā b. Ḥabīb, al-Ṣa’dī da al-abadīyya, Fāżī 1097, 1101-12; ‘Abbās b. ʿIbrāhīm, Ḥīṣām bi-mān āḥal Marṣugū wa-āḥādī mīn al-lāmīm, Fāżī 1096, 1100 ff. (containing a vast number of quotations from the works of the many biographers of the Šūfī); Ṣa’dīlī, Taqawwufuwa’īda rīḍjīl al-tasawwufuwa, ed. A. Faure, Rabat 1958, 96 (a compilation dating from the 7th/13th century). In Los Almoryvides, Tetuan 1956, 283 ff. J. Bosch Vilà traces the activities of the Andalusian Šūfīs in the historical context of the decline of Almoravid power. For his epitaph, see G. Derverdu, Inscriptions arabes de Marrakech, Rabat 1956, 77; the article by Father Paul Nwyia, Note sur quelques fragments inédits de la correspondance d’Ina al-‘Arif avec Ibn Barraḍān, in Hespériscxliii (1956), 217-21, supplies new information concerning the relations between the two men.

(A. FAURE)

IBN AL-‘ARIF, AL-ḤUSAYN B. AL-IVALI AL-DIMASHKI AL-SHAFI‘I, was born in 499/1077 and died in 590/1195. He was the son of Abū l-Ḥasān al-Dimashki al-Shafi‘i, who died in 511/1115.

Among the most illustrious members of this remarkable family it is fitting to mention al-Ḥasan b. Hibat Allāh, who was born in 507/1112 and was a noted jurist and retainer of the Banū Kurāṣ, which included numerous kādīs and scholars, of whom was the historian Ibn Kathīr. Ibn al-‘Arīf, with references to Ibn al-Muwakkit, translated by M. Asin Palacios may be added:—Ibn al-Muwakkit, al-Sa’dī da al-abadīyya, Fāżī 1097, 1101-12; ‘Abbās b. ʿIbrāhīm, Ḥīṣām bi-mān āḥal Marṣugū wa-āḥādī mīn al-lāmīm, Fāżī 1096, 1100 ff. (containing a vast number of quotations from the works of the many biographers of the Šūfī); Ṣa’dīlī, Taqawwufuwa’īda rīḍjīl al-tasawwufuwa, ed. A. Faure, Rabat 1958, 96 (a compilation dating from the 7th/13th century). In Los Almoryvides, Tetuan 1956, 283 ff. J. (A. FAURE)

IBN AL-‘ARIF, AL-ḤUSAYN B. AL-IVALI AL-DIMASHKI AL-SHAFI‘I, was born in 499/1077 and died in 590/1195. He was the son of Abū l-Ḥasān al-Dimashki al-Shafi‘i, who died in 511/1115.

Among the most illustrious members of this remarkable family it is fitting to mention al-Ḥasan b. Hibat Allāh, who was born in 507/1112 and was a noted jurist and retainer of the Banū Kurāṣ, which included numerous kādīs and scholars, of whom was the historian Ibn Kathīr. Ibn al-‘Arīf, with references to Ibn al-Muwakkit, translated by M. Asin Palacios may be added:—Ibn al-Muwakkit, al-Sa’dī da al-abadīyya, Fāżī 1097, 1101-12; ‘Abbās b. ʿIbrāhīm, Ḥīṣām bi-mān āḥal Marṣugū wa-āḥādī mīn al-lāmīm, Fāżī 1096, 1100 ff. (containing a vast number of quotations from the works of the many biographers of the Šūfī); Ṣa’dīlī, Taqawwufuwa’īda rīḍjīl al-tasawwufuwa, ed. A. Faure, Rabat 1958, 96 (a compilation dating from the 7th/13th century). In Los Almoryvides, Tetuan 1956, 283 ff. J. Bosch Vilà traces the activities of the Andalusian Šūfīs in the historical context of the decline of Almoravid power. For his epitaph, see G. Derverdu, Inscriptions arabes de Marrakech, Rabat 1956, 77; the article by Father Paul Nwyia, Note sur quelques fragments inédits de la correspondance d’Ina al-‘Arif avec Ibn Barraḍān, in Hespériscxliii (1956), 217-21, supplies new information concerning the relations between the two men.

(A. FAURE)
his maternal grandfather Yahyā b. Abbād al-Din al-Kurashi (d. 534/1139), then, in about 505/1112, he went to attend the teaching given by his elder brother at the Great Mosque. He learned to recite the Qur'ān and began to learn ḥadīths and their isnād. According to custom, he was permitted to transmit these traditions only after the age of puberty. ʿAllī also had as masters the Shaykh Abū Muḥammad al-Afdān (d. 524/1129) and Dīmāl al-ʿĀlī b. Muslim Abbād al-Ḥasan al-Sulami (d. 533/1139). As a youth he was present at the inaugural lectures of al-Sulami at the Shafiʿī madrasa which ʿAllī attended the lectures at the Niẓāmiyya; he attended the lectures of the Hanbali Saʿd b. Ḥayyār Abbād al-Ḥasan al-Anṣārī, a pupil of al-Ḥazālī, and of the disciples of al-Barmakī, of al-Tanukhī and of Abū Muḥammad al-Djawharī; he attended the lectures on hadīths of Ṣādīq b. Isā b. Abbās al-Sulami b. Ṣāliḥ al-ʿĀlī b. Karamānī and Ibn al-Ḥusayn Abbād al-ʿĀṣimī. ʿAllī visited the region of Mosul and returned to Damascus in 525, the year of the assassination of ʿAbd al-Mulk Būrī. The young man seems to have married towards the end of this period, for his son-Abbās was born in 527/1133. The situation was becoming unsettled in Damascus and so ʿAllī returned to the East in 529/1134; he crossed Kūrārūsān, visited Iṣfahān, travelled in Transoxania and stayed in Marv, where he met Abbās Saʿdī b. ʿAbd al-Karīm b. Saʿdī, with whom he went to Nishāpur and Harāt. In 533/1139, Ibn ʿĀṣikīr again passed through Baghdat, and returned to Damascus two years later. In the course of his journeying through ʿĪrāq, Kūrārūsān, the Dījāzār and the Hidjāz, he collected a considerable number of hadīths and became a ḥāfiz.

From the reign of Muḥīt al-Dīn Anār onwards, ʿAllī Ibn ʿĀṣikīr never left his native town, where he devoted himself for forty years to learning and political activity, without neglecting poetry. Because of the great esteem in which the Banū ʿĀlī made him, the Banū ʿĀlī Ibn ʿĀṣikīr in Damascus society and the personal prestige of Abbās Ibn ʿĀṣikīr as a ḥāfiz and lawyer, Nūr al-Dīn, on his occupation of Damascus in 549/1154, immediately established contact with him; the sovereign found in ʿAllī a valuable ally in successfully implementing his religious policy of Nūr al-Dīn: Arbaʿin fi l-ʿaḍīrīhā fi ʿišāmat al-ghīthā, exalting the virtues of the Holy War; to this period also belongs his Pāḍī ṣakālidīn, mentioned by al-Dīhābī (Taḥkīra, iv, 124); the work exhorted to combat ideas which this period also belongs his Taʾrīkh madinat Dimashq, is a biographical dictionary conceived on the same plan as the dictionary of al-Khāṭib al-Baghdādī. It consists of 80 books (madārijāt) each of 10 sections (dijāzāt) of 20 folios, the whole forming a manuscript in 18 volumes in the Ẓāhirīyya library. This dictionary seems to have been composed in three stages: begun in 599/1193, it consisted in 594/1194 of 57 books on 10 fascicules (dijāzāt); at this time Nūr al-Dīn encouraged the author to continue his work. In 562/1167, when ʿImād al-Dīn came to Damascus, he saw a copy of 70 books on 10 fascicules (khurāsāt) of 20 folios. Finally al-Ḳāsim, the son of the author, speaks of a collection of 800 fascicules divided into 80 books. The work begins with a highly detailed historical topography of the town of Damascus. This section owes much to Aḥmad b. al-Muʿarrād (al-Dīhābī) and to Ibn Ḥumayd b. Abī ʿAbdallāh, who was later used by Ibn Ṣaddādī in his al-ʿĀṣikīrī al-ḥadīthīrā and by Ibn ʿĀṣikīrī al-Kutubī for his ʿUṣān al-taʾrīḵī. The principal part of the work is a collection of biographies, approximating to the genre of tabābāh; after eulogizing the Prophet, the author enumerates in alphabetical order all the important people who dwelt in Damascus permanently or briefly. Widening his horizons, Ibn ʿĀṣikīrī also deals with celebrated persons who lived in Ḥalab, Baṣṭabakī, Raṃla or Ṣaydā. This excellent source for the history of Damascus has so far only been partially published by Bādrān and Ahmad ʿUbayd (7 vols., Damascus 1911-32, as far as part of the letter ṣayyīn). A new edition, promoted by the Arab Academy of Damascus, is in the course of production (2 vols. appeared in 1954, one volume (vol. x) appeared in 1968). It is very probable that this work of Ibn ʿĀṣikīrī inspired Ibn al-ʿAdīmī to write the Bughya.

Besides the two books mentioned, exalting the virtues of ghīthā, we may notice in the abundant production of Abbās Ibn ʿĀṣimī two apologetic works: Manāšib asghārīyya and the Tabyīn kāḥib al-maḥjarī li Ṣādiq Ibn ʿAbd al-Ḥasan al-ʿĀṣirī (ed. al-Kawthārī, Damascus 1951). Finally, his poetic gifts caused him to be mentioned among the “scholar-poets” of Damascus by his contemporary ʿImād al-Dīn al-Isfahānī (Kharīdat al-Kasīr, Damascus ed. 1955, 157-174).

His son, al-Ḳāsim Bahāʾ al-Dīn Abū Muḥammad, was born at Damascus in 527/1132. He studied in his native town and in Cairo. He wrote a biography of his father, but this work, which was used by Yākūt and al-Dīhābī, is lost. His most remarkable work is al-Ṣaḥābī al-mustābāt fi ṣaḥābī al-Maḥṣūr al-Aḥsāʾ. He died in 600/1203, and was buried on the slopes of Kasīyun (see Subki, Tabākāt al-Shāfiʿīyya, v, 148; Ibn Kaṭīṛ, Bilādīya, xii, 38; Brockelmann, S I, 507).

Among the six nephews of the historian, it is fitting to mention Fadl al-Dīn and Zayn al-Umānī. Fadl al-Dīn ʿAbd al-Rahmān b. Muḥammad b. al-Ḥasan Ibn ʿĀṣikīr Abū Mansūr al-Dīmashqī was born in 350/1165. He was the pupil of Kūrārūsān Nūr al-Dīn before becoming his son-in-law. As Shaykh of the Shāfiʿīyya of Damascus he taught in several madrasas in the town. He died in 620/1223 and was buried in the cemetery of the Ṣūfīs (see Ibn Kaṭīṛ, Bilādīya, xii, 101).

Zayn al-Umānī, Abū ʿUmarat al-Ḥasan b. Ibn ʿĀṣikīr 511
Muhammad Ibn ‘Asakir, the pupil of his uncle the historian, was appointed inspector of the Treasury and of the waqfs in Damascus, then he devoted himself to asceticism and died in 627/1230, at the age of 97. He was buried by the side of his brother Fakhr al-Din (see Ibn Kašīr, Biddāya, xii, 127).

**IBN AL-ASH’ATH, ‘ABD AL-RAHMĀN B. MUHAMMAD B. AL-ASH’ATH,** descendant of a noble Kūfa family. He was a great war hero famous because of his insurrection against al-Ḥaḍīdāyī (q.v.) in 82/699-701 or 83/699-702. He was the grandson of the famous al-ʿAsh’āth (q.v.) (see, further to the references given there, L. Caetani, *Amnāli*, 40 A.H. 501-5 for further information, an assessment of him and a very full bibliography; H. Lammens, *Mo‘awia I*, 131, 150-2), and the son of Muhammad (q.v.), who was less famous than his father that he either himself killed or encouraged his hatred (al-Ṭabarī, ii, 901-10), with instructions to pursue Shāhīb Ibn al-Inbādī that Abd al-Rahman had to deal, and the son of Muḥammad al-Mulḍīrī (q.v.) (but probably to be read as Mulḏīrī, son of one of the borderland, the ruler of which, referred to in the sources as Rutbīl [q.v.], [but probably to be read as Rutbīl, i, 1032-4], it was the task of the local governor to keep in subjection the territory of the Kābulistān borderland, the ruler of which, referred to in the sources as Rutbīl [q.v.], (but probably to be read as Zunbel), offered resistance to the Muslims. A "Rutbīl" having inflicted on the governor appointed by al-Ḥaḍīdāyī, Uṣūb Allāh b. Abī Bakr, a most severe defeat in 79/688-9, al-Ḥaḍīdāyī, anxious to put an end to this, prepared an army which, because of its splendid equipment, was called the Peacock Army (dawāḥid al-mawṣil); to be in command of Kūfa. Henceforward it was with the very difficult al-Ḥaḍīdāyī that ‘Abd al-Rahmān had to deal, since he was his superior. The war against the Ṭa’ārīfīs was not yet over when another group of Khāridjīs, the majority of them belonging to the Banū Shaybān, spread terror in the territories on the borders of Ṭarāk and in Ṭarāk itself. This group, consisting of very few men, had inflicted on the government troops some extremely severe defeats (Périer, op. cit., 109-29), when al-Ḥaḍīdāyī entrusted ‘Abd al-Rahmān with an army of 6,000 horsemen with instructions to pursue Shābīb [q.v.]. Ibn al-ʿAsh’āth, describing the advice of the general al-Dīqāl ‘Uṯmān b. Sadaqī who had al-ʿAsh’āth’s experience of Shābīb’s tactical skill (al-Ṭabarī, ii, 901-10), hastened in pursuit of the Khāridjīs, while taking every precaution to avoid an unexpected attack. As the campaign dragged on, the governor of al-Madīn, ‘Uṯmān b. Kātan, in a letter to al-Ḥaḍīdāyī criticized the way the war was being conducted; invited by al-Ḥaḍīdāyī to take the initiative, he attacked Shābīb, but could not with the result that he was defeated with 1120 (or 720) of his soldiers, and the remnants of the defeated army fled to Kūfa (al-Ṭabarī, ii, 930-7); ‘Abd al-Rahmān, unhorsed during the battle, was helped by a comrade (Ibn Abī Sabra) to escape and, after a number of adventures, also reached Kūfa, where he remained in hiding until al-Ḥaḍīdāyī granted him amān (al-Ṭabarī, ii, 937-9).

Relations between the governor of Ṭarāk and Ibn al-ʿAsh’āth had at first been friendly (al-Ḥaḍīdāyī’s son, Muḥammad, married a sister of Ibn al-ʿAsh’āth), but they soon deteriorated; in explaining Ibn al-ʿAsh’āth’s revolt, all the sources attach great importance to this change of attitude. It appears that Ibn al-ʿAsh’āth, proudly conscious of his noble birth, made it clear that he considered himself to be the most worthy of all the amīrs to rule. According to al-Mas‘ūdī (Tanbih, 407), he gave himself the title of Nāṣir al-mu*mīnīn (the Helper of the Believers, presumably setting himself up as the defender of the true Believers as against the Umayyads and al-Ḥaḍīdāyī, whom he condemned as bad Muslims); he also claimed to be the “Kaḥṭānī”, i.e., the person awaited by the Yemenis as being he who would restore domination to them (G. van Vloten, *Recherches*, 61). Such arrogance annoyed the governor, who vigorously condemned Ibn al-ʿAsh’āth (see, further to the references given there, L. Caetani, *Amnāli*, 40 A.H. 501-5 for further information, an assessment of him and a very full bibliography; H. Lammens, *Mo‘awia I*, 131, 150-2), and the son of Muḥammad (q.v.), who was less famous than his father that he either himself killed or encouraged his hatred (al-Ṭabarī, ii, 901-10), with instructions to pursue Shāhīb Ibn al-Inbādī that Abd al-Rahman had to deal, and the son of Muḥammad al-Mulḍīrī (q.v.) (but probably to be read as Mulḏīrī, son of one of the borderland, the ruler of which, referred to in the sources as Rutbīl [q.v.], [but probably to be read as Rutbīl, i, 1032-4], it was the task of the local governor to keep in subjection the territory of the Kābulistān borderland, the ruler of which, referred to in the sources as Rutbīl [q.v.], (but probably to be read as Zunbel), offered resistance to the Muslims. A "Rutbīl" having inflicted on the governor appointed by al-Ḥaḍīdāyī, Uṣūb Allāh b. Abī Bakr, a most severe defeat in 79/688-9, al-Ḥaḍīdāyī, anxious to put an end to this, prepared an army which, because of its splendid equipment, was called the Peacock Army (dawāḥid al-mawṣil); to be in command of
he appointed two generals in succession, choosing finally 'Abd al-Rahmān b. Muḥammad b. 'Alā'ī as his successor. It was this appointment which led to the surprise in Kūfa; a patrician uncle of 'Abd al-Rahmān thought it advisable to warn the governor against the possibility that his nephew might revolt, but al-Hādījīdāī refused to reverse his decision. According to al-Ṭabarī (i, 1042), it is not known where 'Abd al-Rahmān was at this time; according to one tradition (al-Ṭabarī, i, 1046), he had been sent to Kīrman to put down the opposition of a military leader who had refused to serve the governor. He proceeded to Sinūd when necessary, and the number of details given in this tradition point to its being the more reliable, although another passage suggests that he accompanied the Peacock Army (al-Ṭabarī, i, 1044).

In Pērīr's Vie d'al-Hādījīdāī, there is given a very detailed account of the insurrection, with each incident supported by quotations from the sources and with translations of speeches, letters and poems; we give here a summary, emphasizing certain details which help to explain the causes and the development of this event, which came near to overthrowing the Umayyad caliphate. Ibn al-Asʿāḥī was in Sīdījīsīn in 80/699-700 (on the chronology see below). His first action was to force the troops who were garrisoned there to join the Peacock Army. After refusing an offer of peace from Rūṭbīl, he invaded Kābulisīn, using very different tactics from those of Ibn Abī Bākra: as he occupied the villages and the fortresses, he established garrisons in them and linked the places he had captured by a service of couriers. When he had made himself master of the territory bordering on the high mountains, he returned to Bust, postponing any deeper penetration until the spring of 81/700. But when he informed al-Hādījīdāī of this intention, the latter sent him a series of arrogant and offensive messages ordering him to penetrate into the heart of Kābulisīn and there to fight the enemy to the death. The invitation to the troops to plough the land, which appears in his second message, and which might seem to be an acquiescence in delay (Pērīr, 162), should also be interpreted as a threat: he is ironically suggesting that the soldiers may as well start sowing crops since he will not be recalling them until after a total victory. As he occupied Thākafis (it thus gives expression to religious convictions and tribal hatred). On the rebels' arrival in Fārs, a new and important fact emerged: it was suddenly realized that the deposition of al-Hādījīdāī would involve that of the caliph also and they acted accordingly: encouraged by the 'ṣurra' and the zealots, the majority of the rebels swore to reject the "imams of error" and renewed their oath of fidelity to Ibn al-Asʿāḥī, who, in his turn, swore to them the bayʿa. Al-Hādījīdāī, informed of this development in the insurrection, went to Baṣra and asked 'Abd al-Malīk to send Syrian forces; the caliph sent him one detachment after another. Near Tustar, Ibn al-Asʿāḥī's advance guard inflicted on that of al-Hādījīdāī a defeat and serious losses (9 or 10 Dhu 'l-Hijjah 81/24 or 25 January 701), and al-Hādījīdāī withdrew speedily to Baṣra; such prudence was necessary since it is said that Ibn al-Asʿāḥī had with him 33,000 horsemen and 120,000 infantry. As al-Hādījīdāī could not have offered resistance in the town of Baṣra, he entrenched himself at al-Zāwiya. 'Abd al-Raḥmān entered Baṣra on 29 Dhu 'l-Hijjah, and there set up fortifications. After a month of skirmishes of varying severity, in which al-Hādījīdāī's soldiers in general came off worse (they also lacked provisions), a battle was finally joined (end of Muharram 81/early March 701). Ibn al-Asʿāḥī was on the point of winning, but the courage and skill of the Syrian Sūfīyān b. al-Abbrād reversed the situation. Many 'ṣurra' (that is 'ulamāʾ, according to the explanation given by Ibn Kāfīr) were killed (the version of the events given by al-Wāḵīlī and repeated by Ibn Kāfīr (ix, 40) attributes to this battle events which in fact occurred in the following battles of Dayr al-Dījāmādīn). But with the news of his approach, Ibn al-Asʿāḥī went to Kūfa with his Kūfīan soldiers and the elite of the Baṣran cavalry. His lieutenant at Baṣra, the Ḥāshimī 'Abd al-Raḥmān b. 'Abbās, made efforts to maintain his position in the town, but the Baṣrans had lost no time in accepting the amān offered by al-Hādījīdāī (an equivocal amān, which did not prevent his killing a large number of opponents, 11,000 it is said), so with a group of Baṣrans he rejoined his leader at Kūfa. On his arrival at Kūfa, Ibn al-Asʿāḥī had been obliged first to drive out from the citadel an officer of al-Madáṭhīn, Ṭāṭar b. Nāḏiyā, who had taken advantage of the troubled situation to seize it; he succeeded in installing himself there only after a full-scale attack with scaling-ladders and other means of assault. At Kūfa, his forces increased, being joined by a large number of men who were discontented with Umayyad rule. Ibn al-Hādījīdāī, leaving Baṣra to his cousin Ayyūb b. al-Ḥakām b. Abī 'Aṣīl, set off towards Kūfa (mid-Safar 83/April 702), being harassed en route by detachments of cavalry under the orders of Ibn al-Asʿāḥī. Reaching a wide plain near Kūfa, he set up his position at Dayr Kūrā (q.v.) and 'Abd al-Raḥmān, leaving the town, encamped at Dayr al-Dījāmādīn (q.v.) with his troops, who now number-
ed nearly 200,000 (100,000 were on the regular pay-roll, the others were mawali). Al-Hadjdjadj's army was smaller and in an awkward situation because provisions reached it only with difficulty; in spite of this, Syrian reinforcements were able to join it. Both the armies dug trenches and for a time they engaged in skirmishes, as at al-Zawiya. Since the dignitaries in Damascus wished to see a peaceful solution of the situation, 'Abd al-Malik let himself be persuaded to open negotiations with the rebels, against the advice of al-Hadjdjadj. Through the agency of his brother Muhammad and his son 'Abd Allah, he proposed to the rebels that he should dismiss al-Hadjdjadj and should give to the 'Irākī soldiers the same pay as the Syrians, and offered to 'Abd al-Rahmān the governorship of any town in 'Irāk he cared to choose. At a meeting of the leaders of the rebels these proposals were refused, in spite of a speech from 'Abd al-Rahmān inviting them to accept. They were convinced that their advantage lay in not having to take a difficult decision; they knew that they were in a difficult situation (in fact there was a famine in al-Hadjdjadj's camp) and that the final victory would be theirs. Hostilities being resumed, the two armies still remained for a long time facing each other—it is said that the trench warfare went on for 100 days or about four months, and that there were forty-eight engagements. Those who were the most bitter opponents of the governor were the 'urra, fanatically convinced that they were fighting to defend the Faith threatened by the impiety of the Umayyads. They had formed themselves into a squadron under the orders of Diabala b. Zabr b. Kays al-Dju'afī, and it was only after the death of this leader that their courage deserted them and they dispersed. Finally in Ša'ībān 82/September 701, a great battle was joined. At first the advantage was with the troops of Ibn al-Ash'ath, but shortly before sunset they scattered, and Ibn al-Ash'ath, after vain attempts to rally them, also took flight accompanied only by a few supporters. After visiting Kūfā to take leave of his family, he travelled in the direction of Basra. Meanwhile, al-Hadjdjadj returned to Kūfā, set up a tribunal there and executed a large number of rebel prisoners.

But Ibn al-Ash'ath was still not defeated. One of his supporters, Muhammad b. Sa'd b. Abī Waqākas, had taken refuge with al-Malik in Maximian. 'Irāk; another, the Kurayshī 'Ubayd Allāh Ibn Samuel, had forced al-Hadjdjadj's lieutenant to give up Basra to him. After remaining at Kūfā for a month, al-Hadjdjadj continued his campaign and, at Maskin on the Dudiayl, where there were gathered the still impressive remnants of the rebel army, he inflicted on Ibn al-Ash'ath, after hostilities lasting about a fortnight, the defeat which finally put an end to his insurrection, the events which followed, see also Ibn Kathir, ix, 48 f., which records the version of al-Tabrīzī. But al-Umāra, not only in al-Hadjdjadj, advanced, and the majority of Ibn al-Ash'ath's troops were sent prisoner to al-Hadjdjadj, who had most of them executed. While the ruthless governor was occupied in carrying out reprisals and even executing mass sentences, 'Abd al-Rahmān was living at the court of Rutbīl. But, as it was always feared that he might again give trouble, al-Hadjdjadj sent continually to his protector letters in which threats alternated with tempting promises in an effort to get him extradited. In the end Rutbīl yielded. Different versions exist of the death of 'Abd al-Rahmān: he is said to have been killed by Rutbīl himself or to have died of an illness, his severed head being sent to al-Hadjdjadj, who had asked for it; but the account which is generally accepted by the sources is different: put in chains and confined at 'Umāra in order to be taken to al-Hadjdjadj, he threw himself from the top of a castle at Rutkikhādī, dragging with him in his fall the 2,000 men of his supporters. Ibn Kathir:

Chronology. This is not certain since, although the sources are in agreement on the days and months of some of the outstanding events, for example the battles of Tustar and al-Zawiya, they are less so on the years. Wellhausen (Ar. Reich, 150 f., Eng. tr., 241 f.) has studied the question and given preference to the series of dates given above: 81 for the beginning of the revolt; 82 for the three defeats of Ibn al-Ash'ath; 83 for the troubles in Sidjistān and the fighting in Khurāsān. Al-Wākidī (in al-Tabārī, ii, 1052 and 1101; cf. Ibn Kutayba, Ma'ārif, 181 f.) dates the beginning of the revolt in 82, the battle of Rutbīl in 83, and then inconsistently gives the year 82 as the date of the battle of Dayr al-Damādīm, while adding that according to some it took place in 83 (al-Tabārī, ii, 1070); this chronology does not accord with the facts as well as the previous one. Equally unacceptable is the date 14 Djamād II 83/15 July 703 given solely by a tradition of Abū Miḥnaf (al-Tabārī, i, 1094), since if one accepts the year 83 for the hostilities near Basra, this leaves too brief an interval between them and the final battle of Dayr al-Damādīm; if one dates the hostilities near Basra in the year 82, it leaves an interval of too
great a length to be probable (cf. Périer, 186, n. 3). Ibn Kathir (ix, 42 and 47) lengthens the period of the trench warfare near Kūfah in order that it may fall a little later in the year 83, but transfers some of the skirmishes and the final battle of Dayr al-Dīmarjadīm to the year 83; he was evidently attempting to reconcile the divergent accounts, but his solution is not acceptable because he had to disregard the information which limits to about four months the period during which the two armies remained facing one another at Dayr al-Dīmarjadīm. (See Causes of the revolt. The Arabic sources often have a marked bias in the presentation of incidents relating to persons; in the present case they lay stress, in recounting various episodes, on the mutual hatred of the two protagonists. The facts, however, seem to contradict the suggestion that such a hatred existed: the governor put Ibn al-ʿAṣḥāth in command of an army to fight against the Khaṣāḥid, he is said to have sent him to Kirmān to carry out other tasks, and finally he gave him nothing less than the command of the Peacock Army; the reason for his blindness may have been excessive confidence in the fear which he himself inspired (cf. al-Ṭabarī, ii, 1044), or he may have preferred to keep far from ʿIrāq a person who was an embarrassment to him and perhaps dangerous; but if he, as a plebeian, hated the nobly-born Kindī, as is suggested, it is unlikely that he would have shown him so much favour, and if he had been aware of Ibn al-ʿAṣḥāth’s hostility to him, he would hardly have put into his hands the means of achieving his hostile intentions. It must also be conceded that Ibn al-ʿAṣḥāth faithfully carried out the orders of his superior until the autumn of 81. Thus, contrary to the Arabic sources, it is advisable, if not to ignore personal feelings altogether, at least to attach less importance to them and to seek elsewhere the real reasons for the revolt. Von Kremer, in his Culturgeeschichte des Orients (ii, 172, followed by A. Müller and by van Vloten, 17, 26) links the revolt of Ibn al-ʿAṣḥāth with the mawall movement, and more precisely with the attempt made by those who had embraced Islam in ʿIrāq and Kūfah to obtain the same political rights as the Arabs who had been Muslims from an early date. Wellhausen (Ar. Religion, pp. 194 ff., 279 and 290, ed. 1904), following the view of the mawall, chose as his point of departure the fact that only a few years had passed since the fall of al-Muʾtah, who had been their protector, and that al-Ḥadīḍjādī had put into force measures which had made things very difficult for the new converts, does not accept the idea that the revolt of Ibn ʿAṣḥāth was no more than a continuation of that of al-Muʾtah. He notes that the mawall also fought in large numbers, but side by side with their patrons, according to the custom of the time, and that though they might certainly be hostile to the Syrian government, the supporter of Arabism, yet it was not their claims which lay at the root of the revolt. He considers that the basic cause was a rising of the Arab aristocracy against the impoverished and arrogant representative of governmental authority, the plebeian al-Ḥadīḍjādī. The Arab clans followed their chief in the hope of receiving a share of the spoils, and being in war and the garrisons of distant provinces had caused them great hardship. Since not only the Yemenis of Kūfah, who regarded Ibn al-ʿAṣḥāth as one of their chiefs, but other clans and also those of ʿIrāq did not withhold their support, Wellhausen adds that there must be seen in the rebellion a new attempt by the ʿIrāqīs to throw off the yoke of the Syrians and an uprising against the use of Syrian militia and the privileges which were granted to them. All these arguments of Wellhausen must be taken into consideration, but when he states that the rebellion had no religious motives, he ignores the phenomenon of error, or of defending both the faith and worldly possessions (dinakum wa dunyakum) as might be given by any military leader to soldiers who were in disorder (al-Ṭabarī, ii, 1095 f.), whereas they do report violent speeches of ʿkurra2 proclaiming the necessity of fighting against the heterodox, the innovators, who disregard the truth and practise oppression, or of defending both the faith and worldly possessions (dinakum wa dunyakum) because if those people (obviously the Unayyādids) conquered, they would ruin both the one and the other, or proclaiming that there are in the world no people more unjust than they (al-Ṭabarī, ii, 1086 f., etc.). It is true that the traditionists may have had a predilection for speeches of this type, but their complete silence about any propaganda activities in support of the cause by the person who had begun the revolt is striking. Whereas the ʿkurra2 swore to die and did die on the field of battle, Ibn al-ʿAṣḥāth was inclined towards a compromise with the caliph and ready to lay down arms; he commanded the troops from behind and did not throw himself into the fray, as did many leaders when the cause was already lost; after the defeat at al-Ẓawīya he withdrew, at Dayr al-Dīmarjadīm and at Maskin he fled; he refused to
continue the struggle in Khorasan. It would seem as though the reason he continued to... Always most anxious to distinguish exactly between what is hard and what is soft, he was particularly careful.

on tens of thousands of mawdli, show that he saw punished severely the Persian... Furthermore he extorted from the captives above all as the most dangerous and most guilty of the seditionists, granted to the Arabs and the punishments inflicted in Futuh, the latter, after the revolt had been extinguished, 286). Kurayshis, all the Syrians, and all those belonging to the clans of the "two arbiters" (named at Siffin); furthermore he extorted from the captives above all a declaration that they had been infidel (kafir), al-Tabari, ii, 1096; cf. Mas'ud, Murūdī, v, 358) and Murward, Kāmil, 154, 155, 176, 654, 655. Ibn Rustān, in who had supported the revolt (al-Balāghurī, Futūh, 373-4; al-Mubarrad, Kāmil, 286). The pardon granted to the Arabs and the punishments inflicted on tens of thousands of mawdli show that he saw the latter, after the revolt had been extinguished, as the most dangerous and most guilty of the seditionists.

Bibliography: The main sources are Tabari (ii, 1023-5, 1042-77, 1085-110, 1121-6 and index), who recorded mainly on Abū Mīhnaft, traditionist and author of a monograph entitled Kiya Dayr al-Asmā'īyya wa khāli' Abū al-Rahmān b. al-Asfā'ī (Fīhris, 93) and the Anonyme arabisch... Vaglieri).
to accept nothing from anybody and to submit himself daily to a strict examination of his own conscience. One of his biographers, al-Khadrami, asserts that the Kütya of al-Ḥāfis was one of the works which he constantly read.

Many Şñefs gathered round Ibn ʿAshir at Salé, which was a place suitable for meditation and appeared at that time to those who, aspiring to the mystic life, were fleeing from Fez as a haven of peace and security. Thus one of them, Ibm ʿAbbād of Ronda [q.v.], came to spend several years there in the company of the saint, of whom he became a famous disciple.

Bibliography: Ahmad Ibn ʿAshir al-Hāfi (d. 1163/1750) wrote a monograph on his namesake entitled Tūḥfat al-waʾir bi-baṣṣa manāḥib sayyidī al-ḥādīdī Ahmad b. ʿAshir, which has not been printed (see I. S. Allouche and A. Regragui, Catalogue des manuscrits arabes de Rabat, ii, Rabat 1958, no. 2303); for the list of the biographers of the saint see Lévi-Provençal, Cherifia, 1954. Ibn Romfūdh, ʿUrdu al-ṣaḥīh wa ʿaṣaṣ al-ṣaḥīr, ed. M. El Fasi and A. Faure, Rabat, 1961, 9-10. See also the excellent pages on Ibn ʿAshir in Paul Nwyia, Ibn ʿAbbad de Ronda, Beirut 1961, 55 ff.

(FAURE)

IBN ʿASHIR, patronymic of a family of Ifrīdī descent and Moorish origin which settled in Muslim Spain. It is said that ʿAshir, fleeing from religious persecution, came to settle in Morocco. His son Muhammad was born at Salé in about 1030/1621 and it was with him that the family's importance in the history of Tunisia began, at first in the field of "mysticism", then in those of fikr, of teaching and of religious offices. Muhammad b. ʿAshir, who was initiated into mysticism in Morocco by the shaykh Muhammad al-Kudayrī, distinguished himself at Tunis as the leader of a religious fraternity. He settled there, on his return from the Pilgrimage, at the age of about thirty, and carried on the trade of tarboosh-maker. At Tunis he came under the influence of the shaykh ʿAli al-Zawawī, and on his death inherited the ʿzdwiya of al-Zawawī. Muhammad b. ʿAshir did not seek power, but rather shunned it, and he led a life of strict poverty. There is attributed to him the following dignified remark: "We are not of those who perform the ḏiyr in expectation of payment" ( ḏhayl, 197). On his death in 1110/1698-9, he was appointed chief ḏaḏi of Tunis, and in 1277/1860-1 he left this office to become mujtīfī. Shortly afterwards he combined this with the duties of sind (nakhī) with the title of ṣafārīf. He died on 21 Dhu 'l-Jaḏīd 1284/14 April 1868 and was buried in the ʿzdwiya of ʿSidī ʿAll al-Zawawī which seems to have become the family burial-place.

The most famous of the three brothers was Muḥammad al-Ṭāhir, who gained renown as an ashīb—there exist numerous examples of his prose and verse—as a grammarian and as a fakhl. He produced a gloss (bikāhiyya) to the commentary on al-Kafīr (which remained the basic work for the second year of teaching at al-Zaytūna until the reform of 1958), and an abridgement of the commentary on the Būda of al-Bisri (q.v.) written by Ibn Marrūk. On 25 Radjab 1267/26 May 1851, he was appointed chief ḏaḏi of Tunis, and in 1277/1860-1 he left this office to become mujtīfī. Shortly afterwards he combined this with the duties of sind (nakhī) with the title of ṣafārīf. He died on 21 Dhu 'l-Hijja 1284/14 April 1868 and was buried in the same ʿzdwiya as his two brothers.

The family tradition was carried on by his grandson, also called Muḥammad al-Ṭāhir (born 1296/1779) and by his great-grandson Muḥammad al-Fāḍīl.

IBN ʿĀSIM, ʿĀbd BAKR MUḤAMMAD b. MUḤAMMAD b. MUḤAMMAD b. MUḤAMMAD b. MUḤAMMAD b. MUḤAMMAD b. MUḤAMMAD b. ʿĀSIM, a famous Mālikī jurist, grammarian and man of letters. He was born in Granada on 12 Qumādād I 760/21 April 1359 and died there on 11 Shawwāl 829/15 August 1426. He had a brother, who was also called Muḥammad but had the kunya ʿAbū Yaḥyā, and a son who also had the kunya ʿAbū Yaḥyā; this last was the author of a
Memorandum on the members of his family (Abd Allah Muhammad b. Muhammad Askar, Sindbad, 1894, p. 18) was able to establish the fact that they were three brothers instead of two. Then in 1905, from different sources (especially the Bibliothèque Nationale in Paris), Mallon (JA, 1905, 509-29) confirmed Rieu's thesis and put forward the name of Askar only a single Awoyd al-Assal by two of the sons of the honey producer or merchant, pre-}

The shaikhs of the Coptic family which came originally from the village of Sadamant in the Province of Beni Suef in Middle Egypt at an unknown date and settled in Cairo, where its members rose to wealth and high station at the Ayyubid court during the 7th/13th century. They owned a residence in the capital and occupied a position of leadership in their own community. Though their history is obscure, they were reckoned among the most learned Copts in mediaval times. Early modern historians of Egypt appear to have vaguely recognized in Ibn al-Assal only a single personality in mediaval Christian Arabic literature, until in 1734 Renaudot (pp. 585-86, work cited below) revealed that two different brothers had written independently under that name. Afterwards, while classifying some of their manuscripts in the British Museum in 1894, Rieu (p. 18) was able to establish the fact that they were three brothers instead of two. Then in 1905, from different sources (especially the Bibliothèque Nationale in Paris), Mallon (JA, 1905, 509-29) confirmed Rieu's thesis and put forward the name of Askar only a single Awoyd al-Assal by two of the sons of the honey producer or merchant, presumably the title and vocation of the founder of that family. Coptic historians, however, including Ya'kub Naqsha Rufayla (p. 185) and the Commission of Coptic History (Ladjnat al-Tarikh al-Khitbi, 148-52) increased the number of Awoyd al-Assal to two—more—the father and a fourth brother—who also were high dignitaries in the Ayyubid bureaucracy, though rich literary remains were left only by the other three. In 1943, Higgins (see ref. below) has laboured to establish a new thesis that two sets of Awoyd al-Assal had lived—one at the beginning of the 5th/11th century and another in the 7th/13th century. Since this argument is based on a dubious date (1000 AD) in the epic history of a certain manuscript in the British Museum manuscript (Arab. e 163, f. 288 r.), we must for the present maintain that the 7th/13th century group is the only one convincingly established. The full names of the Awoyd al-Assal are as follows: (a) Abu'l-Fadl b. Abi Iskak Ibrāhim b. Abi Sahil Djarjis b. Abu Al-Yusuf Yūhannā b. al-Assal, the father, known as al-Kātib al-Mārīfi, "the Egyptian scribe" or "secretary", who bore the title Fākhr al-
Dawla; (b) al-Safi Abu'l-Fada'il b. al-Assal, with the title Safi al-Dawla; (c) al-Asad Abül-Farağ Bibi Al-Allah, with the title Al-Asad Bibi Al-Allah; (d) al-Mu'taman Abu Isbak Ahrām b. al-Assal, with the title Mu'taman Bibi Al-Allah, al-Malid b. al-Assal, who was Secretary of the important Diwan of the Army. The last two were step-brothers of the preceding two, who are described as full brothers.

The literary figures in the list were the Sañî, al-Asad and al-Mu'taman. In spite of their apparent importance, our knowledge of their lives will remain meagre until further data are gleaned from their numerous works, the chief source for any study on the Awlad al-Asal. All had lived approximately in the tumultuous first half of the 7th/13th century, when Egypt resisted successive crushing attacks on its shores, culminating in the fall of Damietta (1248) and the ultimate discomfiture and imprisonment of King Louis IX of France at the famous battle of Mansûra in 1250. The firm position of the Awlad al-Asal in the Ayyûbîd administration during those years reveals the extent of the decay of the reigning dynasty and their hostility to the Crusade—a movement which aimed at their humiliation as being schismatic, and thus worse than heretics.

Both al-Safi and al-Asad are known from a citation by their third step-brother to have died before 658/1260. The major works of the three are believed to have been accomplished approximately in the decade 627-37/1230-40. All were men of great learning in both the humanities and science. All were masters of Arabic style and in addition well acquainted with Coptic, Greek and Syriac.

Until Ayyûbîd times, Coptic was still in use as a language throughout Egypt, though it was increasingly felt that Arabic was becoming a serious menace to its survival. Hence arose a new class of scholars who concentrated on writing Coptic grammars in Arabic and compiled Copto-Arabic dictionaries to ensure the preservation of their ancestral tongue. The Awlad al-Asal distinguished themselves in this school, as may be witnessed from the enumeration of their works below. In addition to their excellence in Coptic philology, they made outstanding contributions to Coptic canon law, theology, philosophy, Christian polemics, homiletics, Biblical studies, exegesis and all manner of inquiry into their own religious traditions, grammar and the methodology of law. The Awlad al-Asal's monumental contributions may be appraised from the number and nature of their manuscripts. The Coptic Museum alone has down to modern times, among them Gaytji al-Asad, shaykhi Abu'l-Hasan ibn Allah, principally on mysticism and asceticism, of maxims of a distinct beauty of expression, of the depth and breadth of their endeavour is still in its infancy.

IBN 'ATA' ALLAH, TÂBI' AL-DIN ABU 'L-FAQIL (and Abu 'L-ABBAS, see Ibn Farbûn, Dibâdî, Cairo 1351, 70) AHMAD B. MUHAMMAD b. 'ABD AL-KARIM b. 'ATA' ALLAH ISKANDARI AL-SHÂHÂDI, A ra'ay mystic, follower of the doctrines of the mystic al-Shâhâdi (d. 656/1258) as a disciple of the mystic Abu l-Abbâs al-Ma'sûrî (d. 668/1270). He wrote a biographical work on the life and teachings of both mystics, entitled Lâdî'sî al-minânî fi ma'ndûb il-Shâhâdi Abu l-Abbâs al-Sâhypî al-'Ismî (Tunis 1304/1886-87; Cairo 1322/1904, on the margin of Shârâni's Lâdî'sî al-minânî). Originally from Alexandria, Ibn 'Ata' Allâh lived in Cairo and died there on 16 Dhmâd II 702/21 November 1309 in the madrasa al-Manşûriya. Brockelmann (see Bibl.) lists twenty works by Ibn 'Ata' Allâh, principally on mysticism and asceticism, of which six are in print and the rest in manuscript. By far the most celebrated of his works is a collection of maxims of a distinct beauty of expression, al-Hikam al-'Atdîyya, with numerous commentaries down to modern times, among them Shâykh al-ma'sûbî al-Salî'î (Balâk 1285/1868) by the Spanish mystic Ibn 'Abbâd al-Rundî (d. 796/1394). He is also said to have written in the fields of Kûranic exegesis, traditions, grammar and the methodology of law (see Dibâdî, 70).

Ibn 'Ata' Allâh was one of the foremost adversaries of the renowned Ibn al-Bâli juricconsult and theologian, Ibn Taymiyya (d. 728/1328). When the
latter was arrested in Shawwal 707/March-April 1308, it was Ibn 'Ata'llah who made accusations against him for attacks which he had made against Ibn al-'Arabī (q.v.) and other mystics, but none of the accusations were substantiated (‘ondh al-fā‘il) according to Ibn 'Ata'llah (q.v.) in Ibn Kathīr, xiv, 45). Ibn 'Ata'llah no doubt had reason to oppose Ibn Taymiyya, who wrote on particular kinds of names in the Kitab al-Banin wa-'l-bandt wa 'l-dbd* wa 'l-ummahdt wa 'l-adhwd*.

Thus for instance, in his Madjamun al-rasā'ī wa 'l-masā'ī (5 vols., Cairo 1341-9), v, 86, Ibn Taymiyya condemned as an innovation (bid‘a) the formula of dhikr (q.v.) mentioning the name of God as a single term, either in the form of a noun or a pronoun (al-ism wa-mudmar an). Here, Ibn Taymiyya attributes it to al-Ghazālī (q.v.), but adds that some of his contemporaries were guilty of it (wa-kāhā sa wa-yākbu wa-sa ha man kā man samānīnna). We know that this applies to Ibn 'Ata'llah, among whose works is one entitled al-Kād al-muqarrad fi ma‘rifat al-im al-mufrad (Cairo 1930).

Ibn 'Ata'llah was claimed by the Shāfī‘ī (Subkhī, Tabāhāl al-Shāfī‘yya al-kubrā, v, 176) as well as the Mālikīs (Ibn Farhūn, Dībādī; 70). At his death he was interred in the Karāfā Cemetery in Cairo where his tomb was for long the object of pious visits. It is located in the south-eastern group of tombs (see L. Massinon, La Cité des Morts au Caire, in BIFAO, iv, 67).

Ibn 'Ata'llah, among whose works is one entitled al-Kād al-muqarrad fi ma‘rifat al-im al-mufrad (Cairo 1930).

Ibn al-'Athir, a family name (borne by a number of apparently unrelated families) which was given great and deserved lustre by three brothers, Majd al-Dīn, 'Izz al-Dīn, and Diya al-Dīn, who achieved literary fame in the fields of, respectively, philology and religious studies, historiography, and literary criticism. Their father, Muhammad b. 'Abd al-Karīm, whose life spanned the 6th/12th century, was a high official of the Zangids of Mosul, stationed in Dīzārat Ibn 'Umar (hence the nisba Dīzārī). His three famous sons were born there. The family was, it seems, well-to-do, owning real estate in Dīzārat Ibn 'Umar and Mosul and investing in commercial enterprises.

(1) MAJD AL-DIN ABU 'L-SA‘DAT AL-MUBARAK al-Hasawneh was born in 544/1150. His entire adult life was spent in Mosul, where he worked for the government in the service of Ghāzī b. Mawdūd, Ghāzī’s brother Mas‘ūd, and the latter’s son Arsalān Shāh. For a while, he was attached to Muḥājīd al-Dīn Kaymaz, who, formerly of Irbil, had moved to Mosul and been entrusted there by Ghāzī with the running of affairs. Though he was paralysed in his later years, his administrative services and advice were still very much in demand. However, an anecdote reported by his brother, the historian, depicts him as preferring the contemplative quiet of the invalid to the distractions of politics. He died on Thursday, 29 Dhu al-Hijja 606/24 June 1210.

Of his works, a broad collection entitled Di‘āmāt al-ṣulṭān became a much used standard reference work (autograph copy of the first volume in Istanbul, Feyzallah 299, cf. H. Ritter, in Oriens, vi (1953), 71-7). His dictionary of less common words and meanings occurring in the Prophetic traditions, al-Nihāya fi gharb al-hadīth (Cairo 1322, also 1963-5), gained especially wide currency from the fact that it was incorporated in the Liṣān al-‘Arab. He wrote on particular kinds of names in the Kitāb al-Banin wa-l-bānāt wa l-‘ābiyya wa l-‘ummahāt wa l-‘ādīnāt...
IBN AL-ATHIR

was born on 4 Dijumâd I 555/13 May 1160. Like his elder brother, he spent most of his adult life in Mosul but in the capacity of a private scholar. He repeatedly visited Baghdad as a pilgrim or as an envoy of the ruler of Mosul. On at least one of these occasions, upon returning from the pilgrimage, we find him, together with Maqjd al-Dîn, trying to use the opportunity for studying with a Baghdâdî scholar. At the age of twenty-eight, he was with the armies concentrated under the command of Salâh al-Dîn [q.v.] for the fight against the Crusaders (Kâmîl, sub anno 584), probably in the company of his brother Diya3 al-Dîn. Near the end of his life, in 626-28/1228-31, he spent some time as an honoured guest with the Atbâkât of Aleppo, interrupting his stay for one year to visit Damascus. In Aleppo, Yâkût [q.v.], just before he died, asked him to arrange for the transfer of his books and papers after his death to a foundation in Baghdad. He agreed but, we are told, handled the task ineptly. He himself died soon thereafter, in Shâbîn or Ramâdân 650/May-June 1233.

The circumstances of his life are certainly most imperfectly known as compared to the extent of fame and influence that were his on account of his works, which have been preserved and printed repeatedly. He wrote very successful improved compendia of al-Samâ'nî's Ansâb and of some earlier collections of biographies of the men around Muhammâd, entitled, respectively, al-Luhâb and Usd al-qâhâba. His more noteworthy contribution, however, has been to secular history. On the Zangâl (Atbâkât) dynasty of Mosul, he wrote a comparatively short work, based on the first-hand knowledge of his father and himself. His great compilation entitled al-Kâmîl, an annalistic history from the beginning of the world to the year 628, represents one of the high points of Muslim annalistic historiography. Distinguished by the well-balanced selection of its vast material, by its clear presentation, and by the author's occasional flashes of historical insight, it is somewhat marred, from the modern point of view, by its failure to indicate its sources and the restrictiveness of its annalistic form. A noticeable partiality for the Zangîs, leading to some distortion and confusion, is, however, to be expected and is hardly a reason for belittling the great achievement of the historian.

(3) Diya3 al-Dîn Abu 'l-Fath Nasr Allâh, born on Thursday, 20 Shâbîn 558/Wednesday, 24 July 1163, led the most active life of the three brothers and achieved the greatest prominence in politics, obtaining at some time the title of wâizar, which he retained. He joined Salâh al-Dîn in April 1191 (if not already once before, in 583/1187). Near the end of the year, given the choice, he joined Salâh al-Dîn's son, al-Afdal, becoming his wâizar in Damascus after Salâh al-Dîn's death in 585/1193. In this position, he was said to have accumulated so much ill-will that when al-Afdal had to give up Damascus, he was only with great difficulty able to escape, supposedly to Egypt (according to Ibn Khallîkân). In fact, he took refuge in Mosul, where he found employment with Arslân Shâh. In 595/1199, he rejoined al-Afdal in Syria and Egypt, and in 597/1201 moved with him through Syria to al-Afdal's final destination in Sumaysât. Travelling to Aleppo in 607/1211 with the intention to join al-Malik al-Zâhir Ghâzî, he almost immediately left for Mosul. In 611/1215, he took up residence in Irbil, then in Singîr, and eventually, in 618/1221, settled again in Mosul, where he remained to the end of his life in the service of Mahmûd b. Mas'ûd b. Arslân Shâh and Badr al-Dîn Lu'âb, as kâtib al-insâb. He died on an embassy to Baghdad on Monday, 29 Rabî' II 637/28 November 1239. A son, Sharâf al-Dîn Muhammâd (585-622/1189-1229), had begun to follow in his father's footsteps as a littérature when he died prematurely.

Diya3 al-Dîn's works are all concerned with literary criticism. Those published are al-Wâghy al-marmâm (Beirut 1298); al-Dîmâs' al-bahir (ed. Mustafa Dîwâd and Dîamîl Sa'îd, Baghdad 1357/1956) and the most famous of all, al-Mathal al-adâbi, which caused much attention already when it first appeared (on the editions and on old manuscripts of the work, cf. S. A. Bonebakker, in Orientis, xiii-xiv [1961], 186-94). Further, al-Istidrâkh fi l-'adhâh al-âlma'î al-Mukhtdr fi mandkib al-akhdh, an interpretation, together with grammar and Kur'an, of al-Samâ'nî's compendia of al-Samâ'nî's Ansâb and al-Lubâb, an annalistic history from the al-Kâmîl, based on the first-hand knowledge of his father and himself. His great compilation entitled al-Kâmîl, an annalistic history from the beginning of the world to the year 628, represents one of the high points of Muslim annalistic historiography. Distinguished by the well-balanced selection of its vast material, by its clear presentation, and by the author's occasional flashes of historical insight, it is somewhat marred, from the modern point of view, by its failure to indicate its sources and the restrictiveness of its annalistic form. A noticeable partiality for the Zangîs, leading to some distortion and confusion, is, however, to be expected and is hardly a reason for belittling the great achievement of the historian.

Bibliography: Information about the father (from the works of the historian) is to be found in the introd. to the ed., by 'Abd al-Kâdir A. Tulaymat, of 'Izz al-Dîn, al-Bâhir (Caflor. n.d. [1382/1963]), and the ed. of Diya3 al-Dîn, al-Dîmâs'; about other members of the family, in H. Ritter, Orientis, vi, 71 ff. Mehemed Şerefeşedin (Yaltikaya), Ibn Ethîrî (Istanbul 1322) was not available.

For (i): Knowledge of Maqjd al-Dîn's biography goes back mainly to information furnished by his brothers, 'Izz al-Dîn (Kâmîl, sub anno 586) as reported by Yâkût, Utabî, vi, 238-41, and Diya3 al-Dîn in whom the same information appears in Ibn al-Sâ'î, al-Dîmâs' al-muhbâsas, 199-301 (Baghdad 1353/1934). How much of the probably quite [1201] true but somewhat exaggerated account of the works of other contemporaries such as Ibn Nûkîta Ibn al-Mustawi (History of Irbil), and al-Mundhîrî
is reflected in, for instance, Ibn Khallikan, no. 524, or Ibn al-"Imād, Shadhārā, v, 22 f., can as yet not be determined. Brockelmann, I, 438 f., S I, 305, 609-7.

For (2): 1zz al-Dīn achieved fame too late for inclusion in Yākūt, Udbā.ta, and we are basically restricted to the brief remarks in Ibn Khallikan, no. 453, who, at the age of eighteen, had met him in Aleppo. Later authors apparently had no new worthwhile material to add. For information on his teachers from the Kāmil, cf. the introd. of the ed. of al-Bāhir by 'A. A. Tulaymat (the Bāhir had previously been published under the title of Histoire des Atabeks of Mosul, in vol. ii of the Recueil des historiens des Croisades, hist. or., Paris 1876). For the statement concerning Yākūt, cf. the references given by Muṣṭafā Diwād, in Ibn al-Fuwāṭ, Talḥīk Maḏīma al-dāḥib, iv, 260 f. For the esteem he was held in during the Middle Ages, cf. e.g., al-"Imād al-Dīn, 1stA., in F. Rosenthal, A history of Muslim historiography, Leiden 1952, 332, 413. For some more recent critical judgments, cf. C. Caben, La Syrie du Nord, Paris 1940, 58-60; H. A. R. Gibb, in Speculum, xxv (1950), 58-72; H. L. Gottschalk, al-Maḥīt al-Kāmil, Wiesbaden 1958, 61 f.; M. Milmy Al-Maḥīt and F. Gabriei, in Lewis and Holt (edd.), Historians of the Middle East, London 1962, 88-90, 98 ff.; Brockelmann, I, 402, 422 f., S I, 565, 587 f.

ROSENTHAL

IBN "ATTASH. 2. "Abd al-Malik, an Ismāʿili at the mid-10th century, was in charge of the Daʿwa in ʿIrāq and western Persia. Information about him is scanty. According to the autobiography of Hasan-i Sabbāḥ (q.v.), he went to Rayy in Ramadan 464/1072, and enrolled Hasan in the Daʿwa. He is also said to have won over the Rasul Muṣṭafā of Girdkuh, later one of the most active leaders of the Nīṣārī. Ḵālīr al-Dīn and Rāwandi also allude to his relations with Ḥasan-i Sabbāḥ. According to this version, "Abd al-Malik, a resident of Ḥasanān, was accused of Shiʿism, and fled from that city to Rayy, where he joined Ḥasan-i Sabbāḥ. Ibn al-Dīwād gives a slightly different version, and adds further details: he had been a physician, and had been arrested and threatened with death by Sultan Toghru Bey because of his faith. He made a show of repentance, and was then released, went to Rayy, where he associated with Abū ʿAll al-Nisābūrī, the leading Ismāʿili there. He wrote an Ismāʿili book called al-Šākīḥa, and died in the region of Rayy. Rāwandi and Ibn al-"Āṭir agree that he was a man of letters and a fine calligrapher; Rāwandi adds that there were many books in Ḩasanān written in his hand. His son Ḥasan also played a rôle of some importance. According to Rāwandi he was believed in Ḩasanān not to share his father's religious beliefs, and was left un molested at the time of his father's flight. He was, however, secretly working for the cause. As acting as a schoolteacher for the children of the Daylamī garrison of the fortress called Shāhdiz, he is said to have preached to the fathers and converted them, and thus gained control of the fortress. He held it for several years, and was finally defeated in 500/1107. After the capture of the castle, ʿAbd al-"Āṭir suggests that he was an ignorant man, and that he owed his command to Ḥasan-i Sabbāḥ's respect for his father.

(B. LEWIS)

MORE information on his relations with Ḥasan-i Sabbāḥ may be found in the biographies of al-Dhahābi and al-Safādi, in the ed. of al-Dīmāsī, al-habīr. Brockelmann, I, 357 f., S I, 521.
(b) the Canis lupaster for Egypt (dib, taken to be a wolf); (c) the Thos aureus syriacus for Syria and 'Irāk (wādi, Lebanon ḍjabal); and (e) the Canis aureus indicus for Persia and India (Pahlavi Arabized as ḍaxhar, ḍaxbar, ḍaxghar, ḍaxghar).

The sobriquet Ibn ḍaxar seems to go back to remote antiquity, in the dialects of Arabia which were very prone to make use of the construct form to create compounds of which, from their form, show their characteristic behaviour of the jackal which it emphasizes, may be rather the result of the combination of the root ʿAWW/PAW with the idea of “to seek refuge and company in . . .”; they interpret ibn ḍaxar as meaning "the one who responds to the appeal of his congers to rejoin them". This explanation, valid enough in view of the categorical requirements of triliteralism, attached it, on the pattern afal, to the root ʿAWWM/PAW with the idea of “to seek refuge and company in . . .”; they interpret ibn ḍaxar as meaning "the one who responds to the appeal of his congers to rejoin them". This explanation, valid enough in view of the categorical requirements of triliteralism, attached it, on the pattern of the root ʿAWW/PAW, which does not contain the idea of crying out, and of a Bedouin onomatopoeia waʿwašaʿwaša, a vocal imitation of its bark common to all these peoples. The closely related onomatopoeic root waʿwaš is still very much alive in present-day speech to evoke the wailing yelp of the jackal (see the different local names for the jackal given above and al-Djahiz, Hayawan, v. 288, on waš-waš = dog, in childish language). The excessive cowardice of the jackal, which compels it to leave its lair only at night, its instinct as a "carrion-eater", its natural rebelliousness to training, its utter impurity in the eyes of Kur'anic Law and the consequent ban upon the eating of its flesh have condemned it, if not to scorn, at least to total indifference on the part of those who might have been expected to give it their attention, such as huntsmen, naturalists and poets. Although recognizing it to possess the cunning of the fox, they usually refer to it only pro memoria, and, by way of archaisms denoting it, philologists can put forward only the figative shawt bardh which can be interpreted as "luminous rays of the desert" (the expression, in fact, of a phrase heard by them which does not signify at the same time "long course made up of a single stage", "long journey", and "rays of light filtering through a sky-light"), and as the vestige of the Himyaritic language, under its triple Arabic form of ʿilla waššaʿilla waššaʿ. In the Maghrib, in particular, so little attention is paid to the proximity of the jackal that many so-called "dooar dogs", of very variable and sometimes indefinable types, are considered to be mongrels of jackals (barhūḫ) and reveal their essential characteristics.

In this instinctive shunning of the jackal by the Muslim peoples, an exception must be made in the case of the Touareg, who include it among their game and hunt it, either by driving it with beaters or by gin-traps or poison; being far from strict in their observance of Islamic precepts, they sometimes cook the flesh, but for the most part they use the fur for making saddle-bags. Among this people, as in pre-Islamic Arabia, different organs of the jackal are used in the local medicines. In general, in Barbary where it is still regarded with fear as the transmitter of rabies and devastator of hen-houses and sheep-folds, the jackal has become the principal hero of animal tales, in which it takes the part which otherwise falls to the fox (see H. Basset, Essai sur la littérature des Berbères, Algiers 1920, 306-31). In conclusion, it seems that in the mediaval West the jackal was the basis of an import trade from the Maghrib, through Muslim Spain and that, mixed and confused with the fennec [see FANAK] and the fox under the name adīn (from adīn), it was esteemed in furrery. The adīn, with its corruptions adīl, adīr, adīl, adīs, and ardīt, is mentioned in some very ancient chronicles, and in particular we can read in the Mémoires (ed. Paris 1924-6) of Philippe de Conty (in the 16th century) that: "King Louis XI sent to search for . . . strange beasts in all directions, as in Barbary, a species of small lions which are no larger than small foxes and called them adīts". Finally, it will be noted that it is under the name adīn that Buffon (Hist. Nat., v. 214) speaks of the jackal.

The jackal therefore is no longer anything more than a pariah in the Islamic countries, whilst the Egyptians of the age of the Pharaohs dedicated a divine cult to it, as Amunis.

Of his life and character we know next to nothing; but of his birth an entertaining legend is preserved, according to which Šadiq was born as a result of a prayerful request to the Hidden Imām, and the most traditionist used to pride himself on the fact that he was begotten by order of the Imām (Fyzee, 9–10; Nafisi, 5). His father ʿAli was a rich merchant and had three sons, the eldest Hasan, the second ʿUmar and the youngest Muhammad al-Šawājih al-Šadiq (Nafisi, 6, whose opinion is preferable to mine, see Šiite creed, 10). Muhammad was apparently the son of a slave-girl, probably from Daylam. The eldest son Hasan was a theologian of a retiring disposition; ʿUmar was a well-known jurist and theologian; Muhammad, known simply as Ibn Bābāwayhi, or Šawājih-Šadiq among the Šīʿī ulama, was undoubtedly the most famous of all.

Šadiq taught at Baghdād and was a contemporary of the Buwayhid Prince Rukn al-Dawla, and entered into controversies on his behalf. He was pre-eminent in knowledge, memory, "justice", intelligence and reliability, and is universally recognized as a pillar of the Šīʿī faith. Although some have doubted his authority, the Rawdāt al-джннāt declares him to be one of the greatest authorities (iv, 558). Šadiq came of a very illustrious family of learned men, fifteen of whom have been discussed by Saʿdī Nafisi (Musāʿabat al-ḵābār, Instr., 4–17).

Works: Šadiq was a prolific author; of the earliest authorities, Tūsī mentions 43 works and Nāḏajshī, 193; later authorities like the Ǧiṣṣān al-ṭalāmāʾ mention 189 and the Rawdāt al-джннāt, after naming 17 works, says that the rest have not survived. A full list of his works will be found in the Šiite creed, 12 ff.; Nafisi, 6–13, mentions 214 works.

His most important extant books are: (1) Man ī yahdūru-hu l-šafātī, one of the "four books" (often printed; lith. Tehran 1326 A.H.); (2) Risālat al-iḥsādāt (see Fyzee, Šiite creed, containing an English translation and full notes); (3) Ḥmad al-dīn, ed. E. Möller, Heidelberg 1901; (4) Kūlt āl-amālī; (5) Kīdāt al-Taʿṣīlāt; and (6) "Uyān akhābār al-Riḍā (for a full list and particulars see my Šiite creed, 12–17, and Saʿdī Nafisi in his Intr. to Ibn Bābāwayhi’s Musāʿabat al-ḵābār, 11–13.

Bibliography: for his life, Saʿdī Nafisi, Islamic Research Association series, no. 9, Oxford 1943, 111. Sources: al-Nāḏajshī, Fiḥšt, 196; al-Tūsī, Līst, ed. Sprenger, nos. 661 and 471; Nāḏajshī, Ṣīla, Bombay 1317/1900; al-Ḵawāsārī, Rawdāt al-джннāt, iv, 557–60. There are numerous other references in books of riḍā; space does not permit their mention here.

(A. A. A. Fyzee)

IBN BĀDĪS (dialectal pron.: Ben Badis), ʿAbd al-Ḥamīd b. al-Мuṣṭafā b. Ṭamrī, founder of the orthodox reformist movement in Algeria, born at Constantine in 1889. After studying at the Islamic university of Tunis (al-Ẓayṭaḥīna), he devoted himself to private teaching in a mosque in his native town and led an unspectacular life until 1925, when he turned to journalism. He founded a newspaper, al-Muṣtaḥfīd ("The Critic"), which went out of circulation after a few months. Immediately afterwards he founded a new newspaper, al-Shīḥāb ("The Meteor"), which soon took the form of a monthly review and appeared regularly, with some success, until the end of 1939. Ibn Bādīs gave of his best to this publication, which he used as a platform for his reformist propaganda (social questions) and for his religious teaching (šafār, ḍīḥāt).

At first essentially reformist, al-Shīḥāb tried to spread in Algeria the doctrine of the Salafīyya (g.v.), obviously taking its inspiration from al-Manār of Ṭaḥā Ridā (g.v.). But, from 1930 onwards, it dealt more and more with Algerian political questions (this being connected, apparently, with the official celebrations of the centenary of the French settlement in Algeria). From that time onwards the review based its propaganda on two issues—reform (iṣṣāḥ and nationalism, strongly tinged with Arabism. This policy led it to attack: (1) Marabout societies, accused of maintaining certain blameworthy forms of religious life, of favouring obscurantism, of profiting from popular credulity and even of being in collusion with the colonial administration; (2) Gallicization (naturalization and, as a necessary corollary, the abandoning of Islamic personal status, the exclusive adoption of French customs and culture, etc.). Moreover, in this review, Ibn Bādīs showed himself to be a passionate defender of the Algerian personality, which he considered to be inalienable from Islam and Arab culture.

Ibn Bādīs became president of the Association of Algerian Muslim ʿUlamāʾ (constituted in May 1931) and soon confirmed his position as one of the most representative members of the Algerian Muslim community. A tireless worker for his cause, he began the publication of al-Shīḥāb, and directed the organization for the free teaching of Arabic and the religious education of adults in the numerous religious centres of his Association. He played an important political rôle alongside the other representatives of Muslim opinion, particularly after the formation of the Popular Front in France, the meeting of the Algerian Muslim Congress in Algiers (June 1935) and the discussion of the "Viollette project" (end of December 1936). During the last years of his life he was engaged in the exhausting work of political leader and of missionary of iṣṣāḥ in Algeria. He died prematurely on 26 April 1940.

ʿAbd al-Ḥamīd b. Bādīs is remembered with veneration as a master by many followers. His name is already wrapped in legend. Through his activities at the head of the Association of ʿUlamāʾ he was one of the most effective workers in the Arab-Islamic cultural renewal in Algeria between 1930 and 1940. His intellectual brilliance and his religious influence (chiefly his Kurʾānic exegesis published in al-Shīḥāb) make him incontestably the dominant figure of Algerian Islam in the first half of the 20th century. His ardent faith, devoid of all hatred and fanaticism, his disinterestedness and his extreme simplicity, which enabled him to be in collusion with the colonial authorities, regarded him as a saint. It suffices to quote of Ibn Bādīs these words which summarize his life's work: "I am a sower of love, but on a foundation of justice, equity and respect towards everyone of whatever race or religion" (al-Shīḥāb, August 1939, 346).

Bibliography: J. Desparmet, Un réformateur contemporain en Algérie, in L'Afrique Française, March 1933, 149–56; A. Merad, Le réformiste
IBN BADIS — IBN BADJDA

IBN BADJDA (Latinized as Avevements, Abu Bakr Muhammad b. Yahya b. al-Saghîb al-Tudfî al-Andalusî al-Sarakustî, a celebrated philosopher and wasîr in 6th/12th century Spain, and according to Ibn Khalûdîn, who ranked him with Ibn Rushd (Averroes) [q.v.] in the West and al-Fârâbî [q.v.] and Ibn Sinâ (Avicenna) [q.v.] in the East, one of the greatest philosophers of Islam. Ibn Badjda was also well known as a poet, musician and composer of popular songs. Examples of his verses showing a real lyrical gift are to be found in the mediaeval Arabic accounts of the philosopher (see also in the Bibliography the work of Nykl).

Details of his life are obscure. There is an unconfirmed statement in Leo Africanus [q.v.] that the ancestors of Ibn Badjda were Jewish. Since he is said to have died young in 533/1139, it must have been born towards the end of the 5th/nth century (not later, for he was politically active in the first decade or so of the 6th/12th century), at or near Sarakust (Saragossa) [q.v.], where apparently also he spent his youth. We have no reliable information about his education. When in 503/1110 Sarakust was taken by the Almoravids (see al-MurâbiTûn), or earlier, Ibn Badjda for reasons which can only be surmised took service with the new rulers, and became wasîr, apparently while still in his twenties, to the Berber governor Abu Bakr b. Ibrâhim al-Sahrâwî, known as Ibn Tolfâwî. During this viceroyalty he undertook an embassy for Ibn Tolfâwî to 'Imâd al-Dawla b. Hûd, the former ruler of Sarakust [see fûrms], who still maintained his independence at Rûtâ (Rueda de Jalón). Ibn Badjda was thrown into prison, presumably as a traitor, and remained a prisoner for some months. On his release he seems not to have returned to Sarakust, and was at Balânis (Balanis) when news reached him of the death of Ibn Tolfâwî (510/1117). Shortly after this the Christians finally captured Sarakust (Ramadân 514/Decembre 1118). Ibn Badjda may have reached Seville. A second viceroyalty of twenty years to Yaḥyâ b. Yûsûf b. Tâshûfîn (Yaḥyâ b. Abl Bakr b. Yûsûf b. Tâshûfîn), credited to him by several writers, perhaps began about this time. We find Ibn Badjda also at unspecified times at Granada and Wahrân (Oran), and at Ishbîliyya (Seville) in 530/1135 in the company of his friend Abu'l-Hasan 'All b. 'Abd al-'Azîz b. al-Imâm. He died at Fâs (Fes) in Ramadân 533/May 1139, it is said (somewhat improbably) from the effects of eating a poisoned fruit provided by a servant of Abu'l-'Alâ'î b. Zuhr (father of the famous Ibn Zuhr or Avenzoar [q.v.]).

Ibn Badjda's works survive in their original Arabic in a few manuscripts and in Hebrew translations. The late Miguel Asin Palacios considered it possible that there were fragmentary translations into Latin, but no early Latin version of any work of Ibn Badjda has come to light, though he is occasionally quoted in the Latin Avveroes and (differently) in Albertus Magnus. The most important Arabic MSS are:

2. Berlin MS 5060, apparently lost since the second World War. For the contents see W. Ahwardt, Verzeichniss der arabischen Hs. der konigl. Bibliothek zu Berlin, iv (1892), 396-99.

4. Another MS of collected works of Ibn Badjda was signalized by Dr. 'Umar Farîrîk, but has meantime passed out of the hands of its former owner, al-Sayyid 'Abd al-Razzâk al-Hasânî of Baghdad.

The Risdlat Ittisâl al-'Alî (Letter of Farewell) and the later Risdlat Ittisâl al-'Alî bi-l-Insân (Treatise on the Union of the Intellect with Man) have been given good editions by Asin. Ibn Badjda's most celebrated work, the Tadbir al-mutawâhid (Rule of the Solitary), hitherto known only from Munk's French rendering of a Hebrew translation (in Mélanges de philosophie juive et arabe, Paris 1859), was also edited as Asin from the unique Bodleian MS and published posthumously with a Spanish translation. In these three works, as in many passages of his Kitâb fi l-Nafs (Book on the Soul), Ibn Badjda's interest is centred on the possibility of the union of the soul with the Divine, which he takes as man's highest activity and the ultimate felicity, as well as the final end of human existence. Instead of representing this union in a religious sense, to be attained by moral purity and acts of devotion, and as fully realizable only in the after-life, Ibn Badjda considers it as the last stage of an intellectual ascent, by means of a continuous process of abstraction from the impressions caused by sensible objects consisting of matter and form, through a hierarchy of 'spiritual forms' (suwar râhîniyyâ) containing progressively less and less matter, which are intellected by the mind, till finally the Active Intellect is reached. This is devoid of matter and is the same in all men (hence Ibn Badjda's physical doctrine has been described as panpsychism). The Active Intellect is the highest conception which man can fully comprehend and then only in exceptional circumstances, and is represented not indeed as God, the One, the First Mover, or any aspect of Deity, but as an emanation of Deity, ranking immediately below the Separate Inteligences which move the spheres. These higher Forms are entirely beyond the comprehension of man in the sublunary sphere. Ibn Badjda is therefore necessarily concerned with the lower stages of the hierarchy of existence in its metaphysical aspect, but also with the psychological and ethical characteristics of the mind which makes the ascent, which derive according to him from the metaphysical characteristics of the successive stages. The Neoplatonic character of this schema is plain, and Ibn Badjda's 'spiritual forms' are immediately deduced from a treatise of Alexander of Aphrodisias dealing specifically with them, which was available in Arabic.

Apart from the exposition in the Risdlat Ittisâl al-'Alî bi-l-Insân (cf. ed. Asin, § 23), Ibn Badjda made his most sustained effort to explain his thought in the Tadbir al-mutawâhid, which, however, was left incomplete at his death (Ibn Tufayl). Within Arabic
philosophy, the Tadbir was evidently influenced by al-Farabi, who in al-Siydsa (Siydsdt) al-madaniyya, speaks, like Ibn Badija, of the solitary 'plants', i.e., philosophers in the unfavourable environment of existing imperfect cities, and in the Fusul al-madani states that it is the duty of the virtuous man or true philosopher to emigrate to the ideal cities if such exist in fact in his time, adding that if they do not exist, the virtuous man is a stranger in life and to die is preferable for him than to live (ed. Dunlop, § 88). Ibn Badija, who also envisages emigration for his sage, evidently faces the same situation and suggests the solution of withdrawing to a life of speculation viz. Tadbir al-mutawahhid.

In addition to the fields which have been mentioned, Ibn Badija studied mathematics, astronomy, botany, etc.

### IBN BADJDJA — IBN BAKI

**ABO BAKR YAHYA B. AHMAD (in some sources: Yabîb b. Muhammad b. 'Abd al-Rahmân), Andalusian poet born at the end of the 5th/11th century. Although he is considered by Arab biographers and in some modern works to be from Cordova (al-Kurtubi), Ibn al-Abbâr, Ibn Sallâ (whose grandfather knew him personally) and Ibn Bassâm refer to him as al-Tulaytuli, and the latter states that the disturbances at Toledo (jînâd 'ulaytulâ) forced him to leave this town. At this time, probably about 477/1085, the year during which Alfonso VI conquered the town, Ibn Bâkî was still young. Soon afterwards the poet began the journeys across Spain and Morocco which were to continue throughout his life. Always seeking a means of livelihood and unlucky in his fortune, he spent some time in Seville—complaining bitterly of it in his poetry as he was to do of all al-Andalus—then in Cordova. The times, the period of the Almoravids, were not propitious for men of letters who were 'fighting against poverty and ignorance' as has been said by E. García Gómez, who has made a study of the period (al-Andalus, x (1945), 285-340). Ibn Bâkî was the friend of al-Âmî al-Tûlîlî and, in a poetry contest at Seville, after al-Âmî had recited his poem and gained the audience's admiration, Ibn Bâkî had not the courage to read his and tore up the paper on which he had written it. The two poets are rightly classed at the head of their contemporaries and it is surprising to find verses of one attributed to the other. Ibn Bâkî finally found refuge with the Banû 'Agâhara, kâdîs of Salé, some of whom he praises in his poems.

Of Ibn Bâkî's work there survive various court poems on classical themes which clearly demonstrate his greatness as a poet, which was recognized by his contemporaries and by the later critics. But it is principally in the genre of muwâshâhâ: that his brilliance is apparent. His various muwâshâhâ which end in a Românate kharda (q.v.) have recently aroused particular interest.

This 'charmant poète, l'un des meilleurs que l'Andalousie ait eus', in the words of Dozy (Hist. Mus. Esp., iii, 256), died in 545/1150-1 according to Ibn al-Abbâr (Tâhâmi, no. 2042). Yâkîb and Ibn Khallîkân, less reliable as being Eastern writers, give the date as 540/1145-6.

IBN AL-BAKILLÁN [see IBN AL-BAKILLÁN].

IBN BAKIYYA, ABDU TAIKH MUHAMMAD, vizier to the Buyid Muizz al-Dawla Bakhtiyar [q.v.], whose history is perhaps difficult to relate objectively since the chroniclers, who wrote from the point of view of the military or bureaucratic aristocracy, were a priori hostile to a parvenu such as he. Coming from a peasant family of Awana (Upper 'Irāk), he had taken advantage of the disturbances during the first half of the 4th/10th century to organize a force which had seized control of the towns on the Tigris at Takrit.

At the time of the conquest of 'Irāk by the Buyid Muizz al-Dawla, when he was in fact in charge of provisioning the prince's kitchens in Baghdad, he had succeeded in holding his privileges as tax-farmer to the new government. A certain charm in conversation, combined with skill in intrigue between civil and military rivals bidding for power and in the adroit placing of gifts, finally secured him the favour of the vizier, Abu l-Faḍl al- 'Abbās al-Širāzī, and then of Bakhtiyar at the beginning of his reign; finally, in 362/972, he received the succession from al-Širāzī himself, probably without desiring it, and contrary to the customary practice whereby, for more than a century, viziers had been recruited from among the bureaucratic profession. Good fortune did not make him unmindful of his former companions, and it is one of the complaints brought against him by the chroniclers that he appointed men of low rank to numerous positions. It seems, however, that Ibn Bakīyya was a clever manipulator rather than a true politician and he failed to compensate for his own inadequate administrative training by winning over the chief officials in the administration. He was unlucky enough to serve a fickle prince, and his final ruin was to result from the latter's overthrow.

Though bound up with the fortunes of Bakhtiyār, Ibn Bakīyya, at the time of the first 'Irākī campaign of his prince's cousin, 'Adud al-Dawla [q.v.], nevertheless perceived the usefulness of enjoying the favour of the latter (a man who today was the protector and tomorrow, it seemed only too clear, would be the redoubtable adversary of Bakhtiyār) and the favour too of the vizier to Rukn al-Dawla (father of 'Adud al-Dawla), Abu l-Fath Ibn al-'Amīd [q.v.], who was lingering in 'Irāk. From them, besides the vizierate, he received also the town of Wāsīt, as an iktā' [q.v.]. In the end, however, the policy he had adopted of trying by means of gifts to win the attachment of certain forces, the 'ayyārn (q.v.) of Baghdad, the autonomous head of the Banī Ḥāshim b. ʿAbd Allāh, who was always in semi-revolt against Baghdad, and others, aroused the suspicions of 'Adud al-Dawla, while at the same time Bakhtiyār continued to fear that Ibn Bakīyya might utterly betray him for the sake of his powerful cousin. When the latter, now successor to Rukn al-Dawla, invaded 'Irāk for the second time, Bakhtiyār attributed the responsibility for the defeat to his vizier and in the end had him arrested and blinded; then 'Adud al-Dawla occupied Baghdad, Ibn Bakīyya fell into his power, and he had him trampled on by his elephants and impaled; the corpse had to await the death of the formidable Būyīd before receiving burial (Abū Ḥayyān al-Tawhīdī, Ḳamār, i, 42).

Bibliography: See BUYIDS, 'ADUD AL-DAWLA, BAKHTIYAR and IBN AL-'AMĪD (Abu l-Fath). The principal source is of course Ibn Miskawayh; several letters of Abū Ḥaykāl al-Šābī (particularly in the Leiden MS) are addressed to Ibn Bakīyya or concern him. These are devoted by Y. Heger (in the Irshād (vi) is in reality mainly concerned with the relations of Ibn al-'Amīd (Abu l-Fath) with him; Ibn Khallīkān, no. 709 (de Slane, iii, 272 f.); F. Bustānī, Dīārat al-maʿārif, ii, 375–6; J. Chr. Bürgel, Die Hofkorrespondenz 'Adud al-dawlaus, 1965 (Index). (C. CAHEN)

IBN AL-BALADĪ, SHARAIF AL-DIN ABD AL-DAR'U AMĪD B. MUHAMMAD B. SA'Dī, vizier of al-Mustandīd. In 563/1167–8 Ibn al-Baladī, who at that time was Nāẓir in Wāsīt, was appointed vizier. There was an old feud between him and the ustād-dār 'Adud al-Din Muhammad b. 'Abd Allāh. After the murder of the caliph in Rabi 2/1167/November 1710 by 'Adud al-Din and the amīr Kūṭ al-Din, they forced his successor al-Mustandīd to appoint 'Adud al-Din vizier, whereupon Ibn al-Baladī was executed.

(K. V. ZETTERSTEEN)

IBN BĀNA, ʿAMR, famous singer, poet and musician of Baghdad, mawla of the Thaʿlab, died in 278/891 at Sāmarrā. His father was a famous secretary and a high official. His mother, Bāna, whose name he bears, was the daughter of Rawḥ, secretary of Salmā al-Waṣīf. Ibn Bāna was a very cultured, yet a very proud man. He was the supporter and protégé of ʿĪbrāhīm b. al-Maḥdī and among the most bitter enemies of ʿIṣāk al-Waṣīfī, whom he accused of regarding music merely as a profession, whereas for him it was a source of delight. A mediocre musician, he did not play any instrument; nevertheless he excelled in the arts of singing, of improvisation, and of imitation and in teaching music. He wrote a work on music: Kiāb Muṣḥarad al-aghānī. He was an intimate companion of al-Mutawakkil.

IBN AL-BANNA3, ABD AL-HASAN B. AHMAD B. ʿABD AL-MUḤammad B. MAṢʿUD B. MUḤAMMAD B. IBN AL-BANNA, noted Nasīrī scholar, traditionalist and jurisconsult of the Hanbali School in Baghdad; he studied law under the direction of the kādī Abū Ḥassan Abī Mūsā al-Hāshimi (d. 428/1037), and later under the kādī Abū Yašlä b. al-Farrā (d. 458/1066). The available sources tell us nothing of his family origins; he apparently lived all his life in Baghdad, where he died on 5 Radjab 471/1 January 1079. His scholarship was the subject of criticism as well as praise by Shāhīfītes, beginning with al-Muṭṭaman al-Saḏīl (d. 507/1113) and carried on as late as the 9th/15th century with Ibn Ḥadījar al-ʾAskālānī (d. 852/1448). His teaching career began in the lifetime of his master, the kādī Abū Yašlä, on the east side of Baghdad, where he had two study circles, one in the Palace Cathedral Mosque (Djami al-Kasr) and another in the Cathedral Mosque of al-Mansūr. He was commissioned by the wealthy Hanbali merchant, Abū ʿAbd Allāh b. Diyāra, to teach in a mosque-college built by the latter and known by his name, Masqīd Ibn Diyarada. He was also a special tutor of this merchant's family.

Ibn al-Bananna3 is said to have written as many as one hundred and fifty works (some say five hundred,
but this number appears to be a copyist's error). He wrote in the fields of history and biography, fikih, asceticism, hadith, theology, philology, pedagogy and the interpretation of dreams. In his biography Ibn Radjab gives a list of his works wherein twenty-eight titles are cited. Four of his works are preserved in manuscript in the Zahiriyya library in Damascus (one of which is not cited in Ibn Radjab's list).

Of great importance for the socio-religious history of Baghdad in the 5th/11th century is Ibn al-Banna's diaries cited in Ibn Radjab's list as al-Ta'iyyih, the History; or, Chronicle. This work is in fact a diary, in which the author recorded his personal observations of day-to-day socio-religious life in the 'Abbāsīd city. Unfortunately, only a small part of the diary has been preserved, a fragment dating from 1 Shawwāl 460/3 August 1068 and ending on 14 Dhu 'l-Ka'ada 461/4 September 1069. There is evidence that the author kept his diary until the year 470/1077-8, just one year before his death. We have no way of telling at present how early he began to keep it. In the history of Muslim historiography, Ibn al-Banna's diary is significant, in that regularly kept diaries were not generally thought to have existed at this early date (cf. F. Rosenthal, A history of Muslim historiography, Ibn al-Banna's eight titles are cited. Four of his works are preserved in the West; indeed, although he made some advances in mathematics toward purposes of divination, astronomy, astrology and occult sciences. Born in the village of Jāhla in his native town, where he was initiated into asceticism, figures [see HISAB AL-GHUBAR].

In all probability, he died on Friday 5 Radjab 721/31 July 1031 in Marraksh and soon became a legendary figure; he was regarded as a sort of magician, with the power to perform miracles by means of his scientific knowledge applied to divination and magic. Nevertheless, his biographers praise his piety, his noble character and irreproachable conduct.

The list of works attributed to Ibn al-Banna is considerable and includes over 80 titles, belonging to the most disparate branches of learning—Arabic grammar and language, rhetoric, exegesis, wā'il al-din fi al-fikih and fikih, the division of inheritances, logic, magic, divination, mathematics, astronomy, meteorology. Unfortunately, they even include a rā'mū of the Iḥyā' of al-Ghazālī. Only a few of his writings have survived however (see Brockelmann), and only one has been published in its entirety. The only Rā've fī 'l-anwā' (ed. and tr. H. P. J. Renaud, Le calendrier d'Ibn al-Banna de Marrakech, Paris 1948). The best known is, beyond question, the Ta'āfi's fī 'l-ḥidā' an 'ilm al-ḥisāb (MSS. Tunis 1030, 206 R., 184 R.; more detailed than the Ta'āfi's, the Masā'id fī 'l-ḥadām wa 'l-nāḥīq (MS Tunis 2840), the Rūmun li-faṣā fīzā fīzā al-dhimm al-bārā'ī wa-l-nayf al-bārā'ī wa-l-nāḥār (MS Escolar, 788/16) and some astronomical tables, Minhāj al-lātīb li-ta'ādīl al-kawākib (MS Escolar, 909/1; Algiers 1454/1). It is to be hoped that further work, in addition to the existing fragmentary works, will be done on this scholar who is an eminent figure of the Maghrib and whose knowledge compelled the high esteem of Ibn Kuldūn.

The exact dates of his life are unknown. However, an Ibn Kuldūn, Professor en el estudio de la labor astronómica de Ibn al-Banna, Petrus Vernet, Contribución al estudio de la labor astronómica de Ibn al-Banna, Tetuán 1952; M. al-Fasi, Ibn al-Banna al-adaddi 'l-Marrakushi, in RIEL Madrid, vi/1-2 (1958), 1-10. (H. Suter-M. Ben Cheneb*)

(H. Suter-M. Ben Cheneb*)
the imām al-Ṣalt b. Malik; in addition, it discusses certain questions of principles and their juridical solutions; (2) K. al-Tā'āruf; (7) K. al-Sharḥ al-Dīmām. Ibn Dīfā'far, no doubt a commentary on al-Dīmām, the work of Abū Dīfābir Muhammad b. Dīfā'far al-Azkawi of Ḫūm dealing with questions of the application of principles.

Bibliography: Šālimūn, Tobjat al-asrān fī strat ahī 'Umān, i, Cairo 1332, 153, 166, 179; idem, al-Lajmān (in Arabic), al-Andalus, an Andalusian mystic theologian, born in North Africa, who taught in Seville during the first half of the 15th century.

His name is often associated with that of the celebrated Şīff Ibn al-ʿArif (q.v.), head of the Almeria school. With Ibn ʿAsīr and Abū Bakr al-Mayūrī, these two men were indeed the leaders of the resistance movement directed against the Almoravids by the mystics and traditionalists and, in general, by those men of religion who, under the influence of the master al-Ḡāzālī, were then inclining towards tasawwuf. But it is tempting to think that, far more than Ibn al-ʿArif, it was Ibn Barrada who was the most ardent and active inspiration of this Şīff opposition to the inquisition of the Almoravid sūkhād. Ibn al-ʿAbbār, his principal biographer, states that he was outstanding among his colleagues in merit and abilities, and that he was known as the Ḡāzālī of al-Andalus. This pre-eminence seems to emerge clearly from the fragments of correspondence between himself and Ibn al-ʿArif that have been discovered. Finally, Ibn Barrada appears to have been more involved in events than his companion and friend. He aspired to the imāmīma. According to al-Ṭahbārī (Tabakht, i, 15), he was recognized as imāmī in 130 villages.

This advancement and the agitation which probably accompanied it aroused the suspicions of the government's local agents. Alerted by them, the Almoravid prince summoned Ibn Barrada, Ibn al-ʿArif and Abu Bakr al-Mayūrī to Marrākūsh. This advancement and the agitation which probably accompanied it aroused the suspicions of the government's local agents. Alerted by them, the Almoravid prince summoned Ibn Barrada, Ibn al-ʿArif and Abu Bakr al-Mayūrī to Marrākūsh. The last-named managed to escape and took refuge in Bigjya, travelling from there to the East where previously he had lived for a time. The other two both died in 536/1141, the year of their arrival in Morocco. This date is more generally accepted than the year 537/1142 given by Ibn al-Khaṭib.

The two men were accorded very different treatment. To Ibn al-ʿArif, the prince offered his belated but certainly sincere regrets. As for the unfortunate Ibn Barrada, ʿAllī b. ʿYūsuf gave orders that his body should be thrown onto the town dunghill, without any prayers for the dead. The intervention of ʿAllī b. Ḥirzīmih, a courageous Şīff from Fās who was then passing through Marrākūsh, saved him from such a disgrace. Ibn Barrada was buried in the corn-market square (rabbat al-hinā). In the very year that followed his death, Ibn ʿAsīr came out into open rebellion against the Almoravids in the Algarve.

Ibn Barrada was versed in the science of hirzī, Tradition and kālim. As a Şīff, he led an exemplary life of austerity, dedicated to worship. He wrote a commentary on the Kurʾān conceived in the spirit of his esoteric doctrine, and also a commentary on the names of Allāh. Among other miracles with which he was credited, he was said to have predicted in 520, with mathematical accuracy, the capture of Jerusalem by Saladin, as well as the actual year in which that event took place, that is to say Ṣadāb 583/1187.

This aspect of his learning implies that Ibn Barrada had a reputation for divination, of evident appeal to the popular imagination. When summoned to Marrākūsh, he had foreseen ʿAllī b. ʿYūsuf too would die soon afterwards. In fact the prince's death occurred one year after his own.

Ibn Barrada belongs to the great Şīff tradition of the school of Ibn Masarra, but like the other Andalusian mystics of his time, he felt the influence of al-Ǧāzālī. Ibn Khaldūn places him in the category of men of the ṭadījīl (revelation, divine irradiation), whom he contrasts with the category of the theorists of monism (waḥda), for whom God is the totality of the manifested and non-manifested world, the sole reality. (Ibn Khaldūn, Šīfah al-ṣā.flatten li-tahdhib al-masdūd, ed. Khalīfī, Beirut 1959, 51-2).

The memory of Ibn Barrada seems to have remained alive for a long time among the populace. In Marrākūsh, he is still known by the name Šīdī Barrada (Ṣīdī Abu l-Rīḍājī).

Bibliography: Ibn al-Abbār, Taḥmīla, no. 1797; i Goldzimer, Ibn Barrada, ZDMG, lviii (1914), 544. M. Asīn Palacios, Abūnasrās y su escuela, Madrid 1914, chapter VIII, gives particulars regarding the Şīff movement resulting from the teaching of Ibn Masarra, after the 5th/11th century; Ibn al-Muwākkīt, in his al-Sāʿīdī al-abādiyya, Fās 1528, i, 106, records the main points of his biography and lists some of the many authors who have devoted a notice to him, such as Ibn Khallikān, Wāṣafyāt, ʿĀbād Bābā, Nāyī al-abīshādī, Nāṣīrī, Istibdā, Nahbānī, Dīmārī karmāt al-nuliyā, Ibn ʿAbd al-Malik al-Marrākūshī, al-Dhāyī wa l-takmilat. It will be found rewarding to read the first pages of the biography of Ibn al-ʿArif, written by M. Asīn Palacios as a preface to the translated and annotated Arabic text of the Maḥāsin al-madālīl, Paris 1933; on the relations between Ibn al-ʿArif and Ibn Barrada, interesting details are given by Fāther Paul Nywia, Note sur quelques fragments inédits de la correspondance d'Ibn al-ʿArif avec Ibn Barrada, in Hespèris, xl1ii (1956), 217-21.

(FAURe)

Ibn Barrada, Abu l-Ḥaṣan ʿAllī b. Muḥ. b. ʿAllī b. Muḥ. b. al-Husayn al-Ribāṭī, Moroccan scholar born in Ṭaza in about 660/1262-6, died in the same town in about 731/1331. Deeply versed in the Islamic sciences, Ibn Barrada owes his renown to an urjīsātā of 242 verses, al-Durār al-lāmmātī fī ʿasa nabbrā fī al-imān Nāfī, completed in 657/1260 and dealing with the "reading" of Nāfī [q.v.]; this work, published several times in Cairo and Tunis in collections of treatises of Kūrānī orthoepy and orthography, enjoyed a very great vogue in North Africa. From the same author has survived another urjīsātā of 30 verses, fī maṣāḥidī l-kurā, on the points of articulation of phonemes (MS Berlin 548). See also the next article, beginning of final paragraph.

Of his life, all that is known is that after having been an ʿašl (a kind of notary) he was entrusted with the official correspondence of the government at Ṭaza, and retained this post until his death.
IBN BARRI, ABU MUHAMMAD AL-MUKHADSM, ABD AL-QASIM IBN AL-BARRI B. ABU AL-MAQBAR, AL-MADHIDI (so called after his father's place of origin) AL-MAFIDAL AL-SHAFI', ARAB GRAMMARIAN BORN AT CAIRO ON 5 RAJDAB 499/13 January 1187. He studied under the masters of that period (see Ibn Khalilkan, ii, 293); when he himself was a master, among his disciples was AbuMusa al-Dhali (d. 582). During the whole of Ibn Barri's life the Crusades were in progress (capture of Jerusalem by the Crusaders, 1099; disastrous defeat of the Crusaders at Hattin, in the year of his death, 1187); but he himself was an absent-minded scholar, untidily dressed, who seems to have had no interest beyond his passionate interest in pure 'arabiyya, although he himself made mistakes in 'arab while speaking, mistakes of which he was unaware. He held the reputation of having the greatest knowledge in his generation of the language, the grammar, and the vocabulary of Arabic and, like Ibn Bahaishah, was the literary reviser of official correspondence with the Diwan al-Idhan. The author of the Liban quotes him continually, e.g.: six times under k r n (see his Preface, i, 3, line 10, i, 7, line 3 from the bottom).

This scholar showed his learning in writing on the works of other authors: by making annotations (corrections or additions): (1) to the Muwarab and to the K. al-Takmila fi ma yaah h fi l-A'mma (MS Damascus, Zahiriyat) of al-Djwali (g.v.); (2) to the Siah al-Djwali. These copious hawdshi, his chief work (in manuscript; see Brockelmann, i, 134), were collected into an independent work: the K. al-Tanbih wa l-Idhan 'amma waKhama min al-qahim fi K. al-Siah (the title given in Hadijji Khalifa, iv, 93, 9-10); according to Hadijji Khalifa, however, ibid., i, 10, these annotations were begun by his master 'All b. al-Kajfa, of Brockelmann, i, 540 bottom, and, according to al-Safadi (al-Baghdadii, Kitabatu al-adab, ii, 529, lines 8-9), Ibn Barri continued them as far as w g, a quarter of the work, and the rest were written over by Allah b. Hassam al-Bazi; (3) to the Durr al-ghawdwi fi awakh al-ghawdwi of al-Hariri, according to Ibn Khalilkan, ii, 293, line 17, Ibn Kadi Shuhba, 324, line 5-6; by his defence of the Mab'am of al-Hariri against the criticisms of Ibn al-Khashshab (g.v.), printed under the title: al-Istdrakat 'alai Mab'am al-Hariri wa 'nisah Ibn Barri (Istanbul 1328) and as an appendix to the Mab'am (Cairo 1326)—as well as by his Sharh shahid al-Iddh of Abu'l-Farisi; in manuscript, Cairo, ii, 128. Of the personal writings of Ibn Barri only two small works are known: the K. Chuhat al-du'af'a min al-fudhla, a criticism of the incorrect terms of the jurists, published by C. C. Torrey in Orient. Studen Th. Noldeke gewidmet, i, Giessen 1906, 211-24; and al-Masu'd al-'aghir an ma'fra li l-hariri, on some grammatical and local difficulties, in manuscript, Paris 1266 (no. 3), fols. 181-218.

It should be noted (1) that no. 6 of Brockelmann (S I, 340) is wrongly attributed: this Sharh 'ihsan (and not 'ihsan) al-'arid, S. 282 (and not 252) is, as is indicated in the catalogue of the Arabic manuscripts of the Escorial (H. Dersenburg, i, 1884, no. 410, 3), to be attributed to Abu'l-Hasan 'All b. 'All b. al-Husayn Ibn Barri, the Ibn al-Barri of Brockelmann, II, 248 and S I, 350. (2) No. 2 of Brockelmann, i, 302, the 13 verses on the meaning of the word al-khis which L.A. attributes to Ibn Barri (xiii, 240-7 xi, 232-3) are already cited by Abu Hilal al-Askari (d. 956/1505) in his K. Sina'atayn (Istanbul 1320), 335-7. (3) On the question of the glosses or criticisms of Ibn Barri to the Durrat al-ghawdwi and of his refutation of the criticisms of Ibn al-Khashshab to this Durrat, see C. C. Torrey's introduction to his edition of the K. Chuhat al-du'af'a (Orient. St., i, 212-3).

Bibliography: Brockelmann, i, 301-2, S I, 529-30; Subki, Tabaqdt al-Shaf'iyya al-kubrd, iv, 233-4; Suyuti, Bughya, 278-9; Ibn Khalilkan, ii, 292-4 (no. 326); Ibn Kadi Shuhba, Tabaqdt al-nu'dh wa l-ghawdwiyyin, MS Damascus Zahiriyat 438 al-'arabiyya, 323-5; Kifit, Ibn Barri al-radwi, ii, 110-1, see iio, ii, 2, where other references are given. (H. Flesich)

IBN BASHKUWAL, ABU 'L-KASIM KHALAF B. ABD AL-MALIK B. MA'SUD b. MUSA, B. BASHKUWAL, ABU BUKR b. ABU 'L-ARABI, and other celebrated scholars. Well-equipped with learning acquired from some 400 books, he became, according to his biographer Ibn al-Abbâr, the doyen of the traditionists of Cordova and a scholar without peer in the literary history of al-Andalus. At first he became a member of the judiciary as a subordinate of the chief 'alid of Seville, Ibn al-Abbâr, and worked as a 'adl in Cordova, but soon gave up this administrative career and devoted himself to his chosen vocation of teaching and research, and proposed to follow in the footsteps of Ibn al-Farâd, the great pioneer in biographical studies, which had had so great a success. Ibn al-Farâd, with his Ta'fikh 'ulamâ al-Andalus, had laid the foundations for a knowledge of literary and biographical history of Spanish Muslims. Ibn Bashkuwal, two centuries later, decided to continue so interesting a work and called his work al-Šîla "the continuation". In it he was able to gather 1400 biographies of men of letters who had flourished in the 5th/9th and 6th/12th centuries. Although the information which he gives is above all literary and is excessively and frequently detailed in the lists of masters and disciples, he provides a great deal of new data for history, administration, and the toponymy of numerous towns and localities of Muslim Spain.

He is said to have composed 50 works, but of them, apart from the Šîla (Kubd al-Šîla fi al-Šîla al-mammat al-Andalus), finished on 3 Qumdatâ 1354/2 December, 1539, ed. F. Codera in BAH, vii Madrid 1883, we know only the Kith al-Ghuwadwi wa l-mubamâr min al-asma, a dictionary of traditionists whose names are difficult to spell or easily confused with others (Berlin, Verzeichn., no. 1673).

Bibliography: Ibn Khalilkan, Wafayat, Cairo 1310/1929, i, 172; Dhanbâh, Hussâf, iv, 132 ff.; Ibn Farûn, Dibârî, Fez 1316/1905, 116 = Cairo 1312/1923, 113; Ibn al-Abbâr, Takmiha, no. 179; idem, Mawdâm, no. 70; Suyûtî, Tabaqdt al-Abbâs,
IBN BASHKUWAL — IBN BATTA
ed. Wüstenfeld, xvii, no. 1; Wüstenfeld, Geschichts-
schreiber, no. 200; Brockel-
mann, I, 340, S I, 580.

[6. BEN CHERRI [A. HUICI MIRANDA]]

IBN BASSÀL [see filaha, ii.]

IBN BASSÁM, ABU 'L-HASAN 'ALI b. BASSÁM AL-
SHANTARINÍ, Andalusian poet and antholo-
gist, a native of Santarem. Forced to flee from his
native town when it was taken by Alfonso V of Castle
(485/1092-3), he went to Cordova for the first time
in 493/1100 and, during the following years, under-
took at Seville the compiling of his Diwáñ and the
collecting of the diwáns of some great poets of the
5th/11th century: al-Mu'tamid, Ibn Wáhbon, Ibn
'Ammar; he also collected the correspondence of the
prince of Murcia, Ibn Táhir, and collected in one
volume his own satirical poems, which, however,
refrained from circulating. Although in order to
support himself he had to accept a reward from
those to whom he devoted an entry in his Diwáñ,
he behaved more honestly than his contemporary
al-Fath Ibn Kháqán [q.v.].

The only one of his works which has survived is
the Diwáñ fi makásin alí al-Diástrá, which is,
however, enough to earn him enduring fame and the
gratitude of all who are interested in the Arabic
literature of Spain. Planning his anthology as a
continuation of the Kitáb al-Háda'ík of Ibn Farádí
al-Diástrá [q.v.], Ibn Bassám (d. 544/1149) is
reputed to have been concerned only with writers
and poets who were his contemporaries or nearly so,
but on many occasions he goes back as far as the
beginning of the 5th/11th century and even to the
end of the preceding century. He was so widely read
that he could immediately detect the least obvious
plagiarism, and was irritated by the inlution of
his fellow countrymen for everything from the
East—"if a crow croaked in that part of the world
or if a fly buzzed on the far borders of Syria or of
'Irák, they would prostitute themselves as if before
an idol", he writes in his preface; hence he was
anxious to collect and preserve the verse and the
prose works written in Spain, which he with his
sound judgement was able to evaluate and to offer
to posterity. He himself admitted that the compiling
of his anthology had caused him immense
pain and suffering, and he had in general no possibility of
verifying the authenticity of the texts which it
contains. The work, which (according to Yákút)
consisted of seven volumes, is divided into four
sections: I. Men of letters and poets of Cordova and
its surrounding district; edition of 1st part, Cairo 1939,
of 2nd part, Cairo 1942; II. the western part
of al-Andalus (Seville, Portugal); III. the eastern
part of al-Andalus: IV. foreign poets and men of
letters living in al-Andalus; ed. 1st part, Cairo
1945. (An edition of the whole work is being
prepared (1968) at Paris.) For the manuscripts of
the unpublished sections see Brockelmann.

The notices are of varying length; they contain
in general some biographical data, in an ornate
and intelligible prose, citations of earlier authors
and historians, notably Ibn Hayyán [q.v.], and
selected extracts in prose or verse; Ibn Bassám
refrains, however, from including the more shocking
satirical pieces, probably because of the rigorism
which prevailed in his time. A shortened version
of the Diwáñ was made by Ibn Mammáti (542-
606/1147-1209) under the title Lá'ilíyãt al-Diwháñ
wa-jaríyãt al-Diástrá (ms. in the Veliúddin Library,
Istanbul).

IBN BASSÁM, ABU 'L-HASAN 'ALI b. BASSÁM
AL-'ABARTÁ'I, poet
and writer of Baghdad. His grandfather, Nasr, had
held high office during the caliphate of al-Mu'tási
(see Sourdel, Visirat, 252), and he himself was at one
time employed in the service of the barid [q.v.]; he
probably carried out other administrative duties,
since his biographers attribute to him a collection of
letters (rasul) which are unlikely to have been of a
private nature. However, his fame rests on his epi-
grams, very brief, for he was short-winded, but
effective; many stories are told about his relations
with the great men of his time, with whom he treated
with scant regard, attacking the caliphs and
their ministers as well as his own family, so that
Yákút counts him among the unifilí (‘alabáh); he
also managed to write verses on the most highly
placed of his contemporaries and to attribute to
them other poems for example to K. al-Mu'áiyín;
certain eulogies of Ibn al-Furát or of Ibn Múkála [q.v.]
seem out of place in an almost exclusively epigrammatic
output.

Ibn Bassám is besides the author of several works:
K. Abád b. Abu Rabí'a, which Ibn al-Nadim
considers this poet's best monograph and for which
Yákút gives the many sources; K. Abád b. al-Khuwá
Mundfridd al-shu'ardi, K. al-Mukhání. Certain
coincidences with Ibn al-Furát or of Ibn Múkála [q.v.]
seem out of place in an almost exclusively epigrammatic
output.

IBN BATTA — IBN BAT'TÔTA
735
became the friend of Abu Bakr al-AdJuri (d. s6o/
970), the author of the famous Kitab al-Shari'a
(Cairo 1369/1950), and went on several other
journeys in 12th (in particular in Bastra), in the border regions between
the Islamic countries and the Byzantine Empire, and
also in Damascus, where he was anxious to meditate
at the tomb of Abû Sâlih (d. 330/942), the founder of
a mosque situated outside the Bâb Sha'riq (cf.
Biday'a, xi, 204-5). When he was about forty—thus
about ten years after the arrival of the Buyids in
Baghdad (334/945)—Ibn Battûta returned to his
native town, where, until his death on 10 Muharram
387/23 January 997, he led a secluded life, devoted,
it is said, to fasting, meditation and study.
Ibn Battûta wrote several works, listed by the bâdi'
Abû l-Husayn (d. 526/1132) in his Tabâkât (ii, 152).
The two most important, which were to have the
greatest influence, were his two professions of faith:
his ta'âhid in the shorter version, the Ibâna saghi'a,
which has survived, and the Ibâna, the text
of which appears to be lost, but of which much use
was made by the bâdi' Abû Ya'âqîb al-Farrâ'î (d. 458/
1066) and Ibn Taymiyya (d. 728/1328). Apart from
these two professions of faith, of salafi type, Ibn
Battûta's other works deal mainly with jihâd
and the great tradition of Hanbali polemic
which was practised, during the century
following the death of the founder of the school, by
the shaykh 'Abd Allâh Muhammad B. Muhammad
B. Muhammad B. Ibrahim B. Yûsuf al-Lâwati al-Tâjî,
Mohriş traveller born at Tangier on 17 Radjab 720/
February 1326, died in Morocco in 779/1375-6;
many lengthy journeys which make him one of the
world's most famous travellers (giâwûdula) and
authors of travel-books (rikûa).

The chronology of his journeys may, in spite of
some uncertainties of detail, be set out as follows:
(1) Departure from Tangiers 2 Radjab 725/13 June
1325; North Africa; Egypt; Upper Egypt; Syria;
departure from Damascus for Mecca in Shawwal
726/September 1326. (2) Departure from Mecca
20 Dhul-Hijjah 726/November 1326; 'Irâk,
Khuzistân, Fârs and Dîjabîr; Tabriz; Baghâd, Sâmarrâ,
Mosul, return to Baghâd; a stay in Arabia
(with three Pilgrimages) from 727/1327 to 730/1330.
(3) Red Sea, Yemen, Aden, Zayla', Mogadishu
and the trading ports of East Africa; return by
'Umân and the Persian Gulf; a further Pilgrimage in 732/
1332. (4) Egypt, Syria; Asia Minor and the terri-
itories of the Golden Horde; visit to Constantinopole
and return to the territories of the Golden Horde;
Transoxania and Afghanistan; arrival in the valley
of the Indus on 1 Muharram 734/12 September 1333;
stay at Delhi until Safar 743/July 1342. (5) Stay of
a year and a half in the Maldives; Ceylon and a second
visit to the Maldives, Bengal, Assâm, Sumatra;
arrival at the Chinese port of Zaytun: Ts'ui-an-chou
(it is not certain if he noted this on his return from
Peking). (6) Return by Sumatra and Malabar
(Mubarram 748/April-May 1347); the Persian Gulf,
Baghâd, Syria, Egypt; a further Pilgrimage. (7)
Egypt, Alexandria; embarked in Safar 750/April-
May 1349 for Tunis; thence reached Sardinia in a
Catalan ship; return by Algeria; arrival at Fez at
the end of Sha'ban 750/November 1349; visit to
the kingdom of Granada and return to Morocco.
(8) Departure from Sidjilmasa at the beginning
of Mubarram 753/February 1352; journey across the
Sahara; the country of the Niger; return to Sidjil-
masa in Dhul-1-Ka'da 754/December 1353.

This chronology suffices to demonstrate the new
dimensions which Ibn Bat'tûta gave to the genre
of rikûa. Originating from the West, among Spaniards
or Maghribis who were curious to take note, while
making the Pilgrimage, of the countries and the
customs of the East (which had for long been regarded
as the source of knowledge and the model of civiliza-
tion), the traditional rikûa was centred round the
visit to the Holy Places of Arabia. Although Ibn
Bat'tûta, especially in the beginnings of his work,
conforms to this usage, by degrees the extent of
his journeys finally blurs the initial object and raises

the _Rīḥa_ to become in fact a description of the known world.

The documentary value of the _Rīḥa_ is closely linked to the history of its text, which was written down not by Ibn Baṭṭūṭa himself, but by a scholar, Ibn Dūzayy (q.v.), commissioned by the Marinid ruler of the time, Abū ʾIbnān. The writing of it, from Ibn Baṭṭūṭa's dictation, was completed on 3 Dhū ʿl-Ḥijja 726/9 December 1327, and the definitive text appeared a few months afterwards, under the title of _Tuhfah al-musūr fi qawādīl al-umār wa-ṣallīl al-asfār_. So far as can be judged, the literary formation of the _Rīḥa_ proceeded, with Ibn Dūzayy's guidance, from a threefold source.

Ibn Dūzayy's editing inevitably altered in some degree the original aspect of the work; in it are found descriptions which are pertinent, sober and sometimes succinct to the point of dryness, side by side with high-flown passages whose aim is less to give objective information than to produce stylistic exercises on "marvels" such as were then in favour with the educated public. The predilection for unusual details, characteristic of the 'iydn, is here viscerally expressed. The account on his own travels, around which he builds his professional and even his family life, he goes further than Ibn Djubayr, and, in a general way, by his famous predecessor, the vizier Ibn Mukla (Cambridge [Hakluyt Society] 1958-62, vols. 2, in progress).

One outstanding example of his work surviving), a calligrapher of the Buwayhid period who died in 413/1022 (this date is more probable than 423/1031). He frequented the governmental circles of the period, as he was closely attached to the vizier Fakhr al-Mulk Abu Ghalib Muhammad b. Khafid, Tehran 1958; German translations, cf. Brockelmann (cited below in Bibli.).

IBN AL-BAWWĀB, Abu ʿl-Ḥasan ʿAlī b. Ḥillāl, known also under the name of Ibn al-Sitrī, famous calligrapher of the Buwayhid period who died in Baghdād in 413/1022 (this date is more probable than 423/1031). He frequented the governmental circles of the period, as he was closely attached to the vizier Fakhr al-Mulk Abu Ḥablā Muḥammad b. Ḥilāl at Baghdād and was for some time in charge of the library of the Buwayhid Bahāʾ al-Dawla at Ṣhirāz. He was also an illuminator (at least one outstanding example of his work surviving), a devout man who knew the Qurʾān by heart and is said to have reproduced sixty-four copies of it, and a man of letters who was well versed in the law and who wrote a treatise and a didactic poem on the art of writing. His real title to fame, however, according to the early Arab authors, was to have perfected the style of writing invented, about a century earlier, by his famous predecessor, the vizier Ibn Mukla (q.v.) and to have brought it to a degree of well-balanced elegance which was to be surpassed later only by the efforts of Yāḥyā al-Mustasʿāmī (q.v.). The "well-proportioned script" (al-khāṭṭ al-mansūb)
which he thus made famous in such a remarkable way, and whose basic geometric outlines R. Robertson and N. Abbott have tried to reconstitute by means of a system of theoretical measurement of the letters described in later treatises on calligraphy, has given rise to many different interpretations—particularly since its title itself means perhaps nothing more than "five script". It nevertheless seems likely that we are today in a position to evaluate the calligraphy of Ibn Bawwāb through the unique example of it in a Kur'ān in the Chester Beatty Library (MS K. 16), signed by Ibn Bawwāb and dated 591/1208, whose calligraphy is as splendid as its illuminations. The type of naskhī used in this work, as well as the style of its geometric and floral decorations, form the subject of a long study by D. S. Rice, The unique Ibn al-Bawwāb manuscript in the Chester Beatty Library, Dublin 1955. On his school, see C. Huart, Les calligraphes et les miniaturistes de l’Orient musulman, Paris 1906, 80-4. (J. SOURDEL-THEMINE)

IBN AL-BAYTAR, ABU MUHAMMAD ‘ABD ALLAH B. AHMAD AL-DIN B. AL-BAYTAR AL-MALAKI, botanist and pharmacologist, born in Malaga at the end of the 6th/12th century. He probably belonged to the family of the same name whose existence in Malaga is attested by Ibn al-‘Abbār (Ma‘lūm, nos. 35, 165, 241). He studied in Seville and collected plants in the districts round the town with his teachers Abu ‘l-‘Abbās al-Nabātī, ‘Abī ‘Abbār b. Sāliḥ and Abu ‘l-Hādījī. In about 617/1220 he emigrated to the East: after crossing North Africa (Morocco, Algeria and Tunisia), he visited Asia Minor and Syria and, on his arrival in Egypt, he was appointed by the Ayyūbīd al-Malik al-Kāmil as head of the herbalists (rūṭs ʿālāt al-qahāḥīn). From Cairo he carried out several scientific expeditions; he next settled in Damascus, where his pupil was Ibn al-‘Abbārīfī, with whom he collected plants. He died there in 646/1248.

His main works are: (a) al-Maṣbūhī fī ‘l-ṣaḥīfa al-muṣafada, dedicated to the Malikī al-Sāliḥ Nāṣir al-Din Ayyūbī, in which he gives the appropriate simples for each illness. (b) al-Dījāmī fī muṣafādat al-ṣaḥīha wa ‘l-qahāḥīa, with the same dedication (printed Cairo 1351/1874; good Fr. tr. by L. Ledec in Notices et extraits, xxiii, xviii and xvi (1877-8); German tr. by J. von Söntgen, Stuttgart 1840-2). In this work the author lists in alphabetical order some 1400 simples, animal, vegetable and mineral, basing it on his own observations and also on over 250 authorities including al-Rāzī, Ibn Sinā, al-Ǧāfīkī and al-Ǧāḥfikī. Meyendorf and Sobhy (The abridged version of the book of simple drugs of... al-Ǧāfīqī by Gregorius Abu-Farag [Barhebræus], Cairo, fasc. I (1931), 52-3) consider that the Dījāmī of Ibn al-Baytār is merely plagiarized from the pharmacopoeia of al-Ǧāḥfikī with the addition of material obtained from the works of his teachers. Apart from this doubtful statement (particularly since the mediaeval idea of intellectual honesty was different from that of today), it should be mentioned that, of the total number of simples studied, about a thousand were already known to Greek authors. This work had considerable influence both outside and within the Islamic world, for example on the Armenian Amir Dowlat (3) Maṭla al-tabībī (4) Risāla fī ‘l-aghāḥīya wa ‘l-ṣaḥīha by Maṭla al-Tabībī (5) Maṭla fī ‘l-ṣaḥīha. In commentary on Dioscorides, of which a manuscript has been found and which contains a list of 550 drugs which appear in the first four books of Dioscorides; the technical terms are frequently accompanied by their Latin and Berber equivalents (see MĀMA, iii2 (1957), 120-12).

IBN BIBI, AL-HUSAYN B. MUHAMMAD B. ‘ALI AL-DJAFARI AL-RUGHADJI, known by the name of Ibn al-Bibi al-Munaḍjīma (son of the "lady", the astrologer) or simply Ibn Bībī, is the author of al-Awāmir al-Ḏalīliyya fī ‘l-ulumi al-Ḏalīliyya, written in Persian, which was completed early in 680 A.H. (beg. 22 April 1281); it deals with the period from 582/1192 to 670/1210 and is an extremely important work for the history of the Seljūqs of Rūm in whose domains it was written. This work is neither a chronicle nor a pragmatic literary history in the usual sense. The author’s intention was, as he himself states in the introduction (cf. MS Aya Sofya 2985 [henceforward referred to as AS p. 11]), to hand down what he himself had heard and seen, in the literary style of the time. As a general part of Ibn Bībī’s work may therefore be classed as memoirs, which gain especial value from the facts that Ibn Bībī was Mālikī Dinān al-Taṭbāq at the court of the Rūm-Seljūqs, and in effect head of the chancellorry of the Secretariat of State (cf. Muhāṣṣar [see below], 2 and 196), and that his father, Maḏjī al-Dīn Muhammad Taḏǧūm (Ṣūṭṭān Walad in a ḍarīda refers to him as Maḏjī al-Dīn al-Ṣāliḥ b. Maḏjī, see Dinān Sulaym Viel), ed. F. Nal’s Ushak, Ankara 1947, 144, no. 240), was for a long time at the court of Djelal al-Dīn Khurramshāh as Mawṣūl, from 631/1233-4 worked as Secretary in the Seljūq chancellery at Konya and was sent on a number of diplomatic missions (see AS, 485, 485, 487). Practically all that is known of Ibn Bībī’s life is what he himself relates about it in his work (cf. AS, 20, 442-3, Muḥāṣṣar, vii B. and 196-9). The exact date of his death is not known, yet it seems certain that he must have been still alive in the months between Shāb ‘Alān 68/November 1284 and Shāshwalī 68b/ December 1285 (cf. H. W. Duda, Zur Geschichtsforschung über die Rūm-Seldschuken, in ZDMG, lxxxix (1935) p. 29 sq. 1). Ibn Bībī’s mother, who

Encyclopaedia of Islam, III

47
belonged to a distinguished family from Nişapur, was highly skilled in astrology and a considerable authority on this subject. She was no longer alive in the last months of 679/early 681. His father, who came of a prominent family of Diyarbakr, died in Sha'bân 679/March 1282 at an advanced age. In 682/1283, when Djalâl ad-Dîn Khâzânî's power was waning, Ibn Bibî's parents had moved to the court of the Ayyûbîd Malik al-Asghar Muşaffar ad-Dîn Mûsâ at Damascus, whence they were invited to Konya by the Rûm-Seldûk sultan 'Alâ ad-Dîn Kaykûbât I, who had heard of the exceptional ability of Ibn Bibî's mother.

Ibn Bibî's work is preserved in three forms:

1. The above-mentioned original work—the Aya Sefîya manuscript as written for the Seldûk sultan Ghûthây ad-Dîn Kaykûhwarî 111. For details of the facsimile edition of this manuscript and of the first volume of a printed edition, see Bibliothèque Nationale, Paris (Sous Pernas 1356, apparently of the 9th/10th century) by M. Th. Houtsmans as Recueil, iv, 1902 [see Bibliog.]

2. A paraphrase into Turkish, with occasional omissions and interpolations, of the original work al-Anwâr u's-Sâlihât by Yaţ difícî. Allî in the third section of his Otgûnênâmeh, often called also Selûchêmâmeh, which he composed for the Ottoman sultan Murad II in 857/1453-4 or 858/1454-5 (for the date see H. W. Duda, Ziertenschildiche islamische Quellen und das Ogûnênâmeh des Jasîbî. Allî zur angeblichen türkischen Besiedelung der Dobrudja im 13. Jhdt. n. Chr., in the Spässische of the Bulgarian Academy, 12/2 (Sozda 1943), xx, 253-260). For a modern translation of this manuscript, see P. Wittke, Miscellanea, in T. M. xiv (1965), 263 ff. There are a number of more or less complete manuscripts of this Otgûnênâmeh of Yaţ difícî. Allî in the libraries of Ankara, Berlin, Istanbul, Leiden, Leiningrad, Moscow and Paris (cf. Adnan S. Ersat in his introduction to the manuscript of P. Wittke in Igl. xx, 1932), 202. An edition by M. Th. Houtsmans (Recueil, iii, see Bibliothèque Nationale, Paris. Natural sciences, see 61a) of Yaţ difícî. Allî's translation. This contains only about half of the section devoted to the Selûchêmâmeh of Asia Minor. There is also an epitome of the Otgûnênâmeh as by Seyyid Lîûmîn, see Lîûmîn in 1900; the unique manuscript is in the Austrian National Library. It is a complete German translation, with commentary, of Ibn Bibî's Muşaffar ad-Dîn Kaykûbât I, 1887, 1888. (The manuscript has been supplemented on the basis of Ms. Aya Sefîya 2955 and the Otgûnênâmeh (Houtsmans, Recueil, iii, controlled by the manuscript of the Staatsbibliothek, Berlin, Orient Quart 1823).

3. A translation into Persian, by an anonymous epigrapher while Ibn Bibî was still alive, between Sha'bân 683/October 1284 and Shawwâl 684/December 1285, which omits a great part of the rhetorical padding of the original work and leaves out mention of Jîwânî. This epitome was edited from the manuscript in the Bibliothèque Nationale, Paris (Sous Pernas 1356, apparently of the 9th/10th century) by M. Th. Houtsmans as Recueil, iv, 1902 [see Bibliothèque Nationale, Paris].

The sources, which mention no work by Ibn Bibî, are unanimous in attributing to him three merits: (1) the transmission of the famous dictionary al-Sîbîl of al-Dîwânî (which he received from his master İsmîl b. Muhammed b. Nişâbûrî) to his pupil Ibn al-Keştâ (1920), who is said to have helped to circulate the work in Egypt; (2) the translation, to the survival of the poetic tradition of al-Mutanabbi (in which he had been initiated by his master Şâhî b. Rûshdîn) in Sicily, where the name of the panegyrist of Sâyf al-Dâwî dated from the immigration into the island in (579/1184) of 418 b. Hâmza al-Başîr, râdî al-Mutanabbi; (3) the revision of the Talbîb al-lisan wa-talbîb al-làsîn, a work of Sičo-Maghribi dialectology compiled by his pupil Abû aţâf Umar b. Makki [see Ibn Makki].

Lin., 18/5-6 (1954), 260-70 and 282-1; and, Un commento di Ibn al-Qâṭûf il "siciliano" ad alcuni versi di al-Mutanabbi, in RSO, xxx (1955), 208-9; idem, Il talbîb al-lisan wa-talbîb al-làsîn di Abû Hâfîs Umar b. Makki, in Studia Orientalia (of the Centro di Studi Orientali della Custodia Francescana di Terra Santa), Cairo, l (1956), 194-207, should be added the information, particularly from the Takmîla of Ibn Abbâr,
which is found in Ihsan Al-Abbâs, Al-’Arab fi Sihhâya, Cairo 1595, 599-600.

IBN AL-BIRZALI [see IBN AL-BIRZALI].

IBN BISHR, [see UQUMAN B. ABD ALLAH].

IBN AL-BITRÎ [see IBN-AL-BITRIS].

IBN BULHUL, AHMAD B. ISM'Â B. AL-BULHUL AL-TAMÂCUL, born in 252/866 and died at Baghdad in 318/930, was primarily a Hanafi fakî. Trained in the doctrines of his master, Muhammad b. his father and Ibrahim b. Sa'id al-Djawhari, he received also a very careful education in the fields of philosophy and of belles-lettres. He followed, in grammar, the school of Kufa and had the reputation of being a judicious critic of poetry and of adaab. Appointed in 276/889 by the regent al-Muwaffak, during the caliphate of al-Mutamid (275/889-902), and on the advice of Ismâ'îl al-Bulbuli, fakî of Anbar, Hit and of the districts of the Euphrates, Ibn Bulhul then remained in the service of al-Mutâdil (279-85/892-902), the son of the Muwaffak. Al-Mutâdi (289/95-902-8) appointed him, in 292/904-5, kâtîb of the Djihâl. At the beginning of this period, which the reign of al-Muktadir (295-299/908-32), Ibn Bulhul, who had not yet taken up his new post, would have nothing to do with the plot of Ibn Mu'tazz's supporters against the new caliph in 296/909. 'Abû b. al-Furat, who then succeeded to the vizierate (296-909-12), appointed him kâtîb at Madinat al-Mansûr and, in 298/912, entrusted him in addition with the kadât of al-Ahwâz. Without the help of the kadât 'Ihâmî, Ibn Bulhul seems to have enjoyed all the prestige and the prerogatives of this post. The latter retained his offices throughout the reign of al-Muktadir, until 327/940.

Ibn Bulhul, who thus in the service of several caliphs and viziers, appears as a man of great independence of character. He refused to annul, at the request of the mother of al-Muktadir, a marriage to which she had been inclined; he was also, while having served Ibh Al-Furat, to survive his disgrace and to defend him under Hâmid b. Al-Abbâs (306-11/918-23), and later to defend also 'Abî b. Isâ during the third vizierate of Ibn al-Furat (312-23/923-4), when the Karmaî policy of the "good viziers" was called into question.

[HA. LAUZ].

IBN BUKAYLA, 'ABD AL-MASIH B. 'AMR B. KAYN B. HAYVÂN B. BUKAYLA AL-GRASÂNÎ, legendary character who is supposed to have lived for 350 years (only 320 according to al-Ishbîlî, Mustatrâ, ii, 44 and 45) and thus place among the mu'ammarân [q.v.]. The name of his ancestor, who is credited with the construction of al-Kasar al-abdî al-Hira, is often corrupted to Nufayla, but the correct reading is furnished by the tradition according to which this Bukayla owed his surname to a great silk garment, which was the reason for his nickname of "little cabbage".

It is possible that Ibn Bukayla was an historical person; no historian has cast doubt on this, and some Banû Bukayla are mentioned at al-Hira by al-Ya'qûbi. However, the traditions relating to him have, in addition to his longevity, many legendary characteristics. The strangest tradition is that which associates 'Abd al-Masîh b. Bukayla with the Durhum [q.v.] and according to which 'Abd Allah b. Dur'dân [q.v.] discovered his body in a catacomb near Mecca. This tradition is related by al-Hamdânî (384, vii, 163 ff.), who states elsewhere (231) on the authority of Ibn al-Kâbi that the body of Ibn Bukayla was discovered lying on a marble plinth in a catacomb reported this time as being close to al-Hira. Elsewhere this character plays a part in two other traditions of Islamic origin. According to the first, he was sent by Parvis II (Arabian War) to the soothsayer Satîr [q.v.], who was related to him in the female line (†), to question him on the meaning of certain supernatural phenomena (dream of the grand mubâk, shock to the Iwân etc.), which were interpreted as announcing the imminent coming of a prophet (see R. Basset, Le Bordel du Cherikh al-Bouari, Paris 1894, 59-62). The second of these traditions relates that when Khalîl b. al-Walid [q.v.] was besieging al-Hira, he was attacked with projectiles of burning material and then asked the townspeople to send him a mature and experienced man for him to question on their situation. 'Abd al-Masîh was therefore sent before Khalîl, whose questions, however, he took in a different sense from that intended by the general. Ibn Bukayla's answers are similar to those found in folk-stories (see M. Tarnayon and Raynau, Recueil des fabliaux, Paris 1877-88, ii, 52). For example, the question, "The son of how many are you?", meaning, "How old are you?", was answered by "The son of only one man." Afterwards he made as if to poison himself, but Khalîl took the poison from his hands and swallowed it without suffering the least inconvenience. This caused Ibn Bukayla to advise his countrymen not to resist the Arab general any further. In one of his replies the old man declared that at one time the sea reached as far as the outskirts of al-Hira, and al-Masîdî uses this to support his thesis on the movement of seas and continents, apparently convinced of the truth of such a tradition.

Finally, although 'Abd al-Masîh was not converted to Islam, it is he at least who is said to have pointed out to Sa'd b. Abî Wâkîs [q.v.] a suitable site for the foundation of Kufa.

IBN BULHUL [see ISM'Â B. BULHUL].

IBN BURD [see BAHSARI B. BURD].

IBN BURD, name of the members of an Andalusian family (the Banû Burd), of which two representatives in particular enjoy some fame.

I.-IBN BURD AL-QARAB, Abû Hašîb Ahmâd, was head of the Chancellery (dawân al-tâbît) under al-Mu'âzrafter the arrest and execution of Abû Marwan al-Mašîk b. Idrîs al-Djarîlî in 394/1004: with the chief kâtîb Ibn Dhukranî [q.v.], he paved the way for the recognition of Sancholelo in 395/1005. Ibn al-Akrâm ibn al-Arîm [q.v.] was heir presumptive to the caliphate, and it was he who drew up the act of investiture dated Rabî' 1 399 (November 1008); along with other dignitaries, he provided a deputy for Sancholelo during the latter's absence, then, having
taken up office once again during the reign of al-Musta'in, he was appointed khitab during the caliphate of Yalây b. 'Ali, became a minister in the cabinet formed by al-Mustaghfir (441/1052), retired to Saragossa shortly before 417/1026 and died there in 418/1027, more than 80 years of age. Thanks to his perfect mastery of the office of khitab and to his political prudence he was able to live through a troubled period in the history of Andalusia without mishap. According to Ibn Bassâm (Dhakhira, i/1, 84 ff.), there existed a diwân containing all his correspondence, with which the author of the Dhakhira has given some well chosen extracts; other specimens of his writing can be found in nearly all the sources dealing with this period. Not only do they show the characteristics of his prose and his talents as head of the Chancellery, but they are also indispensable documents for the study of the history and politics of the time. Unlike the majority of the khitâb of his day, Ibn Burd al-Akbar is strikingly clear, precise and always to the point. His style is elegant, sober and flowing; he never uses out-of-the-way words and avoids the pedantic expressions so dear to his contemporaries; sa'dî is even used with such skill that it hardly attracts one's attention. It should be observed that, in spite of the troubled times in which he worked, he was anxious to maintain the technical tradition of the Chancellery of the caliphs, insisting on the perfection with which official documents should be written and assigning great importance to paper, ink, writing, the address and its position, etc. In this respect he was the last Andalusian master of the Chancellery to keep up the great traditions of the Spanish Umayyads.

**IBN BURD AL-ASGHAR**  
Ahmad b. Muhammad, grandson of the above, Andalusian author and poet of the first half of the 10th/11th century. Born about 395/1005 at Cordova, he died at Almeria in 445/1054. His father, Abu l-†-`Abbâs Muhammad b. Ahmad b. Burd, had remained almost unknown, and it was the grandson who revived the tradition of Ibn Burd al-Akbar. It is highly probable that he left Cordova for Saragossa with his grandfather, shortly before 417/1026; after the death of the latter he went to Denia where he was employed in the chancellery of Muğhâlîd (q.v.), but cannot have remained there for long, for he was at Cordova again in 426/1035, pronounced the funeral prayer at the grave of Ibn 'Shuhayd (the Banû Burd were masâdîl of the Banû 'Shuhayd). The following year, 427/1036, his name is quoted by Ibn 'Ishârî as the author of a document proclaiming the reappearance of Highâm II al-†-Mû'ayyad brought about by the astute Muḥammad b. Ismâ'il al-'Abbâd b. ‘Abdul-Qadir al-Afûsî in the service of Ma'n b. Šumâdîb whose reign began in 433/1041, and he remained there till his death in 445/1054.  
Ahmad Ibn Burd al-Asghar was a prolific poet and writer whose art is known to us thanks once again to Ibn Bassâm. His poetry is like that of most of his contemporaries, but his prose is different, for it follows the example, on the one hand, of his grand- 
father, and on the other, of Ibn 'Shuhayd. Ibn Bassâm quotes long passages from his works: Sirr al-adâb wa-ka'b ibn 'Abdul–Qadir (i/2, 41 ff.); Risâlât Ibn Burd, wa-l-†-kalam (i/2, 435 ff.); and al-Risâlât al-bâdîs fi tafsîl wkab al-†-šâd 'allad mân yu'farasâh min al-†-wâdp (i/2, 446 ff.), besides a brief essay on the palm tree, Risâlât fi 'l-nâjâh (i/2, 441 ff.). The first of these texts is an unsuccessful imitation of the Kitâb al-†-kâlîk wa l-†-stîyar of Ibn Hazm, in which Ibn Burd tries to give specimens of his writings on different subjects; the second is a dialogue between the sword and the pen, the two adversaries which he handles in giving the debate a faintly dramatic aspect; but he does not carry the comparison beyond the external merits of the two antagonists; the last two are ordinary essays with dialogues interspersed. Yàkût attributes two books to him: al-Tâfiî al-tâfîrî entered al-†-Kurâ'dîn and al-Tâfiî al-tâfîrî entered al-†-Kurâ'dîn, but we know nothing of what these were like.

**IBN BULTÁN**  
AL-MUKHTÀR (or Yuwânîs = Johannes) b. al-Ḥasan b. Abdûn b. Sa'dûn b. Bulán, a Christian physician and theologian of Bagdad. He was the foremost disciple of the Christian priest, physician and physician, Ibn al-Tâsyîb (q.v.), and Ibn Bultan himself was certainly a Nestorian cleric and probably a priest. He was a master of Greek medicine and philosophy, "Ibn Burdûn was the more gracious in style, more spirited and more distinguished in literature and subjects connected with it" (Ibn Aby Ūsayîbî). After a stay in Cairo of three or four years, he went to Constantinople where he arrived in the summer of 446/1054; his arrival there coincided with the crisis which led to the schism between the Greek and the Latin Church, and the Patriarch, Michael Cerularius, asked Ibn
Butlan to compose for him a treatise on the doctrine of the Eucharist, and in particular on the controversial point of the use of unleavened bread. Ibn Butlan stayed in Constantinople for one year Ibn Butlan then returned to Syria, alternating between Aleppo and Antioch; he was for some time in the service of Abu 'l-Mutawwadi Mu'addal b. Nasr b. Munkidh (d. 450/1059), the great-grandfather of Usama b. Munkidh [q.v.]; in 455/1063 we find him supervising the building of a hospital in Antioch and at the same time engaged in literary work. Finally he became a monk and retired to a monastery in Antioch; he died on 8 Šawwal 458/September 1066 and was buried in the church of the monastery. The literary production of Ibn Butlan is distinguished by its originality. (1) His main work is the Tahsin al-sikha, a synopsis of hygiene and macrobiotics in the form of tables, an arrangement borrowed from works of astronomy, al-Qaṣzáli in the preface of his Ihyā' refers to it as his precedent for using another arrangement familiar to the readers from another branch of learning, and it served as a model for the Sāliḥ al-malāḥī fī tadārīr al-mamālīk, a "mirror for princes" by Ibn Abī l-Rabi'ī (wrote 655/1256; cf. G. Richter, Fürstenspiegel, 3, 1937, 206, n. 3; Brockelmann, I, 230; S I, 372; M. Plessner, Ökonomikos, 30-55). It was translated into Latin with the title I hustiunum sanitatis Elucidem Einleitend, Mediz in baldath, (Ibn Butlan), 56-62, ed. H. Richter, 1891, and into German, by Michael Herr, with the title Schachtafel der Gesundheit, Strassburg 1533; see E. Wickersheimer, Les Taucini sanitatis et leur traduction allemande par Michel Herr, in Bibliothèque d'Humanisme et Renaissance, xii (1950), 85-97.

Facsimile editions of MSS of the Latin translation: I hustuiniunum Sanitatis, by Elena Berti Tosca, Paris 1937, and Theatrum Sanitatis, by L. Serra and S. Baglioni, 2 vols., 1940; see also Unity and Variety in Muslim Civilization, ed. G. E. von Grunebaum, Chicago 1955, 363 f. Another Latin treatise of hygiene is based on this work (see Brockelmann). (2) Add to the manuscripts mentioned by Brockelmann: Brit. Museum, Add. 3676; London, Royal College of Physicians, see Triton in JRAFS, 1957, 385, No. 24. On the title, see Thomä, Zeitgesch. Mittelalter, iii, 294-315; Ibn Abī Usaybi'ā and by Brockelmann. (The title Tahsin al-sikha, "The Medical Dinner Party", was dedicated to Nasr al-Dawla Ahmad b. Marwān, the Marwānid ruler of Mayyafārīkīn (401/1010-453/1060; Zambaur, p. 136), a witty skit on quacks, their ignorance and arrogance, with remarks on the ethics of the medical profession. A commentary by a Christian author of Baghdad dates from the 6th/12th century. Edition of the text, by Dr. Bīghāra zalal, Alexandria 1901; study with summary in French, by Dr. Mahmoud Sedaky Bey, Un banquet de médecins, Cairo 1928; on the miniatures in an illuminated manuscript of the Ambrosiana, dated 672/1273, (not mentioned by Brockelmann), see Dr. Djamal al-Din Muḥrīz, Min al-taṣāwir al-mamālīk: mushka min Da'wat al-attrb il-Butlan, in MIMA, vii (1961), 75-80, and R. Eitinghausen, Arab painting, 1962, 143 f. (Ibn Butlan's Da'wat al-husūs, "The Priests' Dinner Party", which was a counterpart to the Da'wat al-attrbā, has unfortunately not been preserved.) (3) Tadbīr al-amrād al-fāriḍa 'ala l-akhtār bi-l-igāz bīn al-māla'īs wa-l-adwiyah al-mamālīk yantaṣṣ fī biḥā ruḥbān al-adwiyah wa-man bā'da min al-madhima, a treatise on homely remedies, particularly for the benefit of monks, (4) Da'wat al-attrbā il-l-akhtār wa-l-adwiyah al-mamālīk, on how to buy slaves and how to detect bodily defects; extracts from the contents in Mez, Renaissance, 156-8; Spanish tr. by S. Vill, El Renacimiento del Islam, Madrid 1936, 204-7; Eng. tr., 160-2. (5) Two treatises directed against Khwāja Ahmad Qādīn [q.v.], dating from 441/1049-50, edited and translated by Schacht-Meyerhof, below; a third and final treatise, written after Ibn Butlan had left Cairo, and called Waq'at al-arjūbā, has not been preserved. (6) A report of Ibn Butlan, addressed at his request to the man of letters and minister, Hilāl al-Sābī [q.v.], on his journey from Baghdad to Cairo; it was incorporated in Muhammad b. Hilabī's Kitāb al-arjūbā, and considerable extracts have been preserved in the biography of Ibn al-Kīfīl and the Geographisches Wörterbuch of Yāḳūṭ. These were translated into English by G. Le Strange, Palestine under the Muslims, London 1890, 370-5, and from English into German by R. Röhrich, Geschichte des ersten Kreuzzuges, Innsbruck 1901, 242-6. This report contains most valuable descriptions of Aleppo, Antioch, Laodicea and other cities at the time of Ibn Butlan's visit. The treatise, together with other indications, shows the kind of society in which Ibn Butlan moved. (7) Ibn Butlan's "Treatise on the Eucharist", Maḥāl fi'l burkān al-mukaddas, hastily written in the summer of 466/1074; extracts in text and translation by G. Graf, Oriens Christianus, xxxv (1938), 46-70. (8) Quotations from his notes for an autobiography, Kitāb al-ikhtāṣār fī dhikr al-maṣābīh, are preserved in the manuscripts mentioned by Brockelmann: Ibn Butlan's last recorded work, on which he worked in 455/1063, is a Discourse, Maḥāla, "on the reason why the skilled physicians have changed the treatment of most diseases which were formerly treated with hot remedies, advising in their place a cooling treatment, e.g. for plegia, facial paralysis, paresis and others, and why they disagree with the rules laid down by the Ancients in compendiums (kunāmīq) and pharmacopoeias (ābrāqākhānā), and how this new system has gradually gained ground in 'Irāk and the neighbouring countries from the beginning of the year 377/988 down to the year 455"; Ibn Butlan refers to changes in climate and subsequent changes in vegetation; extracts have been preserved in the biographies of Ibn Uṣaybi'ā and of al-Ṭabbākh, who quotes Abū Dhārr al-Halabī. Ibn Butlan's refusal to follow slavishly the doctrines of the Ancients, notwithstanding his deep knowledge of them, also appears from his controversy with Ibn Rijwān. Further writings are mentioned by Ibn Abī Uṣaybi'ā and by Brockelmann. (The 'Umud al-ikhtāṣār fī maṣābīh al-nahdā l-ḥa'il labīb, attributed to Ibn Butlan in one of the two known manuscripts [the other is anonymous], is in reality the work of an Andalusian botanist and pharmacologist of the 5th/11th or 6th/12th century; see M. Asin Palacios, Glosario de voces romances, Madrid and Granada 1943.)

(John Schacht)

**IBN DÂ'B, ABU 'L-WALÎD 'ISÂ B. YAZÎD B. BAKR B. DÂ'B AL-LÂYHY AL-MADÂNÎ, traditionist, poet, physician, and politician of Medina, who, after having been a schoolmaster, lived for a time at the court of al-Mahdi and later at that of al-Hâdî, from whom he received unusual favour, and died in 171/787. He owed his fame mainly to the anecdotes, which, albeit presented differently by his contemporaries, make him an ideal companion for important persons, in spite of his pride and his sometimes rather offhand attitude to the caliph, who seems to have overlooked all this impertinence. There is an anecdote which, albeit presented differently by various authors (see D. Sourdel, *Vitrât*, 123), shows that al-Hâdî had no hesitation in offering him considerable sums for a few well-chosen verses; in the field of the transmission of hadîths, of the historical traditions and of the works of the poets of the Hidjaz, Ibn Dabî was not very highly thought of; indeed, although such writers as al-Dâbîjî (though he does express doubts in *Bighdl*, § 14), Ibn Kutayba or Ibn Sallâm see no harm in reproducing traditions on his authority, Khalîf al-Ahmâr and other transmitters accuse him of inventing hadîths; furthermore, Abâ 'Amr ibn al-'Alî points out numerous mistakes in the poems which he transmitted, while others consider that he invented âhkâm concerning the Arabs. These accusations may be due in part to jealousy, but they may not have been entirely unfounded.

The name of Ibn Dabî usually refers to 'Isâ b. Yazîd, but many other members of his family are cited as transmitters of historical and genealogical traditions: his great-uncle Hujayyâ (Dabî, his father Yazîd b. Bakr, his brother Yahyâ b. Yazîd and his cousin Muḥammad b. Hujayyâ.

(John Schacht)

**IBN AL-DÂBABHI [see IBN AL-DUBAYTHI]**

**IBN DÂBBA [see YAZîD B. MIṣSAM]**

**IBN DÂNIYÂL, SHAMS AL-DÎN MUHAMMAD B. DÂNIYÂL B. YUSUF AL-KHUBA'î AL-MAWSILÎ, b. ca. 649/1252, d. 710/1310, Arab writer in Egypt. Born in Mawsil; from the age of 19, he lived in Cairo, studying and practising ophthalmology. In literary and colloquial Arabic poetry and versified prose, he wrote some of the earliest shadow-plays in mediaeval Egypt. He apparently composed some Arabic poems too, but he is mainly memorable for the keen observation reflected in his dramatic works. All three plays were actually intended for production, and the manuscripts were most probably intended to serve as guides rather than as binding texts; the producer could, and did, depart from them.

The three plays are: (1) *Tâyîf al-khâ'yâl* (The shadow of imagination) relates the story of Wâgil, an erstwhile soldier, ensnared by the wiles of a matchmaker. The comic element is provided by his frustration, when he lifts the bride's veil after the wedding-ceremony, and discovers that she is a monster, in everything the opposite of the matchmaker's promises; (2) *'Adîjî wa-Ghârib* ('Adîjî and Ghârib) lacks a plot and is a parade of characters, common in the market-place, plying their odd or debased trade—money-lenders, quacks, reapers, animal-gamers, and performers; the play is named after two quick-witted rogues who appear at its start; (3) *Al-Mutayyâm* (The Enamoured) presents a succession of prizefights of cocks, rams and bulls, accompanied by comments and music, and loosely connected by a thin plot: al-Mutayyâm and his rival-in-love initiate these prize-fights; and, at the play's end, a party is thrown open to all sorts of pathological characters, who come to feast on a slain bull.

While Ibn Dâniyâl's first play is a farce, the other two are comedies of manners. Ridicule is achieved by contrast, slapstick and obscenity. Lip-service to morals is paid to a limited extent in the second play (in a special ending), and more so in the epilogues of the first (the disappointed bridegroom decides on a pilgrimage to the Hîdâl, to atone for his sins) and of the third (the Angel of Death makes an appearance). However, the plays' main asset lies not in their plot or literary quality, but rather in their reflection of the times. They are a realist's description of mores in late 7th/13th century Egypt. Most mediaeval shadow-plays in Arabic were composed by the producers or their circle; Ibn Dâniyâl, however, was a physician by training and occupation, and it is an open question whether or not he incorporated into his plays earlier materials (owned by shadow-play producers), of which hardly anything is known today.

**IBN DARRÂDÎ AL-KÂSTALLÎ [see YAMÂN B. DâRRÂDÎ]**

**IBN DARRÂDÎ AL-KÂSTALLÎ, ANQIMAR AHMAD B. MUHAMMAD B. AL-'ÅŠÂ B. AHMAD B. SULAYMÂN, b. ca. 645/1248, b. in Egypt, a poet whose nisba derives from Kastallât Dârrâdî, a place which R. Blachère wishes to identify with Cazallâ or Castellar de Sanitsebán, in the province of Jaén. Born in Mâharrân 347/126
958, he belonged to a noble family of Sanhadja origin which had settled in Spain at the time of the Arab conquest. He seems to have had a daughter eight years old, was completely comfortable, a poem (no. 57) revealing to whom the third part of his Diwdn is dedicated.

In material matters his life appears to have been not appear to have found at the Hammudid court of the first Alid regime in Spain. Ibn Darradi, with Amirids, and serving as court poet to al-Mundhir c. i sympathies. However, he does time governed by Ali b. Hammud, the future founder of the chancellery which he had held at the court of the 'Amirids and to have become acquainted with literary circles in Cordova. Apart from this, nothing at all is known of his early life.

At the age of 35, he appeared as an already accomplished poet at the court of al-Mansûr Ibn Abí 'Amir in 382/992. The poem with which he introduced himself (see Diwn, no. 3), and which contains some details on his family life (for example that he had a daughter eight years old), was considered by the critics at the court to be too perfect to be by an inexperienced poet and some of them accused him of plagiarism. In order to test him, al-Mansûr summoned him during the night of Thursday 3 Shawwāl 382/1 December 992 and invited him to improvise a description of a tray of apples surrounded by jonquils; the poet then wrote (see Diwn, no. 140) and recited a poem (no. 150) in which he refuted the charges of plagiarism and claimed qualities as a poet and a prose-writer that entitled him to a position in the court. After this test Ibn Darradj's fortunes began to rise. Al-Mansûr rewarded him generously, had his name inscribed in the register of his official poets, and appointed him to a post in the Diwdn al-mu'jadā. For sixteen years he remained in the service of al-Mansûr and of his son 'Abd al-Malik al-Mu'azzama, this period corresponds to the zenith of the splendour of Muslim Spain and to a period of military and political power such as it was never to know again. Under the 'Amirid dictatorship, Ibn Darradj became the celebrator of the 'Amirids and their victories, the chronicler of their exploits and the most highly esteemed panegyrist of their court.

The assassination of 'Abd al-Raḥmān Ibn Abi 'Amir (q.v.) in 399/1008 and the beginning of the fitna inaugurated a new phase in his life. During the first four years he lived at Cordova; he foresaw the dramatic change of régime which was to take place, but, unhampered by excessive moral scruples, he addressed his panegyrics to all those who followed one another on the throne: Muḥammad b. Highām al-Mahdī, Sulaymān al-Mustā'in, al-Kāsim b. Hammūd, etc. Finally, despairing of seeing the situation return to normal, he decided to leave the capital. His first and only journey outside the Peninsula began in 404/1014, to Ceuta, at that time governed by 'Ali b. Hammūd, the future founder of the 3rd régime in Spain. Ibn Darradj, with his opportunism as a court poet, addressed to him a poem feigning Shī'ī sympathies. However, he does not appear to have found at the Hammūdīd court the serenity which he was seeking, since he was obliged to undertake, during four years, many journeys to various minor courts. Until 408/1018 he travelled through the kingdoms of Almeria, Valencia, Játiva and Tortosa, addressing his poems, without much success, to the Slavonic princlings. Finally he arrived, in 408/1018, in Saragossa, where he attached himself to the court of al-Munṣīrī b. Yahyā al-Tuğjībī; for about ten years Ibn Darradj lived a relatively tranquil life, once again holding the positions of chief official poet and secretary of the chancellery which he had held at the court of the 'Amirids, and serving as court poet to al-Munṣīrī (408-12/1018-22) and his son Yahyā (412-27/1022-36), to whom the third part of his Diwdn is dedicated.

In material matters his life appears to have been completely comfortable, a poem (no. 57) revealing that he had acquired land and orchards. However, for reasons unknown, his relations with Yahyā b. al-Munṣīrī deteriorated considerably, and Ibn Darradj found himself obliged to emigrate. In 415/1028 he appeared at the court of Denia, addressing his poems to Mulāhīd al-Śāminī (q.v.), and seems to have passed the final years of his life in this eastern town, since this is where al-Fadl, his only known son, spent his life. Ibn Darradj died on 16 Dīumādā II 421/22 June 1030.

Ibn Darradj is considered as one of the greatest poets of Muslim Spain and the main representative of the golden age of Arabo-Andalusian poetry at the dawn of the thirteenth century. Although he lived until the time of the Mulāhīd al-Ṭawāsīf, he was a product of the Spain of the caliphates. Like Ibn Ṣūyūḥayd, Ibn Ḥazm and al-Ramādī, this poet represents the period during which the character of al-Andalus itself was stamped on its literary production and on all the other manifestations of its culture.

Ibn Darradj was not, however, a revolutionary poet as, to a certain extent, were those who cultivated muwaṣṣfah and sadjād; he was, on the contrary, a neo-classic poet of the type of Abū Tammām and al-Mutanabbi—and in fact he is referred to by the critics as "the Mutanabbi of al-Andalus". Like these other poets, Ibn Darradj adheres scrupulously to what the critics call 'amīd al-ṣ̱īr, the canons of classical poetry. His technique is very polished and he devotes much attention to the correct use of language and the choice of words. His poetry reflects a wide knowledge of Arabic literature and a complete mastery of its vocabulary. He may not achieve the intellectual level and the profundity of thought of Mutanabbi, his favourite model, but some of his compositions (see e.g., nos. 32, 39, 44) are definitely superior to those of his master. The poems in which he describes the battles of al-Mansūr are full of realism and life and reflect the people's sincere admiration for the leader whom they considered as the champion of Spanish Islam against Christianity; in this respect his poems have much in common with those which al-Mutanabbi dedicated to Sayf al-Dawla.

In the genre of floral poetry (nawrīyyāt), Ibn Darradj wrote various poems containing original imagery; in this he appears as the forerunner of such poets as Ibn Khāfādīa, Ibn al-Zaqākī and al-Ruṣāfī, who were to devote almost all of their poems to the description of flowers, fruits and herbs.

A large part of his poetry, and this the most sincere and moving part, is devoted to the description of the horrors of the civil war which followed the overthrow of the 'Amirid dictatorship. These poems form an elegy for the Muslim Spain which the poet knew during the period of its greatest splendour. The lines in which he refers to his sad personal experience during this war, when he wandered continually from place to place with his large family of twelve, mainly females, deserve especial mention. Some of these poems (for example the description of a stormy voyage in a ship, poem no. 33) are particularly successful.

Because of the great care with which he wrote his poems, as much in their basic inspiration as in their form, without adopting the mannerism and the conventionalism of the oriental poets of his time who had a liking for rhetorical ornaments (badāfī), Ibn Darradj may be considered as the initiator, in the Arabic poetry of Spain, of a sort of "cultisme" similar to that which was to characterize, six centuries later, another Cordovan, Luis de Góngora y Argote (1561-1627).

His poetry, apart from its purely literary and
IBN DARRADJ AL-KASTALLI — IBN DAWUD

aesthetic value, is a very valuable documentary source on contemporary events in Spain and particularly on the relations of Andalus with the neighbouring Christian kings (on this aspect, see M. Makki, La España cristiana en el diwan de Ibn Darrād, in Bol. de la Real Acad. de Buenas Letras de Barcelona, xxx (1963-64), 63-104).

Ibn Darrād’s prose is almost completely lost. It is known that he wrote some very famous official communications, such as that which he wrote in the name of al-Mansur on the occasion of the capture of Santiago de Compostella (387/992). But the fragments of this prose which are preserved in the Diwan or in the Dhakhrāta of Ibn Basam are much inferior in quality to his poetry.

IBN DARRADJ AL-TUFAYLI [see TUFAYLI].

IBN AL-DAWĀDĀRĪ, Abū Bakkā r. ‘Abd Allāh b. ‘Abd al-‘Azīz b. ‘Abd al-Muṭahhar al-Dawḍdrī, was a poet and historian. His father, Djamāl al-Dīn ‘Abd Allāh, was in the service of the Amir Sayf al-Dīn Balabān al-Rūmī al-Zāhīrī, the Dawādar of Baybars, whence the by-name Dawdr. His grandfather, lord of Şarāb, was tentatively identified by S. Munaddidī as ‘Īzz al-Dīn Aybak al-Ustād al-Mu‘āẓamī (d. 645/1247-8), the patron of the medical biographer Ibn Abī Usaybi‘a (q.v.). The family is described, somewhat improbably, as of Saldjukid descent.

The author’s family lived in Cairo, in the Hārat al-Bāṭiliyya. His father served for 11 years, until 710/1310, as mutanawwili of Sāhkiyya province, the wilāyāt al-Urbān, and adjoining areas. Released from this post, he moved to Damascus, where he was appointed mihmāndār, and, later, mihmānd al-dawādār. He lost the latter post through a disagreement, but remained in the city until his death in 773/1373, in a riding accident at ‘Adhīrī. He was buried at Adhīrī, near the graves of his parents.

The dates of the author’s birth and death are unknown. In his writings, he speaks of having lived in Cairo and moved with his father to Damascus, presumably as a child. He held some official post, which he does not specify. It seems to have been in Egypt, and an incident in 723/1323 (Chronik, ix, 320) suggests that it may have been connected with the Barid. He wrote several works, of which two, an extensive universal chronicle (Durar al-tidāt) and an abridgment of it, Kitāb al-durar, survive. An autograph of the former, in 9 parts, exists in Istanbul. Parts 6 (on the Fātimids) and 9 (on the reign of Mūhammad b. Kālāwūn) have been published. The author tells us that he began to make notes and drafts for his work in 705/1305, started his final autograph copy in 732/1331-2, and completed it in 736/1335.

IBN DAWUD, MUHAMMAD B. DAWUD B. ‘ALI B. KHALAF, famous Zahirī jurist and first codifier of Arabic “courtly love”, died in 294/909; nothing else is known of his life. Little is known of his Zahirism: Ibn Dāwūd was the leader of a school, who took over the direction of the Zahirī movement of Baghdad on the death of his father [see DAWUD b. ‘ALI]. It is not clear in which direction he led it. It may have been in one less harsh and less uncompromising than that of Ibn Ḥāzim [q.v.], under whom Zahirī insinuagere was to reach its peak (in the Mūhaltā of Ibn Ḥāzim the Zahirīs as a whole are described by the term aṣhabūndā), and it is not clear whether Ibn Dāwūd is included in this designation). There gathered around Ibn Dāwūd not only Zahirī jurists but also an eclectic group of scholars and grammarians (Muhammad b. al-Husayn al-Zāhīrī, the Kāshīf ibn Suraydī, Ahmad b. ‘Imrān, an impassioned admirer of the mystic Djuymad, the Malamātī mystic Ruywan, the traditionists Ahmad b. Ubayd b. Nāṣib, the principal informer of al-Washaṣba, and Ahmad b. Naṣr b. Dhārī, the grammarians Thālabī and Nīfawwāy, both of them converts to Ḥanbalism, the second later becoming the historian of the Zahirīs, a work which at an early date is much to be regretted). But Ibn Dāwūd was to give more serious contributions to Zahirīsm: he wrote or transmitted an important number of Zahirī works, a list of which is given in the Führist. (Among them is a refutation of Ibn Shāhrīr, which may well have been a dialectical exposition of Zahirism, the loss of which at an early date is much to be regretted). But Ibn Dāwūd’s chief claim to fame is the Kitāb al-Zahār, his anthology of courtly love (translated variously as “Book of the flower” or “Book of Venus”). The Kitāb al-Zahār, which purports to be an anthology, is however a precursor of the “Trbarcus” of the West: it is difficult fully to comprehend its composition, its deeper purposes, and its guiding inspiration. It is possible that the Kitāb al-Zahār conceals the personal secret of Ibn Dāwūd. The following is as much as can be said with certainty about a work which must be read between the lines, if one is to achieve any insight into the extremely complex personality of its author. The Zahār is made up of two parts: the first is a collection of love poetry, the second (MS Turin) is an anthology proper (different parts: panegyric, satiric, drinking poetry, versification). The two parts together make up about fifty chapters, each containing a fairly
free selection of one hundred verses. Each chapter illustrates a maxim; these maxims are not of equal importance: they concern fine points of literary style as well as more urgent matters and, perhaps, the most intimate details of the "secret" of love. The maxims in rhyming prose—the elegant style of the jurist who had succeeded in delivering fatwas in this form. The logical arrangement of the first part is as follows: the first ten chapters are a kind of treatise on the hadith of love (the hadith of love gives the advice to put one's trust in the physician rather than in the beloved). They give the advice of the various consequences of passion and the misfortunes which befall lovers (calumniators, slanderers and "exiles"). Next, in the following ten chapters, are enumerated the obstacles of a deeper or more permanent nature which beset passion (sulawm, "consolation"—a sort of interior movement which follows the "triumph" of the lover, separation with all its consequences). A further ten chapters (30 to 40) are devoted to situations which are reminiscent of the nasib: the lover and the lightning, the lover on the day of separation, the lover haunted by the memory of the beloved, etc. At the very end of the first part, the ethical values return to the foreground, in particular that of the secret. The death of love is also dealt with. It will be obvious that everything in this work is problematical: it seems innocuous and soothing and yet it gave rise to passion and polemic. Its greatest originality was to have attempted to define a code of courtly behaviour independent of both religion and mysticism. This code seems to be based entirely on the principle: "He who loves, remains chaste, does not tell his love, and dies (or dies of it), dies as a martyr". This hadith, transmitted on the authority of Dâwûd the father, sets up two problems which long disturbed or annoyed Muslim moralists: al-nasib, al-mudâh (the lawfulness of glancing at young people or a "strange" woman) and himân, the obligation to refrain from speaking of one's love, even to the beloved himself. It was particularly among the Hanbalis that the reactions were strongest and opposition to Ibn Dâwûd's ideas most bitter: a work like the Dhâmm al-sawâb of Ibn Dâwûd contains a list of later re-wordings which have been preserved for the famous hadith. Hayyim al-Hajjâmyya (q.v.) also reproached Ibn Dâwûd for doing his utmost to discredit him. On the other hand, the Hanbalis, from al-Khârîjî (Broekelmann, S I, 250, the author of an Istidd al-khalâl, Bursa, Ulu Camî 1535), attribute to the passions a sort of therapeutic action, based both on Islam and on common sense. It is true that, in his description of "courtly" love, Ibn Dâwûd did not admit that it could possess a providential therapeutic quality, and indulged neither in excessive systematization nor misplaced idealism. (He always refrained from confusing human passion and divine love; he attributed to love, and even to the memory of love, a theme dear to the nasib, causes which are preponderantly physical: the interaction of the "humours" on the thought and vice-versa). It is possible that he was influenced by the Zahirism which fused both mysticism and human wisdom, in order to preserve intact the unpaired character of "courtly" love. Whether this attitude was dictated by his Zahirism, with its tendency to dispute the capabilities of the human reason, or by a negative mysticism based on mamlûmatiya, Ibn Dâwûd is regarded by such scholars as L. Massignon, A. R. Nykl and H. Ritter as one of the initiators of the doctrine of "courtly love", both in its Western and in its Oriental manifestations.

IBN AL-ÂLî, AHMAD B. YÚSÚF B. IBRÃHIM, Tûrûnî, Fatimian. His father Yusuf was a foster-brother of the caliph al-Mu'tasim and an administrative assistant to Ibrâhîm b. al-Mahdî. As such, Yusuf moved in the centre of intellectual life in Bagdad and Sâmarrâ and counted among his acquaintances many litterateurs and physicians. After the death of Ibn al-Mahdî in 224/839 (and, presumably, in consequence of it), he left Sâmarrâ for Damascus and, it seems, moved from there to Egypt where he therefrom had his residence. Having connections with the 'Abbâsid government and with Ibn al-Mudabbir, Yusuf was under the suspicion of Ahmad b. Tûlîn, who imprisoned him but soon released him as the result of an intervention by his numerous friends. When Yusuf died, Ahmad b. Tûlîn had his son Ahmad and the latter's brother arrested, and his files confiscated and searched for evidence of espionage, but nothing incriminating was revealed and the two brothers were released immediately. Yusuf wrote a book of stories about his patron Ibrâhîm b. al-Mahdî, which is certainly the source of the material on the subject transmitted in his name in the Aghâni (for instance, Aghâni, i, 253, 268, ii, 353, iii, 29, iv, 337, 361, vi, 22, ix, 148, 173, xvi, 6, 249, etc.). Like his patron, he also wrote a book on cookery, and he seems to be meant by the Yusuf b. al-Dâyi mentioned in the Fihrist, 180, who published a collection of stories about Abu Nuwas together with an anthology of his poetry. He probably provided much material for the works of his son Ahmad. His Aḥkâār al-atibba, cited by Ibn Hawkal, i, 124 (cf. F. Gabrieli, in RSO, xxxvi (1901), 246), and, presumably, the source for al-Kifî and Ibn Abî Usayyiba when they quote Yusuf b. Ibrâhimus, seems to be a work in this line. Ahmad b. Yusuf, kohl by preference as Ibn al-Dâyi "son of the wet nurse" (although this nickname would seem to have been originally that of his father), belonged like his father to the class of government officials. A reasonable guess for the date of his birth would seem to be between 245-250/859-864, and he is said to have died between 330-340/941-951. Accurate details are lacking. He wrote a Biography of Ahmad b. Tûlîn, known from an abridgment in Ibn Sa'd's Maqârib (ed. K. Volland, Berlin 1894, Semitistische Studien, i). It was also used in a similar biography of Ahmad b. Tûlîn, written in the 4th/5th century by a certain 'Abî Allâh b. Muhammad al-Balawi (ed. M. Kurd 'All, Damascus 1358), who nevertheless criticized Ibn al-Dâyi's work as confused and incomplete and not the work of a professional historian. Biographies of Khurâsânâwî and Hârûn, including those of Tûrûnîlieutenants, are listed by 'Alî, Uddâbî, ii, 157-60, as separate works, but they very likely belonged together with the biography of Ahmad b. Tûlîn, in the same way as Ibn al-Dâyi's Husn al-tubbâ is listed and cited as a work distinct from his Kitâb al-Mukhâfa'â, although it forms part of it. The Mukhâfa'â (ed. Cairo 1914, 1940, 1941) consists of three sections containing, respectively, stories about rewards for good deeds,
punishments for evil deeds, and timely escapes from difficult situations. The preserved text may not be complete (cf. F. Savyid, in his edition of Ibn Dūjūj, 746, 22, n. 43). Two other biographical works, on physicians and on astronomers/astrologers, are not preserved. In the field of science, he wrote a commentary on the Pseudo-

Ptolemaic Celestiorum (al-Tfmar), which, in addition to the Arabic original, is also preserved (partially?) in Greek translation (Cat. Codicum Astrol., ii, 74, iii, 11), as well as a lost Compendium of Logic, dedicated to the waris 'Ali b. 845. The preserved text is based upon Ibn al-Zālīk and Ibn 'Asikir (presumably, under Yusuf b. Ibrāhim); Brockelmann, i, 155, S i, 229; A. Schade, in ZDMG., Nxxvi (1934), 267-72; B. Lewis, in Byzantion, xiv (1939), 383-6; A. Badawi, al-Usul al-Yundihya, Cairo 1954, 24-9.

Bibliography: Vakīt, loc. cit., is based upon Ibn Zulāk and Ibn 'Asikir (presumably, under Yusuf b. Ibrāhim); Brockelmann, i, 155, S i, 229; A. Schade, in ZDMG., Nxxvi (1934), 267-72; B. Lewis, in Byzantion, xiv (1939), 383-6; A. Badawi, al-Usul al-Yundihya, Cairo 1954, 24-9. (F. Rosenthal)

IBN AL-DAYBA', 846 'Abd Allah al-Rahmān b. 'Ali Wahdān al-Din al-Shāhri al-Zabīdī al-Shāfi'i, Arab historian and religious scholar, was born in 866/1461 in Zabid and died there in 944/1537. Older biographers call him Ibn al-Dayba', but al-Dājirī refers to him simply as al-Kādī al-Nafis 'Abd al-Rahmān al-Dayba'. Dayba', said to mean "white" in Nubian, was the šābāb of his remote ancestor 'Ali b. Yusuf. Ibn al-Dayba', whose father died in India without having seen him, was brought up by his maternal grandfather in Zabid [q.v.], the centre of Shafī'i learning in Tihamat al-Yaman. He studied a little under this grandfather but more under his maternal grandfather in Zabid [q.v.], the centre of Shafī'i hadith, which he would recite at the feet of his grandfather in Zabid [q.v.], the centre of Shafī'i hadith, which he would recite at the feet of his grandfather in Zabid [q.v.], the centre of Shafī'i hadith, which he would recite at the feet of his grandfather in Zabid [q.v.], the centre of Shafī'i hadith, which he would recite at the feet of his grandfather [q.v.], the fourth and last Umawi who, in 570/981, was appointed chief kādī of Fahs al-Ballut, kādī of Zabid, which brings the story of the city down to 992/1583, the second of which ends with 992/1583, the year after the Murabitids of Zabid, and at least two books of Fahs al-Ballut, kādī of Zabid, which proves of benefit to students. Al-

Shawkání (d. 1295/1878) found his fame still widespread in the Yaman. (F. Rosenthal)

IBN AL-DAYBA', 846 'Abd Allah al-Rahmān b. 'Ali Wahdān al-Din al-Shāhri al-Zabīdī al-Shāfi'i, Arab historian and religious scholar, was born in 866/1461 in Zabid and died there in 944/1537. Older biographers call him Ibn al-Dayba', but al-Dājirī refers to him simply as al-Kādī al-Nafis 'Abd al-Rahmān al-Dayba'. Dayba', said to mean "white" in Nubian, was the šābāb of his remote ancestor 'Ali b. Yusuf. Ibn al-Dayba', whose father died in India without having seen him, was brought up by his maternal grandfather in Zabid [q.v.], the centre of Shafī'i learning in Tihamat al-Yaman. He studied a little under this grandfather but more under his maternal grandfather in Zabid [q.v.], the centre of Shafī'i hadith, which he would recite at the feet of his grandfather in Zabid [q.v.], the centre of Shafī'i hadith, which he would recite at the feet of his grandfather in Zabid [q.v.], the centre of Shafī'i hadith, which he would recite at the feet of his grandfather [q.v.], the fourth and last Umawi who, in 570/981, was appointed chief kādī of Fahs al-Ballut, kādī of Zabid, which brings the story of the city down to 992/1583, the second of which ends with 992/1583, the year after the Murabitids of Zabid, and at least two books of Fahs al-Ballut, kādī of Zabid, which proves of benefit to students. Al-

Shawkání (d. 1295/1878) found his fame still widespread in the Yaman. (C. van Arendonk-[G. Rentz])

IBN DHAKWAN, name of the members of a family of Cordova, the Banū Dhakwān, which produced several kādīs.

(1) The first was 847 'Abd Allah b. Harthama b. Dhakwān b. 'Abd Allah b. Dājirī al-Umdān who, in 370/981, was appointed jāhīl al-radd (that is, his duty was to pronounce judgements on matters on which the ordinary kādīs were in doubt); see Ibn al-Farāḍī, no. 722; E. Levi-Provencal, Hist. Esp. Mus., ii, 145.

(2) The most famous member of the family was the son of the above, Abu 'l-'Abbās Ahmad b. 'Abd Allah, who, after having been kādī of Fāṣ waṭ al-Shāhī, succeeded his father in the same post, and was appointed chief kādī of Cordova in 922/1518. Possessing excellent diplomatic qualities, and popular among both the Cordovans and the Berbers, he played an important political rôle under al-

Mansūr, whose close confidant and trusted adviser he was. After the death of the kādī (923/1518), he retained his post until 934/1524, then regained it from 935 to 940/1530-10. In 939/1530, he gave his sanction to the document drawn up by Ibn Burd [q.v.] to make 'Abd al-Rahmān Sanchuelo [q.v.] the successor of Hishām II on the throne of the Umayyads. He also supported the succession to the caliphate of al-Mahdī (399/1009). Exiled for a time to Almeria and to Oran, he soon regained his office under Hishām II, who returned to the throne in 400/1010. It was he who, in 403/1013, asked for amūn from the Berbers who were investing the capital. He died in 22 Radjab 1323/21 October 1022, and his funeral eulogy was made by Ibn Shuwayd [q.v.].

Bibliography: Ibn Bassām, Dāhīsh, i, 224; Ibn Khākān, Māmah, 19-20; Ibn Bashkwīlī, 8īla, no. 63; Dabīb, Bughyā, 174; Ibn Sa'dīd, Mughīb, 210-1; Nubāḥī, Mūkhāb, 84-7 and index; Ibn al-Kāfībī, A'māl, index; Maḵfārī, A'nālecī, index; E. Levi-Provencal, Hist. Esp.
The judgements of his contemporaries on Ibn Dhiyya's character and work are contradictory. Whereas the Andalusians in general praise him highly and refer to his great learning, the Eastern critics regard him as a charlatan because of his false claim to an illustrious genealogy, as a plagiarist (Ibn Khallīkān states that the poem dedicated to Muṣṣafar al-Dīn was written by Ibn Mammātī), or as a liar (which various sources consider to have been the reason for his expulsion from the Dār al-hadith al-Kdimīyya). The titles are known of about twenty of his works, of various types, the majority of which, however, have survived. The above recently appeared two editions of the work for which he is chiefly known, al-Muṣrif fi ashtar abī al-Maghrib, a vast anthology of Arabic poets of the West, compiled in Egypt and dedicated to his royal patron al-Malik al-Kāmil. The remainder of his surviving work is so far unpublished.  

Bibliography: In addition to that given in Brockelmann, I, 310-2, § I, 544-5, see the study by M. Gād, Ibn Dhiyya fi l-Muṣrif, in RIE M., 1 (1953). Sp. tr., ibid., 125-35; cf. also the long introduction to the Egyptian edition of the Muṣrif published by I. al-Ibyārī, H. Ḥab al-Maqdīj, and A. Abū al-Maḍāwī, Cairo 1954. Another edition of the same work was published in the same year, at Khartoum, by Muṣṭafā ʿAwāq. (F. de la Granja)
he had taken no part in politics (Ibn Sa'id, Mughrib, i, 342-3; al-Ma‘kṣarī, Analekta, ii, 468; al-Suyūṭī, Bugyān, 275).

IV.—The fourth and last representative of the family to be mentioned is Abū Bakr Mub, b. Abā Allāh b. Yahyā b. al-Faraḥ b. Abū al-Djid, the most famous in the history of the family. Ibn al-Abbār dedicates a long article to him in the Tahmīla (no. 823). Born at Niebla in Rabī‘ I 496/December 102, he studied under the best teachers of the time, such as Ibn Rūghd and Abū Bakr Ibn al-Arabi. The former advised him not to limit himself to the study of grammar, literature and fikh, but to study fikh and wudū; he showed a special aptitude for these subjects and was not long in becoming the favourite pupil of Ibn Rūghd. About 521/1127 he became a juristconsult in Seville, and continued in this high office for 65 years, till his death in Shāwval 586/Nov. 1190, at the age of ninety. Abū Yūsūf Ya‘qūb al-Manṣūr (380-95/1184-98) had a profound veneration for him, perhaps because he had undergone a certain amount of suffering himself, and appointed, as his successor, Abū Ya‘qūb Yūsūf (558-60/1162/84). During the troubled years which preceded the unfortunate campaign against Santarem (580/1184), he was among the Niebla dignitaries who were arrested and imprisoned (cf. A. Huici Miranda, Hist. pol. del imperio almohade, i, 255-309). He spent his whole life as a fāḥish and teacher. He has left no written work, but his position allowed him to increase his fortune; he was in fact the head of his native town of Niebla.

Bibliography: In addition to the sources quoted in the article: Ibn Sa‘īd, Mughrib, i, 243; Ibn Farhūn, Dībāǧī, 302; Ibn al-‘Imād, Shāhārāt, Cairo 1350, iv, 286; Sa‘īdī, Wafī, photography and fikh, iii, 51; al-Kutub, Cairo, no. 431. He had literary ability, but his passion for wine and his frivolity prevented him from reaching the heights he deserved. For some time he was a secretary (kābīr), in the service of Ibn ‘Amār (q.v.), during the brief period in which the latter reigned in Murcia.

II.—Of greater importance was his cousin and contemporary Abu l-Kāsim Muḥammad b. Abā Allāh Ibn al-Djad. He was one of the best representatives of the family and one of the authorities of his time on hādhī, fikh, literature and genealogy. Ya‘qūb al-Rāḍī, the son of al-Murtāmid Ibn Abābīd, made him his wāṣir when he was appointed governor of the Andalus, and took him with him when he went to govern Ronda; Ibn al-Djad remained with Ya‘qūb till the latter’s death at the hands of the Almoravids, in 484/1091 (Ibn al-Abbār, al-Hulā, apud De Abbaddis, ii, 75; ed. Mones, ii, 71). He retired to Seville; the inhabitants of Niebla then offered him the office of juristconsult (ṣufṭat al-ṣarā) of the town, which he accepted without enthusiasm, keeping his position till Ya‘qūb b. Taqīṣī made him kābīr in the chancellery. He was still holding this office when he died at Marrākush in 515/1121 (Ibn Baqṣhwawl, Sīla, no. 1149; Ibn Khākān, Kawadī, Cairo 1283, 109 ff.; Ibn Sa‘īd, Mughrib, i, 341-2; al-Marrākushī, Muṣliḥī, Cairo 1940, 173; Ibn Dībāyā, Mughrib, Cairo 1940, 150-2; Ibn Bassām, Dīghī, ms. Baghdad, ii, fols. 185-213). Abu l-Kāsim Ibn al-Djad was in excellence in the style being on a level with that of the eminent kuttāb of the time (Muḥ. b. Abī ‘Ikhṣāṣ and his brother Abū Marwān, Abū Bakr Ibn al-Kabtārun, etc.), which marks the apogee of prose writing in Muslim Spain.

III.—A third member of the family is Abū ‘Amīr Abūmad b. Abā Allāh Ibn al-Djad, who was a grammarian of repute. He was arrested and executed by the agents of the Almohads in 550/1155, although

Banū Diama'a traced their descent to the North Arab tribe of Kinān. The first member of the family to gain a modest reputation for Islamic learning was Burhān al-Dīn Abū Isḥāk Ibrāhīm b. Saʿd Allāh (596-675/1200-1277), who studied jurisprudence (fikih) and tradition (hadith) in Damascus, lectured in his native Hamāt and elsewhere, and died in Jerusalem shortly after he had gone to settle there. The distinguished career of his son Badr al-Dīn Muḥammad, who rose to become three times Shāfiʿī chief (kādi) of Egypt, and twice of Damascus, made the fortunes of the family and established it among the leading religio-judicial "dynasties" of the Mamlūk empire. Badr al-Dīn Muḥammad was the author of numerous works, of which the most important is a book on constitutional law: Tahrīr al-akhām fi tādāb arḥah al-Islām (ed. and German trans by H. Koeller in Islamica, vi (1934), vii (1935), Schlussheft (1938)). The position of Khaqāb of the Aḵṣā mosque in Jerusalem, which he held before becoming chief (kādi) of Egypt in 690/1291, remained in the family until certainly the early 10th/16th century; it continued as the preserve of the descendants of Muḥammad's brother "Abd al-Rahmān Ibn Diama'a, who formed the Jerusalem branch of the Banū Diama'a. As for the descendants of Muḥammad they came to form the Cairo branch of the family, which produced the distinguished ʿĪzz al-Dīn "Abd al-ʿAzīz and Burhān al-Dīn Ibrāhīm. The former, after holding the position of intendant of the treasury (wakīl bayt al-mdāl) of Egypt for twelve years, was appointed Shāfiʿī chief (kādi) of Egypt in 738/1340, and remained in this position, with one brief interruption, for twenty-five years, retiring shortly before his death. His nephew Ibrāhīm, after him, was twice chief (kādi) of Egypt, and died as chief (kādi) of Damascus. Between 690-784/1291-1383, the three Ibn Diama'a mentioned held the office of chief (kādi) of Egypt—the chief judicial position in the realm—for a total of sixty-one years. The fortunes of the Banū Diama'a declined after the death of Burhān al-Dīn Ibrāhīm b. "Abd al-Rahmān, the family nevertheless maintaining a traditional importance in Jerusalem. After the Ottoman conquest the name of the family appears to have been forgotten.

**IBN DIAMI'**

- Abu 'l-Kāsim İsmā'îl, famous singer and musician of Mecca. Of noble origin, he belonged to the clan of Sahn, one of the principal branches of the tribe of Kurayš. A handsome man, well-versed in jurisprudence, (hadith and the Kur'ān, he had won the admiration of the (kādi) Abū Yūsuf until the latter discovered that he was a singer. He was the pupil of Yāḥyā al-Makkī and of his father-in-law Sīyāṣ, with whom he went to Baghdād. Some time afterwards, he was expelled from there by al-Mahdī in order to separate him from his sons Hārūn and al-Hādī. He returned to Mecca, where he squandered his fortune on his two passions: gaming and dogs. After al-Mahdī's death, he returned to Baghdād and became, during the reign of al-Raṣīd, the leader of a rival group to that of his former friend, Ibrāhīm al-Mawṣilli. With his tender, sensitive, stirring and expressive character, possessing a voice vibrant with emotion, Ibn Diami' embodied the typical image of a romantic musician of the period. The flautist Barsawma said: "Ibrāhīm al-Mawṣilli is like an orchard in which the sweet and the sour grow side by side..." Ibn Diami' is like a pot of honey all side by side... Ibn Diama'a mentioned held the office of chief (kādi) of Egypt—the chief judicial position in the realm—for a total of forty-two years.

**IBN DJAMI'**

- Abu 'l-Makārim (Abu 'l-'Ashār) Ḥabīt Allāh (Nathaniel) b. Ḥāsan b. Ibrāhīm b. Ya’qūb b. Ismā'īl, Jewish physician who received the honorific titles of Shams al-rū'ās and Ustadī zamānī, Born at Fustāṭ, he was the disciple of Ibn al-'Aynzarbī (d. 548/1153), entered the service of Saladin, and died in 594/1198. One of his pupils was Ibn Abī 'l-Bayān al-Ibrāhīmī (d. ca. 634/1236) and he became famous for having prevented a person in a cataleptic fit from being buried alive. He was the author of several works: (1) al-Irṣād li-m waṣīlah
